The subject of "Waste in the Box Trade" was brought up by Mr. R. L. Jones, of Saginaw. Mr. Jones urged that more attention be given to the question of waste. "How," he asked, "shall we figure waste? One man says ten, another fifteen, another twenty per cent. One man is using scoots, another culls, another sound lumber, and the percentage of one will not apply to another. Take 1,000 feet of lumber, cut it up into boxes; if you get 800 feet of boxes your waste is 200 feet. Now, make the purchaser of the 800 feet of boxes pay for 1,000 feet of lumber and you are safe. Then if you happen to get a few feet of boxes out of the 200 feet of waste, don't sell it to the next man below the market value, because there is no reason why he should buy boxes any cheaper than the first man, and the chances are that the extra cost of manufacture will make it an unprofitable sale to you.

On the same subject Mr. Cristadore said: "A few years ago when lumber was fairly good, about 15 per cent. was considered a fair per cent. of waste for pine lumber. In the old days, wormy, shakey lumber went into the refuse burner, and now it goes into boxes or anything it can be sold for. In the old days the boxmaker used to use some No. 1 boards and some No. 2 boards, but now they are not considered. Occasionally No. 3 is used, but this is too expensive. When you get to making boxes of No. 4 there is an increase or decrease in waste according to quality of boxes made. I have known boxes made of No. 4 boards where the waste was as high as 30 per cent. Of course different mills make different grades, but the waste problem of No. 4 will come out from the surfacer to the printing machine. You have 20,000, say, in a car, you find the amount of waste 5,000 feet to the car, and you should figure the cost of manufacture as well as of labor on the same. Except on printing you should extend the cost of manufacture the same as on the lumber. You can not dispose of the cost in handling waste. If the cost is much less on lath yarn and printing why should you give the customer the benefit of this cost of labor? It is a legitimate part of your cost in figuring shooks, and the proper way to divide the matter is to divide 800 into 20,000, and you have the cost. If you have been in the wrong in the past, why not add this item of cost on your labor? You can start anew and you will fill the leak, and it is the leaks that do away with the profits of manufacturing."

SIZE OF BARRELS.

It appears that there is a lack of uniformity in the sizes of apple barrels in the States and those of Canada. An exchange says: The Canadian Parliament lately passed a law for the regulation of the size of barrels for packing apples, pears or quinces, which requires that these packages shall be made good and strong, of seasoned wood, having dimensions not less than 26¼ inches between the heads, inside measure, a head diameter of 17 inches, and a middle diameter of 18½ inches, representing, as nearly as possible, 96 quarts.

The apple barrel adopted by the United States Apple Shippers' Association is required to have a head diameter of 17⅛ inches, staves 28⅛ inches long, and a bilge of not less than 64 inches, outside measurement.

The capacity of the Canadian barrel is calculated exactly at 96.51 imperial quarts, or about 100 quarts, dry measure, or equal, approximately, to our standard barrel for pears, quinces or potatoes, which is required to "represent a quantity equal to 100 quarts of grain or dry measure."

The new Canadian standard barrel, accordingly, is about six quarts in capacity less than the New York standard barrel for apples, which was adopted by the Apple Shippers' Association.

There is a penalty of 25 cents per barrel of apples, pears or quinces exposed for sale in Canada in a barrel smaller than that specified by the new law.

EXPORTS OF FOREST PRODUCTS.

The following figures showing the exports of the forest are taken from the unrevised monthly statements of the imports and exports of Canada compiled by the Department of Customs at Ottawa:

Article.	Month of June. Value.	Month of July.
Elm logs	$ 27,947	$ 4,004
Hemlock logs	10,217	1,028
Oak logs	2,146	.....
Pine logs	97,487	31,811
Spruce logs	6,391	1,656
Tamarac logs	240	.....
All other logs	23,679	13,000
Battens	12,841	232,662
Basswood lumber	6,813	5,218
Pine deals	317,402	881,949
Spruce deals	1,610,914	985,500
Deal ends	75,916	101,346
Laths	95,049	57,410
Palings	585	.....
Pickets	11,206	4,193
Planks and boards	1,471,614	830,613
Joists	115	.....
Scantling	59,699	42,854
Shingles	183,990	92,731
Box shooks	47,084	570
Other shooks	28,748	12,839
Standard staves	.....	883
Staves and heading	27,494	24,611
Lumber not elsewhere specified	24,240	15,497
Match blocks	110	979
Masts and spars	160	1,915
Piling	27,594	10,696
Hoop poles	185	.....
Telegraph poles	7,146	8,061

Other timber	15,816	9,731
Pulp wood blocks	17,668	149,305
Other articles of the forest	1,148	3,391

LAST CANADIAN LOG.

The last pine log to go from Canada to the United States reached the Saginaw River on August 29th, when a raft containing three and a half million feet arrived from Little Current, Ontario, consigned to the Saginaw Lumber and Salt Company. This company took over this season between twenty-two and twenty-five million feet, and a raft of three million feet went to Detroit. This finishes the rafting of logs from Canada to Michigan mills. The logs brought over this season were cut from the Indian Reserve lands, with the exception of the Detroit raft, which was cut from deeded lands. The Ontario authorities have shut off taking over any more Indian reserve logs. Since the rafting of logs to Michigan mills was inaugurated one billion six hundred and forty-one million feet have been taken over.

It is said that a planing mill and shingle mill will be erected at Blind River, Ont., this fall.

CURRENT TRADE CONDITIONS.

ONTARIO.

The movement of white pine lumber during the month of September was of a satisfactory volume, and judging from the present demand there will be an equally good trade during October. The market cannot be called buoyant, although there is a steady call for nearly every grade of pine. That farmers are making improvements to buildings is evidenced by the report from retail dealers of a heavier sale of low grade stock. While stocks at the mills are comparatively light, the supply of the low grades is the heaviest. There is a scarcity of 12-inch boards and the best qualities of pine generally, and the opinion is frequently expressed that next year all grades of white pine above box will be advanced in price. A factor which will assist to this end is the high price that is being paid for labor, both at the mills and in the woods. Representative shippers to the British market are understood to have been negotiating with some manufacturers for the purchase of next season's cut, and it is probable that sales will take place on about the same basis as this year. Hemlock is a trifle weaker.

Reports from Western Ontario state that the hardwood market is improving from week to week, and that the demand is now quite active. It is believed that the worst has been passed and that there will be liberal buying during the next two months by dealers and consumers. A few manufacturers still report a dull trade, but the consensus of reports is that an improvement has set in. The production of logs during the coming winter is likely to be quite limited, and we would not be surprised if higher prices for hardwoods would be witnessed after the turn of the year, if not before.

QUEBEC AND NEW BRUNSWICK.

Reports regarding the spruce lumber market are of a favorable character. Manufacturers regard the outlook for next season as very hopeful, and expect that there will be a substantial advance in prices. In Montreal, while the consumption of all grades of lumber is quiet, common grades remain firm, and for the better grades an advance is being obtained by retailers. Thick good pine sidings are in good demand and scarce. For spruce and cedar shingles there is a fair demand. In the eastern provinces cedar shingles are very strong, $3 being the ruling quotation for extras on Boston rate of freight. Clapboards are also strong and in very light supply. Laths are well sustained at the recent advance, selling for Boston delivery at $3 for 1⅝ inch, and at $2.80 to $2.85 for 1½ inch.

MANITOBA AND BRITISH COLUMBIA.

The strike of Winnipeg carpenters which was instituted on August 8th has been declared off, the men returning to work upon the same terms as existed previous to the strike. Consequently, building operations are expected to be quite active this fall, but as the carpenters announce that they will make the same demand upon the employers next January, no doubt an indisposition will be shown by speculators to undertake large building projects. Within the past week there has been heavy buying of common boards, dimensions and shiplap, and as soon as threshing is finished low grade boards will commence to move freely. Wheat is yielding from 20 to 35 bushels per acre, and at an average price of 56 cents per bushel farmers should be enabled to make needed improvements. Shipments from British Columbia have been fairly heavy, particularly to Manitoba and the Territories, one mill reporting an increase of 15 per cent. over those of last year. It is probable that there will be an early advance in the price of British Columbia lumber. While export business has been good, present prices leave a small margin of profit.

UNITED STATES.

The statement issued by the secretary of the Mississippi Valley Lumbermen'

Association shows that the shipments of pine lumber by rail within the territory of the Mississippi Valleysand the Wisconsin Valley Associations, from January 1 to August 31, 1901, were 1,428,105,756 feet, as compared with 1,313,219,479 feet for the first eight months of last year. This is an increase of 24 per cent., and proves that the season has been an exceptionally good one for the manufacturer of white pine. The sawing season is drawing to a close with mills carrying a comparatively light stock. At Ashland, Wis., the market is very active, and stocks are being sold as fast as they can be produced. A short supply of No. 1 fencing and dimension is reported. Saginaw valley manufacturers are expected to go into the winter with the smallest stocks of unsold lumbe r in thirty years. Log run there is quoted at $18 to $24, box at $14 to $15, and mill culls at $12. While the demand is mostly for cutting-up stocks, there is no lack of call for the cheaper grades. A Buffalo dealer has just sold 500,000 feet of box. Stocks of spruce are getting scarce, and a stiffening in price is to be noted. Boston prices are $19 to $20 for 10 and 12 inch dimension ; $18 to $19 for 9 inch and under ; and $17.50 to $19 for 10 and 12 inch random lengths 10 feet and up.

Conditions are favorable to a further improvement in hardwoods, although opinions differ as to whether this will be realized. Advices from mill districts are to the effect that stocks are not heavy and that the output is small. In New York city hardwoods are said to be in splendid shape, all things considered, and in Buffalo there is an excellent demand for maple flooring, and maple and birch lumber is becoming more active. Hemlock is steady, prices ranging from $7 to $11.50 in the Saginaw valley. Shingles are showing further strength. A Michigan firm state that they have manufactured 12,000,000 shingles this year and are now 60 days behind with orders.

GREAT BRITAIN.

The situation in the timber trade of Great Britain is still one of uncertainty. Baltic shippers hold large stocks which they have been endeavoring to sell all season, but even the sharp reduction in price has not been sufficient to tempt buyers to load up to any extent. On the smaller sizes the decline has been quite marked. While in respect to Canadian goods the outlook is more hopeful, prices have been sympathetically affected by the low quotations for deals and battens put forward by the Riga shippers. Were it not for this aspect it is believed that there would be a sharp recovery in prices, as stocks are not excessive and importers are showing a disposition to replenish their supplies. The Timber Trades Journal in referring to the spruce and pine market says : "The improvement in the spruce market has been well maintained, and a distinct advance must be recorded. Agents have very few cargoes unsold, and for these full prices are being asked. For a seven hundred standard cargo of unfloated spruce from St. Margaret's Bay, of very poor specification, consisting chiefly of 7-inch, £9, 10s. is being asked, while for a similar cargo of Halifax deals to the west coast, we are told that over £7 is demanded. There are also indications in London of firmness in the better quality of Quebec pine, and there is no doubt that the present stock is inadequate. The mere fact of shippers offering merchants very considerable sums to cancel unfulfilled contracts shows the healthy position. A considerable portion of the stock on hand is composed of red pine, which by no means take the place of white pine from the St. Lawrence." On the other hand, we read in the Timber News that Canadian spruce prices are a shade easier. Third quality deals are procurable at £9 5s per standard in the docks, with seconds at 5s advance, whilst the Quebec and Montreal shippers are accepting £8 5s for October-November shipping.

STOCKS AND PRICES.

The S. Hadley Lumber Company, of Chatham, Ont., recently purchased 400,000 feet of lumber from J. & T. Conlon, of Little Current.

The steamer Kingstonian sailed from Quebec last week for the United Kingdom, with 500 standards of deals and 4,270 bales of wood pulp.

Timber berths were sold at the Crown Lands office, Fredericton, N.B., last week as follows: Two miles on Little River, Sunbury county, to Andre Cushing & Company, at $51 a mile ; two miles in the parishes of Simonds and Wilmot, Carleton county, to the applicant, James K. Fleming, at upset price of $8 a mile.

The Manchester City last week took on 1,000 loads of timber, 150 standards of deals, and 100 tons of pulp, and completed loading at Montreal.

The barque Loreto is loading lumber at St. John, N.B., for Buenos Ayres. The barque Dilbhur is taking in deals at same port for the Mediterranean.

Cochran & Soley have secured an option on the Hatfield and Smith timber property at Fox River, N.S. It consists of about 5,000 acres of timber land, for which $50,000 is asked.

The Bangor Commercial says that there is little chance that the West log drive will reach the booms in time to be rafted this fall. It is feared that 30,000,000 feet will be hung up.

The steamer Glen Head arrived a fortnight ago at Cork, Ireland, with a cargo of lumber from the mills of the Gravel Lumber Company, of Etchemin, Que. It consisted of 500 standards of planed boards and 150 standards of deals.

It is reported that James Playfair, of Midland, Ont., purchased the township of Levack at the recent Ontario timber limit sale for the Saginaw Lumber & Salt Company. The township is estimated to contain about 45,000,000 feet of timber.

A correspondent at Albany, N. Y., writes : All thicknesses of good lumber are very scarce and prices have been advanced from $3 to $5 per thousand. Summer lumber remains about the same. At a meeting of the pine dealers on the 23rd, 1 to 1½-inch uppers were put up to $70 and $5 down, and thick uppers to $75 and

FOR SALE.

A number of very valuable pine and other timber limits on the north shore of Lake Huron and elsewhere for sale. Also limits bought and sold on commission and estimates given. For particulars, apply to

—CORRESPONDENCE SOLICITED—

$5 down, showing an advance within six weeks of $10 per thousand feet. All thicknesses of yard picks and Nos. 1 and 2cuts were also advanced from $1 to $3 a housand. This is not a case of merely putting up the figures, but he lumber is being actually held firm at those prices."

Concerning the Barbadoes lumber market Messrs. S. P. Musson, Son & Company say: No arrivals have taken place since September 1st, and one or two dealers are in want of white pine. We could readily place a small cargo of half each of shipping and second quality, at about $24 and $18 respectively. Spruce is not much in demand at this season and will not be much before November. There have been no arrivals of shingles, and Long Gaspe are wanted. A small lot have been placed at $4 and we think first receipts should bring about this figure. Dimension shingles are also wanted and would bring full rates. Cedar laying shingles are in fair stock, but owing to the scarcity of Gaspe are being worked off, and a cargo would bring between $1.80 and $2. Another cargo of Portland shooks has lately been sold at $1.70.

A new price list was put into effect at Cleveland, Ohio, on September 16th, making an advance of from $2 to $3 on some grades of lumber. Dry lumber continues scarce and the amount on hand less than at the beginning of last month. Dry uppers in 1, 1¼, 1½ and 2-inch bring $65 a thousand feet; selects in same thicknesses, $55; fine common, $50; No. 1 shop, 1¼, 1½ and 2-inch, $45. The only change noted in any of the commoner grades was in 1 x 12 No. 3 to $21 and in 1 x 8 No. 3 to $19. Norway is very firm at the list and a slight advance in this may be looked for soon. There is a good demand for hemlock boards and bill stuff and the prices on these are easy. Shingles of all kinds are exceedingly scarce and it does not seem possible to accumulate any. Prices on 18-inch white cedars and red cedars have advanced 25 cents. Lath of all kinds are firm at the new list: No. 1 white pine, $3.50; No. 2 white pine and No. 1 norway, $3.25; No. 2 norway, $2.75, and No. 1 hemlock, $3, and stocks in all yards are exceedingly light for the season.

CANADIAN LUMBER SHIPMENTS.

The following shipments of lumber, etc., from Canadian ports are reported since last issue:

From Chatham, N.B.: Barque Mariadella-Guardia, for Port Mendres, 571 feet deals and ends, by J. B. Snowball Co. Str. Powa, for New York, 1,200,000 laths, by William Richards Co.

From Vancouver, B.C.: Tug St. Clair, for United States, 350,000 feet cedar logs, value $1,750, by T. Larkin. Str. Tartar, for Japan, 121,280 ft. dressed lumber, value $3,422; 76,470 ft. rough lumber, value $1,780, by British Columbia Mills, Timber & Trading Co.; for China, 60,000 shingles, value $102, by E. H. Heaps & Co.

From Yarmouth, N.S.: Barque Argentina, for Buenos Ayres, 610,000 ft. lumber, value $7,300, by D. R. Saunders. Schr. Hattie P., for Portland, Me., 100,000 ft. lumber, value $1,000, by Blackadar & Co.; Str. Briardene, for Bordeaux, 1,917,000 ft. deals, etc., value $22,124, by Dickie & McGrath.

From Halifax, N. S.: Schr. D. V. Haskel, for Bridgeport, Conn., 397,533 ft. lumber, value $3,037. Ship Marena Magre, for Barry Docks, Eng., 1,245,977 ft. deals, etc., value $12,460. Barque Ervin, for Grangemouth Docks, Eng., 578,000 ft. deals, etc., value $5,700.

From Montreal, Que.: Str. Australasian, for Plymouth, 641 pieces oak scantling, by Jacques & Co.; 30 birch logs, by W. J. Sharples; 6,412 pieces deals and ends, by W. J. Sharples; 24,725 pieces deals and ends, by R. Cox & Co.; 8,115 pieces deals by Watson & Todd; 11,188 pieces deals and boards, by E. H. Lemay. Str. Glitra, for Bergen, 2,304 pieces deals and boards, by Watson & Todd; 214 pieces deals, by Robert Cox & Co.; 247 pieces deals and boards, by G. T. R.; 910 pieces oak lumber by C. P. R.; 5,571 pieces deals, etc., by J. Burstall & Co.; 121 pieces deals, etc., by McArthur Export Co.; 2,354 pieces deals, by Dobell, Beckett & Co.; 5,572 pieces deals, etc., by Watson & Todd. Str. Memnon, for London, 7,936 pieces lumber, by J. Burstall & Co; 9,635 pieces lumber, bp Watson & Todd; 6,517 pieces lumber, by Dobell, Beckett & Co. Str. Bengon Head, for Belfast, 199 bales pulp, by Laurentide Pulp Co.; 4,724 pieces deals, by Dobell, Beckett & Co.; 1,201 pieces deals, by Watson & Todd; 2,778 pieces deals and boards, by R. Cox & Co.; 566 pieces oak scantling, 2,795 bdls. staves, by C.P.R.; 1,154 pieces scantling. Str. Orcadian, for Glasgow, 967 pieces deals, by G. T. R. Str. Amarynthia, for Glasgow, 8,220 pieces deals, by J. Burstall & Co.; 2,152 pieces deals and boards, by R. Cox & Co.; 1,478 pieces deals, by E. H. Lemay; 6,810 pieces deals, by McLaurin Bros.

TIMBER PROPERTIES CHANGE HANDS.

Two important transactions in timber properties have taken place within the past week. It is reported that negotiations have been completed for the sale to Robert Hurdman, of Ottawa, of the Klock Bros.' timber limits on the Kippewa, embracing about 100 square miles. They are perhaps the largest limits in the Kippewa district and are located around Ross lake. The purchase price is in the vicinity of $380,000. The Quebec Bank has an interest in the sale, and all that is required to complete the deal is the sanction of the bank to the transfer, which, although withheld, will likely be granted in a few days.

Newton Pugsley, B. L. Tucker, E. R. Reid, P. A. Holmes and Adams Baird, all of Parrsboro, N. S., have purchased from S. P. Benjamin, of Wolfville, his East Avon timber lands, containing 17,000 acres. The price paid was $55,000. The new owners of this valuable property will commence operations at once with a view to getting out a large cut next winter.

TIMBER LIMIT SALE.

Mr. Peter Ryan will offer for sale, at the Board of Trade Building, Toronto, on Wednesday, December 18th, at 2 p. m., another lot of valuable timber limits. The berths are known as A, B, C and D, being 33, 13½, 17½, and 28¾ square miles respectively, on the north shore of Lake Huron, comprising berth No. 10 of the sale of 1885. The limits are virgin timber and are very convenient for operating. Maps and other particulars may be obtained from Mr. Ryan at the Registry office, Richmond street, west, Toronto.

BUSINESS NOTES.

M. L. Jantze, Newton, Ont., is offering his saw mill for sale.

The assignment is announced of Gillespie & Grier, planing mill owners, Parry Sound, Ont.

Robert Kilpatrick, lumber dealer, Ladysmith, B.C., has been suceeded by the Ladysmith Lumber Company.

L. J. Tweedie and A. H. Hannington have been appointed liquidators of the Maritime Sulphite Fibre Company, Chatham, N.B.

The firm of G. Z. Schuyler & Company, corner East 98th street and First Avenue, New York, is announced to have assigned. Established in 1835, a large business in lumber and building materials has since been conducted. The failure is attributed partly to the stringency of the new building and tenement laws in that city which has checked the activity of their customers and de ayed them in meeting their obligations. The liabilities are said to be about $100,000 and the assets $75,000.

OILING CRANK PINS, WRIST PINS AND GUIDES OF STEAM ENGINES.

By W. H. WAKEMAN.

The plan of oiling a bearing that is in motion (like the crank pin of an engine) from a stationary oil cup, is now so commonly practised that it attracts little or no attention among engineers in large cities. But this was not always so; even now there are hundreds of engines running without this great improvement, and there are still a few engineers who do not appreciate the value of such a device. The word "few" here means several thousands, for it is used in a comparative sense only; the total number of engineers in this country is very large.

From the time that I first opened the throttle valve of an engine until the present day, it has been my ambition to keep my engine running at full speed for the required number of hours, whatever that might be, from the mill that runs but five hours without a stop to a run of 132 hours without closing the throttle valve. During the first six years of this time I did not have any way of oiling my crank pin while in motion, except a cup that revolved with the crank. I am free to admit that the care necessary to keep that pin from heating was greater than that caused by all the other bearings combined, for I could fix them while running, but any mistake in setting that crank pin oiler was sure to bring the whole mill to a standstill before the appointed time.

The oiler consisted of a common brass cup screwed into the strap on the connecting rod, with a tube in the center through which a piece of lamp wicking was drawn. When this was new it would feed too fast; when it had been used a few weeks it fed just right, and after that it fed too slowly, provided it was not taken care of, so that the adjustment consisted in manipulating this piece of wicking every morning and noon so as to overcome its exasperating tendency to feed too much or too little; but the rule followed was made up from day to day, so that it is impossible to repeat it here.

On the second engine that I engaged to run, a very similar device was used for the crank pin. I soon discovered that this shop contained machinery that could not be stopped at pleasure without damaging the stock used, hence the crank pin became more important than ever in my estimation. I decided that a "wiper" was necessary, but wipers were expensive at that time, and as I was anxious to make as good a record as possible in the cost of running the plant, I had one made. A neighboring blacksmith forged out a piece of iron and punched a large hole in it, so that by taking one of the capscrews out of the main bearing, putting it through this hole and returning capscrew to its place, I had a

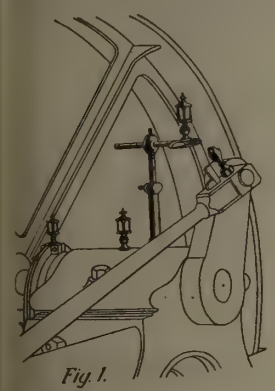

Fig. 1.

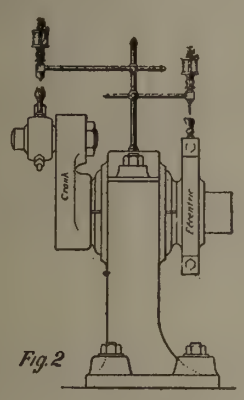

Fig. 2

standard that answered the same purpose as that shown in Fig. 1. A piece of sheet brass was fitted into the cup on the strap, a sightfeed oiler put on the standard, and other details attended to that made it possible to run that engine as many hours as required without shutting down to oil the crank pin. I am not advocating the idea of making such devices to the exclusion of those put on the market by reliable parties, for the ones sold in competition with others in the open market are nearly always better than any "home-made" device. As a rule they are cheaper, too, all things considered. I am not in sympathy with the man who uses $6.00 worth of time and $1.50 worth of stock in making an article he could buy for $5.00, and then boasts of his business sagacity. I do claim, however, that where an engineer can not induce his employer to purchase some needed appliance, he is justified in making it, provided it is not patented.

The wiper shown in Fig. 1 has a piece of flat lamp wick stretched in a horizontal position underneath the sight-feed oiler; as the oil is dropped on this it filters through and is wiped off from the under side by the moving cup. Fig. 2 is all metal, the oil falling through a slot and hanging underneath until the wiper comes around and takes it off. This illustration shows the same device in use on the eccentric of an engine. While this is not absolutely necessary on a slow-speed engine, it is a very good thing to have in use.

Fig. 3 shows a wrist pin oiled in the same way, also a cup that feeds oil to the lower guide. The dotted lines show how the oil rises to both edges of this circular guide, thus insuring lubrication for the highest parts of it, after which the oil is sure to work downward to the lower part without further attention. Fig. 4 illustrates another device for oiling a crank pin while in motion. The principle on which it operates is the use of centrifugal force. The sight-feed oiler drops oil into the hollow ball beneath it, out of which it flows to the right and drops into the hollow ball which revolves opposite the center of the crank shaft. So long as it

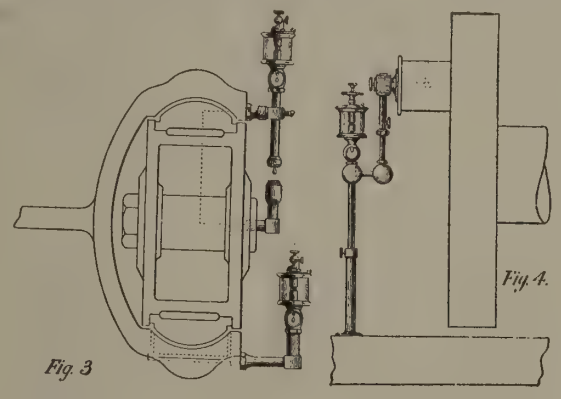

Fig. 3 Fig. 4.

remains at the center there is no tendency to go in either direction, but when the crank is down the oil moves away from the center, and once started on its journey it quickly travels toward the crank pin without regard to the position of the crank. It is quite a job to apply this form of oiler to an engine in a mill, as two holes must be bored in the crank pin, but it is very satisfactory in practice, because it throws the oil less than any other device. The same principle is utilized on some center-crank engines, where oil is taken from oilers on the shaft bearings, and used in the same way.

Having described these oilers, I wish to call attention to their great value to steam users, not only on account of preventing lost time in shutting down during working hours, but because they deliver oil to the rubbing surfaces in small quantities and at regular intervals. It is quite possible for these surfaces to wear much more than is necessary without heating or giving any outward indication except that the keys need frequent adjustment and the boxes are worn out sooner than they ought to be. Some mill owners regard such devices as luxuries, therefore they can be dispensed with; but this idea is not wholly correct, for while a mill can be run without them it does not pay to do it. It seems rather inconsistent to find a mill in a city, near machine shops and other places where repairs are made, fully equipped with oilers that prevent friction and wear, and then to find another mill located several miles from the nearest machine shop (which may be a primitive affair at best) fitted with oilers that do not prevent the bearings from becoming warm every day. In such places repairs are always expensive, since it takes so long for one or more machinists to reach the place.

The only objection to wipers on the crank pin and wrist pin of an engine is that they call for oil cups, or rather oil-catchers, that are open on the top, and when located in a dusty mill there is a chance for some of the flying dust to get into the open cups and clog them, or work down into the bearings and damage them. This objection may easily be overcome, however. A small piece of waste put loosely into each one will allow the oil to filter through it, but will catch the particles of dust. It is necessary to renew these pieces of waste frequently in order to prevent them from becoming hard enough to stop the oil from filtering through fast enough to keep the bearings well lubricated. This is but a small job, and need not be done more than twice each week.—The Wood Worker.

THE HARDILL COMPOUND ENGINE.

The town of Mitchell, Ontario, presents an example of Canadian enterprise in the possession of a company who are meeting with success in the manufacture of a compound steam engine invented and perfected by purely Canadian genius.

Mr. Joseph Hardill succeeded in January, 1899, in obtaining the Canadian and United States patents on a new design of cylinders and valves for a compound engine which had occupied his attention for a number of years. Considerable interest was hereby manifested among experts, who recognized in this design the possibilities of an inexpensive, yet complete and serviceable engine presenting promise of increased economy, besides other features heretofore unobtainable, at a price which would be within the reach of all steam users, and at the same time be so free from all complicated parts and gears that it could be operated by anyone capable of handling an ordinary slide valve engine.

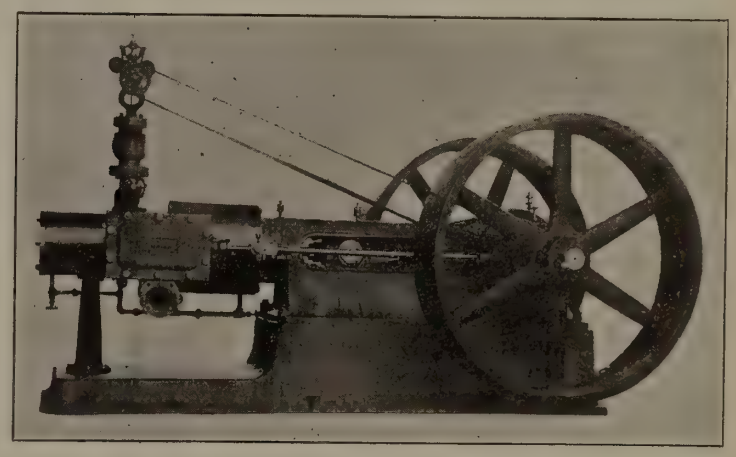
An engine was accordingly built and sent to McGill University, where it was subjected to an unusually thorough and practical test, and although the engine was the first of its kind, the results, we understand, were gratifying beyond the fondest expectations of its builders, who were congratulated on their possession of a most valuable invention.

A company was then formed and incorporated under the name of the Hardill Compound Engine Company, of Mitchell, Ont., Limited, who immediately made preparations for placing the engine on the market, and have been working quietly for a little more than two years, perfecting designs and building patterns, so that to-day, as all who attended this year's Exhibition at Toronto will agree, they have succeeded in producing an engine which for performance and appearance is of exceptional merit.

In the meantime a number of engines had been sold, and may be found doing almost every conceivable kind of work, and giving such general satisfaction that the success of this engine seems assured. The company are now prepared to supply this engine in all sizes, from 15 h. p. to 100 h. p., with the assurance that every engine will fulfill the claims made for it.

A company has recently been organized in Buffalo who are building the same engine and meeting with the same degree of success. One of their engines was tested at Cornell University, and its performance was such as to call for the most flattering commendations. It is hardly necessary to state that these two universities are equipped with special facilities for making such tests in a most thorough and vigorous manner and that their reports are comprehensive and absolutely impartial.

The Hardill compound, of which an illustration is shown, is a compact, self-contained, medium speed engine of the tandem compound type. It may be operated as a double-acting or single-acting compound as may be required. The peculiar feature is the two-valve chests, one on each side of the cylinders. These



THE HARDILL COMPOUND ENGINE.

chests form the bulkhead and are cast in the same piece with the cylinders, giving great rigidity to the structure. Each valve is complete in itself and independent of the other, being operated by separate eccentrics so that either may be shut off at discretion without impairing the operation of the engine, in cases where half or less than half the usual power is required. The valves are extremely simple and compact, and themselves form the means of conveying steam from the high pressure cylinder to the low pressure cylinder without the aid of a receiver or any other connections. This is in itself a strong recommendation, in addition to the fact that the steam from the high-pressure cylinder, before being admitted to the low-pressure cylinder, must pass through the valve which is at all times surrounded by live steam, thus preventing condensation and insuring the desired result of greater economy.

The makers are desirous of having the public become acquainted with this new engine, and will gladly correspond with all who are interested in a reliable and economical engine at a reasonable cost.

THE NEWS

The new mill of James Leigh & Sons, in Victoria, B.C., has commenced operations.

Lequime & Powers, saw millers, of Midway, B. C., have purchased a mill at Curlew, Wash.

F. Goodwin, of Moncton, N.B., has moved his saw mill to Bathurst, where he will operate this winter.

A scheme is on foot to organize a company to establish a large lumbering industry at Fort Frances, Ont.

The new saw-mill of the Cleveland-Sarnia Lumber Company at Sarnia, Ont., will becompleted this month.

George F. Burpee, of Avondale, N.B., is manufacturing a large number of butter boxes. Spruce timber is used.

The Conger Lumber Company have completed their new saw mill at Parry Sound, Ont. It is up-to-date in every respect.

Rhodes, Curry & Company, of Amherst, N.S., recently received a large cargo of oak lumber from Richmond, Virginia.

The new mill of the British Columbia Shingle Manufacturing Company at Vancouver, B.C., has just commenced operations.

It is reported that a syndicate of Michigan parties is considering the erection of a large saw and shingle mill on Burrard Inlet, Vancouver, B.C.

The Crow's Nest Lumber Company's mill at Michel, B. C., has been closed down and will likely be removed to Sparwood, a point six miles further west.

The Hawkesbury Lumber Company, of Hawkesbury, Ont., have just added a new band mill, thus increasing their cutting capacity to 200,000 feet per long day.

W. H. Nugent, of St. John, N.B., has leased from A. W. Hatfield the saw mill at Hatfield's Point, Belle Isle, and will put the mill in operation about December 1st.

A. E. Alexander, of Campbellton, N. B., is building a storage shed for shingles. It will be 130x42 ft., and is expected to be found of great advantage in making shipments.

A by-law was carried recently by the ratepayers of Port Arthur, Ont., granting the Pigeon River Lumber Company the necessary land on which to build a saw mill and establish yards.

No. 4 saw mill of the Rat Portage Lumber Company cut during the month of August 3,800,000 feet of lumber. This is claimed to be the largest cut ever made by one mill in the district.

R. A. Estey, lumber merchant, of Fredericton, N.B., with other eastern capitalists, have organized the James Barnes Construction Company, to build railways and do a general contracting business.

William A. Kribs has purchased 3½ acres of land in the town of Hespeler, Ont., and intends to build a planing mill and box factory. The building will be 56 x 140 feet and will be equipped with a modern plant.

Judgment was recently given compelling James Playfair, of Midland, Ont., to purchase certain timber limits valued at $45,000 from James L. Burton and Martin Burton, of Barrie. The defendant has appealed against the decision.

Charles J. Willis & Company recently loaded the steamer Dordrecht at Sheet Harbor, N. S., with 1,873,000 feet of deals and scantling. The time occupied in loading was seven and one-half days, which is regarded as quite an accomolishment.

S. B. Frick has recently purchased Messrs. Stephens & Argue's mill at Norland, Ont., and will add new machinery and other improvements. Mr. Frick has purchased a small timber limit (mostly hardwood), in the locality and proposes to buy more.

A branch of the Canadian Manufacturers' Association for the Province of British Columbia was recently formed at Vancouver. The membership includes nearly all the large saw-mill owners in the Province. At the organization meeting the question of an import duty on lumber and shingles was discussed.

An examination of cullers of timber was held at Arnprior, Ont., last month. The candidates numbered 39, 32 of whom were successful. The examiners were S. M. Johnson, of Arnprior, William Russell, of Pembroke, and J. B. McWilliams, of Peterborough. The names of the successful candidates are not given out for publication.

In a recent forest fire south of Windermere Station, Algoma, 200,000 feet of jack pine timber was burned. An area about four miles by two miles was burnt over, the cause being evidently a fire left by campers. A heavy rain has since fallen in the district, and the indications are there will be no more fires there this season.

W. B. Russell, chief engineer for the proposed Government railway from North Bay to Temiscamingue, reports that the timber passed through on the now completed twenty miles is the finest to be found in New Ontario, both as to quantity and quality. It comprises black and yellow birch, tamarac, maple, ash, hemlock, spruce and white pine.

In the District Magistrate's Court at Sherbrooke, Que., George Bolter, Henry Morten, Joseph Hill and William Gervais, all of Richmond, were fined last month for having appropriated a quantity of logs belonging to the Royal Paper Mills Co., of East Angus, that were carried down the river some time ago on account of high water.

The new saw mill of J. D. McArthur at Lac du Bonnet, Man., is operating very satisfactorily. The capacity is 50,000 feet per day. The power plant consists of three 60 horse power boilers and a 125 horse power engine. Sawdust is used for fuel and is fed automatically to the furnaces from the saws. The machinery for this mill was supplied by the Stuart-Arbuthnot Machinery Company, of Winnipeg.

German capitalists, with headquarters in Chicago, are negotiating for the purchase of the timber lands in British Columbia owned by the Toronto & British Columbia Lumber Company. William O'Donnell, of Baker City, Ore., is acting for the company. It is said to be the intention to build a large saw mill to cost $500,000, and to manufacture largely for export to South Africa, Australia, Japan and China. The mill will likely be located on one of the numerous harbors between Alberni and the coast.

TRADE NOTES.

The works of the Globe File Manufacturing Company, Port Hope, Ont., are announced to have been purchased by Mr. Payne, of New York city.

The Durham Rubber Co., of Bowmanville, are sending out samples of rubber belting and packing of excellent quality, made at their factory at Bowmanville, Ont.

Messrs. Shurly & Dietrich, Galt, Ont., had a large exhibit of circular, gang and cross-cut saws, mill saws, maple leaf saw sets, bed-steads, etc., at the Ottawa Exhibition.

At the Central Canada Fair at Ottawa last month Thomas Pink, of Pembroke, made a very attractive display of lumbering tools in the main building. Mr. Pink recently made several shipments of tools to Australia and New Zealand.

James Warnock & Company, Galt, Ont., manufacturers of axes, cant hooks, peaveys, edge tools and special lumbermen's supplies, had a very attractive

Noble's Dominion Detective Agency

TORONTO, CANADA

Janes Building, 75 Yonge Street, Toronto

We are prepared to undertake all legitimate detective business and investigations for Corporations, Companies, Banks, Mercantile Houses, Attorneys, or individuals in any part of Canada or the United States by experienced and reliable operatives. All work is confidential.

Operatives supplied to Lumber Camps for detecting frauds and losses.

Terms reasonable as is consistent with good service. This agency does not work for rewards. Positively no divorce business accepted. Patronage respectfully solicited. Yours respectfully.

KENTVILLE, N.S.

exhibit at the recent Ottawa Exhibition. Messrs. J. B. Warnock and T. Kennedy were in charge.

We have pleasure in noting the evidences of practical progress being made by the Durham Rubber Company, Limited, Bowmanville, Ont. This enterprising concern is steadily working its way to the front. They have been in business but a short time, but already the expansion of their trade has compelled them to add large extensions to their original factory. Their present additions are now well under way, and when completed will more than double their capacity. The new battery of boilers and the machinery which they are now installing are of the most modern and up-to-date types, and no expense is being spared in bringing their plant to a state of highest efficiency. They report business far in excess of last year, and are anticipating a large trade in the coming season, for which they have already closed some large contracts. In belting and packing they claim especially to be in a position to offer better values than any on the market. They are certainly turning out nice goods in these lines, and the trade would do well to see their samples before placing orders. In visiting their factory one receives a cordial welcome and cannot fail to be impressed with the air of a healthy business.

PERSONAL.

Mr. Henry Powell, the well-known river and shanty foreman, of Arnprior, Ont., died of lung trouble last month, in his 48th year.

Mr. William E. Hutchison, of Huntsville, Ont., is at present in England in the interest of his handle and turning factory purchased last spring from Mr. William Craddock. The product of this factory is entirely for export, and Mr. Hutchison hopes to bring back a large number of orders.

The death occurred early in September, after a lingering illness, of Mr. Robert Ferguson, M. P. P. for East Kent. About forty years ago he came to this country from Scotland and engaged in the lumber business, building up an important trade at Thamesville, Ont. He was first elected to the Legislature for East Kent in 1885, and has held the seat continuously ever since.

Mr. Thos. Southworth, Clerk of Forestyr for Ontario, lately returned from a ten days' trip of inspection to the Temagami forest reserve. Mr. Southworth says a number of very threatening fires have been extinguished by the rangers during the present season, and the action of the Government in maintaining an extra force of men has been justified many times over. The season has been exceptionally dry, and the water lower than for twenty years, a fact which has made the danger of bush fires much greater than usual.

Hon. Dwight Cutler, for more than half a century identified with the lumbering interests of Michigan, died at his home in Grand Haven on August 30th. He settled in Michigan in 1850 and became identified with Mr. Hunter Savidge, and in 1854 the Cutler & Savidge Lumber Company was incorporated. In 1881 Mr. Savidge, who was president of the company, died and Mr. Cutler was chosen to succeed him. In 1891 their timber supply had become exhausted and attention was turned to Canada. Limits were purchased in the vicinity of Cutler, on the Georgian Bay, where operations have since been carried on. Mr. Cutler was seventy years of age.

FOREST FIRES.

Forest fires in New Brunswick and Nova Scotia have done considerable damage during the past month. Although the details are not to hand, it is believed that considerable timber in the vicinity of Musquash, Grand Bay and Spruce Lake, in New Brunswick, and in the vicinity of River Hrbeet in Nova Scotia, have been destroyed. A dispatch from Glace Bay, N.S., dated September 6th stated that there was a forest fire at least two miles across the front running through the back part of Cape Breton county from the Mira district towards Sydney.

WOOD PULP DEPARTMENT

THE WOOD PULP MARKET.

The wood pulp market has been depressed for some time. There is now a more hopeful outlook and prices seem to be on an upward move. The drouth in Scandinavia is said to be seriously affecting the production of mechanical pulp, and should this trouble prove to as serious as is reported, it is likely to materially strengthen the pulp market. In Canada, however, production is proceeding along normal lines, although the mill of the Maritime Sulphite Fibre Company at Chatham, N. B., has suspended operations.

A combination of the chemical pulp manufacturers of Norway, Sweden, Germany and Austria is talked of, the object being to bring about a decrease in the production. On the other hand American sulphite manufacturers are considering proposals to increase their exports, and it is thought that in view of this the proposed combination of European manufacturers will be found impracticable.

PULP MANUFACTURE IN BRITISH COLUMBIA.

The province of British Columbia possesses excellent facilities for the manufacture of pulp, and it seems that they are shortly to be taken advantage of, as two companies have been formed for that purpose.

In 1899 two companies—the Industrial Power Com pany, of Nelson, and the Pacific Coast Power Company, of Victoria—were incorporated with power to engage in the manufacture of pulp and paper in all its branches. These companies have spent considerable sums in exploring for water powers and timber areas suitable for their purposes, and have at length succeeded in locating what they consider exceptionally good sites for their plants.

The Industrial Power Company has finally secured Clowhom river falls, Sechelt Inlet. Clowhom river empties into the sea over a series of falls, the altitude between the top of the highest fall and sea level being 120 feet. Twelve thousand horse power is available from these falls, a special feature being the comparatively low cost at which the power can be developed, the ground being very favorably situated for that purpose. Mills can be erected practically at the edge of the ocean, thus securing excellent shipping facilities, and shipments can be made during the whole year without incurring the expense of railway haulage.

By an agreement recently entered into by this company with the Chief Commissioner of Lands and Works, a large area of timber lands situated on the north end of Vancouver Island and on the Mainland opposite, has been reserved for two years to enable the company to select the timber necessary for its undertaking.

One of the most important water powers of the province, viz., that at Powell river, has been secured by the Pacific Coast Power Company. Powell river forms the outlet of Powell lake and flows into Malaspina straits, about 80 miles north of Vanconver. The power available at this point is estimated at 18,000 horse power, and its situation is admirably adapted as a centre of industrial activity.

There is every reason to believe that in the near future mills of various kinds, utilizing this fine natural power, will be established. Important timber areas have been reserved at Kingcome and Tsaw-Watti rivers, and at Thompson and Wakeman Sounds, to assist the company in its selection of spruce and other timber lands necessary for supplying pulp wood to the mills which this company propose to erect.

Speaking of the possibilities of the pulp industry in British Columbia, Gosnell's Year Book of British Columbia says: A special feature of British Columbia timber areas is their density—the yield being greatly in excess of that obtainable from equal areas in Eastern Canada. The average cut in Ontario is about 10 cords per acre, while upon the lands secured by this company the estimated cut is over 100 cords per acre. This density enables logging to be carried on to great advantage, and it is estimated that the cost of wood at the mills for many years will be at least one-third the average cost to Eastern United States mills.

Cheap coal of excellent quality can be obtained from Nanaimo or Union, about 90 miles distant, and shipments can be made direct by water to the mills. The markets that can with special facility be supplied from British Columbia are: British Columbia, Japan, Australia, China, New Zealand, Hawaii, Philippines, Fiji Western Coast of South America, Western Coast o Mexico and Asiatic Russia.

The home market is a rapidly growing one, and with the steady growth of population, a correspondingly rapid increase of the requirements in the way of paper may reasonably be anticipated. The long distance from the eastern mills and the freight rates make competition from the east impossible.

Japan probably furnishes the greatest possibilities for the future, the imports of paper in 1900 amounting to over $2,000,000, and that of pulp to about $230,000. Both the demand for pulp and paper in Japan is increasing very rapidly and the pulp mills of this province will be in the best possible position to supply it.

There are no statistics available regarding the trade with China, still an importation of $375,000 in 1900 from the United States alone shows that the market is a valuable one. The South and Central American republics also show a large increase in imported paper.

The Australian market is perhaps the most important at the present time. There are no suitable pulp woods on that continent and no water powers, so that Australia is almost wholly dependent upon outside sources for its supply of paper, its total importation for 1900 being about $5,000,000.

Appropos of the above, it is interesting to learn from the annual report of the Minister of Mines for British Columbia that there are valuable sulphur mines on the Extall river, a tributary of the Skeena river. It is the first workable deposit of pyrites suitable for sulphuric acid making found in the province, and bears an important relation to the growth of the pulp industry.

THE CANADIAN PULP INDUSTRY.

Mr. S. Charles Phillips, of London, England, proprietor of Phillips & Company's publications, The British Paper Trade Journal, Wood Pulp Maker, and others, has been in Canada recently. Mr. Phillips being an excellent authority on pulp and paper matters, we give below some facts as expressed to the St. John Sun.

Mr. Phillips said: I have taken a great deal of interest in the pulp and paper trade, and nothing has delighted me more than to promote the interest under our own flag rather than in any foreign country. I think I can safely say that in the past twenty years I have visited all the important plants in the world. Canada has a great future in front of her. From the beginning I said so, basing the statement on my experience. I may say that our people in Great Britain were very reluctant to believe what I told them, believing that tne inexperience of Canadians combined with the high freight rates would preclude the possibility of a substantial trade being done with Great Britain. The facts have proved otherwise. Already the United Kingdom is taking one-sixth of its supply of ground wood pulp from Canada. Fred Becker, of the enterprising firm of Becker & Co., of London, the largest importers of ground wood pulp, was led through the glowing reports I made during my visits to Canada of her suitability as a source of pulp supply, to come out to this country. His eyes were opened to such an extent that he placed contracts in different parts of the Dominion for 50,000 tons of ground wood pulp. Next year that firm's contracts call for over double that quantity. Mr. Becker was much struck with the methods employed over here and the prompt manner in which business is done. Other well-known houses are doing business with Canadian wood pulp producers, among them being W. G. Taylor & Co. (Ltd.), Henderson, Craig & Co. (Ltd.), and Harry B. Wood. Canadian pulp makers are willing to learn and benefit themselves by the advice gained by those in a position to suggest improvements. It is my firm belief that if Canada makes in the future such rapid strides in the pulp business as have been made in the past, only a few years will elapse till she will supply the greater part of the ground wood pulp supplied in Great Britain, and in addition to that a large percentage to European countries. I find the sulphite pulp industry springing up and making capital progress. Canada being young at the business, has taken up the threads of pulp making European makers left off, and owing to the interesting and scientific character of the industry, improvements in America are constantly being made. New plants have taken advantage of them. Capt. Partington, of the Cushing mill, who is the largest individual shareholder in that mill, is looked upon in the old country and Europe as one of the first and foremost men in the industry. He is a self-made man, which in itself reflects the highest credit on him. He has fought his was throngh insurmountable difficulties from the bottom rung to the top of the ladder by sheer merit. He has been through every department connected with the pulp and paper mill. He was the first British paper manufacturer to recognize the value of sulphite wood pulp, and about 20 years ago devoted much time and money towards exploiting the system. He made himself familiar with all the processes, which were then few and in their infancy, and evolved for himself a process which he considered the best. Mr. Partington took in hand paper mills in the country which were absolute failures and through his practical knowledge and perseverance, made them most prosperous concerns. He has up-to-date mills at Glossop, Cheshire, near Manchester, Barrow-in-Furness, Borregard in Norway, and Hollein in Austria. He was the first man to make sulphite pulp at Glossop. He has made money in the paper business, and is said to be worth $1,000,000.

PULP NOTES.

The Riordon Paper Mills Company, of Merriton, Ont., has been authorized to increase its capital stock to $1,000,000.

F. M. Steadman has been appointed manager of the mills and stores of the Sissiboo Pulp Company, Weymouth, N.S.

The Pulp Plaster Company, of Toronto, has been incorporated, with a capital of $25,000, to manufacture pulp and other plaster.

James Beveridge and Charles C. Springer, of Boston, have been selected to the directorate of the Cushing Sulphite Fibre Company, to succeed George S. Cushing and Joseph Allison.

The Wabigoon Star states that definite developments are likely to take place shortly regarding the establishment of a pulp mill at Dryden, Ont., and that Charles Wright will submit a proposition for the building of the mill.

The tender of S. R. Pearce and J. D. Clifford, of Lewiston, Me., has been accepted for the building of pulp and paper mills at Brompton Falls, Que., for the Brompton Pulp and Paper Company. The contract price is about $190,000, which includes about 30,000 cubic yards of ledge and 10,000 cubic yards of masonry work.

F. J. D. Barison, president of the North River Lumber Company, states that his company will have a pulp mill under construction at St. Ann's, C.B., within six months. The mill will employ over two hundred hands

At present the company has a saw mill and a wood barking mill under construction.

A settlement has been effected in the arbitration suit between the Edward Lloyd Company and the Sturgeon Falls Pulp Company, in which the adjustment of nearly three quarters of a million dollars was involved. The terms of settlement will be formally announced on October 10th. Briefly the facts of the case are :—Some three years ago the Sturgeon Falls Pulp Company, of London, Eng., purchased from a Canadian organization all their rights to land, timber, water power, etc., at Sturgeon Falls. The purchase was absolute, the Canadian concern relinquishing every title to rights or options. The company erected pulp mills and operated them for two years. The erection of extensive paper mills was also begun, and these buildings were also completed, at a cost of over $500,000. The Lloyds then made overtures for the property and finally purchased. Some time afterwards they claimed that there was not in the district a sufficiently large quantity of pulpwood, and that the water facilities were poor. On the other hand, the Sturgeon Falls Pulp Company contended that there was enough wood to supply enormous quantities of pulp for years to come, and that in all other respects also the property was satisfactory. This contention seemed to be borne out by the reports of the Government experts who investigated this and other districts for the Government some time ago. In this report specific mention was made of the large supply of pulpwood in the Sturgeon Falls concession.

What promises to be one of the largest pulp mills in Canada is about to be built at Seven Islands, on the north shore of the St. Lawrence. Thomas Meaney, of Toronto, in conjunction with Clarke Bros., of New York, have purchased a magnificent water power on the St. Marguerite river, seven miles from the village of Seven Islands, and have also secured about 500 square miles of excellent spruce limits in the vicinity. It is the intention to build a large pulp mill, to be operated by electricity generated at St. Marguerite river, and to construct a railway from St. Marguerite to Seven Islands. The bay of Seven Islands is a deep and commodious harbor, and will afford excellent facilities for the shipment of the product of the mill. The details have not yet been completed, although surveys are being made by the engineer for the work, Henry Holgate, C. E.

Canada's exports of pulp wood and wood pulp in the last year amounted to $3,335,265, of which $966,920 was sold to Great Britain, and $2,302,215 to the United States, $66,194 worth going to other countries. The total exports show an increase of $616,477 over those of the preceding year. There is an advance of $366,372 in our sales to Britain. Those to the United States are larger by $244,321. The exports of pulpwood showed an increase of $494,247, the United States taking $500,744 worth more than in 1900, and Great Britain $6,172 less. The increase in sales of wood pulp was $122,230, the details being as follows: Increase to Great Britain, $372,544; increase to other countries, $6,109; decrease to the United States, $256,423. Thus while the United States increased their purchase of pulpwood from us by over half a million dollars and decreased their purehase of the manufactured article by over a quarter of a million, Great Britain's decrease was in the pulp wood, and that but small, while in the manufactured article, involving greater labor and the employment of a greater capital, the mother country took from Canada an increased amount greater than the decrease of the United States by $116,121.

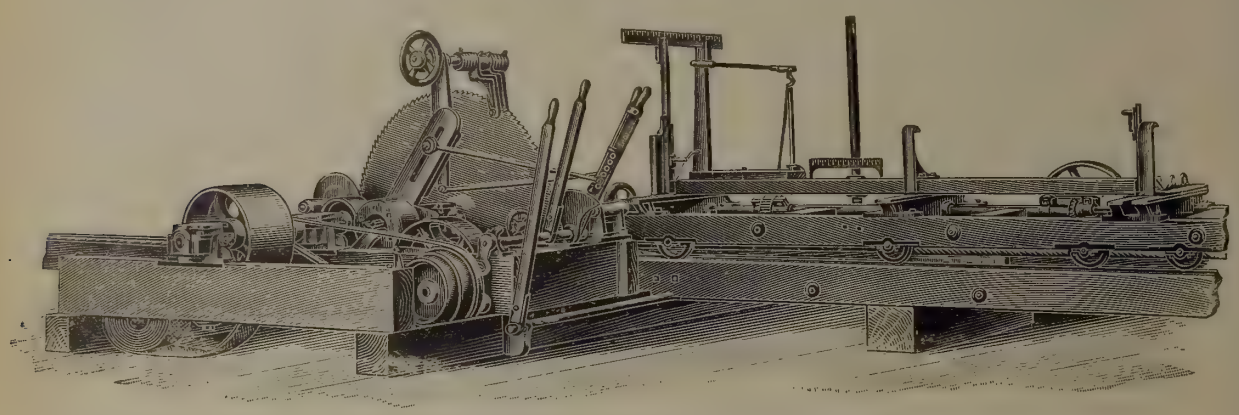
PORTABLE SAW-MILL AND OVER-LOG GUIDE.

Mr. F. J. Drake, of Belleville, Ont., who is well-known to many of our readers, makes a specialty of machinery pertaining to the manufacture of lumber. The accompanying illustration shows one of his portable saw-mills. It is designed throughout for hard and fast work. The arbor is extra large for this class of mill, and runs in three adjustable self-oiling boxes, each one 12 inches long. Each box is also provided with a tallow cup. The friction feed and gig pulleys, both iron and paper, have 6-inch face. The feed belt is 3 inches wide, and the cone pulleys have three changes of feed.



PORTABLE SAW-MILL AND OVER-LOG GUIDE.

Mr. Drake thinks the only time a saw-mill pays is when the saw is cutting; he has therefore fitted the mill with a very fast "gig" or reverse movement for the carriage. The carriage is mounted on iron wheels or trucks, with steel axes and iron boxes. The wheels are turned true to fit planed V and flat iron tracks. The set works are generally arranged with lever or handle over the log, so the sawyer can set the desired thickness without leaving his post. A very powerful friction receding gear is also attached, so that it will run the head-blocks either backward or forward, as the sawyer may desire.

The track timbers are framed together in three sections, so designed and constructed that they cannot be put together wrong. The mill is arranged with rope feed, both ends of the rope being above the mill floor.

By far the most important feature about the mill is the over-log saw guide. This is designed for the purpose of saving timber, and there is no doubt of its being a success; in fact, it has been subjected to very severe tests. Every mill man knows that when a big saw gets heated it commences to wabble and run crooked. In this state it is impossible to do good work with it. The saw will enter the log a little out of line and get worse before it is through the cut. A very heavy saw, under these conditions, is not nearly as stiff as a much thinner one in its normal state. Then, why not put in a guide that will control the saw before it enters the log? Make your saw enter the log in perfect line, and stay in line, and you will remove the principle cause of its heating. Two guides are better than one; have one guide below the log as usual and have another one above the log.

The "Canadian" over-log saw guide has now been put on the market and will no doubt fill a long-felt want. Concerning it the manufacturer says: "The guide can be made to fit any ordinary saw frame, and it is adjustable for saws from 36 to 72 inches diameter. A hand wheel makes the lateral adjustment for lining the saw either in or out both safe and positive. When sawing small logs or stocks the sawyer can with the lever bring the guide pins from their normal position, near the top of the saw, down around the periphery of the saw to a point within about 16 inches of the head block level—the upper and lower guides would then be less than 2 feet apart—then let it wabble behind if it wants to, it will come straight before it gets down to the work. The hangers carrying the guide pins are independent of each other, and so constructed that if a knot or other projection on a log strike either one of them it would swing it up clear until the knot, or whatever it is, goes by, when the hanger would drop back to its place and close in on the saw. The hangers are held in place by suitable coil springs and so construced that when they swing up they spread apart in order to clear the points of the saw teeth. The upper parts of the guide are all steel castings, and are strong and light. The saw shown in cut is 60 inches diameter, 12 gauge, 120 teeth. This saw makes a little less than 3-16 inch saw kerf; a 7 gauge saw makes nearly 5-16 inch of saw kerf, and sometimes more. This would mean a saving in a little mill cutting say 10 thousand feet per day and fair run of logs, of quite 1,000 feet. That is where the profit comes in."

INTRODUCTION OF THE SAW-MILL.

Richard Neve, the author of a builders' guide published in England in 1736, refers to an attempt to introduce saw-mills driven by wind and water, as in Holland and other places abroad, but Parliament interposed for the sake of the families that would have been impoverished by the loss of the hand labor. "By this means," says our author, "a useful improvement is not only lost to the kingdom, but foreigners are thereby enabled to underwork and undersell us in all sorts of building materials that require the saw. Much better would it have been, as we humbly presume to think, if the Parliament, at the expense of the public, provided for the poor families some other way that would have yielded them equivalent maintenance for life, and suffered the public to reap the advantage of the improvement; and every builder might have been taxed what he would have saved by the mill-sawing, towards their provision. And as no more than a small limited number should have been brought up to the business for the future, this charge would have soon been over." The price of sawing up oak varied from 2s. 8d. to 3. 6d. per 100 superficial feet. The sawing of ash and beech was rather more in some places, touching 4s. per 100 feet. An experienced sawyer told him they sometimes cut ship-planks for 10s. the load. The lowest rate in Sussex was 6s. the load, but as they built at Tunbridge wells it was 7s. 6d. or 8s.

THE NEW RIVAL ENGINE.

The Laurie Engine Company, of Montreal, have been long and favorably known as the builders of the highest class Corliss engines. Their large engines of many thousand horse power have been at work for years in the largest power houses in the Dominion, and are furnishing as good service to-day as when first installed. Success in the larger field of engine building has prompted the company to use their knowledge and experience in the designing of a small engine for use in small factories, saw mills, planing mills, etc., thus meeting the demand which is at present largely supplied by engines of United States manufacture. To rival all others in quality, and incidentally in price, has been the aim of the designers, and the new "Laurie Rival" engine, herewith in advertisement, after repeated tests and trials, can be confidently declared a perfect success, a production which will not bring discredit upon the name of the company.

The "Rival" is of the very simplest construction possible, and is claimed to be so proportioned in every detail as to be beyond the possibility of accident through breakage. The frame is of neat design, of the type known as "self contained," embracing the two main bearings which are in diameter nearly one-half the diameter of the cylinder. The slides or guides are of the circular form, and have a substantial flange at the end to receive the cylinder. The metal used in the frame is of the toughest nature, and is so distributed that all working strains are provided for in such a way that any spring or distortion whatever is rendered impossible. The cylinders are proportioned with mathematical exactness, so as to develop the greatest power with a given amount of steam, and are cast of close grained hard charcoal iron, and covered with neat cast iron lagging. The valves are of the plain slide type, a type which retains many advantages over others, as in clearance; the slide valve port is much shorter than the piston valve, thus reducing loss in clearance; the slide valve always wears tight, whereas the piston valve is always wearing smaller, and the casting larger, thus causing leakage which has to be provided for in other ways. The crank shafts, which are made of semi-steel, are very much larger in diameter than what are used by engine builders generally. The crossheads are fitted with bronze slides of large area and hardened steel wrist pins. The piston rod is of mild steel, and is secured to the crosshead by fine threaded screw and lock nut. The connecting rod is of cast steel fitted with adjustable bronze bearings at crosshead end; and the crank pin end is of the marine type, lined with the best quality of babbit metal. The parts throughout are all made to gauge and are interchangeable. These engines will run quietly without jar, vibration or spring, and keep perfectly cool in journals. They are guaranteed as to workmanship and material, and should any breakage occur within a year after sale from defect in either of these points, a duplicate of the broken part will be furnished free of cost, f.o.b. Montreal.

THE LATE MR. GEORGE MUNRO.

The citizens of Peterborough, Ont., were much grieved when they learned that Mr. George Munro, vice-president of the William Hamilton Manufacturing Company, of that town, had on the 18th ultimo been

THE LATE MR. GEORGE MUNRO.

suddenly stricken with heart failure, from which he succumbed a few minutes afterwards. For some years Mr. Munro had been associated with the management of the William Hamilton Company, one of the leading and most substantial industries of Peterborough. He was widely known and much respected, and his death is a public loss as well as a sad bereavement to his family.

Deceased was born sixty-one years ago, at Glasgow, Scotland, and came to Canada when about thirty-one years of age. After a short time spent in Montreal, he removed to Peterborough and entered the Wm. Hamilton works, where he remained. Unostentatious in his life, he would never take any active part in public affairs. But, while discharging his duties as a citizen quietly, he gave the industrial interests with which he was identified his close and experienced attention.

In 1881 Mr. Munro married Miss Euphemia Hamilton, eldest daughter of Mr. Wm. Hamilton, who, with four children, one daughter and three sons, is left to mourn his loss.

The deceased was a member of St. Paul's church. He was also a member of Peterborough Lodge, No. 155, A. F. & A. M., Corinthian Chapter, Royal Arch Masons, and the funeral took place under Masonic auspices on September 21st.

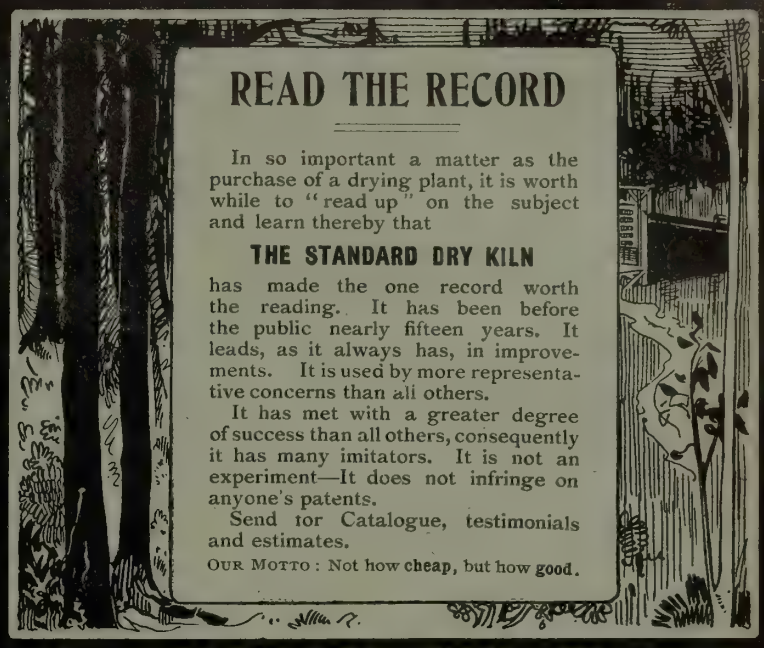
THE STANDARD DRY KILN



READ THE RECORD

In so important a matter as the purchase of a drying plant, it is worth while to "read up" on the subject and learn thereby that

THE STANDARD DRY KILN

has made the one record worth the reading. It has been before the public nearly fifteen years. It leads, as it always has, in improvements. It is used by more representative concerns than all others.

It has met with a greater degree of success than all others, consequently it has many imitators. It is not an experiment—It does not infringe on anyone's patents.

Send for Catalogue, testimonials and estimates.

Our Motto: Not how **cheap**, but how **good.**

THE STANDARD DRY KILN CO.

R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simonds' Process** in the Dominion of Canada.

There is no process its equal tor tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw nto frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as theyare cheaper, and in regard to working qualities are all that is needed.

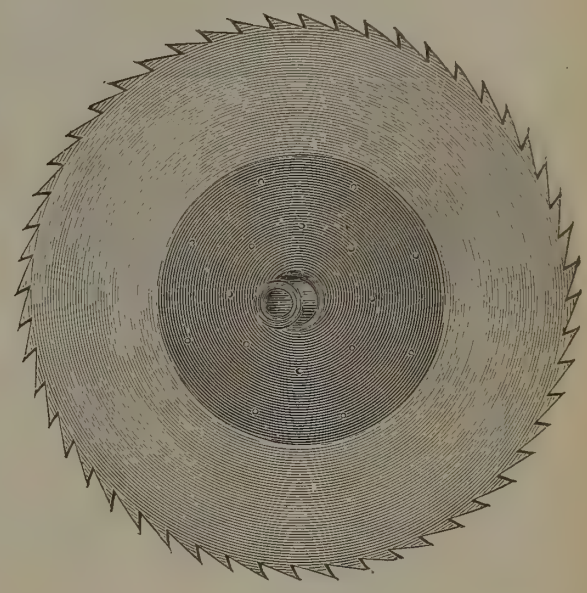
Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws. Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



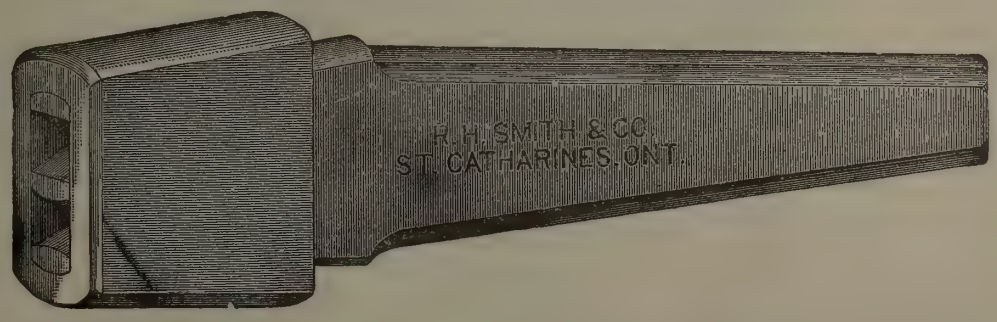
THE "LEADER" CROSS-CUT SAW

These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Proce s insuring a perfectly uniform temper throughout the plate, and stan i without a rival as the BEST, FASTEST AND EASIEST-CUTTING SAW KNOWN. A gauge to regu ate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

THE "LEADER" SAW SWAGE



Made in 3 Sizes—$2.00, $2.50, $3.00, etc.

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

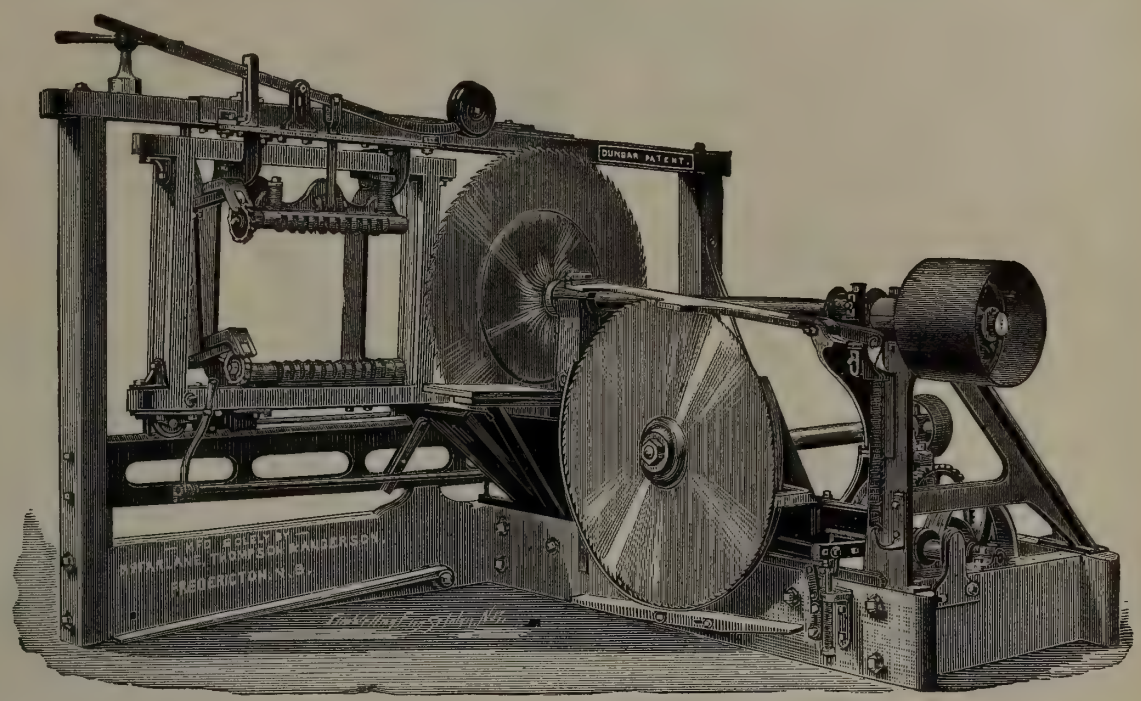
PATENTED DUNBAR SHINGLE MACHINES

And Sole Proprietors of the said patent

Universally admitted as being the best machine on the market from the Atlantic to the Pacific.



Patent Dunbar Shingle Machine.

The following well known firms are a few of the many who are using the celebrated Dunbar Shingle Machine:—Metis Lumber Co., Quebec, 15 machines; John A. Morrison, Fredericton, N.B., 16 machines; Gibson, R'y. & Manufacturing Co., Marysville, N.B., 10 machines; Hastings Shingle & Manufacturing Co., Vancouver, B.C., 16 machines.

The McFarlane, Thompson & Anderson Dunbar Shingle Machine a record breaker in the west—(New Whatcom Blade, Washington State). The following may be of interest to mill operatives and others; it is we believe the best six day record ever made on this class of machine—a Dunbar upright; the bolts were taken as they came from the woods, without selection, and were a good average quality. This remarkable run was accomplished last week at the George A. Cooper mill, Chuckanut siding: Total cut for six days, 2 shifts of 10 hours each per day, 394,000 eighteen inch shingles. In the day shift, Harry A. Edison, sawyer, cut 218,000, an average cut of 36½ thousand, and the night shift, Levi Loaf, sawyer cut 176,000, an average of 29⅓ thousand of eighteen inch shingles per day.

Campbellton, N.B., Febuary, 13th, 1896.

Messrs. McFarlane, Thompson & Anderson,

Gentlemen,—I have been from home and only received yours of the 8th this morning. My opinion of the Dunbar Machine is as follows: I have been using the Dunbar Shingle Machine of your manufacture for these past ten years, and have found them most satisfactory machines, in regard to quality of work, quantity of shingles that can be sawn, and freedom from repairs. I have compared your machine with other makes and prefer yours to any others. All experienced shingle sawyers prefer your machine to work on, to those of other makes. I have received to-day a letter from Allston Cushing, asking my opinion of your machine, and I shall write to him and strongly advise him to take your machine, (he writes in re Sumner Co. Mill).

Yours truly, Kilgour Shives.

We have since sold Sumner Co. the four machines referred to above.—McF. T. & A.

River Charlo, N.B., Feb. 13th, 1896.

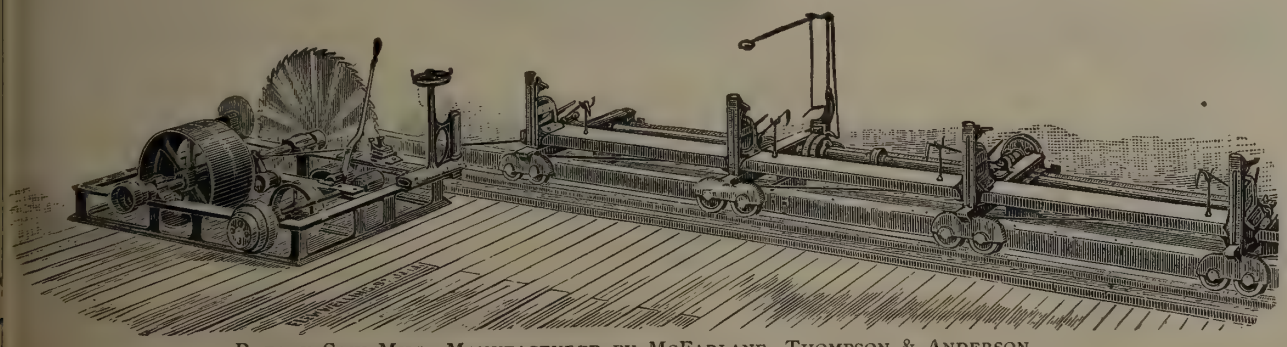
McFarlane, Thompson & Anderson, Fredericton,

Gentlemen,—Your favor received. We have six Dunbar Shingle Machines which we have run seven years, and in that time have never had to put any repairs on them and they are still running in good order. We pronounce them to be the best machines we have ever seen for cutting shingles.

Yours truly,

Gray & Lawrence Bros. Co

Write these firms now and get their opinion of our Dunbar 1901.



Rotary Saw Mill, Manufactured by McFarlane, Thompson & Anderson.

Latest Bulletin from the seat of war, October 17th, 1901—From the Metis Lumber Co., Price, Que., in reference to the 15 Shingle Machines sold them this season.

"Replying to your enquiry as to the running of the Shingle machines you sold us, would say that they have given entire satisfaction, and have run very successfully so far. We have sawn 30 million shingles in 70 days to date, and count on sawing 10 million more this season."

The Metis Lumber Comhany.

We manufacture a complete line of Improved Rotary Saw Mills, Buckeye Automatic Cut-off Engines and all kinds of Mill Machinery.

Our prices are right.

Kindly allow us to quote before purchasing.

TERMS. $1.00 PER YEAR
Single Copies, 10 Cents

A REPRESENTATIVE EASTERN LUMBERMAN.

Frederick Moore, farmer, lumberman and mill owner, of Woodstock, N.B., is one of the most noticeable examples of a self-made man. He represents a type of lumberman of which a number are to be found in the eastern provinces, who in early life gained the practical experience necessary for the successful conduct of their chosen avocation.

Mr. Moore was born in Canterbury, York county, in 1839. When twenty-three years of age he entered the business world as a farmer and lumber operator, following the former vocation in summers and the latter in winters. From his farm, one of the best and most thrifty of the town of Canterbury, he raised from $500 to $2000 worth of beef annually, cut one hundred and fifty tons of hay, and raised from two to three thousand bushels of vegetables, and from one to two thousand bushels of oats each season, this being in addition to that of lumbering. From 1862 until 1884 he was one if not the heaviest lumber operator in the Aroostook County, in Maine, his headquarters being at Houlton and Bridgewater, cutting from five to fifteen million feet of spruce timber yearly for the St. John market, and employing from 150 to 300 men with from sixteen to thirty pairs of horses and the accompanying rigging, according to the season or demand. In 1882 he built and operated one of the best grist and carding mills in the lower provinces on Eel river, the grist mill having a capacity of from 18,000 to 20,000 bushels of grain annually.

In 1884 Mr. Moore erected a saw mill upon the site of the Hale & Craig mill on the south bank of the Maduxnakeag, and in connection with his sons, cut from three to seven million feet of lumber, the supply therefor coming from the Aroostook, which had formerly been driven to St. John. In 1886 he built a shingle mill near the saw mill, cutting from eight to thirteen million shingles in a season. Later he built a planing mill in addition, these three industries all being operated by steam and furnishing employment to from 100 to 125 hands. His mill was burned last year, but a new one is now in course of construction. In 1896 he built a handsome residence in Woodstock, where he is considered one of the town's most progressive public spirited citizens.

MR. FREDERICK MOORE, OF WOODSTOCK, N.B.

SAW MILLS OF THE KLONDYKE.

At Dawson there are five saw mills in operation, says the Dawson Sun. They have a combined daily capacity of 85,000 feet. They employ 177 men. There are two shingle mills, each cutting 25,000 shingles a day, one lath mill, one sash and door factory, and some other wood-working plants.

The lumber industry in Dawson has always been good, so the saw mill men say, but it has been better this summer than any previous year, owing to the large amount of building that is being done. The new government buildings are using nearly 1,000,000 feet alone in their construction and the business blocks, private dwellings and sidewalks consume most of the balance. Many thousands of feet are also sent up the creeks every summer for flume building and the various other purposes to which lumber is put.

In price, lumber rules the same this year as it did last. Matched and the clearest quality obtained from native timber commands $125 per thousand feet ; planed lumber is quoted at $115, and ordinary rough boards at $90 per thousand. Special prices are made where extra large orders are placed, but the figures given are the current market rates. The lumbermen who supply these mills with logs cut up the Yukon or Klondyke, receive $38 per thousand delivered at the mill.

The supply of logs for the mills is obtained mainly from the banks of the Yukon, though one mill draws largely from the Stewart and another from a point 60 miles up the Klondyke, where a big camp has been established. In every case the timber limits are owned by the mill companies, as individuals not operating mills cannot hold such lands. In only two instances, however, do the companies cut their own logs, as the majority prefer to farm out the cutting privilege to logging contractors, who must take the risk of the river in getting their product safely delivered and tied up at Dawson.

The various mills, their capacity, pay roll, etc., are as follows :

The Klondyke Mill Co. is really owned and operated by the N. A. T. & T. Co., but Joseph A. Segbers has its local management. It is situated on the large island at the mouth of the Klondyke, and has the most pretentious plant in the country. It has a shingle mill, lath mill, planer and dry kilns.

The Yukon Saw Mill Co., of which J. F. Burke is general manager, has a large plant. It has a capacity of 15,000 feet per day, employs in its mill and machine shop seventy men, and expends in wages every month $20,000. The equipment comprises a circular saw, two planers, an edge saw, matcher, moulder, and in fact all other kinds of up-to-date wood-working machinery. The annual output is 2,000,000 feet, and the company is in a highly prosperous condition.

W. H. B. Lyon is the superintendent in charge of the Ladue Mill Co., of which Elmer F. Botsford is general manager. The plant adjoins the Yukon mill and has a capacity of 26,000 feet per day of twenty-four hours. A force of thirty men is employed, the monthly pay roll amounting to $4,000. More than a million feet of planed and dressed lumber is produced during the operating season.

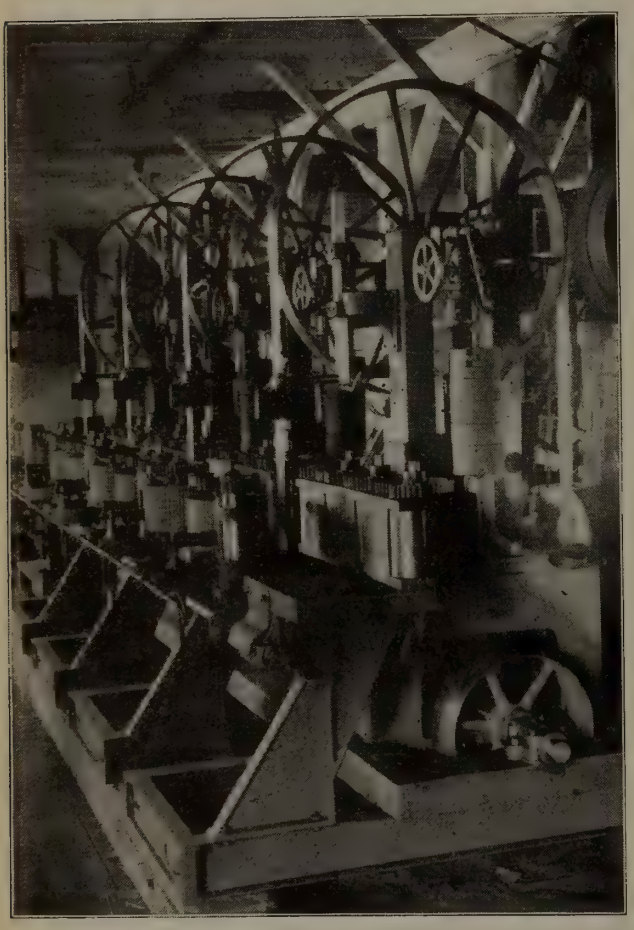
The Canadian Yukon Lumber Co. is officered with J. Wilson Smith as president, C. V. Anthony general manager, J. H. Holson secretary. It employs thirty men when operating night and day, as it has been doing

this summer, and has a pay roll of $46,000 per month. The mill capacity is 20,000 feet in twenty-four hours. The season's output is 1,500,000. A shingle mill is operated in connection, with a capacity of 15,000 per day.

O. W. Hobbs, a contractor, also operates a saw and planing mill on First avenue. His circular saw has a capacity of 10,000 feet per day.

A BAND RESAW-GANG.

A novel machine is being built by W. B. Mershon & Company, of Saginaw, Mich., for the Firstbrook Box Company, Limited, of Penetanguishene, Ont. It is described by the makers as a band resaw-gang, and is intended for resawing thick planks or flitches into



A Band Resaw-Gang.

five boards of equal thickness, the machine having four blades. The saw mill in which it is to be installed manufactures exclusively box material from short logs, second growth pine, etc. The equipment in this saw mill is unique and consists of the following : What was originally a twin circular rig made by the Rodgers Iron Works, of Muskegon, Mich., the round logs being placed on a spiked chain and carried past the saws by said chain, the logs being prevented from turning by spiked press rolls resting on the top thereof. This machine is used, supplied with one circular saw only, thus delivering the logs flatted on one side. These are then placed upon a travelling bed and carried by a Saginaw style F pony band mill, the second side flatted, the cants resulting being 5 inches in thickness with two parallel planed faces. These flatted cants, as well as the slab remaining, are then fed through the band resaw-gang and the cants converted into five one-inch boards and the slabs and waney portions made into as many boards as the thickness will yield. The band resaw-gang is very well suited for this work, and the following description may be of interest to our readers.

The band mills themselves are generally similar in design to the Mershon standard perfected band resaw. They are mounted on eye beams, as shown in the illustration, and each has a transverse adjustment by means of a screw ; said adjustment is very easily operated and very accurate. This arrangement will admit of sawing flatted cants of any thickness into boards as thick or thin as desired. The feed works consist of a continuous fence, in which are mounted numerous driven feed rolls, thus removing all of the friction from said fence. The stock resawn is retained in position against said fence by the action of the yielding pressure rolls of large diameter, which are also powerfully driven. These press rolls will yield three inches or more without any adjustment whatever. They, however, are provided with suitable adjustments so they can be retained in position at any distance from the fence desired. Cants as thick as ten inches may be sawn on this machine. The machine may be built so as to comprise any number of saw mills desired, and where a gang can be used in a saw mill to advantage, a machine of this kind, having unlimited capacity, will add wonderfully to the output of the saw mill plant.

A band resaw-gang with five saws supplied with cants six inches in thickness and feeding at the rate of 80 feet per minute, would mean a steady stream of bunches of six boards travelling at 90 feet per minute, practically all day long. If the boards averaged but nine inches wide, this would mean 360 feet board measure per minute, or, if there be no lost time whatever, 216,000 feet board measure one inch boards per day. Allowing ample time for lost time, changing saws, etc., if the single band mill could keep it supplied with cants, 150,000 per day could be safely figured, and this removing a saw kerf of 1-16 inch. It has been supposed it was impossible to secure the greatest capacity with the least possible waste in saw kerf, so that the above would indicate that this machine actually accomplishes what is apparently impossible.

METHOD IN THE SHOP.

By H. T. G., in The Wood-Worker.

We all have a natural antipathy to red tape, and justly so. Red tape is the bane of the factory man's existence ; and yet we must have system in every well-conducted business, so that the manager may be manager in fact as well as in name, and in order that he may know how the various departments in his factory are being conducted, besides having a reasonably clear idea of the profits of such shop. The simpler the plan, the better for all concerned. It shall be my purpose to outline a simple system of conducting a wood-working establishment, so that costs may be figured and work indexed for reference.

1. We have found it of great advantage in our factory to number all orders consecutively, and every order ticket or shipping slip referring to said order bears the same number. The saw bills and the material also are numbered, thus avoiding much confusion of orders, especially when there is more than one for the same customer. Another advantage is found in keeping the time and materials and in checking up invoices, the order number explaining what job the material is used on. It is very convenient to index the order book for reference to back orders, and the time thus employed is well spent.

2. Have all order slips returned to the office as soon as any piece of work is finished, so that shipping orders may be in the hands of the shipping clerk as soon as possible. This prevents delays and enables the one in charge to keep the work well under control. The shipping ticket, if marked so as to indicate by name of shop or the workman's initial, where the various articles may be found, will facilitate shipping and avoid numerous questions.

3. The shipper should each night return all slips for goods delivered during the day, and the orders be checked up and priced for billing the next day. Have a place on the slips where the name of teamster and date are filled in, so

ORDER NO._____ NAME_____

DATE COMPLETED_____ FILLED BY_____

Shop Order Slip.

that if any claim of shortage or error should come in there is a record of when the goods were sent and by whom. The driver also has a trip ticket, which he requires the conignee to receipt for his material ; that is, when anybody is on the job to give receipt. These trip tickets are filed away as they are returned, and help to settle many a dispute.

4. It is well in consequence to assort and file all old factory and shipping tickets, and preserve for about a year, as there are often notations or sketches on them that are not found in the order book, and they prove helpful in duplicating an order or investigating a shipment. The advantages of slips over shop order books is evident in the method of filing, the returning of slips to the office, and the convenience of handling small orders ; besides, it avoids confusion to have orders accompany the goods. In shipping house trim, the shipper can check the goods from the factory ticket and avoid the possibility of part being forgotten.

The expense of such a system is light, as no elaborate style or quality of ticket is needed. The time saved by obviating the waiting for, or running back and forth after order books, and the convenience of making out orders at any time without delaying any one, mor than pays for the slight cost of the tickets. Ineeed, it is a question whether the cost of good, durable books would not equal that of the slips. After having used this system it would be hard to persuade one to go back to the books again. Herewith is a copy of the order ticket, which is of tough manilla paper, about 7 inches long and 5 inches wide. Shipping slips are ruled the same, but on white instead of buff paper, to avoid confusion.

William Whistle, the 265-pound foreman of the W. C. Edwards Company, who responded for the shanty men at Ottawa in honor of Their Royal Highnesses, the Duke and Duchess of Cornwall, made a most amusing speech. Here is what I believe to be an almost correct version of his remarks : "Oh I cannot spik vat I vant in English, but I will do de best I can. I commence on de shantee for M'sieu Edward many year ago, and in tam I had charge of de shanteen and I make some monee. He gave me pretty fair wages, but I notice M'sieu Edward make much more monee every year, and I say to myself I will tak up bisness myself, and I am going to make big monee too. Well, M'sieu Edwards he no object, and in tree year I mak big business, I mak $17,000 debt (great laughter), and I lose all dat I have. I commence to look preety sharp, less I lcse my home (laughter), den I met M'sieu Edward, and he say to me : "Well, William, are you done ?" I say to M'sieu Edward, "Yes; and I would like to go to work for your famlee again." So I start and go back to M'sieu Edward. But der was dat $17,000 debt, and M'sieu Edward, he say to me : "Well, William, when you are in debt you have to pay." Well, dat bother me vare mouch, and I did not know what to do, so I went to de church to de mass, and I prayed de good Lor, and I say to Him : "God Almighty, I cannot pay dat debt ; I want you to forgive me dat debt, I will give it to you." (Roars of laughter). It is many, many year since I first worked in de shantee for M'sieu Edward. He give me good wage, and I am honorable enough to mak shantee to-day for de king and de queen."

* * *

I met in Toronto last month Mr. J. Pearson, a director of Beecroft & Wightman, Limited, timber merchants, of Hull and Bradford, England. Mr. Pearson was on his first visit to Canada to investigate the possibilities of securing a timber supply direct from the mills. It is surprising how many timber merchants and consumers of England have visited Canada for the first time within the past two years. It will surely result in bringing the manufacturer and consumer closer together, as is the desire of the people on the other side. Mr. Pearson, I would say, is an excellent representative of his firm, active, energetic and especially desirous of getting all the knowledge possible of lumber matters. He remarked on the absence in this country of a uniform system of grading, adding that it made it much more difficult to transact business. Mr. Pearson's timber requirements included spruce box shooks. He said they had been importing them through the Quebec shippers, but wished to form a connection with responsible mill men. Moulding stock in red pine was also wanted, this being used very largely in England. His firm also used a large quantity of casings for electric wires. For this purpose poplar had been employed, but he thought it might be possible to obtain a suitable wood in Canada. They were also large buyers of Indiana oak, and Mr. Pearson made enquiries as to the quantity of oak to be obtained in this country. He thought it would be possible to arrange for small shipments, as during the past year there had been an increased trade with Canada in car load lots.

* * *

Searching for white pine limits is an avocation which is engaging the time of more persons than is generally believed. The country is constantly being scoured by anxious investors and timber estimators. Whenever a good limit in our pine belt is placed on the market, it is quickly picked up by the Ottawa valley and Georgian Bay mill men, who are always ready to increase their holdings. Messrs. S. S. Henderson and R. W. Schofield, of Henderson, Schofield & Company, Brookfield, Pennsylvania, stopped off in the Queen City a few days ago. They were en route to Algoma to inspect a timber limit on which an option had been given them. From Mr. Henderson I learned that they have been manufacturing Pennsylvania and Michigan pine, and that their timber supply will be exhausted in a year or two. They are considering the advisability of changing their base of operations to Canada if it is found possible to continue to supply the Philadelphia and adjacent markets. One difficulty, Mr. Henderson stated, might come up in connection with the duty. It would be necessary to dress a great deal of their lumber, and if it had to be done on this side the duty would be very high. As much of their lumber would not be shipped right through to Philadelphia, it would be necessary to make an arrangement for stop-over at Tonawanda or some such point near the border, to have the necessary dressing done, but he was not certain that this could be arranged. I am doubtful if lumber manufactured in the Algoma district can be placed on the Philadelphia market at a profit, notwithstanding Mr. Henderson tells me that Canadian pine is being marketed there.

QUARTER-SAWING.

In a previous issue of this journal a correspondent asked for information in regard to quarter sawing and direct running circular mills. I have had experience with all kinds of saw mills, says M. E. L., in The Wood-Worker, and might give some advice that would help the correspondent referred to if I knew the size of his mill. He writes as though quarter sawing would be the main work. For that class of work I prefer a good heavy arbor not likely to spring easily, 3½ or 4 inches diameter, or if he has already a mill husk and arbor, the engine crank must be fitted to it. The engine should be 10 x 12-inch cylinder, or 12 x 12, or 12 x 14-inch. The 10 x 12-inch engine would make good power and would be light and easy to move from place to place as timber was sawed out. It should run 500 revolutions per minute, and if strongly built would stand hard usage and do good, heavy work, running a saw on all the feed needed for hardwood, or 3 to 4-inch feed in 12-inch cuts, according to the kind of timber sawed.

If a small mill is wanted, working four to eight men, the engine should be a centre-crank, with pulley on outside or opposite saw arbor, from 2 to 3 feet in diameter, 7-inch face, to run a single-saw edger, known as a side edger. This saw should be filed so as to be used to cut the slabs for the boiler as well as to edge with, making a combined edger and cut-off. If a larger mill is wanted, to work from six to ten men, another engine, 8 x 12, should be added, to run a three-saw edger and cut-off. This kind of mill, with a 50-horse boiler, will saw lumber rapidly and is a cheap mill, with low running expenses.

The saw I like best for such a mill is R. Hoe & Co.'s chisel bit, 60 inches diameter, 8-gage, 48 teeth, or 12 teeth to an inch of greatest feed run. I think all rip saws should be chisel bit for small mills. They are easy to care for, need no gumming and not much swaging, so that they are quickly put in order and new teeth easily put in.

I once knew a direct-running mill with an engine 12 x 16-inch cylinder, but I thought it too large ; it was slow and clumsy. I have quarter-sawed two ways. One way is ts split the log through the middle, then split each half in center, then saw each quarter, with the bark side down, until the heart is reached, then turn and finish. The other way is to cut a heavy slab, varrying according to size of log, but going to within about 4 inches of the heart, then turn and take another from opposite side same distance from the heart, then turn down and finish same as any cant, then put slab on blocks, round side down, and saw to heart, then turn and finish. This is by far the quickest way of sawing, but in some localities there is a dfference in the price between these two ways.

LUMBER EXPORTS TO THE UNITED STATES.

Below is shown the quantity and value of lumber and shingles shipped from Canada to the United States for the past three years. It will be observed that while the quantity exported in the year ending June 30th last was nearly 200,000,000 feet less than in the previous year, there is not a corresponding difference in the value. This is due to the higher prices prevailing for white pine lumber. The figures given below are furnished by the Bureau of Statistics of the Treasury Department of the United States Government. They show that the duty on Canadian lumber has not restricted shipments to any extent :

Years ending June 30 :	Boards, planks, deals and other sawed lumber.		Other lumber	Shingles.	
	M. feet.	Value.	Value	M.	Value.
1899	423,705	4,186,515	971,316	471,594	827,886
1900	680,069	7,464,208	1,285,673	541,040	1,011,234
1901	490,400	6,342,050	1,217,260	555,853	1,028,184

The lumbermen of British Columbia are finding difficulty in securing men to work in the mills and logging camps, as a large number of laboring men are employed in railway work.

Hose for fire-fighting purposes about mills and yards should have an outside connection. If the connection is within the mill, the fire may be exactly the location to pr eventthe hose being used.

THE
Canada Lumberman
MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited

CONFEDERATION LIFE BUILDING, TORONTO

BRANCH OFFICE:
IMPERIAL BUILDING, MONTREAL

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance..... $1.00
One Copy, Weekly and Monthly, Six Months, in advance..... .50
Foreign Subscriptions, $2.00 a Year.

ADVERTISING RATES FURNISHED ON APPLICATION

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE BOX INDUSTRY.

The box industry of Canada is growing. Manufacturers are finding that the making of boxes is a profitable method of utilizing material which cannot be used advantageously for other purposes. Spruce and pine are excellent box timbers, and there is no reason why they should not be a very large development of the box industry within the next few years.

The local consumption being now well supplied, manufacturers must look for a market in other countries. It has already been shown that Great Britain is prepared to take large quantities of boxes and box shooks—probably we should say box shooks, or boards so prepared as to be readily put together for boxes, the carrying charges on manufactured boxes being too heavy to permit of their profitable export to any extent. Besides Great Britain, a market for shooks may be found in Australia, France, West Indies, Mexico and other countries.

Washington firms are exporting shooks to Australia with some success. There is a large demand there for fruit boxes, and it is said that the box furnished by the home manufacturer is a very crude affair, and that a better box would meet with ready sale. In the province of New South Wales 400,000 boxes for packing oranges are used annually. The standard box holds about 50 pounds. The sides, tops and bottoms are narrow strips one-fourth of an inch thick, and ends half an inch thick, the top being fastened by pieces of leather. For this box 30 cents is paid. The Island of Tasmania ships about 500,000 boxes of apples annually, half of them to London, besides large quantities of other fruits. A box very largely used is 27½x12½x5½ inches, end pieces ¾ inch thick, which sells for 12 cents. There is doubtless a field for a good trade in box shooks in Australia, to secure which it is essential to send a representative to study the conditions and secure samples and information. It might be possible to secure some business through agents, but it would not likely be satisfactory.

An Ontario firm is pursuing the proper course in connection with the development of trade in Mexico. About one year ago, a representative was sent to that country to open an agency of their business, which is largely confined to boxes and box shooks. After spending about six months, he returned to Toronto. The business secured was found satisfactory, and he has returned to Mexico to further extend it. This is the policy which is likely to produce the best returns, and should be followed by all concerns who are in a position to do so.

RECIPROCITY IN LUMBER.

The advent of a new president of the United States has aroused interest in the subject of reciprocity. The late president, as the author of the McKinley tariff, became recognized as a strong protectionist. It may be said by his political followers that he brought prosperity to American industries, and to none more than to the lumber trade. His remarks at Buffalo a few days prior to his demise showed that in his capacity as President his protectionist ideas had become modified. He pointed out that if the United States was to increase her foreign trade, it would be necessary to adopt a more liberal trade policy in dealing with other countries. What President Roosevelt will do is yet unknown, but his announcement that he would follow the policy suggested by his predecessor, has gained for him the confidence of the people.

Reciprocity with Canada will doubtless be considered at the coming session of Congress. Before long the Joint High Commission may resume its sittings and endeavor to arrive at a basis for a broad reciprocity treaty. In such case the lumber trade will be one of the pivotal points in the discussion. In certain respects the situation is different from what it was when the Commission was last in session. At that time the free export of logs would have been given in return for free lumber. We do not think that such a concession would now be made by the Dominion Government, even if it were possible to induce the Provincial Governments to acquiesce in the proposition.

The only legislation in existence at that time affecting the movement of timber from Canada to the United States was the Ontario law compelling the manufacture within the province of pine timber taken from Crown lands. This has since been extended to include pulp wood. A similar law has been put into effect by the Dominion Government in respect to the pine timber on Indian reserve lands, and the province of British Columbia has enacted legislation to prohitit the export of fir and cedar logs after next spring. The several provincial laws mentioned above will have to be reckoned with, and compensation given for their removal. The results of the existing laws are so satisfactory that they would not be abolished in return for free lumber, which is the only inducement that can be offered by the United States.

The lumber duty has been the means no doubt of restricting in a small degree lumber shipments to the United States, but the figures for the past two years show that the falling off has been inconsiderable, while many benefits have accrued from home manufacture.

THE EXTENT AND SERVICE OF OUR RAILWAYS.

Whatever complaints may be made concerning operation, it must be admitted that railway building in Canada has made rapid progress, particularly within the last thirty years. The railway facilities provided places the Dominion far ahead in this respect of some of the oldest European nations.

There is in actual operation in Canada 17,824 miles of railway and 2,558 miles of sidings. The system is controlled by 86 companies and the Dominion Government, the latter operating the Intercolonial and the Prince Edward Island railways. The first road was built only sixty-five years ago, and comprised sixteen miles. There was no increase until twelve years later, in 1847, when thirty-eight miles were added. In 1866 the total was 2,278 miles, the Grand Trunk Railway having been built in the meantime. Between 1870 and 1880 4,241 miles were built, and in the following decade 6,293 miles, including the Canadian Pacific road. In the last ten years about 5,000 miles have been built. A large sum is expended annually in keeping these railways in repair. In 1900 the expenditure for maintenance of line and buildings was $10,000,000, and for working and repair of engines and cars over $20,000,000. There is a large consumption of forest products by the railways, their demands chiefly calling for a class of timber which does not possess a high marked value. During the next ten years the expansion in railway building is likely to be equally as great as in the past decade, as the public are fully alive to the advantages of railway facilities.

The railroads are just now being scored on account of inability to supply cars to carry freight and for excessive charges, and not without just reason. As regularly as the time comes around for the movement of grain, there has developed a car shortage. The lumbermen of Canada have suffered severely from this cause in past years, and the present fall is no exception. Orders have been cancelled owing to inability to make prompt shipment of the stock, and the volume of trade has been greatly curtailed thereby. The railway officials may claim that the period when the extra cars are required is too short to warrant the expense incident to providing the necessary accommodation. This, however, is poor argument, as it is incumbent upon every business to provide for the maximum demand. It is little satisfaction to know that similar conditions exist in the United States.

The railroad companies are no doubt largely to blame for the car shortage, as apparently they have not taken steps to provide for the advent of such seasons of rush traffic, although they have been known to occur each fall for years past. But some of the onus may properly be placed on the shoulders of shippers and receivers, as there is often too much delay in the loading and unloading of cars. As a remedy, it has been suggested that the Government

make a demurrage charge as a lien upon the lumber, and then charge the railroads a penalty of one dollar, to be collected out of the freight charge, for every day a car is in transit above a certain maximum schedule. Thus an inducement would be held out for prompt unloading.

The second grievance is freight rates. It is certain that the business community of Canada is burdened with excessive charges for transportation. It should be equally certain that these will be remedied, but the fact that they have so long existed without official interference makes hope forlorn. It may be that the demand for a readjustment on a proper basis is stronger than ever before, and that something tangible will result from the present agitation. The appointment by the Dominion Government of a Commissioner to investigate railway rate grievances is a proper step, and should be followed by the appointment of a royal commission.

A committee of the Toronto Board of Trade have, at considerable trouble, collected statistics showing a comparison of the rates of freight throughout Canada with those that prevail on similar products in the United States. These figures have not been made public, but it is understood that they will strongly support the contention for lower rates in this country. The Winnipeg Board of Trade has furnished to the Commissioner a comparison between the rates applying on merchandise from New York to St. Paul via the Soo line (which for the greater distance passes over the C.P.R. and roads controlled by it), and the rates from Montreal to Winnipeg. The distance in each case is about equal, but the charges from Montreal to Winnipeg are nearly double those from New York to St. Paul. Why this should be is a question which the railway companies should and no doubt will be asked to explain.

EDITORIAL NOTES.

Canada tendered a right Royal welcome to the Duke and Duchess of Cornwall and York, who have just left our shores after a month spent in visiting all parts of the Dominion. It is to the credit of our future King and Queen that they should have undertaken a nine months' journey, traversing two-thirds of the earth's surface, with the object of acquainting themselves with the people and conditions existing in the various parts of the great British empire. The information which they have acquired will enable them to more capably discharge the functions of their high station. The people with whom they have come in contact feel that the bond of sympathy and loyalty which binds them to the Empire has been further strengthened. Great commercial advantage is also likely to accrue to Canada from the descriptions of the country and its resources and opportunities written by representatives of the leading British and American papers who accompanied the Royal party.

Twenty dollars per thousand feet is stated by Dr. Schenck to be the price of pine stumpage in Germany and France. Many persons believe that the time will come within another century when a similar price will prevail on the American continent, as the white pine territory in the United States and Canada is somewhat limited. It is little wonder, therefore, that pine timber limits are being sought out for investment by shrewd and far-seeing financiers.

The Consular reports to the United States Government have been the means of diffusing much information regarding the markets of different countries. These reports are usually accurate, but it is not to be expected that the persons acting as Consuls can be familiar with all branches of trade. This lack of knowledge sometimes results in the publication of misleadiug statements. As an illustration, a report from Consul Skinner, of Marseilles, France, states that the firms of Price & Pierce and Tagart, Beeton & Company, of London, are reported to be the actual importers of fully 80 per cent. of all the American lumber shipped to England and the Continent. It is well known that there are many importers of lumber besides the two firms named, and that their imports represent much more than 20 per cent. of the total. Mr. Skinner is quite correct when he states that it will require persistent and well directed effort to change the present course of business and bring the manufacturer and consumer together ; and it is a question if lumber for export will not continue to pass through the hands of brokers.

TAXATION OF LOGS.

Some important questions were raised in the personal property tax case against the Rat Portage Lumber Company, which was decided by Judge Dibell in the district court at Duluth, Minn. Among other points that were raised by the company, one was that the logs were in transit between the United States and Canada, and were therefore under the interstate commerce act and beyond the jurisdiction of the state. Nevertheless the company accepted a reduction in its valuation, and paid its taxes to the amount for which judgment was entered.

The company cut some logs during the winter of 1899-1900 near the northern boundary of the county, and the logs were taxed in the United States. The assessors reckoned the amount at over 15,000,000 feet, and put a valuation of $9 per 1,000 feet upon the lot, making a total valuation of $141,300, on which a tax of $1,127.04 was levied. The company claimed that it had only 13,165,200 feet there on May 1, and that logs in the harbor at Duluth were only assessed $2.75 per 1,000 feet, in addition to the other points it raised. The company showed by the surveyor general that it only had the amount of logs it claimed.

The company also introduced proof that before May 1 all its logging drives were started, and on this the point that the logs were under interstate commerce rules was raised. A decision of the United States supreme court was quoted showing that where drives had been started, and the logs were bound for another state or outside the country, the state could not tax.

Another point was that there are only three places where property can be taxed: At the residence of the owner, at the residence of the agent, or at the point where the logs were manufactured. It was shown that in this case all of these points are in Canada.

Yet the company was willing to pay taxes and only asked that the valuation be made lower, and by stipulation it was agreed that the other logging property of the county was assessed at $2.75 and that judgment should be entered on that basis. The valuation of $9 per 1,000 feet was therefore cut down to $2.75, aud instead of over $1,200 taxes, with interest added, the company paid only about $200.

OPENING FOR A SASH AND DOOR FACTORY AT SHANGHAI.

Henry B Miller, United States Consul at Chungking, writes as follows :—There is an excellent opening for the establishment of a sash, door and wood-working establishment at Shanghai. A number of very large modern buildings are always in course of construction in this city, and I have been advised by architects that they are constantly in difficulties about interior finishings.

There is not a planer, moulding machine, or sawmill in China, so far as I have been able to learn. Logs are sawed into lumber by the whipsaw process, and in every city and throughout the country men are engaged in this business of sawing lumber by hand. Mouldings are made by hand work, and all lumber is dressed in the same way. There is not a lumber dry kiln in China, and the most difficult problem in the construction of buildings is to get well-seasoned material for interior finish.

A proper wood-working establishment at Shanghai would command the trade of the entire Yangtze Valley and probably of points along the coast to the north, such as Tsintau, Wei Hai Wei, Tientsin, and Port Arthur.

The most important feature of the plant would be a first class dry kiln of sufficient capacity to meet the demands for dry lumber. A good bandsaw for sawing native logs of small size and imported lumber up to 18 inches would be required. Moulding machines, planers, and sash and door machinery for making special work, turning lathes and general wood-working machines would complete the requirements. A plant for making stock doors and windows would not be advisable, as proper material is not to he had and the demand is not heavy. Most of the wood used for interior finish is hard wood, coming from countries south of here. All building contracts are carried on by Chinese, and the lumber yards are also in their hands.

The best man to undertake this business would be one of good education and address, familiar with the details of the business and capable of taking the management of the concern ; he should have some capital and first class recommendations ; he should spend at least three months here looking into the requirements before ordering his plant ; he should get the Chinese contractors and perhaps the lumber dealers to join him in the enterprise.

The Chinese have plenty of capital to engage in such enterprises and do not hesitate to invest therein, if they are presented by good and capable men and show chances for reasonable profit.

The architects will be glad to do all they can to encourage the institution, for all recognize the necessity of it.

Experiments are being made in New York to utilize saw dust in a commercial way. It is understood that if the scheme is successful, as now seems probable, the entire output of the Ottawa mills will be sent to New York.

REMEDIES FOR BAND SAW TROUBLES.

By S. C. MELLEN.

The September issue of this journal contains a communication from a gentleman signing himself "C. T.," in which he asks for pointers regarding the care and treatment of band saws. He raises a number of important questions, and as he requests the writer to furnish replies, I shall endeavor so to do.

Our friend raise half a dozen questions concerning this instrument and then adds something very pertinent as to "Tom, Dick and Harry and three others in one particular place who have a whack at the band saw at every opportunity." This last point describes the situation in a great many places and of this feature I may say something farther on.

His first question is, "How shall I best prepare the saw for brazing?" To fit a saw for this should not become a very difficult act for a practical man who has a fair supply of mechanical ability and will be painstaking in doing the small amount of work necessary in fitting a saw for a good joint. The quality and not the quantity of the work is the important item.

To be safe, a man should provide himself with some device for holding the end of the saw in a perfectly stationary position for filing the lap or joint. For this purpose an iron bed with a smooth surface and a low flange at the back side, which can be fastened solidly to some well-lighted bench, forms a satisfactory device upon which the saw can be clamped firmly by whatever means may be best suited to the workman, and at his command. The right sort of a small cabinetmaker's bench clamp is often as convenient for this service as anything, but it is a good investment for a factory proprietor to own a vise intended especially for this work.

It is important that the filing for the joint should be nicely done; the person who can carry a file squarely over his work can produce a workmanlike job, but the other fellow can not, ordinarily. The jointed space of whatever the length, should be made perfectly straight from the end of the saw to the heel of the joint and never be allowed to stand oval or convex for brazing. Some have failed of satisfactory ends at this point. The length of a braze easily comes in for notice just here. On a saw with four points to the inch the use of two points space for a joint will usually be satisfactory, while on five or six points to the inch it may often be advisable to file back three points, especially so where the saw may be quite narrow.

Doubtless, if "C. T." follows up his interests in these lines and has an opportunity to converse with men of experience to any considerable extent, he will meet those who argue that a one-point is equal in endurance to those of two or three points, and then perhaps wonder why I advocate the latter. I allow that the short joint is a good one when properly and successfully brazed, and may, barring accidents, wear as well as the other, in careful hands, but I find a practical reason for advocating a longer joint, which reason it may be best to state. Both by experience and observation, I have found these long joints hold their position better than the short ones, being less liable to kink or bend in the frequent coiling and uncoiling so common in any establishment where a variety of stocks are handled, hence if my advice is desired in the matter I would recommend a long lap. Further, I believe a beginner in this work will be less liable to a failure with a long braze than with a short one.

"The best method of brazing" is the second question in the list and naturally follows in this connection. Of this several things should be well understood. With a good, reliable iron brazing clamp in which to place the saw there can be no excuse for not obtaining a straight joint edgewise at least, unless there is carelessness in allowing something to remain on the clamping vise which will place the two sections out of parallel lines. Be sure and have it clean and free from all particles of dust. For a solder I either use silver or soft brass plate or chips of brass, each of which is easy to handle, although the brass acquires the heaviest fire to cause it to run freely in the joint. If I had to use a light blast on brazes I should want to confine myself to silver; if the forge is of sufficient size to melt the brass readily, brass is equally desirable and very much cheaper.

On the manner in which "C. T." treats the joint in preparing it for the heat I am disposed to mention several things just here. One thing I would emphasize, that of having the two ends of the lap press well together. It is well understood that powdered borax must be used in these brazes, but in my experience I do not find it necessary to use as much of it in the lap as is the custom with some. I've seen as much as ⅛-inch thickness packed into the joint, which only produced the same results as a very small amount. In my practice I simply make a paste of borax and water sufficient to whitewash the surfaces to be joined, but on the top of the lap use it very freely so that the braze will be well flushed as it melts and flows with the solder.

For several years I practiced using the solder in the joint, between the lap, any am quite inclined to the belief that this is the prevailing custom, but for some time past, using brass chippings, I place all the solder on the top of the lap and cover it heavily with the borax powder. By this method I have derived the best of results. In connection with this plan I use a fine wire thread and tie the joint firmly together after pasting it with the borax.

Some may ask if the solder will flow freely into the joint. I well remember how this same question came up in my own mind before trying it, but after an extended use in this manner it has never failed to flush in freely with the borax. In using a bellows and blaze for heat it will be found beneficial to have a block of hard wood cut so as to form a fork-like piece that will enclose the braze on the top, back and bottom sides, into which the fire may be blown and thus concentrate the blast and flow the solder quicker. Such a block should be cut away so as to leave about a half inch space on each side. I may add that in using this I get the best results by driving the blast just under the joint rather than above it.

The depth and shape of the teeth must be regulated to suit the stock in hand. It is not easy to outline any particular style of tooth that will be exactly suited to all conditions, yet a few points may be given. If I were cutting any considerable quantity of pitchy pine or other material that was disposed to cling in the throat of the teeth, I should straight-file my saw, while on dry woods it has always been the most satisfactory to give them a degree of hook. It should be noted that the width of the saw and the number of points to the inch come into consideration if we attempt to mark down a specific rule. There is a possibility of providing too liberal hook to the teeth; when this is done a saw may misbehave to the extent of forcing ahead out of its legitimate course on the wheels and create trouble. We hear it said that when a saw "jumps ahead" the tilting wheel should be so adjusted as to obviate all this. Is this best? If you have hook sufficient to create this effect and tilt your wheel to overcome the difficulty, it simply compels the saw to travel hard on the back rest, whatever it may be, and a case-hardening process begins which soon deprives a saw of its best life-sustaining quulities.

Removing kinks can be done by using a smooth, straight-faced block and a light hammer with a face slightly ovaled to avoid denting the saw. The block should be quite solid and the face formed on the end of the grain; by placing the block against the concave side of a kink and tapping it lightly with a hammer, a mechanic will not find it difficult to remove the kink, but a blunderer, or the fellow who says that "anybody can handle a band saw," will doubtless add two kinks to every one removed. When a saw shows up crooked in the braze, and the crook is edgewise, it must be rebrazed to bring it to a straight line, as it can not be remedied otherwise.

The last question, except of course, "Tom, Dick and Harry and three others," is of jointing saws and how this is best accomplished. There is no better appliance than a square block some 6 inches high and an emery wheel of small dimensions, say from 4 to 8 inches diameter, of any thickness. A most excellent jointing can be given by laying the emery flatwise to the face of the block and then applying the flat side of the wheel to the saw, moving the block and wheel at right angles across the face of the teeth. Men are not lacking who never use the flat of an emery, but rather crowd the narrow edge of a wheel hard to the teeth until a slot shows in the emery, but while they may produce a face-jointing they have also robbed the teeth in a measure, at the extreme point, which should always be maintained in the act of jointing.

If anything further is desired concerning "Tom," etc., I have this to offer—that I am not inclined to the practice of turning over these instruments to the experimental twists of any and all who may happen to need a piece of work at this machine.—The Wood-Worker.

The October number of The International Monthly contains several contributions of unusual interest and power that deserve to be widely read.

Machinery insurance is a new thing which is to be tried in Massachusetts, says an exchange. The idea is to indemnity manufacturers against loss from stoppage of machinery due to breaking or any similar cause, except fire.

THE SCHULTZ BROS. COMPANY, LIMITED,
Brantford, Ont

FOR SALE

Large Tract of Timber

In Central Ontario

THE PROPERTY OF

The Canadian Land and Immigration Company of Haliburton, (Limited.)

This company has a large tract of well timbered land about 125 miles north-east of Toronto. There are large quantities of Cedar, Hemlock, Spruce, Balsam, Basswood, Cherry, Birch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads, one of which is about to be extended through the centre of the property. The Company are prepared to sell this timber in blocks ranging from 5,000 to 10,000 acres, or more if desired.

There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and looking for a new location.

Maps and plans and further particulars can be had by applying to

W. H. LOCKHART GORDON,
Managing Director,
157 Bay Street, Toronto.

Gagnon & L'Heureux have registered partnership as shingle manufacturers at Coaticook, Que.

FOR SALE

Situated at Barrys Bay, Ontario, Parry Sound Division Canada Atlantic Ry, small Saw Mill, with Boiler, Engine, Carriage, Saws, etc., complete, together with some 50 acres of land, Railway Siding, etc. The location is a good one for Hardwood Lumber. Will sell cheap. Apply to

THE RIDEAU LUMBER CO., Limited,
17 Elgin Street, Ottawa.

AUCTION SALE

OF

VALUABLE TIMBER LIMITS

There will be offered for sale by public aution at the Auction Rooms of C. J. Townsend, Esquire, 28 King Street West, Toronto, on SATURDAY, THE 16TH DAY OF NOVEMBER, 1901, at the hour of 12 o'clock, noon, all those certain Timber Berths or Limits known as Berths Numbers 176 and 182, containing together about seventy-two square miles of land situate on the North Shore of Lake Huron, in the District of Algoma, in the Province of Ontario.

The limits will be sold in one parcel en bloc.

The limits will be sold without reserve.

TERMS OF SALE: 20% in cash at time of sale and the balance of the purchase money to be paid within thirty days thereafter without interest.

Estimates which have been heretofore made of the amount of timber upon the limits can be seen at the offices of the solicitors undermentioned, but these estimates are not in any way guaranteed.

Further terms and conditions of sale will be made known on day of sale or can be ascertained upon application to Beatty, Blackstock, Nesbitt, Chadwick & Riddell, 58 Wellington Street East, Toronto, or Messrs. McCarthy, Osler, Hoskin & Creelman, Freehold Loan Building, Toronto.

By Public Auction

VIRGIN TIMBER BERTHS

North Shore Lake Huron

AT THE ROTUNDA, BOARD OF TRADE, TORONTO, ON

Wednesday, December 18th, 1901,
at 2 p. m.

The undersigned has been instructed to offer for sale by public auction, at the above time and place (subject to the terms and conditions which will be produced at the time of sale), the following

VALUABLE TIMBER LIMITS IN SINGLE BERTHS

known as Berths "A," "B," "C" and "D," being 33, 13½, 17½ and 28¾ square miles respectively, on the north shore of Lake Huron, being Berth No. 10 of sale of 1885.

The above berths are amongst the best in the Province, very convenient for operating and getting in supplies. The timber is sound, and will be found to contain a large quantity of Long Timber suitable for Special Trade.

For Terms, Maps and other particulars apply to

PETER RYAN,
Toronto.

AUCTION SALE

Timber Berths

TOWNSHIPS 111 & 117 1898

North Shore Lake Huron,

AT THE

Board of Trade Rooms, Toronto,

—ON—

December 18, 1901

AT 2 P. M.

The subscriber has been instructed to offer for sale, BY AUCTION, at the above time and place, and subject to the conditions which will be announced at the time of sale, the licenses for TIMBER BERTHS 111 and 117, on the NORTH SHORE LAKE HURON, and known as the Townships of

GOUGH AND DUNLOP

36 square miles each.

The above berths are licensed under the most favorable conditions, and in addition to a large quantity of pine there are other valuable woods, which are included in the licenses.

Terms of sale—One-third cash, and the balance one, two and three years, with interest at five per cent. per annum.

For maps and other particulars apply to

PETER RYAN,
Toronto.

CURRENT TRADE CONDITIONS.

ONTARIO.

"There would be a heavy movement of stock if we could secure the necessary cars. As it is, we are doing a fair trade and are constantly receiving orders for both immediate and future delivery." These remarks, by a Georgian Bay manufacturer, express the condition of the trade generally. The situation is most favorable from the point of demand, and prices are firm. Some manufacturers have further advanced the price of uppers and selects, the supply of which is very limited. Box lumber has been enquired for quite largely during the week, and lath and shingles have maintained the strength which they have recently shown; in fact, it is believed that higher prices for them will rule before long on account of the small quantity in the hands of manufacturers. Shipping by vessel is quite active. Large shipments were made last week from Parry Sound, Collingwood and other Georgian Bay points to the Eastern States. The loading of vessels has emphasized the scarcity of men for lumbering operations. Some concerns have found it necessary to close down their mills in order to get a sufficient number of men to load the vessels. The enforcement of the regulations for the prevention of smallpox is interfering with work in the woods, as some men will not submit to the regulations so long as they can go to other camps where they are not imposed. It seems necessary to take steps to enforce the general observance of the regulations. Altogether, the outlook for logging operations this winter is not favorable, and a light cut is predicted.

More inquiries are reported for hardwood lumber, with maple and basswood leading in the improvement. Indications point to a more satisfactory trade during the winter months than was experienced in the summer.

QUEBEC AND NEW BRUNSWICK.

The outlook for spruce lumber is gradually improving. Manufacturers on this side have learned with much satisfaction of the apparent turn of the tide in Great Britain. It is not probable, however, that the prospects of a good fair trade next year will cause manufacturers to increase their operations in the woods, as men are scarce and supplies high in price. A large trade has been done this year with the West Indies and South America. Lumber for the United States market is firm and moving moderately. Clapboards are selling \$1 higher than last week, \$32 to \$33 being the quotation for extra spruce, and \$30 to \$31 for clears. Cedar shingles are firm at \$3.10 to \$3.20 for extras and \$2.75 to \$2.85 for clears, on Boston rate of freight.

MANITOBA AND BRITISH COLUMBIA.

Railway construction in Manitoba and the Territories is providing a market for a large quantity of timber. Several jobbers have been given important contracts for ties and poles. Building lumber is moving pretty freely. The value of buildings erected in the city of Winnipeg this year is expected to reach nearly \$2,000,000. Most of the buildings have now reached the stage where finishing lumber only is required. Men are wanted for railway construction and to work in lumber camps. Prosperous conditions prevail in the lumber trade of British Columbia. Several large shipments of lumber, pickets and laths have recently been made to Australia. The ship-building industry is consuming considerable lumber. The export of cedar and fir logs to the United States has been very heavy this fall, as there is a prospect that the legislation prohibiting the export of logs from the province will be put into force next spring.

UNITED STATES.

Box manufacturers have lately been heavy buyers of No. 4 and No. 5 boards, and consequently the stock of these grades has become greatly reduced. As the one weak spot in the market was the lower grades, this reduction has given increased strength to white pine. Some manufacturers are buying stock to even up their grades, and some anxiety is expressed that the quantity of white pine lumber will not be sufficient to supply the demand until the cut of next year is ready for shipment. Predictions are made that prices will be advanced during the winter months. Great difficulty is being found in the Lake Superior district in obtaining men for the woods. It is said that not more than 25 per cent. of the men required by the Minnesota operators have been secured. Wages range from $30 to $35.

Values of lumber generally appear to be hardening. At Toledo 2 x 10 bill stuff, 12 to 16 feet, has been advanced to $17 ; 2 x 12, $20 ; and 18 feet and over, $1 higher for every two feet over 16 ft. engths. At Buffalo and Tonawanda the better grades of pine are scarce, and some dealers are asking a fancy price for uppers and selects. The spruce market continues strong, with prices practically unchanged. Mills are unable to keep up with the demand. More encouraging reports are heard concerning the hardwood trade. Maple, oak and basswood are among the best sellers, there being a very satisfactory demand for maple. Prices are still low, and there is a good deal of competition among dealers. The shingle market is exhibiting strength. In Buffalo the call is chiefly for red cedars, which sell on the basis of $4 for Perfections and $3.25 for extra Clears. A stronger tone prevails in the lath market, and some manufacturers are asking slightly advanced prices. It is anticipated that a still firmer tone will rule.

GREAT BRITAIN.

Pine deals are going into consumption quite freely in London and Liverpool. There is an actual scarcity of broad first quality pine deals. Prices, however, although continuing firm, show no material advance. In spruce there has been a marked improvement. From all the leading centres comes the report that spruce deals are in good demand and prices tending upwards. Contracts have recently been closed in London for 3 x 11 third quality at £9 and £9 5s., whilst 3 x 9 second quality has brought £9 15s. Several transactions in cargo lots are also reported. A cargo from Nouvelle, Que., has been sold for delivery to Garston, on the Mersey, at £7 c.i.f., and a St. John cargo for the Bristol channel at same figure. Only one or two unsold cargoes are now in the hands of agents, and for these there are many enquiries. A Glasgow report says : "Spruce continues in good demand, and several lines have changed hands during the week at fair prices." From a Liverpool correspondent it is learned that values of spruce deals have advanced there, consequently higher prices have been talked of freely alround. The position is undoubtedly favorable for holders of this class of timber. Belfast also reports that spruce deals have advanced in price. One of the chief reasons why an improvement in spruce deals has taken place is that there is a return of confidence to the timber trade, and it is almost certain that other classes of timber will share in the improvement. Birch timber and planks are in better demand, with a slight improvement in prices.

CANADIAN LUMBER SHIPMENTS.

The following shipments of lumber, etc., from Canadian ports are reported since last issue :

From Halifax, N.S. : Barque Nimrod, for Irvine, Scotland, 401,000 feet, value $4,100. Barque Jupiter, for Conway, England, 502,000 feet, value $5,000.

From Montreal : Str. Fremonia, for London, sailed Oct. 247,537 pieces deals, etc., by the Charlemagne Lumber Co. Str. Marina, for Glasgow, sailed Oct. 24, 2,172 pieces deals, etc., by Dobell, Beckett & Co.; 5,987 pieces deals, by McLaurin Bros. ; 2,517 pieces deals, by Watson & Todd. Str. Lake Champlain, for Liverpool, sailed Oct. 22, 13,576 pieces lumber, by J. Burstall & Co. ; 3,490 pieces lumber, by Dobell, Beckett & Co. ; 26,548 pieces lumber, by Watson & Todd ; 2,580 doors, 1,147 pieces oak lumber, 1,113 bundles wood pulp, by C.P.R. Str. Westphalia, for Hamburg, sailed Oct. 25, 3,249 pieces boards, by Watson & Todd. Str. Etolia, for London, sailed Oct. 23, 11,893 pieces lumber, by R. Cox & Co. ; 11,541 pieces lumber, by Cox, Long & Co. ; 10,284 pieces lumber, by Watson & Todd ; 8,432 pieces lumber, by J. Burstall & Co. ; 1,617 pieces of lumber, by Montreal Lumber Co ; 12,806 pieces lumber, by Charlemagne Lumber Co. ; 22 basswood boards, by M. & L. Samuel Benjamin ; 4,429 pieces lumber, by C.P.R. Str. Escalona, for Aberdeen, sailed Oct. 25, 10,611 pieces deals, etc., by Watson & Todd ; 913 pieces oak, by C.P.R. Str. Australasian, for Liverpool, sailed Oct. 25, 2,181 pieces elm lumber, by G.T.R. ; 2,103 bundles pulp, by Laurentide Pulp Co. ; 8,895 pieces deals, by J. Burstall & Co.

From Vancouver, B.C. : Ship Battle Abbey, for Melbourne, Aus., 1,198,144 feet rough fir, 20,000 pickets, 120,000 laths, by British Columbia Mills, Timber & Trading Co. Tug Albion, for United States, 307,000 feet fir logs, value $1,305, by W. R. Jones. Schr. Kailna, for Melbourne, Aus., 764,825 feet rough fir, 30,000 pickets, 180,000 laths, value $6,630, by British Columbia Mills, Timber & Trading Co. Tug

(Continued on page 4.)

From Yarmouth, N. S.: Schr. J. H. 2rns, for Boston, 90,000 feet lumber, 5,000 laths, value $680, by Dickie & McGrath. Barque Johanna, for Newport, Eng., 440,000 feet deals, value $4,801, by Dickie & McGrath. Schr. D. H. Rivers, for Montevideo, 906,000 feet lumber, value $10,803, by Dickie & McGrath.

Charles Pedwell, of Lion's Head, Ont., recently made a shipment of 250,000 feet of hardwood lumber.

SHIPPING MATTERS.

Recent charters include the steamer Coringa, 1,366 tons, St. John, N.B., to w. c. England, deals, 40s., and the steamer Kronbourg, St. John, N.B., to w. c. England, deals, 36s.

An extraordinary condition now prevails in the shipping world. Freight rates are unprecedently low, and along the Atlantic coast hundreds of ships are idle. It is said that nothing like the present depression has been known in the freight markets since 1890.

TRADE INQUIRIES.

The following were among the enquiries relating to Canadian trade received at the Canadian Government Office in London, Eng., during the two weeks ending October 4th, 1901;

A gentleman in Glasgow conversant with the timber trade desires to represent on commission several well established firms shipping Canadian white pine.

A broker and agent at Durban, Natal, desires to be placed in communication with some good Canadian houses manufacturing goods suitable for the South African market.

An agent at Genoa, Italy, is open to take up the representation of Canadian firrms exporting goods such as lumber, etc., suitable for the Italian market. He is also desirous of appointing an agent in Canada for the sale of a well-known brand of olive oil.

The names and addresses of the parties making the above inquiries may be obtained at the office of the CANADA LUMBERMAN.

PERSONAL.

Mr. C. D. Warren, president of the Imperial Lumber Company, has recently been elected president of the Traders Bank.

The friends of Mr. John Donogh, formerly of the firm of Donogh & Oliver, will be pleased to learn that as a result of a considerable stay in Muskoka during the summer, his health has been entirely restored and he is again in harness. Mr. Donogh has connected himself with the Imperial Lumber Company, of Toronto. The company has recently been reorganized and is moving into new offices in the Traders Bank Building.

The amalgamation is announced of the Canada Wood Specialty Company and N. Janes & Sons, of Orillia, Ont., under the name of The Canada Wood Specialty Company, Limited. Mr. J. H. Lavallee is president; Mr. George Thompson, vice-president; and Mr. C. B. Janes, secretary-treasurer and manager.

OUR SHINGLES

FACTS ARE FACTS WHETHER TOLD ABOUT FISH OR SHINGLES

We make a fine 16-inch Shingle.
We make a fine 18-inch Shingle.
We make a fine 24-inch Shingle.
We make all thicknesses from 6-2 inch to 1 9/16 inch.

They are going out of our different mills at the rate of 200,000,000 a year. We make more shingles than any one firm in the world. Just think of it!

We claim to be experts. That is not gall. That is a statement which is proven constantly by the testimony of our customers from the Pacific Coast to the Atlantic Coast on the Canadian side, and from Maine to Puget Sound.

Mixed Cars our Specialty. Don't forget that we have all kinds of House Finishing Material in Fir and Cedar, and can load any quantity with shingles.

Come, let us deal together.

STOCKS AND PRICES.

Jesse Cook is reported to have purchased a 400 acre timber limit near Orillia, Ont.

Last week the Parry Sound Lumber Company shipped about 5,000,000 feet of lumber by vessel.

In the Saginaw valley log run pine is quoted at $18 to $25, box lumber at $14 to $16, and mill culls at $12.

A report comes from Bangor, Me., that Congressman Powers has sold 107,000 acres of spruce timber lands for $500,000.

Lath are in request in the Chicago market at $3.25 for No. 1 white pine, $2.75 for No. 1 mixed and $2.25 for mixed pine and hemlock.

The call for cooperage stock is light, and there is a weaker tone to the market. In Chicago tierce hoops range from $12 to $12.50, and tierce staves from $21 to $22.

W. M. McKay, of St. John, N.B., is reported to have purchased from C. W. Robinson, of Moncton, several lots of timber land at Diligent river, paying $20,000 therefor.

S. B. Trick, of Oshawa, has purchased a timber limit on the shores of Gull Lake. The timber will be manufactured in the mill at Norland recently purchased from Stephens Argue.

William Anderson, of Quebec, has sold to Champoux Bros., of Disraeli, about 200 square miles of timber limits on Causapscal River and Salmon Lake, in the province of Quebec, at $125 per mile.

R. P. Murphy, of Rat Portage, Ont., has been given a contract to get out a large quantity of ties this winter for the C.P.R., and has commenced work on his limit on Sturgeon Lake.

Eastern capitalists are reported to have purchased 15,000 acres of timber limits near Big Bend, B. C. They have purchased the saw mill across the lake from Arrowhead and intend removing the plant to a new site.

The Manitoulin and North Shore Railway Company, of Sault Ste. Marie, Ont., have just taken tenders for the supply of 55,000 railway ties and 580 telegraph poles, to be used in connection with the construction of the road between Spanish River and White Fish Bay.

The largest timber sale ever recorded in the south was made last week, when the Hayward Timber Company, of Davenport, Iowa, sold 81,000 acres of timber limits situated in Grant, Hot Springs and Dallas counties. The price paid is understood to have been $1,125,000.

J. W. Munro, of Pembroke, Ont., is putting in camps on his limits in the township of Whitman, and this winter will take out 200,000 feet of board timber. In the township of Harty he will take out a similar amount, besides a large quantity of saw mill logs.

QUESTIONS AND ANSWERS.

A subscriber writes : "Can you give me a recipe for a cement which will cement leather firmly to an iron pulley. I want to increase the diameter of it slightly ?"

ANS.—The following information may be of value to you in connection with the means to be employed forcementing leather to an iron surface : Clean the surface of the pulley with naptha ; roughor sand-paper the surface of the leather which is to be applied to the pulley ; apply a thin coat of the best rubber cement to the surface of the pulley and to the rough surface of the leather. Allow the cement to dry (not in the sun) for an hour or more, then repeat the coats and allow the cement to dry as before ; then apply the cemented surface of the leather to the cemented surface of the pulley. Care must be taken to keep dust, moisture, and the fingers from the cemented surfaces. The leather should be applied so as to prevent air from being enclosed between the cement coats ; this can be done by rolling the leather onto the pulley. When the leather is on the pulley, roll it well with a hard roller, or pound the surface of the leather with a hammer or mallet. The ends of the leather should be scarfed and cemented so they will firmly unite together, and the lap in the leather should be made so the revolving of the pulley will not start it, but, on the contrary, will press it down when the belt or other device comes in contact with the lap. A good quality of coach body varnish, or good glue is frequently used to apply leather to the surface of iron pulleys. Coat the surface of the pulley and the rough surface of the leather to be applied to the pulley with the varnish, and apply the leather while the varnish or glue is in a soft state. The glue should be hot when applied. An excellent cement can be made of one (1) part best fine para rubber, washed and well seasoned, three (3) parts best purified gutta percha, dissolved in ether. This is an expensive cement, and takes some time to make it properly. Apply the same as varnish or glue, that is, do not allow it to dry as in the case of rubber.

"R. F." : What is the difference between priming and foaming ?

ANS.—Priming is the name given to that state of the boiler when the water is picked up, in the form of spray, by the steam, and carried over to the engine or other machinery in which the steam is being used. It is caused by too heavy a demand being made on the boiler for steam, or by the steam spaces and channels being too small for the amount of steam required to be passed through them, and may exist in a boiler supplied with the cleanest water, whereas foaming is due to dirty water and consists of a violent agitation of the water in the boiler, due to the presence of impurities, such as grease and salt. Both are dangerous to the engine, because they are likely to result in water getting into the cylinders, with all its attendant disastrous results ; and to the boiler because they are likely to result in low water and overheating of the boiler plates.

Kelsey & Kelsey, of North Tonawanda, Y.N. recently purchased 1,000,000 ft. of white pine at Ashland, Wis.

JUST A FEW SHINGLE FIGURES.

How many lumbermen actually realize the enormous quantities of red cedar shingles that are annually shipped from the Pacific Coast into this and Eastern territory? asks the Mississippi Valley Lumberman. This is an age of large figures, and familiarity with newspaper reports of billion-dollar trusts and other undertakings on an unheard-of scale are apt to cause one to smile indulgently on an annual shipment of from 20,000 to 25,000 cars.

It is estimated by competent authorities that 30,000 cars of shingles will this year find a market east of the Rockies. Let us see what this means. Taking 170,000 as a basis for a carload, we have for 30,000 cars, 5,100,0000,000 shingles. As each shingle is four inches wide, if laid side by side this mass would extend 20,400,000,000 inches, or 1,700,000,000 feet, or 321,969 miles ; in other words, a pathway to the moon and one-third back could be made. Laid end to end, using sixteen inches as an average length, and many run as high as twenty-four inches, we would have a line of 1,287,876 miles, or five times the distance of the moon from the earth. Placed on the equator, it would circle the earth 5½ times, or make a walk 17 feet wide and 25,000 miles long. Packed in bunches and piled one on another, we would have a column extending 17,000,000 feet into the air, or nearly 1,000 times higher than the highest mountain. At the present market prices these shingles would represent a value of about $13,500,000.

A few figures will do wonders in awakening people to an appreciation of a thing of this kind. Thirty thousand cars can be expressed in three words and one is apt to estimate accordingly, but five minutes' work with a pencil will astonish him.

PRESERVATION OF RAILWAY SLEEPERS.

In years gone by, says Engineering, little attention was paid by railway engineers in the United States to the preservation of sleepers by creosoting, burnettising and the like. The small interest taken in the matter was in part due to the very ample supplies of cheap timber then available ; but there were also other reasons. With the light rails then used the useful life of a sleeper was not closed by decay, but rather by the fact that serious abrasion under the rail-seats necessitated their replacement, even if comparatively sound as a whole. With the stiffer rails now in use but little abrasion takes place, and even when light rails are still used, the adoption of tie-plates has become general and protects the timber immediately under the rail, so that but few sleepers are now removed for any reason but general decay. In combination with the higher price of timber, this has led to greater attention being directed to the matter of preserving the sleepers, but creosoting seems still to be generally regarded as too expensive, particularly in the West, where the chloride of zinc process seems to be the most in favour. As western lines run, to a large extent, through somewhat arid country, this process seems to give satisfaction on the whole, in spite of the readiness with which the zinc salt can be washed out of the timber.

Mr. Robert Fulton, of the firm of Fulton Bros., saw millers, Fingal, Ont., died early last month.

NEW PROCESS OF REMOVING SCALE.

Patents have recently been granted to Mr. E. D. Hopcroft, Kidder Munster, England, for a process of removing scale from the interior surfaces of boilers, which lacks nothing in novelty, judged from a practical standpoint. The prevailing idea among engineers is that boiler scale must be removed by either solvents, oil or muscle and frequently by a judicious combinatiou of the three, which idea may still continue uppermost in the minds of practical engineers for some time to come. The method referred to contemplates the removal of scale by subjecting the boiler to a very low temperature. The apparatus consists of a combined steam and belt driven ammonia compressor, of portable design, together with the usual form of condenser and expansion coils. The boiler is first emptied and the scale covered interior surfaces allowed to become thoroughly dry. The pipes conveying the expanding ammonia gas are then connected to the boiler and the temperature of the latter reduced to 20-25 degrees below the freezing point. The rapid contraction of the the plates and tubes causes the scale, which has become extremely brittle under the low temperature, to flake off very rapidly, and the rise in the temperature which soon follows completes the operation, removing by the expansion of the plates the remainder of the scale. The operation is said to be quick and effective, which, if proved to be true by a more thorough trial of the process, offers an easy solution of the scale problem, especially for those operating ice and refrigerating machinery.

It is not unlikely that, should such a simple process fulfill the requirements from a practical stanpoint, a new enterprise, that of professional boiler cleaning, will find a substantial backing and a lot of needy customers to cater to.

It must be noted, however, that expansion and contraction of the boiler plates have not proved specially beneficial, and it will be difficult to convince engineers that it is good practice to deliberately stimulate an operation that they have sought by every means to retard.

CEDAR POLE SPECIFICATIONS.

With the increased demand for and use of cedar poles in the erection of telegraph and telephone lines, there should be some uniform basis on which contracts could be made and inspections had of these poles. As the business is now conducted a contract for cedar poles, unless every dimension is specified, means the delivery of almost any old pole. T. E. Mitten, general superintendent of the International Traction Company, of Buffalo, suggests the following specifications for cedar poles :

All poles to be cut of white live cedar, peeled, sound at top and not more than 15 per. cent. rot at butt ; base area to taper gradually and be free from large knots ; a crook of ¾ inch to five feet in length will be allowed.

Poles must be free from wind twists and large cracks, and measure as follows :

Length.	At Top	6 feet from butt.
12 ft	4 in	8 in.
20 ft	5 in	8 in.
25 ft	6 in	10 in.
30 ft	8 in	14 in.
35 ft	7 in	14 in.
40 ft	7 in	15 in.
45 ft	7 in	16 in.
50 ft	7 in	17 in.
55 ft	7 in	18 in.
60 ft	7 in	20 in.
65 ft	7 in	20 in.
70 ft	7 in	21 in.

Mr. L. Sapery, of the Syracuse Smelting Works, Montreal, has recently returned from an extended trip to Europe.

Mr. H. Walcot, of London, Eng., expects to pay his annual visit to Canada as usual about the middle of November, to call on his different shippers at Quebec, Montreal and the west.

Mr. George Harris, who by the way is a Canadian, is the affable and energetic travelling representative of Messrs. Geo. T. Houston & Co., the well-known hardwood manufacturers and dealers of Chicago. Mr. Harris frequently takes a run through Canada, and has succeeded in working up quite a considerable trade in this country.

CORRESPONDENCE

DRIVING HARDWOOD LOGS.

TROUT CREEK, Oct. 21st, 1901.

Editor CANADA LUMBERMAN :

Dear Sir,—Noticing various ways described in your paper of handling hardwood logs in the water, I beg leave to add an account of my experience.

For twenty years we have driven hardwood logs and find it can be done without difficulty and small loss, if any. Soft, rock and grey elm, black and white ash, basswood and cherry, if sound, will float, but any log will sink if much shake or rot exists. Maple, beech and birch can be driven in the loose by cutting and skidding on rollways during summer months, then banking them on skids by the water's edge until May or June of the following spring, to allow them to dry well. When put in the water they should be driven with the least delay to the mill.

The ends of all hardwood logs should be painted when skidded to preserve the timber and especially before putting in water to prevent soakage.

Oak cannot be driven any distance successfully unless placed with alternating softwood logs. We have rafted them with pine, hemlock and cedar by the use of small iron or steel dogs—driven in the logs—in which a ring has been arranged through which to pass a line or rope, thereby securing them to each other. Drive two dogs in the top side of each log, say eight or ten feet apart, then pass two lines of half inch rope through the rings, beginning with a pine or other softwood, followed by two or three hardwood, then another softwood, and so on until the raft is complete. The stream would require to be fairly straight with no rough rapids to break the raft.

We have never tried the peeling of birch logs for driving, bnt think it would be rather an expensive proceeding. We have tried boring holes in the ends and plugging them, leaving space for air, but without success.

Yours truly,
C. W. BURNES.

FROM ALGOMA.

DAY MILLS, Oct. 23rd, 1901.

Editor CANADA LUMBERMAN :

Dear Sir,—Lumbering is quite brisk in this part of Algoma. Wages are high for bush work. Teamsters and cant hook men are getting $28 to $32 per month, and other men $20 to $26. I think it would be to the interest of all lumbermen in Canada to stop rough timber from coming in to our country duty free. If this were stopped and a duty put on all undressed lumber and bill stuff coming from Uncle Sam, mill owners would not feel a dollar or two per month on extra wages. When at Sault Ste. Marie the other day I was shown by a lumber dealer there some nice hemlock all No. 1 and 2, 2 x 10 inch 18 feet long, that just cost the dealer $9.50 per M, f.o.b. scow, Soo, Ont. This hemlock came from Uncle Sam's bush.

Jas. Harris has cut this season for the W. Doherty Company, of Clinton, 1,500,000 feet of lumber. W. G. Doherty, of Doherty & Company, made a business trip to Toronto and other points in the interest of his firm in October, and I understand disposed of some stock.

Jas. I. Harris made a business trip to the Soo October 21st.

R. Blutie, one of W. G. Doherty's employees, had a very close call to a watery grave a few days ago. Early in the morning, while out in a birch bark canoe on Mud Lake shooting duck, he lost control of the canoe and was capsized. His cries for help were heard just in time. W. J. Harris ran about 100 rods to the lake, got another birch canoe and paddled out to the drowning man and brought him safely to land. We think W. J. Harris should have a Victoria Cross for performing such a feat as this. He is fireman for the W. Doherty Company here.

Jas. First, of Iron Bridge, has a new shingle mill in operation at that place.

D. Gordon, of Thessalon, is moving his steam portable mill out to the C.P.R. track about four miles east of Thessalon. Mr. Gordon is putting in a siding for his own use.

"HEMLOCK."

ANNOYANCE OF SMOKE FROM FACTORIES.

The following judgment, rendered in the Court of Appeal of Hamilton, is of much interest to manufacturers :

Whipple vs. Ontario Box Company.—Judgment on appeal by plaintiffs from judgment of Ferguson, J., dismissing action to restrain defendants from allowing smoke and sawdust to escape from their factory, No. 120 Main street, in the city of Hamilton, and fall upon the plaintiff's dwelling-house opposite the factory, and known as number 119 Main street. The defendants allege that for more than 20 years they have enjoyed as of right, and without interruption, an easement or right to have the smoke and sawdust from their lands and premises escape and fall upon the plaintiff's property. The trial judge held that owing to defendants' having to fill a contract for boxes for British troops in China, that the factory was working to its full capacity, and the separator got clogged, but that this lasted only a few days, when the nuisance was abated ; that as to smoke the particles alleged to have been carried and deposited by it had not been shown to have come from defendants' factory, which is thoroughly modern in all its appliances, though it appeared that no smoke consumer had yet been devised which will apply to the consumption of fuel such as shavings and sawdust. Held, that in view of the conflicting evidence between the parties with respect to whether the smoke complained of came from the defendants' chimney, coupled with letter of Oct 22nd, 1900, from plaintiffs' solicitors to defendants' solicitors, complaining of sawdust only, and also Plaintiff Whipple's statement to the inspector, this court is not disposed to disagree with the judge below in concluding that the plaintiff had failed to establish that the smoke came from the defendants' chimney. But on the question of sawdust, an entirely different conclusion must be formed. The great preponderance of evidence shows that quantities of sawdust have been blown from defendants' to plaintiffs' premises, which materially interfered with their comfort and enjoyment of their property, and constituted a substantial nuisance, to the abatement of which they were entitled when action brought, but having ceased before trial, an injunction need not be granted. If recommended, however, a fresh action may be brought. Dinning v. Grosvenor Dairies, 1900, W.N., p. 265. Judgment below reversed, and judgment directed to be entered for plaintiff for $50 damages, and full costs throughout. Per Armour, C.J.O., the plaintiffs are entitled to an injunction as to the smoke and soot also, but should the nuisance be continued, a fresh action may be brought.

AMERICAN REDUCTOIN IN LUMBER DUTIES.

(From a Washington Correspondent.)

While it may be that President Roosevelt will not follow up the example of the late Chief Magistrate of the Republic in advocating in his forthcoming message to Congress reciprocity with neighbouring nations, yet the signs of the times point to an early if not immediate reduction in lumber duties entering the United States and a total wiping out of the duties before the next presidential term. The imposition of the Dingley tariff on lumber was expected to favor the American lumberman and injure his Canadian competitor. The test of the Dingley Bill has proven that the American consumer pays the duty, and that never before have the Canadian lumbermen been so prosperous as since the imposition of what was thought on this side to be a fatal blow.

The bold stand taken by the government of the province of Ontario in proclaiming that far from accepting the blow from the Dingley Bill with meekness, that henceforth no more Ontario logs should leave her shores in an unmanufactured state, has opened the eyes of many of our people to the futility of trying to coerce a neighbouring nation of resolute men of our own stock. The Congress, and particularly the Republican party, sees how the wind is blowing, and that the farmers of the treeless states and many of the best men in the east who have much influence in the party are desirous of taking off the lumber duties entirely. The growing scarcity of white pine and the increased demand for this matchless and indispensible wood is another reason why the Americans want to preserve the small remnant they have. Altogether, it would seem the outlook for the holders of Canadian white pine stumpage could not be more assuring, and high as it is thought by some to be, it will likely become still higher.

RIGHT TO DEADMAN'S ISLAND.

Readers of THE LUMBERMAN will remember the somewhat exciting incidents in connection with the proposed establishment of a saw mill on Deadman's Island, in Vancouver harbor, by Theodore Ludgate. Steps were taken by the citizens of Vancouver to prevent the building of the mill, and the proceedings brought up the question of the title of the island. Mr. Justice Martin has just given judgment, quashing Ludgate's claim to the island, and placing the ownership of the island in the province of British Columbia. The counsel for plaintiff sought to establish that the land in question being part of the military reserve of the province, became part of the Dominion. Their contention was that the reserve existed prior to the time of the survey made in 1863 by Corporal Turner, R. E. The defendant's counsel argued that the land in question should be regarded as lands under section 109 of the British North America Act. The judge, however, in his judgment said that he failed to see that section 109 of the British North America Act has any application in this connection, for the existence of no trust or interest has been shown, and there was nothing to show that the province should cease to be the owner if it had been. In concluding the judge says : "The result is that defendant's case fails, and the title to Deadman's island is hereby declared to be in His Majesty the King on behalf of the province of British Columbia, and a perpetual injunction is granted restraining the defendant Ludgate from felling trees or otherwise trespassing upon said lands to which the plaintiff is entitled to immediate possession."

SOUTH AFRICA WANTS SHINGLES.

Consul General Stowe, of Cape Town, wants information from American manufacturers as to the efficiency, life, etc., of shingles as a roof covering. He explains that the De Beers Explosive Co., of Somerset West, Cape Colony, which has used shingles on all the isolated buildings of its explosive works, wishes to roof the company's residences with the same material. These houses will be erected at or near cities, and the municipalities object to the use of shingles for roofing. A fine showing is expected to be made by western red cedars in the South African market, if the manufacturers make an effort to get the trade that is promised there. No supply point has the advantages that the west posesses in taking care of a shingle demand in South Africa, and it is quite possible that a cargo trade could be worked up that would do much to relieve the conjested conditions caused by over-production.

The cargo market has the advantage of not being dependent upon railroad rates for an existence.

THE NEWS

R. P. Young purposes building a saw mill at Rosseau, Ont.

Irons & Winnacott, of Huntsville, Ont., are building a new dry kiln.

Charles Boynton, of Georgeville, Que., is considering the erection of a new mill.

Charles Stuckey is moving his planing mill from Bay Mills to Sault Ste. Marie, Ont.

The plainng mill of Gillespie & Grier at Parry Sound, Ont., is being offered for sale.

R. Holmes, of Ottawa, has made an offer to establish a planing mill at Fort Frances, Ont.

McArthur Bros., of Toronto, are carrying on extensive lumbering operations in Texas.

It is the intention of S. L. Kyle to build a wood-working factory on Bridge street, Ottawa.

James Thompson is rebuilding his saw mill at Terranova, Ont., which was burned recently.

John Charlton, M.P., is projecting a railway to run from Port Rowan to Collingwood, Ont.

The Swan River Lumber Company have bought the the saw mill and timber rights of John Sinnott at Swan River, Man.

It is understood that the Parry Sound Lumber Company intends starting a box shook factory at their mills in Parry Sound, Ont.

A company is seeking incorporation at Gananoque, Ont., to establish a factory for the manufacture of tables and other woodenware.

The Scotstown Lumber Company, of Scotstown, Que., closed down their mill about the middle of October, having exhausted their supply of logs.

The Michigan Land & Lumber Company will this winter overhaul their saw mill at Blind River, Ont., and substitute steam for water power.

Napoleon Payette has commenced the erection of a planing mill and sash and door factory at Penetanguishene, Ont. Mr. Payette is a large contractor.

A by-law was carried last month by the ratepayers of Sundridge, Ont., granting assistance to the Veneer & Box Company. No votes were cast against the by-law.

Fred. Moore, of Woodstock, N.B., is about to build a new mill, to contain rotary, two shingle mills, patent edger, clapboard and lath machines and other necessary appliances.

A dispatch from Vancouver, B.C., states that a Puget Sound lumberman has selected a site for a shingle mill to be built at Vancouver, and has purchased 613 acres of cedar limits.

The new mill of the Conger Lumber Company of Parry Sound, Ont., was put in operation about one month ago. The mill was built under the superintendence of Barney Wickett, and is first-class in every respect.

A special committee of the council of New Westminster, B.C., has recommended the lease of certain property to the Pacific Coast Lumber Company, which proposes erecting a large saw mill.

The third action against J. R. Booth, of Ottawa, for dumping sawdust into the Ottawa river, has been withdrawn, Mr. Booth promising to erect a burner at the close of the present season.

The Victoria Lumber & Manufactnring Company, of Chemainus, B.C., are making improvements to their plant. The mill has been extended about 80 feet and the yard is being rearranged and enlarged.

W. C. Edwards & Company, of Ottawa, are taking steps to prevent the spread of smallpox in the camps during the coming winter. A doctor has been engaged to make a regular inspection of the camps.

The largest saw mill in Maine has just been completed at Ashland, on the Aroostook river. It is 207x60 feet and equipped with double-cutting band mills. Platforms from which the lumber is loaded on cars are four in number, each 400 feet long.

A new lumber concern is that of Bahnsen & Bucholtz, of Pembroke, Ont., composed of B. B. Bahnsen and A. Bucholtz. Mr. Bahnsen is an expert bookkeeper, having been with the Pembroke Lumber Company for fourteen years, while Mr. Bucholtz is an experienced man in the lumber business.

The Department of the Interior at Ottawa has asked Mr. Schenck, superintendent of the Vanderbilt Park at Biltmore, N.C., to report upon the forestry system of Canada. Next spring he will go to the Northwest and investigate the conditions under which tree plantiug has been carried on in the past, and will recommend a policy for the future.

A new mill has been built at Lower Stewiacke, N.S,, by Alfred Dickie to replace the one destroyed by fire in July last. The patent edger and rotary were built by the Oxford Foundry and Machine Company, of Oxford, N.S., and the lath machine by the St. John Iron Works. The mill is fitted with electric lights. It was built under the direction of D. Gillis, the millwright being C. D. Smith.

In a tree felling contest at Tacoma, Wash., a log measuring 37 inches in diameter was placed on end just as it came from the forest. Three teams entered the contest, the winners cutting through the tree in the remarkable time of 4 minutes and 9 seconds. This beats the world's record. A new record was also established in the one man contest, a 33 inch log being cut through in 6 minutes and 22 seconds.

Among the few industrial establishments in Canada visited by the Duke and Duchess of Cornwall was the Hastings saw mill of the British Columbia Mills, Timber & Trading Company at Vancouver B.C. This mill is one of the largest of its kind in the Dominion, and is equipped with the latest appliances. The mill was in operation, and the process of manufacturing lumber was watched with intense interest by the Royal party. On leaving the mill each of the Royal guests was presented with a souvenir of the visit in the shape of a morocco case, containing veneer samples of various kinds of wood.

The employees of the Pembroke Lumber Company, of Pembroke, Ont., held their annual supper a fortnight ago. The decorations were more elaborate than usual in honor of the guest of the evening, Mr. B. B. Bahnsen, who has recently severed his connection with the company as secretary after 17 years of service. Mr. Bahnsen was presented with an address, which was read by Mr. W. H. Bromley. He was also made the recipient of a splendid typewriter. Mr. Bahnsen responded briefly, thanking his fellow employees for their kindly remembrances and expressing regret that he was about to sever his business relations with them.

Upon a recent visit of the Attorney-General to the Rainy River district, the question of timber dues was brought up at Beaver Mills. It was contended that Government officials had in some cases demanded dues. The Attorney-General replied that of course the bona-fide settlers were not liable to stumpage dues. These are charged only to lumbermen, pulp companies, etc., who buy merely the right to cut timber, but persons who hold the land itself on patents from the Government can use such timber upon it as is not reserved without paying any dues. He explained, however, that certain persons who held land patents when not real settlers came there with the purpose of remaining as annual producers, but they were merely plunderers of the timber, their land patent being merely a blind under which they stripped off all the good spruce, etc., and then left. These people, wherever possible, would be required to pay a stumpage tax.

An event of considerable interest at the recent exhibition in Victoria, B.C., was a wood cutting competition. To assist the management, E. C. Atkins & Company, saw manufacturers, sent two expert wood choppers to take part, their names being H. S. Dorman and Joseph Bode. Two Canadian lumbermen also entered, namely, James and Robert Mearns, of Koksaat. A commencement was made with the cutting of a seventeen inch vertical log, Dorman using the axe first. He completed his work in 5 minutes and 39 seconds. The other results on logs of the same size were: R. J. Mearns, 5 mins., 25 secs. ; Bode, 5 mins., 25¾ secs., and J. Mearns, 7 mins., 12 secs. Cutting same size log with axe horizontally—Dorman, 4 mins., 12 secs. ; R. Mearns, 3 mins., 56½ secs. ; Bode, 4 mins., 4 secs. Double sawing, horizontal 24 inch log—R. and J. Mearns, 55 secs ; Bode and Dorman, 40 secs. Sawing perpendicular log, same size—Bode and Dorman, 43 secs. ; the Mearns brothers, 1 min. and 16 secs. One man back contest, 24 inch log—Dorman, 2 mins., 12½ secs. ; J. Mearns, 2 mins., 41 secs. ; R. Mearns, 2 mins., 36½ secs., and J. H. Bode, 2 mins., 10 secs. Bode and Dorman used one saw in all the contests, namely, the Atkins Pacifico. The Mearns Bros. used the Simons and Canadian razor saws.

THE NEW BRUNWICK FOUNDRY AND MACHINE WORKS.

Attention is directed to the advertisement in this issue of Messrs. McFarlane, Thompson and Anderson, of Fredericton, N.B. This well-known firm have been established now over halt a century, the business passing into the hands of the present firm in 1870, and under their able and energetic management has expanded, new lines have been added until to-day the products of the company find purchasers all over Canada. One of the most important specialties manufactured is their patent Dunbar shingle machine, for which they control the Canadian patent, secured in September, 1885. This machine is beyond question and universally admitted to be one of the best on the market. It is favorably known from the Atlantic to the Pacific. A large number of these machines are now in use. They have stood the test for years, and users claim that they give perfect satisfaction, and value them highly for their durability and excellent work.

This firm also manufacture rotary saw mills, planers, band saws, wood working machinery, lathes, vertical drills and all kinds of mill machinery. Another specialty is their well-known Buckeye automatic engine manufactured from plans and specifications procured from the patentees in the United States. This engine is guaranteed to give as good results in machine power from the smallest quantity of fuel as any automatic engine in the world. The present members of the firm are Walter McFarlane, Hon. P. F. Thompson and Peter McFarlane. Mr. Anderson, one of the original members, died some years ago while on a visit to Scotland.

PERSONAL.

Mr. W. A. Charlton, M.P.P., has been nominated by the Liberals of South Norfolk to contest that riding in the Provincial election to be held next spring.

Mr. H. Cargill, M.P., president of the Cargill Lumber Company, of Cargill, Ont., has returned from a three months' trip to Great Britain and the Continent.

Mr. A. G. McKenzie, of Stonewall, Man., died at his home in that place early in October. Deceased had recently been appointed to the position of forest fire ranger for the Dominion Government.

Mr. J. G. Scott, Mayor of New Westminster, B.C., and manager of the Pacific Coast Lumber Company, of that city, has announced that he will not be a candidate for the Mayoralty for a third term.

Mr. L. H. Shepard, of Shepard, Farmer & Company, wholesale lumber dealers, Boston, left early in October for British Columbia and the Puget Sound country. He will make an inspection of the mill of the Spicer Shingle Mill Company at Vancouver, B.C.

The death took place last month at St. John, N.B., of William Barnhill, who conducted a lumber business at Marble Cove, N.B., previous to 1881, when he retired from active business life. He was a director of the St. John Railway Company.

The bereavement which has fallen upon Mr. Thomas Conlon, of the lumber firm of J. & T. Conlon, Thorold, Ont., has elicited the deepest sympathy from his numerous friends and the citizens of that place. Mr. Conlon's youngest son Louie, 17 years of age, died at his home on the 14th ultimo as a result of a bicycle accident received some time previously. At the time of his death Mr. Conlon was absent at his mills at Little Current, and almost simultaneously with the death of his youngest son, the family received a telegram from him announcing the death of his third son, James, who was at Little Current, the cause being typhoid fever.

WOOD PULP DEPARTMENT

PULP WOOD—TREATMENT OF THE RAW MATERIAL IN THE LOG AND ITS MEASUREMENT.*

By a Canadian Pulpmaker.

Chapter I.—The Raw Material.

Although the ordinary text-books on paper-making and the manufacture of wood pulp give mention of a large variety of woods for the production of fibre, yet in actual practice the number of woods used is very limited. Of recent years, however, the inevitable law of supply and demand has made itself felt, with the result that it is being found possible to utilize material that at one time manufacturers would not look at.

In the various reports of the Forestry Bureau of the United States Government we find the following woods mentioned as being suitable for pulp wood, viz: Spruce, Pine, Fir, Balsam, Hemlock, Poplar, Larch, Tamarac, Aspen, Cottonwood, Basswood, Birch, Maple, Cypress, Willow, Beech, Chestnut.

Now while it is true that a certain percentage of cellulose can be obtained from all these woods, and that the quantity of fibre producible from a given weight of raw material does not vary largely as between the several woods mentioned, yet there are important qualifications outside of the mere yield of cellulose which effect the suitability of any particular wood far more than the percentage yield.

It is this fact that limits the choice of wood, and so long as the supply of the wood giving the best results with least cost has been abundant, the pulpmaker has confined his attention to those woods which give a fibre of good colour and strength at a minimum expenditure of labour and material.

Until quite recently, therefore, pulpmakers have confined their attention almost exclusively to the use of spruce, because this wood has always proved to be the best for the production of pulp, either in the form of mechanical wood or as chemical pulp.

That spruce ranks first as a pulpwood more on account of its physical properties than for the chemical composition of the raw material may be judged from the following table, showing the proportion of cellulose in certain woods:—

Wood.	Cellolose %
Poplar	62.77
Silver Fir	56.90
Birch	55.52
Willow	55.72
Pine	53.27
Spruce	53.00
Chestnut	52.64
Beech	45.47
Ebony	30.00

The woods which are mainly utilized either in conjunction with spruce or alone as pulp-woods are poplar and balsam. It is, however, worthy of notice that while spruce is equally suitable for mechanical pulp or for chemical, these other woods have only a limited application. Thus the use of poplar is almost entirely confined to the production of soda pulp, while balsam is generally worked in with spruce in the manufacture of ground wood.

In actual practice the rules followed, and the methods adopted, are so much a matter of local circumstances that it is not easy to describe, or define, under what conditions the best results are to be obtained.

For instance, some pulpmakers have a great objection to the use of balsam in the manufacture of ground wood. On the other hand, it will be found that in many mills balsam is used to the extent of 20 to 25 per cent. The chief difficulty experienced with balsam is that the wood grinds somewhat flaky and gives an irregular fibre. In the majority of mills using this wood the usual practice is to keep the proportion down to about 10 to 12 per cent., and in this way the inferior condition of the fibre does not seriously affect the pulp made.

It might be noticed in passing that the admixture of other woods with spruce in the manufacture of mechanical pulp will often account for irregular running on the paper machine, because the physical condition of the fibres from different woods is not the same. Every papermaker knows that some pulps work free while others act just the opposite on the machine. Sometimes it is necessary to run the pulp with a large proportion of water in order to get the stuff to felt properly, and for reasons of this kind the papermaker is apt to blame the quality of the pulp, and attribute the irregularity to the wrong causes.

A good deal might be done in this direction to determine the approximate effect of certain percentages of any particular wood added to spruce, say for instance the balsam, so that the maximum amount might be made known. For this it would be desirable to have a number of tests made with varying proportions of the added wood in which the conditions of manipulation and behaviour on the paper machina would be closly watched.

For the preparation of chemical pulp a greater number of woods are available, and it is easy to see that such would naturally be expected. By the process employed the non-cellulose matters are more or less eliminated, so that the resultant cellulose, or fibre proper, would not differ much as to its chemical composition, the difference being mainly those of a physical character. These are very varied, and then to such an extent that pulp prepared from one class of wood is not suitable for the uses to which pulp made from another wood can be applied.

Thus, while spruce makes a good strong white pulp, poplar will only produce a soft pliable pulp, which in its way is, however, as useful a material as spruce.

Of late years hemlock has been tried as a pulp wood with a moderate degree of success. The fibre obtained is somewhat dark colored, and of coarse quality, and is not suitable for anything but common paper. Another wood on which experiments have been made is tamarac, also known as larch. So far this wood has proved to be of little or no service for pulp. The cost of production is too high, as the amount of sulphite liquor required per ton of raw wood is greater than with spruce, and the complete removal of the resinous matters is a difficult operation. The subsequent process of bleaching is also an expensive one, and since the fibre produced without bleaching is poor the pulp cannot be used for good papers. It is claimed that the proportion of chips and shives in fibre prepared from tamarac is another serious objection to its use.

It is interesting to note in connection with the subject of spruce as the raw material for pulp that methods have been introduced to utilize the wood to the fullest extent, so as to obtain a high percentage yield. In some districts where the spruce is used for the manufacture of lumber as well as of pulp, an arrangement is made whereby the logs are converted into lumber and the smaller ones into pulp In this way there is a material saving effected. When small logs are cut up into lumber a large proportion of the wood is wasted owing to the necessity of cutting the round log into a square piece of timber, whereas with a large log the amount is much less relatively speaking. For the manufacture of pulp the small logs are as equally serviceable as the large ones, while some Rlaim that the former usually make the best pulp, so that the exchange is of advantage to all parties. Moreover, a machine has recently been introduced by means of which the slabs, as they are called, cut off from the large logs can be barked and eventually chipped up for conversion into chemical pulp. The economy effected is said to be considerable, though it is obvious that such a method of using all the wood can only pay when the cost of the raw material is fairly high, seeing that the expense attaching to the adoption of any such process as that described must be great, because of the labour required to handle the slabs produced.

Generally speaking it is certain that the utilization of woods other than spruce will only be achieved as circumstances demand, and it is hardly to be expected that pulp manufacturers will experiment with such woods until the supply of spruce runs a bit short so that the manipulation of them can be managed at a profit. The present price of pulp does not seem to warrant many attempts in this direction just now.

But at the same time the supply of good sound spruce in abundant quantities easily and cheaply got from the forests will not last for ever under existing conditions of lumbering, and steps ought to be taken to see that the supply is not unduly shortened.

*From Paper and Pulp.

BRITISH WOOD PULP ASSOCIATION.

A committee meeting of this Association was held in London on August 21st.

Members of the Association having received communications from certain papermakers who wish to introduce a new clause into the contract note, empowering them to entirely reject deliveries of pulp when they are found to be inferior in value to the contracted quality to the extent of 5s. per ton, the matter was discussed at some length, and it was decided to communicate with the Papermakers' Association on the subject.

Communications having taken place with the Statistical Office of the Custom House for the supply of weekly returns of the imports of wood pulp into each port of the United Kingdom, and comprising the particulars from the entries for this article as contained in Bill of Entry B, it was decided to accept the offer made by the Custom House and to supply these returns weekly to members at a charge of £1 1s. 0d. per annum.

Disputes have arisen as to what the minimum percentage of variation in moisture in wood pulp, from the 10 per cent. basis, should be before either party could claim for the difference, analysts engaged in this class of work were consulted, and it was decided to lay their replies before the Papermakers' Association and ask for an expression of opinion. The majority of the analysts considered that one-half per cent. would be a fair allowance.

The arbitration submission form recommended at the annual general meeting was revised, and temporarily agreed to.

Some discussion took place as to the advisability of amending the "force majeure" clause of the Contract Note so as to better define its object, but no decision was arrived at.

PULP NOTES.

The Thorold Pulp Company, which recently commenced operations at Thorold, Ont., has made a proposition to the town to start a paper mill.

It is reported that the demand for pulp wood in Quebec this fall shows a marked falling off from previous years. The price is lower, and the demand from the United States very light.

Through the efforts of the British Wood Pulp Association the statistical office of the London custom house now make separate returns of both dry and wet mechanical pulp and dry and wet chemical pulp.

It seems that a settlement in the arbitration case of Edward Lloyd versus Sturgeon Falls Pulp Company has not yet been reached, as proceedings are about to be again opened in the Superior Court at Toronto.

The wood pulp market in Great Britain is rather firmer than it was one month ago.

CANADIAN GENERAL ELECTRIC CO., LIMITED,
Makers of High Class Electrical Apparatus of all kinds
Head Office : Toronto, Ont.

Contracts for chemical pulp for delivery next year are being made more freely, whilst for mechanical enquiries show that paper-makers have still to buy very largely.

A representative of Messrs. Harmsworth, proprietor of the London, England, Daily Mail, has made an inspection of the pulp mill of the Maritime Sulphite Fibre Company, at Chatham, N.B., with a view to purchase.

E. H. Humbero, manager of the Belgo-Canadian Pulp Company, of Shawinigan Falls, Que., was accidentally killed by his own gun while inspecting the limits of the company in the Lake Edward district. Deceased recently arrived in Canada from Belgium.

Progress is being made towards the formation of a combine of nearly all the sulphite pulp mills of the United States and Canada. It is said that the proposition provide that each manufacturer shall be paid for his plant in stock, preferred and common, both going to makers whose mills show a profit, and common stock to mills not showing an earning capacity.

The progress of the pulp and paper industry of the Dominion is shown by the annual statement of the Laurentide Pulp Company, operating at Grand Mere, Que. The net profits for the past year were $296,361 over and above interest on bonds on all other charges. This is upwards of 18 per cent. on the stock of the company. It is said that the entire product of the company is sold up to the end of the year 1902.

The paper and pulp industry of the United States, according to a preliminary census report issued the other day, has a total capital of $167,507,713, a gain of 86.5 per cent. since 1890. The number of establishments is 763, a gain of 17.6 per cent. The value of products is $127,286,162, an increase of 61.2 per cent The average number of wage earners is 49,656 ; total wages, $20,746,429 ; miscellaneous expenses, $10,184,106 ; cost of materials used, $70,530,239.

The Sissiboo Pulp Mills Company, of Weymouth, N.S., has defaulted in the payment of interest on its bond issue. About two years ago the stock of the company was placed on the market, with a bond issue of $250,000, secured by a mortgage upon the property owned by the company. The present inability to meet the interest is reported to be owing to internal difficulties on the part of the management. It is also probable that the recent low selling price of pulp has been a factor in the embarrassment. The company has an excellent directorate, and it is to be hoped that a satisfactory settlement will be made.

BAND RESAWS.

A few months ago a correspondent asked in these columns for some information in regard to 8-inch resaws. I happen to be taking care of just such saws this season in connection with a band log mill, writes J. S. Phillipi, in The Wood-Worker. The maximum feed with which the mill is equipped is 4 inches to the revolution of saw. You can figure what feed that is per minute, taking a maximum tooth travel of 8,000 feet and length of saw as 31 feet.

The stock we resaw comes from a band and a circular, generally in planks 2⅜ inches thick, and runs in widths from 40 inches down. It will be seen from this that with a 4-inch feed each tooth (1¾-inch space) cuts a little less than 1-50-inch. This, to my notion, is not nearly enough feed on stock, especially from 16-inch down, on which I think my saws would stand up to from 75 to 150 per cent. more.

In regard to the width of lap, etc., of which he inquires, that matter has heretofore been well discussed here. However, in my practice right at the present time on these saws, I make a lap ranging from 7-16 to ½-inch, generally nearer the former than the latter. I find old saws here of 17-gage with laps ¾ inch wide, which is ⅛-inch wider than I make on 14-gage saws. I certainly prefer the narrow lap. The proper size brazing tongs for this gage is about ⅝x1 or 1⅛ inches.

In regard to his question about the crown in back of saw, there has been quite a change of opinion and practice in the last ten years. If the teachings of filers at that day were unquestionably correct, then such a thing as a double-cutting band would never have been invented, nor could they be a success. Fortunately, band filers and band saw mill men are progressive and not dependent on the traditions of the past.

I can easily recall the time when I was told of a certain filer who put up his saws "straight" (no reference here to the late circular controversy). I was told that his saws went well, and I immediately asked if they might not go better if they had crown in back. But at the present time, the only objection I have to a straight back is this: A single cutting saw that is fitted this way will not be straight any longer after the first run of a few hours. The concave in saw at this time, of course, will be so little that it may not be possible to discover it. But a saw is all the time stretching more on tooth edge than on back, so it is certainly only a matter of a short time until it will be concave or sway-backed. While I can find no good objection to a straight back, the sway or concave back I would not regard as a desirable condition. Therefore, I prefer to fit them with crown back, say about 1-16 inch in 8 or 10 feet. In this condition they can be tensioned several times before they become concave. Furthermore, with the system of work I use, it is quite as easy to fit saws crowning as straight, and as easy to keep the back even.

An American firm has secured a contract to finish red gum block for street paving in England, to the extent of 100,000 square yards. The awarding of so large a contract for American material excited some opposition but in a trial of jarrah, Swedish yellow deal and red gum it developed that the gum lasted five months longer than the others, and was good for two years more of service.

To Purchasing Agents:

Corner 22nd and Centre Avenue,

GENTLEMEN: CHICAGO, October 12th, 1901.

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of hardwood lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber, we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO.,

Douglas' Egyptian Liniment

Is the most Powerful and best preparation on sale.

We guarantee Egyptian Liniment to be the most powerful Liniment that medical science has ever formulated. It will reach deeper seated troubles and produce better effect for lameness and unhealthy sores than any other preparation on sale. It contains no grease, its effects are absorbent, alterative and penetrative, will penetrate Muscle, Membrane and Tissue to the Bone and go to the seat of the disease direct.

Is the only Liniment on sale that will STOP BLEEDING at ONCE.

It is the fastest seller on the market. If you have not used it in your Camps, etc., we have what you want.

Douglas' Egyptian Liniment ....is it....

We mean this and will thank you to give us a trial order for one or more gross Egyptian Liniment upon the following conditions:

Will ship you any amount you may require, and if our Liniment is not better than anything you have heretofore used it can be returned to us with freight charges "both ways" added.

Remember we have a perfect absorbent preparation and the only Liniment that will stop blood at once, cauterize the wound and prevent and cure Blood Poisoning.

Kindly send us a small order.

Endorsed by the largest lumber firms in Canada.

NAPANEE, ONTARIO,

Proprietors and Manufacturers. ***CANADA.***

Prices upon application. Samples sent free, postage prepaid.

It is a pleasure to forward samples to Lumbermen.

TRANSMITTING POWER BY ELECTRICITY TO SHOP TOOLS.

A committee of one, and a very strong one, has been appointed by the Railway Master Mechanics' Association to investigate and report upon the subject of transmitting power by electricity in railway shops. This is a very seasonable subject, for while a few of our more enterprising superintendents of machinery are applying electric motors to their principal shop tools and thereby effecting a decided saving of expense, the majority are holding off for the purpose of obtaining more information concerning the value of electrical motors. We have no doubt, says Railway and Locomotive Engineering, but the report of the committee referred to will have the effect of convincing many of the doubting Thomases that electrical motors are perfectly reliable.

Meanwhile we would advise those who are anxious to adopt electric motors and are hanging off on the ropes of two opinions to read a paper on the "Influence of Electric Transmission Upon Workshop Expansion" read at the last meeting of the American Society of Mechanical Engineers.

This paper states briefly and comprehensively a number of the most important advantages of electricity as the motive power, not only where the future of the installation cannot be foretold, but where the gradual development of a plant or system of workshops may be in contemplation.

Future areas of power may be planned and arranged for with the utmost freedom and entirely irrespective of power considerations. They can be located as desired, on separate floors, in various departments or in detached buildings. Original provision for prospective development is not necessary in the electric system, but is required by shafting transmission. There is no expense for contemplated additions till they are actually installed as required.

Permanent additions to the electric generating plant and the distributing system are made with a gradual and pro rata outlay of capital, instead of in disproportionate blocks of new equipment, as required by mechanical transmission.

Extensions of electric transmission and new centers of power distribution may be established at any time and of reasonable capacity, anywhere and at any distance, at minimum cost for labor and material. There is no crowding, overloading, or interference with existing conditions, or with the daily progress of routine work. Temporary extensions to meet sudden demands for power at any point are quickly made by running to the desired location electric wires or cables. These are easily removed when no longer required and as readily used elsewhere for similar purposes. The shifts are made with the least expense of time and labor in handling, and with no accompanying waste of material to suit different conditions.

Auxiliary power is always at hand for emergencies and to almost any reasonable extent, on account of the reserve nature of the electric supply.

On a number of creosoted beech railway sleepers laid on two railways in Elsass-Lothringen in 1868-69, about 86 per cent. were in use as late as 1897. In the Eberfeld district only 13 per cent. had to be renewed after thirty years' service; these were impregnated with a mixture of creosote and zinc chloride. On the Eastern of France Railway, after twenty-one years' service only 6 4 per cent. of beech-creosoted sleepers required renewal, as against 26.7 per cent. creosoted oak sleepers and 52 per cent. untreated oak sleepers.

LUMBERMEN AT THE FAIR.

The employees of the W. C. Edwards' saw mills at Rockland, accompanied by their wives, again this year visited the Central Canada Fair at Ottawa. The visitors, numbering about 800, were taken to the Capital on a special train at the expense of the Company. The latter also stood the cost of admission to the fair grounds. A general holiday was proclaimed at the mills, and all took advantage of this fact to take in the fair. This is the third year Mr. Edwards has provided this treat.

The St. John Ship Laborers' Society have decided to accept an offer made by William Thompson & Company to give them employment on three lines of steamers at the same rate of wages and conditions as last season, namely, 30 cents an hour.

The shingle mill burned at Marble Cove, N.B., last month was built in 1890 by the late Robert Roberts, and is now controlled by the sons of deceased, who, during the winter, carry on a general contracting business.

Noble's Dominion Detective Agency

TORONTO, CANADA

Janes Building, 75 Yonge Street, Toronto

We are prepared to undertake all legitimate detective business and investigations for Corporations, Companies, Banks, Mercantile Houses, Attorneys, or individuals in any part of Canada or the United States by experienced and reliable operatives. All work is confidential.

Operatives supplied to Lumber Camps for detecting frauds and losses.

Terms reasonable as is consistent with good service. This agency does not work for rewards. Positively no divorce business accepted. Patronage respectfully solicited. Yours respectfully.

FORESTRY AWARDS.

The directors of the Pan-American Exposition Company have announced the following awards to Canadian exhibitors in the Forestry Department :

Silver medals—Bureau of Forestry, Toronto, Ont., forestry products ; Columbia Handle and Lumber Co., London, Ont., turned wood (rough and manufactured) ; Sault Ste. Marie Paper and Pulp Co., Sault Ste. Marie, Ont., dry pulp.

Bronze medals—J. R. Booth, Ottawa, Ont., tree sections ; J. B. Smith & Sons, Toronto, Ont., house furnishings.

Honorable mention—Algoma Commercial Co., Sault Ste. Marie, Ont., square sections of birch ; British Canadian Lumber Co., Kearney, Ont., chair parts and birch specimens ; Lyn Last Co., Lyn, Ont., shoe lasts ; W. H. Morgan, Huntsville, Ont., inlaid baptismal font ; Mitchell Bros., Berkeley, Ont., maple rollers ; Sutherland, Innes Co., Limited, Chatham, tree sections, hoops and staves ; Standard Chemical Co., Deseronto, Ont., charcoal and wood alcohol.

Andrew Hutchinson, a young man 19 years of age, fell across the slash table in the saw mill of the Rat Portage Lumber Company at Beaver Mills, Ont., and was killed almost instantly.

IMMENSE FORESTS.

Hon. Mr. Duffy, one of the members of the Quebec Government, expresses himself very enthusiastically as to the prospects of his province. Only one-sixth of the timber lands are yet under lease, he says. He also declared that if the present rate of cutting on the licensed limits were continued for ten years, it would scarcely represent the product of one year's growth on the whole extent of the Crown lands. Further, he stated, that if all the public lands were put under lease, it would place the finances on a safe footing and would in no way jeopardize the interests of the province.

TRADE NOTES.

The Syracuse Smelting Works, of Montreal, have secured a large order for babbit metal to be shipped to Holland. It seems strange that the Boer sympathisers should thus show loyalty to Canadians.

Messrs. Geo. T. Houston & Co., of Chicago, have recently purchased 157,000 acres of hardwood timber land in the Delta Valley on the Yazoo river, Miss., and are about to erect a large mill and install four bands. This will give them in the new mill a capacity double that of their present mill at Bigbee.

WANTS PAVING BLOCKS.

The Canadian Manufacturers' Association, Toronto, is advised by a firm of commission agents in London, Eng., that they are prepared to take up the sole agency in the United Kindgom and the continent for Canadian manufacturers of the following goods :

Fir, hemlock or pine railway sleepers cut to the size of 8 ft. 11 in. x 10 in. x 5 in.

Granite paving sets in sizes of approximately 9 x 6 x 3 inches.

Hard paving blocks, red gum or other similar wood about the same size as the granite.

Wood pulp in cargoes.

Nickel ore, zinc ore.

They state that in almost every instance they could arrange to make sales of large quantities of stuff, and would be glad to have proposals from any firm who are willing to open connections.

Joakley—That's a clever bit.

Coakley—Yes ; that's my Jetsam. He's a very promising marine painter ; and, do you know, he started life as a humble lumberman.

Joakley—Ah ! once a hewer of wood and now a drawer of water.—Philadelphia Press.

THE SUTHERLAND-INNES EXHIBIT.

The Sutherland-Innes Co., Chatham, Ont., are among our most liberal exhibitors of forest products. They took the Grand Prize at the Paris Exposition, and have an exhibit at the Glasgow Exposition. At the Pan-American they had an exhibit consisting of, one section elm log, 3 ft. 6 in. by 5 ft. 2 in. ; one section red oak log, 3 ft. 6 in. ; one section white oak log, 3 ft. 6 in. ; one section sycamore, 3 ft. 6 in. ; one section black ash, 3 ft. 6 in. ; one section basswood, 3 ft. 6 in. ; elm staves, maple staves, red oak staves, basswood staves, white ash staves, black ash staves, elm hoops, red oak, basswood, elm, black ash, and maple heading, separate bundles, and bark for decorative purposes.

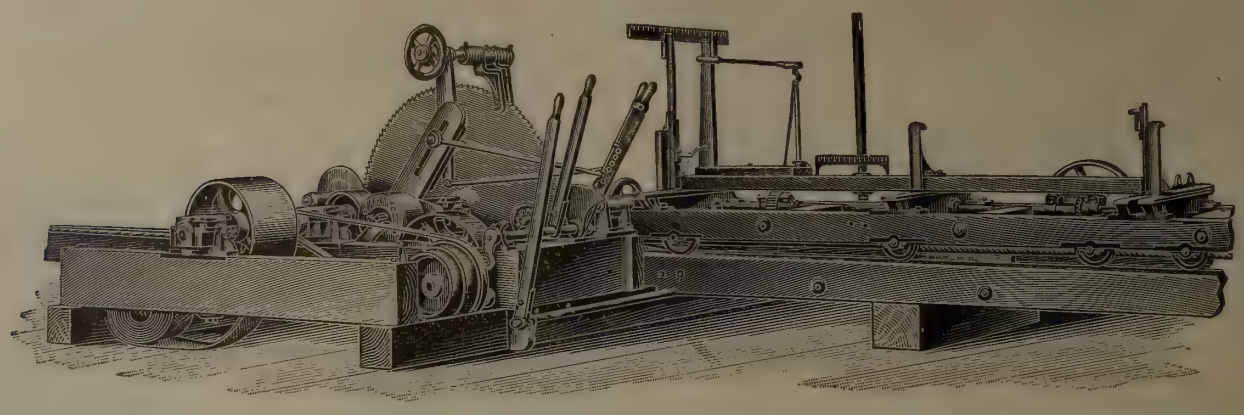
The "Canadian" Over Log Saw Guide

PATENTED IN CANADA AND UNITED STATES.



Your Mill would make more money if you would make more lumber from the same quantity of logs. You can do it by using a thinner saw, and you can use a thinner saw with one of my Patent Over Log Saw Guides. They are adapted to either Stationary or Portable Saw Mills, Re-sawing Machines, &c, &c. The illustration shows one of my Portable Saw Mills equipped with this Guide and carrying a saw 60 in. diameter, 12 guage. All my Portable Mills will take saws up to 72 in. diameter, and this guide will take saws from 36 to 72 in. diameter. It is adjustable every way. I am prepared to fill orders for complete Circular Saw Mill Outfits, or will make the guide to fit any ordinary existing saw frame.

THE LEFFEL AND VULCAN TURBINES

POSSESS DISTINCTIVE MERITS, which should have the attention of water power owners 1st—They are strongly and carefully built. 2nd—They are economical in their use of water. 3rd—They develop more power in proportion to the water used than any other Turbine built. Mr. J. D. Flavelle, of the Flavelle Milling Co., of Lindsay, writes us under date of March 7th as follows:

"Referring to the two 74" water wheels (Leffels) purchased from you during the past year. As far as we have had an opportunity of testing, they have done their work excellently, in fact are doing more than you guaranteed them for. We took a test of the power they were developing with a head of water of 3 ft. 10 in., and they developed very close to 100 h. p. We are thoroughly satisfied with same."

This letter is but one of many such.

We also Manufacture **The Lane Saw Mill, Four Styles of Shingle Machines, Lath Machine Edgers, Trimmers, Pulleys, Hangers, Boxes, Etc.**

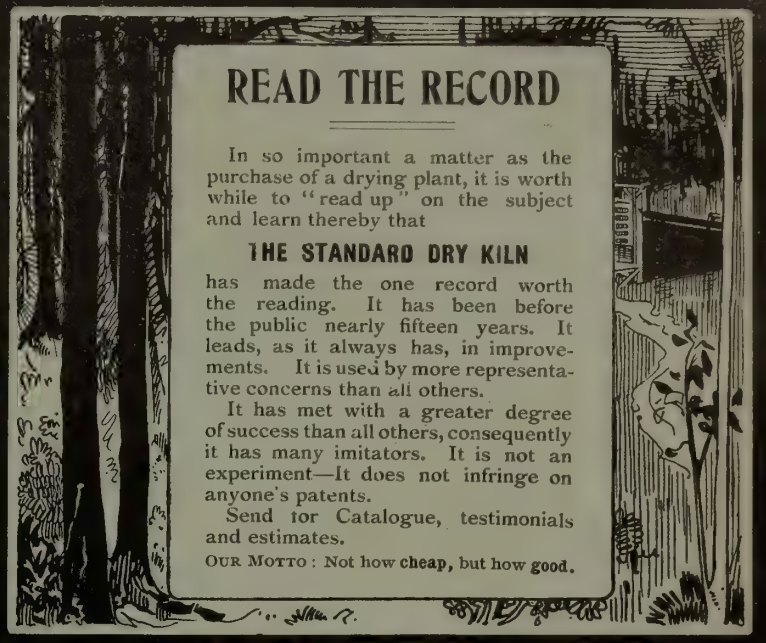
THE STANDARD DRY KILN



READ THE RECORD

In so important a matter as the purchase of a drying plant, it is worth while to "read up" on the subject and learn thereby that

THE STANDARD DRY KILN

has made the one record worth the reading. It has been before the public nearly fifteen years. It leads, as it always has, in improvements. It is used by more representative concerns than all others.

It has met with a greater degree of success than all others, consequently it has many imitators. It is not an experiment—It does not infringe on anyone's patents.

Send for Catalogue, testimonials and estimates.

OUR MOTTO: Not how **cheap**, but how **good.**

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It made of "Razor Steel," which is the finest ever used in manufacture of Saws. We have the sole control of steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to steel which no other process can approach.

Maple Leaf Saw Set

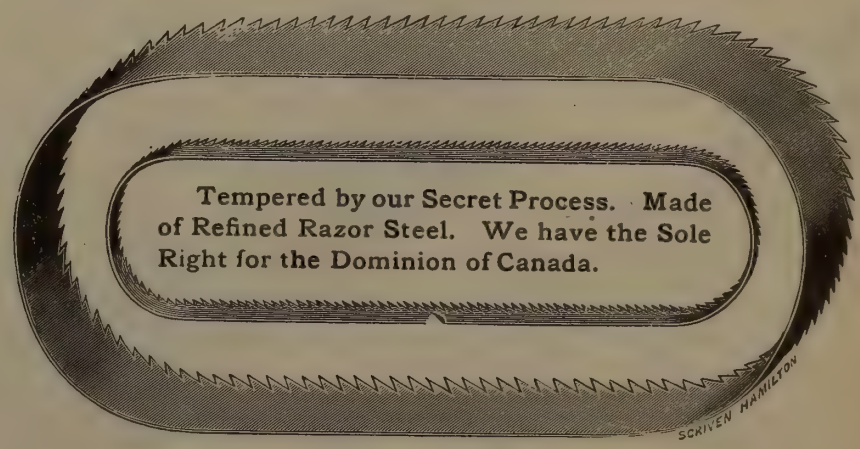
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



Tempered by our Secret Process. Made of Refined Razor Steel. We have the Sole Right for the Dominion of Canada.
SCRIVEN HAMILTON

THE CANADA LUMBERMAN

VOLUME XXI.
NUMBER 11.

TORONTO, CANADA, DECEMBER, 1901

TERMS, $1.00 PER YEAR
Single Copies, 10 Cents

MR. FREDERICK DYKE.

The lumber export business has now become one of the chief industries of Canada, the natural resources which the Dominion possesses in this line affording advantages for the profitable investment of capital which are, perhaps, not found to the same extent elsewhere. English capitalists have of late been turning their attention in this direction, one of the leading firms engaged in the business being Thos. B. Neale & Company, timber and lumber agents and exporters, with head offices at Liverpool, Eng. This firm operate principally in the Maritime Provinces, Mr. Frederick Dyke, of whom a likeness is shown, is their Canadian representive. Their offices are situated at Chatham, N. B., from which point large quantities of spruce deals and other lumber are shipped.

Although a young man, Mr. Dyke possesses a thorough knowledge of the lumber trade, and particularly of the requirements of the British market. He was born in Liverpool, England, in 1875. At the age of fifteen he entered the Liverpool office of Price & Pierce, of which Mr. Thomas B. Neale was then manager, as apprentice. Upon Mr. Neale taking over the business from Price & Pierce, in 1891, and establishing the firm of Neale, Harrison & Company, Mr. Dyke was engaged by the latter firm, and in 1896 was removed to their Miramichi office, later becoming the representative in the Maritime Provinces of Thomas B. Neale & Company, who succeeded Neale, Harrison & Company.

For the season now closing the shipments by Mr. Dyke from the Miramichi were about 12,000,000 feet of spruce, with some pine and birch, and from the Dalhousie district about 2,000,000 feet. The firm which he represents are also agents for various concerns shipping deals from the Nova Scotian ports, and for Messrs. W. & J. Sharples on the west coast of England and Ireland. Mr. Dyke expects to leave for England in the early part of this month.

Probably the oldest timber in the world which has been subjected to the use of man is that found in an ancient Egyptian temple, in connection with the stone work, which is known to be at least 4,000 years old.

In making foundations for piles of lumber where it is not handy to get timbers for the purpose, inch lumber s sometimes used by piling the boards on top of each other to the required height, taking eight pieces of 1x6 to make a 6x8. This form of foundation, while strong, is objectionable from the fact that it is likely to rot and has not the stiffness desirable in timber usually employed in this kind of work. A Chicago yard uses as a substitute for boards a frame made of two pieces of 1x6-16, and blocks of 2x6, 6 inches long, nailed on end every 6 inches. This makes a light and easily portable frame that has all the required stiffness of a piece of timber and has less tendency to rot than either the boards or the solid stick.

HARDWOODS ALONG THE CANADA ATLANTIC RAILWAY.

Owing to the receipt of many inquiries in regard to the location of hardwood mills, the Canada Atlantic Railway has given us the following information with respect to the timber adjacent to their line:

The district immediately west of Ottawa is well supplied with the softer woods suitable for cooperage stock, shooks, etc., such as elm, ash and basswood, but west of Eganvillle, maple, ash, beech and birch are quite plentiful. West of Madawaska, for a distance of one

MR. FREDERICK DYKE.

hundred and thirty miles, or through to Georgian Bay, there is an unbroken belt of white and yellow birch, with a good average of maple, ash, elm and basswood. There is probably no section of Canada producing the quantity or as fine a quality of birch, and we understand that the white birch represents practically the bulk of that now standing in Ontario. The timber is well matured and is especially suited for furniture stock, veneers and wood specialties, and owing to its great size, planks and specially sawn timber for the Continental markets. This timber will average twenty-four to thirty inches in diameter, sound and remarkably clear, as the samples of stock and veneers which we have for inspection will show. We are sorry that we have no illustrations prepared of the almost universal tracts of birch in this territory, but ample can be seen from the trains at any season to justify the statement that the supply is practically inexhaustible.

This timber is generally held by licensees of berths who are engaged in taking out the pine, little or no effort so far being in evidence as regards operations in hardwood. Locations can be readily obtained or the logs jobbed. A very large quantity of the hardwood is also held by settlers, who are only too glad to take out on contract, as it furnishes winter work at home. There is no difficulty in getting out several million feet in this way per annum in the immediate neighborbood of any mill and at as low a cost to the manufacturer under present conditions as if limits were operated by himself.

CANADIAN TIMBER AT GLASGOW.

A correspondent at Glasgow, writing to a Toronto daily paper, thus refers to the display of timber products at the recent exhibition:

"Much interest has been taken in the forestry exhibit, which is very complete and well arranged, and contains specimens of every kind of merchantable timber grown in the Dominion. Articles of woodenware were much inquired for, and there is a growing demand for material cut in particular sizes to be used in manufactories in this country. This applies to furniture also. The polish put upon the Canadian furniture is said not to stand in this climate, and the dealers in furniture prefer to have the material in the rough, or partly finished, and to put it together and finish it themselves. There are many advantages in this mode of dealing, especially as regards carriage, but the chief difficulty in the way of extending business in this direction is that few Canadians who could carry it on to advantage are in a position to fill such large orders as it would be necessary to accept to secure the trade. No doubt the commissioners in their report will be able to give valuable information with regard to this, as well as other branches of trade in which Canada is concerned. The Peterboro' canoe is always an object of interest, and all the exhibits of them, and most it not all of the carriages, will be sold before the close of the Exhibition. Canadian carriages are much admired, both for style, comfort, lightness and price. They have, however, one drawback, and that is the difficulty of turning —a serious one in narrow country roads. If this difficulty could be obviated without causing weakness of construction or increase of price the trade in these vehicles could be largely extended."

The Premier of Quebec has adjusted the difficulty over land rights existing between the settlers on the Lievre river and the McLaren Lumber Company, of Buckingham. The settlers complained that the company's men cut logs off the lands and made roads through the cultivated fields belonging to the complainants. It seems that the difficulty arose through a misunderstanding as to the extent of the McLaren limits, and the company agreed to recompense the settlers on a cash basis.

ALGOMA MILL REMODELLED.

For nearly a decade what is known as the "Red Mill" at Little Current, Ont., owned by McKinnon & Walsh, stood in idleness. About one year ago the W. & A. McArthur Company, Limited, of Cheboygan, Mich., wishing to transfer their operations to Ontario, purchased the property, and have transformed it into one of the most modern saw-milling plants in the country, as may be inferred from the accompanying illustrations.

The officers of the company are: Chairman, A. McArthur; secretary, W. F. DePuy; treasurer and general manager, C. E. Mould.

SAW MILL OF MCARTHUR BROS. & COMPANY, LITTLE CURRENT, ONT.

It was found that as a result of the long period of idleness the mill required a most thorough overhauling to put it in running order; in fact, the plant was almost entirely rebuilt, and in addition thereto there was constructed a mile of new tram and piling ground, sufficient for a stock of 18,000,000 feet, which includes 3,000 feet of water front, with not less than 14 feet of water along the entire front.

The mill is circular and gang, all the machinery being of American manufacture excepting the three engines, which were supplied by the William Hamilton Manufacturing Company, of Peterborough, Ont. After a run last year of about four and one-half months, the mill, under the supervision of Mr. Thomas McGuire, local manager, was again overhauled and a number of improvements added, particularly in the refuse system. There is in connection with the mill a complete electric light plant, and in addition to furnishing light for the mill and yard, a number of business places in the town are supplied during the running season.

This season operations were commenced on April 25th on day run, and on May 15th on night run, making a total run up to November 9th of 308 days. During this time 20,000,000 feet of lumber were produced, the greater part of which was cut from a small class of logs. It is claimed that with logs averaging about ten or twelve to the thousand, the mill would be capable of turning out from 28,000,000 to 30,000,000 feet. In the run of 308 days, it is said that not more than 20 hours were lost as the result of breaks in the machinery or from any other cause, which is a high tribute to the ability of Mr. McGuire as a mill man.

The company obtain a log supply from their Beaverstone and Spanish River limits, situate as follows: Berths 5 and 8 and part of Humboldt, just west of the French River, and Berth 120, on the Spanish River, from which limits they are this winter putting in about 20,000,000 feet for next season's cut, besides about 2,000,000 feet which will be left over from this season. The timber is chiefly white pine.

TIMBER TRANSFER.

The M. Brennan & Sons Manufacturing Company, of Hamilton, closed a large deal with the Huntsville Lumber Company, last month, in which they sold fifty-eight square miles of white pine timber limits. From twenty-seven miles of this limit no logs or timber of any kind have ever yet been taken off. The sale includes the Brennan Company's mills and mill plant at Huntsville, and the price paid was two hundred and twelve thousand dollars. The Huntsville Lumber Company now owns one hundred and twenty square miles of pine timber, sixty-five miles of which is still virgin, no logs having been taken off it; and the other berths have been only partly cut. This recent purchase includes the last remnant of pine berths lying this side of the height of land and tributary to the Big East waters. The whole one hundred and twenty miles of timber can easily be floated to Huntsville, where the Huntsville Lumber Company now have two modern band-saw mills. Mr. A. Tait, President of the Company, had been negotiating with the Brennan Company for two months. The M. Brennan & Sons Company yet own large timber berths tributary to the Georgian Bay, and at other points.

THE STURGEON FALLS ARBITRATION.

A settlement has finally been reached in the arbitration suit between the Edward Lloyd Company, of England, and the Sturgeon Falls Pulp Company. The terms agreed upon are understood to be as follows:

The Edward Lloyd Company agrees to reconvey the whole property affected to the Sturgeon Falls Company. The former will pay to the latter damages amounting to £102,417 19s. 7d., made up thus: £58,417 19s. 7d. actual cash already paid on account of the purchase, and a further sum of £44,000 in cash and assets, the value of the assets to be ascertained by a valuator. The valuator is to be chosen by the parties to the agreement, and if they are not able to agree a choice will be made by Sir John Boyd, Chancellor for Ontario. The Lloyd Company agrees to give a collateral guarantee for an issue of 6 per cent. bonds of the Sturgeon Falls Pulp Company, amounting to £25,000, and also to purchase, if the Sturgeon Falls Company so desire, the output of the mills about to be completed for two years from the time of starting up. The Lloyd Company further agrees to withdraw all allegations made in the statement of claim affecting the good faith and character of the Sturgeon Falls Company, and the truthfulness of its representations, and the former further admits that the result of the timber explorations made alters the views it entertained. Furthermore, the Lloyd Company acknowledges that the trouble with the Sturgeon Falls Company has been the result of a business misunderstanding. The Lloyd Company further agrees to pay £7,000 to the Sturgeon Falls Pulp Company on account of the costs of the arbitration.

It is stated that the construction of the new mill will now be resumed and pushed to completion as rapidly as possible. The company will aim at manufacturing from 100 to 120 tons of pulp daily.

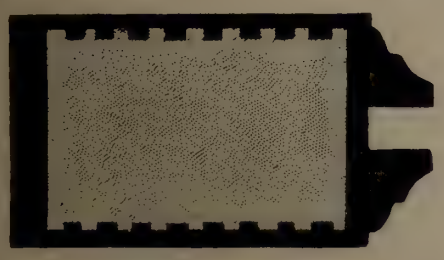
YARDS AND DOCK OF MCARTHUR BROS. & CO., LITTLE CURRENT, ONT.

POWDERED TALC AS A WOOD LUBRICANT.

The use of powered talc, or French chalk, as a lubricant for wood is not sufficiently appreciated. On new working or sliding parts a little rubbed in with a flannel or small brush will work wonders in the direction of smoother running; and where a piece of apparatus has been laid aside for some time it should always be lubricated in this manner before use. Talc may be objected to as liable to cause dust, but this can be entirely overcome by making a solid pencil of the chalk mixed with paraffin wax. Melt the paraffin and stir the talc into it, mixing very thoroughly. If the mass, on being allowed to cool, shows a slight tendency to crumbe it will be about the right consistency. So far from injuring the wood, this lubricant may rather be considered to season it—that is, it will tend to penetrate the pores and so resist damp.—Exchange.

GILMOUR'S PATENT DOORS.

We give below a section of a stile of one of Gilmour & Co's. patent lumber doors. These doors are meeting with a large demand both in this country and abroad. They can be manufactured in many kinds of wood, such as plain or quartered white or red oak, cypress, chestnut, white pine, ash, elm, birch, cherry, maple, quartered sycamore, mahogany, etc., facing ¼ in. thick, with a solid core of wood thickness according to that of the door. The sketch shows how the lumber is put together, and the manufacturers, Messrs. Gilmour & Company, of Trenton, Ont., claim it is equal

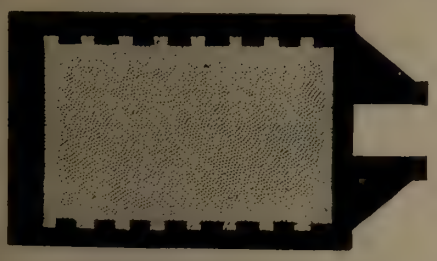


BEAD AND COVE SOLID MOULD.

or superior to the solid wood, and in hardwoods of course much less in weight, and being a 3-ply cannot warp or twist. The price comes considerably under that of solid hardwoods, and also under that of any veneered doors owing to the quickness with which the lumber can be manufactured; there is no necessity of keeping it under weight except as it passes through the machinery.

The wood is first kiln-dried with moist air, and to insure perfect dryness is further subject to heat up to 200 degrees. Waterproof cement is used.

The doors can be manufactured 1¼ in. and up thick, and either square, single or double



P. G. SOLID MOULD.

flush mould, Bolection mould, also moulded on solid, as seen in section.

Three-ply panels can be used, which, of course, are much stronger than most solid woods of the thickness.

DRYING LUMBER IN KILNS.

BY "SUMNER."

There was a time when one thought he must carry a stock of lumber sufficient for a year's supply ahead in order to satisfy the trade. That seemed to fill the bill then, but the demand increased to such an extent that the supply run short and there arose a demand for something to dry lumber quicker. From that time there has been a constant effort to develop a system for drying lumber that shall be quicker and better than the old system, and dry-kiln builders have succeeded in making a wonderful showing in the matter.

My object in writing on this subject is to show to some extent the different stages in dry-kiln building and their effect on lumber. In the first place, let me say I never worked nicer stock so far as drying was concerned than the lumber dried under a covered open shed. This stock was sometimes two years old. You could put a finish on it with a set of knives, without damage, while some of the artificially-dried stock will turn the edge of a knife in a few minutes, especially hard woods. I used to think this must be the result of a harder kind of wood than I was used to, but changed my mind, as I find the fault is in the drying.

Why is lumber dried by the heat of a stove harder to cut than air-dried lumber? I studied the matter and kept experimenting and reading about the nature of wood, and found that wood is a complete network of pores or airholes through which the water evaporates. Where the lumber is dried out of doors, under cover, the process is so slow there is practically no change in these pores, giving the lumber a soft, light surface, while stock subjected to artificial heat tends to collapse by the pores drawing together, making a hard, glassy surface, hard to cut. This for a long time kept artificial methods in the background; it was only after much study and experimenting that kiln builders were able to overcome the difficulty and arrive at the present systems of drying.

The first artificial dryer I remember was a carpenter shop where the lumber was set up on end around a stove. This did not long satisfy the demand, so they built rooms suitable for piling the stock and put in a stove. Usually ventilation of these rooms was the last thing thought of, as that would let the heat out and heat was just what they wanted to retain. Still, this also failed to supply the demand, and they must try again. Then another point arose—the insurance companies began to complain and raise rates because of the danger of fire from the stoves, hence they must look elsewhere for heat to dry the lumber. Then steam was given a chance to show what sort of agent it would prove in that line. It proved to be the very best thing possible.

Still they clung to the same old method of building a closed room, ceiled tightly to retain the heat, with practically no ventilation. These would not dry green lumber; the lumber must first be piled a few months or the kilns ruined it. I remember some of this style of kilns that were built from 12 to 16 feet wide and 18 to 24 feet long, with a network of pipes on the floor proper and a slat floor to pile stock on over the pipes. The valve for regulating steam was located at the end opposite the door and the operator must pass through the length of the kiln to shut off steam when the stock was dry. I have seen men attempt to go into those kilns to shut off steam, but could not because of the heat, showing that it must have been pretty hot. I used to be able to stand heat very well, so was often chosen for this duty; by keeping near the floor and going quickly I could shut off steam and get back without being overcome with heat.

This style of kiln answered the purpose for some time, but was extremely hard on lumber. Green lumber would "honeycomb" badly. Then experimenting began on the line of air-drying, and knowing that lumber dried in the open air dried much faster during the months when the wind blew strongest, kiln builders began to introduce the blower in order to create a draft, thus initiating the air-drying process. They have succeeded to such an extent that to-day in a first class dry-kiln lumber may be dried nearly perfect in the shortest possible time and still leave the stock soft enough to be easily worked. But right here let me tell you that some people could take the best dry-kiln in existence and spoil lumber in drying, while others could take one of these old back-number kilns and get fairly good results from it. Don't run away with the idea that anybody can operate a dry-kiln successfully. It requires as much knowledge and judgment as any other branch of wood-working. — The Wood-Worker.

A MAHOGANY CROTCH.

Mr. Arthur Rushforth, mahogany merchant, of Liverpool, England, has sent the CANADA LUMBERMAN a photograph of a mahogany crotch, which is herewith produced. The log

SPECIMEN OF MAHOGANY CROTCH.

was 15 feet long and about 30 inches wide, the crotch extending to 12 feet in length. Mr. Rushforth states that in his experience of about 25 years in the mahogany business it is the longest crotch that he has ever seen.

SAWING FROZEN LOGS.

"Are you going to do winter sawing this year?" inquired one lumberman of another. "We are planning to keep the mill running," replied the other. "You were inquiring some time ago regarding our experience in handling frozen logs. As you know, we have arranged to use all our exhaust steam in keeping our pond open. We have besides a closed box in which the water is sufficiently warm to take the frost out of most of the logs. We are figuring on utilizing all the waste material from the mill by converting it into steam and sending it into the pond direct. This ought to thoroughly thaw the logs.

Occasionally, however, the first few logs sent up after a new consignment has been received by rail are pretty thoroughly frozen. After a good deal of experience we have found that these logs can be sawed providing we have the right sort of a filer and the sawyer will reduce his feed.

Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C.H. Mortimer Publishing Company of Toronto. Limited

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICE :
IMPERIAL BUILDING, MONTREAL.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month

TERMS OF SUBSCRIPTION :
One Copy, Weekly and Monthly, One Year, in advance . . $1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $1.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensa ble for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE STURGEON FALLS ARBITRATION.

The dispute between the Edward Lloyd Company, of London, England, and the Sturgeon Falls Pulp Company, which has been going on for many months, has been finally settled in a manner that is eminently satisfactory to Canadians. The controversy arose over the sale of certain timber limits, a water power and uncompleted pulp and paper mills by the Sturgeon Falls Pulp Company to the Lloyd Company. A portion of the purchase price was paid by the Lloyd Company, but before their financial obligations were finally fulfilled, a protest was entered to the effect that the water power was inadequate for the operation of the mills and that there was a less quantity of timber on the limits than had been represented by the Sturgeon Falls Company. Proceedings were taken to have the matter settled by arbitration, resulting in a series of hearings. It is understood that a partial exploration was made to ascertain the quantity of the timber on the limits.

The terms of the settlement, published in another column, were arrived at by agreement between the contesting parties. The Lloyds agree to convey to the Sturgeon Falls Pulp Company all the property purchased, and to pay in damages $500,000 and in costs about $35,000 more. They further agree, inasmuch as the controversy may have injured the credit of the pulp company in England, to guarantee the payment of an issue of bonds by the pulp company. The Lloyds, it is understood, have formally retracted the allegations of bad faith made against the Sturgeon Falls Company.

While the dispute was in progress, the impression arose in England that the Lloyd Company had in a sense been swindled. Thus English capitalists held aloof from investing in Canada until the matter was disposed of. The settlement, it will be seen, completely exonerates the Canadian company. The effect of such a satisfactory and clearly-defined settlement can scarcely be overestimated. It will doubtless assure British capitalists that they may rely upon the business honesty of Canadians, and may reckon upon fair treatment in business transactions generally.

GRADING OF OTTAWA PINE.

On more than one occasion the Timber Trades Journal, of London, England, has attached the present method of grading pine as adopted by the Ottawa valley manufacturers and shippers. In a recent issue, under the heading of "The New Ottawa Classification," that journal says in part :

"The Quebec shippers appear to have made a serious blunder in trying to impose upon the buyers in this country the new Ottawa classification for pine. This innovation has been the cause of considerable inconvenience and trouble to the selling agents, and we have heard from important pine buyers that next season they will absolutely refuse to buy on this new assortment. We would remind our Canadian friends that the danger of habitual users of pine in this country seeking substitutes is very likely to occur."

We can scarcely think that the views of the writer in the Timber Trades Journal, as expressed above, are those of the timber trade of Great Britain ; in fact, we think that the statements have been made on very scant or unreliable information. Even the title of the article is misleading, while the reference to an "innovation" is very far from the facts.

The efforts of the Ottawa valley lumbermen have been directed towards regaining the old classification as established by the Quebec Supervisor of Cullers. It is well-known by the trade in this country, and no doubt abroad, that previous to the year 1899 the lumber trade of Canada was in an utterly depressed condition. The result was that during these years the standard of grading was made unreasonably high. This was in part due to the fact that the English bnyer took advantage of the existing conditions and influenced the grading to his own benefit, by constantly urging upon the seller the necessity of furnishing good grades and by the presence of his own inspectors when shipping. From year to year the grading became better, until the standard was ultimately so high as to leave little profit for the seller.

This condition of things could not be expected to continue. The year 1899 brought a return of prosperity to the lumber trade, and with it a natural desire on the part of our manufacturers and shippers to reap their just proportion of profit. An agreement was reached by the Ottawa valley manufacturers to form an association for the purpose of correcting innovations which had crept in at some of the mills in the matter of culling, and also for the purpose of making the culling as uniform as possible at all the mills. It was decided to adhere as closely as possible to the original standard of grades as laid down in the Act to regulate the culling of deals. This is the only aim which the Ottawa deal manufacturers have had in view.

The cause of complaint from England comes through the sharp contrast between a culling which had grown to be outrageously unfair to shippers, and the culling as laid down by the Supervisor of Cullers. The present grades are equal to, if not better than, those called for in the Act. This, we think, is generally understood by the trade in England, and even the statements in the journal referred to would scarcely have been suggested but for the fact that the demand for lumber this season has been rather backward.

THE BRITISH COLUMBIA TIMBER POLICY.

The Legislature of British Columbia, following in the footsteps of the Ontario Government, passed an Act at its last session prohibiting the export of cedar timber from the province. Upon certain representations being made as to the unfairness of enforcing the law at once, an extension of time was granted until the spring of 1902. In the meantime every opportunity is being seized by interested parties to bring about the abolition of the Act, and it is even stated that such a decision has already been reached by the government. In this case no doubt the wish is father to the thought, as such a statement is quite premature, and it is doubtful if such a step is even under consideration by the legislature.

The two interested factors are what is known as loggers on the one side, and the lumber and shingle manufacturers on the other. The former are engaged in taking out logs and selling them to manufacturers, the buyers being chiefly Puget Sound millmen. Most of the British Columbia manufacturers operate their own camps, and are not, therefore, large customers of the loggers. The government very wisely considered the interests of the manufacturer in preference to those of the logger when placing on the statute book the law prohibiting the export of cedar.

It is evident that the business of the logger will be injured by the legislation, but on the other hand the more important industry of the manufacture of lumber and shingles will be longer perpetuated. As to the advantages of the two industries little need be said. The logger expends a small sum for the cutting of the timber and exports it to a foreign country to be manufactured. The mill-man expends an equal sum in cutting the timber, and a much greater sum in manufacturing it into lumber, shingles, and other more finished products.

If the lumber industry of British Columbia is to prosper, a reasonable measure of protection must be given by the Government. The industry now suffers by unfair competition from United States manufacturers, who are permitted to ship into the Canadian market free of duty.

The success which has followed the Ontario timber policy should encourage the Government of British Columbia to enforce next spring the proposed export law. The situation in the two provinces is peculiarly similar, and there can be little doubt that the results would be as satisfactory in British Columbia as in Ontario.

EIDTORIAL NOTES.

The Canadian Manufacturers' Association, at its annual meeting in Montreal last month, passed a resolution in favor of the following duties on timber products coming into Canada: White and red pine, hemlock, tamarac, spruce, Douglas fir and cedar, $2 per thousand feet ; shingles, 30 cents per thousand ; laths, 20 cents per thousand. If these duties should be adopted by the Dominion Government, a large measure of relief would be afforded Canadian lumbermen generally and those of British Columbia in particular. An important section of the same resolution calls for the use of Canadian timber in all government contracts. In this respect the governments have been somewhat neglectful of the interests of the people, in omitting to specify Canadian material.

One would judge by the amonnt of space devoted to a discussion of the reciprocity question by lumber journals of the United States that there must be a strong sentiment in that country in favor of free lumber. Every possible argument is being brought forward by these journals to show that free lumber would be a dire calamity to the country, but nevertheless there are many advocates of a reciprocity treaty between Canada and the United States embodying the free interchange of forest products. It is not clear, in view of recent legislation on this side of the border, how this can be brought about, but the United States is apparently waking up to the fact that Canada is one of her best customers and that American products are purchased by Canadians to the value of $20 per capita annually.

The geographical position of the city of St. John, in New Brunswick, has made it one of the most important saw-milling points in Canada. The St. John river, which is over 450 miles long, and its numerous tributaries, drains a large section of territory in the state of Maine, making it compulsory for Maine lumbermen to float their logs to St. John for manufacture. Most of the mills located there are owned by Maine lumbermen. In time it is believed this will be changed, and logging by rail will become popular in the state of Maine. The Bangor & Aroostook Railroad Company are now making extensions which will ultimately complete a circuit of railway leading from Bangor and running around the great northern timber territory, in many sections of which the axe of the woodsman has never been wielded. As the forest lying within a reasonable haul of the driving streams becomes cut over, it may be that the logs will be carried out of the forest by rail, and that St. John mills will cease to manufacture the timber of Maine.

It is announced that Russia is about to apply scientific methods to her immense forests, with the object, we are told, of more vigorously competing for the timber trade of Great Britain. This movement illustrates the wisdom of the Dominion and Provincial Governments of Canada in taking steps to perpetuate the timber resources of this country. Great Britain is by all odds the greatest timber consuming country in the world. Her annual imports for the past five years have averaged in value £22,000,000. The quantity which Europe has supplied is each year showing a decrease, and it is thought that a further falling off may be prevented by the adoption of scientific forestry. Germany comes second as a timber consuming country, spending annually £8,000,000 less than Great Britain, while France comes third. Thus it will be seen that there is an immense market in Europe for Canadian timber. An Indian forest officer has stated that if the magnificent timber resources of Canada were controlled by a system as thorough as that established in India, the Dominion could easily supply the mother country with 3,000,000 tons of timber a year. "Why cannot such a system be started," queried the expert, "and why let Russia and all the rest in when our own Colonies can supply our needs, and, in doing so, enrich themselves ?"

CANADIAN WOODS FOR STREET PAVING.

The question of the suitability of Canadian woods for paving purposes is receiving considerable attention in Great Britain. Mr. J. W. Bradley, city engineer of Westminster, has made enquiries from leading dealers, whose opinions are given below. It will be seen that spruce is strongly recommended :

Improved Wood Pavement Co., Ltd. : Tried a sample of Quebec deals in Bond st. in 1896 in comparison with Baltic wood ; there is no apparent difference in the wear, and it seems to be doing well ; also tried it many years ago in St. Martin's-le-Grand, and it proved a success.

R. R. Dobell & Co. :—Have the impression that Canadian spruce would suit better for paving blocks than most other woods, and would certainly come very much cheaper than any red deals.

Watson & Todd, Liverpool. :—Have supplied the Liverpool Corporation with large quantities of Canadian red pine for paving purposes.

City Engineer, Liverpool :—Practically all the red pine deals used in this city during the last three or four years have been Canadian, and these have given satisfactory results. There does not appear to be much difference between the cost of Canadian and that of Baltic deals.

R. Lauder & Co., West Hartlepool :—Are not aware that any Canadian timber has been used for paving purposes, but would strongly recommend a trial of the red deal from Canada, as they consider it to be sounder, tougher and more durable than the Baltic, and costs very little more.

Bryce, Junor & White :—Consider that Canadian pine would be too expensive and too soft to compete with Baltic pine for wood paving purposes, but there is an excellent hard pine in Canada (which can be produced more cheaply than the standard Canadian pine) which is becoming favourably known, and it is possible this might prove satisfactory.

Burt, Boulton & Haywood, Ltd. :—Are of opinion that Canadian white spruce creosoted would make an excellent paving, the wood being sound, hard, bright and free from sap. The creosote would prevent any decay, and, moreover, the price would be less than Baltic yellow. All scaffold boards are cut from spruce

Price & Pierce :—As regards Canadian timber, white pine is of too soft a nature for street paving, but, in the opinion of many people, spruce is a most desirable wood for this purpose, and we have no doubt if it received a fair trial would be found to answer every purpose. It is a cheap and durable wood of a tough nature, and where it has been used has given satisfaction, but in certain quarters there is a prejudice against it, which has prevented it coming into use for this purpose. Spruce deals 3 x 9 are to be had in large quantities all through the country, and in our opinion would be found to answer every street paving purpose quite as well as some of the more expensive woods.

Mr. Bradley is of opinion that tamarac and white spruce are deserving of a more extended and thorough trial for paving purposes in England, but would point out to those interested that the success or otherwise of the trial will depend to a very large extent on the care with which the deals are selected and sawn, and they should also be marketed as cheaply as possible.

LARGE DEMAND FOR YOUNG TREES.

The Timber and Forestry Branch of the Department of the Interior has recently purchased 300,000 young trees for use in the North-West from a firm in Bismarck, North Dakota. It is learned from Mr. William Stewart, the Superintendent of Forestry, that all the young cottonwood seedlings that could be obtained in Canada were purchased, but that these were insufficient for the requirements of next season ; hence the necessity of getting a supply from across the border. The Dakota cottonwoods grow along the river bottoms and sand bars of the Missouri river, and are furnished very cheaply, the price being $1.25 per thousand.

The Department is experiencing a heavy demand for plant material in connection with the government co-operative plan, and find it necessary to use every effort so as not to disappoint the settlers after they have prepared their land in accordance with the instructions given.

ASSOCIATION OF LOGGERS.

The loggers in British Columbia have formed an association, with Mr. William Higgins as president, and Mr. A. Hamilton corresponding secretary. The rules and regulations will be modelled after the Washington Association. It is said that the Association will endeavor to induce the Government to abolish the act prohibiting the export of cedar to the United States, which became law last season, but which has not yet been put in operation.

Mr. Higgins, the president of the association, is one of the best known loggers on the coast. For several years he supplied the mill of the Victoria Lumber Manufacturing Company at Chemainus with practically all the logs required.

The Thomas Merrill Log & Lumber Company, a Washington concern, has been authorized to do business in British Columbia. Their head office will be at Victoria.

CORRESPONDENCE

METHOD IN THE SHOP.

BRANTFORD, ONT., Nov. 12th, 1901.

Editor CANADA LUMBERMAN:

Dear Sir,—In your last issue there appeared an article "Method in the Shop," by H. T. G. We feel that we cannot let the opportunity pass without endorsing the writer's remarks; indeed, it would almost appear that he had stolen the idea from us, as he describes our system exactly, even to the color and size of slip used by us.

This system enables us to tell in a moment's time by whom the material was ordered, to whom delivered, when and where, and name of teamster. When necessary to issue a shop slip or lumber yard slip in connection with the order, each order bears a corresponding number, and are all, with the shipper's slip, attached together and filed away consecutively.

We heartily recommend the system described by H. T. G. to any person who desires a safety valve on his business.

Yours very truly,

SCHULTZ BROS. COMPANY, LIMITED.

THE BOX SHOOK TRADE.

CORK, IRELAND, Nov. 12th, 1901.

Editor CANADA LUMBERMAN:

Dear Sir,—Now that the box shook trade is about closing for the season, I would like to bring before shippers some facts which I have already laid before a member of the Canadian Government.

Firstly I would call the attention of shippers to the want of a central agent or expert where all enquiries could be made. For example, A wants a cargo of box shooks, and calls on B, who are agents in London or Liverpool for a leading shipper. B can only say he would write out and see what his house can supply, and A has to wait perhaps a month for a reply, and then if B cannot supply the stock, he (A) has to go and repeat this over again with one or more agents. Norway and Sweeden score here, as the cheap telegraphic rates enable the agent to wire out and back instead of writing.

Secondly, Canadian shippers could get a great number of orders if an expert or agent were appointed who would look after this branch of the Colonies' industries, and if the right man was appointed, I feel confident a large and profitable addition could be made to the timber box shook trade of the Colony.

Thirdly, the mills would want a little organization, and I should say if the Government would not provide for such an expert the shippers could easily subscribe a small sum each yearly to pay for looking after their interests.

And lastly, there are a great number of details to be discussed at the begining and end of each season which would enable all parties, the shipper, the agent and the expert, to more effectually grasp the trade in this very important industry. In conclusion I would say that I believe there would be everything to gain and very little to loose in such an appointment, and there need be no clashing with existing agents, but a very valuable help to them in securing orders which are now going elsewhere.

Yours faithfully,

"A SMALL IMPORTER."

TRANSPORT OF TIMBER IN ENGLAND.

A paper was read before the Botanical Section of the British Association by Mr. Samuel Margerison, on "The Transport of British Timber." He said that in England it cost about 5d. to grow a cubic foot of fir timber. On the average it cost about another 5d. or 6d. to get it into the market, and it sold for 8d. to 9d. per cubic foot. The chief reason, Mr. Margerison said, why it sold for less than cost price was that foreign fir was sold at the figure specified, and the growers and importers could make it pay. He had selected fir as an extreme case in order to emphasize the fact that the handling charges on home-grown timber were much higher than those on imported timber of the same species. We could grow Scots fir and spruce practically as cheaply as the continental forester, but we could not afford to sell it at the same price and at the same time compete on equal terms with him, because it cost us more to transport it from the plantation to the consumer, sometimes even when both were in the same county; and until we could do it as cheaply the splendid efforts of our scientific botanists to produce good and cheap timber were greatly spoiled by the hard facts of £ s d. This, it might be said, was an old story about all native produce. Yet, because of its bulky nature it was more ruinous in relation to native timber than, say, to home-grown corn, because of its greater handling charges in proportion to its value. A ton of wheat was sold for, say, 6l. 15s. Of this 5 per cent. (6s. or 7s.) would be paid for cartage and railway carriage. But a ton of spruce sold for 33s. would cost 21s. (or 60 per cent.) for cartage and carriage. A ton of spruce grown in a Baltic country cost in transport from the forest there to the consumer here about 40 per cent. of its selling value, and a ton of spruce grown in Canada very little more. Of course the discrepancy and extra cost did not seem so great proportionately on the value of the higher priced timbers. But these took longer to grow, and except in favourable surroundings the final results were about the same. There was little commercial encouragement to produce timber if there was no reward but that which virtue was said to bring. Preferential railway rates in this country were costing timber growers nearly as much as the rental value of the land on which the timber was growing. Why was there this great check upon the efforts to make forestry pay? One reason was that foreign timber imports were handled generally in large quantities, so that detail work was done more cheaply. But it was not only in railway charges that our expenses were higher. The overland carriage cost us more. We had not the advantage of water shoots and great rivers, or sufficient snows and frosts to make water or ice a generally available means of transport. Could these overland forest to railway handling charges be reduced? He had made some inquiry about tramway and other mechanical appliances, but did not see any advantage to be gained from them under the conditions ruling in this country. The chief drawback to their use was that our small and scattered plantations would not pay for the profitable employment of costly plant and machinery for transport. A tramway, cheap as it was in working, was costly in instalment, and although it would effect considerable reduction in the cost of transporting a large lot of timber grown in a suitable environment, and could be used again under similar circumstances, would in a large number of cases, be much dearer than the present system of removal by horse waggons. Besides, public roads would have to be used and crossed, and county councils would not be ready to allow this. Under favourable circumstances, again, traction engines would effect considerable economy in haulage. A load of 12 or 15 tons might, on some roads, be carried for less than one of three or four tons drawn by horses. But good roads did not often penetrate into the woods, and there were weak bridges and sharp corners to contend with, which would not be negotiable with long, heavy loads such as would be required to use the full available power. The pole-waggon at present in use, drawn by horses, was the best appliances at present in existence for collecting timber from our comparatively small timber areas in the first instance. But if we could have partial conversion of the timber at centres close to large areas of timber, we could considerably cheapen the cost of transport, both by using traction engines and tramway for the local work and traction engines for "through" traffic to reasonable distances. It was easy to complain of the iniquities of railway companies in charging more for carrying native produce than foreign, and there was considerable reason for the complaint, especially under the present chaotic system of measurement and the newly-insisted-on wharfage charges. But the question was not a one sided matter. There was no gainsaying the fact that native timber did, on the whole, cost somewhat more to transport than foreign. It was often in clumsy, dangerous forms, crooked and knotty, whilst imported timber was generally wholly or partly converted into tidy, straight pieces, making more compact and firmer loads. And being dealt with at ports in larger quantities at one place, much of the work was centralized and specialized, with the result that there was a large saving in details. Railway managers were practical business men, who could not afford to do work on philanthropic principles, and they saw this difference in the nature of the two classes of merchandise. But, at the same time, we had no practical indication that, if any effort was made by our home producers and merchants to centralize their work, make their loads more compact, and arrange for regular and large consignments, the railway companies would make their charges equal those for imported timber. Straight and crooked, large lots and small, compact loads and light ones, all were charged at the same rate. The question was a large one, and its importance was not sufficiently realized by those who were not affected by it, namely, growers of timber. Whilst perserving in the efforts which had been made of late years to improve our forestry, it behoved growers to pay special attention in future to the relation of transport to concentration of production, the producing of timbers of the higher values, compactness of loads, and regularity of supply of consignments.

IMPORTS OF JAMAICA LUMBER.

Mr. G. Eustace Burke, commercial agent at Kingston, Jamaica, in a report to the Department of Trade and Commerce, says regarding lumber: The figures which represent the importation of white pine, I think I am safe in saying, are hardly a quarter of the actual importation, the bulk of which arrives via United States ports at an enhanced value, which prejudices consumption. If a line touched at St. John, N.B., I think this would improve the situation.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VII. TORONTO, ONT., DECEMBER 4, 1901 No. 44

CANADA LUMBERMAN

PUBLISHED BY

The C. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:

IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday, Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 20-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

We have large export orders for Box Shooks, principally in Spruce, for butter, candle and soap boxes Also Birch and Maple squares, chair-seats, etc. Apply for particulars to GELLIBRAND, HEYWOOD & Co., Cardiff, Wales, G. B. Payment cash.

Railway Material for Sale.

Consisting of about four miles of track, (20 b. rails), 1 Porter Locomotive, 1 Snow Plough, 1 Hand Car, and 35 small cars, all 30 guage, suitable for lumbering, mining, etc. Also a Steel Bridge, 3 spans of 125 feet, and one span of 150 feet—suitable for highway bridges. All in good order. For particulars apply to BACON BROS., 377 St. Paul Montreal.

AUCTION SALE

OF

VALUABLE TIMBER LIMITS

AND LANDS.

There will be offered for sale by Public Auction, at the Russell House, in the city of Ottawa, on

Wednesday, the 19th day of February, 1902,

at two o'clock in the afternoon, the Timber Berths and Properties owned by Mr. William Mackey, on the River Amable Du Fond, Province of Ontario. The limits are in one block containing 129¾ square miles, timbered with white and red pine of superior quality, spruce and other woods, and are well watered, making a very short average draw. Part of the block is still a virgin forest containing large board pine of the finest quality with a very short haul.

With above are included deeded lands on which are built slides and dams; and at Beauclaire station, Can. Pac. Ry., a well-equipped saw, planing and shingle mill run by water power.

The whole will be sold in one block. Maps and descriptions of limits may be obtained from

W. MACKEY.

Ottawa, 4th Dec., 1901.

CURRENT TRADE CONDITIONS.

ONTARIO.

The business in pine lumber during the month of November reached the expectations of the trade, and December starts in with a firm market and favorable conditions generally. The volume of buying is not likely to be large, although if the weather should continue open, there will be a good demand for building lumber. The value of permits for buildings issued by the City Commissioner of Toronto in November exceeded $400,000. This figure has not been reached in a corresponding month since 1892, when a vast amount of speculative building was done. As the buildings are mostly only commenced, they will call for a good deal of lumber before they are finally completed. The large volume of permits augurs well for the building season of 1902, and it is expected that much activity will be witnessed next spring. Reference is seldom heard to the question of lower prices for pine lumber. Present prices seem to have been established as the basis for the winter, but it is not unlikely that an advance in some grades will be brought about before the spring. It has transpired that some of the Ottawa manufacturers have disposed of their production of 1902. Watson & Todd are said to have purchased the entire cut of the Hull Lumber Company; Cox, Long & Company, the cut of McLaren & Company; and W. & J. Sharples, the cut of the Hawkesbury Lumber Company. Prices have not been made known, but from what can be learned, they differ but little from those paid one year ago for the same stock. As previously pointed out, prices of lath and shingles are strengthening and a sharp advance may be looked for at any moment on account of the short supply. Hardwood conditions are unchanged, manufacturers continuing to show a firm attitude.

QUEBEC AND NEW BRUNSWICK.

Manufacturers of spruce deals are feeling quite encouraged at the hopeful reports which come from Great Britain, where there is evidently a full recognition of the probability of a short supply for next season. Shippers are showing a disposition to contract for mill cuts, and to pay the price asked by the manufacturer. The opinion prevails that with the demand from the United States, South America, the West Indies and Great Britain, a market is certain to be found for all the spruce lumber that will be manufactured next year. The timber market is quiet. Cedar shingles are in good demand and have sold as high as $3.25 for extras, Boston delivery. The large manufacturers apparently control the market and are taking advantage of the conditions that exist to obtain higher prices. Lath is also higher, 1⅝ inch bringing $3.20 to $3.30, and 1½ inch $3 to $3.10.

MANITOBA AND BRITISH COLUMBIA.

Until within the last few days mild weather has prevailed throughout Manitoba and the Territories, and outdoor operations have been carried on without interruption. Lumber for finishing purposes has been in good request, and the market is firm. The building permits issued in Winnipeg this season were 628 in number, representing an aggregate value of $1,616,550, which is about $300,000 in excess of last year. The opinion is quite general that considerable building will be done next year in Winnipeg and throughout the North-West. The shingle industry of British Columbia is suffering from an over-production. It is announced that the combination formed to handle the product of several large mills through one selling agency has been discontinued, owing to a number of small concerns that were not in the combine cutting prices and demoralizing the market. It is hoped that some permanent arrangement will eventually be made to limit the shingle production of British Columbia and maintain prices at a point where they would represent a fair margin of profit.

UNITED STATES.

The lumber market of the United States continues to exhibit satisfactory conditions. The disposition to reduce stocks before taking the annual inventory is lessening the demand in some quarters, but the movement of stock during November was in excess of the corresponding month last year. It is thought that the price list on pine will be advanced by the Lake Superior manufacturers within the next two weeks, as sales are now being made above the list price, and an advance is even being obtained for some of the lower grades. The seller is able to realize almost any reasonable price for the upper grades. At Buffalo and Tonawanda the tendency is towards higher prices, and much more business would be done but for the scarcity of cars. In the Saginaw market no quotations are made on log run below $18. Mill culls are selling at $12 and box at $14 to $16. Hemlock and spruce are both improving in price. Michigan hemlock has been advanced 50 cents at the head of the lakes. The movement of hardwood is not large, inquiries being chiefly for small lots. Quarter-sawed stuff is dull of sale. Elm, basswood, birch and maple are meeting with about an equal call, but in some markets thick maple seems to be sluggish. The firmness of lath and shingles has been maintained, the volume of recent purchases tending to show that buyers recognize the necessity of arranging for their requirements as soon as possible.

GREAT BRITAIN.

We do dot think that the agents of Canadian shippers have as yet closed any important contracts for next year's ship-

ment, for two reasons, first, that there is uncertainty as to what prices should be asked, and second, that importers are still holding quite heavy stocks and are not anxious to enter into new obligations until these have been reduced. There is an almost certainty, however, that purchases will be made in the near future, and that the figures of the transactions will be favorable to shippers. The tone of the British market has greatly improved, spruce deals generally and pine deals in the standard sizes showing a strong upward tendency. Broad dimension pine deals are much asked for at Glasgow and Hartlepool and several sales are reported at satisfactory prices. At West Liverpool second quality pine is exceedingly scarce. A report from Liverpool states that within a short time spruce prices have gone up from £1 to £1 10s. per standard, with every indication of a further advance. The statement has gained some publicity in England that a St. John shipper has "cornered" all the available spruce in the Bay of Fundy district. The report appears to have induced buyers to look around for spruce. A lot of Quebec spruce stored at Belfast by shippers is being held at a stiff advance on prices recently asked. In some of the markets there is a scarcity of waney board pine, and consumers have in some instances substituted square timber, with the result that the latter wood is showing more strength.

STOCKS AND PRICES.

The Harbor Commissioners of Montreal are asking for tenders up to December 17th for supply of timber and planks.

The ship Prince Arthur, which sailed from the Hastings mill, Vancouver, on May 11th, for Cork, Ireland, has not yet reached its destination, although she is now overdue.

The New Brunswick Government will offer for sale on December 11th four timber berths of two square miles each, located in Cumberland district, Carlow Sett, west of Eel river, and Deadwater Brook.

It is reported that Keenan Bros., of Owen Sound, Ont., have secured a contract from an English government contractor for thirty carloads of maple flooring blocks. The blocks are to be delivered within four months.

Heavy sales of lath were made last week by Wisconsin manufacturers. The Francis Beidler Company, of Chicago, purchased 4,000,000 feet from the Kirby-Carpenter Company and Hamilton, Merryman & Company, of Marinette, Wis.

In the Chicago market No. 1 fencing sells at $22, No. 2 at $18 to $18.50, and No. 3 at $15.50 to $16. There is a scarcity there of long and wide piece stuff and 12 inch No. 1 and 2 stock boards. Hemlock is quoted at $9.50.

On November 26th three cargoes of lumber arrived at Saginaw, Mich., from Blind River, Ont., consigned to Bliss & Van-Auken, and three cargoes from Midland, Ont., consigned to Mershon, Schuette, Parker & Company.

There is an indication of still higher prices for hemlock. For some time 12-inch boards have commanded a premium of 50 cents at Buffalo over the regular $13 base price, but it is now said that this price will be made one dollar extra, as boards continue to be scarce.

The lumber dealers at Toledo, Ohio, have put in force a new price list in which several commodities are advanced, as follows: Wide pine common, 13-inches and up, $55; wide No. 1 shelving, 13-inches and up, $48; 1x6 shelving, or C strips, $35; 1x4 No. 1 shelving, $32; 6-4 and 8-4 No. 2 shops, $35; No. 3, $25.

The contract for the supply of cedar scantlings to the city of Toronto for the year 1902 has been awarded to Reid & Company, at $14.24 per thousand feet. The same firm will supply hemlock timbers at the following prices: 12 and 16 feet lengths, $12.96; 20 feet, $15.96; 24 feet, $17.96. Arthur Bryce secured the contract for pine lumber at $16 for 12 and 15 feet lengths, $17 for 20 feet, and $20 for 24 feet.

Timber berths were sold last week at the Crown Lands office, Fredericton, N. B., as follows: Four miles, Bonny River, Charlotte county, to John E. Moore, at $8.25 per mile; two miles, Robertville Settlement, Gloucester county, to T. B. Winslow, at $65 per mile; four miles, North Forks, Canaan river, to E. B. Winslow, at $53 per mile.

At an auction sale held by Foy, Morgan & Company, London, England, on November 20th, a quantity of deals ex. Scottish King, from Quebec, sold at the following prices: 10-30 ft. 4 x 11 in. first quality, red, £14 5s per std; 9-32 ft. 4 x 11, £13; 9-26 ft. 4 x 9, £12 15s; 10-24 ft. 4 x 8, £10 15s; 10-24 ft. 4 x 4-7, £10; 10-18 ft. 3 x 11, £16; 10-18 ft. 3 x 9, £13 15s; 10-18 ft. 3 x 8, £9 15s; 10-18 ft. 3 x 6, £8; 12-31 ft. 4 x 11 in. unassorted, red, £9; 6-25 ft. 4 x 11, £9 5s; 14-30 ft. 4 x 9, £9 10s; 6-26 ft. 4 x 9, £9 15s; 9-26 ft. 4 x 8, £8 15s; 10-26 ft. 4 x 7, £8 10s; 10-26 ft. 4 x 6, £8 5s; 10-24 ft. 4 x 5, £7 10s; 10-18 ft. 4 x 4, £7 15s; 8-24 ft. 3 x 11, £9 10s; 9-30 ft. 3 x 9, £10 5s; 9-24 ft. 3 x 8, £7 15s; 10-18 ft. 3 x 7, £7 10s; 10-18 ft. 3 x 6, £7 5s; 10-18 ft. 3 x4-5, £7 10s; 12-18 ft. 3 x 6-11 in. discolored, £6. Spruce deals, ex. Ashmore, from Quebec, brought from £6 10s to £7 5s for third, fourth and fifth quality. Oak timber, from Quebec, sold at 77s 6d to 85s per load of cub. feet.

Concerning the demand for hardwoods at Chicago the American Lumberman says: "The hardwood market presents about the usual variety of ups and downs, with a substantial volume of trade and irregular prices. It may be said that the market at the present time is not all one-sided, as seemed to be the case up till a few weeks ago. Here and there one hears of a slightly better price being obtained for this or that commodity. Basswood is in fair request. Dealers are asking $27 for firsts and seconds, 12-foot stock, but say that they are not always getting it. Birch moves with about its usual freedom and is in fair inquiry, but prices fail to respond. Maple is quiet and steady at a slightly improved basis.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

Reports from dealers indicate that business is quiet in lumber circles at present. The scarcity of cars has still an important bearing in this direction, as it is difficult to get shipmeuts to their destination. At present, however, customers in outside points are engaged or preparing to engage in stock-taking. Little lumber is being bought and business will probably be quiet till after the New Year. Prices are unchanged, with every prospect of maintaining a firm tone and a possibility of advancing.

Although the labor market has become easier, the cost of production of lumber promises to continue high; the scale of wages is as follows: Good choppers, $27 to $30 a month and board; general hands, $18 to $24 and board. In the square timber market wages are higher. Good hewers command $50 a month and board, liners $40, and scorers $35. The all-round advance in produce is placed at ten per cent. by a large operator. Oats are selling here at 50 cents a bushel. Flour and hay show no advance, but pork is decidedly firm. Delivered at the Kippewa river, it is worth $22 per barrel of 200 pounds. Hardware is also at a high figure.

Natural conditions this season are even worse than they were last. The long dry fall has left the swamps without water, and the first snowfall found the ground compartively free from frost. These conditions will make road-making exceedingly difficult task. The work of getting out logs will be no easy task. All the above conditions must be taken into consideration when figuring on future mill and retail prices.

Ottawa's new chief magistrate is well-known in and closely identified with the lumber trade. Mayor Davidson is a member of the firm of Davidson & Thackeray, which operates a large planing mill and sash and door factory in Ottawa. The firm is also building sawmills on its limits above Coulonge. Mayor Davidson's executive ability has also been demonstrated in the success with which as president of the Capitol Lacrosse Club, he has managed its affairs. Ald. R. J. Davidson, the "father" of the council, is a brother of the chief magistrate.

The valuable water-power on the Quebec side of the Chaudiere promises to again be the subject of legation. In the Hull court on Saturday, Mr. Thomas Ahearn, president of the Ottawa Electric Company, fyled an opposition to the improvements in the river being carried forward by the Ottawa and Hull Power Company. W. C. Edwards, M. P., and the Hawkesbury Lumber Company are rated as defendants in the suit. Mr. Ahearn is the owner of valuable water

(Continued on page 4.)

—CORRESPONDENCE SOLICITED—

lots above the Chuudiere, and he claims the dams being built there will interfere with his rights.

In Bryson, to-day judgment was given in the celebrated Perrault Fraser lumber suit in which over $500,000 was involved. The action was taken by Mrs. Dezouche (nee Perrault), whose first husband, the late John MacCoshen, was a partner of Alexander Fraser, the well known lumber king. Plaintiff's action was taken to set aside a sale of timber limits belonging to the firm of MacCoshen & Fraser. Although the limits stood in the latter's name alone, the claim was made that MacCoshen had equal shares. The limits in question comprised about 34 square miles on the Opeongo river in the province of Ontario and about 78 square miles on the Schyan and Black rivers in the province of Quebec. The late Mr. MacCoshen died on August 17, 1885, and the sale was held at the Russell House, Ottawa, on October 20 of the same year. The Ontario limits were sold at this sale for $65,600 and the Quebec limits for $159,600 to Mr. Hiram Robinson, as representing Messrs. J. B. and W. A. H. Fraser. The limits were subsequently sold by the Messrs. Fraser to the other parties, the Quebec limits, the more important of the two, being now owned and operated by Mr. J. R. Booth. By the judgment the sale of the Quebec limits has been annulled as contrary to the law of that province, it being decided that while Mr. Fraser acted in good faith in the sale, the interests of the minor heirs of MacCoshen had not been properly protected. Defendant is ordered to account for the actual value of the limit, and the revenue derived from it since MacCoshen's death. Experts will report on this point. The judgment on the other hand maintains that the sale of the Ontario limits had been a legal one.

Ottawa, December 2nd, 1901.

THE BARBADOS MARKET.

Clairmonte, Man & Company, under date of November 9th, make the following reference to the Barbados lumber market:

Our market was very bare of white pine and spruce lumber when the schooner G. S. Troop arived from Jordan River, N. S., and her cargo, fetched full rates, as given below; the schooner Britannia soon followed with a large cargo which was placed at $24 for white pine boards, $22-50 for planks, and $21 for spruce. There is still a good demand, especially for spruce. Second quality lumber is also wanted.

Shingles.—Gaspe Long Cedar wanted, last sales at $4.05 to $5.30 per M as to quality. Cedar laying—we hear of a sale at $2 per M to arrive. Spruce laying—no recent sale, worth $1.60 per M. November 2nd: Schr. "G. S. Troop," from Jordan River, N. S., with 16 M feet white pine, sold at $26.10; 19 M second quality do $22.10; 48 M spruce $22.10; 9 M second quality do $19.10. November 5th. Schr. "Britannia," from Bear River, N. S., with 290 M feet white pine boards, sold at $24; 25 M do planks $22.50; 25 M feet spruce boards $21.

OUR SHINGLES

FACTS ARE FACTS WHETHER TOLD ABOUT FISH OR SHINGLES

We make a fine 16-inch Shingle.
We make a fine 18-inch Shingle.
We make a fine 24-inch Shingle.
We make all thicknesses from 6-2 inch to 6-3⅜ inch.

They are going out of our different mills at the rate of 200,000,000 a year. We make more shingles than any one firm in the world. Just think of it!

We claim to be experts. That is not gall. That is a statement which is proven constantly by the testimony of our customers from the Pacific Coast to the Atlantic Coast on the Canadian side, and from Maine to Puget Sound.

Mixed Cars our Specialty. Don't forget that we have all kinds of House Finishing Material in Fir and Cedar, and can load any quantity with shingles.

Come, let us deal together.

CUSTOMERS' ATTENTION.—Please take notice that on and after the 1st day of January, 1902, all arrangements with the Pacific Coast Lumber Co. of New Westminster, B. C., for the handling of any of our shingles will be ended, and until further notice our authorized general agents will be Mr. Jas. Twitchell, Clinton, Ont., for Ontario, and Mr. Samuel Ashfield of Winnipeg, Man., for Manitoba and the North-West; therefore, orders for straight or mixed cars send us direct or through the above agents will have equal, prompt and careful attention.

THE NEWS

A new shingle mill has been put in operation at Kearney, Ont., by L. J. Lehay.

B. M. Shepard, of Knowlton, Que., is offering his saw and planing mill for sale.

Joseph Moreau, of St. Germain, has invented a machine for peeling the bark from trees.

F. Maunder, of Little Current, Ont., has installed an electric light plant for lighting his saw mill.

Jesse Cook, of Zephyr, Ont., has purchased a timber limit near Orillia and intends building a saw mill.

Gaudin & Dewitt, lumber dealers, Napinka, Man., have started a branch yard at Nedora.

Noah Eby is about to commence the erection of a sash and door factory at Southampton, Ont.

The Fred Robertson Lumber Compauy, of Revelstoke, B.C., are building a shingle mill at Wigwam.

A. W. Barr, of South Maitland, N. S., has decided to abandon farming and devote all his time to lumbering.

Walter & Humberstone, sawmillers, Edmonton, N. W.T., have dissolved partnership, Mr. Humberstone retiring.

R. A. Estey, of Fredericton, N.B., has 125 men at work in his camps on the Tobique river and near Edmundston.

The Charlton Saw Mill Company, Limited, of Toronto, has obtained incorporation, with a capital of $75,000.

George White has purchased the planing mill at Parry Sound, Ont., recently operated by Gillespie & Grier.

The Cascade Lumber Company, Limited, of Cascade, B.C., has been incorporated, with a capital of $20,000.

W. & G. L. Evers contemplate the erection of a sash and door factory at North Bay, Ont., to cost about $10,000.

P. Sayers, of Nassagaweya, has purchased a small timber limit near Corwhin, Ont., on the C.P.R.,and will build a mill this winter.

Maitland, Rixon & Company, of Owen Sound, Ont., have installed an electric light plant in their mills. Its capacity is 50 lights.

Alphonse Tessier, of Penetanguishene, Ont., has in contemplation the enlargement of his sash and door factory and planing mill.

Michael Jentzi, proprietor of planing mills at Newton, Ont., was almost instantly killed in his mill by being drawn into the shafting.

It is understood that a party of capitalists are negotiating for a site at Newcastle, N.B., on which to build a sawmill and box factory.

The Dominion Shingle Company has been organized at Sapperton, B. C., with F. L. Johnson as manager. A new mill 36x56 feet has been built.

S. B. Trick, of Ottawa, has purchased the saw mill of Stephens & Argue at Norland, Ont., and is adding a 50 horse power engine and shingle machine.

A movement is on foot to form a joint stock company to purchase and operate the spool wood mill of Clarke, Skillings & Company at Newcastle, N. B.

The Goderich Lumber Company, of Goderich, Ont., are negotiating for a site in Keppel, just across the bay from Wiarton, on which to build a large saw mill.

The works of the Canada Veneer & Bent Lumber Company, at London, Ont., were offered for sale at auction last week, but no satisfactory bid was received.

A steam logging plant is to be used by H. R. McLellan, of St. John, N.B., who has a contract to supply the Clergue syndicate, of Sault Ste. Marie, with several thousands cords of wood.

The Quebec Government has conceded the right of the Gilmour & Hughson Company, of Hull, to the ownership of water powers at Eton Chute and Chelsey Falls. The arbitration has been going on for a considerable time.

It is said that Ker & Harcourt, who removed from Walkerton to Parry Sound a few years ago, are considering the advisability of returning to Walkerton, being unable to find in the Parry Sound district a sufficient quantity of maple for their bobbin business.

The Northern Lumber Company, of Dauphin, Man., will rebuild their saw mill at Garland. The machinery of the Mitchell mills at Selkirk has been purchased and will be installed in the Garland mill. It is probable that the company will also build a mill at Pine River.

A syndicate of Ottawa lumbermen holding extensive timber limits are negotiating for the erection of a large steam saw mill at Deschenes, on the site of the Conroy mill destroyed by fire two years ago. It is the intention to erect a mill with a yearly output of 50,000,000.

J. D. McArthur has leased the lumber yard in Winnipeg lately conducted by the British Columbia Mills, Timber & Trading Company. The lease also includes the purchase of the lumber in stock. The British Columbia Company will continue an office in Winnipeg for their wholesale business.

Mr. Gilmour, Vancouver agent for the Waterous Engine Works Company, of Brantford, Ont., has furnished the plant for the big Eddy saw mill being built by the Revelstoke Lumber Company, of Revelstoke, B.C. The plant includes two boilers of 80 h. p., two engines and the necessary saw milling equipment for a capacity of 50,000 feet per day. Both lumber and shingles will be manufactured.

A number of improvements have recently been made to the mill and yards of the Parry Sound Lumber Company, of Parry Sound, Ont. A machine shop has been erected and new tools added, and a duplex set of electric rollers is now used for the loading of vessels. It consists of a series of conveyors, with rollers operated by endless chains, the terminal point being an adjustable skidway so constructed as to be easily adapted to the height of the vessel's rail. The power is supplied by the electric plant at the mill.

Three hundred men are now employed on the dam and mills of the Brompton Pulp & Paper Company, at Brompton Falls, Que. Although the works will not be completed to their full capacity for more than a year, it is expected that the company will be making pulp and paper by August next. Over fifty thousand acres of pulp woodlands have been secured along the St. Francis river, but it is expected that the company will not have to cut on their own limits for many years, as the farmers will keep the mills supplied with wood. After the ground wood pulp and paper mills are finished, the construction of a sulphite fibre mill is to be begun.

The manufacture of shingles at Vancouver, B.C., represents an important branch of the lumbering industry. In addition to the old established mills two Americans are erecting large shingle mills on False Creek, and two sons of Mr. W. L. Tait are building mills near the cement works on False Creek. The Imperial Lumber Company has just erected a modern mill west of Grenville street, and at Hastings, a suburb of Vancouver, an American firm has torn down the old mill and is establishing a modern plant. Heaps & Company have increased the capacity of their shingle mill and intend going extensively into the export business. The Fraser River Lumber Company have also erected a shingle mill on the river.

At the fall assizes of Renfrew county, which opened at Pembroke on Oct. 28th, lumber suits engaged much of the attention of the court. One of the most interesting was brought by J. W. Munro against George Gordon & Company to recover a balance claimed to be owing on a sale of logs. The plaintiff contended that Scribner's rule should have been used, while the defendants claimed that Doyle's rule was the right one to use. The case was settled out of court. George & McGregor, of Killaloe, were defendants in an action brought by the Walsh Lumber Comnany in regard to telephone poles supplied by the defendants, the plaintiffs claiming that they were not up to agreement. A verdict was given for the defendants. The Pembroke Lumber Company were given $1,015 damages against J. & J. Gillies for trespass on the timber limits of the former concern situated in Renfrew. The case o Jos. McRea vs. the Rathbun Company was ordered to be tried in Toronto.

PERSONAL.

Mr. C. E. E. Ussher, general passenger agent of the C.P.R., has been appointed a director of the Canadian Forestry Association, as successor of the late Hon. G. W. Allen.

Mr. E. D. Tennant, bookkeeper for Graham & Horn, Fort William, Ont., has accepted a similar position in the Winnipeg office of the Rat Portage Lumber Company and has been succeeded by Mr. H. D. Smith.

Ald. James Davidson, of the firm of Davidson & Thackray, lumber merchants and wood-workers, has been chosen Mayor of the city of Ottawa, to succeed Mayor Morris, who was recently disqualified.

Death has claimed as its victim Mr. John S. Burger, of Toronto, who was one of the pioneer lumbermen of Ontario. For many years he carried on business in Simcoe county and in Michigan, being connected with the Thompson-Smith Company.

Mr. W. R. Beatty, M.P.P., who has undertaken the management of extensive lumbering operations in Nova Scotia, has recently been on a visit to Parry Sound, Ont. Mr. Beatty states that the methods of loading vessels with lumber in the east are not the most modern, and that much more time is occupied than should be necessary.

TRADE NOTES.

The Winnipeg Machinery & Supply Company, of Winnipeg, Man., is the name of a new company formed to trade in machinery and supplies. Mr. J. C. Gibson, late of the Stuart-Arbuthnot Machinery Company, was the organizer.

As is their usual custom, the employees of James Warnock & Company, manufacturers of axes and lumbering tools, Galt, Ont., held their annual banquet on November 15th. Following a tempting menu came an interchange of song and story. The manager of of the company, Mr. F. H. Hayhurst, presided. The programme and toast list was most entertaining, and a pleasant evening was spent by the many employees.

A meeting of the larrigan manufacturers of the maritime provinces was held at Moncton, N. B., early in November, at which it was decided to organize the Dominion Tanning Larrigan Association, with the following officers: John Palmer, Fredericton, president; J. S. Henderson, Parrsboro, vice-president; J. M Baird, Sackville, secretary-treasurer. The firms represented at the meeting were the John Palmer Company, of Fredericton; J. S. Henderson, of Parrsboro; Standard Manufacturing Company, of Sackville; McKenzie, Crowe & Company, of Bridgetown; Annapolis Larrigan Company and J. P. Sherry, of Memramcook.

The S. Morgan Smith Company, York, Pa., has lately received an order for six single 39 inch and one 13 inch McCormick turbines from the Metabechouan Pulp Company, Quebec. Each turbine will be mounted in an iron flume connected to a supply pipe 15 feet diameter. Five of the 39 inch turbines will develop 4,000 h. p. and drive 10 pulp grinders. Another of same size will drive the wet machines, screens and other machinery. The 18 inch will operate a dynamo. The mill will have a daily capacity of 60 tons pulp, dry weight.

The Dodge Manufacturing Company, of Toronto, Limited, have recently completed very substantial extensions in the way of new modern machine shops and foundry, also a very handsome two storey office building for general offices and draughting rooms. Both shops are equipped with 10 ton 3 motor electric travelling cranes. The machine shop is equipped with very heavy tools of latest design and the foundry with all the most modern ideas in foundry equipment. The Dodge Company are now taking care of all kinds of foundry and machine shop work, no matter how large, and are undertaking early deliveries. Power transmission machinery is their specialty, a 260 page catalogue descriptive of which is mailed on application.

THE STANDARD MANUFACTURING COMPANY.

At the beginning of 1899 the Standard Manufacturing Company, Limited, succeeded the J. R. Ayer Company, Limited, of Sackville, N.B., one of the oldest and most widely known firms in the Maritime Provinces. Since the re-organization of the company many changes and improvements have been made, new power house, leach house, and larrigan factory have been erected, all of which are steam heated; modern machinery of the latest and most up-to-date pattern has been introduced, which has enabled the company to enlarge their output and meet the ever-increasing demands of their rapidly growing business.

About one hundred and ten men are employed in the various departments turning out team and driving harness, moccasins, larrigans, shoe packs, boots and shoes, lacing leather, etc., a speciality being made of lumbermen's heavy team harness and hand-made boots and shoes. Practically all the stock used is manufactured in the tannery.

In the harness factory, which is the largest in the Maritime Provinces, the value of the output is about $5,000 per month. Thirty-six men are employed, and two of the latest improved Campbell Bosworth machine stitchers (the only ones east of Montreal), are in use.

The larrigan factory employs from thirty to forty men. It is claimed to be the oldest factory of its kind in Canada, and the quality of the stock is recognized by conservative buyers as the best.

The boot and shoe department is under the direction of an experienced foreman and cutter, the leading lines produced including lumbering and fishing hand-made boots and other coarse stock.

The plant consists of twenty-seven buildings in all, and in addition the company also operate a general store, employing five clerks and doing a large general business, besides supplying their own hands. There are two large warehouses where hides and surplus stock are stored. In the near future the factories will all be lighted by electricity, as the company intend installing a plant for this purpose.

The accompanying cut gives an illustration of the company's works, which are situated at Middle Sackville, about one and a half miles from Lower Sackville, N.B. The officers of the company are: H. A. Powell, K.C., president; F. McDougall, treasurer; John M. Baird, secretary. There is no man better and more favorably known to the trade than Col. Baird, who has been connected with the business for the past eighteen years. His genial personality and businesslike method of treating patrons has made him many friends.

At the recent exhibition in Halifax the display made by this firm elicited much favorable comment. It was the largest display of its kind ever made in the Maritime Provinces, and besides gaining many prizes for the company, it also resulted in largely increased sales.

PROFITABLE PREVENTION.

A card is being distributed through the lumber districts of the east, which is full of good suggestions. It contains the following:

HINTS TO LUMBER MANUFACTURERS AND WOOD-WORKERS.

1st. Thoroughly coat interior of mill and also wood-work exposed to sparks with white-wash or one of gypsum compounds. The latter are more adhesive and permanent, viz.: Alabastine, Muresco, Indurine, Magnite, etc.

2d. Maintain 200 feet clear space between any open refuse burners and mills or lumber.

3d. Make shutes and conveyors perfect, sides, tops and bottom, so as to remove all refuse. Have all blower pipes of metal and have a cyclone dust separator.

4th. Have operatives clean bearings of their machines daily and touch bearings at end of each run, and have oiler do the same to the other bearings, fans, etc.

5th. Secure steam pipes clear of combustible material by metal or asbestos, keep pipes clean, use especial care to keep steam coil and interior of hot blast fan clean, as also steam pipes in dry rooms and hot or caul boxes.

6th. Use steam heat instead of stoves.

7th. Use electricity or metal kerosene lamps for lighting; no open lights or glass kerosene lamps.

8th. Keep oil in clean place and in cabinets.

9th. Keep clean waste locked up and oily waste burnt.

10th. Cut woodwork away from iron boiler stack one-half the diameter of the stack, or protect woodwork by a jacket around stack, extending from boiler room through roof. Make proper arrangements to remove danger from sparks.

11th. Post signs prohibiting smoking, and enforce them.

12th. Put in fire pails, one to every 400 sq. foot of floor surface. Keep filled with brine, put all fire appliances in charge of one man, make him responsible for them and their condition.

13th. Keep boiler hearth clean and wet down at all times.

14th. Warn firemen to be careful no to fill fire-box too full and cause back draft.

15th. Close up unused holes in the floors; box up belt holes.

16th. Protect all woodwork beneath and around emery machines with metal.

17th. Have watchman, if any, report by watch-clock. When mill shuts down, noon or night, have a man make a trip over it and see that everything is O.K. At night, if there is no watchman, have a man make a trip over plant about two or three hours after mill shuts down.

18th. Clean up and remove all refuse at end of each day, clean up thoroughly every Saturday, clean ceilings and beams once a month.

19th. Don't leave mill alone during the noon hour. If it is possible allow one man to go to his dinner earlier or carry his dinner.

20th. Keep combustible material away from boiler setting.

21st. Arrange plant to close up and lock up and keep it so when not in operation.

All these points have a direct bearing on the final rates promulgated by the local Underwriters Boards, and in proportion as they are observed tend to lessen the rate.

THE McFARLANE-NEILL MANUFACTURING COMPANY.

Among the leading manufacturers of cant dogs is the McFarlane-Neill Manufacturing Company, Limited, with headquarters at St. Mary's, York County, New Brunswick. We give herewith an illustration of their new factory, which is conveniently and beautifully situated overlooking the St. John river. This concern was originally established in the year 1885, by the late Walter McFarlane, who was then engaged in the manufacture of hames. In a short time Mr. McFarlane added a new branch and began the manufacture of cant dogs, he being the sole inventor of the solid forged steel socket made in one piece. After his death in 1898 the business was carried on by Mrs. McFarlane for two years. In 1891 the important interests were incorporated under the present title, with a paid-up capital of $100,000, thus making it one of the most extensive concerns of its kind in the Dominion. The officers of the company are: President, James S. Neill; Vice-President, Mrs. Jane McFarlane; General Manager, M. A. Tweeddale; Directors, E. Bryon Winslow and F. J. Morrison.

The high standing of the company is well known, and its officers and directors possess a thorough knowledge of the trade, while personal reputation is a guarantee that all business transactions with them will be mutually satisfactory.

The McFarlane-Neill Manufacturing Company are the sole manufacturers of the McFarlane forged steel socket cant dogs, and control the patent for Canada. All the handles are carefully selected from split rock maple. The company consume in one year over three hundred cars of lumber. This lumber is all air dried after being manufactured into handles, and they carry a stock of from 30,000 to 40,000 from year to year. These handles are manufactured in thirty-six different varieties, ranging in length from two to six feet. In addition to this special branch, the firm manufacture single and double Harpoon hay forks, hay carriers, slings, hay pulleys, floor hooks, pole irons, grapples and all kinds of drop forgings. They recently added a tackle block plant for the manufacture of ship blocks and all kinds of tackle. They have also a first-class electric light plant which permits of operations being carried on night and day. The factory is built of brick and thoroughly piped, and is supplied by water which is carried a distance of one mile through a three-inch pipe from an artesian well having an elevation of 150 feet, of which there is a never-failing supply of water. This company do an extensive trade and ship in car lots to the upper provinces, and as far west as British Columbia.

TO FIND THE LENGTH OF BELT REQUIRED.

In a recent Wood-Worker an enquirer asked several questions concerning the duties of a millright. One of them was, how to find the proper length of a belt after the distance around the pulleys is known. If the pulleys are up the simplest way is to take a tape line and put it around the pulleys the same as you would the belt; whatever the tape reads that length your belt should be.

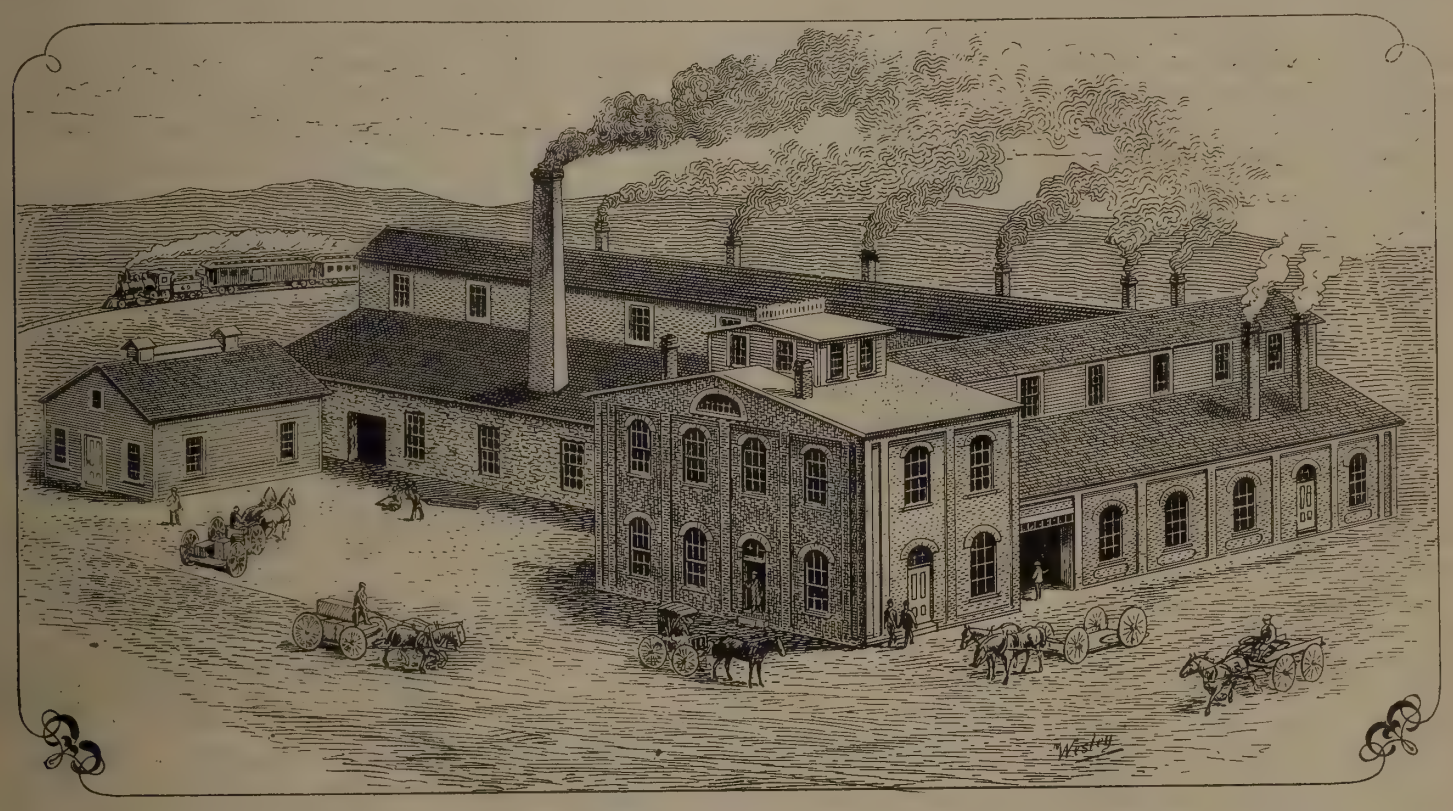
If you can not do this there is a simple rule to go by (for a straight belt). Suppose the distances between the centres of two shafts is 14 feet, the diameter of one pulley 8 feet and the other 4 feet, and the thickness of the belt ¼-inch. Then half the circumference of the 8-foot pulley is 12.5664 feet and half the circumference of the 4-foot pulley is 6.2834. Three times the thickness of the belt is ¾-inch or .0625 feet. Then 28 plus 12.5664 plus 6.2834 plus .0625 equals 46.9103, or 46 feet and 10 15/16 inches is the length of your belt. Therefore, the rule for a straight belt is this: To twice the distance between the two centres add half the circumference of each pulley, with three times the thickness of the belt.

To find the length of a cross belt the rule is more complex. First, the distance from the center of each pulley to the center of the point where they will cross must be obtained If both pulleys should happen to be the same diameter, the cross will occur exactly in the center of the space between them. If not, then that point will be in proportion to their respective diameters and may be found by the following rule: Divide the diameter of the larger pulley by that of the smaller and add 1 to the quotient. This will represent the number of parts into which the distance between the centres is supposed to be divided. Then as the whole number of parts taken by the larger pulley, so is the whole distance between the centres to the point where the cross will occur. Example: A pulley 8 feet diameter is to drive one of 4 feet with a cross belt ¼-inch thick, the distance between the centres being 14 feet. Required, the distance to the point where they will cross and the whole length of the belt.

First find the point where they will cross by the foregoing rule: 8 divided by 4 equals 2, plus 1 equals 3. This represents that the 14 feet are supposed to be divided into three parts, and as the diameter of the same pulley is contained in that of the larger one twice, it shows that two parts of the three must be taken by it—3 is to 2 as 14 is to 9 feet 4 inches. Now, as the whole distance is 14 feet and the larger pulley requires 9 feet 4 inches, the distance from this point to the smaller pulley is 4 feet 8 inches, so that the distance from the center of the large pulley to the point where the belt will cross is 9 feet 4 inches, while the other from the same point will be 4 feet 8 inches.

If a horizontal line be drawn through the center of each pulley, extending from one to the other, and a perpendicular line also drawn through the same points, intersecting it at right angles, there will be two right-angled triangles formed, the base of one being 9 feet 4 inches, with a perpendicular equal to the radius of the 8-foot pulley, or 4 feet, while the other base will be equal to 4 feet 8 inches, with a perpendicular equal to the radius of the 4-foot pulley, or 2 feet, the belt in each case representing the hypothenuse; and as the square root of the sum of the squares of the base and the perpendicular of any right-angled triangle equals the hypothenuse, it is evident that the hypothenuse of these two figures must represent the length of belt between these two parts.

The operation perhaps will be more simple and easier understood if the whole be reduced to inches. Then 112 times 112 equals 12,544 inches, and 48 times 48 equals 2,304 inches, being the square of the base and perpendicular in inches. Then 12,544 plus 2,304 equals 14,848, the square root of which is 121.85 inches. With the other proceed in like manner: 56 times 56 equals 3,136, and 24 times 24 equals 576, and 3,136 plus 576 equals 3,712, the square root of which is 60.92 inches. Now if each of these sums is doubled and half the circumference of each pulley with three times the thickness of the belt be added together, their sum will be equal to the whole longth of belt required in inches, which, when reduced to feet, will be found to equal 48 feet 1½ inches.



FACTORY OF THE McFARLANE-NEILL MANUFACTURING CO., ST. MARY'S, N.B.

The timbers of the Phillipine Islands are going to be tested by the United States Bureau of Forestry, it being the intention to establish a testing laboratory at Manila as soon as possible. It is especially desired to test the various processes for the preservation of timber against decay and the attack of insects.

A device for holding down short stuff on the table while using a self-feed saw will be interesting to those who have to rip very short pieces and want to do the work on this kind of a saw. Instead of the usual spring for a hold-down, put in its place a block of 4 x 6, fastened to the feed wheel frame and rounded off in front like a sleigh runner. Raise the table clear of the saw and start it (the saw) running, then lower the table so the saw cuts its way into the block and until the block touches the table. Adjust the feed wheel frame to the right height for the stock being worked, with the block ½ inch lower down than the feed wheel. This makes a hold-down from which no block, however short, can get away.

STAVE MAKING BY THE VENEER PROCESS.

"C. J. A," in the National Coopers' Journal

As this process is a radical change from the old method, and as it is one of the hardest things to get a man out of an old rut, the adopting of the veneer process has met with little encouragement. The man who has succeeded in producing a stave by this process has fenced in his plant and put up "No admittance" signs, thinking he has a valuable thing and cannot afford to take the public into his confidence, and this reticence has made the process slow in developing. Manufacturers hesitated to make the necessary investment for want of information. The veneer machine builders, however, are getting the information needed, and to-day there is no line of woodworking so simple as veneer cutting. It is only required in order to make staves with a veneer machine that one be a stave man. He must first know what constitutes a stave when made, and the veneer machine will do the work. It is so simple in operating that any man who has ordinary knowledge of machine operating can run it. This is the reason, I suppose, that so little is said in the trade journals on the subject—there is so little that can be said.

What suggested to me the idea of making staves with a veneer machine, and the results of my experimenting is the object of this article—not to attempt to enlighten the stave maker, as I do not consider I am competent to do this, nor do I want to divulge any trade secrets or be known as a fellow who tells all he knows. This subject is coming to the front, however, which makes this article at least timely. The scarcity of timber necessitates a more economical process of manufacture. The increased use of sacks requires radical changes in the manufacture of staves to regain the lost prestige once enjoyed by the stave makers. For the reasons here mentioned, I hope to be justified, and my efforts, by those interested, approved.

It is only by an interchange of ideas that we advance. As an illustration of the truthfulness of this statement, I recall a conversation I had with a bright mechanic I had in my employ some ten years ago. I suggested that he subscribe for one of the trade journals, which he did, and he informed me last year that the knowledge he had obtained from reading that journal had enabled him to secure an increase in salary of over $1,000 per year without any solicitations on his part. The knowledge he had obtained from the journal had been made use of to his employer's advantage, and the recognition of his services rewarded followed accordingly and naturally.

I desire to say, while on this subject, to the men employed in stave and heading factories, that the columns of the Journal are open to you, and if you will only use them when you are in trouble, some fellow who has had your experience and succeeded will gladly tell you through this medium how to solve the problem, and all readers be benefited thereby. Don't "hide your light under a bushel," but let your experience be known and thereby help your coworker and benefit yourself and your employer by advancing the store of knowledge that cannot be obtained from books. The National Coopers' Journal is the only exponent of the cooperage trade, and it is the recognized authority on cooperage matters in all the world. Go to this headquarters when you want to be posted correctly.

Six years ago while operating a rotary veneer machine, cutting cabbage crate laths, ⅜ x 4, I had some jointed and took them to a first-class cooper, who made up a barrel and pronounced it as good a barrel as he had ever made; but to be sure that the staves would stand up, would not cup in, would not shrink or swell after being made into a barrel, I put this barrel in damp places, also in the sun, and gave it all the tests that I thought a barrel could be ever put to, and found out by these tests that a veneer-cut stave was a better stave, was more uniform in thickness, length and circle, more uniform in width, made a more perfectly round barrel, than it was possible to obtain from staves made by the old process, and I purchased a veneer machine, designed especially for cutting staves.

I commenced the manufacture of veneer-cut staves. I found from my former experiments that a uniform width stave would not do, and ordered the new machine equipped to cut the staves in widths from 3½ to 5½ inches, which made a stave 3, 3½, 4, 4½ and 5 inches when jointed. These staves matched up 8 inches for two in the bales, and held out in working up and were a perfect success.

In the manufacture of veneer staves, the timber is either cut to length in the woods or cut from log by drag saw into lengths desired. From the drag saw the timber goes direct to the boiling vats. I first tried steam boxes, but soon found it was impossible to build a wooden box tight enough to force the steam through the timber easier than through the box. At one time the timber was frozen when put in the box, and when cutting the outside and ends of the block were fairly steamed, but the heart showed ice still in the timber. I then built boiling vats out of 2 x 4, dressed both sides and spiked together; dug a hole in the ground 7 feet deep, 14 feet wide and 49 feet long; filled it half full of water, and boiled the timber. This ended the experimenting in the heating of the timber. Since then I have made the vats out of concrete, which is very little more expensive and last indefinitely. Above the vats I placed a hoist, using skidding tongs to grab the blocks and hoist from the vats. The hoist was on a car, supported on a T-rail track leading to the veneer machine, where the block is lowered and peeled—the bark falling off easily. Care must be used in boiling the timber. Cottonwood and elm will not stand as much boiling as gum, sycamore and maple. It makes the ends of the blocks too soft. The chucks turn in the block, besides it makes a rough surface to the stave. I have found that when the bark comes off easily the timber is generally steamed enough. Boiling the timber insures uniformity, while steaming makes the upper layer of blocks softer than the bottom, and requires continually changing of the pressure bars on the machine. The block is hoisted and swung into the veneer

To Purchasing Agents:

Corner 22nd and Centre Avenue,

GENTLEMEN: CHICAGO, October 12th, 1901.

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO.

machine by a windlass or crab on a swinging crane, and the chucks are driven into the ends of the block by a friction dogging attachment handled by the operator of the machine. The block revolves, and the knife and back roller approach the block by means of a right and left-hand screw, which regulates the thichness of the cut. This thickness is obtained by gears very similar to an iron lathe. In the back roller is inserted knives laying lengthwise of roller, which extend outside the diameter of the roller the thickness the stave is to be cut. As the block turns around these knives cut into the surface of the block, cutting the staves to random widths before they are cut to thickness. Above the knives, and at a distance apart to cut the desired length of the stave, are placed at both ends a spur knife that enters the block and cuts the stave to length by trimming off all surplus stock outside length of the stave. The timber passes through the space between the edge of the knife and the pressure bar, and drops into the conveyor and is carried to stackers. The pressure bar is a very important part of the machine, as the amount of pressure regulates the solidity of the staves, and indifference to its importance has caused some people to fall down on the veneer stave, which must be cut solid to maintain the circle and keep the stave from cupping in. This could not be shown except by a sketch showing the proper angle to knife and the height above the edge of knife. This information is furnished by the makers of the machines, which an operator must observe, as the bars wear fast ; and this point must be maintained at all times by grinding the bar as often as the knife is ground.

By this process staves can be cut to any length and thickness. In the shorter lengths, such as keg staves, two lengths can be cut at one time. I have cut 100,000 17½-inch staves in ten hours. The fact must be considered in this process ; small timber is not practical, but for timber 24 inches and up in diameter, more staves can be cut in same time and from less timber than by the old method.

From the veneer machine the staves are piled, aud their handling is the same in every way as by the old process, except that there are no staves to split, nor is there any narrow staves, which is a featu e appreciated by the cooper, as it enables him to make a much nicer package at no extra labor. The jointing is easier, as the edges are all square, and one clipping always insures a good joint. The whole process is simple. The expense of flitching into bolts is avoided, you get all No. 1 staves from clear timber, and more staves are obtained from same amount of timber.

There was a meeting of the Michigan maple lumber manufacturers in Grand Rapids, Mich., on October 17th, for the purpose of considering ways and means for putting their business on a better basis than it has been for some time past. The result of the meeting was a decision to organize a company with a capital of $250,000, which will contract for or buy outright the product of the mills. Over 50 per cent. of the necessary capital was subscribed at this meeting. The output of maple lumber represented at this meeting was 107,000,000 feet annually.

Douglas' Egyptian Liniment

Is the most Powerful and best Preparation on sale.

We guarantee Egyption Liniment to be the most powerful Liniment that Medical science has ever formulated. It will reach deeper seated troubles and produce better effect for lameness and unhealthy sores than any other preparation on sale. It contains no **grease**, its effect are **absorbent, alterative** and **penetrative,** will penetrate **Muscle, Membrane** and **Tissue** to the **Bone** and go to the seat of the disease **direct.**

Is the only Liniment on sale that will STOP BLEEDING at ONCE.

It is the fastest seller on the market. If you have not used it in your Camps, etc., we have what you want.

Douglas' Egyption Liniment ....is it....

We mean this and will thank you to give us a trial order for one or more gross Egyption Liniment upon the following conditions :

Will ship you any amount you may require, and if our Liniment is not better than anything you have heretofore used it can he returned to us with freight charges "both ways" added.

Remember we have a perfect absorbent preparation and the only Liniment that will stop blood at once, cauterize the wound and prevent and cure Blood Poisoning.

Kindly send us a small order.

Endorsed by the largest lumber firm in Canada.

WOOD PULP DEPARTMENT

PULP WOOD—TREATMENT OF THE RAW MATERIAL IN THE LOG AND ITS MEASUREMENT.

BY A CANADIAN PULPMAKER.

CHAPTER II.—FOREST OPERATIONS.

The utilization of other woods referred to in the previous chapter has arisen chiefly from the scarcity of spruce wood, that is in those districts where, by reason of the extensive lumbering operations, the quality of spruce available is small, or costs too much to get to the mill.

There is no doubt that this scarcity can be attributed to the careless and extravagant manner in which the spruce was handled in the forests in the earlier days of pulpmaking. Of course this is not the only reason, but it is easy to show that the absence of any regulations as to the manner and extent of the operations has done much to exhaust the supply of a valuable source of pulpwood.

Of recent years the necessity of stringent and efficient regulations to prevent the utter destruction of trees and timber growth has been recognized both in the States and in Canada. It must not be forgotten that the conditions upon which the timber lands are held by the firms operating them largely determines the nature of these rules for preservation. In cases where the limits are held in fee simple, and are the absolute property of the holders, the observance of any rules is merely a question of self-interest, and the Government can hardly enforce the carrying out of any regulations laid down. But with Crown lands the preservation of the forests, with a view of maintaining a more or less permanent supply of valuable timber, is now becoming a matter of the utmost importance.

An interesting and useful book dealing with this question has been written by Gifford Pinchot, in which the results of tests and observations on lumbering operations carried on in the Adirondacks have been fully recorded, and certain deductions drawn therefrom as to the most profitable method of operating with the object of ensuring perpetual growth of new timber.

The following extract from his book, "The Adirondack Spruce," well defines the true function of forest management :—

"Under the present system the lumberman practically ignores the fact that forest land is productive capital. He speculates in the timber with little regard to the real productive capacity of the land. He cuts not only the mature timber, but the growing trees as well. In other words he removes, not only the accumulated interest of many years, but with it the most productive portion of the capital. If, however, the ripe timber alone is cut, and enough young trees are left to replace it, the growth of the small trees and of those which germinate under the new conditions will be actual added interest. That is to say, that the unproductive portion of the capital has been converted into money to be invested elsewhere, and the forest has been put into such a condition that its power of growth is utilized."

The practical side of the question is not lost sight of, for Mr. Pinchot goes on to show that careful adherence to certain rules not involving any appreciable expense will go far to keep up the supply. A few of these may be mentioned to indicate their general character. In most cases trees fourteen inches and more in diameter are ready to cut. Smaller trees showing signs of decay, and crooked scrubby trees crowding the young growth, should also be removed. Only such trees as are marked by the superintendent of the operations should be cut, and great care should be exercised while felling trees not to injure the young growth. The trees felled should be cut into logs at once, and not allowed to remain lying across young trees, and any of the latter bent over by felled trees must be released and straightened out. Care should also be taken to prevent fire, and to guard against conditions likely to cause fire in the branches lopped off the trees.

It may be noticed that regulations of this kind, if consistently carried out, would not involve expense, and, therefore, are practical ones.

In the province of Quebec, Canada, the general rule laid down for the lumbering operations in spruce and pulp woods is that no tree shall be cut which does not measure 11 inches on the stump. That is, the diameter of the stump left in the ground after the tree has been removed must measure at least 11 inches. This rule has proved a good one so far, although recently considerable latitude has been shown in this measurement, but at the same time the principle of preventing a wholesale removal of small trees likely to reach maturity in a few years is recognized and acted upon.

In the province of Ontario the regulations are not of stringent nature, with the result that the timber limits are cut to such an extent as to seriously endanger the prospect of aftergrowth.

This neglect of suitable precautions applies more particularly to the lumbering operations in pine timber, which are of much older date than those of pulp wood, the latter, indeed, being of very recent origin. It is obvious that any system which allows all the timber on a given area to be cut and removed without any restrictions as to the size of the trees is fatal to the preservation of the forest. In the early days of pine lumbering the wood was so abundant that the trees which did not measure more than about 10 or 11 inches on the stump were passed over and left alone, so that the abundance of large timber served as a protection for the smaller growth.

Considerable loss of merchantable timber and of wood capable of conversion into pulp wood is sometimes occasioned by the method of cutting all trees into logs of a uniform length. As a general rule the trees after cutting are saw into logs of 12, 14, and 16 feet lengths, but some manufacturers ask for one uniform size, and this causes a loss of a certain proportion of the tree.

In Quebec, for example, logs are often, for the purposes of measurement, referred to the Quebec standard log, which is a log 13 feet long and 14 inches in diameter, and consequently the length of 13 feet has been much employed in lumbering operations. Hence, a tree containing 28 feet of really serviceable timber cut to such an arbitrary length would lose two feet of good material for no purpose, beyond mere compliance with an unnecessary rule. For pulpwood in particular any strict regulation as to length is quite uncalled for, seeing the conditions of manufacture do not require it. The ultimate size of the pulpwood for actual manipulation is a length of two feet, and, therefore, it is best to allow the trees to be cut into lengths of 12, 14, or 16 feet, and in this way the whole of the good timber is available

It is hardly necessary to say that it is possible to utilize much smaller logs for pulpwood than can be taken out for lumber, so that a large part of every spruce tree is suitable for pulp. The upper portion of the tree is of no value, being of small diameter and full of branches, and the usual practice is to cut off the top at a point where the diameter is about four inches, leaving a long piece of timber to be cut up into proper lengths.

A spruce tree, five inches mean diameter, will give a log 18 feet long after the removal of the upper portion. The mean diameter is the average of the top and bottom measurements of the tree. A tree showing six inches at the top end and 12 inches at the lower end would have a mean diameter of 8 inches.

For other trees we have logs as follows :—

A tree 8 inches diameter should measure 36 feet in length.

A tree 10 inches diameter should measure 48 feet in length, while one of 12 inches diameter will go 62 feet long.

In cutting up these trees it is evident that logs should not be one uniform length, but that they should be cut into logs 12, 14, or 16 feet, according to circumstances.

It is by attention to apparently small matters of the kind hinted at in the above lines that the best results are to be obained in the operations necessary in the forest for cutting out the pulp wood.

CHAPTER III.—MEASUREMENT.

As with all material which is used for industrial purposes, so in the case of pulp wood the considerations connected with the measurement of the wood after it has been cut down are of great importance. Not only is the buyer or consumer interested as well as the seller and the contractor, but in much of the wood taken out the Government has a direct financial interest. This arises from the fact that a good proportion of the timber cut is obtained from Crown lands, and all wood removed from limits in the possession of the Government is taxed, the purchaser having to pay certain dues on all the timber consumed. In consequence of this direct control of the limits, the rules laid down for the measurement of the wood are somewhat stringent, in order that the full amount of the dues may reach the Government.

In the first place, every contractor taking out wood on lands owned by the Crown is obliged to employ the services of a licensed culler or scaler. No person is allowed to act as a scaler or measurer of logs unless he holds a certificate from the Government, stating that he possesses the proper qualifications and requisite knowledge as to the duties appertaining to such an important office. The penalties attaching to misconduct or fraud on the part of the scaler, and to any attempt to defraud the Crown of dues by wrongful returns of the wood cut, are pretty severe, so that the regulations in respect of the measurement are generally followed closely. Wood rangers or inspectors, acting solely under instructions from the Crown Lands Department, visit the several camps in which timber operations are going on, having all necessary authority to see and examine the returns kept by the scaler. In Canada this control of the operations is fairly complete, not only as regards pulp wood, but also in respect of pine cut for lumber and other woods removed from Crown lands.

With one exception the almost universal rule which obtains for the measurement of logs is that each log as it is cut down is measured at the small end. This exception will be dealt with later. By measuring the small end it should be mentioned that every log is slightly conical in shape, this being due to the natural taper of the tree, and a record of the diameter at this end is made by the scaler. A note is also made as to the length of the log. In all the measurements allowances have to be made for imperfections in the tree, and it is in this respect that the scaler has to exercise his judgment. If a log, for instance, is 16 feet long when cut and appears to be rotten at one end, the scaler may deduct a ceatain amount from the length according to the apparent extent of the rot. Should he judge that the rot extends two feet into the log then he would record the log as being 14 feet long instead of 16. The diameter is usually taken inside the bark, since the bark itself has no commercial value, and it is therefore only right to deduct the thickness from the actual diameter of the tree. Another method adopted in making allowances for imperfections, or "culling," as it is generally called, is to reduce the diameter, more particularly in the case of crooked logs, so that a log measuring nine inches at the small end may be culled down to an eight-inch log. It is thus evident that the duty of scaling is a very important one to all parties concerned.

The measurement taken, namely, the diameter at the small end of the log and its length, form the basis of subsequent calculations which give the contents of the whole of the timber cut in terms of certain well-defined units. The exception referred to above is a more complicated method introduced by the Ontario Government in the measurement of pulp wood as dis-

tinguished from saw logs. For logs intended to be sawn into lumber the length and small end diameter are recorded, but in the case of logs cut for pulp wood the diameters at both ends of the logs are recorded as well as the length. The several records taken are used for converting the contents of the logs into the standard units. The unit by which pulp wood is measured differs from that employed in the case of saw logs, although there is a definite relation between them.

Logs intended for lumber are calculated in terms of a "foot board measure." The standard for the pulp wood logs is the "cord." We may now consider the meaning of these terms and the relation between them. A foot board measure is simply the amount of wood contained in a piece of timber or board 1 ft. long, 1 in. think, and 12 inches wide. Thus, for example, a stick of timber which measures 16 ft. long, 12 in. wide, and 1 in. in thickness contains 16 ft. board measure. If the stick is 3 in. thick it contains 48 ft. board measure.

Hence the following rule obtains for converting any piece of timber into the number of feet board measure: Multiply the length (in feet) by the width (in inches) by the thickness (in inches); divide the result by twelve.

The general formula may be written thus—

$$\text{Feet B. M.} = \frac{P \times L \times W \times T}{12}$$

in which P is the number of pieces of timber,
L is the length of one piece in feet,
W is the width in inches,
T is the thickness in inches.

Example:—How many feet, board measure, are contained in 120 pieces of 8 in. × 8 in. timber 24 feet long?

Total feet B. M. is $120 \times 8 \times 8 \times 24 \div 12$ is 15,360 feet.

In this way the contents of any piece of timber can readily be determined in terms of the usual nomenclature, viz., feet board measure.

By the use of special formula the contents of the round log can be similarly expressed, and calculated into the same units. Several such rules and formulæ are known, and the results differ somewhat, the number of feet in a log of given dimensions not being alike by the various methods.

One of the most common rules is known as Doyle's Rule, largely used by contractors and lumbermen in the measurement of logs intended either for lumber or for pulp wood. With large pulp wood logs some contractors prefer to measure the logs by this rule, which they are accustomed to, rather than by a system of calculating the logs into a number of cords.

In the province of Quebec pulp wood is often measured by the contents in feet board measure, and the determination of the number of cords in the quantity so found, arrived by a simple computation.

The existence of several rules for converting round timber into board measure is of course rather perplexing, and the acceptance of a general formula to be applied in in all cases would be a great convenience, but custom and habit are difficulties not easily overcome, and things remain as they are. The Quebec Government has avoided the errors due to any divergence in the results of such formulæ by setting out in authorized tables the contents of round logs in feet board measure, the figures having been obtained from observations in saw mills as to the actual lumber sawn from the logs put through the mill. As the tables are compiled from figures which cover a long period, and are based on the practical working of many saw mills, they should be pretty accurate. In considering the Doyle's rule, and any precautions necessary in its application, we may well compare the two systems.

"Experience has shown that unquestionably the easiest plants to govern are those in which the turbines are set in open flumes leading directly from open forebays."—GARRATT.

The cuts above illustrate one of our methods of placing water wheels in open flumes, as applied to a pair of our

CROCKER PATENT TURBINES

arranged horizontally, for direct connection to main shaft or otherwise. We have several other designs for open flume settings, adapted to single wheels, or for pairs, and to suit particular locations.

We are prepared to examine and report on water powers, and to advise as to methods of development for the same. Estimates promptly submitted. Send for Bulletin No. 200, 88 pages, of interest to all owners and users of water power.

PULP NOTES.

One hundred and twenty men are now employed in the erection of the new pulp mill at North River, Victoria County, Cape Breton.

Good progress is being made with the new pulp mill being built at Buckingham, Que., by the James McLaren Company, and it is expected that it will be in operation early in the new year.

George Taunt has arrived at Vancouver, B. C, from England, and claims to represent a large syndicate which purposes building a pulp mill at some point in British Columbia.

It is reported that the Chicoutimi Pulp Company, of Chicoutimi, Que., have arranged to ship 25,000 tons of pulp from Quebec next year, and will enlarge their mills to double their present capacity.

W. Pearson, manufacturing chemist, of London and Paris, recently made a visit to Canada, and speaks most hopefully of the pulp industry of this country. He stated that English capitalists are eagerly watching the results of investments already made in Canadian mills, and if these should prove satisfactory all the capital required will be forthcoming.

Messrs. O. W. Nordin and K. Nordin, of Paris, France, who are understood to represent a wealthy French syndicate, were in Montreal last month making arrangements for the organization of the Saguenay Colonization Company, with the object of establishing saw and pulp mills in the Saguenay district. These gentlemen spent last winter in exploring the timber limits on which operations are to be conducted.

The Peribonca Pulp Company are now turning out pulp in their new mill at Peribonca, on the Great Peribonca river, in the Province of Quebec. This company was formed in the summer of 1900, with a capital stock of $50,000, which has since been increased to $100,000. The president and manager is Thomas Du Tremblay. The mill is 120x45 feet, with a wing, and has an average output of 30 tons of pulp per day.

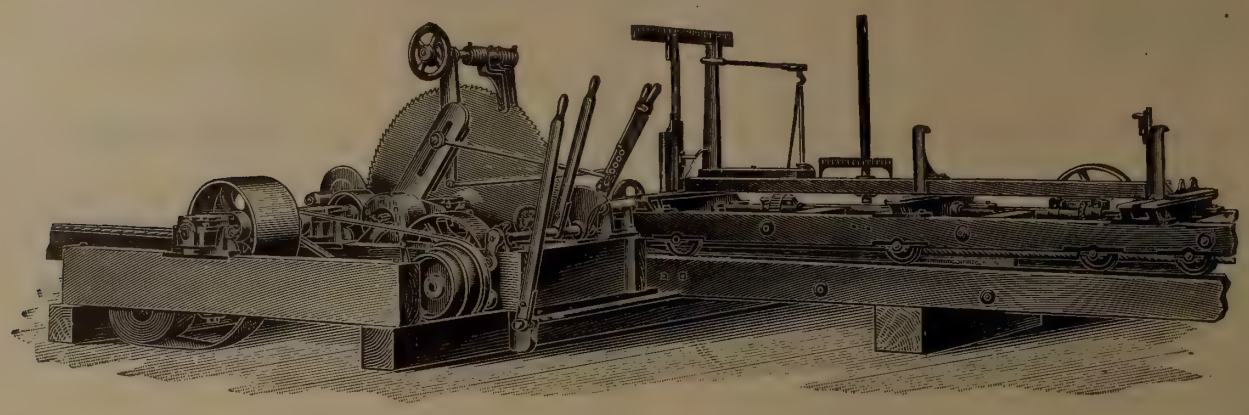
The "Canadian" Over Log Saw Guide

PATENTED IN CANADA AND UNITED STATES.



Your Mill would make more money if you would make more lumber from the same quantity of logs. You can do by using a thinner saw, and you can use a thinner saw with one of my Patent Over Log Saw Guides. They are adapted to either Stationary or Portable Saw Mills, Re-sawing Machines, &c, &c. The illustration shows one of my Portable Saw Mills equipped with this Guide and carrying a saw 60 in. diameter, 12 guage. All my Portable Mills will take saws up to 72 in diameter, and this guide will take saws from 36 to 72 in. diameter. It is adjustable every way. I am prepared to fill orders or complete Circular Saw Mill Outfits, or will make the guide to fit any ordinary existing saw frame.

THE LEFFEL AND VULCAN TURBINES

POSSESS DISTINCTIVE MERITS, which should have the attention of water power owners 1st—They are strongly and carefully built. 2nd—They are economical in their use of water. 3rd—They develop more power in proportion to the water used than any other Turbine built. Mr. J. D. Flavelle, of the Flavelle Milling Co., of Lindsay, writes us under date of March 7th as follows:

"Referring to the two 74" water wheels (Leffels) purchased from you during the past year. As far as we have had an opportunity of testing, they have done their work excellently, in fact are doing more than you guaranteed them for. We took a test of the power they were developing with a head of water of 3 ft. 10 in., and they developed very close to 100 h. p. We are thoroughly satisfied with same."

This letter is but one of many such.

We also Manufacture

R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the

Simonds' Process

in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw nto frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as theyare cheaper, and in regard to working qualities are all that is needed.

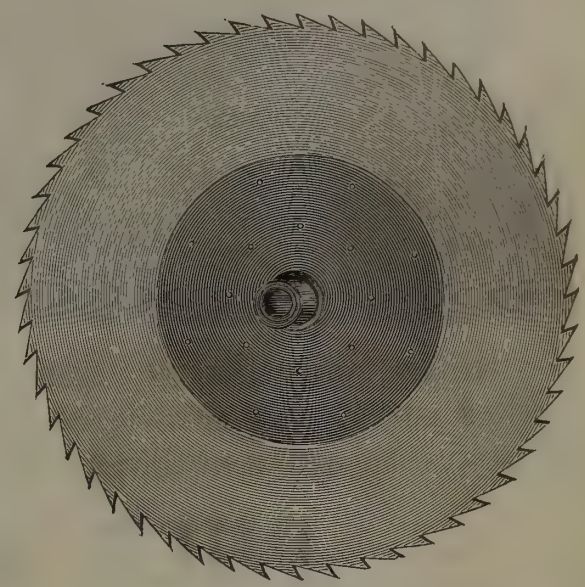
Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

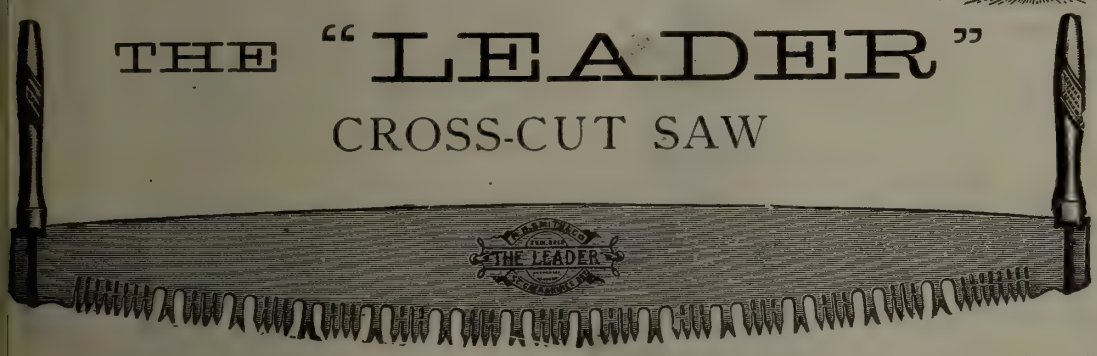
R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws. Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



THE "LEADER" CROSS-CUT SAW



These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, nsuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

THE "LEADER" SAW SWAGE

Made in 3 Sizes—$2.00, $2.50, $3.00, etc.

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

VOLUME XXII. NUMBER 1. } TORONTO, CANADA, JANUARY, 1902 { TERMS, $1.00 PER YEAR Single Copies, 10 Cents

The Cleveland-Sarnia Saw Mills Company

A Gigantic Corporation Established in Canada.—Particulars of the Immense Plant at Sarnia.—Personnel of the Company.

Industrial progress is one of the strongest indications of a country's prosperity. When the wheels of industry are turning quickly, and the raw material is vigorously being converted from its crude form into the manufactured product, then prosperous conditions are likely to prevail throughout the country. The number of industrial establishments in Canada is steadily increasing, the development of the forest resources being a field in which considerable investments have been made.

Some of the largest saw-milling plants in Ontario have been built by United States parties whose timber supply in their own country has became exhausted. The Cleveland-Sarnia Saw Mills Company, Limited, is one of the latest corporations to establish itself on Canadian soil. It is probable that this company would not now be located in Canada but for the Ontario law prohibiting the export of timber to the United States. Nevertheless, they have erected, in the town of Sarnia, one of the largest, most modern, and altogether unique plants to be found in the Dominion, and our reader generally will doubtless be interested in the several illustrations and particulars of the concern which are published in this number.

MILL OE THE CLEVELAND-SARNIA SAW MILLS COMPANY'S SARNIA, ONT.

For many years the Cleveland Saw Mill & Lumber Company operated saw mills at Cleveland, Ohio, for the production of square timber, and also conducted an extensive lumber yard and planing mill business at the same point. The volume of business in late years has been in the neighborhood of $1,000,000 annually. The supply of white pine was obtained from Michigan, but this supply having become exhausted, it was necessary to seek a new location for their saw mill in order that the business which they had established might be perpetuated. Hence it was decided to locate at Sarnia, and thus be in a position to obtain a timber supply from the pine district of Northern Ontario.

THE TIMBER LIMITS.

In recent years Mr. L. D. Holden, the president of the company, and his associates, had been investigating the white pine timber supply of the Georgian Bay district, and eventually secured options on a wide area of timber properties. These options have been gradually claimed, and the company are now in possession of over 43,000 acres of the best white pine timber lands. The timber is of excellent quality, and, it is said, shows a good proportion of logs running four to six to the thousand, which are smooth, sound, and of cork pine quality, and which will produce a large percentage of No. 1 lumber. The timber is all tributary to the Spanish river, which flows into the Georgian Bay and is one of the best logging streams on the continent. The logs will be rafted to the new plant at Sarnia, where storage room is provided for twenty million feet, and at Kettle Point, eighteen miles north of Sarnia, an immense surplus storage ground is provided which has a capacity of one hundred million feet of logs. The company have now available for next year's sawing over fifty million feet.

THE MILL AND EQUIPMENT.

Work on the construction of the plant at Sarnia was commenced on April 15th, 1901, and the mill was put in operation about November 1st, notwithstanding that there was a considerable delay on account of labor difficulties in the factory where the machinery was being manufactured. The saw mills and booming ground occupy a frontage on Sarnia Bay of 2,078 feet, with a depth extending to the St-Clair river channel of nearly 3,000 feet; in fact, the main tram and piling piers are 2,732 feet in length. Lumber is piled two rows deep on each side of this tram, which will afford a piling capacity of twenty million feet. A slip on both sides affords easy access for loading lumber on vessels, while a tramway underneath the tram provides facilities for forwarding stocks to the railroad tracks.

The main mill, illustrated on this page, will be devoted largely to sawing the best timber into boards and planks. It is 60 x 160 feet in size, with an L sorting shed attached, 40 x 140 feet, of which a view is shown. South of this mill is the timber mill, which is 40 x 204 feet in size, and will saw timber up to 75 feet in length. Between the two mills is a brick, stone and cement power house, 50 x 136 feet. The centre of this structure is occupied by a splendid battery of six boilers, of the Dutch oven variety of furnaces, which are fired automatically. On either side of the boiler room are located the two engine rooms, each of which contains Corliss engines of the most modern type, the one running the larger mill being 24 x 42 inches in size. The entire power plant equipment was furnished by John Inglis & Sons, of Toronto.

The board mill is equipped with one right and one left hand Prescott band mill using twelve inch saws, fourteen gauge, each 48 feet 6 inches long, the right hand mill having a three-block carriage, and the left hand a four block carriage, of Allis make, latest improved type. On the left hand mill it is possible to cut any length of log up to thirty feet, and on the right hand mill short logs.

THE RESERVE LOG SUPPLY, WITH DISTANT VIEW OF SAW MILL.

The saw mill equipment is from the Allis-Chalmers Company, of Milwaukee.

Both sides of the mill are equipped with live rolls, one string extending to the transfer table inside of the mill, the other string running through to the outside of the mill to convey timber to the platform located there. The mill is equipped with two Allis edgers, where the entire product of the mill, four inches and under in thickness, passes through and drops onto a transfer table, being conveyed at right angles with the mill over the trimmer into the sorting room. The equipment also includes a timber trimmer, which trims any size of timber, and preparations have been made to install a Mershon re-saw during the coming winter.

The mill frame is of the most substantial character, and is placed upon massive foundation, while the general equipment has strength enough to handle timber of the largest size.

The timber mill is equipped with one band mill, one long carriage made in two sections, and the necessary live rolls, jump saws, lath mill, steam niggers, and stave and heading machinery. Machinery has also been installed for the manufacture of curtain rollers.

The timber mill is equipped with a gigantic timber planer capable of dressing four sides at one operation immediately upon leaving the live rolls. A long timber loading dock connects with this mill, having ample room to accumulate numerous timber bills, thus enabling the company to saw, group and load orders in a comprehensive and economical manner.

The company will be able to ship by both rail and water. The lumber will be assorted

INSIDE OF SORTING SHED.

to regular yard grades and handled automatically by the most modern sorting appliances. The location of the plant furnishes exceptional facilities for prompt distribution of lumber. By vessel the chief lumber distributing centres at the head of Lake Erie can be reached in twelve hours. By rail there are five lines of outlet, including a chief trunk line from Chicago to Buffalo, with branches that cover all parts of Michigan and Canada. As a matter of fact, Sarnia is the centre of the largest white pine consuming territory in the United States and Canada. The quick delivery possibilities of this plant will be a great factor in securing a very large share of the rush order business of the country in white pine lumber. It is also an exceptional plant in the particular that it can promptly furnish white pine timber bills. This assures the company an extensive trade throughout the Central and Eastern States and Ontario.

The company have some 400 men at work in their camps in Foster township, where they are putting in the present winter some twenty-five million feet of tree lengths pine.

The company have just erected a derrick and belt house at Sarnia, and are sinking two salt wells, it being the intention to erect what will be the largest salt plant in Canada.

PERSONNEL OF THE COMPANY.

The president of this extensive organization is Mr. L. Dean Holden, who is also its treasurer. Mr. Holden is interested in many other important commercial enterprises, and is well versed in the lumber business. His brother, Mr. A. F. Holden, is vice-president of the company. He is also a man of large business experience, although only recently associating himself with the lumber trade. The secretary and general manager of the concern is Mr. J. M. Diver, to whom is due the splendid arrangement and equipment of the Sarnia plant. Mr. L. B. Beider is assistant secretary and Mr. E. C. Barre general superintendent. Mr. Frank Coleman, formerly saw mill superintendent of the Cleveland plant, and for twenty years with the Mitchell & Rowland Lumber Company, of Toledo, will occupy a like position with the new company, and will be backed by able assistants in the various departments of the business.

PART OF THE POWER HOUSE.

LUMBERING OPERATIONS IN SWEDEN.

A royal commission, which was appointed to investigate the depopulation of Northern Sweden through the operations of great lumber companies, has made a report in favor of the immediate introduction of a bill prohibiting sales of forest lands in the Provinces of Norland and Dalecarlia to lumber companies until 1905. The commission finds that the peasantry in those provinces is in danger of extinction, the lumber companies laying waste farms and nursing only the forests.

The evils thus brought about are so great that immediate temporary measures are demanded. The commission suggests that after 1905 final legislation be adopted regulating the operations of lumber companies and based on the detailed investigations of the commission.

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C.H. Mortimer Publishing Company of Toronto, Limited

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICE:
IMPERIAL BUILDING, MONTREAL.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:
One Copy, Weekly and Monthly, One Year, in advance.... $1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

ANOTHER YEAR.

With the present number THE CANADA LUMBERMAN enters upon its twenty-second year of publication. What this year may bring forth cannot be declared, but, taking the one gone by as a criterion, we are justified in looking forward to a period of prosperity and advancement.

The first year of the new century brought no serious obstacles to the lumber trade. Lumbermen generally have been prosperous. There have been a few dark spots on the horizon, but they are passing away, and the year 1902 promises to find Canadian lumber of all kinds in good demand.

THE CANADA LUMBERMAN has continued to receive the hearty support of the lumber trade and of a large clientele of advertisers. Many evidences of the appreciation of our efforts to make the journal useful and instructive have come to us from readers from the Atlantic to the Pacific, as well as from many in Great Britain, where the journal is now widely known and largely circulated. Our representative who recently returned from the Mother Country reports a steadily increasing interest there in the timber products of Canada and a growing disposition to trade with the Colonies.

This year we hope to be at the helm as usual, and shall endeavor to render the best possible service to the lumber trade, and twelve months hence, to be able to chronicle another year of prosperity.

To our readers, advertisers, correspondents and the lumber trade generally, we extend the Season's Greetings.

THE INSURANCE AND PROTECTION OF FORESTS.

IT is learned from a British insurance journal that in some countries of Europe the insurance of forests has received considerable attention, and that in rare instances risks of this character have been accepted by the underwriters. In Germany, for instance, forests are known to have been insured. The question so far as we can learn has never been seriously considered in Canada.

It seems doubtful whether it would be found profitable for insurance companies to accept the risk of forest fires in this country. Much difficulty would be encountered in ascertaining the value of the property and thus of fixing an adequate premium, while in the event of an outbreak of fire gaining progress, the great extent usually devastated would prove disastrous to the insurance companies. In Germany the conditions are different. The forests are laid out in squares and adequately protected, and there is not the abundance of underbrush to feed a fire that is to be found in Canada.

Until forests are much better protected than at the present it would be suicidal for the underwriters to accept such risks. The government of Ontario has perhaps taken more progressive steps towards forest protection than that of any other province of the Dominion, yet the measures that have been adopted are by no means sufficient to adequately protect the forests from fire. Take, for instance, the fire which occurred last summer in the Temiscaming district, when millions of feet of spruce and pine timber were destroyed. The fire, it is believed, was caused by settlers, who almost invariably take little precaution to extinguish a fire. If we hope to properly conserve our forest wealth, it will be necessary for the government to adopt more stringent laws governing the setting out of fires, and, in fact, to prohibit the starting of fires by settlers unless under the direction of a Crown official. Such a law would not retard settlement, but would simply be the means of saving the country many million feet of timber annually.

What has been accomplished by the government fire rangers on the pine timber limits is sufficient to prove the efficacy of a system of fire protection. Where fire rangers have been employed the loss has been greatly curtailed. It is impossible, of course, to bring about complete immunity from fire, as lightning or some unknown cause will occasionally start a fire which will attain such headway that it cannot be overcome until considerable damage has been done.

The spruce forests of Ontario should not be neglected in the application of a system of forest protection. In the Temiscaming district the average production of spruce is about five cords per acre. This is now granted to settlers for the sum of fifty cents per acre. These settlers do not value the timber, but simply the land. It is all the more necessary, therefore, that the government should protect the timber from fire, otherwise that great spruce district will in a short time be completely wiped out. In exploring for minerals and timber, a party of surveyors, representing a well-known syndicate, are said to have exercised no precaution whatever when setting out fires in the woods, with the result that they are believed to have been responsible for many of the fires that have occurred in Northern Ontario.

There can be no more effectual way in which the government can expend a few thousand dollars annually than in further protecting the forests. If immediate steps are not taken we will find that in a short time our position in respect to timber supply is no better than that of the United States, Great Britain, Germany and other countries.

LUMBER STATISTICS.

One of the needs of the lumber trade of Canada is lumber statistics. The statistics now available are confined almost exclusively to the tables of exports and imports compiled by the Dominion Government. These are good enough of their kind, but are of little value to buyers in foreign countries, and, owing to their inexplicit classification, not particularly useful to the home trdde. Little or no effort is made by our lumbermen toplace before buyers and consumers figures respecting the conditions of the trade, as is done in nearly every other country.

In the United States the eastern spruce field is represented by the New England Lum-Manufacturers' Association; the pine district of Lake Superior by the Mississippi and Wisconsin Valley Lumbermen's Associations; the yellow pine of the south by the Southern Lumber Manufacturers' Association, and so on throughout the lumber producing districts. These associations compile and place before the trade at regular intervals figures showing the lumber production, quantity of unsold stock, and other information which is found most useful. In Great Britain, the greatest lumber importing country in the world, statistics are issued by the Boards of Trade from time to time which show the actual condition of lumber stocks and, accordingly, of the lumber market.

The policy of the lumber manufacturers of Canada in the past has been to conduct their business in such a manner that their neighbor, as it were, would know little of what is being done. The Georgian Bay manufacturers are not in touch with the producers of the Ottawa Valley, notwithstanding that the production of both districts is in a large measure sold in the same markets. It is not in the best interest of the industry that this condition should continue. The day for clandestine operations has gone by, and the tendency is towards reasonable publicity of the actual conditions existing in a business.

Lumber statistics cannot be collected except with the co-operation and assistance of lumbermen. An improvement in this direction, it

would seem, could best be accomplished by the formation of lumber associations throughout the Dominion, one covering British Columbia and Manitoba, another for Ontario and the Ottawa pine district, another for Quebec, and a fourth for New Brunswick and Nova Scotia. It may be said that none of these provinces are now represented by a proper organization, as even in the case of Ontario the existing Lumbermen's Association is almost solely a western Ontario organization.

There is urgent need of greater unity among the lumbermen of this country, one of the main advantages of which would be the preparation of statistics bearing upon the trade. This would doubtless result in a proper recognition of our importance as a lumber producing and exporting country, and benefit would certainly accrue to the trade in general. The matter might well be considered at the forthcoming annual meeting of the Lumbermen's Association of Ontario.

EDITORIAL NOTES.

The use of metal and other varieties of shingles has evidently not lessened the demand for wood shingles to any extent. Throughout the past year they have been in strong demand. It would seem that either the consumption has increased or the production decreased. We do not think that the latter is the case except, perhaps, as regards white pine shingles. There is no shingle more in favor to-day than the white pine, but the scarcity of them, doubtless due to the enhanced price of pine stumpage, has caused some dealers to turn their attention to other qualities. The white and red cedar shingle has been used very largely, and spruce and hemlock to a smaller extent.

There can be no disputing the fact that white pine lumber is steadily becoming more valuable. It is doubtful if ever before in its history the position of white pine has been as strong as it is to-day—not excepting the prosperous year of 1899. The upper grades are annually becoming less plentiful, and the low prices of a few years ago are not likely to be ever reached again. As to the lower grades there is more uncertainty, owing to the larger supply, but even these seem to have a promising future. Since the prohibition of the export of Ontario logs, the market for Canadian pine has broadened, and it is now sold in sections of the United States where previously it was almost unknown. A remarkable instance was the rerent shipment of pine lumber to Chicago by Mr. J. R. Booth, of Ottawa.

During the last month the lumber trade of the United States have been much interested in the exposures which have been made concerning the doings of the Chequassett Lumber Company. The transactions were apparently of a most questionable character, and finally terminated in the winding up of the company by the banks. An interesting feature of the case is the explanation of how a large sum of money was lost by the piling of lumber. The yard at Asheville, North Carolina, was originally used in connection with a large band saw mill. The tramways were very high, in some places as much as twenty feet above the surface of the ground. At one time the company had 3,000,000 feet of lumber in the yard, and to economize room the piles, instead of being topped off level with the tramways, were carried up from 75 to 100 courses higher. The lumber, which was largely oak, remained on sticks for some time, and when taken down practically every board up to about the level of the tramways was split at each crossing of the piling sticks. It is said to have been caused by the superimposed weight on the lower boards, preventing any lateral movement or slip at the piling stick as the board contracted in drying. This is probably true, as every lumberman will have noticed the greater width of a board, which has been long in a large pile, at the point where the piling sticks cross it. This is a matter to which lumbermen should give attention, so that the quality of their lumber may not be impaired.

Pine and hemlock stumps and old logs that were supposed to have become worthless years ago, are being gathered in Northern Michigan to be manufactured into lath.

Timber should be cut down when the sap is at rest, that is, in the middle of summer or in the middle of winter. The latter is by far the more preferable. The ancients knew this as well as we do.

A MODERN SHINGLE MILL.

From the ruins of the shingle mill of the Spicer Shingle Mill Company, of Vancouver, B.C., has risen a mill of larger capacity and better equipment than that which was destroyed by fire on May 26th last. The new mill has now been in operation for over four months and is giving excellent satisfaction and turning out shingles in large quantities. The mill proper is a two storey frame structure 35 x 110 feet, with a boiler house 35 x 60 feet. The power is furnished by three 60 inch x 14 foot boilers, and a slide valve engine 18 x 36. The power is distributed by a four inch shaft 100 feet long.

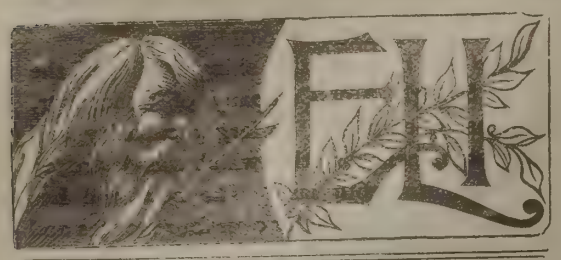
The equipment of the mill consists of seven latest improved type of Dunbar machines, designed by Mr. F. Johnson and built by the Schaake Machine Works, both of New Westminster, B.C., also automatic saw filing and automatic regrinding machines and all other machinery required in an up-to-date shingle mill.

The boiler house is detached from the mill and is constructed of iron on a light wood frame. Both buildings are whitewashed on the inside from a receipe furnished by the Board of Fire Underwriters. The mill building, boiler house, dry kiln, blacksmith's shop, dwelling house and office are painted with a fire-proof paint, reducing the fire hazard to the minimum. Three lines of iron rails extend from the mill through the dry kiln to railway siding, thus necessitating no handling of shingles until they are ready for loading on the cars. The capacity of the mill is 100,000,000 shingles a year; dry kiln, 2,500,000 shingles; storage sheds, 7,000,000 shingles.

Mr. H. H. Spicer, the head of the company, has been connected with the shingle business for many years and is thoroughly conversant with the wants of customers. The company, besides a good local trade, are making large shipments of shingles to Manitoba, Ontario and other Eastern points, and report a steadily increasing business.

SHINGLE MILL OF THE SPICER SHINGLE MILL COMPANY, VANCOUVER, B. C.

The Phoenix Oil Company, of Cleveland, Ohio, manufacturers and dealers in lubricating oils, graphite greases, etc., have opened Canadian offices at Room 25 Janes Building, corner King and Yonge streets, Toronto. This firm make a specialty of Murphy's famous Green Seal belt dressing. Mr. P. R. Hood is manager and Canadian representative.



Mr. James Hardie, of Owen Sound, gave up farming a few years ago to engage in lumbering. In order to add to his success in that line he recently became a subscriber to THE CANADA LUMBERMAN, so that he might know what the other fellows in the trade were doing. Mr. Hardie was born in Owen Sound more than half a century ago, and has lived there continuously ever since. He has had the pleasure of seeing the town grow from a hamlet of three or four buildings to the dimensions and importance of a small city. It is now one of the most important shipping ports on the great lakes, the river entrance to the harbor, nearly a mile long, being at present lined as thickly as possible on both sides with iron vessels engaged in the lake trade in grain, lumber, ores, etc. In view of the great industries now being established at Sault Ste. Marie and other points in New Ontario, and the rapid development of the resources of this territory as well as of the Northwest, Mr. Hardie foresees a great future before his native town. THE LUMBERMAN hopes that he may live another half century or so and witness even greater developments than he has yet seen.

* * *

I learned from Mr. R. Cook, of South River, when in Toronto before Christmas, that he expects to bank the usual quantity of logs this winter, in the vicinity of 6,000,000 feet. Weather conditions, he says, were favorable for logging operations until about the first week in December, when snow fell until it reached two and one-half feet in depth, and the cutting and skidding of logs had to be abandoned about one week earlier than usual. Mr. Cook reports labor to be quite plentiful at present, which is in contrast to the conditions prevailing previous to the middle of November, at which time nearly all the mills had closed down for the season. Before then woodsmen were very scarce, and it was difficult to keep the camps in operation, as many of the men, after working a short time, would lay off work or leave, knowing that they could easily secure employment elsewhere. The extent of this trouble may be judged from the fact that when Mr. Cook visited the camps on a certain Thursday he was told by the foreman that he was well supplied with men, but two days later he received a letter asking that ten be sent immediately, that number having absented themselves in the meantime. At another time he had one gang in the woods, another on the way out, and a third going into work. These difficulties, however, have now been overcome.

* * *

I notice in a late issue of the American Lumberman a character sketch of Jacob Cummer, who was born in Canada in 1823, and whose father, John Henry Cummer, was the first white child born in Toronto. The date of his father's birth was 1797. The parents of John Henry Cummer moved from Pennyslvania to Canada at an early date. He was a lumberman in a small way, and his son Jacob was scarcely out of his boyhood when he succeeded to his father's business. Operating chiefly in Michigan white pine, he built up a large trade and was eminently successful in timber investments. In later years he acquired timber holdings in Florida and built a magnificent saw mill at Jacksonville. Mr. Hollister, manager of the old National Bank, of Grand Rapids, Mich., relates an incident which contributed to Mr. Cummer's success in business. Mr. Cummer had a balance of a few thousand dollars in the bank. He went to Mr. Hollister one day with the statement that he wished quite a sum of money to take back with him to Canada to pay a bill. He explained that it was not a debt he owed, but a matter that he regarded as one of honor and he wanted to pay it. Mr. Hollister provided the money and Mr. Cummer made his trip to Canada. The impression this incident made on the minds of the bank manager and his associates served Mr. Cummer in good stead some years after when the panic of the early seventies appeared. He was loaded down with lumber and had to borrow a considerable amount or sacrifice his stock at ruinous prices. It required only a suggestion on his part to obtain all the funds necessary from the First National Bank to carry him through that difficult financial period.

* * *

A writer in the Mississippi Valley Lumberman commends the policy of the Ontario Government in handling timber lands. He says: The government is certainly entitled to a great deal of credit for the efficient and business-like way in which they have handled their timber lands. Every inducement has been offered to responsible parties to encourage them in building up the lumber industry across the border, yet any attempt at fraud has been dealt with very summarily. This policy is in direct contrast with the way in which a great deal of the public of the United States has been gobbled up by a lot of shrewd schemers and politicans. Apparently it has not been very difficult to get through Congress or one of the departments some enactment which permitted individuals, companies or railroad corporations to acquire possession of a lot of the very choicest holdings of the government. There are many cases of where parties have been permitted to relinquish absolutely worthless lands and take in exchange much of our wonderful resources. The Canadian government would long ago have been bankrupt if it had not been for the way in which they administered their public lands. I remember years ago I was connected with the company that had an extensive business across the border. We had leased a number of timber berths from the proper authorities, but our manager thought that there was an opportunity to take advantage of the generosity of the government to still further increase our hold ings without a very large outlay. By an enactment bona fide settlers were permitted to come in and take up a very large tract of land, agreeing to pay something like $3 an acre. They were, however, permitted to pay this in installments running three years without interest. The manager got together all the men in their employ that he could possibly spare and even induced a few outsiders to come in for a small consideration and had them file on certain of the very choicest timber lands. Of course the company, paid the first installment of 50 cents and immediately had the different men sign over their rights to the company, the plan being that as soon as they were properly passed upon, considerable of the timber could be cut without much delay. However, the proper authorities turned down every one of those applications and confiscated the 50 cents an acre which had been paid. In rendering their decision, they intimated that they were perfectly willing to go into other deals on the same basis. Of course, our company had to stand the loss, because it would not have been difficult to have proved that we were attempting to perpetrate a fraud. The great advantage which the officials across the border have always had is they do not hesitate to make a decision and then the burden of proof is upon the individuals. It can be said, however, to their credit that mighty few cases have been found where innocent persons were unjustly or harshly treated, but they certainly do not waste any time or sympathy on law breakers."

* * *

The annual feast of the Saginaw Lumber Dealers' Association is one of the landmarks of that society. For the twelfth time the members gathered in the East Saginaw Club on December 10th last. The speeches were mostly of a reminiscent character, and much was said that has a tinge of interest for Canadian lumbermen. John Estabrook gave a brief recital of the rise and decline of the white pine industry of the State of Michigan. He said that when he remembered the rise of the lumber industry of the Saginaw river to over one billion feet produced in 1882, and that only one mill is now devoted solely to the manufacture of white pine, it made him feel as if his friends, the saw mills, had deserted him. In 1860 he bought lumber at $2.50, $5, $12 and $18 that would be worth to-day more than $35 straight, if it could be found. R. H. Hoys, of the Saginaw Lumber & Salt Company, who is known to many Ontario lumbermen, contrasted the old conditions with the new, pointing out that lumbermen are obliged to follow the pine trees, and for this reason have transferred their operations to Ontario. The men, he said, who first learned to lumber on the Coldwater, on the Salt, and on the Cedar rivers, and contended with low banks, shallow flats and sandy bars in the spring drive, were up against a different proposition amid the rocks and hills of the Georgian Bay country. The shantymen, too, who in former time gathered in the little hotels ready to go up the Michigan Central or the Flint and Pere Marquette Railroad to the lumbering camps, had become a thing of the past. Now the Georgian Bay lumbermen send an agent clear down the Ottawa river to Ottawa itself, hundreds of miles, and when he comes up with the crew men are so scarce that the foreman reports that the company saved near half the railroad fares by having the younger fellows sit on the old men's laps, working them through on half fare. After viewing one motley collection of grey beards and whiskerless faces, in disgust he ejaculated, "Great Scott! We rob the cradle and the grave." Coming to the subject of white pine stumpage, Mr. Roys said that a little over a decade ago the lumbermen could go out and buy stumpage on the Spanish tributary streams for one dollar a thousand, and frequently pieces were snapped up at less than that price. In contrast, notice the prices obtained by the Ontario Government in September last. when portions of townships back of the "Canadian Soo" brought ten dollars stumpage, according to the reports of some of the timber cruisers. One man whom he sent to make an examination reported good timber, but thought it would have to be lumbered by balloon, the hills were so high, the creeks so small, and the timber so scattered. "One singular thing about this rocky territory," said Mr. Roys, "is that fires must have swept it for centuries, for on a winter road we were making some years ago the woodman with me kicked out of the mossy ground fragments of charcoal, and looking at the pine trees evidently over one hundred years old that we were cutting on the same ground, said this country must have been swept by fires long before our day."

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 20 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:

IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday, Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

FOR SALE—One of the largest and best equipped planing mills and lumber yard in Western Ontario; continued ill health of proprietor reason for selling. Answer Box 24, CANADA LUM ERMAN.

WANTED—75 carloads Rock Elm Strips 2½ x 1¼", in lengths 4 ft. 6 in., 4 ft. 9 in. and 5 ft. Must be perfectly free from knots and full size. Apply OTTAWA LUMBER CO., Ottawa.

SCOTCHMAN (6) SEEKS EMPLOYMENT in timber yard, 13 years experience in office and yard, has excellent references, respectable appearance, and is in robust health. Address "Timber," care Keith & Co., Advertising Agents, Edinburgh, Scotland.

SALE BY AUCTION

OF

SPRUCE AND PINE TIMBER LIMITS

IN OTTAWA DISTRICT.

The undermentioned Timber Limits will be sold by public auction at the office of the undersigned, No. 114 St. James Street, Montreal, on Wednesday, 29th January, 1902, at noon:—

1. 196 square miles on the North East branch of the Lievre River.
2. 100 square miles on the middle branch of the Lievre River.
3. 100 square miles on the North West branch of the Leivre River

Full information respecting the property may be obtained from the Department of Lands, Forests and Fisheries, at Quebec, and on application to the undersigned.

JOHN FAIR,
114 St. James St. Notary for Vendors.

Montreal, 23rd Oct., 1901.

WANTED—BLACK ASH LUMBER, CUT to order. Apply to J. KAUFMAN, Berlin, Ont.

B. HOOVER, BANNOCKBURN P. O., SOLICits correspondence with reliable Canadian Agents who deal in brush handles, etc., with a view of establishing business.

WANTED—INCH BIRCH, STRICTLY 1s and 2s, eight inches and up wide. Quote lowest price delivered on cars point of shipment. J. F. STENGEL, 990 Ellicott Square, Buffalo, N Y.

WANTED—An up-to-date 3 or 4 block carriage, medium weight, for mill of 18 M capacity, must be good as new Give full particulars and price. Address "Righthand Carriage," care CANADA LUMBERMAN.

Cedar Poles Wanted

A LARGE quantity of cedar telegraph poles wanted, 25 to 65 ft. long, 7 inch top, for early spring delivery. Quote price f o.b. cars point of shipment' BOX 33, CANADA LUMBERMAN.

A FIRST CLASS BAND MILL, SITUATED on the Georgian Bay, is open to contract for sawing from two to four million feet logs during summer of 1902. Good piling ground and shipping facilities. State size and quality of logs. Apply in first instance to this office.

BOX SHOOKS WANTED.

We have large export orders for Box Shooks, principally in Spruce, for butter, candle and soap boxes Also Birch and Maple squares, chair-seats, etc. Apply for particulars to GELLIBRAND, HEYWOOD & Co., Cardiff, Wales, G. B. Payment cash.

FOR SALE

ONE 40 H.P. ENGINE, ONE 45 H.P. BOILER, and one 100 h.p. engine. The larger Engine is now running in our works, but we can dispose with it any time owing to electric power now being installed in Orillia. One Planer and Matcher or Moulder, Shingle Machine, Rip Saw, Dry Kiln Fans and Heater complete, Hangers, Shaftings. All of these we offer at a snap; they were up to October 1st in the Veneer Works, but now that we have taken the Veneer Works into our business we have no use for the machinery we offer.

THE CANADA WOOD SPECIALTY CO., Limited Orillia, Ont.

AUCTION SALE

OF

VALUABLE TIMBER LIMITS

AND LANDS.

There will be offered for sale by Public Auction, at the Russell House, in the city of Ottawa, on

Wednesday, the 19th day of February, 1902,

at two o'clock in the afternoon, the Timber Berths and Properties owned by Mr. William Mackey, on the River Amable Du Fond, Province of Ontario. The limits are in one block containing 129¾ square miles, timbered with white and red pine of superior quality, spruce and other woods, and are well watered, making a very short average draw. Part of the block is still a virgin forest containing large board pine of the finest quality with a very short haul.

With above are included deeded lands on which are built slides and dams; and at Eauclaire station, Can. Pac. Ry., a well-equipped saw, planing and shingle mill run by water power.

The whole will be sold in one block. Maps and descriptions of limits may be obtained from

W. MACKEY.

Ottawa, 4th Dec., 1901.

FOR SALE—CHEAP. 3 cars 1¼ inch Cull Maple, 3 cars 1 inch and 3 cars 2 inch Beech. REID BROS., Hepworth Station.

FOR SALE.

LARGE STEAM SAW MILL, COMPLETE—can ship Seaforth or Brussels. J. R. GOVENLOCK, Seaforth, P. O.

FOR SALE OR RENT.

FIRST-CLASS SAW AND PLANING MILL, in good locality. For particulars apply to A. S. STROME, Fordwich, Ont.

For Sale.

One 54 inch double cant oscillating gang, Wm. Hamilton make, extra strong and in running order. Apply G. B., care CANADA LUMBERMAN.

WANTED—In car lots, mill run or common and better 1½ inch, 2 inch, 2½ inch and 3 inch dry Soft Elm. Also 1 inch and 3 inch fair grade Basswood. State lowest price f.o.b. cars, Markham Station. Address TAYLOR & LOUNT, Markham, Ont.

FOR SALE.

50 LARGE WHITE PINE TREES, THE pick on 75 acres of Pine, Cedar and Tamarac woods. Price $40.00 each as they stand. Tamarac Piles and Cedar for sale at Brantford, Ont. Apply to E. TODD. 131 Brant St., Brantford, Ont.

WANTED

A steady, energetic, thoroughly experienced and competent man as foreman for a large shingle mill, equipped with Dunbar type of machine. Night and day capacity per year, 100 million.

Must be an expert on shingle saw filing and hammering, and thoroughly understand the Dunbar machine, and be able to do mill-wright work, know how to handle men, and write and figure fairly well. None but a strictly temperate man need apply.

Prefer a man not over 40 years old. An excellent salary and steady employment to the right man.

Apply "Shingle," care this paper, for further particulars.

CURRENT TRADE CONDITIONS.

ONTARIO.

It is difficult to give a statement of the lumber market that will show the true situation, but it may be said with certainty that the tendency of white pine prices is upwards. Very few manufacturers are now issuing price lists, for the reason that they have not sufficient stock to offer. Almost every grade is well sold out, the heaviest stocks, perhaps, being in mill culls and common pine plank. Prices of the higher grades have shown a wide fluctuation during the past two weeks, as some manufacturers are apparently more impressed than others with the scarcity of these grades, and are asking correspondingly higher prices. This is also true in respect to lath and shingles, as is demonstrated by the fact that an Ottawa valley manufacturer is asking $3.50 for No. 1 lath at the mill. This figure, however, does not represent the average market quotation. There is considerable inquiry for stock for future delivery, and the trade are inclined to the opinion that prices next season will be fully as high as in 1901.

In hardwoods there has been some improvement. Carload shipments of elm, birch and maple to the United States are being regularly made by manufacturers in the Wiarton district, and it is said that the inspection has not been as severe as last year, thus indicating a stronger market. It is now certain that fewer hardwood logs will be taken out this season than last winter, as millmen are beginning to realize that it is more profitable to leave the timber on the stump than it is to sell it as lumber when prices are low and inspection hard.

QUEBEC AND NEW BRUNSWICK.

Late report from the eastern provinces seem to show that conditions are quite favorable for spruce lumber. Stocks in most districts are below what they were one year ago, while enquiries for next year's cut are quite numerous. South American specifications are much in favor, and if the demand should continue large shipments will be made to that country next season. Full prices are being asked and will no doubt be obtained, as the log supply is likely to be small and insufficient to keep the mills at work throughout the season. Cedar shingles continue strong, on the basis of $3.30 for extras, Boston delivery. Ocean freights have fallen and are dull, while rail freights to the United States rule high.

MANITOBA AND BRITISH COLUMBIA.

The lumber movement at the present time is confined largely to finishing material. This is comparatively large, as building operations in Winnipeg during the past year were on an extensive scale. There is a good outlook for next spring, as retail dealers are not heavily stocked. British Columbia mills continue busy. Several vessels are loading at Chemainus for Australia. The freight market has strengthened considerably, the rate being fully three shillings higher than six weeks ago. There is an exceptionally strong demand for cedar logs. More camps than usual are at work, and a scarcity of men is reported. It is feared that there will be a break in the shingle market owing to the increased production resulting from the several new mills about to be put into operation.

UNITED STATES.

The holiday season has curtailed the lumber demand, but the market has lost none of its strength. On the other hand,

the year closes with high prices and the outlook favorable for a continuation of a firm and advancing market. This applies to almost every class of lumber, with white pine occupying the first position. The upper grades are so scarce that it is impossible to find a sufficient quantity to meet the requirements of the market, while the lower grades are gradually becoming stronger. It is reported that in Tonawanda prices of the lower qualities have recently been advanced quite sharply, and dealers are predicting a further advance on some items within the next month. It is estimated that Chicago dealers who heretofore bought most of their stock at Duluth and Ashland have purchased at least one hundred million feet of white pine lumber at interior mills to be shipped to their yards next season. In Cleveland dealers are asking an advance of from $1 to $2 a thousand on selects, fine common and No. 1 and No. 2 shop. Numerous enquiries are in the market for hemlock lumber. The base price in New York is now established at $15, while during the last week prices have advanced in North Tonawanda until some items are selling at the base price of $16 and as high as $17 in a few instances. The hardwood market continues to show a fair degree of activity. There is a good demand for basswood, elm, and black ash. At a meeting of the Chicago Hardwood Lumber Exchange held last week, discussion revealed the fact that firsts and seconds basswood, birch and ash were extremely scarce, also that many of the dealers were selling some varieties of lumber at less than they could be replaced. Accordingly, advances were decided upon.

GREAT BRITAIN.

As usual at this period of the year, the business doing in lumber is of a quiet character, yet the British market seems to be breaking away from the weakness and uncertainty which characterized it through the greater part of the past year. Some shippers have not yet submitted their price lists for next season. The question now seems to be how much higher prices will go for the first-open-water stocks. This is particularly the case in respect to Canadian lumber, which is showing marked strength. Considerable quantities of spruce deals are said to have been bought for next year at high figures, but even if freights can be obtained at the present rates, which are extremely low, the opening prices are not likely to be below those now ruling. The stock of spruce in all the United Kingdom ports is abnormally low, especially in Liverpool and the Bristol Channel. A very light stock of 11 x 3 and 9 x 3 is held. While pine deals are in heavier stock than spruce, they are rapidly going into consumption. The stock of waney pine is very small and the prices asked for next season's production are said to be the highest ever known. The Importers Section of the Timber Trade Federation took no action at their meeting last week regarding prices, on the ground that it was not practicable to pass a resolution defining any particular course.

SOCKS AND PRICES.

John Jamieson expects to have half a million feet of lumber to ship from Bloomfield, N-B., in the spring.

The city of Winnipeg is asking for tenders up to January 9th for the supply of from 500 to 1,000 cords of cedar.

John Whalen, of Sussex, N.B., who is lumbering for Mr. Mooney, of St. John, expects to get out 2,000,000 feet of logs this winter.

The Saginaw Lumber & Salt Company are announced to have sold to Quebec shippers 200,000 cubic feet of waney board pine to be taken out this winter in the Georgian Bay district.

The Dominion Government is asking for tenders up to January 13th for a permit to cut timber on berths No 995 and 996, in the Province of Manitoba, and until January 20th for a permit to cut on berth No. 998. The two first berths contain an area of 9 square miles each, and the last berth an area of 160 acres.

LAKE OF THE WOODS DISTRICT.

A correspondent writes THE CANADA LUMBERMAN regarding lumbering operations in the Lake of the Woods district as follows :

Lumbering operations in this district are much greater this season than heretofore. The large crop in Manitoba has stimulated the lumber business, and I am looking forward to next season being the most active in our history. There will be cut about 35 million feet, board measure, of saw logs. Labor is in good demand and very fair wages are being paid. The Canadian Pacific Railway Company has let contracts for one and one-quarter million ties and about 10,000 piles and one-quarter million fence posts. This is much in excess of former contracts and points to railway construction in the west. The Northern Railway Company has let contracts for one-quarter million ties and a large quantity of telegraph poles and fence posts. The Northern Railway, or what is known as the Rainy River Railway, is going to open up a large territory, well covered with all kinds of timber. There is a large portion of the territory on which no pine timber has been cut, and I have no doubt that the time is approaching when it will be sold, as the danger from fire is so great along the line of the railway that it necessitates the disposal of the timber in close proximity to the line.

There is a demand for timber of less value than heretofore, by reason of connection with Winnipeg. Cord wood along the valley of the Rainy River is now worth $2.50, with a large demand.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

Available stocks are scarce and prices firm in the local lumber market. Business is dull, a dullness attributable to the scarcity of supply and the cessation in manufacturing operations. The principal planing mills have closed down, to resume business about Jan. 5th. At present all hands are engaged stock-taking, reviewing the year's business and planning for the future.

Shingles are not to be had in any considerable quantities, and lath is very scarce. Good strips and shorts are also about sold out, and the same may be said of 1¼, 1½ and 2 inch sidings Nearly all this stock has passed into third hands, albeit the builder and other consumers.

Circulars sent from a leading mill on Monday quoted prices suggestive of the Klondyke. The prices at the mill ran as follows: No. 1 white pine lath, $3.50; No. 2 ditto, $3.25; No. 1 red pine lath, $3.25; No. 2 ditto, $3.00. It is a question whether these prices can be obtained. Prices already quoted rule in other lines. Everything points to an upward movement, however, as the available stocks are small.

Reports from the limits go to show that the weather conditions are now more favorable then they were earlier in the season. All the larger lates are fit for traffic and recent thaws have improved the roads.

Mr. T. C. Elmitt, of the firm of Hurdman & Elmitt, left last Monday on a business trip to Alabama and Tennessee. He will be away until the middle of January.

Notice has been given that an appeal will be entered by Mr. Alexander Fraser, defendant in the celebratd suit of Dezouche vs. Fraser. Judge Leavergue gave an order calling from defendant a statement of proceeds of sale of limits owned by the firm of Frazer & McCoshan; the latter was Mrs. Dezouche's first husband. The limits were sold after his death. Proceedings were instituted by the widow to determine what share if any her children, the minor heirs of McCoshan; were entitled to. About $500 is involved.

DOORS AND MOULDINGS.

A large buyer of Canadian white pine doors and mouldings is open to contract with a mill for their entire output of No. 3 and 4 qualities of doors and all their mouldings during 1902. Write in the first instance to Empire, care CANADA LUMBERMAN.

FOR SALE.

A number of very valuable pine and other timber limits on the north shore of Lake Huron and elsewhere for sale. Also limits bought and sold on commission and estimates given. For particulars, apply to

TRANSACTIONS IN TIMBER PROPERTIES.

It is rumored that King Bros., of Quebec, have sold their timber limits, mill properties and railways in the province of Quebec to a Glasgow syndicate, who will further develop the properties and put on a special line of steamers to South America.

The Cutler and Savidge Lumber Company are reported to have sold their saw mill located at Cutler, Algoma district, to the Wright Lumber Company, of Bay City, Mich. It is understood that the deal does not carry with it the timber limits in Ontario owned by the company.

New Mill Erected 1901. Capacity 100 Million a Year.
Spicer Shingle Mill Co., Limited

It is not the purpose of this advertisement to try and convince the Lumber Trade of Canada that we are the only company in British Columbia manufacturing and shipping shingles in large quantities, or that we "know it all." We recognize that "there are others" and that we are not the only "pebble on the beach." To try and make you believe that we are the only people who can supply you **promptly** and in **large quantities** with a **high-grade** shingle would not only be a **fish** and a **bear** story combined, but it would be gall of the bitterest kind.

Our competitors in the shingle business in B. C. are nice people, and we presume that they know their business ; but we are nice people too, and as we have been in the trade as long as any of them, and a **great deal longer** than the most of them, we know that we know our business, and that our competitors are not in the possession of any points of value regarding the manufacture of shingles which has not come to **our knowledge**.

Our old mill was burned down in May last, and in its place we have built what is at the present time the **Largest** Shingle Mill in B. C.

Our new Mill has 7 of the latest improved type of Dunbar machine, which we run night and day—giving us a capacity of about **100 Million** a year.

Competent judges who have seen our new mill, tell us that it is one of the most **substantial**, carefully **constructed**, and best **planned** mills in this province. We ourselves think it is **the very best** shingle mill in B. C. ; and we know that it is **equipped** with all the very latest improved Shingle Machinery.

Will the trade please note that our contract with the Pacific Coast Lumber Co. closes at the end of this year. D. Ferguson, of London, Ont., is our representative for that province. Orders sent to him, or to us direct, shall have **prompt** attention.

We want our share of your shingle business, and can **guarantee** your satisfaction in **every particular.**

Spicer Shingle Mill Co., Limited,
VANCOUVER, B. C.

No Fish Stories

go when it comes to speaking about
OUR SHINGLES
FACTS ARE FACTS WHETHER TOLD ABOUT FISH OR SHINGLES
We make a fine 16-inch Shingle.
We make a fine 18-inch Shingle.
We make a fine 24-inch Shingle.
We make all thicknesses from 6-2 inch to 6-3⅜ inch.
They are going out of our different mills at the rate of 200,000,000 a year. We make more shingles than any one firm in the world.
Just think of it!

We claim to be experts. That is not gall. That is a statement which is proven constantly by the testimony of our customers from the Pacific Coast to the Atlantic Coast on the Canadian side, and from Maine to Puget Sound.

Mixed Cars our Specialty. Don't forget that we have all kinds of House Finishing Material in Fir and Cedar, and can load any quantity with shingles.

Come, let us deal together.

CUSTOMERS' ATTENTION.—Please take notice that on and after the 1st day of January, 1902, all arrangements with the Pacific Coast Lumber Co. of New Westminster, B. C., for the handling of any of our shingles will be ended, and until further notice our authorized general agents will be Mr. Jas. Twitchell, Clinton, Ont., for Ontario, and Mr. Samuel Ashfield of Winnipeg, Man., for Manitoba and the North-West ; therefore, orders for straight or mixed cars sent through the above agents or direct to us will have equally prompt and careful attention.

CORRESPONDENCE INVITED.

THE BOSTON MARKET.

Spruce lumber Boston is in the steady, quiet demand that is almost always incident to this particular season. Perhaps it is fortunate that the demoralization of the mills along the Maine rivers by the recent freshet came at this particular season, when the demand for spruce is very quiet. As it is, the demand is very small here, while it is also true that a big demand could not be taken care of by the mills: Ten and 12 inch dimensions, $20; 9 inch and under, $18 to $18.50; 10 and 12 inch, random lengths, 10 feet and up, $19 to $19.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $16.50; all other randoms, 9 inch and under, 10 feet and up, $17.50; 5 inch and up, merchantable boards, $15 to $16; matched boards, $17.50 to $18.50; out spruce boards, $12.50 to $13; bundle furring, $16 to $17.

Western pine increases in firmness, under the supply steadily growing less. Business is seasonably quiet: Uppers, 1 inch, $70 to $72; 2 1-2 and 3 inch, $75; 4 inch, $80; selects, 1 to 1 1-2 inch, $63 to $65; 2 inch, $65 to $67.50; 2 1-2 to 3 inch, $72 to $75; 4 inch, $75 to $80; fine common, 1 inch, $48; 1 1-4 to 1 1-2 inch, $54; 2 inch $55, 2 1-2 to 3 inch, $63 to $65; 4 inch, $70; barn boards, $23 to $32; coffin boards, $25 to $28.

Hardwood lumber is steady in prices, with the demand steady, of moderate proportions: One inch, whitewood, $38 to $40; thicker, $39 to $42; ⅝ inch, $30 to $35; saps, inch, $25 to $30; common, $23 to $25; quartered oak, $56 to $65; fancy, $70 to $75; plain oak, $40 to $47; black ash, $40 to $50; white ash, $45 to $55; cherry, $90 to $130; maple, $32 to $40.

Shingles continue scarce, with the market firm, though the demand is small: Extra cedar, $3.25 to $3.30; clear, $2.85 to $2.95; second clear, $2.30 to $2.35; sap, $2.15 to $2.25; extra No 1, $1.75 to $1.85; Washington and British Columbia, 16 in, five butts to 2 ins, $3.40 to $3.50.

Clapboards are still scarce and firm, but the demand is small: Extra spruce, $32 to $33; clear, $30 to $31; second clear, $27 to $28; extra No. 1, $18 to $20; pine extra, $48 to $50; clear, $43 to $45; second clear $38 to $40.

Laths are quiet and unchanged: One and five-eighth inch, $3.15; 1 1-2 in, $3.10.

CORRESPONDENCE

SAWING FROZEN LOGS.

LISCOMBE MILLS, N.S., Dec. 18, 1901.

Editor CANADA LUMBERMAN:

DEAR SIR,—After seeing on page 9 in your monthly edition of the LUMBERMAN the question about sawing frozen hardwood, I may say that if the logs are not full of gravel, if saws are properly hammered and teeth properly shaped, you can make better and evener lumber when frozen, as the log will not spring when coming near the heart of the log. You need not slow up the feed if you have plenty of power and the right man to fit saws. If the party will send me the exact conditions of his saw, a templet of teeth, I will be honest with him and tell him if his saw is right for hardwood or not. No man can do good work in frost easing or slowing up the feed.

For cleaning dirty and gravelly logs I have used a No. 1 Penberthy injectior with some piping from injector before rubber hose was connected. I then put a ⅔ inch pipe from dome of boiler, connected in some pipe so as to heat the water hot, then a boy to handle the nozzle and play it on the logs and skidway before hauling or rolling them in the mill. If a little care is taken you can clean logs perfectly clean, and if they are so it matters not about frost if not more than 20 below zero, and if colder it will work some harder.

The reason I write this is that I know it to be so, because I have worked in the Adirondack mountains in New York for five winters sawing hardwood boards. It was three years before I knew how to properly fit and hammer saws.

Yours truly,
M. J. KILLAM.

QUARTER-SAWING.

Editor CANADA LUMBERMAN:

DEAR SIR,—An article on quarter-sawing appeared in the November number of the CANADA LUMBERMAN. The method of sawing adopted by the author of this article being entirely different from what I have been accustomed to, I would like to know which is the correct way to do the work. His method is to cut the log into four quarters and lay it as shown in Figure 1, with the bark down. The way some sawyers have advised me is to quarter the log and then lay it as in Figure 2,

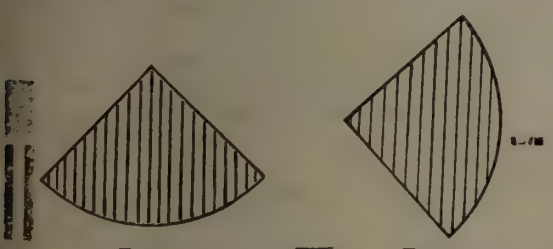

FIG. 1. FIG. 2.

with the bark against uprights of saw carriage. The perpendicular lines shown in both drawings is the way the boards are sawn. Will some of your readers kindly inform me as to the correct method?

Yours truly,
"SUBSCRIBER."

THE "ROSSENDALE" MAY-WOVEN BELTING.

We learn from Mesrs. R. H. Buchanan & Co., of Montreal (who handle the "Rossendale" belting), that they are sending these belts out very extensively to leading pulp and paper mills, who speak very highly of them, they being specially adapted for damp work. It would be well to note that the "Rossendale" belting can only be obtained from the agents here in Canada, who claim to carry the largest stock of woven belting in the Dominion. We mention this because we learn that several Canadian firms have enquired from the Rossendale Co. direct to Manchester, England, only to be referred back to their agents in Montreal. Messrs. R. H. Buchanan & Co. are being ably assisted by the Belting Company's own representative, Mr. W. E. Pilkington, of Manchester, England.

JAMES P. SHERRY.

Attention is directed to the advertisement of James P. Sherry, Memramcook, N. B., manufacturer and dealer in shoe packs, larrigans, lumbermen's hand-made boots and shoes, lace leather for belting, harness, etc. Mr. Sherry succeeded his father, the late Owen

TANNERY OF MR. JAMES P. SHERRY.

Sherry, twenty-one years ago, the business having been established by him in the year 1851 as a general store. With close attention to business Mr. Sherry has increased his business to such an extent that it is one of the largest jobbing and retail stores in the provinces. Mr. Sherry thought there was an opening for manufacturing, and in the year of 1899 he erected a building 80x35 feet, three storeys, with engine room and out-buildings attached. A tanning mill was added and modern machinery installed necessary for a well equipped shoe, harness, larrigan and shoe pack factory. The hides are brought in in their rough state and afterwards turned out into manufactured goods. This branch of Mr. Sherry's business has been in operation ever since that time and is gradually increasing, giving employment to a large number of men.

In addition to the above factory, Mr. Sherry carries on a large jobbing and retail business. The main store is 80x35, three storeys and basement, a second store 100x35, two storeys, together with four warehouses which give ample accommodation to exhibit his large stock of goods. Memramcook is situated on the main line of the I. C. R., thus affording convenient shipping facilities to all points.

LUMBER CONSUMPTION.

Dr. N. H. Eggleston estimates that the United States consumed last year more than 36,000,000,000 square feet of sawn lumber alone. This amount of lumber would load a train of cars long enough to encircle the earth at the equator. If to the sawn lumber be added the timber, the railway ties, the telegraph poles, the posts for fences, and the wood cut for fuel and for mining, the train of cars would have to be 100,000 miles in length, or long enough to reach four times around the globe. The annual consumption of wood in the United States is 350 cubic feet per capita, says Dr. Eggleston, whereas in Germany it is 40 cubic feet and in Great Britain only 14 cubic ft.

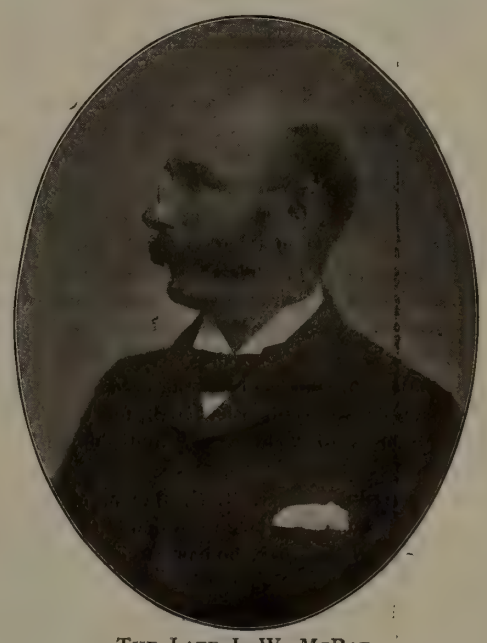
THE LATE J. W. McRAE.

Many lumbermen throughout Canada and the United States learned with regret of the death of Mr. John W. McRae, of Ottawa. Deceased, who accidentally shot himself in his office a few days ago while cleaning a revolver, was well and favorably known to the trade.

Mr. McRae was born in Renfrew on January 31st, 1848, and for the past 30 years had resided at Ottawa. He entered upon the forwarding business, and was for many years vice-president of the old Ottawa and Rideau Forwarding Company, which has since been incorporated in the Ottawa Forwarding Company. Mr. McRae was also a leading promoter of the Ottawa Transportation Company, which now handles all the lumber shipped from Ottawa by barge. In the latter concern he became actively and prominently identified with the lumber interests of the Capital. He was secretary and treasurer of the latter company for years. Mr. McRae was also well-known as one of the strongest workers in the development of power at the Chaudiere. He was one of the organizers of the Ottawa Electric Street Railway, the first of its kind in Canada. He was also prominently associated with several other successful enterprises.

The fire on April 26th, 1900, dealt him a severe blow, as it wiped out several of the industries to which he had subscribed capital, two being the Ottawa Paper Company and the Dominion Carbide Works. The latter had just before the fire been rebuilt after an explosion which wrecked them.

In his death, Ottawa loses one of its most energetic and generous citizens. Associated



THE LATE J. W. McRAE.

with Mr. McRae at different times were Mr. J. R. Booth, Mr. E. B. Eddy and Mr. Denis Murphy.

As a young man Mr. McRae was identified with the business of Mr. L. Barnes, an extensive lumber operator of Burlington, Vt. There he learned the lessons of the trade that stood him so well in Ottawa.

THE NEWS

Andrew Wood has built a saw mill at Wyevale, Ont.

A new mill has been built at Abbotsford, Ont., by a Mr. Johnston.

D. A. Huntley has enlarged his saw mill at Parrsboro, N.S.

The mill of Baillie & Company at Bonfield, Ont., has been purchased by Klock Bros.

James Forman, a lumber dealer at Alexander, Man., is advertising his business for sale.

W. B. Maclean, of North Bay, Ont., is enlarging his saw mill and putting in another boiler.

It is understood that O. G. Anderson, of Woodstock, is looking for a site for a chair factory.

A branch yard has been opened at Franklin, Man., by T. Harrison & Son, lumber dealers, of Neepawa.

Logan & Sutherland, of Musquodoboit Harbor, N.S., are sawing laths by a portable saw mill at Astrea Lake.

B. R. Kean is reported to have sold his veneer factory at Orillia, Ont., to the Canada Wood Specialty Company.

The Ontario Government have re-appointed the thirty forest rangers who looked after these duties last season.

The West Coast Timber Company, Limited, of Victoria, B.C., has been incorporated, with a capital of $25,000.

The annual meeting of the Fredericton Boom Company, of Fredericton, N.B., has been postponed until January 15th.

The lumber firm of Hughes & Long, Brandon Man., has been dissolved, and the business will be continued by A. M. Long.

H. Brown & Sons are reported to have purchased the water power and mills of the Canada Lumber Company at Carleton Place, Ont.

J. H. Douglas, M.P.P., of Warkworth, Ont., has purchased the grist and saw mills at that place, and also the mill at Norham.

George Chew & Son, of Midland, Ont., have asked for tenders for operating their two band saw mills by the thousand next season.

A number of small rotary saw mills are in operation this winter in New Brunswick. It. is said that they have been found to be a paying investment.

The Chilliwack Shingle Mfg. Company, Limited, of Chilliwack, and the Moyie Lumber Company, of Moyie, have been incorporated in British Columbia.

The Cascade Lumber Company have completed their saw mill on False Creek, B.C. The power plant was supplied by the Albion Iron Works, of Victoria.

A. & P. White, of Pembroke, Ont., are this winter putting in a new lath and shingle mill and slash table and making other repairs to their saw mill.

The Parry Sound Lumber Company are converting their saw mill from water to steam power, the work of installing the necessary power plant being now in progress.

Mr. Champion, who has been engaged in the lumbering business near Dalhousie, N.B., for the last ten years, proposes to build a saw and shingle mill at Chatham.

It is reported that Capt. R. C. Bacon, of Moncton, N.B., intends building a large saw mill in the vicinity of Grand Lake, N.B., where he has purchased a block of timber land.

Forests cover one-tenth of the world's surface, but to those of us who are never "out of the woods," says the funny man of the Toronto Star, the timber area seems much greater.

The new saw mill of Thackray & Rawlins, of Pembroke, Ont., is nearing completion. Most of the lumber manufactured in this mill will be utilized in their sash and door factory.

Gilmour & Company, Limited, purpose to again put in operation their large saw mill at Trenton, Ont., and are asking the town for exemption from taxation for a period of ten years.

The box factory of the Parry Sound Lumber Company at Parry Sound, Ont., is nearing completion, and will probably be in operation this month. It will employ about 40 hands.

Robert McNair has disposed of his interest in the Hastings Shingle Manufacturing Company, of Vancouver, to his brother, J. A. McNair. The former will continue to manage the mill at Hastings.

The saw mill of the Tobique Manufacturing Company, near Woodstock, N.B., was closed down last month, after cutting 20,000,000 shingles, 3,500,000 laths and 5,000,000 feet of long lumber.

Alex. Mustard, of Brucefield, Ont., has leased the Bayfield saw mill from William Jowett and intends operating it next season. He has added some new machinery to his mill at Brucefield.

It is understood that work has been commenced on the preparation of a site for a large saw mill to be built in Vancouver by J. G. Scott, of New Westminster, Theodore Ludgate, and Michigan parties.

Freeman Goodwin, of Hopewell Hill, N.B., who is carrying on lumbering operations near Bathurst, intends putting in a shingle machine next spring, as there is a large amount of cedar on his property.

O'Neil & Sceli, of London, Ont., have purchased the Anderson saw mill at Sundridge, Ont., and next spring purpose rebuilding the mill and installing a new plant. They will saw a large quantity of hemlock.

The improvements which A. Tessier is making to his planing mill at Penetanguishene, Ont., will make it one of the most complete factories in Western Canada. He has built a large engine and boiler house and new dry kiln.

Octave Declaire, foreman of a gang of men who were taking out square timber in the vicinity of Woodstock, Ont., for the Wilson Lumber Company, was killed recently by a falling tree. Deceased lived in Quebec city.

The Canadian Pacific Railway expect next year to haul a large percentage of the timber brought into Winnipeg, and for this purpose are surveying new lines of railway into the Western Ontario and Eastern Manitoba timber belts.

The Dominion Lumber Company, which recently bought the Young lumber property at Ingram River, N.S., intend putting in four new boilers of 100 horse power each. They are now being built by the Robb Engineering Company, of Amherst, N.S.

The North Pacific Lumber Company, of Barnet, B.C., intend putting in a shingle mill and extending their operations. The manager, H. DePencier, has gone to Australia for the purpose of arranging for the chartering of ships and the shipment of lumber there.

A report from North Bay, Ont., states that some 400 deer were shipped from Trout Creek station last fall; and 377 deer from Burk's Falls. Owing to the high price of pork many of the lumber camps have laid in a stock of venison, so that the shantymen will live high this winter.

The Revelstoke Lumber Company, of Revelstoke, B.C., have purchased two boilers of 80 horse power each, two engines, a carriage with three head blocks, two planers, a four saw edger, steam nigger, live rolls and kicker, trimmers, and lath and shingle machines. With this equipment their mill will have a capacity of 50,000 feet per day.

John E. Moore, of St. John, N. B., has had plans prepared for a new saw mill which he proposes building at Pleasant Point, on the site of the Barnhill mill burned last fall. The mill will be two storeys, 150x34 feet, and will likely include a band saw, edger, lath mill, planer, two stave machines, and box making machinery. Mr. Moore is undecided whether to put in a stock gang and slabber or a band saw. The mill will cost about $25,000 and will saw deals for the British market exclusively.

The new mill of Alfred Dickie at Liscombe Mills, N.S., has finished its first season's cut of 5,000,000 feet and is now undergoing improvements for a much larger cut next year. The equipment consists of a gang and rotary saw and other necessary machinery. The rotary is said to be the fastest and best cutting saw of this class ever constructed in the eastern provinces. In a test on October 15th 110 logs were sawn in one hour, aggregating 12,704 superficial feet, in 1, 2, and 3 inch stock. The saw used was 60 inches diameter, fitted with an improved top saw guide, and the carriage a Lloyd's, fitted with improved friction gear.

PERSONAL.

By a large majority Mayor John Arbuthnot, of Winnipeg, known to many readers of the CANADA LUMBERMAN, has been re-elected for a second term as Mayor of that city.

Mr. Duncan Anderson, for many years one of the prominent public men in Peterborough county, and for twenty-five years Crown Lands Agent at Apsley, Ont., died at his home in Toronto last month, after a lingering illness.

Mr. Charles McCool, M. P. for Nipissing, who conducts lumbering operations at Geneva Lake, recently underwent an operation for appendicitis in the Ottawa hospital. At last report he was on the way to convalescence.

Mr. Archibald Fraser, son of Mr. Donald Fraser, lumberman, of Fredericton, N. B., has joined the ranks of the benedicts, his bride being Miss Dunbar, daughter of Mr. Alexander Dunbar. Mr. and Mrs. Fraser will reside at Cabano, Que., where the firm of Donald Fraser & Sons have extensive saw mills.

The term of Mr. McClellan as Lieutenant-Governor of New Brunswick expires this month, and it is thought that the appointment will be given to Senator Snowball, the well known lumberman of Chatham, N. B., and that the vacancy in the Senate representation will be met by the appointment of Mr. Robert Thompson, of St. John.

Mr. Julian Vowles, representing Harry Collins, a large lumber dealer of Natal, South Africa, recently visited British Columbia cities to look into the conditions of the lumber trade to ascertian if it would be advantageous to obtain lumber from the Pacific coast rather than from the Baltic. He stated that considerable lumber has been shipped from British Columbia to Cape Town, but that Natal is as yet a virgin field which affords an excellent opening for Canadian lumbermen.

The CANADA LUMBERMAN was favored with a call Christmas week from Mr. Thomas Kirkpatrick, of Vancouver, B. C. Mr. Kirkpatrick has been engaged in the manufacture of shingles in Vancouver almost ever since the city was incorporated, and has two shingle mills, one at Cedar Cove and the other at Hastings. Although he has always done a considerable trade in the east, he was making a trip through Ontario for the first time, to become better acquainted with the trade, and subsequently to visit his former home in Nova Scotia.

Mr. George W. Campbell, who has been manager of the Winnipeg branch of the British Columbia Mills, Timber & Trading Company since 1898, has severed his connection with that company and has associated himself with Mr. Henry Byrnes. Under the title of Campbell & Byrnes they will act as manufacturers' agents for lumber, with headquarters in Winnipeg. They have already arranged to handle the business of the Canadian Pacific Lumber Company, of Port Moody, B. C., and will no doubt secure the representation of other well-known concerns.

The export of timber from West Africa is every year increasing, the trade in mahogany being a large and growing one. In the timber belt, forming part of the Central Africa forest, there is abundance of the richest mahogany. The imports of mahogany from Africa in 1900 are said to be 14,034,408 feet. Barwood, camwood, wormwood, rosewood, almond, and walnut are also sent over in large quantities. A great difficulty connected with the transport of mahogany is when it exists some distance from the waterways. An idea of training the African elephants and utilizing them as means of transport is regarded as most feasible. If they were trained to move timber as the Indian elephants a great incentive, it is thought, would be given to this growing industry. In Southern Nigeria there is abundance of the best mahogany. In the northern territories of the Gold Coast herds of elephants are to be found, chiefly at Gurnsi and Daboya.

NEW BRUNSWICK FOUNDRY AND MACHINE SHOPS

FREDERICTON, N. B.

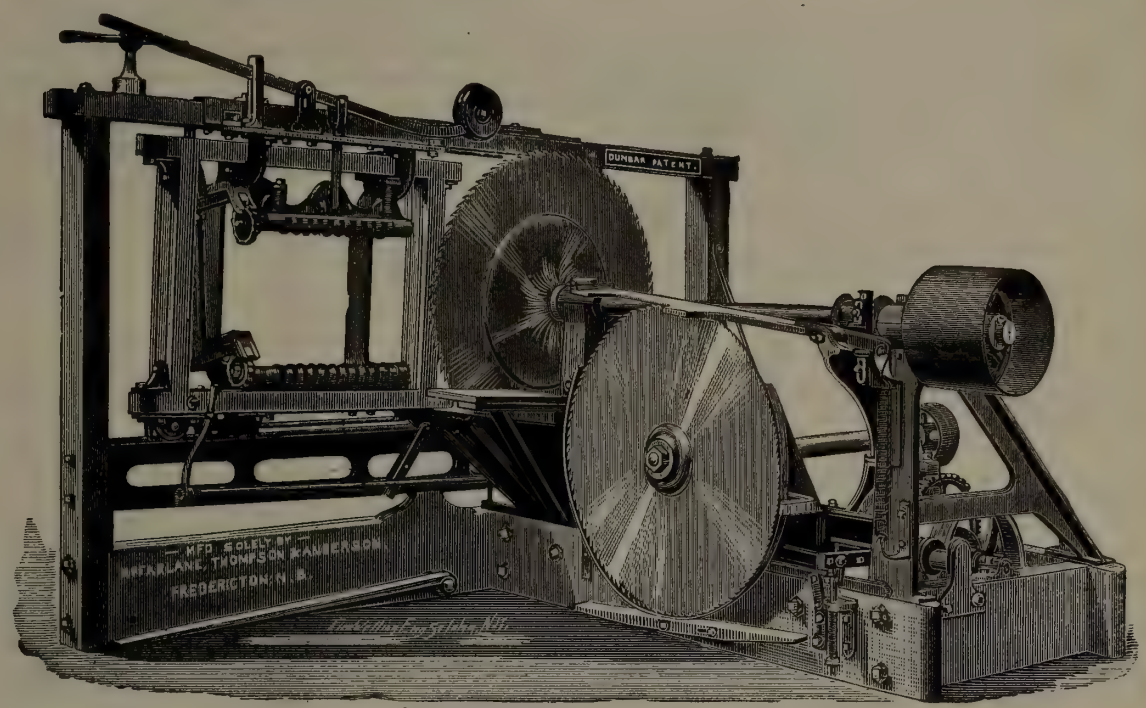
McFarlane, Thompson & Anderson

Manufacturers of the only original

PATENTED DUNBAR SHINGLE MACHINE

And Sole Proprietors of the said patent

Universally admitted as being the best machine on the market from the Atlantic to the Pacific.

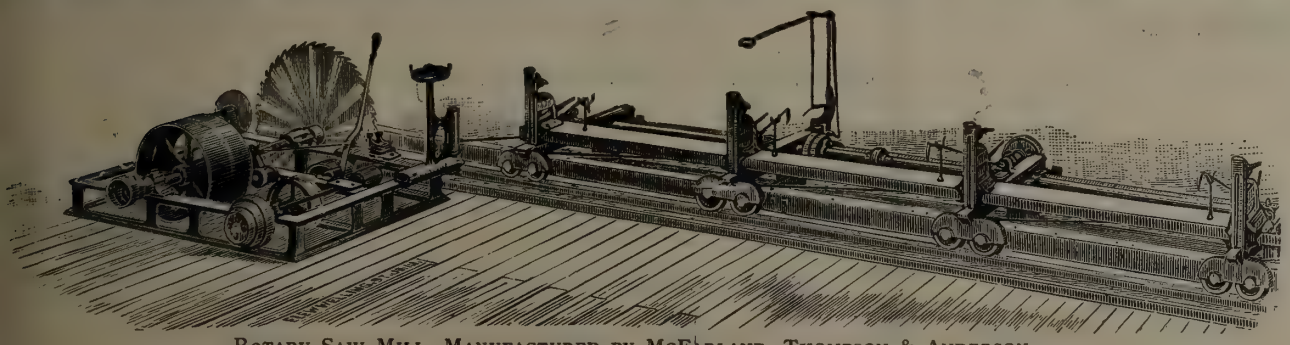


PATENT DUNBAR SHINGLE MACHINE.

The following well known firms are a few of the many who are using the celebrated Dunbar Shingle Machine:—Metis Lumber Co., Quebec, 15 machines: John A. Morrison, Fredericton, N. B., 16 machines; Gibson R'y. & Manufacturing Co., Marysville, N.B., 10 machines; Hastings Shingle & Manufacturing Co., Vancouver, B.C., 16 machines.

The McFarlane, Thompson & Anderson Dunbar Shingle Machine is a record breaker in the west—(New Whatcom Blade, Washington State). The following may be of interest to mill operatives and others; it is we believe the best six day record ever made on this class of machine—a Dunbar upright; the bolts were taken as they came from the woods, without selection, and were a good average quality. This remarkable run was accomplished last week at the George A. Cooper mill, Chuckanut siding: Total cut for six days, 2 shifts of 10 hours each per day, 394,000 eighteen inch shingles. In the day shift, Harry A. Edison, sawyer, cut 218,000, an average cut of 36½ thousand, and the night shift, Levi Loop, sawyer, cut 176,000, an average of 29⅓ thousand of eighteen inch shingles per day.

"When all the rest fail, or are down for repairs, or are cutting shins, the McFarlane, Thompson and Anderson Shingle Machine is still cutting the standard shingle of the world." From the Atlantic to the Pacific they all say it.



ROTARY SAW MILL, MANUFACTURED BY McFARLANE, THOMPSON & ANDERSON.

Latest Bulletin from the seat of war, October 17th, 1901—From the Metis Lumber Co., Price, Que., in reference to the 15 Shingle Machines sold them this season:

"Replying to your enquiry as to the running of the Shingle machines you sold us, would say that they have given entire satisfaction, and have run very successfully so far. We have sawn 30 million shingles in 70 days to date, and count on sawing 10 million more this season."

THE METIS LUMBER COMPANY.

We manufacture a complete line of IMPROVED ROTARY SAW MILLS, BUCKEYE AUTOMATIC CUT-OFF ENGINES and all kinds of MILL MACHINERY.

Our prices are right.

Kindly allow us to quote before purchasing.

For further particulars address

McFarlane, Thompson & Anderson

Fredericton, N. B.

WOOD PULP DEPARTMENT

THE PULP AND PAPER MARKET.

The demand for pulp and paper has greatly improved within the past month. Chemical wood pulp is in better demand in the United States than during any time within last two years. For mechanical pulp also prices have an upward tendency, as many manufacturers suffered from low water in the fall, and later from freshets. It is stated that the total output of the Sault Ste. Marie pulp mill for the next few months has been purchased by an American paper maker. The price has not transpired, but it is the opinion of Mr. J. R. Barber, of Georgetown, that it was close on $25 a ton. The paper makers held a meeting in Toronto recently and determined to advance the price of new print an eighth of a cent.

PULP WOOD—TREATMENT OF THE RAW MATERIAL IN THE LOG AND ITS MEASUREMENT.

By a Canadian Pulpmaker.

Chapter IV.—Measurement by Doyle's Rule.

The application of Doyle's rule, to which reference was made in the previous chapter, is a simple matter, and the rule reads as follows :—Take the diameter of the log at the small end, deduct four from it ; square the result ; deduct from this figure one-fourth of itself. The remainder is the number of feet board measure in a log 12 feet long. The contents of longer timber is in proportion.

The rule will be evident from the examples given.

Example 1.—What is the contents of a log 16 feet long, 9 inches diameter ?

Diameter	9 in.
Deduct four	4 "
Remainder	5 in.
Remainder squared	25 in.
Deduct one-fourth	6 "
Final remainder	19 in.

Hence, a 12-foot log contains 19 feet board measure.

A log 16 feet long would contain 25 feet board measure, and a 20-foot log 31 feet board measure.

Example 2.—How many feet board measure are there in a log 19 inches diameter, and 31 feet long ?

From 18 deduct 4 ; this leaves 15 ; square this figure ; result is 225. Deduct one-fourth, viz., 56, leaving 169 feet. This is the content, of a 12-foot log 19 inches diameter. A 31-foot log would contain 436 feet board measure.

In actual practice it is found that Doyle's rule is not accurate for small logs under nine inches, as the calculated amount of timber is a good deal less than can be obtained. With large logs the quantity estimated by the rule is about right.

The following comparison between the estimated quantities as given by the rule, and the amount as found obtainable in actual sawing as tabulated in the Quebec Government tables, is of considerable interest in this connection :—

TABLE SHOWING THE CONTENTS OF LOGS 12 FEET LONG IN FEET BOARD MEASURE.

Diameter.	Contents Doyle's Rule.	Contents as per Quebec Tables.
6	3	12
8	12	24
10	27	44
12	48	60
14	75	90
16	108	120
18	147	160
20	192	210
24	300	315
28	432	435
32	588	570
36	786	710

A study of the above figures shows that the Doyle rule is not a fair one for application in the case of small logs. In the case of an 8-in. log the contents, as per the Quebec table, amount to just double the contents according to Doyle's rule. With the larger logs this large relative difference disappears, for at a diameter of 20 inches the excess measurement, according to the Quebec scale, is only a very small one.

But while these rules obtain for saw logs, they are not so much used for pulp logs, the conditions under which the wood is cut and manufactured being of a totally different description. For example, it is possible to utilize logs for pulp wood which would be perfectly useless for conversion into lumber. As a general rule, the logs less than 10 inches are considered of little value for lumber, whereas logs as small as four inches in diameter can be manufactured into pulp wood. In this respect it may be noted that the lumberman prefers as large a log as possible, but the pulp manufacturer likes his logs to be of some uniform size without any great variations.

This being so, the use of Doyle's rule, or of any of the ordinary saw log scales, is not a reliable method of determining the contents of pulp wood.

This may be rendered apparent by an example. An 8-in log, 20 feet long, contains 20 feet board measure according to Doyle's rule. A log 16 inches diameter and 20 feet long will show 180 feet in board measure. The ratio of the contents is 1 to 9.

Now, the true comparison of the logs is best arrived at from a comparison of the cubical contents. In all cases the ratio of the cubical contents of logs of equal length can be found by means of the following formula :—

$$\frac{C}{c} = \frac{R_2}{r_2}$$

or, in other words, the contents are in direct ratio to the squares of half the diameters. In the example quoted the logs are eight and 16 inches respectively, giving a ratio of 16 to 64, that is, of 1 to 4.

The measurement almost exclusively employed for the determination of the contents of logs intended for pulp wood is by means of a standard unit known as the "Cord." This is a measure or quantity of wood so called because it was originally measured with a cord of a certain length. A pile of wood cut into 4-ft. lengths and stacked up so as to measure 8 feet by 4 feet high is taken as a cord of wood. Hence the standard cord consists of a pile of wood 8 feet long, 4 feet wide, and 4 feet high, giving 128 cubic feet in the pile.

For the sake of convenience the actual dimensions of the pile are sometimes allowed to vary, so long as the cubical contents are 128 cubic feet. Thus, a stack of wood 8 feet long, 8 feet high, and 2 feet wide contains 128 cubic feet, or one cord. A number of pieces of wood, each 12 feet long, stacked up to give a pile 6 feet long by 5 feet 4 inches high, will contain 384 cubic feet, or three cords.

Strictly speaking, however, the cord is supposed to consist of pieces of wood four feet long piled up as described.

A definite relation exists between the "cord" of wood and the system of measurement adopted for use in the lumbering industry, but so far this has not been properly determined or agreed to. As a result arbitrary figures, differing considerably, are found everywhere.

PULP NOTES.

Continued low water in the rivers has caused a partial famine of pulp wood in Quebec.

It is said to be the intention of McLaren & Company, who are erecting a large pulp mill at Buckingham, Que., to build a paper mill in the near future.

Higher prices are talked of for ground wood pulp during the coming season. Contracts are being closed at figures which are very satisfactory to manufacturers.

The Paper Mill is authority for the statement that John H. Coburn, of Carthage, N. Y., intends building a large news, ground wood pulp, and sulphite pulp mill in Canada.

John Hudson & Company, 13 Sise Lane, London,

P. PAYETTE & CO.
Manufacturers of Saw Mill and Engine Machinery, and all kinds of Marine Machinery.
PENETANGUISHENE, ONT.

To Purchasing Agents:

Corner 22nd and Centre Avenue,

Gentlemen : Chicago, October 12th, 1901.

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO.

Eng., have been appointed sole agents for the United Kingdom for the Sault Ste. Marie Pulp & Paper Company, of Sault Ste. Marie, Ont.

The ratepayers of Thorold, Ont., have approved of the granting of a bonus of $5,000 to assist the Thorold Pulp Company in building a paper mill. Only eleven votes were cast against the by-law.

A measure has been introduced in the House of Representatives at Washington to repeal the duty on wood pulp and all other material used in the manufacture of printing and writing paper, and to restore the duty on manufactured printing papers.

James G. Stevens, jr., of St. Stephen, N. B., gives notice that he will apply for the incorporation of a company for the purpose of constructing a pulp mill and other manufactories on the St Croix River at Sprague's Falls, in the province of New Brunswick.

The Quebec Gazette gives notice that the Metabetchouan Pulp Company will ask for power to acquire, on the river Metabetchouan river and in the counties of Saguenay, Chicoutimi, and Lake St. John, water powers, timber limits and the lands it may need to erect mills and dams necessary for the manufacture of pulp, lumber and paper, to develop electricity and to build railways and telegraph and telephone lines.

During the nine months ended September 30, 1901, the pulp mills of Canada manufactured 142,085 tons of ground mechanical pulp, 6,1934 tons of sulphite pulp, and 8,485 tons of soda pulp, of an aggregate value of $6,100,000. Great Britain took 58,000 tons, United States 28,000 tons, and other countries 1,500 tons.

A deputation from Parry Sound, Ont., including W. L. Haight, Walter Foote and Beveridge Walsh, recently interviewed the Commissioner of Crown Lands with a view to securing for the town the rights to a water power on the Magnetawan river, in connection with which a pulp industry may be established.

It is said that the Brompton Pulp & Paper Company intend at a later date to develop another power for electrical purposes alone, with a view to furnishing light and power to Windsor Mills and Sherbrooke. Work on the construction of the dam and pulp mill is now under way, under the direction of J. D. Straw, of Lewiston, Me., who is engineer in charge of construction.

The employees of the St. John Sulphite Pulp Company, of St. John, N. B., recently presented their manager, Mr. M. F. Mooney, with a beautiful gold watch, and the assistant manager, Mr. Philip Grosset, with a fur coat. The foreman, Mr. Francis Druet, was also made the recipient of a watch. The gifts were made as an expression of personal regard, and indicate the good feeling which exists between the management and the employees.

It is reported on good authority that J. A. McNair, of the Hastings Shingle Manufacturing Company, Vancouver, has purchased a site in the eastern part of that city for a new shingle mill, to be one of the largest and best equipped on the coast.

The cuts above illustrate one of our methods of placing water wheels in open flumes, as applied to a pair of our

CROCKER PATENT TURBINES

arranged horizontally, for direct connection to main shaft or otherwise. We have several other designs for open flume settings, adapted to single wheels, or for pairs, and to suit particular locations.

We are prepared to examine and report on water powers, and to advise as to methods of development for the same. Estimates promptly submitted. Send for Bulletin No. 200, 88 pages, of interest to all owners and users of water power.

MEETING OF COOPERAGE MANUFACTURERS.

The semi-annual gathering of the Slack Cooperage Stock Manufacturers' Association took place at Detroit, Mich., on December 10th, when stave and heading men were present in large numbers. Those in attendance from Ontario included the following :

John Hayne, Brigden ; A. A. Scott, McGregor ; D. R. McGarvin, Chatham ; Wm. Niebergall, Geo. & Wm. Niebergall, Geo. Neibergall & Son, McGregor ; J. L. Reaume, J. L. Reaume & Co., Essex ; T. H. DeCew, T. H. DeCew & Sons, Fenelon Falls ; D. N. Menzies, Niebergall Stave and Lumber Co., Staples ; Ed. Smith, Leamington ; S. W. Mitchell, Warwick ; H. P. Lawrence, Jacob Lawrence & Son, Waterford ; N. Watson, Mull; James Innes, the Sutherland-Innes Co., Chatham ; J. C. West, Sutherland-Innes Co., Chatham.

Some business was transacted, but the meeting was largely of a social character. The most important feature of the association is the grading of stock according to the rules adopted at the last meeting, which are printed below :

GRADES AND SPECIFICATIONS.

STAVES.—Elm staves 30 inches long shall be cut not less than 5 staves to 1 15-16-in. in thickness. Elm staves 24 to 28½-in. long shall be cut not less than 5 staves to 1⅞-in. in thickness, except 24-in. or keg staves when specially cut, when said staves shall be cut 6 staves to 2-in. in thickness.

Cottonwood staves of all lengths shall be not less than 5 staves to 2-in. in thickness.

No. 1 staves shall be of full thickness and uniform throughout, free of knots, slanting shakes, doty wood or other defects.

Meal barrel staves shall be free of slanting shakes over 1½-in. long, knot holes, unsound knots, (but sound knots of not over ¾-in. in diameter shall be allowed), free of thin staves, and shall consist of good, sound, workable staves.

No. 2 staves shall be free from dead culls.

Mill run staves shall consist of the run of the knife, made from the regular run of stave logs, dead culls thrown out.

SPECIAL STOCK.—White ash staves shall be cut 5 staves to 2⅛-in. in thickness, graded the same as elm, but only No. 1 and No. 2 quality.

Mill-run elm or hardwood apple barrel staves shall be cut 6 staves to 2-in. in thickness and shall consist of the run of the mill, from the regular run of stave logs, dead culls thrown out.

Mill-run cottonwood apple barrel staves shall be cut 5 staves to 2-in. in thickness.

All the above staves shall average in measurement 4-in. per stave or 4,000-in. a 1,000 staves across the bilge, with the exception of the keg staves, which shall measure 160-in. per bundle of 50 staves, across the bilge, and 24-in. half barrel staves, which, when not otherwise specified, shall measure 3½-in. wide or 175-in. per bundle across the bilge. All other staves not specifically mentioned shall be sold according to the local custom or under special agreement.

HOOPS.—Sugar barrel hoops shall be 6-ft. 4-in., 6-ft. 6-in. and 6-ft. 9-in. long, cut so as to be not less than 5-16-in. and 3-16-in. in thickness when finished and seasoned, and not less than 1⅜-in. wide when seasoned.

Flour barrel hoops shall be 5½-ft. and 6-ft. long, and shall measure, when seasoned, not less than 5-16-in. to 3-16-in. in thickness, and not less than 1⅜-in. wide.

Keg hoops shall be sold on special specifications, as agreed upon between the buyer and seller.

No. 1 hoops shall be of good, sound timber, fully up to specifications, free from broken hoops in the coils and well finished.

HEADING.—No. 1 basswood or cottonwood heading shall be made from good, sound timber, free of damaging defects, of such diameter as is required, well jointed, 1-2-in. in thickness and thoroughly kiln-dried.

No. 1 hardwood heading shall be of the same specifications as above, but only 7-16-in. in thickness and thoroughly kiln-dried.

Mill-run heading shall be the run of the mill, dead culls out, thickness and dryness the same No. 1.

No. 2 heading shall be the heading thrown out of the No. 1, dead culls out. All staves, hoops and heading not specifically mentioned shall be bought and sold on terms and specications agreed upon between the buyer and seller.

TRADE NOTES.

The Atlantic Refining Company, of Toronto, have removed their business offices to the corner of Front and Scott streets. The warehouse will remain at the old location on the Esplanade.

James W. Woods, manufacturer of lumbermen's supplies at Ottawa, has purchased property on which he intends to erect next spring a new manufacturing establishment and a large warehouse, at a cost of about $90,000.

At a meeting of the leather belting manufacturers of Canada, held on the 2nd inst. at the Windsor Hotel, Montreal, it was resolved that on account of the very high price of hides it was necessary to advance prices twenty per cent., to take effect at once. For the same reason all the manufacturers in the United States in this line of goods advanced their prices on the 12th ult. to the same extent.

The Bradley, Levy & Weston Machinery Company, Limited, has recently been organized in Toronto, to deal in iron and wood-working machinery, engines, boilers, and general engineering supplies. A warehouse has been opened at 102 Front Street West, two doors west of the Queen's Hotel. The officers of the company are: President and mechanical superintendent, W. J. Levy; vice-president and business-manager, W. J. Bradley; secretary, W. H. Weston; treasurer, A. E. McLean.

It is gratifying to learn that Mr. E. Livingstone, of the Blyth Handle Works, Blyth, Ont., finds difficulty in keeping up with his orders, notwithstanding his factory has only been in operation since March last. He reports a large trade in cant hooks and peavies, also rock elm axe handles and whiffletrees, his trade in this line extending to lumbermen up the North Shore as far as Port Arthur. Mr. Livingstone's works are located in a district where maple and rock elm are plentiful, hence he can guarantee quality and prompt shipment.

We have received from The B. Greening Wire Co., Limited, Hamilton, an advanced copy of their annual calendar for 1902. They will be mailed to the trade before the close of the year, and no doubt will be much appreciated. The leading feature is good bold type that can be read from some distance. The extra spaces of each month are filled in with attractive cuts illustrating the principal seasonable lines of manufacture. We are pleased to hear that this enterprising firm have had a very successful year's business, and have in contemplation some important changes. Contracts will be signed in a few days for the erection of fine new offices. Plans are being prepared for a large new paint tower. Their last catalogue was issued January, 1900, and should be in every architect's office.

THE DODGE COMPANY'S NEW PLANT.

The Dodge Manufacturing Company, Limited, of Toronto, have just completed what may be termed a model plant. The new building consists of a machine shop 200x75 feet; foundry, 125x75 feet, with annex; two storey office building, 60x40 feet. The buildings are of modern type, solid brick, with monitor roofs. Both machine shop and foundry are equipped with ten ton, three-motor travelling cranes and industrial narrow gauge rails and turntables. Among the massive machine tools installed in the machine shop is a 62x62x20-foot planer, and a 16-foot boring and turning mill weighing in the vicinity of 40 tons. In the foundry a modern Whiting cupola has been installed.

The shops are heated with the Webster system of steam heating, lighted with both incandescent and arc lights, and electric power is used throughout. The electric light and power is generated on the premises by means of a 15x14 high speed engine, direct connected to a 100 kilowatt generator.

The office building is of handsome design, pressed brick and stone, the ground floor being used for the company's general offices, and the first floor as engineering and draughting rooms.

The entire plant covers some six acres. It is located on Pelham avenue, Toronto Junction, just north of the C. P. R. tracks and without the city limits. A system of railroad sidings encircles the plant, giving the company their iron, coke, coal, sand, etc., direct from car to stores. The new machine shops and foundry are employed altogether in manufacturing the Dodge Company's special lines of power transmission machinery. Their extensive wood pulley plant has also been materially improved. The company have a daily manufacturing capacity of 300 wood pulleys, apart from their iron pulley output. Over 1,000,000 feet of lumber is carried, and a new brick dry kiln of 60,000 feet capacity has been built. The Dodge Company extend an invitation to the trade to call and inspect their new works.

The city sales offices and warerooms of the Dodge Manufacturing Company are situated at 74 York street, Toronto, where a large stock is carried.

Douglas' Egyptian Liniment

Is the most Powerful and best Preparation on sale.

We guarantee Egyptian Liniment to be the most powerful Liniment that Medical science has ever formulated. It will reach deeper seated troubles and produce better effect for lameness and unhealthy sores than any other preparation on sale. It contains no grease, its effects are absorbent, alterative and penetrative, will penetrate Muscle, Membrane and Tissue to the Bone and go to the seat of the disease direct.

Is the only Liniment on sale that will STOP BLEEDING at ONCE.

It is the fastest seller on the market. If you have not used it in your Camps, etc., we have what you want.

Douglas' Egyption Liniment ....is it....

We mean this and will thank you to give us a trial order for one or more gross Egyption Liniment upon the following conditions:

Will ship you any amount you may require, and if our Liniment is not better than anything you have heretofore used it can he returned to us with freight charges "both ways" added.

Remember we have a perfect absorbent preparation and the only Liniment that will stop blood at once, cauterize the wound and prevent and cure Blood Poisoning.

Kindly send us a small order.

Endorsed by the largest lumber firm in Canada.

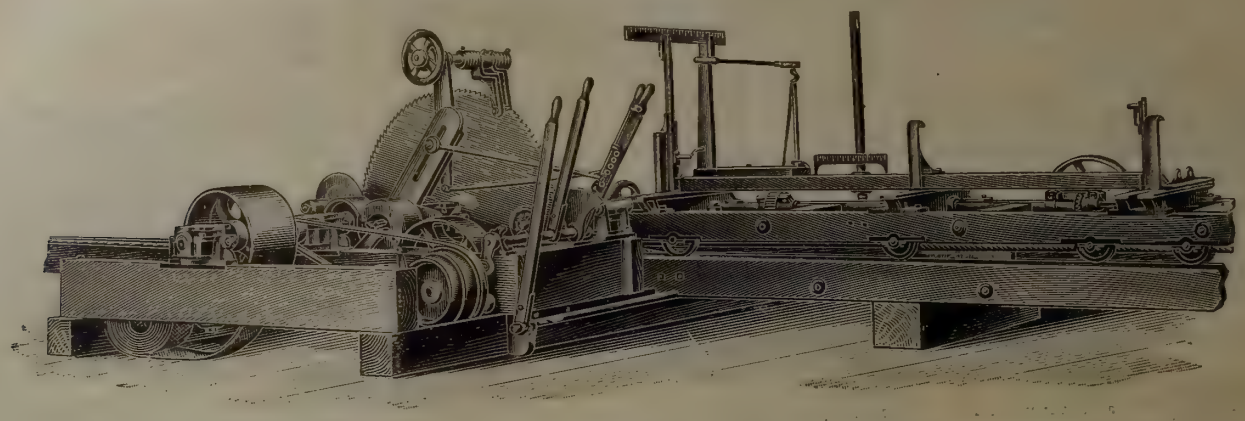
The "Canadian" Over Log Saw Guide

PATENTED IN CANADA AND UNITED STATES.



Your Mill would make more money if you would make more lumber from the same quantity of logs. You can do it by using a thinner saw, and you can use a thinner saw with one of my Patent Over Log Saw Guides. They are adapted to either Stationary or Portable Saw Mills, Re-sawing Machines, &c, &c. The illustration shows one of my Portable Saw Mills equipped with this Guide and carrying a saw 60 in. diameter, 12 guage. All my Portable Mills will take saws up to 72 in diameter, and this guide will take saws from 36 to 72 in. diameter. It is adjustable every way. I am prepared to fill orders for complete Circular Saw Mill Outfits, or will make the guide to fit any ordinary existing saw frame.

P.S—My United States Patent is For Sale.

THE LEFFEL AND VULCAN TURBINES

POSSESS DISTINCTIVE MERITS, which should have the attention of water power owners 1st—They are strongly and carefully built. 2nd—They are economical in their use of water. 3rd—They develop more power in proportion to the water used than any other Turbine built. Mr. J. D. Flavelle, of the Flavelle Milling Co., of Lindsay, writes us under date of March 7th as follows:

"Referring to the two 74" water wheels (Leffels) purchased from you during the past year. As far as we have had an opportunity of testing, they have done their work excellently, in fact are doing more than you guaranteed them for. We took a test of the power they were developing with a head of water of 3 ft. 10 in., and they developed very close to 100 h. p. We are thoroughly satisfied with same."

This letter is but one of many such.

We also Manufacture

The Lane Saw Mill, Four Styles of Shingle Machines, Lath Machine Edgers, Trimmers, Pulleys, Hangers, Boxes, Etc.

THE STANDARD DRY KILN

READ THE RECORD

In so important a matter as the purchase of a drying plant, it is worth while to "read up" on the subject and learn thereby that

THE STANDARD DRY KILN

has made the one record worth the reading. It has been before the public nearly fifteen years. It leads, as it always has, in improvements. It is used by more representative concerns than all others.

It has met with a greater degree of success than all others, consequently it has many imitators. It is not an experiment—It does not infringe on anyone's patents.

Send for Catalogue, testimonials and estimates.

OUR MOTTO: Not how **cheap**, but how **good.**

THE STANDARD DRY KILN CO.
INDIANAPOLIS, IND.

SOMETHING SPECIAL

We direct your attention to the above illustration of our **NEW PEAVEY.** Its good points will at once be apparent to and appreciated by all practical lumbermen.

Note the improvement in the socket—a fin running from the base of the hook to point of socket.

It is made of the very finest material, and is the most practical and up-to-date Peavey on the market.

This Saw Stands Without a Rival

AND IS THE

STEST CUTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It made of "Razor Steel," which is the finest ever used in manufacture of Saws. We have the sole control of s steel. It is tempered by our secret process, which ocess gives a keener cutting edge and a toughness to steel which no other process can approach.

Maple Leaf Saw Set

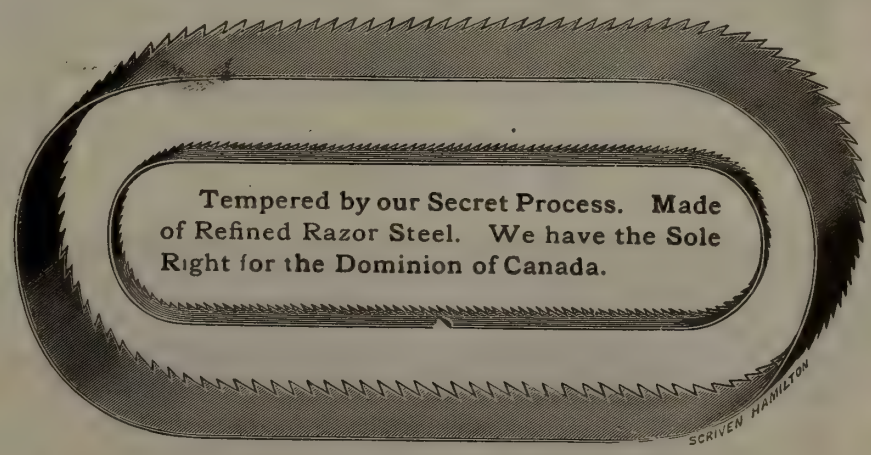
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



Tempered by our Secret Process. Made of Refined Razor Steel. We have the Sole Right for the Dominion of Canada.

OPENING OF THE ONTARIO AND RAINY RIVER DIVISION OF THE CANADIAN NORTHERN RAILWAY.

The accompanying illustration is from a photograph taken on January 1st on the occasion of the driving of the last spike of the Ontario and Rainy River division of the Canadian Northern Railway. Hon. E. J. Davis will be noticed with the spike maul on his shoulder, the silver spike in his left hand. On his left is Mr. William MacKenzie, with Mr. D. Mann on his right. The ceremony was performed at the divisional point, Atikokan, one hundred and thirty miles west of Port Arthur, and closed with singing the National Anthem.

The second and third illustrations show the two sides of the first car of lumber sent over the Canadian Northern Railway from Port Arthur to Winnipeg.

The opening of this road is an event of greater importance to older Ontario than is generally conceived, and is also one of national (Canadian) importance. It furnishes the second all-Canadian outlet for a province which is not yet twenty years of age, counting its railway connection, only sparsley settled, but is exporting its fifty millions of dollars worth of the products of the soil. What will it produce in the next twenty or forty years?

The Canadian Northern Railway opens up between Port Arthur and the western boundary of Ontario a magnificent country equal in size to one-third of the province of Manitoba—a country rich in timber, iron, gold, silver and copper. The Hon. E. J. Davis (than whom there should be no better authority on the forest wealth of Ontario) states that he is satisfied this portion of the country contains from seven hundred million to nine hundred million feet of pine, leaving out all other kinds of woods, such as spruce, tamarac and birch, which exist in abundance.

Forty miles from Port Arthur the road enters the Mattawin Iron Range, and at one hundred and thirty miles is met a most magnificent body of magnetic iron ore known as the Atikokan. This mountain is within one thousand feet of the rail for a distance of ten miles, and is one of the largest ore bodies in America. North of this range are the various silver mining properties, and west of the Atikokan you enter vast timber forests, and in leaving those you are in the gold country. Then the fertile soil of the Rainy River country; this river valley stretches for a full hundred miles, and it has been stated that nowhere in all Ontario is there a similar stretch of equally rich lands for grains, roots, fruits, cattle, and in fact anything that springs from the soil.

The Canadian Northern Railway route from Port Arthur to Winnipeg will demand a large patronage from both tourist and sportsman. Twenty miles from Port Arthur and within a few hundred feet of the track is the grand and magnificent Kakabeka, with the grand fall of one hundred and twenty feet sending its exquisite rainbow-colored sprays far above surrounding hill tops. From this point the road follows the bed of the Kaninistiqua river, with its falls and rapids, then traversing through the many river valleys and by the shores of a hundred inland lakes, the waters of which are abounding in fish and the forest in game. And you are still travelling in New Ontario, and a vast and rich portion that has come into prominence as it were in a day.

The building of this road has been accomplished and brought to successful completion in the space of three years, when it required from seven to eight years for the Dominion Government to complete a similar line from this point to Winnipeg. The Canadian Northern Railway Company have just completed at Port Arthur a million and a quarter elevator, large merchandise docks, round house, and machine shops, and are now laying out yards for the handling of freight. During the coming season the company will erect a passenger depot in keeping with the importance of the position, also other docks and elevators.

RICHARD VIGARS.

Port Arthur, January 22nd, 1902.

DRIVING THE LAST SPIKE—ONTARIO AND RAINY RIVER DIVISION, CANADIAN NORTHERN RAILWAY, PORT ARTHUR TO WINNIPEG.

Forde, Photo—Copyright applied for.

The immense increase in lumber importations to the United States from Canada is illustrated by the report of Collector of Customs Brawn at Bay City, Mich. Over 10,500,000 feet of lumber, 431,000 pickets and 385,000 lath were received from Canadian ports during the month of November. The duties collected on these amounted to $21,307.27. The shipments for the same month of last year were 1,427,500 feet of lumber and the duties but $3,063.33.

REVIEW OF THE LUMBER TRADE

Progress of the Past Year in the Manufacture and Shipment of Lumber.—A Banner Year for White Pine.—Volume of Export Business Remained Almost Stationary.—Statistics of the Different Provinces.

IT is not possible to chronicle great expansion in the lumber trade of Canada during the year 1901. The demand, however, was of moderate volume, and prices, on the whole, were well sustained. When it is considered that the British timber market was depressed almost throughout the entire year, the figures of export shipments presented in this number must be regarded as eminently satisfactory. That there were practically no failures in the lumber trade is another cause for congratulation.

There was a steady appreciation during the year in the price of white pine lumber. This was due in large measure to a revival of trade with the United States. Turning to the figures for 1900, we find that shipments to that country were comparatively small owing to the unsettled condition of business prior to the Presidential election. Thus at the beginning of last year dealers and consumers were carrying exceptionally light stocks, and a brisk buying demand set in which continued almost without interruption throughout the year. Canadian mills were called upon to supply a large quantity of the requirements of Michigan and the Eastern States. For the ten months ending October 31st the exports were 452,349,000 feet, of a value of $6,190,545, while for the same period in 1900 the value of exports was $5,530,713. The domestic demand for white pine was likewise heavy, and the year closed with manufacturers carrying exceptionally light stocks of unsold lumber. The higher grades were in greatest demand, the advance in these being quite marked. It is estimated that within the past three years the grades of white pine that are used in sash and door manufacture and in house finish have advanced $10 per thousand. The explanation of this is that in the great pine districts of Canada and the United States the quantity of standing timber is gradually becoming diminished. This is illustrated by the production last year in the States of Michigan, Wisconsin and Minnesota, where the total cut was only slightly in excess of 5,000,000,000 feet, although every effort was put forth in the winter of 1900-1901 to get out as many logs as possible. Within ten years the cut in these states has declined over 50 per cent. While a corresponding reduction has not taken place in Canada, the fact emphasizes the necessity of pursuing a conservative policy in respect to the cutting of timber and of protecting our timber limits from fire.

The cost of logging has now become a serious problem with lumbermen. Within the past three years it has increased about 50 per cent., due to the higher cost of labor and supplies and to the necessity of going further back into the woods for timber. It has, therefore, become absolutely necessary that higher prices should be obtained for lumber, and it is extremely improbable that the low prices of a few years ago will ever be reached again.

A large production of hardwood logs one year ago was responsible for an unsettled market for that class of lumber last year. While prices did not decline to any extent, there was no snap to the demand, although towards the close of the year there was a slight improvement. A light input of logs this winter is likely to bring about better conditions during the coming season. It would be advisable, however, for manufacturers to give more attention to the export trade, as there is a large market in Great Britain for hardwood lumber cut to standard sizes.

From the tables following it will be seen that the foreign shipments of British Columbia, Quebec and the Maritime Provinces were almost as great as in the previous year, while if complete statistics were available they would doubtless show that a substantial increase was made in the shipments from Ontario.

THE TWO SIDES OF FIRST CAR OF LUMBER SHIPPED FROM PORT ARTHUR TO WINNIPEG OVER THE CANADIAN NORTHERN RAILWAY.

ONTARIO.

To speak of the lumber trade of Ontario it is necessary to make a division between white pine and hardwoods. The cut of pne logs in the winter was fairly heavy, and as very few were hung up in the streams, the mills were well supplied with raw material. The demand was such as to stimulate production, and the total white pine lumber output of the province was comparatively heavy and somewhat in excess of the previous season. The Ottawa valley production was 611,000,000 feet, an increase of 22,000,000 feet for the season. The mills in in the Georgian Bay district were operated to their full capacity, and taking into account the new mills that have been put into commission since the export of logs was prohibited, the increase is estimated to be considerable.

The volume of white pine trade was greater than in 1900. Heavy shipments were made to the United States, and there was a large domestic consumption. The industries of the province were in a flourishing condition and the agricultural interests enjoyed a period of prosperity, conditions which brought about an increased demand for lumber. As prices at the beginning of the year were comparatively high, a marked advance was not looked for, and consequently the range of prices generally was narrow; yet the improvement which exhibited itself early in the year finally resulted in a net gain in price, on an average, of about one dollar per thousand. In the higher grades and the class of lumber exported to the United States the appreciation was from two to three dollars, while on the other hand some of the lower grades remained stationary, even selling off slightly about midsummer, to recover towards the close of the year. Clear picks, which sold at $32 in 1900, brought $35 last year, and common stocks, which were marketed at $14 in 1900, realized from $15 to $16. A considerable portion of the cut of the western mills was sold to Michigan dealers.

A dull demand characterized the red pine trade. On account of the unsettled condition of the British market it was difficult to effect sales early in the year, and while there has since been some improvement, the immediate future of this class of lumber seems somewhat uncertain. Hemlock prices advanced during the year from $9 to $10.

Of the hardwood situation nothing encouraging can be said. Stocks were offered more freely than during the previous year, and while prices did not decline seriously, no advance for the year was accomplished. In some classes

of stock the market was weaker. Soft elm sold at $13 as compared with $15 in 1900, and maple at $14 as against $15 in 1900. The other hardwoods held their own. Basswood was scarce throughout the year. Within the past two months there has been a slight improvement in the hardwood situation, and it is believed that there will be a larger demand during the coming season, and in all probability a recovery in prices.

The scarcity of white pine shingles was a feature of the year, and consequently higher prices were the rule. It seems that the enhanced value of pine timber is bringing about a reduction in the production of white pine shingles. The result has been that a greater quantity of the white and red cedar variety is being used. The fluctuation in lath was somewhat narrow, and at the close of the year they were selling at almost the same figure as one year ago.

The manufacturers of cooperage stock are not altogether satisfied with the season's business. About midsummer large quantities of staves were forced on the market, breaking prices considerably. No. 1 staves soon recovered, but No. 2 continued heavy and in little demand. Hoops opened well in the beginning of the season, and after a slight decline advanced 25 per cent. in less than three months. In No. 2 staves and heading the trade of the year was unsatisfactory. The production of No. 2 stock was very heavy on account of the inferior grade of logs and bolts taken out, and consequently a large quantity of that class of stock is being carried over. The high prices of logs, combined with the moderate price of No. 1 and the low price of No. 2 stock, have reduced the profits of the manufacturer to a very small margin.

The following figures show the production of the Ottawa Valley pine mills for two years:

OTTAWA VALLEY PRODUCTION.

	1900—Feet.	1901—Feet.
J. R. Booth, Ottawa	125,000,000	125,000,000
Gilmour & Co., Trenton	25,000,000	25,000,000
Hull Lumber Co., Hull	35,000,000	35,000,000
McLachlin Bros., Arnprior	70,000,000	70,000,000
Hawkesbury Lumber Co., Hawkesbury	45,000,000	45,000,000
W. C. Edwards & Co., Rockland and New Edinburg	85,000,000	85,000,000
St. Anthony Lumber Co., Whitney	42,000,000	50,000,000
Gillies Bros., Braeside	30,000,000	40,000,000
Gilmour & Hughson, Hull	35,000,000	35,000,000
Pembroke Lumber Co., Pembroke	14,000,000	14,000,000
Ottawa Lumber Co., Calumet	8,000,000	.....
Ross Bros., Buckingham	10,000,000	10,000,000
McLaren Estate, Buckingham	15,000,000	15,000,000

A. Hagar & Co., Plantaganet	6,000,000	6,000,000
A. & P. White, Pembroke	5,000,000	8,000,000
Bailey Bros., Aylmer	4,000,000	.....
McLaren & McLaurin, East Templeton	6,000,000	20,000,000
G. H. Perley Co., Calumet	25,000,000	25,000,000
Total	588,000,000	611,000,000

QUEBEC.

"The lumber trade in general was good from start to finish, and still continues." This opinion, expressed by a Quebec lumber manufacturer, perhaps savors of optimism, yet it illustrates the satisfied and hopeful feeling of the lumbermen of that province. The manufacturers were more fortunate than the shippers, as most of them sold their British stock early in the year when prices were at about the highest point reached, whereas the shippers had to meet the depression in the British timber market and found it difficult to close the year with their transactions showing a reasonable margin of profit. The best grades of spruce deals remained comparatively firm. A large trade was done with the United States in clapboards and shingles. The stocks being carried over are light and less than one year ago.

The total shipments from Montreal, Quebec, and the smaller ports along the St. Lawrence were 479,099,464 feet, a decrease of 5,000,000 feet from the preceding year. The port of Montreal shows a falling off of 16,000,000 feet, this being due in part to the fact that more lumber than usual found its way to the British market through Portland and Boston, from which ports the rate of insurance is much less. From New York and Boston the insurance rate is 4 per cent., as against about 9 per cent. from Montreal. This makes a difference of about $5000 to a vessel, in favor of an American port, and accounts for the steady decline in the shipping trade of Montreal. From 516 steamships leaving that port in 1898, the number has fallen each year to 396 in 1901.

Freights ruled low throughout the year. Opening at 40 to 45 shillings on deals for Montreal liners, they showed little or no advance. During the summer, rates to Glasgow fell to the very low figure of 25 shillings, other ports being somewhat affected. The season closed with a very weak freight market.

The respective shipments of the different firms from the port of Montreal for two years are shown by the following table:

	1900—Feet.	1901—Feet.
Watson & Todd	55,574,000	66,107,435
Dobell, Beckett & Co.	39,429,408	36,695,912
W. & J. Sharples	37,735,855	26,322,102
R. Cox & Co.	26,826,629	31,736,125
McArthur Export Co.	19,302,370	10,411,035
Charlemange Lumber Co.	16,135,965	10,863,809
J. Burstall & Co.	14,843,496	22,521,217
Cox, Long & Co.	6,643,931	4,653,236
McLaurin Bros.	5,214,061	5,348,000
E. H. Lemay	4,339,925	3,472,000
D. Cream	955,526	.....
Harold Kennedy	613,800	.....
The Robert Reford Co., Ltd.	524,708	.....
Imperial Lumber Co.	289,020	.....
Montreal Lumber Co.	228,189	.....
Sundry Shippers, Railways, etc.	10,565,497	4,393,979
Total feet	239,222,380	222,424,850

In the statement for 1901 the exports of one or two small shippers are not given. The only shipment of lumber to South America was one of 863,067 feet by the Export Lumber Company.

From the ports east of Montreal the following shipments were made:

	Quebec Feet.	Three Rivers and Pierreville Feet.	Other Ports Feet.
Dobell, Beckett & Co.	43,081,000	26,62,000	8,724,000
Price Bros & Co.	2,500 000	.....	65,844,492
W. & J. Sharples	27,05[illegible],397	,7 6,105	8,361,010
J. Burstall & Co.	6,418,790	.....	.....
H. R. Gooday & Co.	27,027,247	.....	.....
McArthur Export Co.	123,78,416	.....	.....
King Bros	17,150,557	.....	.....
H. Kennedy	6,150,000	.....	.....
Totals	141,757,407	31,988,105	82,929,102

The largest shippers were Dobell, Beckett & Company, with a total of 114,762,912 feet, followed by Price Bros. & Company, W. & J. Sharples and Watson & Todd with about 67,000,000 feet each.

The following particulars regarding the timber trade of the port of Quebec are found in the annual timber trade circular of J. Bell Forsyth & Company, compiled by Mr. E. J. Dalton, of Quebec.

WHITE PINE.—The lightest export and smallest stock on record tell their own tale. The production can now be closely estimated, and will be quite inadequate to meet anything but a very moderate demand. In no case can this wood be overdone either in waney or square timber.

		Supply.	Export.	Stock.
1901	Square	585,432	2,317,443	589,561 Square
	Waney	1,446,889		361,488 Waney
1900	Square	570,818	2,754,920	804,417 Square
	Waney	1,504,625		506,001 Waney

RED PINE.—The supply and wintering stock show little change from last season's reduced figures. It has been more profitable of recent years to take out saw logs than to make square timber, and in any case the demand is not large, pitch pine having replaced this timber in the home markets.

	Supply.	Export.	Stock.
1901	80,917	86,535	78,084
1900	63,780	133,640	85,880

OAK.—The supply has closely approximated to that of the preceding year, and although the shipments have shown a reduction, the wintering stock remaining has fallen to the lightest recorded figures. There is no probability of an increased production unless a very marked advance in price takes place.

	Supply.	Export.	Stock.
1901	498,261	516,437	126,874
1900	488,100	779,040	315,313

ELM.—The large supply consists to a great extent of soft elm. The recorded stock is made up largely of this wood, and is consequently quite misleading. Rock elm is scarce and its contract value has been fully maintained.

	Supply.	Export.	Stock.
1901	1,023,372	548,869	594,922
1900	712,468	682,600	115,311

ASH.—The demand in the United Kingdom has fallen off except for large wood of good quality. Small wood is not wanted. Meantime good wood of any size cannot be purchased except at full prices owing to scarcity of suitable standing timber.

	Supply.	Export.	Stock.
1901	135,245	118,074	25,420
1900	91,745	84,880	2,211

BIRCH.—A moderate production has been well shipped out and the manufacture will be kept within reasonable limits to meet anticipated demand. A good demand from the United States for sawn wood will ensure this.

	Supply.	Export.	Stock.
1901	291,786	304,584	7,721
1900	441,019	371,240	11,486

PINE DEALS.—The Ottawa mill cuttings have again been placed for next season's manufacture at unchanged prices. Some considerable dissatisfaction has existed over the changed culling, but there seems every prospect of this being fairly adjusted. The following figures being only for Quebec, represent but a small portion of the trade. They are given in 100 Quebec standards, equal to 2,750 feet B. M.

	Supply.	Export.	Stock.
1901	383,655	379,993	12,062
1900	182,367	233,540	15,720

SPRUCE DEALS.—Values have been fairly maintained on this side throughout the season and the mill cuttings for next year have been placed at a decided advance on previous figures. The exceedingly light stock in Quebec as compared with former years is very striking.

	Supply.	Export.	Stock.
1901	6,900,659	6,738,669	253,048
1900	5,414,171	4,965,468	415,038

SAWN LUMBER.—Local consumption has been very large, and the increased demand from the United States has advanced prices for such an export that little or nothing has been shipped to River Platte, the market there being unable to respond to the advance demanded by shippers.

THE MARITIME PROVINCES.

An average season was experienced last year by the lumber manufacturers and shippers of the Maritime Provinces. The trade of the North American Continent was satisfactory, but European business was somewhat disappointing and characterized by many uncertainties. The home consumption of lumber was about on a par with the previous year, while increased shipments were made to the United States, the West Indies and South America, specifications for the latter country bringing about $11.50 per thousand. Boards suitable for the West India market brought an average of $10.75, as compared with $10 in the year 1900.

Throughout the Eastern States there was a strong demand for spruce lumber, and consequently the year closed with prices about $1 per thousand higher than at the end of the previous year. Towards the fall there arose an active demand for spruce clapboards, and as the supply at the mills was light a sharp advance took place, and the gain for the year is about $3 per thousand. It is a question, however, how long present prices of clapboards will be maintained, although it is improbable that there will be a material decline before the new stock is ready for the market. Several periods of weakness were experienced by cedar shingles during the year, but these were not sufficient to offset the advances that were made at other times. For Boston delivery extras are now quoted at $3.25 and clears at $2.80. These figures represent a gain for the year of 50 cents per thousand. In other grades of shingles the improvement was very slight.

The shipments from St John to the United States show a gain in value of over $400,000. The increase is made up exclusively by lumber manufactured from Maine logs, as the quantity of Canadian lumber shipped from that port was less than in the previous year. Below will be found a table giving a comparative statement of lumber shipments from St. John to the United States in the years 1900 and 1901 :

EXPORTS FROM ST. JOHN TO UNITED STATES.

	1900	1901
Canadian lumber	$442,794.07	$ 300,593.42
American lumber	505,213.10	1,052,860.73
Total	$948,007.17	$1,363,454.15
Increase for 1901	$415,446.98.	

Canadian lumber was exported across the border to the value of $150,891.21 ; laths to the value of $136,919.44 ; and shingles to the value of $12,782,77.

Turning to trans-Atlantic shipments, we find that the total from the Province of New Brunswick was 339,000,000 feet, a decrease of 90,000,000 feet as compared with the previous year and the smallest since 1896. This is accounted for by the depression in the British timber market. The early shipments were sold at fair prices, but as the season advanced the demand fell off and prices declined sharply towards midsummer. For the bulk of the deals shipped to Great Britain the price realized was about $1 per thousand less than in 1900. The depression continued until late in the fall, when there was a sharp recovery in spruce prices, and at the present time the outlook is for an improvement during the coming season. The year was characterized by uncertain and generally low freight rates, which was an incentive to heavy shipments early in the spring.

The lumber shipments from Nova Scotia to trans-Atlantic ports are given as 182,000,336 feet, but these figures are believed to include South American shipments also, as they show an increase of nearly 40,000,000 feet over the previous year.

The distribution of shipments indicates that France, Spain, and Australia are likely to be larger buyers of Canadian spruce lumber in the future. The shipments from Miramichi and St. John to France and Spain were 10,000,000 feet greater than in 1900, and those to Australia 6,000,000 feet greater. The following tables are taken from the Miramichi wood trade circular of the J. B. Snowball Company, of Chatham.

SHIPMENTS FROM MIRAMICHI FOR 10 YEARS, FROM 1892 TO 1901 INCLUSIVE.

1892—95,000,000	sup. feet	1897—102,000,000	sup. feet.
1893—83,000,000	"	1898—113,000,000	"
1894—96,000,000	"	1899—129,000,000	"
1895—82,000,000	"	1900—122,000,000	"
1896-106,000,000	"	1901—126,000,000	"

BRITISH COLUMBIA.

The lumber trade of British Columbia no more than held its own during the year. The car trade was fairly good and an increased quantity of lumber found its way to Manitoba, the Northwest Territories and the eastern provinces. There was also an average local demand for building material, salmon boxes, etc. The foreign trade, however, was not altogether satisfactory either in respect to volume or price. Shipments show a falling off of 14.2 per cent. as compared with the previous year. It was difficult to secure a price on foreign cargoes which would leave the exporter a fair profit, and it is understood that several orders were refused on account of the price being too low. Efforts are now being made by the mill men to reach an agreement which will do away with the cutting of prices and place the export trade on a more satisfactory footing.

The principal loss in export business was 41.1 per cent. in Australia, which took only 23,000,000 feet against over 32,000,000 feet the previous year. The United Kingdom took only 9,000,000 feet, against 22,000,000 feet in 1900, a falling off of 146.7 per cent. The consumption of South Africa was only 4,000,000 feet, a decline of over 30 per cent. The countries showing an increased consumption were South America, with a gain of 19.3 per cent.; China, a growth from less than 2,000,000 feet to nearly 7,000,000 feet ; and Japan expanding from 1,500,000 to 6,00,000 feet.

The figures in detail of shipments to foreign countries are shown below :

SHIPMENTS BY COUNTRIES.

	1900 Feet B. M.	1901 Feet B. M.
Australia	32,240,564	22,919,807
United Kingdom	21,980,695	8,909,864
South America	8,739,125	13,045,214
China	1,955,368	6,687,133
Japan	1,523,627	6,015,559
South Africa	5,117,672	3,926,620
France	2,696,242	
United States	1,030,625	
Mexico	357,445	746,762
Calcutta		3,036,539
Hamburg		1,211,661
Alaska		170,260
Bombay		44,852
Fiji Islands	446,724	
Total	76,208,087	66,714,271

Sixty-eight vessels sailed from the province with lumber, the shipments from the different ports being as follows :

SHIPMENTS BY PORTS.

	1899 Feet B. M.	1900 Feet B. M.	1901 Feet B. M.
Chemainus	24,952,042	38,365,833	25,856,316
Vancouver	12,553,087	20,138,612	21,815,297
Moodyville	9,615,655	14,700,467	16,926,189
Other ports	2,620,180	3,003,175	2,116,469

The Chemainus mills were 48.4 per cent. behind their 1900 shipments, while the Vancouver and Moodyville mills expanded about 2,000,000 feet each. The North Pacific Lumber Company entered the export market, shipping two cargoes to Australia.

The following table shows the point of shipment, destination, quantity and value of foreign cargoes :

BRITISH COLUMBIA SHINGLES.

The British Columbia shingle trade of 1901 opened with very light stocks in the lumber yards throughout Ontario, Manitoba and the North-West. There were also only one or two mills which had any stock on hand worth mentioning. It is safe to state that there was less than 15 million shingles at all the mills in British Columbia ready for shipment when the spring trade started.

The demand was rather later than usual in developing—no shipments to amount to anything being made until April. When once started, however, the demand remained heavy and prices kept fairly firm throughout the year till the close of the fall trade ; in fact, prices were advanced 15 cents per thousand in August, but the advance was not held at the close of the season's trade, when orders commenced to fall off. Although some dealers had to wait on shipments, it is safe to state that they all finally got what shingles they wanted to supply their customers.

The apparent scarcity of shingles for a time during the year is accounted for by the fact that three mills (including two of the largest in the province) were burned down during the early part of the year ; and one of these mills had been closed down from the beginning of the year until the time it was burned. These three mills made a shortage in the supply for the whole season of about 75 millions. In other words, had these mills been in operation steadily, the trade would have been supplied more promptly, and all the mills would have done less business.

One of the features of the year's shingle business was the arrangement between the Pacific Coast Lumber Company and four of the manufacturers, whereby the company closed down their mill and acted as selling agents. While the demand, of course, had something to do with keeping up prices during the year, it is conceded by by all that the arrangement above referred to was responsible in a large measure for maintaining a uniform price, and if it could have been amicably continued for the length of time intended, it would have undoubtedly maintained a uniform price and helped to keep the business in a healthy condition.

Another feature in the shingle trade of British Columbia during 1901 was the building of no less than eight new mills, with an aggregate capacity of about 700 thousand per day. Arrangements are also made for the building of three more large mills in Vancouver, which will have a combined capacity of at least 600 thousand per day.

The total quantity of British Columbia shingles manufactured and sold during 1901 amounted to about 225 millions. Of this quantity from 25 to 35 millions would be consumed in British Columbia and the balance about equally divided between Ontario, Manitoba and the North-West.

The following is a list of the existing mills in the coast district of British Columbia, with their daily (10 hour) capacity, viz. :

B. C. Mills, Timber and Trading Co.,	Vancouver	160 M
E. H. Heaps & Co.	"	180 M
Hastings Shingle Mfg. Co.	"	135 M
(4 mills in Washington in addition to Vancouver mill.)		
Thos. Kirkpatrick	Vancouver	80 M
Spicer Shingle Mill Co.	"	160 M
British Columbia Shingle Co.	"	90 M
Cook & Tait	"	80 M
Cascade Lumber Co.	"	90 M
Robertson & Hackett	"	25 M
W. L. Tait	"	25 M
Robert McNair	"	75 M
The Canada Shingle Co.	"	90 M
Fraser River Lumber Co., New	Westminster	110 M
A. R. Welch	"	110 M
Brunette Saw Mill Co.	"	75 M
Galbraith Bros.	"	25 M
Chillawack Shingle Co., Harrison River		75 M
Haddon & Son, Cloverdale		25 M

In addition to the above the following firms have made arrangements to build shingle mills:

Pacific Coast Lumber Co., at Vancouver, capacity about 250 M a day.

Hastings Shingle Mfg. Co., at Vancouver, capacity 250 to 300 M per day.

The following named firm has actually commenced building : Robert McNair, at Vancouver, capacity not decided on, but will likely be about 150 M a day.

It can be seen from these figures that the 10 hour per day capacity of the shingle mills now built and those building and arranged for is about two and one-quarter million. All these mills can be operated night and day—in fact, it has been the practise for the shingle mills in British Columbia to work night and day as long as orders were on hand. Continuing, these figures show a monthly capacity of 25 working days of 112,500,000, or a yearly capacity of 1,135,000,000 shingles for the coast mills of the province.

The total Canadian trade for B. C. shingles during the last five years has not averaged over 200 to 225 million a year. If all these mills could get timber to operate steadily, the shingle business would certainly be in an utterly demoralized condition in a comparatively short time ; but where the proprietors are going to get a supply of raw material for their mills is a question we will not attempt to answer just now. It looks like trouble in the near future for the shingle industry of British Columbia, and the above words of warning would seem to be timely.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C.H. Mortimer Publishing Company
of Toronto, Limited

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICE :
IMPERIAL BUILDING, MONTREAL.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION :

One Copy, Weekly and Monthly, One Year, in advance ... $1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

PROPOSED TIMBER CHARTER.

The British Chamber of Shipping have submitted to the trade a new timber charter covering vessels sailing from British North American ports. This charter, so far as can be judged, is a reconstruction of the charter which was submitted in the fall of 1898. It will be remembered that the timber trade refused to accept this charter, on the ground that it contained many objectionable clauses. The document now submitted is, in the opinion of the trade, no improvement on the rejected one. At a meeting of the Quebec timber and deal exporters, an unanimous resolution was passed that the charter as promulgated by the Chamber of Shipping for British North America, to come into force in 1902, should be strongly opposed as an arbitrary change from the London Chamber of Commerce form of Charter Party which has been in use for the last eleven years. The trade placed itself on record in a very decided manner, at the same time pledging itself to accept such changes as might be shown to be of general advantage and mutually agreed upon after fair discussion.

The form of charter is so manifestly in the interest of the ship-owner that it is almost needless to specify the objectionable clauses. Perhaps those most glaringly unfair are clauses 3, 5 and 6, relating respectively to the manner in which the cargo is to be supplied and received, reservation as to strikes, and objectionable terms under which bills of lading would be given. There are likewise important omissions, and the bill of lading is ambiguous and by no means satisfactory. Under the circumstances the Quebec shippers are justified in insisting on the adoption of the form of charter which has been found workable for so many years.

LESSONS OF THE YEAR.

The lumber trade of 1901, as reflected in the statistical information published in this number, was not particularly suggestive of either advancement or retrogression. The position of Canada as a lumber producing country was merely sustained. If the year served to prove one thing more than another, it was the supremacy of white pine—not, however, so much on account of its acknowledged superiority over most other woods as for the reason that the supply is annually decreasing.

In Canada the limit of production in white pine has not yet been reached, and it is hoped that by a wise policy of forest preservation such limit may be postponed for an almost indefinite period. But the top of the ladder has been reached in the United States, and a backward movement would seem to have set in. The cut of pine in the Lake Superior district last year was smaller in quantity than in any year since 1879. This was not due to a lack of demand for lumber, but rather to the increased difficulty and expense of getting out logs as compared with the earlier years of the white pine industry. The state of Michigan now furnishes a very small portion of the total white pine production, and is reckoned as a considerable importer of lumber.

It will be noticed from the tables that the shipments of British Columbia lumber to Australia were smaller than in the previous year, whereas that country took an increased quantity of spruce from the Maritime Provinces. France and Spain are also becoming better customers for Canadian spruce. The trade of the Pacific coast seems to be expanding in the direction of Japan, China and South America.

The figures with respect to shipments from British Columbia to South Africa are not encouraging. The assumption that South Africa is not a large buyer of lumber must be dismissed when reference is made to the Washington shipments, which were 21,000,000 feet last year, as compared with 12,000,000 feet in 1900. The falling off of over 50 per cent. in the lumber exports from British Columbia to that country shows that our lumbermen are not giving as much attention to that market as it deserves. This is to be regretted, as it is probable that merchants who now secure a foothold in South Africa will have little difficulty in maintaining it for years to come and in gradually increasing the volume of their business.

The conditions which have arisen in the shingle industry of British Columbia do not forecast a promising future for that trade. During the year a number of new shingle mills were built, and several others are now in process of construction. It is difficult to understand what has been the underlying cause for this expansion in shingle mill building ; certainly it could not have been the prosperous condition of the industry nor the inability of the existing mills to supply the demand. Nevertheless, when the mills now under way are completed, the combined capacity of the then existing mills will be five times greater than the total consumption of British Columbia shingles in Canada. What the ultimate result will be cannot be foretold, but it is not likely to be profitable to those engaged in the business. The supply of cedar timber cannot last long under the present consumption, and in a short time it is probable that British Columbia will reach the point when the manufacture of shingles must be abandoned for want of raw material. It is some satisfaction to learn that the provincial government has actually enforced the law prohibiting the export of cedar logs to the United States. The law, however, only applies to timber cut on crown lands and cannot affect that taken from deeded property.

It should be the aim of lumber manufacturers to make the most out of their raw material. The question with lumbermen should not be how much timber can be taken out of the woods and manufactured into lumber, but how can the greatest returns be obtained from a given quantity of timber. By pursuing such a policy the manufacturer, the workingman and the country at large will be benefitted to the greatest extent.

EDITORIAL NOTES.

THE suggestions made by a committee of the Canadian Manufacturers' Association to the Dominion Governme t regarding the extension of export trade should be heartily supported by Canadian manufacturers and the Canadian press. We may not all agree as to the particular methods to be adopted, but the necessity of taking steps to make our manufactured products better known in foreign countries must be universally admitted. The markets of the West Indies, for instance, are now very largely supplied by United States merchants. Very little is known of Canadian goods. It is claimed that New York houses already handle more Canadian goods in the West Indies than are shipped direct from Canada. The publishers of this journal recently received from a gentlemen at Hamilton, Bermuda, a request for a directory of Canadian wood-working firms and dealers in building material. This gentleman states that for materials for public works they are compelled to obtain estimates from the United States on account of not knowing where to apply in Canada. He adds that the Imperial Government Surveyor had applied to him for such a directory, and he was certain that such information would ofttimes lead to the placing of considerable orders that now go to the United States.

AN interesting and instructive chart has been received by the CANADA LUMBERMAN from Messrs. Foy, Morgan & Company, showing the periodical estimates of the duration of the timber supply at London, England, for the past four years in comparison with the averages at the same time in the previous five years. With Canadian pine the largest stock for the years 1898, 1899 and 1900 was held on 31st January, 1899, when it reached 20 per cent. above the average of the preceding five years. In 1901 the supply reached 45 per cent. above the average on 30th April and 31st July. The largest supply of spruce for the past four years was on the 31st October, 1898, the quantity then in stock not being reached even last year, when

so much was heard about the large supply and depression in spruce. The lighest stocks of both Canadian pine and spruce were held on June 30th, 1898, the quantity being 50 per cent. below the average and 15 per cent. smaller than the supply at any other time during the four years. Baltic deals and battens were in most excessive supply during the summer of 1901, being 45 per cent. above the average. The diagram representing the supply of rough boards is particularly suggestive. Only at five monthly periods during the past four years has the supply been below the average of the preceding five years. In 1898, 1899 and 1900 the supply ranged from 10 to 45 per cent. above the average, and on the 31st January, 1901, was 40 per cent. above. This, however, was the highest period of the year, and from that time the supply gradually decreased until on October 31st it was 35 per cent. below the average, rapidly increasing again to 15 per cent. above the average on December 31st last.

LUMBER THAT SOUTH AFRICA WANTS.

The timber requirements of South Africa were recently the subject matter of an elaborate roport prepared by the Norwegian consul at Durban, Natal. It is well known that Norwegian manufacturers have a large share of that country's trade of lumber, and also that the shipments from the Pacific coast are taking the place of Norway and other exporting countries to a considerable extent.

The market prices of timber were quoted per running foot, as follows: Deals, fourth and fifth quality, 3x9 to 17 feet, per foot 10½ cents; same up to 18 and 19 feet, 11½ cents; same, 20 feet and above, 13 cents; 3x11 feet, 14 and 15 cents; 4x9 feet, 16 cents; 4x11, 20 cents; planed ceiling, quality "colonial mixed and thirds," ⅝x6½ feet up to 20 feet, per foot, 1½ cents; ⅝x5 feet, 1 cent; flooring, same quality, 1x6½ feet, up to 20 feet, 2 and 3 cents. These prices include delivery to buyers, less 5 per cent. discount, and from thirty to sixty days' credit. Landing charges are; Deals, per ton (40 cubic feet), 25 cents; boards, 31 to 37 cents. Sorting: Deals, 18 to 25 cents, boards 25 to 31 cents per ton; delivery from wharf to any building site in town, 41 cents a ton. The customs duties are 2 cents a cubic foot for rough timber, and 3 cents for planed.

The sizes most preferred are: Deals, 3x9, 4x9, 3x11, 3x8, and 3x6 feet; scantlings, 3x4½, 3x3, 2x4½, 1½x4½, 2x3 and 4x4 feet; boards, 1x6½, ⅝x6½, 1x5 and 1⅛x6½ feet. The consul says that it is far more advantageous for exporters to send the sizes and qualities used locally, and get good prices for them, than to send those for which there is no demand. Although the latter eventually find buyers, after much delay, they have to be disposed of at low prices. It has been his experience to see cargo after cargo of unsuitable sizes remain a drug on the market for long periods. Consignors who ship such cargoes create difficulties for the consignees, who cannot realize to the satisfaction of their clients. There is a heavy demand for spars from twenty-eight to forty feet in length and not less than three to four inches in diameter. They are sent as deck loads, and the prices range from $2.50 to $3.25 each, landed and delivered.

The dimensions and prices of made doors most suitable are as follows: Six and a half feet by 2½ feet by 1¼ inches, molded on both sides, $2 to $2.60 each; 6½x2½ feet x 1 1-2 inches, molded on both sides, $2.35 to $3.10 each; 6 1-2x2 1-2x1¼ inches, molded on both sides, $3.50 each. These prices include delivery to buyer, less 5 per cent. discount. Duties are 7 1-2 per cent. ad valorem. The dimensions and prices of molding in demand are: Three-inch cornice, per running foot, 2 cents; 4-inch, 2 1-2 cents; 5-inch, 3 cents; 6-inch, 4 cents; 3-inch architraves, 3 cents; 4-inch, 3¼ cents; 5-inch, 4 cents; 6-inch, 4 1-2 cents; 3-inch O. G. molding, 2 1-2 cents; 4-inch 2¾ cts; 6-inch skirting, O. G. 21-2 cts.; 7-inch, 3¼ cents; 9-inch, 4 1-2 cents. These prices include delivery to building site, less 5 per cent.

The consul reports a great demand for packing cases, saying that in Durban alone from 50,000 to 70,000 are used every year. He gives these samples of three specifications: Case No. 18—Ends 16x7x¾ inches, one piece each; sides 19x7x⅜ inches, one piece each, lid and bottom 19x16¾x⅜, two pieces each. Case No. 11—Ends, 12½x6½x¾, one piece; sides, 28½x6½x½, one piece each; lid and bottom, 28½x13½x½, one piece each. Case No. 20—Ends 12½x6½x¾, one piece each; sides 20x6½x⅝, one piece each; lid and bottom 20x13⅝x½, two pieces each. The thicknesses of the end pieces in Nos. 11 and 20, and the thickness of the lid, bottom and sides of No. 18 are actual. All the other thicknesses are nominal, and one sixteenth may be allowed for sawing.

The United States consul general at Cape Town reports: "The lumber trade for the year is highly gratifying, and the United States has had the bulk. Twelve American sailing vessels are now awaiting discharges. The lumber is principally Oregon pine, (Douglas fir). For the year ended June 30, 1901, over fifty Swedish and Norwegian sailing ships have left South Africa for our southern ports, to bring back pitch pine. It is to be regretted that American ships could not be found to do this work."

Wood that will stand the attacks of white ants will find a ready market in South Africa. It has been found that the Canadian spruce pine is very liable to destruction by the white ant. Norwegian and Swedish deals are in great demand, as the dimensions of this timber are superior.

As to chances of a good market in the future, it is reported that plans are matured for expending $10,000,000 on railway; that several thousand miles of telegraph lines are to be erected and renewed; that £1,000,000 is to be spent on public works, £3,000,000 on harbours; that £7,000,000 will be expended in the Transvaal, and a like proportion for the Orange Colony.

To cut lumber requires a mill and some brains; to cut prices requires neither.

Only poor advertising is an expense. Good advertising is always a paying investment. —Printers' Ink.

TESTING A SULPHITE COOK.

A correspondent of the World's Paper Trade Review asks: "In boiling wood, what are the usual tests to ascertain completion of cooking operation?" to which that paper replies as follows:

"In sulphite processes for boiling wood, one or both of the following tests are employed. Iodine test: A sample of the liquor is taken from the digestor by means of the test cock, of which 1 cc. is run into an 8-ounce glass beaker, half filled with distilled water. To this is added a few drops of starch solution and titrated with a decinormal solution of iodine until the appearance of the bluish tint of the starch compound of iodine. If less than 2 cc. of iodine solution turns it bluish, the acid is almost exhausted and the wood is considered sufficiently boiled. Of course this only holds good providing the correct proportions of wood and liquor were employed.

If the wood employed is hard, dark or knotty, the boiling may be continued until only 1 cc. of iodine is sufficient to show the blue coloration. If the boiling is continued beyond this, sulphuric acid soon shows itself by burning or charring the pulp. Ammonia test: This test is generally employed by the foreman or boilermen themselves, as it requires less skill and manipulation than the iodine test. A small test tube is three parts filled with liquor from the digester and a few drops of strong ammonia added. If the liquor remains a light color and precipitates lime, it shows the liquor is not exhausted and the boiling may be continued. If the ammonia throws down no precipitate, or very little, the liquor is exhausted and the boiling must be stopped at once. If a brown ring is formed on adding ammonia the boiling should be stopped. A sample of pulp should also be examined to ascertain if it is sufficiently boiled."

PETRIFIED WOOD IN SOUTH RUSSIA.

An interesting account is given in a contemporary of some remarkable deposits of petrified wood existing in one of the rivers of South Russia. The depoist consists of a quantity of calcined oak lying in the bed of the river in layers three or four deep, and extending over an area of some 150 mlles. A main feature—which, indeed, constitutes the chief value of this specific hardwood—is its variety of colors. No fewer than twelve shades in pink, blue, yellow and that known as American walnut, have been found. This peculiar formation would seem to have been caused by the variegated character of the soil at the bottom of the river. How long nature has taken to achieve this feat is a question to be solved by geologists. The excavated timber is in logs of from 42 feet to 100 feet in length by 15 inches to 20 inches in diameter, and each log is one uniform shade throughout. The effect must be far less pleasing than that produced by the petrified wood of Arizona, where all the colors of the rainbow are shown in a single piece. No indication is given as to whether the Russian petrified wood could be used for ornamental purposes. For years there has been a steady, although limited use made of the American chalcedony.

THE LATE HONORABLE R. R. DOBELL.

It was with feelings of profound regret that the people of Canada learned of the death of Hon. R. R. Dobell, which took place at Folkestone, England, on January 13th, as the result of being thrown from his horse. Mr. Dobell was a member without portfolio of the Dominion Cabinet, and head of the lumber exporting firm of Dobell, Beckett & Company. In the former capacity he had been prominently before the people, while his business interests were of such magnitude as to give him an acquaintance and standing which few men enjoy. His death is a national calamity and an almost irreparable loss to the city of Quebec, of which he was a resident.

Hon. Richard Reid Dobell was born in Liverpool, England, in 1837, and when a lad was engaged as clerk for a timber importing firm. When twenty years of age he came to Canada to promote the business of buying and shipping timber, and subsequently founded the lumber and mercantile firm of R. R. Dobell & Company, of Quebec, which has since been changed to Dobell, Beckett & Company. The Dobell firm, like others in the timber trade, had its vicissitudes and frequently encountered severe fluctuations in the prices of timber. But Mr. Dobell possessed indomitable energy and an enormous capacity for work, which, combined with good judgment and administrative capacity, invariably surmounted the difficulties. The strain under which some men sank only braced Mr. Dobell to renewed enterprise. An immense lumber business was built up by his firm, the shipments in late years sometimes reaching 80,000,000 feet.

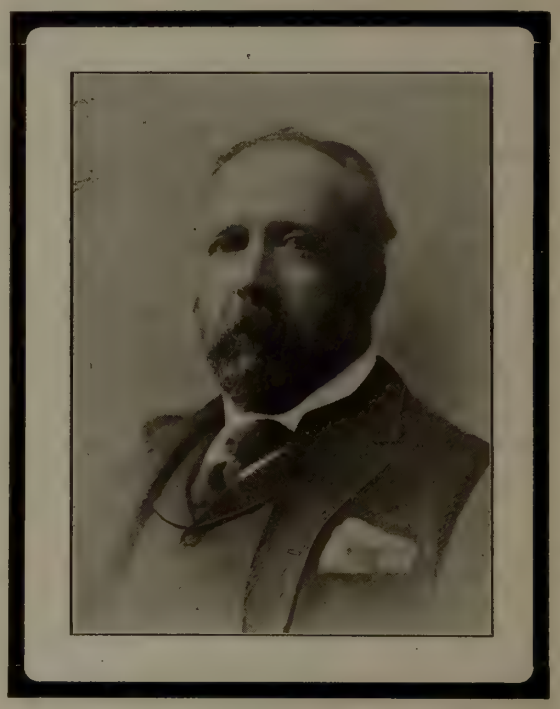
It was Mr. Dobell's custom to make frequent visits to Great Britain, to which country almost his entire shipments were made. He was widely known in England and was an enthusiastic Canadian and Imperialist. He did eminent service in London by declaring his optimistic views as to the resources and future of Canada.

As a member of the Dominion Cabinet, Mr. Dobell was able to wield a power little known to the public. His political career began in 1895, when he was elected as independent Conservative for Quebec West, but on a recount he lost his seat. The following year he was elected in the same constituency as an independent, and upon the formation of the Laurier Administration was made a member of the Cabinet without portfolio. At different periods he acted as temporary political head of several departments, his longest service in this capacity being as Acting Minister of Inland Revenue. He was re-elected for Quebec West in 1900.

The late Mr. Dobell had been identified with most of the enterprises having in view the advancement of the port of Quebec and the St. Lawrence trade generally. He had been president of the Quebec Board of Trade, a member of the Harbor Board, a director of the Quebec Bridge Company, and was active in the promotion of the new Canadian Atlantic cable. He had a firm belief in the future destiny of Quebec as an ocean port, and was an advocate of the fast Atlantic steamship service and of winter navigation from Quebec to Montreal. He was a delegate to the Congress of Chambers of Commerce of the Empire in 1892 and in 1896, and in 1894 was elected president of the deep waterways convention which met at Toronto.

But it was in private rather than political life that the late Mr. Dobell won distinction. Generous in purse and charitable in judgment, gifted with physical vigor and inexhaustible vitality, he was one of the most affectionate of men, harboring no ill will towards any person. In works of philanthrophy he took a leading part. None have striven harder or more conscientiously to be of use to their fellowmen in their day and generation, and none will be more deservedly mourned by all.

Mr. Dobell married Elizabeth Frances, eldest daughter of the late Sir David Macpherson, of Toronto, and leaves three sons and two daughters. Mr. W. M. Dobell is a member of the firm of Dobell, Beckett & Company,



THE LATE HON. R. R. DOBELL.

Mr. Alfred Dobell is a law student, and Major C. M. Dobell is in the Imperial Service, an officer of the Royal Welsh Fusiliers.

Sir Charles W. Dilke contributes to "The Cosmopolitan" for February an article on "The Naval Strength of the Nations" which gives not only a most interesting and comprehensive account of the natives of the great powers, but also a clear insight into world politics.

An interesting question as to insurance has come up in New York state. The premium on a saw mill had been in arrears two months, though the subject of correspondence, when it burned. At the time of the fire a check for the premium was under way and was received by the company three hours after the fire. The mill owner demands the payment of the policy, while the company holds that there was no mill to be insured when the premium was received and therefore the policy was void. The United States district court at Buffalo will have to decide this question, which is entitled Meyer vs. Pennsylvania Lumbermen's Mutual Fire Insurance Company.

SAWS IN FROSTY WEATHER.

Do you have trouble with your saws in winter? It is quite common, says Barrel and Box, to hear complaints about the work of their saws when the frost gets in the timber, so a word on the subject is not out of place. There are troubles and troubles that come to the sawing machines, and a man would have to attend each individual case in person to make a sure thing of the individual trouble and its remedy, but the frost is a common trouble and there is a general remedy that can be cited. That remedy is, slow down. Cut the speed of your saws down at least 25 per cent. from the normal when you go into frozen stock, and the chances are in favor of you having very little trouble. It is simply a matter of proportioning speed to the density and hardness of the wood, and no matter what your speed is, when your timber becomes frosty it is in order to reduce it. This may seem queer when you look at it in the light that there are saws and sawmills that run even in frozen timber at a speed that is above the normal at which you operate your saws, but that does not alter the logic of the idea. Your saws are hammered and tensioned to cut a certain wood at a certain speed, and when you change either the speed or the wood without changing the other there is trouble. That is what happens when the wood gets frosty, it is changed into a harder wood, and unless you want to get your saws hammered up for it you should lower the speed, and this holds good regardless of what the speed is—within reasonable bounds. There is, without question, such a thing as too high and too low a speed for good work, but that is always understood. How to lower the speed is sometimes a problem, especially if there is other machinery attached that requires the full speed of the engine so that you cannot slow down there, and about the best way to solve that problem is to provide yourself with an extra pulley for your saw mandrel that is somewhat larger than the one you operate with in the summer time. Mill men who have alternate runs of soft and hard wood find it good policy to carry two mandrel pulleys in this way regardless of frost, and any man who has trouble with his saws in winter weather will find a larger mandrel pulley a good investment. The foregoing applies particularly to sawmills, but the same logic ought to hold good with a heading saw so far as the speed question is concerned, and where heading is manufactured, a progressive policy is to slow down the engine during winter. In other words, a general specific for saw trouble in the winter is to run slower, and then if there remain troubles they are of a special nature and need special treatment.

Another way of protecting the tops of piles of lumber while drying is that adopted by a Canton, Ohio, firm that air-dries all its stock. The last tiers on the top are offset to the centre of the pile about half the width of the boards on each side for successive tiers until the top is reached, with one board for the crown of the pile. This top board is allowed to project over the ends of the pile, being fastened down by a strap at either end of the pile.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 24 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VII. TORONTO, ONT., JANUARY 29, 1902 No. 52

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:

IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday, Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED—An up to date Band Saw Mill with or without carriage, second-hand. Give all particulars and lowest price. Box 38, CANADA LUMBERMAN.

FOR SALE.

STEAM SAW MILL, KNOWN AS THE Pickard & Rowan mill, Owen Sound, with yard and water room for lumber and logs, Tramways with iron rails, Lumber Cars, Waggons, Carts, Offices, Large Stable, Booms, Etc., two Boilers, Gun Shot Feed Gauge Edger, Trimmer, Shingle Machine, Heading Machine, Etc., Etc. All in good working order. For particulars apply GODERICH LUMBER CO., Goderich.

AUCTION SALE

OF

VALUABLE TIMBER LIMITS

AND LANDS.

There will be offered for sale by Public Auction, at the Russell House, in the city of Ottawa, on

Wednesday, the 19th day of February, 1902,

at two o'clock in the afternoon, the Timber Berths and Properties owned by Mr. William Mackey, on the River Amable Du Fond, Province of Ontario. The limits are in one block containing 129¾ square miles, timbered with white and red pine of superior quality, spruce and other woods, and are well watered, making a very short average draw. Part of the block is still a virgin forest containing large board pine of the finest quality with a very short haul.

With above are included deeded lands on which are built slides and dams; and at Eauclaire station, Can. Pac. Ry., a well-equipped saw, planing and shingle mill run by water power.

The whole will be sold in one block. Maps and descriptions of limits may be obtained from

W. MACKEY

Ottawa, 4th Dec., 1901.

SAW MAKER WANTS POSITION AS FILER, Band or Re-saws. Twelve years experience, factory, mill References as to character and ability. Address BOX C, CANADA LUMBERMAN.

OPEN FOR ENGAGEMENT—FIRST-CLASS Sawyer with good portable saw mill. Mill capacity eight to ten thousand feet per day. Work guaranteed in hard and soft wood cutting. Apply GEO. A PATRICK, Delaware, Ont.

GOOD QUALITY PINE SAW LOGS WANTED, by mill situated on the Georgian Bay. State quantity, quality, average, price, when cut, and where logs can be seen. Address, BOX 92, CANADA LUMBERMAN.

WANTED—INCH BIRCH, STRICTLY 1s and 2s eight inches and up wide. Quote lowest price delivered on cars point of shipment. J. F. STENGEL, 990 Ellicott Square, Buffalo, N Y.

WANTED—TWO GOOD CIRCULAR SAWYERS, capable of sawing dimension timber. Capacity of mill 30 to 40 thousand per day. Address applications to the PEMBROKE LUMBER Co., Pembroke.

For Sale.

One 54 inch double cant oscillating gang, Wm. Hamilton make, extra strong and in running order. Apply G. B., care CANADA LUMBERMAN.

FOR SALE.

80,000 feet of one and two inch dry Ash and 30,000 feet of one and two inch dry Soft Elm for sale, also will have the same amount to cut this winter CHARLES QUERENGESSER, Brodhagen, P. O., Ont.

WANTED—WHITE BASSWOOD.

200,000 1 1/4 inch Winter sawn, End dried, Common and Better White Basswood, for delivery May, June and July next. Parties able to supply part or whole, address Box 34, CANADA LUMBERMAN.

Cedar Poles Wanted

A LARGE quantity of cedar telegraph poles wanted, 25 to 65 ft. long, 7 inch top, for early spring delivery. Quote price f o.b. cars point of shipment' Box 33, CANADA LUMBERMAN.

BOX SHOOKS WANTED.

We have large export orders for Box Shooks, principally in Spruce, for butter, candle and soap boxes Also birch and Maple squares, chair-seats, etc. Apply for particulars to GELLIBRAND, HEYWOOD & Co., Cardiff, Wales, G. B. Payment cash.

FOR SALE.

VALUABLE SAW MILL PROPERTY ON Georgian Bay, in the Province of Ontario, situated at Town of Wiarton, and about 1900 acres of hardwood and hemlock timber-lands on Bruce Peninsula, together with railway sidings and docks. The Saw Mill is a new one, suitable for the manufacture of pine and hardwood lumber and lath, with excellent facilities for shipment by rail or water. The Saw Mill may be purchased with or without the timber lands.

For further particulars apply to the undersigned.

W. J. FERGUSON,
Wiarton, 17th Jan., 1902. Solicitor for Owners.

WANTED

A steady, energetic, thoroughly experienced and competent man as foreman for a large shingle mill, equipped with Dunbar type of machine. Night and day capacity per year, 100 million.

Must be an expert on shingle saw filing and hammering, and thoroughly understand the Dunbar machine, and be able to do mill-wright work, know how to handle men, and write and figure fairly well. None but a strictly temperate man need apply.

Prefer a man not over 40 years old. An excellent salary and steady employment to the right man.

Apply "Shingle," care this paper, for further particulars.

WANTED—PART, OR THE ENTIRE CUT of a mill making first-class cedar shingles, to handle by the New England trade. Will advance 75 per cent. cash on receipt of each bill of lading. Can get the best market prices. Correspondence solicited. Address, IVERS P. LAWRENCE, Fitchburg, Mass.

FOR SALE.

Large Tract of Timber

In Central Ontario

THE PROPERTY OF

The Canadian Land and Immigration Company of Haliburton, (Limited.)

This company has a large tract of well timbered land about 125 miles north-east of Toronto. There are large quantities of Cedar, Hemlock, Spruce, Balsam, Basswood, Cherrybirch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads, one of which is about to be extended through the centre of the property. The Company are prepared to sell this timber in blocks ranging from 5,000 to 10,000 acres, or more if desired.

There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and looking for a new location.

Maps and plans and further particulars can be had by applying to

W. H. LOCKHART GORDON,
Managing Director,
157 Bay Street, Toronto.

CURRENT TRADE CONDITIONS.

ONTARIO.

While the month of January is usually uneventful in respect to lumber transactions, the past month has witnessed a movement which has further strengthened the white pine market. Buying of the coming season's cut has been quite heavy and at figures invariably satisfactory to the seller. The purchase of lumber in the Ottawa district by a Chicago concern, as reported by our correspondent, is particularly significant as showing that the market for Canadian pine lumber is broadening, and that United States concerns find it advantageous to pay even the high prices which Canadian manufacturers are now asking, in addition to the import duty of two dollars per thousand feet. It is estimated that there is not over 25,000,000 feet of unsold lumber on the mill docks in the Georgian Bay district, and even this quantity is almost certain to find a buyer before spring. There is a firm market for logs which are held at $11 to $13 per thousand. A very small quantity is being cut this winter for export, as the operations for this purpose must be confined to deeded lands, on which the timber is mostly scattered.

An estimate furnished by Mr. Ralph Loveland of the expected output of the mills on the Georgian Bay is interesting and valuable, inasmuch as it shows a smaller cut than has been reported. The figures of the districts are:

	Feet.
Blind River	37,000,000
Cutler	31,000,000
John's Island	15,000,000
Spanish River	15,000,000
Victoria Harbor	25,000,000
Byng Inlet	40,000,000
Collingwood	30,000,000
Parry Sound	71,000,000
Midland	60,000,000
Waubushene	30,000,000
Little Current	70,000,000
Sarnia	25,000,000
Sandwich	25,000,000

According to this estimate the total is less than 500,000,000 feet, but it will be observed that it does not include the cut at French River and one or two other points.

QUEBEC AND NEW BRUNSWICK.

The spruce lumber market is firm, though quiet. It is anticipated that there will be a strong market in the spring, as the volume of building in the Eastern States is likely to call for a large quantity of rough lumber. This, it is thought, will offset any possible falling off in the demand from Great Britain. The winter cut of logs will not be greater in volume than usual, and may be slightly curtailed. White cedar shingles are still selling on the basis of $3.25 to $3.30 for extras on Boston rate of freight, with the demand a little more inactive.

MANITOBA AND BRITISH COLUMBIA.

At the present time the chief interest of the lumber trade of the west centres in the movements affecting the trade of British Columbia. The Provincial Government have put into effect the law prohibiting the export of cedar logs, and British Columbia lumbermen expect to find a market for shingles in certain territory that was formerly supplied by United States manufacturers. The revised price list is also commanding some attention. Cedar shingles are quoted at $1.70 for No. 1, 6 to 2x16 inches, and $1.20 for No. 2 for all points west of Fort William, f. o. b. cars Vancouver. For all points east of Fort William the price is $1.55 and $1.05 respectively. Delivered prices are, of course, quoted in all cases, but the above figures are the basis from which delivered prices are made. The fifty cent. rate covers all points from Fort William west to and including Regina, also a number of the branch roads of Manitoba and the North-West, while the 75 cent. rate covers practically all of Ontario and the city of Montreal.

UNITED STATES.

Several small lots of white pine lumber are changing hands in the Lake Superior district. There is an activity and strength which augers well for a strong market during the early spring. In the Albany market cuts and better have advanced $2 a thousand, and some grades of common about $1 a thousand. Dealers there report that car trade has been exceptionally good this winter. Our Buffalo list this week shows a further

advance in the price of uppers and selects. The tone of the market there is the strongest that it has been since Christmas; orders and enquiries have increased materially. The lower grades are meeting with more inquiry and are likely to be advanced, a feature which gives much encouragement to the trade. The hardwood market is also enjoying a degree of activity. Elm, basswood and maple are selling very well.

GREAT BRITAIN.

The British timber market has not yet made a decided move towards recovering from the recent depression. There has, it is true, been some improvement, but importers are pursuing a policy of precaution and cannot be induced to purchase excepting on a very moderate scale. It may be that there will be a gradual return of complete confidence, which in the end is probably most to be desired. Some of the largest importers predict that the market will be comparatively strong for the first six months of the year, but they seem very uncertain about the course of trade after that time. The curtailment in operations which has been decided upon in Norway and Sweden cannot but have a beneficial effect upon the market, and if the present line of policy is pursued, the import of timber into the United Kingdom this year will witness a further reduction. At recent auction sales buying has been quite active, stimulated no doubt by the higher prices which shippers are asking. Spruce prices have been fairly well maintained, with the exception of 3 x 7 stock, which is slightly lower at Bristol and Liverpool. The receipts of spruce deals by the regular liners from St. John and Halifax has had the effect of checking any further advance in prices. In London second quality 3 x 9 spruce is selling at £10 per standard, and third quality at £9 10s landed at the dock. Several contracts have recently been placed for birch squares, the price of which is about £7 10s per standard.

TIMBER LIMIT TRANSACTIONS.

A couple of weeks ago the Delta Lumber Company, of Detroit, disposed of their timber limit in Mackenzie township, on the Georgian Bay, to Messrs. Avery and Eddy, of Saginaw, and Glenn, of Duluth. It is reported that the consideration was in the neighborhood of $275,000. The Delta Lumber Company purchased this limit from the Holland & Emery Lumber Company in 1895. It comprises nine square miles, is a very desirable limit as to location, and can be lumbered very cheaply. It contains about 5,000,000 feet of red pine, the remainder being white pine.

The Victoria Harbor Lumber Company, Toronto, recently purchased the north half of Ferrie township from the Detroit Lumber Company. It comprises 40½ square miles, the pine of which has been mostly cut off, but there is a considerable quantity of hemlock and cedar.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

Attention in the local lumber market is fixed on the future. Present dealings are few. The event of the midwinter business is found in the operations of the Edwin S. Hartwell Lumber Company, of Chicago. For several weeks past the western concern, one of the largest of its kind, has had a representative in Ottawa negotiating for the purchase of first class white pine lumber. He has made good use of his time, and has secured a large slice of the supply of Ottawa and neighbouring towns. The sales in the aggregate represent about $135,000 in money, and 7,500,000 feet in lumber.

Large purchases were made from J. R. Booth, Hull Lumber Company, Gillies Bros., of Braeside, McLachlin Bros., of Arnprior, and Lemay & Company, Montreal. All the above stock, except that secured from the Hull Lumber Company, operating the Mason mill, has been shipped. The freight alone, at $5 per M, represented an expenditure of about $35,000, and the duty at $2 per M another $15,000 The same firm has closed a contract for the 1902 cut of the Peters mill at Parry Sound. It secured the cut for 1901, about 20,000,000 feet, and the coming season it is estimated will find the saws quite as busy.

The lumber already shipped was sent by the Canada Atlantic and Grand Trunk Railways to Chicago. The opening of navigation, however, will probably see a change of route, as boat shipments can then be made from Parry Sound and Depot Harbor, the terminus of the Ottawa & Parry Sound branch of the C.A.R.

The Hartwell concern has large factories in Chicago, where the Canadian pine will be utilized. It is not at all unlikely that the firm will be a steady bidder in coming seasons for the product of the Ottawa and neighboring mills. It must have the lumber, as the supply of the Western States is becoming exhausted. Indications would seem to prove that the mill owner of the Ottawa district has in Chicago a market that will rival that of the Eastern States. This latest development of the trade has another interest for the lumber trade. The large purchase of high grade lumber by the Chicago concern has made a marked reduction in the available local supply of the better grades of white pine lumber. For this reason, coupled with the increasing local demand, prices are bound to continue firm, with every prospect of an advance. "Lumber is lumber nowadays" remarked a dealer recently, "and the man who is waiting for prices to ease has a long wait before him." On reliable authority it is learned that the cut of the McLachlin mill at Arnprior for 1902 has also been sold, making another marked reduction in future available stocks.

Unlike the British buyers, the Chicagoians have had no fault to find with the Ottawa sorting. The board lumber has been well selected and satisfactory in every sense to the western buyers. Hence it would not be surprising if early negotiations were closed for still more of the Ottawa mill cut of 1902.

The prevalence of smallpox of mild type in the lumber camps may have the effect of reducing the log cut on the limits this season. In several instances camps have had to be abandoned on account of lack of labor due to the ravages of the disease. In the Gatineau district the trouble is seen at its worst stage, and in the Black river and Coulonge districts W. C. Edwards & Company and Fraser & Company have experienced considerable trouble. The Parry Sound district is also affected and men are quitting work either on account of the disease or through fear of contracting it.

In the Parry Sound district, considerable trouble is being experienced on account of the lack of good solid sleighing. There is plenty of snow in the swamps but no bottom. The absence of frost early in the season has had its effect.

Mr. J. Williams, of the Parry Sound Lumber Company, has been in the city for several days arranging for the purchase and installation of new machinery in the mill. It is the intention to change it from a water to a steam mill. Circular and gang saws are to be taken out and two double-cutting saws and re-saw installed. The box factory which the company recently built will start operations soon on a large contract for boxes for a Canadian manufacturing house.

The death of Hon. R. R. Dobell was deeply regretted in local lumber circles. He, as head of the firm of Dobell, Beckett & Co., was a leading spirit in the British export business. The firm has a large office in the Capital.

Mr. Frank Hawkins, private secretary to the late Hon. Mr. Dobell, has taken a position in the Quebec office of the firm.

BUSINESS NOTES.

Messrs. Sieveking, Podmore & Company, timber merchants, London, England, advise us that they closed their Liverpool office on December 31st, 1901, and that Mr. V. Travers, who has represented them in that city, will in future work independently, but will continue to look after their business in his district.

Mr. John Donogh, manager for the Imperial Lumber Company, Toronto, has sent us a copy of a stock and price list which they send to their customers from time to time. It is in booklet form, and in addiion to the prices for the various sizes and grades of lumber, lath and shingles, shows the freight rates from various shipping points in the Georgian Bay district to over 100 towns and cities in Ontario and to New York, Buffalo, Tonawanda, Boston, Philadelphia and Baltimore.

DOORS AND MOULDINGS.

A large buyer of Canadian white pine doors and mouldings is open to contract with a mill for their entire output of No. 3 and 4 qualities of doors and all their mouldings during 1902. Write in the first instance to Empire, care CANADA LUMBERMAN.

New Mill Erected 1901. Capacity 100 Million a Year.
Spicer Shingle Mill Co., Limited

It is not the purpose of this advertisement to try and convince the Lumber Trade of Canada that we are the only company in British Columbia manufacturing and shipping shingles in large quantities, or that we "know it all." We recognize that "there are others" and that we are not the only "pebble on the beach." To try and make you believe that we are the only people who can supply you **promptly** and in **large quantities** with a **high-grade** shingle would not only be a **fish** and a **bear** story combined, but it would be gall of the bitterest kind.

Our competitors in the shingle business in B. C. are nice people, and we presume that they know their business; but we are nice people too, and as we have been in the trade as long as any of them, and a **great deal longer** than the most of them, we know that we know our business, and that our competitors are not in the possession of any points of value regarding the manufacture of shingles which has not come to **our knowledge.**

Our old mill was burned down in May last, and in its place we have built what is at the present time the **Largest** Shingle Mill in B. C.

Our new Mill has 7 of the latest improved type of Dunbar machine, which we run night and day—giving us a capacity of about **100 Million** a year.

Competent judges who have seen our new mill, tell us that it is one of the most **substantial**, carefully **constructed**, and best **planned** mills in this province. We ourselves think it is **the very best** shingle mill in B. C.; and we know that it is **equipped** with all the very latest improved Shingle Machinery.

Will the trade please note that our contract with the Pacific Coast Lumber Co. closed on December 31, 1901. D. Ferguson, of London, Ont., is our representative for that province. Orders sent to him, or to us direct, shall have **prompt** attention.

We want our share of your shingle business, and can **guarantee** you satisfaction in **every particular.**

Spicer Shingle Mill Co., Limited,
VANCOUVER, B. C.

No Fish Stories

go when it comes to speaking about
OUR SHINGLES
FACTS ARE FACTS WHETHER TOLD ABOUT FISH OR SHINGLES
We make a fine 16-inch Shingle.
We make a fine 18-inch Shingle.
We make a fine 24-inch Shingle.
We make all thicknesses from 6-2 inch to 6-3 3/8 inch.
They are going out of our different mills at the rate of 200,000,000 a year. We make more shingles than any one firm in the world. Just think of it!
We claim to be experts. That is not gall. That is a statement which is proven constantly by the testimony of our customers from the Pacific Coast to the Atlantic Coast on the Canadian side, and from Maine to Puget Sound.
Mixed Cars our Specialty. Don't forget that we have all kinds of House Finishing Material in Fir and Cedar, and can load any quantity with shingles.
Come, let us deal together.
CUSTOMERS' ATTENTION.—Please take notice that on and after the 1st day of January, 1902, all arrangements with the Pacific Coast Lumber Co. of New Westminster, B. C., for the handling of any of our shingles will be ended, and until further notice our authorized general agents will be Mr. Jas. Twitchell, Clinton, Ont., for Ontario, and Mr. Samuel Ashfield of Winnipeg, Man., for Manitoba and the North-West; therefore, orders for straight or mixed cars sent through the above agents or direct to us will have equally prompt and careful attention.

CORRESPONDENCE INVITED

THE BOSTON MARKET.

The spruce lumber position at Boston is firm, with little that is new in the market. Orders are not plenty since it is between seasons. Neither is the supply anything but decidedly limited. When business starts in the spring, it is more than likely that there will be a shortage and stronger prices, following the course of other classes of lumber: Ten and 12 inch dimensions, $20; 9 inch and under, $18 to $18.50; 10 and 12 inch random lengths, 10 feet and up, $19 to $19.50; 2 x 3, 2 x 4, 2 x 5, 2 x 6, 2 x 7 and 3 x 4, 10 feet and up, $16.50; all other randoms, 9 inch and under, 10 feet and up, $17.50; 5 inch and up merchantable boards, $15 to $16; matched boards, $17.50 to $18.50; out spruce boards, $12.50 to $13; bundle furring, $16 to $17.

Hemlock holds firm, in keeping with spruce, though trade is quiet: Boards, 12 14 and 16 feet, $14 to 14 50 for good eastern; Pennsylvania, No. 1, $16 to $17; No. 2, $14.50; random, $13 to $13 50.

White pine is scarce, with the position very firm and higher prices on all the best grades: Uppers, 1 inch, $72 to $73; 2½ and 3 inch, $77.50; 4 inch, $82.50; selects, 1 to 1 1-2 inch, $66 to $67; 2 inch, $68 to $70; 2 1-2 to 3 inch, $73 to $76; 4-inch, $75 to $80; fine common, 1-inch, $55; 1 1-4 to 1 1-2 inch, $60; 2 inch, $55; 2 1-2 and 3 inch, $65 to $67; 4 inch $70; barn boards, $23 to $32; coffin boards, $27 to $32.

Shingles are firmly held, with the demand limited: Extra cedar, $3.25 to $3.30; clear, $2.90 to $2.95; second clear, $2.35 to $2.40; sap, $2.10 to $2.20; extra No. 1, $1.75 to $1.80; Washington and British Columbia, 16-inch, five butts to 2 inches, $3.45 to $3.50.

Clapboards are still very firm: Extra spruce, $35 to $36; clear, $33 to $34; second clear, $29 to $32; extra No. 1, $20 to $23; pine extra, $50 to $52; clear, $45 to $48; second clear, $40 to $42.

Laths are quoted at: One and five-eights inch, $3 to $3 05; 1 1-2 inch, $2.95 to $3.

The dissolution is announced of the Stevenson Lumber Company, of Ottawa East. The business will be continued by G. A. Little.

THE NEWS

—George Moffatt is building a new shingle mill at Dalhousie, N.B.

—James Chisholm, lumber dealer, Oxford, N.S., died last month.

—A new saw mill has been built by Weston & Sons at Marbleton, Que.

—The Fox River Lumber Company, Limited, has been organized at Fox River, N. S.

—The Columbia Saw Mill Company have decided to rebuild their saw mill at Hezelmere, B.C.

—Improvements will be made this spring to the veneer and box factory at Sundridge, Ont.

—Extensive improvements are being made at the saw mills of Gillies Bros. at Braeside, Que.

—The machinery is being installed in the Northern Lumber Company's saw mill at Pine River, Man.

—A. A. Black, formerly of Walkerton, Ont., has purchased a shingle mill and timber limit at Pike Bay.

—Swan Bros. are about to erect a steam saw mill at Tweedside, N.B., for the manufacture of lumber and excelsior.

—The Firstbrook Box Company, of Penetanguishene, Ont., are preparing to build a new saw mill at the head of the bay.

—J. A. Gregory, of St. John, N.B., is building a large saw mill at Lepreaux, which will be put into operation in the spring.

—At the annual meeting of the Montreal Lumber Company, held in Montreal last month, the old board of directors was re-elected.

—Hilliard & McKinley, builders and planing mill owners, London, Ont., have dissolved partnership, Thomas Hilliard continuing.

—J. G. Morton, lumber dealer, Milton, N. S., has admitted J. S. Morton as partner, and the firm name will be J. G. Morton & Son.

—The Eastman Lumber Company are building an addition to their mill at Racine, Que., for the purpose of manufacturing clapboards on a large scale.

—Among the new industries likely to be established in Wiarton, Ont., this year are two saw mills and a sash and door factory, the latter by Pullybank Bros., of St. Mary's.

—It is announced that the Clarksburg Wood Rim Company and the Shipe Manufacturing Company, of Clarksburg, Ont., which amalgamated two years ago, are to be wound up.

—Thomas Bros., of Norwich, Ont., purpose removing to St. Thomas, where they will establish a plant to manufacture washboards, butter boxes, and box shooks for the export trade.

—John Collins will operate a saw and shingle mill at Honora, Ont., this year, and expects to start sawing immediately. The capacity of the mill is about 25,000 feet per day.

—The value of forest products exported from Canada for the six months ending December 31st, 1901, was $20,375,117, as compared with $19,666,158 for the corresponding period in 1900.

—The first shipment of lumber from Port Arthur, Ont., to Winnipeg over the Canadian Northern Railway was made by Vigars & Company on January 10th. The car was decorated with flags and bunting.

—It is announced that the timber limits, saw mill, etc., of the Moodyville Land & Saw Mill Company, Moodyville, B.C., have been purchased by the parties who control the British Columbia Mills, Timber & Trading Company.

—It is reported that the large saw mill at Moodyville, B.C., including timber limits, has been sold to an English syndicate, at a figure in the vicinity of $110,000. Robert Ward & Company have been agents for the mill for the past five years.

—Collingwood, Ont., is becoming a central point for the manufacture of lumber. J. & T. Charlton located here in the fall of 1899, and it is said that a large firm has secured an option on a site along the lake shore on which to build a large mill this year.

—A new concern, known as the West Coast Timber Company, Limited, was incorporated by the British Columbia Government in December last. The president is E. B. Morgan and the secretary-treasurer H. G. Ross. The head office of the company is in Vancouver.

—F. H. Clergue, of Sault Ste. Marie, Ont., has decided to build a reading room at each of the seven camps connected with the lumbering operations of the Algoma Commercial Company. Application will be made to the Department of Education for travelling libraries.

—Work was commenced early in January on the large saw mill to be built in Vancouver by the Pacific Coast Lumber Company. The mill will have a capacity of 300,000 feet of lumber per day. The machinery is being supplied by the William Hamilton Manufacturing Company, of Peterborough, Ont.

—The Standard Lumber Company, of Manitoba, is seeking incorporation, to carry on a lumber business throughout the Dominion, the capital stock to be $125,000. Peter McArthur, A. D. McArthur and George Barr, of Westbourne, G. O. Bellamy, of Winnipegosis, and J. G. Harvey, of Dauphin, are the applicants.

—Negotiations are under way between R. H. Pope and the Standard Chemical Company looking towards the establishment by the latter of a large chemical factory at Cookshire, Que. The plant is estimated to cost about $30,000, and Mr. Pope is to get out on his limits in Auckland and East Clifton upwards of 10,000 cords of wood.

—The lumber firm of H. Elderkin & Co., Port Greville, N.S., have built on an average one vessel annually for about thirteen years. Their draughtsman is said to be one of the best in the province. The firm own large tracts of timber lands, including considerable virgin timber, and ship large quantities of piling and spars to Boston and New York.

—James Bain, jr., read a paper before the Canadian Institute on January 11th on "National Parks and Forest Reservation." He reviewed the action of European nations in preserving large areas for the benefit of their citizens and for the supply of timber products, and pointed out how generously the United States Government had during the past twenty years preserved immense tracts of country in the west for parks and reservation. The total area set apart amounts to 50,000,000 acres, or nearly the area of Great Britain. He commended the Ontario Government in setting apart the Algonquin Park, Rondeau Park, and the forest reservations in the counties of Frontenac and Addington and township of Sibley. He urged the extension of the Temiscaming reserve over the whole of the country near the height of land north of Lake Huron.

CASUALTIES.

While operating a circular saw in his planing mill J. S. Desrivieres, of Ottawa, had two fingers of his left hand severed.

W. J. Beattie was caught in the machinery of D. C. Beattie's planing mill at Norwich, Ont., and received injuries from which he died.

John Wilson, employed in the Rathbun Company's lumber camp in Findlayson township, was killed on December 31st by a falling limb.

TRADE NOTES.

Mr. C. M. Strange, who for many years represented Messrs. Lewis Bros., of Montreal, on the road, has recently been appointed warehouse manager.

Mr. Theo. Korb, late of St. Louis, has recently taken charge of the advertising department of Messrs. Lewis Bros., of Montreal. Mr. Korb will give to the duties of his present position the benefit of a wide experience.

A new company is being formed in Toronto to take over the business of the John Abell Company, manufacturers of engines, boilers, and general machinery. The company will have a large capital and will proceed at once to extend the business.

The Syracuse Smelting Works, of Montreal, have sent their customers a neat calendar, showing the figures of two girls on a tandem going at a high rate speed down a steep hill with a bar of Syracuse babbit under the wheels. The illustration gives an exce e idea of the anti-friction qualities of the metal

PERSONAL.

Hon. John Sharples has been re-elected first vice-president of the Quebec Board of Trade.

Mr. D. C. Cameron, manager of the Rat Portage Lumber Company, has been re-elected as mayor of Rat Portage, Ont.

Mr. W. A. Hare, a graduate of the School of Practical Science, Toronto, has been engaged as superintendent of the car building works of Rhodes, Curry & Company, Amherst, N. S.

Mr. J. M. Chisholm, representative at Winnipeg for the Rat Portage Lumber Company, was on Christmas morning presented by the members of his staff with a handsome gold headed cane, suitably engraved.

Mr. William Power, of the firm of W. & J. Sharples, lumber merchants, Quebec, has been elected by acclamation as member for Quebec West in the Dominion Parliameet, to fill the vacancy caused by the death of Hon. R. R. Dobell.

Mr. H. Herreboult, a capitalist from Antwerp, Belgium, visited Eastern Canada early in January with the object of arranging for the shipment of hardwood lumber to Belgium, where he states there is a good market for that class of timber.

Mr. O. G. Andsrson, manager of the Anderson Furuiture Company at Woodstock, Ont., which has been absorbed by the Canadian Furniture Manufacturers, Limited, has severed his connection with the establishment, and will probably build a new factory at some other point.

Mr. F. T. Rutherford, of Winnipeg, has been appointed travelling agent in Manitoba and the Territories as far west as Moose Jaw, for the North Pacific Lumber Company, of Barnet, B.C. Mr. Rutherford is the youngest son of Mr. Thomas Rutherford, of the lumber firm of Brown & Rutherford, Winnipeg.

A pretty wedding was celebrated early in January at the residence of Mr. John Bertram, 9 Walmer road, Toronto, when his daughter, Miss Ella A. Bertram, became the bride of Mr. C. W. Pitt, of the Collins Inlet Lumber Company. Mr. and Mrs. Pitt received many tokens of esteem, and were warmly congratulated by numerous friends.

Mr. William Little, who has been connected with the Magann-Fawke Lumber Company at Toronto for some time, has gone to Irving, Kentucky, to look after the financial interests of the above firm in connection with their manufacturing department. The company have a large circular and band saw mill at Irving, manufacturing chiefly whitewood and oak.

Mr. C. W. Burns, who recently sold his lumber business at Trout Creek, Ont., to the Anderson Furniture Company, has resigned his position as manager for this company at Trout Creek, and is about to leave for British Columbia to engage in lumbering in that province. Mr. Burns has already had considerable experience in lumbering in California, and is therefore familiar with the character of the timber in British Columbia and the methods of handling and manufacturing. He is also experienced in the manufacture of shingles, and will no doubt meet with success.

The Collins Bay Rafting & Forwarding Company, of Kingston, Ont., are reported to have disposed of their rafting business to the Calvin Company of that city. The reason for the sale is said to be the falling off in the quantity of square timber shipped to the Quebec market.

To file a rip saw with a sharp bevel to the teeth and use it as a cross cut has often been done, but is commonly regarded as a makeshift and is not done except in cases of necessity. A filer in a Michigan factory found the results so satisfactory from that method of filing that he now uses it in preference to the common method of filing. But as one swallow does not make a summer, it is not expected that there will be any great haste in other filers to follow the example.

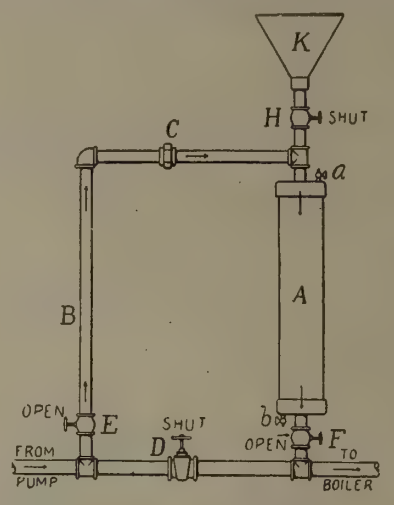
CARING FOR RAW MATERIAL.

It is generally conceded that the best way to preserve logs or blocks of timber is to store them in the water. However, water is not always available for this purpose, and when there is a big stock of valuable timber to be cared for at the mill till it can be worked up, it is frequently a source of worry. Painting the ends of logs is a help in this way, and is quite frequently resorted to, but even with this there is need for some shelter from the sun. It may seem a little odd, too, but it appears that about as good a way to do this as any is to cover the stock with sawdust and such trash that accumulates about a mill. A pile of burls and short logs covered in this way present something of the appearance of an old abandoned mill site with a few old stumps and log ends mixed up with the sawdust pile. At first flash this whole thing looks like decay, and there is no doubt but what it is conducive to decay as far as the sap portion of the wood is concerned, but in making fine veneer that is waste stock, any way, so there is not so much loss, and there is no question but that the sawdust will prevent season cracks. Probably a better settling of the point here would be to say that the sawdust pile is not resorted to for indefinite storing, but where there is a desire to protect fine logs and burls from the sun for a short season it is undoubtedly effective.

Great Britain pays out annually for timber and lumber over one hundred million dollars.

INTRODUCING SOLVENTS INTO BOILERS.

We are often asked by engineers and others how to introduce scale solvents, such as soda ash, into a boiler. We took up this question at some length in the issues of The Locomotive for July and August, 1888, when we showed two very convenient arrangements for pumping the dissolved solvent into the boiler, and also a method of introducing it by means of an injector. These different methods ordinarily work very well in practice, but we have occasionally had complaints to the



ARRANGEMENT OF PIPING FOR INTRODUCING SOLVENTS.

effect that the soda ash, when passed through the pump, eats out the packing thereof. We think this would hardly be likely to occur with a new packing, but with an old one, which had become impregnated with oil or grease, the soda ash might easily give some such trouble as has been reported.

To assist those who have had difficulties of this sort, we present, herewith, another plan for introducing the dissolved solvent, by means of which it is forced into the boiler without passing through the pump at all. The present arrangement calls for more piping than the ones previously shown, and its only advantage is that it saves the pump.

Referring to the illustration, A is a section of big pipe—say 6 inches in diameter and 30 inches long—which is to serve as a reservoir. This connects with the feed pipe running from the pump to the boiler, by means of the pipes B, C, and F, which are so arranged that they connect the feed pipe on opposite sides of the stop valve D. Over the reservoir is a funnel, K, by means of which the reservoir, A, can be filled through the valve H. The reservoir, A, is provided with pet-cocks, a and b, at the top and bottom, so that it may be readily filled and emptied. A union is provided at C, to facilitate the assembling of the piping. (A right-and-left elbow, of course, may be used instead, if it is preferred.)

The device is used as follows: The reservoir A being empty, valves E and F, and pet-cock b, are first closed, and valve H and pet-cock a, are opened. The soda ash solution is then poured into K, until the reservoir A is filled. The valve H and the pet-cock a are then closed, as well as the valve D, in the main pipe. Valves E and F are then opened, and the pump is started. The device is then in the condition shown in the engraving, and the water from the pump passes through B, C and A, as shown by the arrows, sweeping the contents of A out into the boiler.

When the pump has been run long enough to thoroughly remove all soda ash from A, valve D may be opened and valves E and F closed. The reservoir A is then emptied by opening pet-cock b and either pet-cock a or valve H, and the device is again ready for operation.—The Locomotive.

P. PAYETTE & CO.
Manufacturers of Saw Mill and Engine Machinery, and all kinds of Marine Machinery.
PENETANGU SHENF, ONT.

To Purchasing Agents:

Corner 22nd and Centre Avenue,

CHICAGO, October 12th, 1901

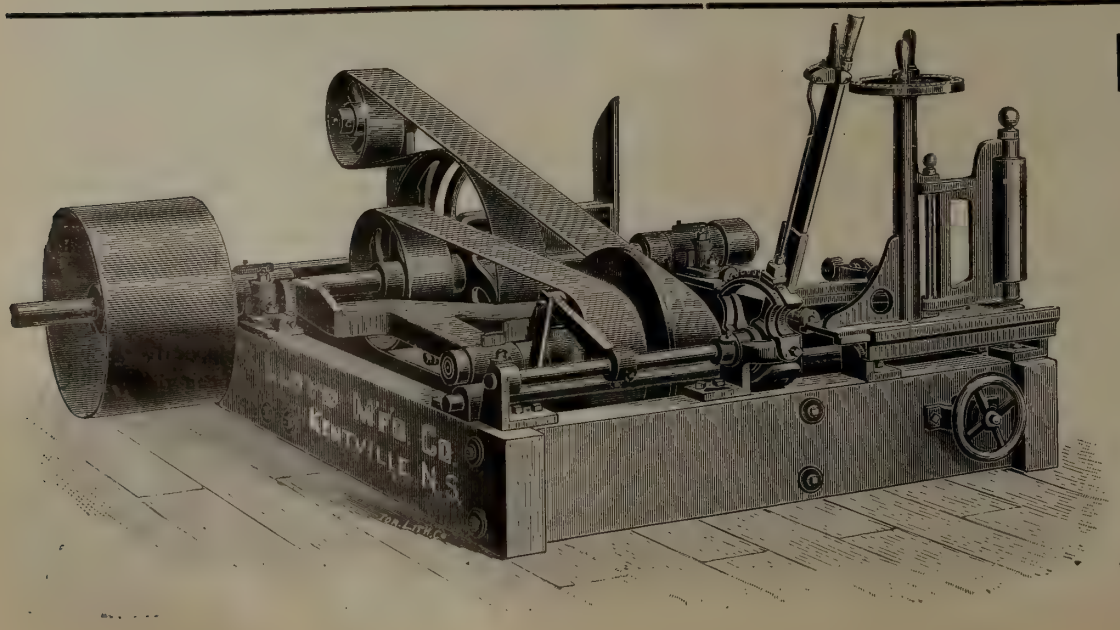
GENTLEMEN:

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO



Lloyd Manufacturing Co'y JOHN I. LLOYD, Proprietor.

KENTVILLE, N

BRITISH COLUMBIA LUMBERMEN'S ASSOCIATION.

A report of the annual meeting of the British Columbia Lumber and Shingle Manufacturers' Association was received just after our January issue had gone to press. The meeting was held in Vancouver on December 17th, when officers were elected and the price list revised and ordered to be published in more concise form. The new list includes a schedule for the Vancouver trade, one for the Fraser River trade, and others for export and Manitoba and eastern trade. The officers elected for 1902, and the various committees appointed, are as follows :

President, John Hendry (B. C. Mills, T. & T. Co., Ltd.), Vancouver ; Vice-President, J. A. McNair, (Hastings Shingle Manufacturing Co., Limited), Vancouver ; Secretary, William F. Stein, Chartered Accountant, Vancouver ; Honorary Treasurer, William Sulley (E. H. Heaps & Company) , Cedar Cove.

LUMBER MILLS BRANCH : Chairman, L. A. Lewis (Brunette Sawmill Company, Ltd.), Sapperton ; Vice - Chairman, P. D. Roe, Canadian Pacific Lumber Company, Ltd.), Port Moody ; Committee, R. Jardine (Royal City Planing Mills), New Westminster ; E. C. Mahoney, (Royal City Planing Mills), Vancouver.

SHINGLE MILLS BRANCH : Chairman, E. H. Heaps (E. H. Heaps & Co.) , Cedar Cove ; Vice-Chairman, J. G. Scott (Pacific Coast Lumber Company, Ltd.), New Westminster ; Committee, H. H. Spicer (Spicer Shingle Mill Company, Ltd.) , Vancouver ; William Tytler, (Canada Shingle Company, Ltd.) , Hastings ; A. J. Welsh (B. C. Shingle Manufacturing Company, Ltd.) , Vancouver.

SASH AND DOOR FACTORIES BRANCH : Chairman, S. N. Jarrett (Vancouver Sash and Door Company, Ltd.) , Vancouver ; Vice-Chairman, J. W. Hackett (Robertson & Hackett) , Vancouver ; Committee, E. H. Heaps, (E. H. Heaps & Company) , Cedar Cove ; E. C. Mahoney (Royal City Planing Mills) , Vancouver ; R. Jardine (Royal City Planing Mills) , New Westminster.

STANDING COMMITTEES : Legislation, R. Jardine (Royal City Planing Mills) , New Westminster ; J. G. Woods (Moodyville Lands & Saw Mills Co.), Moodyville ; L. A. Lewis (Brunette Sawmill Company, Ltd.), Sapperton.

RAILWAY RATES : C. M. Beecher (B. C. Mills T. & T. Company, Ltd.) , Vancouver ; P. D. Roe (Canadian Pacific Lumber Company, Ltd.) , Port Moody ; H. H. Spicer (Spicer Shingle Mill Co., Ltd.) , Vancouver.

LABOR : E. C. Mahoney (Royal City Planing Mills) , Vancouver ; William Tytler (Canada Shingle Company, Ltd.) , Hastings ; H. DePencier (North Pacific Lumber Company, Ltd.) , Barnet.

LOGS : C. M. Beecher (B. C. Mills, T. & T. Company, Ltd.), Vanconver ; L. A. Lewis (Brunette Saw Mill Company, Ltd.) , Sapperton ; J. W. Hackett (Robertson & Hackett) , Vancouver.

UTILIZING PINE WASTE.

A western firm write the CANADA LUMBERMAN as follows : " We are operating a small planing mill, sash and door factory and jobbing shop, and find that we have a good deal of pine waste that looks too good to throw away, and yet we cannot just see how we can work it up profitably. We would not have enough of this waste to consider shipping any product by the carload. Could you make us a suggestion that would assist in solving the problem ? "

We would be glad to hear from any of our readers who know of a profitable method of utilizing the waste from pine timber.

SAW MILL STATISTICS.

The preliminary census report of the saw mills, planing mills (operated in connection with saw mills) and timber camps of the United States shows the following figures for 1900 and the increase during the previous decade :

Establishments, 33,035 ; increase, 46 per cent. ; capital, $611,010,412 ; increase, 96 per cent. Average number wage earners, 283,510 ; increase, 9 per cent. Total wages, $104,633,091 ; increase, 19 per cent. Miscellaneous expenses, $71,719,239 ; decrease, 26 per cent. Cost of materials, $317,607,048 ; increase, 31 per cent. Value of production, $566,832,984 ; increase, 29 per cent.

WOOD PULP DEPARTMENT

PULP WOOD—TREATMENT OF THE RAW MATERIAL IN THE LOG AND ITS MEASUREMENT.

By a Canadian Pulpmaker.

Chapter V.—Measurement by the Scale of Chords.

As already suggested, there is, as yet, no fixed rule for calculating the relation existing between the contents of a number of logs as found by Doyle's rule, and as determined by a measurement of the same logs in term of standard cords.

Now, as the actual quantity of wood in a pile will vary slightly, according as the logs are large and piled loosely, or of small diameter and piled closely, custom allows sundry alterations in the dimensions of the standard cord in order to make up for deficiencies or differences arising from this cause. Hence a good many anomalies exist in certain localties. In some of the states 132 cubic feet is accepted as the cord, and wood contracts are based on that measure.

In the province of Quebec, until quite recently, the cord has been taken as equivalent to 1,000 feet board measure.

In some parts of New York state the cord has been allowed to scale 685 feet board measure.

As a result of careful observation as to the amount of lumber which could be obtained from a given number of logs, many experts on this question accept 500 feet board measure as the equivalent of a cord of wood.

As these relative quantities are fixed in a manner more or less arbitrary, they cannot serve as an exact measure of the contents of a cord of pulp wood. The amount of wood in a cord is determined somewhat by the diameter of the logs, and the manner in which they are piled. Thus, if a number of logs of large diameter are cut up into four-foot lengths and piled, the total quantity or weight of wood would not necessarily be the same as if a number of logs of smaller diameter were similarly treated, owing to the fact that the wood of smaller size will pack closer and leave less air space between the individual pieces of wood.

But in practical everyday work considerations of this kind are not of much account, for it is unlikely that in handling any quantity of logs the amount of wood in a number of piled cords would vary to a serious extent, that is when the whole quantity dealt with is considered.

The method adopted by the Government of Ontario seems to be based on more correct principles than any other system at present in use, although it must be confessed that it entails a good deal of work on the scaler or other employed in checking the wood cut.

This system has been referred to in a previous chapter, more particularly with respect to the practical work of scaling. The contractor or jobber is compelled to keep a record of the two end diameters of each and every log cut. The mean of the two figures recorded for each log is taken as the mean diameter, and this figure so obtained is the basis of after calculation.

The official standard of reckoning is the determination of the cubical contents of each log, and the selection of some empirical number for converting the total number of cubic feet of timber obtained into cords.

For this purpose the Government has issued a table showing the contents of round logs in solid cubic measure. Reference is made to this table and the scaler is thus enabled to work out the contents of the logs cut into solid cubic measure.

The following extract will serve to indicate the nature of the table, which in reality is only an ordinary mathematical table showing the volume, in cubic feet, of cylindrical bodies for certain diameters.

Cubical Contents of Round Timber.

Length feet	Dia. 6 ins.	Dia. 8 ins.	Dia. 10 ins.	Dia. 12 ins.	Dia. 14 ins.	Dia. 16 ins.	Dia. 18 ins.
8	1.57	2.80	4.36	6.28	8.55	11.17	14.14
10	1.96	3.49	5.45	7 85	10.69	13.96	17.68
12	2.36	4.19	6.54	9.42	12.83	16.75	21.21
14	2.75	4 89	7.64	11.00	14.97	19.55	24.27
16	3'14	5.59	8 73	12 57	17.10	22.34	28.78
18	3.53	6.29	9'82	14.14	19.24	25.13	31.81
20	3 93	6.99	10 90	15.71	21.38	27.93	35.34

A log which measured 20 feet and having its small end diameter 6 inches and the large end 10 inches, thus giving a mean diameter of 8 inches, would contain by this table 6.99 cubic feet.

A log having a mean diameter of 6 inches and a length of 14 feet, would contain 2.75 cubic feet.

The contents of any log can readily be determined without reference to a table by the use of the general formula or rule as follows :—

$$\text{Cubic contents equals} \frac{22}{7} R^2 L$$

where the dimensions are all expressed in feet.

R is the radius (half the diameter).

L is the length.

Example :—What are the contents of a log 20 feet long, having a mean diameter of 8 inches.

$$\text{Contents are} \frac{22}{7} R^2 L = \frac{22}{7} \times \frac{16}{144} \times \frac{20}{} = 6.99.$$

This is the figure given in the above table.

With the log 14 feet long having a mean diameter of 6 inches the same formula applies.

$$\text{Contents are} \frac{22}{7} R^2 L = \frac{22}{7} \times \frac{9}{144} \times \frac{14}{} = 2.75.$$

The calculation of the total number of cubic feet, obtained this way, into standard cords is effected by taking 115 solid cubic feet as equivalent to one standard cord. This figure has been arrived at by the Government as the result of numerous experiments instituted with the intention of determining the relation between a piled cord and the solid contents of the wood comprised in that cord.

Thus, a number of logs giving a total measurement of 563,511.5 cubic feet would equal 4,900.1 cords.

This system of ascertaining the contents of pulp wood is commendable for several practical reasons, as it is independent of the size of the logs and no errors are introduced by large variations in the diameters of the logs.

The following table gives some idea of the number of logs required to produce a cord by this method of measurement :—

Number of logs 12 feet long to give a cord containing 115 solid cubic feet.

Diameter Inches.	Cubic Feet in One Log	Number of Logs
6	2.36	49
8	4.19	27
10	6.54	17
12	9.42	12
14	12.83	9
16	16.75	7
18	21.21	5

In all cases referred to, so far, the cord of wood consists of the raw material cut up into such lengths as required by circumstances, but after the removal of the natural bark and of the inner dark coloured bark the shrinkage in measurement is very appreciable.

Messrs. Griffin & Little, in their treatise, quote an experiment which was made in order to determine this important factor in the question of pulp wood manipulation :—

"One cord of green spruce, containing 37 per cent. of moisture and weighing 4,440 lbs., when cut up into four-foot lengths, was barked by the usual barking machinery and again weighed. The weight so obtained was 3,750 lbs. This loss is about 20 per cent. In ordinary cases the shrinkage is somewhat greater, especially if the logs have not been closely trimmed or the projecting knots cut away."

According to this experiment it will take about 125 cords of unbarked wood to produce 100 cords of barked wood.

BRITISH PULP IMPORTS.

During the year 1901 the imports of wood pulp into Great Britain declined 37,379 tons, and in value £204,956, compared with the previous year. The total imports for the two years were 450,363 tons in 1901, and 487,742 tons in 1900. The following table shows the quantities of pulp supplied to the British market by the different countries during the two years :

	1900 Tons.	1901 Tons.	Increase or Decrease. Tons.
Norway.....	286,960	250,557	— 36,403
Sweden.....	113,067	104,863	— 8,204
Canada.....	54,507	70,364	+ 15,857
U. S. A.....	12,006	11,384	— 622
Various.....	21,202	13,195	— 8,007

It will be seen that the past year was not a satisfactory one from point of demand, and consequently prices weakened considerably. The following are the

OFFICES: Temple Court Building, Beekman and Nassau Sts., NEW YORK. - WEBBWOOD, Ontario

comparative values of wood pulp received from the countries mentioned :

	1900	1901	Increase or Decrease
Norway.....	£1,323,105	£1,052,595	— £270,510
Sweden.....	830,001	845,097	+ 15,096
Canada.....	246,435	312,084	+ 65,649
U. S. A.	55,393	91,491	+ 36,098
Various.....	162,855	111,566	— 51,289

The tables make an interesting study. Canada was the only country that increased her exports of wood pulp to Great Britain last year. Altogether 70,364 tons were received, an increase of 15,857 tons, whilst the total value shows an increase of £65,649.

Of the total quantity imported Norway supplied 55.6 per cent., compared with 58.8 per cent. in the previous year. Sweden supplied 23.2 per cent., against 23.1 per cent. in 1900. Canada comes third, supplying 15.6 per cent. of the total import, whereas the percentage in 1900 was 11.1 per cent. The United States participated to the extent of 2.5 per cent., compared with 2.4 per cent. in the previous year. The average value of the British imports of wood pulp last year given as follows : Norway, £4 4s per ton ; Sweden, £8 1s ; Canada, £4 8s 6d ; United States, £8. The World's Paper Trade Review, from which these figures are taken, does not give an explanation of the vast difference in the estimated value of pulp imported from the various countries.

PULP NOTES.

Roy & Cannon, solicitors, Quebec, are seeking incorporation for the New Richmond Timber Company, Limited, for the purpose of building pulp and paper mills.

A syndicate of American capitalists have made an offer for the purchase of the Dewar lumber property at St. George, N. B., the object being to build a large pulp mill thereon.

Ross & Holgate, consulting engineers of Toronto and Montreal, are preparing plans for the large pulp mill development to be undertaken at Seven Islands, 350 miles below Quebec, by Clarke Bros., of New York.

The Blanche River Pulp Co. have asked the Ontario Government for an extension of time in which to build their proposed pulp mill.

C. A. Messerve, manager of the Boston and Nova Scotia Wood Pulp Company, is endeavoring to complete arrangements with New York capitalists for the early building of the proposed pulp mill at Wentworth, N. S.

A despatch from Winnipeg dated January 20th stated that Charles Chamberlain had just returned from New York, where he completed arrangements with capitalists for the erection of immense pulp and paper mills on the Winnipeg river, 66 miles from the city of Winnipeg.

It is understood that the work of completing the pulp and paper mills of the Sturgeon Falls Pulp Company at Sturgeon Falls, Ont., will be proceeded with at once. A. S. Fairbanks is making a survey of the mill property and as soon as this is completed the plans will be prepared.

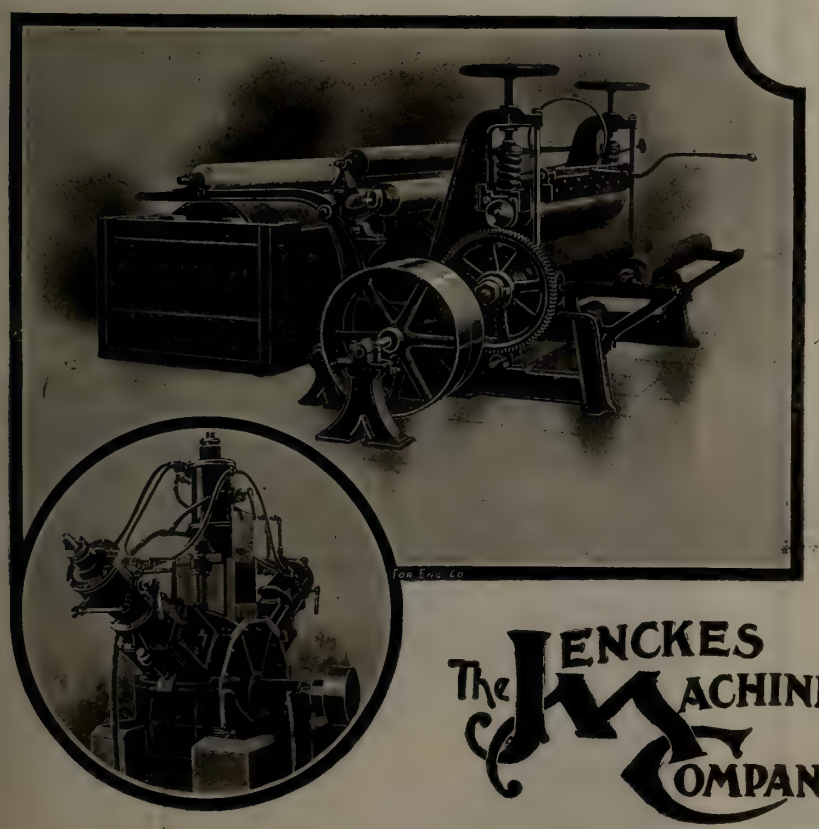
Pulp Mill Machinery



We make a specialty of equipping Ground Wood Pulp Mills from start to finish, and are prepared to build and install Water Power Plants, including Turbines, Steel Cases, Tubing, etc., together with the Pulp Mill Machinery proper, such as

Port Henry Grinders, Centrifugal Pumps, Pressure Pumps, Diaphragm Pulp Screens, Screen Plates; Wet Machines, either of our New Hydraulic Pattern or of our Standard type shown in cut at left ; **Cylinder Moulds, etc., Hydraulic Presses and Pumps, Baling Presses, etc.**

Among recent customers may be mentioned The Canada Paper Co., The Royal Paper Mills Co., Fraserville Co., Cushing Sulphite Fibre Co., Chicoutimi Pulp Co., St. Raymond Co., Toronto Paper Co., Kenleith Paper Co., and others.

We are now engaged in filling extensive contracts for the Spanish River Pulp & Paper Co. and the Montmagny Light & Pulp Co.

Correspondence invited from those about to build new mills or renew and enlarge existing plants.

CANADIAN FORESTRY ASSOCIATION.

At a meeting of the Board of Directors of the Canadian Forestry Association, held in Gttawa on January 6th, there were present: Messrs. W. Little, Wm. Saunders, C. E. E. Ussher, Prof. John Macoun, E. Stewart, Norman M. Ross and R. H. Campbell. Arrangements for the annual meeting to be held on the 6th and 7th of March were discussed. So far as at present arranged, papers will be submitted by Dr. Wm. Saunders on the "Results of Experiments with Shelter Belts as Carried Out at the Experimental Farms;" by Norman M. Ross, assistant superintendent of forestry, on the "Work Accomplished by the Dominion Bureau in the West;" by Mr. W.N. Hutton, on the "Management of Wood Lots in Ontario." A report on the forest fires which have occurred throughout Canada during the past year is to be prepared by the secretary. Arrangements are being made for other papers on the management of spruce pulp forests and other subjects of special interest at the present time. The Forestry Association is steadily growing i numbers, having now a membership of ove 300, and is doing good work to arouse a interest in the preservation of our forests.

H. L. Merritt, of Blenheim, Ont., is considering th removal of his saw mill and sash and door factor to Galt.

In reply to a question asked in the Ontario Legi lature, Hon. E. J. Davis, Commissioner of Crow Lands, stated that the province received $551,3 during the past year as bonuses on timber limits sale while $210,787 was still due on bonuses on past sale

No. 346 and 348 Broadway, NEW YORK CITY, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the conducting circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, if the results may justify its claim as an authority on matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the company at any of its offices. Corres ondence invited.

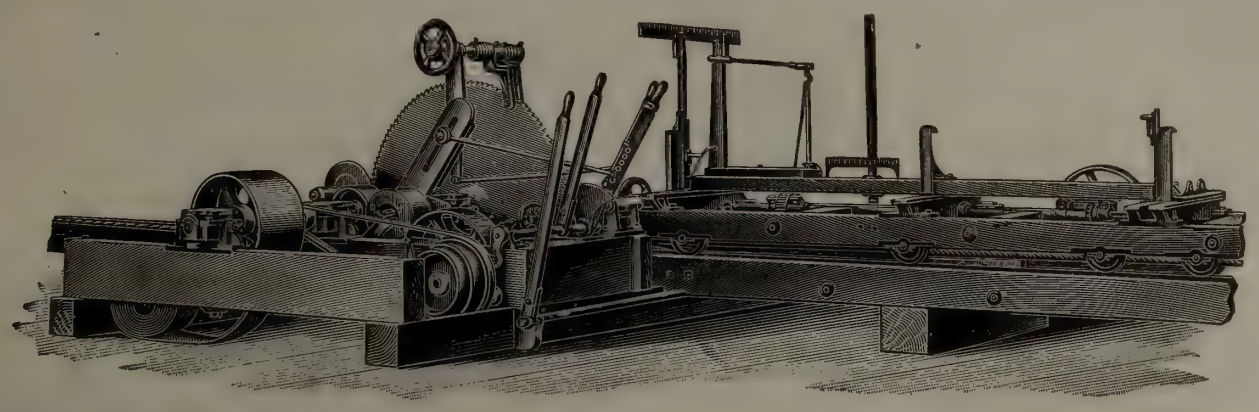
The "Canadian" Over Log Saw Guide

PATENTED IN CANADA AND UNITED STATES.



Your Mill would make more money if you would make more lumber from the same quantity of logs. You can do it by using a thinner saw, and you can use a thinner saw with one of my Patent Over Log Saw Guides. They are adapted to either Stationary or Portable Saw Mills, Re-sawing Machines, &c, &c. The illustration shows one of my Portable Saw Mills equipped with this Guide and carrying a saw 60 in. diameter, 12 guage. ll my Portable Mills will take saws up to 72 in diameter, and this guide will take saws from 36 to 72 in. diameter. It is adjustable every way. I am prepared to fill orders for complete Circular Saw Mill Outfits, or will make the guide to fit any ordinary existing saw frame.

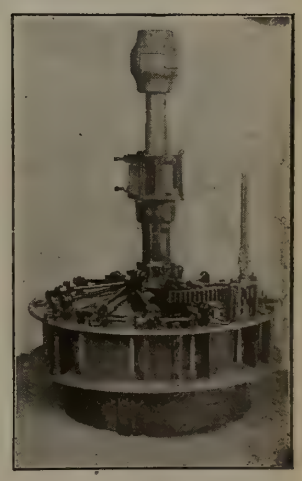
THE LEFFEL AND VULCAN TURBINES



POSSESS DISTINCTIVE MERITS, which should have the attention of water power owners 1st—They are strongly and carefully built. 2nd—They are economical in their use of water. 3rd—They develop more power in proportion to the water used than any other Turbine built. Mr. J. D. Flavelle, of the Flavelle Milling Co., of Lindsay, writes us under date of March 7th as follows:

"Referring to the two 74" water wheels (Leffels) purchased from you during the past year. As far as we have had an opportunity of testing, they have done their work excellently, in fact are doing more than you guaranteed them for. We took a test of the power they were developing with a head of water of 3 ft. 10 in., and they developed very close to 100 h. p. We are thoroughly satisfied with same."

This letter is but one of many such.

We also Manufacture **The Lane Saw Mill, Four Styles of Shingle Machines, Lath Machine Edgers, Trimmers, Pulleys, Hangers, Boxes, Etc.**

THE STANDARD DRY KILN

READ THE RECORD

In so important a matter as the purchase of a drying plant, it is worth while to "read up" on the subject and learn thereby that

THE STANDARD DRY KILN

has made the one record worth the reading. It has been before the public nearly fifteen years. It leads, as it always has, in improvements. It is used by more representative concerns than all others.

It has met with a greater degree of success than all others, consequently it has many imitators. It is not an experiment—It does not infringe on anyone's patents.

Send for Catalogue, testimonials and estimates.

OUR MOTTO: Not how **cheap**, but how **good**.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It s made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to he steel which no other process can approach.

Maple Leaf Saw Set

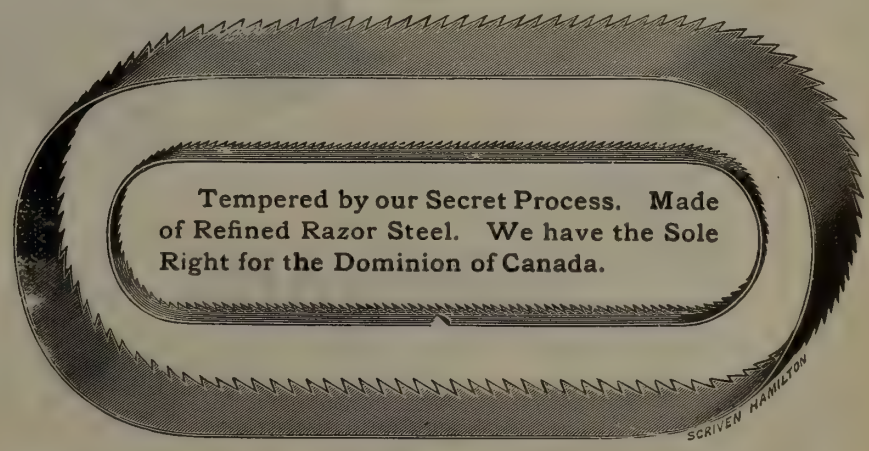
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



Tempered by our Secret Process. Made of Refined Razor Steel. We have the Sole Right for the Dominion of Canada.

THE CANADA LUMBERMAN

VOLUME XXII. NUMBER 3. } TORONTO, CANADA, MARCH, 1902 { TERMS, $1.00 PER YEAR Single Copies, 10 Cents

CAREER OF A PROMINENT LUMBERMAN.

It may be interesting for the readers of the CANADA LUMBERMAN to know something of the personal history of one of the members of the new lumbering corporation which recently started operations at Sarnia, a full description of whose plant was given in the January issue. He is a thriving American who has come to live on Canadian soil, bringing with him Yankee hustle and push. This is truly an age of specialties, and the successful men of to-day seem to be for the most part those who devote their entire ability and attention to some one line of work, as in this case it might be said Mr. J. M. Diver has been raised in the lumber business, having spent his whole life in its different branches.

Mr. Diver was born at Cleveland, Ohio, on April 15th, 1859. He received a common school education. At the age of sixteen he left Cleveland and went to Lewiston, Ill., where he obtained employment in a combined saw and grist mill. After remaining there for a period of six months, realizing the fact that there was a saw mill in his own town, he concluded that he would return there and try and obtain employment. On his journey he stopped at Fort Wayne, Ind. The country being thickly covered by oak timber, he secured a position and went to work in the woods about twelve miles from that city, where he remained until the following June.

Still clinging to the thought of the saw mill being in his native town, and being urged by his father, Mr. Diver returned to Cleveland on June 6th, 1876, going direct to the saw mill owned by the Cleveland Saw Mill and Lumber Company and asking for employment. He was given a place and went to work as a slab carrier. In the course of a few weeks he was put to work on the lath mill, where he continued for a period of some three months, being then called into the office by Mr. R. K. Hawley, then president of the company, to act in the capacity of office boy. The following spring he was put into the yard to tally lumber under an inspector's eye, where he soon learned the value of lumber and was given a position as inspector. In the year 1880 he was asked to come back to the office and act as assistant book-keeper, which position he held until in 1881 he was given entire charge of the books and made secretary and treasurer of the company. This position he held for some eleven years, when he was advanced to secretary and general manager of the company.

In the year 1900, the company had the misfortune to lose a large raft of logs on Lake Huron, which raft finally went ashore near Goderich, Ont. Mr Diver took the train to Port Huron, Mich., crossing over to Sarnia on July 12 of that year en route to Goderich to superintend the wrecking of this raft. While at Sarnia his attention was called to Sarnia Bay as being an ideal place for a saw mill. He looked over the bay and proceeded on his journey. He had always been told that the Canadian pine was scrubby, that is to say, that the limbs were from the ground up on the trees and that there was no long bodied timber in Canada. After he had reached Goderich and had made arrangements to wreck the raft, he concluded that he would go north in the pine regions of Canada and

MR. J. M. DIVER,
Manager Cleveland Sarnia Saw Mills Company.

see for himself the quality of timber the Dominion contained. He went north in the Algoma district and spent some four weeks in tramping timber lands, and, needless to say he saw some excellent timber. Getting into a very fine tract and finding the owner, he went directly to Bay City and closed a contract for a winter's output of some thirty million feet.

Returning to Cleveland after fixing up the regular routine of business in his office, Mr. Diver went to Sarnia to secure options on booming grounds and a site for a saw mill. These options were closed in the forepart of April, 1901, and on April 15th of that year the company, under his direction, began the erection of the plant already described in this journal.

In the meantime Mr. Diver has secured options on several tracts of timber, which the company have taken up. The company have purchased thousands of acres of timber lands, and the plant for which the ground was broken, so to speak, on April 15th, is now in commission and turning out daily in the neighborhood of 100,000 feet. Mr. Diver moved to Sarnia on August 1st, 1901, and is giving the operations in hand close attention.

If a thorough knowledge of the work in hand, combined with untiring effort, merits success, surely a bright future may be predicted for him and the company with which he is associated.

TESTS OF DOUGLAS FIR.

Builders are familiar with the fact that Douglas fir is among the strongest woods in the world, but figures such as have been prepared for the British Columbia Mills, Timber & Trading Co., of Vancouver, are of especia value to those interested in the subject. This company sent five fir logs to the testing and experimental works of David Kirkaldy & Son, of London, England, to be subjected to the severest bending and thrusting tests, and full data to be returned. The results show in detail that fir is in every respect satisfactory to those who have always insisted that it was one of the best varieties of wood.

The specimens give the bending test 12x15 and 16 inches in dimensions, cut to a length of 13½ feet, with a distance of 12 feet between the supports and the load applied at the center. The mean total stress in pounds and deflection in inches are shown in the following table :

Weight.	Deflection.	Weight.	Deflection.	Weight	Deflection
10,000	.027	34,000	.365	58,000	.663
14,000	.119	38,000	.414	62,000	.726
18,000	.170	42,000	.461	66,000	.804
22,000	.219	46,000	.511	70,000	.911
26,000	.269	50,000	.561	74,000	1.070
30,000	.317	54,000	.613	*78,000	1.203

*Only three pieces were given this strain.

The ultimate weight borne by the pieces was 78,714 pounds, or 35.1 tons, which was equivalent upon the beam of 93,162 pounds, or 41.6 tons. The timbers were bent to a deflection of five inches and removed.

Those tested to ascertain the resistance to depression were 12x12 and 100 inches long, with the ends faced true in a lathe. The total stress in pounds and depression in inches were as follows :

Weight.	Depression	Weight	Depression.	Weight	Depression
40,000	.027	220,000	.114	400,000	.195
60,000	.038	240,000	.122	420,000	.205
80,000	.048	260,000	.130	440,000	.214
100,000	.059	280,000	.139	460,000	.225
120,000	.069	300,000	.149	480,000	.243
140,000	.078	320,000	.157	*500,000	.238
160,000	.088	340,000	.165	*520,000	.253
180,000	.097	360,000	.175	**540,000	.250
200,000	.106	380,000	.184	**560,000	.267

*Only three pieces subjected to this strain. **Only two pieces subjected to this strain.

The average ultimate strain of the five pieces before they were crushed was 531,656 pounds, or 3,680 pounds to the square inch, although two of the pieces withstood a stress of more than 4,000 pounds to the square inch.

THE LUMBERMEN'S ASSOCIATION OF ONTARIO.

The annual meeting of the Lumbermen's Association of Ontario was held at McConkey's Restaurant, Toronto, on Wednesday, February 12th. Preceding the business meeting an excellent luncheon, provided through the hospitality of the President and Board of Management, was partaken of.

The members in attendance included Messrs. John Waldie, president, Toronto; Robert Watt, second vice-president, Wiarton; W. B. Tindall, secretary, Toronto; W. B. McLean, J. B. Miller, W. P. Bull, Robert Laidlaw, Walter Laidlaw, Toronto; William Laking, Hamilton; George Chew, Midland; C. Beck, Penetanguishene; N. Dyment, Barrie; M. Boyd, Bobcaygeon; George Thomson, Goderich; R. Cook, South River; D. G. Lummis, Spragg. The guests were Messrs. T. G. Brough, manager Dominion Bank; Aubrey White, Assistant Commissioner of Crown Lands; Thomas Southworth, Chief Ontario Bureau of Forestry, and T. S. Young, representing the CANADA LUMBERMAN.

The toast of "The King," and "Canada Our Country" being duly honored, the business of the meeting was proceeded with. Letters of regret were read from Messrs. James Playfair and D. L. White, Midland, John Bertram, Toronto, and W. J. Sheppard, Waubaushene.

Mr. Waldie, on behalf of the Board of Management, submitted the following report:

REPORT OF BOARD OF MANAGEMENT.

Gentlemen,—We are pleased to report that the year 1901, now completed, has proved a reasonably prosperous season. That it has not been as profitable as the two preceding years is owing in the first place to increased cost of manufacture. This, however, is not an unmixed evil, as labor has received higher wages, until Ontario to-day is occupying a premier position in affording abundance of employment at higher average wages than any other country we know of. Formerly wages were higher in the United States than in Canada. Now these conditions are changed, and to-day the workmen of Canada are better remunerated than the workmen of the United States or elsewhere.

Owing to the activity occasioned by the South African war, the year 1900 was one in which there was a large demand for red pine for the English market, but on account of the high ocean freights which prevailed in the fall of that year (owing to the immense tonnage employed in the transportation of war supplies to South Africa), it made the cost to the English buyer exceedingly high. Consequently, when a sudden cessation of the active demand occurred, the market for a time in England was rather demoralized, and many of the English buyers on arrival in this country in the spring of 1901 were so despondent that they closed out contracts at considerable loss.

The Canadian producer saw no reason to submit to any reduction in his price, and throughout the season maintained that conditions in England would soon right themselves. This anticipation is now being realized, partly owing to a reduced ocean freight rate from America to Great Britain—shipments having been made during last fall and this winter at a 50 per cent. lower freight than a year ago—and we accordingly look for an improved demand for red pine.

Our white pine has been in unusually good demand. Prices advanced steadily from June until the close of the season, and so far as the higher grades were concerned the advance was really abnormal, averaging as much as from $5 to $10 per M. feet.

We are entering the present year with limited stocks of sawn lumber at the mills, and these largely contracted for. This gives promise that the year will be a prosperous one. It is not desirable that we should seek to advance present prices on the supposition that white pine—which is the largest product of the Ontario mills—is the only wood that can be used. Further, we must realize that as population is concentrating in the large cities, where the buildings requisite for housing are largely constructed of iron, brick and cement, the great consumer of pine is the country, not the city population.

We are pleased to note the increase of self-reliance amongst the people, extending throughout the whole of Canada. This is attracting the attention of the world, and we may therefore look for a very rapid immigration into this country; and this Association through its insistance upon the Ontario Government adopting the Manufacturing Clause, has contributed its whole quota to the prosperity now existing.

The question of transportation is the most important factor in aiding or hindering the advancement of this country, and while the lumber interest suffered very seriously from the car shortage during the months of October and November, we are pleased to note that the executives of the trunk lines of railroads in Canada, realize that if they are to get the best results from the operation of their roads, they must supply additional locomotives and cars. We trust that in future they will time their betterment and ballasting to a period of the year when it will inflict the least loss upon the lumber industry. The withdrawal of a large number of flat cars in the fall of the year is a serious loss to the lumber interest of this country.

We do not think the interests of this country are forwarded by negotiations with the United States looking to a renewal of any kind of Reciprocity Treaty, nor by discussions about the "balance of trade." We serve our best interests by pressing our own Provincial and Dominion Governments to legislate for Canada alone, and it would be unwise for a member of this association to speak of any legislation that we are promoting as retaliatory. Let us act, not talk, and we as lumbermen will continue to saw wood and keep our axes sharp.

We believe the Dominion Government should put wood products on the dutiable list so that in a period of depression (and to offset the American cut on through rates from the South) a tariff would act as a hindrance, and thus prevent Canada from becoming a slaughter market. While the theories of protection and free trade may be discussed academically, this country asks for legislation to suit the conditions that exist here. It is not a matter of theory, it is a matter of deciding what is going to presently promote the welfare of the country.

The arbitrary, perpendicular and unjustifiable increase of insurance on sawmills and lumber in yards has been the subject of discussion with the representatives of the Underwriters. They admit that the rate is unscientific as well as unjust, and we have expectation of improvement, either by reduction or by special rating, where conditions warrant same.

JOHN WALDIE, President.

The president stated that it was not thought prudent to further press the railways regarding insufficient cars owing to the inability of the roads to supply cars for all kinds of traffic, as the result of the general prosperity of the country. The question of forming a mutual insurance association for self-protection in insurance matters had, as stated in the report, been considered. The lumbermen had mutual insurance in Massachusetts, but they were only able to carry $5,000, and this amount was too limited for the members of this Association.

Mr. Dyment concurred in the statements set forth in the report. He was surprised that the prosperity in the lumber business had continued so long, but in his opinion the outlook for white pine was good, even better than twelve months ago. The large amount of lumber made last year had been worked off at very satisfactory prices.

As one of the advocates of mutual insurance Mr. Beck was asked to speak. He contended that a large amount of money in insurance premiums was each year being sent to the United States and England, and urged that if the lumbermen could not arrange among themselves to carry their own insurance, they should at least place the risk with Canadian companies. If a lumbermen's mutual insurance company could be formed it would be a check upon the present companies. He was in favor of the Lumbermen's Association of Ontario amalgamating with the Canadian Manufacturers Association, on the ground that in this way it might be possible to obtain from the Government more consideration than had been received in the past. Mr. Beck also brought up the question of labor and urged that the Government should give more attention to the importation of German settlers.

STATISTICAL REPORT.

The following statistical report was presented by the secretary:

GENTLEMEN,—Herewith I beg to submit to you the following statistical information based upon such replies as I have received from the circular letter of Jan. 3, 1902.

PRODUCTION WHITE PINE LUMBER.—The total production of mills in North-Western Ontario, which embraces all mills on the Georgian Bay, Northern Division of the G.T.R. to Callender, and C.P.R., North Bay to Rat Portage, was 351,000,000 feet in 1899, 476,000,000 feet in 1900, and 466,000,000 feet in 1901, the decrease in 1901 from that of 1900 being 10,000,000 feet, which is mainly accounted for by the output of one or two of the mills being seriously affected by fire, and also that some of the operators did not saw as much as they expected.

The stocks on hand at the mills December 31st were 120,000,000 feet in 1899, 216,349,000 feet in 1900, and 181,000,000 feet in 1901, the decrease in stocks on hand as compared with that of 1900 being 35,000,000 feet. Of the stock on hand on the 31st of December, 29,000,000 feet was sold waiting delivery in the yards, and 152,000,000 feet unsold. Of this stock 50,0000,000 feet will go entirely to the Manitoba and North-West markets.

In regard to my inquiries in the circular letter as to whether it was considered that present prices should be maintained, unanimously the answer received has been that no reason can be given why the present prices should not be firmly maintained, and some looked for an increase.

The trade press of the United States reports that the production of Michigan, Wisconsin and Minnesota shows a decrease in 1901 over 1900 of 112,881,000 feet, and the stocks of lumber stored at the mills also show a decrease for the same period of something like 529,229,000 feet. The stocks on hand are the lowest which statistics show since 1894, all of which must certainly make one come to the conclusion that the requirements of the market both for manufacturing and distributing purposes remain the same, that there can only be one effect, namely, firm or increased prices.

I have not been able to get satisfactory figures as to the cut of logs this winter, but understand that it will probably be about 10 per cent. less than last year.

W. B. TINDALL, Secretary.

A discussion of market conditions followed. Mr. Miller asked regarding the quantity of mill culls in the market. He had heard that the quantity was large, whereas on the other hand he had been told that in Michigan an advance of $1 per thousand on mill culls had been put into effect. The opinions given showed that while one or two concerns hold a considerable stock, the total quantity unsold is less than one year ago. Mr. Dyment stated that he found mill culls selling very satisfactorily.

A suggestion of the president that monthly luncheons be held in Toronto met with the hearty approval of the members. Mr. Dyment took occasion to point out the advantages of social intercourse, remarking that he "wanted to know what the other members of the trade knew." It was decided to meet for luncheon at McConkey's on the first Wednesday in each month, at 1 o'clock. The first luncheon will therefore be held on March 5th, when it is hoped that as many as possible of the members of the Association will arrange to be in Toronto on that day.

Mr. Watt made a brief report regarding the hardwood lumber trade. He said it was much better than six months ago, and that this winter's stock of logs was only one-half that of last year, and not more than one-third that of two years ago.

Mr. Thomson inquired as to hemlock, to which the president replied that it was difficult to estimate the quantity of hemlock in the market, as the large quantity taken out by tanners was a disturbing factor. Mr. Dyment said that the stock of hemlock was light, and that last week he had sold half a million feet of inch strips and stocks at $9.75.

As a large dealer Mr. Robert Laidlaw gave his views of the market. He had found it difficult to buy lumber either in Ontario or at Duluth or Ashland. Lumber was going west from Duluth to Kansas and Minneapolis. Mr. Waldie said that he had just made his first shipment of lumber by rail to Chicago, and that he had recently shipped a quantity of ten-inch and up inch common boards, dressed two sides, to Glasgow. This was somewhat in the nature of an experiment, but if dressed lumber could be shipped to Great Britain there would be an important saving in freight.

ELECTION OF OFFICERS.

The election of officers resulted as follows: President, John Waldie, Toronto (re-elected); first vice-president, Robert Watt, Wiarton; second vice-president, N. Dyment, Barrie; secretary, W. B. Tindall, Freehold Loan Building, Toronto; board of management, John Bertram, W. A. Charlton, M.P.P., J. B. Miller, Robert Laidlaw, Toronto; D. L. White, jr., Midland; C. Beck, Penetanguishene; J. T. Conlon, Thorold.

MEASUREMENT OF PULP WOOD.

STURGEON FALLS, January 29th, 1902.

Editor CANADA LUMBERMAN:

SIR,—I read in your monthly edition for January an article on the measurement of pulp wood and a definition of the Doyle rule for measuring saw logs, comparing it with the Quebec table. Regarding the measurement of pulp wood, it is mostly all cut 12 and 16 feet long and measured at both ends and the mean diameter taken; or when in skidways the one end of the skidway is measured butts and tops as they come inside of bark, fractional inches omitted, each piece reduced to cubic contents, and every 115 cubic feet called a cord, allowing 13 feet for bark, spaces, fractional inches, etc. This is the rule the Crown Lands Department have adopted for collecting duty, stumpage, etc., and is followed by some lumbermen when getting pulp wood cut by contract, thus getting about 1⅛ cords for every cord returned, as it takes about 100 cubic feet of wood measured that way when cut into four feet lengths and piled to make a standard cord of 128 feet.

Regarding the measurement of saw logs the Doyle rule is the only rule given where the contents of saw logs are figured out to board measure, and is not at all correct when logs are under 20 inches in diameter. The following rule how to figure out the amount of square edged boards in a saw log may be of some interest to lumbermen and scalers; it is very nearly the same as the Scribner and Quebec table, which, I believe, was compiled from the measurement of boards sawn from imperfectly measured logs. Rule: Twice the square of the radius or half the diameter less one-quarter for saw cut will give the contents in feet board measure of any log under 12 inches diameter. Example, 10 inch log, $5\times5=25\times2=50-¼=37$ feet b.m. Saw logs 10 inches in diameter up to 18 inclusive will have one board outside of the square. Example, 14 inch log, $7\times7=49\times2=98-¼=74+4$ strips 4 inches wide $=16+74=90$ feet b.m. Example, 24 inch log, $12\times12=144\times2=288-¼=216$. The square root of 288 is 17, the side of the square $17-4$ for edging $=13$. $13\times4=52$; the second board $13-4=9\times4=36+52+216=304$ contents b.m. The thickness of the segment is found by taking half the side of the square from the radius and allowing 2¼ inches for each board. For example, 17 inches being the side of the square of 24 inch log, half of which is 8½ taken from 12, the radius will give you 3½ inches, two boards 2½ inches, leaving one inch for slab.

Yours truly,

J. C. KENNEDY.

THE BRITISH COLUMBIA EXPORT LAW.

VANCOUVER, B. C., February 10th, 1902.

Editor CANADA LUMBERMAN.

DEAR SIR,—Having been very busy for some time past it is only now that I have had time to read the December number of your valuable paper. I would like to make a few remarks with regard to your editorial on page 10, headed "The British Columbia Timber Policy." To enter into this matter fully, I will be obliged to make quotations from your article.

You say, "The two interested factors are what is known as loggers on the one side, and the lumber and shingle manufacturers on the other." This should, to be correct, read as follows: The two interested factors are the loggers, their employees, the financial institutions, business men and firms assisting them in their operations, the business houses, whether wholesale or retail, the steamboat companies or owners interested in the towing of logs and others interested directly or indirectly in the business of lumbering; the owners of timber lands, whether under lease, license or Crown grant, all are equally interested with the loggers in this question.

Again you say, "The Government very wisely considered the interests of the manufacturer in preference to those of the logger when placing on the statute book the law prohibiting the export of cedar." Does it not occur to you that this statement is a most unfair one? It endeavors to show that the logger, and all above mentioned who are interested with him in the business of lumbering, have hardly been considered. Their not being considered is exactly what took place. It was only after the passage of the Act that the Honorable Chief Commissioner of Lands and Works agreed that its enforcement should be deferred, on represensations being made to him as to the hardships that it would entail.

I would also point out to you that you were wrong in using the word "cedar." The clause in the act reads as follows: "All timber cut from Provincial lands must be manufactured within the confines of the Province of British Columbia, otherwise the timber so cut may be seized and forfeited to the Crown and the lease cancelled."

You say, "It is evident that the interests of the logger will be injured by the legislation, but on the other hand, the more important industry of the manufacture of lumber and shingles will be longer perpetuated." The business of the logger has, and will continue to be injured by this legislation, unless the restriction is removed, until such times as there are more mills in this Province requiring a greater output of logs than at preseut, and more important still, until the mills take logs as far up the tree as is done by the mills on the American side. Not only is a severe hardship caused to the loggers by the mills only taking one, and in some cases two, logs out o one tree after he has built his camps, roads, booms, etc., and felled the tree, but the country, represented by the Government, loses the stumpage on the logs so left in the woods to either rot or add fuel to a fire which may be sweeping over that section.

You say, "The logger expends a small sum for the cutting of timber and exporting it to a foreign country to be manufactured. The mill man expends an equal sum in cutting the timber, and a much greater sum in manufacturing it into lumber, shingles, and other more finished products." I would state positively that the expenditure by the logger up to the time of delivering the logs at the mill is greater than that of the manufacturer. This is largely accounted for by the fact that the mills employ oriental cheap labor. Very few mills have camps of their own.

You say, "The industry now suffers by unfair competition from United States manufacturers, who are permitted to ship into the Canadian market free of duty." This is a matter that has absolutely nothing to do with the matter under discussion. It is a matter for the Dominion Government to deal with as a tariff question between the two countries.

You say "The situation in the two Provinces (referring to Ontario and British Columbia) is peculiarly similar, and there can be little doubt that the results would be as satisfactory in British Columbia as in Ontario." There is very little similarity on this question between the two Provinces. This point, as well as the others to which objections are taken in this letter, are no doubt well known to the party giving you the information for your editorial.

Another point that must not be lost sight of in selling logs on Puget Sound is the fact that a higher price per thousand feet is paid for the logs on a much more equitable scale, thus putting a much larger amount of money into circulation in British Columbia than if the logs were sold and manufactured in this province, including the manufacturing. This seems unreasonable, but it is so.

Thanking you in anticipation for publishing this letter,

Yours truly,

W. H. HIGGINS,
President B. C. Lumbermen's Association.

PERSONAL.

Mr. George Campbell, formerly with the Royal City Mills, Vancouver, B.C., has returned to that city after an extended visit to Winnipeg.

Mr. H. DePencier, of the North Pacific Lumb e Company and the Vancouver Sash and Door Factory, has recently returned to Vancouver from a trip to Australia in the interests of his firm.

General sympathy was expressed with Mr. W. A. Charlton, M.P.P., upon the death of his eldest son, Mr. William Andrew Charlton, which occurred in Toronto late in January, after a lingering illness.

There passed away in Toronto on January 31st Mr. N. W. Belding, who for many years conducted a lumber business in Barrie, but fifteen years ago removed to Toronto. He was 78 years of age.

Mr. Robert Hamilton, who has for some time been located at Vancouver, B. C., as western representative for the William Hamilton Manufacturing Company, o Peterborough, Ont., has been removed to the head office, and will probably act as sales agent for Ontario and the east. His successor at Vancouver is Mr. C. N. Cornell.

Hon. J. B. Snowball, the well known lumberman of Chatham, N. B., has been sworn in as Lieutenant-Governor of New Brunswick. Senator Snowball is 64 years of age and the son of Rev. John Snowball, a minister of the Methodist church. He is with one exception the largest manufacturing exporter of lumber in the province, his shipments being about 40,000,000 feet annually. He has under lease or control about 600 square miles of timber limits. About two years ago the business of which he is at the head was converted into a joint stock concern, under the style of the J. B. Snowball Company, Limited, which it composed of members of Mr. Snowball's family.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C.H. Mortimer Publishing Company of Toronto, Limited

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICE :
IMPERIAL BUILDING, MONTREAL.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION :

One Copy, Weekly and Monthly, One Year, in advance . $1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $1.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

BRITISH DUTY ON TIMBER.

The necessity of the British Government raising revenue to meet the expenses of the South African war is responsible for a rumor that the Chancellor of the Exchequer proposes to re-impose the duty on timber, which has been abolished for some thirty-five years. In well informed circles it is not believed that such action will be taken, but on the other hand the fact remains that it is absolutely necessary to raise the additional revenue in some manner, and a light tax upon timber is regarded as one of the feasible methods. The proposition has been freely discussed by the timber merchants, who are, we are told, feeling a little uncomfortable over the prospect of such a duty.

Just how seriously the idea has been considered by the Chancellor of the Exchequer is not known, but it is stated that the custom authorities at some of the east coast ports have been requested to send in full statistics of the wood goods imported to their districts. This is at least sufficient ground for believing that the matter is under consideration. The statement is also made that an insurance for twelve months against the imposition of the tax has already been effected by Lloyd's.

It is estimated that a tax of 25 cents per load on soft timber would bring in about $2,250,000 per annum. This is exclusive of any duty on hardwoods.

In connection with this matter the question arises whether a duty would be imposed on timber imported from the British Colonies. The advocates of Imperial Federation would no doubt strongly oppose such a move, and if an exception was made in the case of Colonial timber, the revenue obtainable would be reduced by nearly one-quarter.

The imposition of a duty on timber imported into Great Britain would be of little benefit so far as fostering the home trade, as the available supply in England is of little account. It would seem, therefore, that the tax would fall upon the consumer, and if no preferential duty was provided for, the quantity of timber imported from the different countries would not be lessened thereby. A proposition which meets with much greater favor in England is the taxing of manufactured timber products, as this would assist the manufacturing industries of the country.

HOME MANUFACTURE OF TIMBER.

The departure made by the Ontario Government in the year 1898 by passing legislation compelling the manufacture within the province of all timber cut on Crown lands was at the time favorably received, representing as it did preponderance of public sentiment. There were, however, opponents to the legislation. The law has now been in force over three years, in which time many converts to the measure have been made, and it is safe to say that the opposition has become an almost invisible quantity. The reason for this is clearly understood by everyone acquainted with the conditions. As a result of the legislation we can point to a great expansion of the lumber industry, an increased population, more employment for the working man, a larger demand for Canadian machinery, and other advantages of more or less importance.

The experiment, if it might be so termed, has demonstrated two things—first, that the time has come for Canada to legislate in the interests of Canadians ; and secondly, that the raw material will attract the manufacturer. Within four years towns and villages along the Georgian Bay shore which had become nearly extinct while the logs were being rafted to Michigan, have grown to be thriving settlements ; machine shops have been working to their full capacity on mill repairs, etc., and the country at large has prospered. As figures are perhaps more convincing than mere statements, we give below the names of Michigan firms which, to our knowledge, have established mills in Ontario subsequent to and as the direct result of the prohibitory legislation. The annual capacity for day run only is given :

	Feet.
W. & A. McArthur Company, Little Current . .	25,000,000
Holland & Graves, Byng Inlet	40,000,000
Eddy Bros., Blind River, ...	25,000,000
Michigan Land & Lumber Co., Blind River . . .	20,000,000
Moulthrop Lumber Co., John's Island	15,000,000
Mr. Loveland and associates at Cutler	25,000,000
J. & T. Charlton, Collingwood	20,000,000
Edmund Hall, Sarnia	25,000,000
Cleveland-Sarnia Saw Mill Co , Sarnia	25,000,000
Saginaw Lumber & Salt Co., Sandwich	25,000,000
Pitts & Charlton, Victoria Harbor	20,000,000

Some of the above firms built new mills ; others remodelled mills that had been idle for years. The operation of these mills means an increased capacity in Ontario of upwards of 250,000,000 feet of lumber annually. This amount represents the logs that were formerly cut in Ontario and rafted to Michigan. It will be seen that the quantity of lumber placed on the market is no greater, but that which was formerly sawn in Michigan from Canadian timber is now sawn in the Province by Canadian workmen.

In addition to the increased mill capacity above referred to, contracts for sawing logs have been given by American firms to Canadian manufacturers, who have built new mills and otherwise increased their capacity.

Some of the opponents of the prohibitory legislation were owners of timber limits. Time has proven that their judgment was faulty. At the Government sales following the enactment of the law exceptionally high prices were paid for limits, and this condition has continued ever since.

The Legislature of British Columbia has placed on its Statute books a law similar to that of Ontario, to take effect this spring. From a non-partisan standpoint such a step is to be commended as showing the proper spirit—the encouragement of the industries of the country. That the province will eventually benefit thereby, as was the case in Ontario, is almost a foregone conclusion. What argument can be advanced, in these days of a declining timber supply, in favor of allowing our timber to be exported as the raw material to build up manufacturing establishments in the United States ? Just as sure as the mills were removed from Michigan to Ontario, so will they be removed from Washington to British Columbia.

An association of loggers has been formed in British Columbia with the object of inducing the Government to repeal the Act prohibiting the export of timber. Mr. Higgins, the president of the association, in a letter published in this nnmber, undertakes to show that certain statements made in the CANADA LUMBERMAN were unfair. We fail to see that Mr. Higgins makes one point in favor of the repeal of the law. His first complaint is that no mention was made of the various interests that are associated with the loggers, such as the employees, financial institutions, owners of timber lands, etc. With the manufacturers also are associated their employees, financial institutions, and timber limit owners, and in addition the Canadian manufacturers of mill machinery and supplies. What is to become of our industries if the raw material is exported to and manufactured in a foreign country ? His second contention is that it was unfair to state that the Government considered the interests of the manufacturer in preference to those of the logger. It is not unfair to point out the wisdom of the Government in taking such action as will prevent the removal of the manufacturing industries of the province to the United States. Mr. Higgins points out that the law includes all timber and not cedar alone. To this correction we submit, but wherein is the significance ? Next he contends that the business of the logger will temporarily be injured, and that the Washington mills take timber further up the tree than the Canadian mills. If such is the case, when more mills are established on the Canadian side, as they doubtless will be, the consequent competition should provide a remedy, but if not, it is in the power of the Government to bring about the desired change. The question of expenditure answers itself. If the timber is manufactured into lumber and shingles within the province, the amount of money expended must

be considerably greater than if the timber is simply taken out of the woods and exported. We fail to see any dissimilarity between the situation in British Columbia and in Ontario, nor has Mr. Higgins given us any evidence to the contrary.

CARE IN MANUFACTURING LUMBER.

The tendency among lumbermen to sacrifice quality to quantity in the manufacture of lumber is, we are glad to say, not as common as it was a few years ago. Many who are inclined towards a large output have so designed and equipped their mills as to accomplish this without injury to the product ; for there are no better mills in the world than some of the large white pine establishments to be found in Canada. Nevertheless, the evil of poorly manufactured lumber still exists to some extent, and particularly in the case of the moderate size and small mill. In order to make a large daily output, crowding of the saws is resorted to with the result that the lumber is roughly and unevenly sawn and cannot be classed as a good grade. The loss from this source, as well as from a lack of proper and efficient machinery for trimming, edging, etc., is much greater than is generally supposed by the manufacturer who turns out this class of lumber. Careless piling is also responsible for much unnecessary injury to lumber.

With our timber each year running more to low grade as the supply is cut away, it is very necessary that the quantity of low grade lumber should not be decreased through defective manufacture ; on the contrary, it should be the aim of lumbermen to obtain the greatest possible quantity of high grade stock out of the log.

The large mill has doubtless an advantage over the small mill in this particular, as the larger revenue enables the owner to employ the most experienced help, such as sawyers, filers, etc., but with a little effort and care the product of the average small mill may be greatly improved.

One or two instances which have recently come to our notice of the loss resulting from badly manufactured lumber will show the folly of crowding a mill and of endeavoring to get along with inadequate equipment of an obsolete character. A carload of pine cuts and better was recently shipped to a dealer in Toronto. This lumber should have brought $35 per thousand. Owing to the fact that it was not trimmed, the dealer was obliged to accept $30 per thousand for the stock. An expenditure by the manufacturer of a small sum for a trimmer would have made the lumber much more valuable and saleable. A trimmer occupies but little room and is a valuable adjunct to the equipment of a mill.

Another carload of lumber recently arrived in Toronto which in many respects was of excellent quality, but contained a few boards that were unevenly sawn, being too thin at one end. Probable buyers inspected the stock, but refused to make what was considered a reasonable offer owing to the uneven boards which it contained. The quantity of uneven stock was not above 2 per cent., yet it was sufficient to condemn the entire carload. This may be taken as an illustration of the necessity of uniformity and of having every board properly manufactured. The buyer notices a board or two of imperfect manufacture and often refuses to examine the stock further.

The employment of cheap labor is responsible for much of the inferior lumber that is placed on the market. An incompetent sawyer or filer is unprofitable at any price, as is well illustrated by the experience of an Ontario mill owner a short time ago. The owner contracted to saw a considerable quantity of logs for a certain firm. A saw fitter was engaged at $5 per day, and during the first month a large quantity of high grade lumber was manufactured. When scrutinizing the expenses of the month, the owner decided to cut down the wage bill, and accordingly gave the position of fitter to an applicant who claimed to have little or no experience and who accepted the position at $1.50 per day. The result may easily be guessed. The party for whom the logs were being sawn refused to accept a large percentage of the lumber, which was charged against the owner of the mill. In addition to the damaged lumber, several saws were destroyed by improper hammering. It is needless to say that the owner recognized the situation and resolved to again engage an expert for the position of fitter. Some lumbermen do not fully appreciate the fact that band saws are more delicate and require greater care than circular saws ; if they are not properly hammered they will not cut even lumber.

The quantity of lumber manufactured by small mills is considerable. If the product of these mills can be improved and the quantity of high grade lumber increased, it will have a material effect upon the market and at the same time bring greater returns to the manufacturer. The National Hardwood Lumber Association of the United States have taken a decided stand against lumber of inferior manufacture, the rules stating that all defectively sawn lumber shall be classed as culls.

QUESTIONS AND ANSWERS.

"W.A.S." writes : Will you kindly answer the following questions : (1) What is a fair number of shingles sawn and jointed by one man, using a Dunbar machine, in a day of 11 hours? (2) What thickness should a shingle be? (3) How much lumber is necessary to make 30,000 shingles?

ANSWER.—(1) The quantity of shingles which can be manufactured in a given time depends largely upon the character of the timber. On the Pacific Coast, where the lumber is sound throughout, 30,000 shingles is a fair average for 11 hours ; in New Brunswick and Maine, where the centre of the log is often decayed, the average is about 15,000. (2) A shingle should be nearly one-half inch thick ; in other words, a bunch composed of 24 shingles should be 10 inches across the end of the bunch. (3) Three thousand superficial feet of New Brunswick cedar will make 30,000 shingles, all grades. On the Pacific Coast the quantity of timber required to make the same number of shingles would, of course, be considerably less.

POWER AND ITS ECONOMICAL TRANSMISSION.

The important subject of "Power and its Economical Transmission" was discussed in an able manner by Mr. Henry Souther, consulting metallurgical engineer and state chemist, of Hartford, Conn., in a lecture delivered in the rotunda of the Board of Trade Building, Toronto, on January 16th, under the auspices of the Canadian Manufacturers' Association. Having the benefit of both practical and theoretical experience, Mr. Souther may be regarded as an authority on the subject. He treated briefly with the generation of power and then in more detail on sub-divisions. His remarks in part are given below :

Naturally the first thing to consider in connection with the subject before us is the source of power in an industrial establishment, and to determine the best source of power the only basis of comparison in these commercial days is that of cost.

The only power we can obtain for practically nothing is that from falling water. The cost of harnessing is considerable, but after that there is nothing to compare with water power for small cost. I expect to see the time—or at least I believe there will be a time, if I do not see it—when every waterfall will be utilized. This is becoming more and more possible with every addition to our knowledge of electricity. It is now not necessary as of old for a factory to actually overhang the stream from which the power is obtained ; on the contrary, it is often better for it to be at a reasonable distance with only the generating machines at the canal or flume. Other things being equal, therefore, water power is best, for it is cheapest.

The only other commercial source of power is heat from coal or oil. The common form of reciprocating steam engine in its many forms of single and multiple expansion is at present almost universal ; but it seems to me that a change from the reciprocating to the rotary is coming, our now popular type will become absolete, and the rotary type universally used.

This movement has made considerable headway in Europe and is beginning on this continent. The electric light company of my own city has put in the largest Parson's turbine (3,000 h. p.), which is running well and very economically as compared with the best reciprocating engines. Turbines of the De Laval type are creeping in very fast for small units of power, being better adapted to many small uses than any other machine. They are economical at all powers within their own maximum. The coming power, however, in my opinion, is that obtained from liquid fuel (oils) direct, perhaps from solid powdered fuel as well, or from either one gasified. We obtain power now in this way by so-called gas engines, more properly speaking combustion or explosive engines. As yet they are not always successful, but tremendous strides are being made in perfecting these engines and the number in actual use is now very large. All things considered, however, the best engine or other source of power for any given place or installation is not determined by its economy, its cost or the type, but rather by the combination of points that will contribute most to lessening the cost of production of a given article.

In the future we may look forward to the storing of power from the heat of the sun. This is now experimentally possible and is being accomplished in the sunny climate of California ; but I do not think that any of you gentlemen would undertake to equip a new plant just at present and in this climate with its only source of power the sun. Many things more wonderful have been accomplished lately, but this scheme will wait until the commercial necessity for it arises, although it looks to me as if the present rise in the price of coal would hasten its coming.

Then, again, the man who professes to multiply power indefinitely by intricate systems of gearing or some other equally impossible scheme is not yet dead ; I fear we must jolly him along, however, and let him down easy without counting him as a serious proposition. He is ingenious and interesting, but not profitable.

Having the power, how shall it be most economically distributed to the producing point? Means for doing this are multiplying fast through the development of electricity, gas engines and the use of compressed air.

The various possible systems are in part as follows:

Steam engine driving shafting by gearing, spur or bevel.

Steam engine driving shafting by belts or ropes.

Steam engine driving electric generator transmitting power over a plant with but few, if any, belts or gear drives.

Steam engine driving compressor of air and transmitting power in pipes over a plant to many forms of tools and litts.

Gas engines transmitting power by belt or otherwise.

Central gas generating plant distributing gas over a a plant in pipes to many engines of small units.

Every engineer or factory manager has his own ideas about these methods, and I dare say every one is much in the right as to his own particular case, in regard to which he is necessarily well informed. No one of the methods is best for all cases. Each particular one must be studied carefully. Conditions are also changing rapidly, what may be best one decade may not be best the next. How rapid this change is is well illustrated by the following quotation from a most eminent engineer, made as recently as 1867, William Fairbairn. In discussing transmission, he said, in part referring to belt drive, at that time new and mostly used in America, while the gear drive was almost universal in Europe, "the advantages of straps (belts) are the smoothness and noiselessness of the motion; their disadvantages are cumbrousness, the expense of their renewal and necessity of frequent repairs. They are inapplicable where the motion must be in a constant ratio, because, as the straps wear slack, they tend to slip over the pulleys and thus lose time."

How little these things seem to bother us now, and how few gears there are as compared with belts, notwithstanding the faults of the belts, as expressed by Mr. Fairbairn. It is almost useless, it seems to me, to talk on such subjects as these, inasmuch as what one says becomes obsolete so soon. All one can do is to act quickly in establishing a plant; take that which is most applicable at the time, and charge off each year enough from the machine account to buy all new in ten years at the longest. Above all things, in laying out a plant, no matter how small, do not proceed by rule of thumb, but think the entire arrangement out and plan it to scale on paper, determining the speed and position of every shaft and pulley; providing for everything beforehand. By other methods much work is repeated, and never as well done as it it might be.

The most lively discussion has always followed when the question of electric transmission has come up for consideration in all our engineering societies. Its exclusive use is advocated by some. By others it is absolutely condemned. The intermediate course will be the final one adopted. For certain work it is incomparable. For example, the large printing presses of to-day may be better manipulated by separate motor than by belt drive from main shaft. Entire independence of speed, reverse, repeated trials of the print, stopping and starting, and finally the cleanliness, make the motor drive directly connected, almost essential. The government printing office at Washington has materially reduced the expense and increased the product by the adoption of the motor drive throughout the place.

All machines served by overhead cranes should be motor driven so that the crane shall not meet the interference of belts. The printing press is one of these. All shops where groups of machines are run independently of other groups should be equipped with motors for each group. As a rule it is well to equip all heavy machine tools with independent motors, inasmuch as such tools stand idle much of the time. The plants in cotton and woollen mills need not be equipped with motors, unless perhaps, certain floors and departments are often run alone or are frequently shut down when the remainder of the mill is in operation. Anything that will do away with heavy and long belts will prove a commercial advantage. One case that came to my knowledge was a long belt that drove machinery in another building and around a corner. Some thirty horse-power was consumed in driving the other department. A separate motor was installed for a trial. A ten horse-power motor did the work and consumed only about six horse-power doing it. The trial became a permanent fixture.

How far to carry the idea is hard to determine. The first cost may be heavy, and yet such savings result that this cost is wiped out in a year. Convenience in a shop, rather than the cost of the motor or the power to run it, is most often the determining factor. Assuming that by introducing electric motors generally throughout a shop, the cost of all things considered were the same, it is quite possible to imagine such conditions that increased convenience would save 50% of the cost of the product. First cost and power might be disregarded under these conditions. Every case should be carefully considered by one familiar with all the conditions. If in doubt, a few motors should be tried, but nothing under five horse-power units should be used except in rare cases. The smaller units are expensive and not efficient, and machines should be grouped to get the five horse-power. Below two horse-power the electric motor is not efficient.

Competent and careful investigators have repeatedly found the losses of transmission due to driving or transmission devices to vary from 5 per cent. to 90 per cent. of the total power consumed. Here, then, in these days of small margins and close competition is the chance to save an annuity that will amount to a fair profit in most cases. The question of using copper or aluminum for transmisssion purposes is one worthy of consideration. In the case of a 9 mile transmission plant in my state, aluminum has been used. At the time of installation copper was selling at 17 cents per pound, and aluminum at 41 cents, yet the reduced weight of the latter made it the cheaper of the two. The average loss of transmission for the cotton mill and flax mill is 60 per cent., and for the woollen mill 40 per cent. In heavy iron working plants the loss is about 15 per cent. In any small mill or workshop the matter of friction is of the greatest importance, and, if I am not greatly mistaken, it is in the small mill that one generally finds the greatest neglect in such matters. In the large organizations such things are in the hands of some particular person, whereas in the small mill it is no one's business, and is neglected. Friction in mills is subject to great variations. Probably half the friction in the small mill is caused by lubricated surfaces. A change in temperature with improper lubricants, such as heavy animal oils, may increase or diminish friction to a considerable extent. Prof. Thurston estimates the friction of shafting in general, including the total belts and bearings, and varying with the size and load, at from 33 horse power to 1.5 horse-power per 100 feet. Prof. Benjamin, by careful investigation in many shops and with every precaution for practical and at the same time accurate results, found that in six machine shops, where heavy machine work was done, an average of 62.3 per cent. of the power produced was used in driving the shafting alone. In one case it was 80 per cent. This was explained by the fact that the shafting had to be built large enough for tools that are often idle, and necessarily the shafting must be kept running. In this item the tension of belts is a serious matter. A belt should be just tight enough to do its maximum work. Many belts, if not most of them, are much tighter than is necessary. No easy means is at hand to ascertain how tight a belt may be, and the belt mechanic sets it firm and tight to make sure that it shall not slip. Then when a wet day comes, a shop full of moderately tight belts makes a heavy drain on the coal pile. In this same investigation it was determined that the busiest of tools was only in operation 80 per cent. of the time, and the average tool about 33 per cent. of the time.

The argument has been made by those opposed constitutionally to nice work toward economy of any kind that the power amounts to little or nothing in the cost of a product. As a matter of fact the cost in percentage is small in machine shops, being from 1½% to 2%. This seems small indeed when stated this way; but looked at as an annuity it takes on another aspect. Supposing for example the product costs a million per year, one per cent. means ten thousand dollars.

Another class of losses occurs in the bearings of the machines themselves. It has been found by test with motors, for the driving power, that printing presses, and other heavy machine tools, consume twice the power running idle that they should. Investigation disclosed the fact that the loss was in the bearings, and that they were very tightly adjusted. There is no means of telling how tight a bearing is when it is one of many in a train; and had the machines in the cases mentioned been belt driven from a shaft, the friction would have continued until heating occurred or until the bearings wore loose. Again, to offset the argument that power saving is in any case only a small factor, we must consider that where there is friction there is wear, and that cost of repairs is increased by friction. This is a serious matter in the case of line shafting and counters. It means a mechanic at the works many Sundays in the year, to overhaul bearings and loose pulleys. The following general principles have been laid down by Prof. Benjamin to save friction losses in manufacturing establishments. There are none better and I quote:

1. Use pulleys of large diameter on counter shafts and narrow fast running belts.

2. Use the best oil for the purpose, and enough of it, catching the drip and purifying it for repeated use.

3. Have everything oiled regularly, and do not depend too much on even the best of oiling devices.

4. Inspect line shafts to see if in line and will turn easily.

Neglected shafting, both in respect to alignment and lubrication, is the cause of tremendous friction. Anything that will do away with both of these evils at once deserves earnest consideration. A good so-called "frictionless" bearing will do this, as lubrication is practically unnecessary, and heavy pressures produced by lack of alignment count but little. More of this later. Samuel Webber sub-divides the friction in a mill as follows: To run loose pulleys and their belts, 10 per cent.; to run main shafting, 20 per cent.—the engine itself takes but 6 per cent. He puts overtight belting and consequent bending of shafting with resulting heavy journal friction as the chief cause of transmission losses. I think the average manager does not look at it in this light. Even this source of friction may be avoided. If managers of factories would only take the pains to measure their idle load once in a while, they would find the information gained both instructive and surprising. Comparatively few do it.

Some noon hour, or some evening at six o'clock, turn off all work on all machines and see what your engine indicates; it is something any of your engineers can do if furnished with an indicator, and I am sure you will feel repaid. Nine times out of ten you will overhaul a considerable number of things.

Is it not true that in almost any shop, if the bearing does not get heated, if it does not make a noise, if it does not stop the mill and nobody kicks, that there is not much thought about it?

My experience in such matters has been that some shafts may be turned by hand, and in other cases of similar dimensions a bar stuck through a pulley may be used for a lever in order to move at all. Subsequent test in these cases showed corresponding losses. In one or two instances I have seen loose pulleys driving shafting and waiting for Sunday repairs.

As a matter of general interest I thought I would look up the origin of belts. After doing so I made up my mind that it was prehistoric. The first belt on record seems to be in connection with the fire machine, the original method of starting a fire by friction. A ligament or other string was wound about a pointed stick and pulled as in spinning a top. Then followed the use of the belt in all the various ways known to us. It is old, but it is good, and I doubt very much if we shall ever drop it entirely, notwithstanding electrical motors. The rope is newer as a commercial feature. It serves its purpose admirably and is an efficient driver. Careful experiment has shown that when well arranged in each case, the efficiency of belt and rope is practically the same. The rope has one practical advantage and that is, that the tension may be exactly controlled by tension pulley and weight. On the other hand, the rope is not good for small powers. The necessary splicing and complication of manipulation n count against it and practically bar the use of any size smaller than ¾ of an inch. A rope running over too small a pulley goes to pieces very fast, and the rope drive has suffered on account of this mistake in installing.

The following figures give an idea of the proper relative size of rope and pully:

For a 1¼ inch rope, diameter of pulley must be at least 3 feet.

For a 1½ inch rope, diameter of pulley must be at least 4 feet.

For a 1¾ inch rope, diameter of pulley must be at least 5 feet.

For a 2 inch rope diameter of pulley must be at least 6 feet.

These pulleys and ropes will transmit respectively per 100 revolutions per minute, 5, 8, 11, 15 horse power.

An increase of 25 per cent. over these figures is possible when the bottom rope is the driver and under proper conditions. The best speed is about 3,300 feet per minute. Cotton and manilla are equally good providing long fibre cotton is obtained, and, in any case, the character of the splice is all important.

The comparative efficiency of belt and rope, as determined at Lisle, France, by official investigation, is as foliows: Power transmitted, 162 horse-power; taking efficiency of rope at 100 (manilla) cotton is 100.87 and leather belt 100.37. To all practical purposes this difference is nothing.

As I have already emphasized, belt tension is most important. It is estimated that the pull of a belt is, as a rule, at least three times that necessary to transmit the power required. The velocity of belts should be kept at the maximum possible point, and the most efficient velocity is given at 4,000 to 5,000 feet per minute. Data on belts is to be found anywhere, and I will say but little, as there are branches of my subject on which there has been absolutely nothing written or published.

Mr. Souther spoke at considerable length on the subject of bearings and lubricants, advocating the greater use of the ball bearing and mineral oils.

D. H. Campbell is building a sash and door factory at Kamloops, B. C.

Fleming & Company, of St. John, N. B., have furnished three boilers for the box factory of Cushing & Company, at that place.

The new saw mill of Thackray & Rawlins, at Pembroke, Ont., made its first cut early in January, and a few days ago was wrecked by a boiler explosion.

Knight & Smith, who operated a saw mill at the Fourth Chute, near Eganville, Ont., have dissolved partnership, and the business will be contiuned by Mr. Knight.

J. McKercher, of Elko, B. C., has completed a saw mill fourteen miles from that place, on the line of the Crow's Nest Southern Railway. The mill has a capacity of 40,000 feet per day, and will be operated day and night on a contract for piling, bridge timber and ties for the Crow's Nest Southern Railway.

A meeting of the directors of the Manitoba Forestry Association was held at Winnipeg on February 24th, the president, Dr. Bryce, in the chair. A resolution was passed calling the attention of the Dominion Forestry Department to the desirability of reserving for forestry purposes all the region lying south of the main line of the Canadian Pacific Railway in the neighborhood of Austin, Carberry, and Sewell, that is unsuitable for homesteading purposes. It was decided to hold the annual meeting of the association in Winnipeg on Tuesday, March 11th.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 24 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VIII. TORONTO, ONT., FEBRUARY 26, 1902 No. 4

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:

IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday, Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED — TWO GOOD CIRCULAR SAWYERS, capable of sawing dimension timber. Capacity of mill 30 to 40 thousand per day. Address applications to the PEMBROKE LUMBER Co., Pembroke.

MODERN STEAM CIRCULAR SAW MILL on Railway near large town, with about eight miles of standing timber, within three or four miles of mill and not over a mile to draw to water; pine, hardwood and hemlock. Satisfactory reasons for selling; prices reasonable. Drawer 67, LUMBERMAN.

DRY PINE.

WE HAVE ABOUT 1,500,000 FEET DRY PINE in 1, 2 and 3 inch common and better, prefer selling in bulk. Will quote freight rate to Buffalo, Chicago or Toronto on application. Correspondence solicited. N.B.—Would like to correspond with consumers of hardwoods. ST. JOE ISLAND LUMBER Co., Sault Ste. Marie, Ont.

BOX SHOOKS WANTED.

We have large export orders for Box Shooks, principally in Spruce, for butter, candle and soap boxes. Also Birch and Maple squares, chair-seats, etc. Apply for particulars to GELLIBRAND, HEYWOOD & Co., Cardiff, Wales, G. B. Payment cash.

FOR SALE.

VALUABLE SAW MILL PROPERTY ON Georgian Bay, in the Province of Ontario, situated at Town of Wiarton, and about 1900 acres of hardwood and hemlock timber-lands on Bruce Peninsula, together with railway sidings and docks. The Saw Mill is a new one, suitable for the manufacture of pine and hardwood lumber and lath, with excellent facilities for shipment by rail or water. The Saw Mill may be purchased with or without the timber lands.

For further particulars, apply to the undersigned.

W. J. FERGUSON,
Wiarton, 17th Jan., 1902. Solicitor for Owners.

WE ARE PREPARED TO CONTRACT WITH mill men for this season's cut of Hardwood Lumber; will inspect at the mill and pay cash. LONDON LUMBER Co., London, Ont.

WANTED—HARDWOOD LUMBER.

SOFT ELM, BIRCH, BLACK ASH, 1STS and 2nds preferred. J. F. STENGAL, 990 Ellicott Square, Buffalo, N.Y.

WANTED

TO BUY A MILLION GOOD NO. 2 WHITE Pine Lath and one-half million No. 1. Must be standard size, 4 feet, and well manufactured. Quote best cash prices delivered f.o.b. cars Pittsburg, Pa. AMERICAN LUMBER & MFG. Co., Pittsburg, Pa.

WANTED

TO MAKE AN ARRANGEMENT WITH some large white pine manufacturer with facilities for making rail shipments, to cut for us a block of two to three million feet white pine No. 1 cuts and better, including all thicknesses from 1 to 4". We would want yard room to dry this stock and ship mixed cars. Address, AMERICAN LUMBER & MFG. Co., Pittsburg, Pa.

WANTED

A steady, energetic, thoroughly experienced and competent man as foreman for a large shingle mill, equipped with Dunbar type of machine. Night and day capacity per year, 100 million.

Must be an expert on shingle saw filing and hammering, and thoroughly understand the Dunbar machine, and be able to do mill-wright work, know how to handle men, and write and figure fairly well. None but a strictly temperate man need apply.

Prefer a man not over 40 years old. An excellent salary and steady employment to the right man.

Apply "Shingle," care this paper, for further particulars.

CURRENT TRADE CONDITIONS.

ONTARIO.

The position of the white pine market is extremely satisfactory. Manufacturers have sold heavily of the coming season's cut, and are receiving many enquiries for stock for shipment to the United States. The Turner Lumber Company, of Midland, is reported to have sold 29,000,000 feet, to be manufactured the coming season, to the Skillings, Whitneys and Barnes Company, of Tonawanda, who have also purchased the Parry Sound Lumber Company's cut, estimated between 25,000,000 and 30,000,000 feet. Easton & Company, of Albany, are said to have purchased the entire cut of McArthur Bros'. mill at Little Current, estimated at 30,000,000 feet, while other large transactions have taken place which indicate that no difficulty will be found in marketing all the white pine lumber that will be manufactured this year. Other United States firms have purchased a large quantity of logs and have arranged to have them manufactured at mills Georgian Bay district. While all grades of white pine are strong, there is an exceptionally good demand for boards 12 inches and wider. Mill culls are also moving actively considering the season of the year, and box grades have come into prominence recently. The scarcity of lath continues and is not likely to be relieved until the mills resume sawing. Hardwoods are a little firmer and manufacturers and dealers look for an expansion in the demand as soon as the spring season opens up.

QUEBEC AND NEW BRUNSWICK.

The position of spruce lumber is practically unchanged. The opinion is quite general that lumber intended for the local and United States markets will hold firm until midsummer, and manufacturers and dealers are making their arrangements accordingly. The buying of British spruce deals would seem to indicate that shippers are confident of their position, although it is understood that less than the usual quantity has so far been placed with British importers. Spruce lath, which was weak early in January, has recovered, and sales of 1⅝ inch are now being made to Boston at $3. Extra cedar shingles are firmer, the quotation on extras for Boston delivery being $3.35.

MANITOBA AND BRITISH COLUMBIA.

Lumber manufacturers and wholesale dealers have booked a considerable number of orders for spring delivery, and are looking forward to an active season, as building operations in Manitoba and the Territories promise to be of large volume. A few recent price changes have taken place. B. C. cedar base has declined $5 per thousand, making the price now $42.50 in Winnipeg. Cedar casing has declined $7.50, and B. C. fir dimension $2.50 to $4 per thousand. The export trade of British Columbia has started off well. Several vessels have been chartered to load lumber and quotations are somewhat higher. In anticipation of the enforcement this spring of the Act prohibiting the export of timber from British Columbia, the price of cedar logs has advanced $2 per thousand feet.

UNITED STATES.

No material change in the lumber situation has occurred in the past week, the market continuing strong and the buying being of a most liberal character. Stocks in white pine are low at wholesale markets as well as in distributing yards. Wholesale lumbermen have bought very heavily, it being estimated that more than half the entire 1902 product of white pine on the great lakes has already passed into second hands, while some districts have sold more than three-fourths of the cut. The annual meeting of the Mississippi Valley Lumbermen's Association was held last week, but no action was taken in the direction of advancing the price list. The report of the secretary, however, showed a pronounced shortage in the stocks in the hands of manufacturers. It is said that Buffalo and Tonawanda dealers are likely to make an all-round advance in the price of white pine lumber, as they believe this course is warranted by the high prices that are asked by manufacturers and by the outlook for building operations and the lumber demand generally. Our Buffalo list this week shows an advance of one dollar per thousand on fine common and No. 1 and No. 2 cutting-up stock, also $2 per thousand on thick white ash. The hardwood market has undergone a distinct improvement. Stocks have become low and the demand greater, and altogether higher prices are looked for. Oak and maple are leading, but the supply of the latter is too large to warrant much of an advance. The Wisconsin Hardwood Lumbermen's Association, at a special meeting at Wausau on February 13th, put into effect a new list advancing most hardwood items from $1 to $3 per thousand feet. This is looked upon as the forerunner of other advances.

GREAT BRITAIN.

The British timber market has not kept up the activity which characterized the trade of the month of January. Recent unfavorable weather has checked building operations, and buying of lumber has accordingly fallen off. Importers do not seem confident regarding the future of prices, and are not disposed to enter into large contracts at the figures that are asked by shippers. Accordingly, different views of the market are expressed. From one port comes the report that the representatives of Quebec shippers have put through no large contracts, while the information from another port is that an average amount of business in contracting for the coming season's requirements has been done. It is certain, however, that such contracts as have been closed show a substantial increase on the prices of one year ago. Sales of white pine deals have been made to Glasgow at an advance of 20 shillings to 30 shillings per standard over last season's quotations. A correspondent at Cardiff states that the high prices which shippers are asking for

spruce have caused a run on Austrian whitewood, which merchants are getting in long lengths and good widths at rather less than the price asked for spruce Another opinion is that spruce will keep at about its present price for several months to come, even after the first consignments begin to arrive, for the reason that the consumption will probably keep ahead of the import.

At recent auction sales in London second quality 3x9 spruce deals brought £9 13s to £10, and third quality £9 per standard. For 3x11 fourth quality pine $12 was obtained, and for one lot £12 5s. These figures show an advance for this class of lumber.

STOCKS AND PRICES.

The barque A. Tavela sailed recently from the Hastings mills, Vancouver, B.C., laden with lumber, for Ostend, Belgium.

The Saginaw Lumber and Salt Company, of Saginaw, Mich., have purchased 1,000,000 feet of mill culls at Cutler, Ont.

J. Stiles is getting out 1,250,000 feet of spruce and hardwood deals at Hopewell Hill, N. B.

Lath and high grade lumber have been shipped in considerable quantity to Pittsburg and other Pennsylvania points during the past two months.

The Dominion Government is asking for tenders for the construction of a large breakwater at Pointe St. Pierre, Gaspe county, Quebec.

The Central Lumber Company, of Saginaw, Mich., has bought 5,000,000 feet of pine logs cut this winter on deeded lands in the vicinity of Parry Sound, Ont., The logs will be ratted to Saginaw.

Pine and spruce lath have advanced in the Albany market to $3.50. At Saginaw No. 1 white pine lath is quoted at $3.00; No. 2, $3.10; No. 1 Norway, $3; No. 1 hemlock, $3; No. 2 hemlock, $2.20.

The following prices are asked for shingles in the Saginaw valley: No. 1 white pine, $3.80 to $3.90; clear butts, $2.60 to $2.75; 4 × 18 in. cedar, $2.60; clear butts, $2.60; 4 × 16 in. cedar, $3.10.

It is said that the Edward Hines Lumber Company, of Chicago, have purchased 12,000,000 feet of logs from Hale & Bell, and have arranged to have them manufactured by N. N. Wright & Company at Cutler, Ont.

The steamer Ionian sailed from St. John, N. B., last week for Liverpool with the following cargo of timber: 203,342 ft. birch deals, 29,349 ft. birch ends, 652,348 ft. spruce ends, 14,832 ft. boards, shipped by W. M. Mackay; 15,075 ft. deals, by George McKean; 330,330 ft. spruce deals, 12,372 ft. birch timber, by William Thomson & Co.

The J. S. Hartwell Lumber Company, of Chicago, have bought from McFadden & Ferguson, of Ottawa, 15,000,000 feet of logs, which will be manufactured by the Conger Lumber Company at Parry Sound, Ont.

Timber berths were sold at the Crown lands office, Fredericton, N. B., last week as follows: Two miles on Thirty-three Mile Brook, N. W. Upsalquitch river, at upset price; 2½ miles on Memansey Brook to George W. Thompson, at $20 per mile.

It is understood that E. H. Lemay, of Montreal, has again purchased the entire cut of McLachlin Bros., of Arnprior, Ont., and will market a considerable portion of it in the United States, through his selling agents, W. M. Crombie & Company, 81 New street, New York. Mr. Lemay has also purchased other large lines of white pine, basswood and ash, and is also carrying a large quantity of log run spruce.

Messrs. S. P. Musson, Son & Company, in their market report of February 1st, review the lumber market as follows: "During the fortnight there has been only one arrival, the "E. A. Sabean," to our address, with 62,000 feet shippers and 25,000 feet second quality white pine, 138,000 feet hemlock and a small lot of spruce. Dealers are heavily stocked, and it was with difficulty that we could place it at $20.60 and $16 respectively for white pine; $13 for shipping and $11 for second quality hemlock; and $18.50 and $16 for shipping and second quality spruce. It is very desirable that all receipts should cease for some time to come, in order that dealers may get rid of a fair portion of their present supply. Only one small lot of 42,000 dimension shingles has arrived by Halifax steamer, which we placed at $6.79 for 5-inch and $7.39 for 6, 7 and 8-inch. There is very little demand for laying; no arrival has taken place, but we are daily expecting a large cargo, about half of which is in fulfilment of contract."

THE BOSTON MARKET.

There is a better call at Boston for spruce lumber, notwithstanding that the storm has hindered matters somewhat. It is mentioned by leading houses that trade is uncommonly good for February, with promise of an active market early. Quotations are fully sustained: Ten and 12 inch dimensions, $20; 9 inch and under, $18; 10 and 12 inch random lengths, 10 feet and up, $19 to $19.50; 2x3, 2 x 4, 2 x 5, 2 x 6, 2 x 7 and 3 x 4, 10 feet and up, $16 to $16.50; all other randoms, 9 inch and under, 10 feet and up, $17 to $17.50; 5 inch and up merchantable boards, $15 to $16; matched boards, $18 to $19; out spruce boards, $13; bundle furring, $16 to $17.

Hemlock is really firmer, with the demand good for the season: Boards, 12, 14 and 16 feet stock, $14.50 to $15 for good eastern; random, eastern, $13.50 to $14; Pennsylvania, No. 1, $16 to $17; No. 2, $14.50.

White pine is in good winter request, with the market exceedingly firm: Uppers, 1 in., $72 to $73; 2½ and 3 inch, $77.50; 4 in. $82.50; selects, 1 to 1 1-2 inch, $66 to $67; 2 inch, $68 to $70; 2 1-2 to 3 inch, $73 to $76; 4-inch, $75 to $80; fine common, 1-inch, $55; 1 1-4 to 1 1-2 inch, $60; 2 inch, $55; 2 1-2 and 3 inch, $65 to $67; 4 inch, $70; barn boards, $23 to $32; coffin boards, $27 to $32.

Hardwoods are in pretty good request at steady prices: Quartered oak, $56 to $65; fancy, $70 to $75; plain oak, $40 to $47; black ash, $40 to $50; white ash, $45 to $55; cherry, $90 to $130; maple, $32 to $40; sycamore, quartered inch, $43 to $45; plain, $35 to $40.

Shingles are scarce and really firmer, though the demand is still limited: Extra cedar, $3.30 to $3.35; clear, $2.90 to $3; second clear, $2.35 to $2.50; sap, $2.10; extra No. 1, $1.75 to $1.90; British Columbia red cedar, 16-inch, five butts to 2 inches, $3.45 to $3.50; 18-inch, $4.25 to $4.50.

Clapboards are in quiet demand at firm prices: Extra spruce, $35 to $36; clear, $33 to $34; second clear, $29 to $32; extra No. 1, $20 to $23; pine extra, $50 to $52; clear, $45 to $48; second clear, $40 to $42.

Laths are firm, and a little higher: One and five-eighths inch, $3; 1 1-2 inch, $2.85.

SALE OF OTTAWA LIMITS.

A large number of lumbermen gathered in the rotunda of the Russell House, Ottawa, on Wednesday, February 19th, on which day it was announced that the extensive timber limits owned by Willlam Mackey on the Amable du Fond river would be offered for sale. The limits comprise 129¾ miles and were offered in one block, Mr. Peter Ryan wielding the hammer. The bidding started at $200,000 and soon advanced to $650,000, the bidders being Mr. W. C. Edwards, M. P., Mr. H. K. Egan, Mr. J. C. Brown and Mr. J. B. Fraser. Mr. J. R. Booth, who had not yet submitted a bid, raised the figure $5,000, and at the price of $655,000,

MILLS: French River, Georgian Bay.

the limits were knocked down to him by the auctioneer.

It is generally believed that Mr. Booth secured a bargain, as it is stated that over $1,000,000 was asked for the limits recently by private sale. It is claimed that the limits were originally bought by Mr. Mackey thirty years ago for $1,800, and since that time he has taken off them a large quantity of square timber.

Among those present at the sale were: J. R. Booth, Fred Booth, C. Jackson Booth, Claude McLachlin (Arnprior), Alex Fraser, W. C. Edwards, M. P., George Dewar, Peter Whelen, W. C. Whitney, A. E. Dyment, M. P., (Thessalon), H. K. Egan, Hiram Robinson, George H. Perley, ex-Mayor Bingham, J. B. Fraser, William Fraser, F. W. Powell, J. Barnett (Pembroke), J. B. Klock, R. H. Conroy, Wm. McAuliffe, Harry Cameron, Robert Hurdman, Captain Cameron, John Gilmour, Wm. Gilmour, David Gillies, Hon. George Bryson, Thomas Mackie, M. P., (Pembroke), Wm. J. Conroy, W. G. Perley, George Francis (Pakenham), James Bryson (Fort Coulonge), W. A. Allan, Edward Skead.

The wholesale lumber business of the H. M. Tyler Lumber Company, Tonawanda, N. Y., having been closed out, W. W. Tyler and his son, Van Tyler, have formed a partnership under the firm name of W. W. Tyler & Son, to conduct an export and domestic business.

New Mill Erected 1901. Capacity 100 Million a Year.

Spicer Shingle Mill Co., Limited

It is not the purpose of this advertisement to try and convince the Lumber Trade of Canada that we are the only company in British Columbia manufacturing and shipping shingles in large quantities, or that we "know it all." We recognize that "there are others" and that we are not the only "pebble on the beach." To try and make you believe that we are the only people who can supply you **promptly** and in **large quantities** with a **high-grade** shingle would not only be a **fish** and a **bear** story combined, but it would be gall of the bitterest kind.

Our competitors in the shingle business in B. C. are nice people, and we presume that they know their business; but we are nice people too, and as we have been in the trade as long as any of them, and a **great deal longer** than the most of them, we know that we know our business, and that our competitors are not in the possession of any points of value regarding the manufacture of shingles which has not come to **our knowledge**.

Our old mill was burned down in May last, and in its place we have built what is at the present time the **Largest** Shingle Mill in B. C.

Our new Mill has 7 of the latest improved type of Dunbar machine, which we run night and day—giving us a capacity of about **100 Million** a year.

Competent judges who have seen our new mill, tell us that it is one of the most **substantial**, carefully **constructed**, and best **planned** mills in this province. We ourselves think it is **the very best** shingle mill in B. C.; and we know that it is **equipped** with all the very latest improved Shingle Machinery.

Will the trade please note that our contract with the Pacific Coast Lumber Co. closed on December 31, 1901. D. Ferguson, of London, Ont., is our representative for that province. Orders sent to him, or to us direct, shall have **prompt** attention.

We want our share of your shingle business, and can **guarantee** you satisfaction in **every particular.**

Spicer Shingle Mill Co., Limited,
VANCOUVER, B. C.

No Fish Stories

go when it comes to speaking about

OUR SHINGLES

FACTS ARE FACTS WHETHER TOLD ABOUT FISH OR SHINGLES

We make a fine 16-inch Shingle.
We make a fine 18-inch Shingle.
We make a fine 24-inch Shingle.
We make all thicknesses from 6-2 inch to 6-3 3/8 inch.

They are going out of our different mills at the rate of 200,000,000 a year. We make more shingles than any one firm in the world. Just think of it!

We claim to be experts. That is not gall. That is a statement which is proven constantly by the testimony of our customers from the Pacific Coast to the Atlantic Coast on the Canadian side, and from Maine to Puget Sound.

Mixed Cars our Specialty. Don't forget that we have all kinds of House Finishing Material in Fir and Cedar, and can load any quantity with shingles.

Come, let us deal together.

CUSTOMERS' ATTENTION.—Please take notice that on and after the 1st day of January, 1902, all arrangements with the Pacific Coast Lumber Co. of New Westminster, B. C., for the handling of any of our shingles will be ended, and until further notice our authorized general agents will be Mr. Jas. Twitchell, Clinton, Ont., for Ontario, and Mr. Samuel Ashfield of Winnipeg Man., for Manitoba and the North-West; therefore, orders for straight or mixed cars sent through the above agents or direct to us will have equally prompt and careful attention.

CORRESPONDENCE INVITED

THE COOPERAGE MARKET.

The Sutherland, Innes Company, Chatham, Ont., in the National Coopers' Journal, review the cooperage market as follows:

The sales of No. 1 stock in 28½ and 30, including elm, during January have been extremely active, especially in flour-barrel staves. Meal-barrel staves have received a fairly active inquiry, though not as brisk as expected. The inquiry has been sufficient to reduce the stocks on hand last fall to a minimum basis, at which there will probably be no difficulty in disposing of long before the present season's output is seasoned and put on the market. Good grades of patented hoops have been moving somewhat actively, and fetching fairly remunerative prices. Heading sales have not been as brisk as many manufacturers would like to see them. The stocks in hand of the most salable lines and sizes are not very heavy, and in the larger sizes of basswood manufacturers have advanced the prices, and are only contracting sales on a firm and sure basis, on the supposition that buyers will make active and ready disposition of the parcels they secure.

So far the weather for logging operations has been anything but desirable in the Western States and Canada. The absence of sleighing and the high prices prevailing for timber have prevented mill owners from putting in anything but light stocks, and the majority of factories have not secured any timber at all.

The demand at present for white-oak or light staves is very active and well-seasoned stocks are apparently eagerly sought after, while oak-heading sales have been fairly brisk.

OBITUARY.

WILLIAM HAMILTON.

Death has removed one of the prominent citizens of Peterborough, Ont., in the person of Mr. William Hamilton, the founder and for so many years the head of the William Hamilton Manufacturing Company, of that city. Ten years ago Mr. Hamilton was stricken with paralysis, and since that time he has been an invalid.

Mr. Hamilton was a Scotchman and was in his 79th year. In 1844 he came to Canada and worked as a machinist in Hamilton and Cobourg. Then he went to the United States, and in 1850 established a foundry at Shelbyville, Ind. Leaving there in 1856, he went to Peterborough and established the works which have since grown to the large establishment conducted by the William Hamilton Manufacturing Company. By energy and business talent the business was made to grow and develop. At the present time it is one of the most progressive establishments in the manufacture of mining and mill machinery, water wheels, etc., the products of the works being in use in mills and factories from the Atlantic to the Pacific coast.

The late Mr. Hamilton, although often consulted, never sought any public position, but always took an active interest in the affairs of his town and country. He was a man of integrity, energy and preseverance, and gave his close attention to the interests of the industry of which he was the head. He was most highly respected by his employees, as well as by all who knew him. Mrs. Hamilton, five daughters and one son survive, the latter being Mr. William Hamilton, president and general manager of the company.

JOHN HARRISON.

Mr. John Harrison, senior member of the firm of John Harrison & Sons Company, Limited, of Owen Sound, Ont., died on February 7th, at the age of 78 years. Mr. Harrison was a pioneer lumberman and had been a resident of Owen Sound for fifty years. The commercial importance of that town is due in large measure to the business which he founded many years ago and which has developed into a vast industrial enterprise.

Mr. Harrison was born in Saffordshire, England, coming to Canada when quite young. In 1848 he, with his brothers, moved to Owen Sound from Guelph and founded the Harrison Bros.' grist, flour, woollen and saw mills. Despite his large business interests, he gave much of his time to the town and served the corporation for some years as a councillor and school trustee. He had been president of the Board of Trade and a member of the Hospital Board. In demeanor Mr. Harrison was modest and retiring, and although on several occasions he had been nominated for Mayor, he always refused to stand for election.

WILLIAM RUSSEL.

On February 13th there passed away one of the oldest residents of Pembroke, Ont., in the person of Mr. William Russel, Crown Timber Agent at that place. Mr. Russel was a native of Scotland, having been born in Fifeshire in 1824. He came to Canada in 1840, arriving at Quebec after a stormy passage of 66 days. At Quebec he engaged with a lumberman to work on the Madawaska river, and from there he drifted to Ottawa, working for different lumber firms and also lumbering on his own account. Subsequently he engaged in the mercantile business in Pembroke, the firm name being Kennedy & Russel. In 1868 he was engaged by the Ontario Government to inaugurate a system of forest ranging in the Pembroke district. He was the first crown timber agent for the Ontario Government.

ANNUAL MEETING CANADIAN FORESTRY ASSOCIATION.

Arrangements have been completed for the third annual meeting of the Canadian Forestry Association, which will be held in the Railway Committee Room of the House of Commons, Ottawa, on March 6th and 7th. Several interesting papers have been promised, including the following:

"Eastern Forest Trees Grown at Victoria, B. C., from Seed Imported from the East," by His Honor Sir Henri Joly De Lotbiniere, Lieutenant Governor of British Columbia; "Forestry in Ontario," by Thos. Southworth, Director of Forestry for Ontario, Toronto; "The Management of Wood Lots," by W. N. Hutt, Southend, Ont.; "The Forest Fires of 1901," prepared by instructions of the Board of Directors; "The Second Discovery of the West," by Professor John Macoun, Assistant Director of the Geological Survey; "Tree Planting on the Experimental Farms," by Dr. Wm. Saunders, Director of Experimental Farms; "Work of the Forestry Branch in Tree Planting on the Prairies," Norman M. Ross, Assistant Superintendent of Forestry for the Dominion; "Forestry in the Schools," by Wm. Pearce, Inspector of Surveys, Calgary, Alberta; "Forestry in Prince Edward Island," by Rev. A. E. Burke, Alberton, P. E. I.; "The Pulp Industry in Canada," by D. Lorne McGibbon, Manager Laurentide Pulp Co'y, Grand Mere, P. Q.; "The Management of Pulpwood Forests," by Austin Cary, Forester to the Berlin Mills Co'y, Brunswick, Maine, U. S. A.; "Defects of the Pulpwood Regulations of the Province of Quebec," by E. G. Joly De Lotbiniere, Quebec.

In the evening of March 6th a lecture, illustrated by stereoptican views, on "Evolution of a Forest Growth," will be given by Dr. B. E. Fernow, principal of the New York State College of Forestry, Ithaca, N. Y., in the lecture hall of the Normal school.

TRADE NOTES.

Mr. P. H. Wilby, 27½ Front street east, Toronto is sole Canadian agent for Fleming, Birkby & Goodall, manufacturers of English oak-tanned leather belting, Halifax, England. This belting is especially adapted for saw mill purposes on account of its superior weight, every lap being sewn with a glazed lace, thus protecting the laps from moisture. Mr. Wilby also handles the Capata brand of belting, made of specially hard-woven, long staple cotton canvas, bound together by an indissoluble mixture of vegetable gums which entirely permeates the fibres of the canvas while in a state of very high tension, the result being an extra suple, textile, water-proof belt, which it is claimed never hardens or becomes rigid when off work.

When the fire occurred at the Royal Electric Station in Montreal and destroyed the wide double leather belts, it was thought that there would be much delay in obtaining new ones, but such was not the case for the reason that the enterprising firm of Sadler & Haworth had men upon the ground before the fire was out, removing the damaged belts to their factory to repair as best they could, so as they could be used the same night. It was discovered, however, that the large 54-inch, 3-ply belts, which were made by the same firm about 12 years ago, could only be repaired temporarily, and under the circumstances an order was given to Sadler & Haworth for new wide belts, including a number of smaller sizes, upon condition that they would be all ready within three days. To the surprise, relief and pleasure, however, of the manager of the Royal Electric Co., all the belts, including the large ones, were in position and ready to run, in 48 hours after order had been given, which goes to show tha the firm of Sadler & Haworth have unusual facilities for handling large contracts in a short space of time. Had this not been the case, the city of Montreal would have beon obliged to have resorted to some other method of obtaining light than from electric power.

WOOD PULP DEPARTMENT

PULP WOOD—TREATMENT OF THE RAW MATERIAL IN THE LOG AND ITS MEASUREMENT.

By a Canadian Pulpmaker.

Chapter VI.—The Question of Yield, &c.

In view of the enormous demand for spruce and other woods for the manufacture of pulp, it is self-evident that the subject of supply, and its connection with the equally important question of yield, demands close attention from all those engaged in the operations of lumbering for pulp woods. The preservation of the natural resources of the forests is a subject of vital moment to the Government, which is directly interested in, and responsible for seeing that all necessary precautions are taken to prevent the extinction of such an asset and source of revenue.

Some very valuable information on this subject, written from an eminently practical standpoint, was obtained in the year 1897 by several interested experts operating in that well-known district in the States, "The Adirondacks." The results of the many observations recorded are given by Mr. Gifford Pinchot in an excellent book entitled "The Adirondack Spruce."

From this book we take the liberty of quoting one or two points which have a direct bearing on the subject of the yield of pulp wood.

Careful measurements of the stems of over 2,000 trees cut for pulp were made, and some 300 trees were cut into logs in order to furnish data for the compilation of tables showing the contents of standing trees. For this purpose tables were eventually calculated giving the number of standards, feet board measure, merchantable cubic feet, and cords. It is only with the two latter that we need concern ourselves.

The term merchantable cubic feet means that amount of wood in the tree actually used for the manufacture of pulp. The following table is given showing the contents of spruce trees for certain sizes.

Volume Table for Spruce (G. Pinchot).

Diam. Breast High.	Height of the Tree Feet.								
	25	30	35	40	45	50	55	60	65
Inches.	Merchantable Cubic Feet of Wood.								
5	1.1	1.2	1.3	1.4	1.5	1.6	1.7	..	..
6	1.6	1.8	2.1	2.4	2.8	3.2	3.6	4.0	..
7	2.1	2.5	3 0	3.6	4.2	4 8	5 4	6.0	6.6
8	...	3.1	3.9	4 8	5.6	6.5	7.3	8.0	8.8
9	...	3.8	4 9	5.9	6.9	8.0	9.0	9.9	11.0
10	...	...	6.0	7.2	8.4	9.6	10 9	12.2	13.5
11	...	...	7.1	8.6	10.1	11.6	13 1	14.6	16.1
12	...	...	...	10.0	11.7	13.5	15.2	17.0	18.8
13	...	...	...	....	13.4	15.4	17.3	19.4	21.5
14	...	...	...	....	15.1	17.3	19.5	21.8	24.2

The relation between the ordinary standard cord of piled wood measuring 128 cubic feet is determined by the use of a factor representing the difference between solid wood as given in the above table and the stacked wood as it would obtain in actual practice when brought into the mill for consumption.

Pinchot refers to the custom in Germany of taking this factor as 0.65, but he is inclined to think that this gives results somewhat too high. The factor selected is 0.7 as being more accurate.

Hence the conversion of the above into cords is effected by dividing the values for the respective trees by 128 and the result by 0.7.

Thus a tree 10 inches in diameter and 35 feet high would contain 0.067 cords of pulp wood.

By means of a table of this kind the extent of the operations necessary for the cutting of logs to ensure a stated quantity of pulp wood can easily be gauged.

For example, to produce a cord of wood of merchantable quality will require ten trees of the following dimensions : 55 feet high, and 9 inches diameter at the stump. Fifty trees 6 inches diameter at the stump and 30 feet high would have to be cut to give one cord of merchantable pulp wood.

Volume Table for Spruce (Pinchot).

Diam. Breast High.	Height of Tree in Feet.								
	25	30	35	40	45	50	55	60	65
Inches.	Merchantable Cords of Pulp Wood.								
5	.012	.013	.014	.015	.016	.017	.019	...	...
6	.019	.020	.023	.026	.030	.035	.040	.044	...
7	.023	.028	.033	.040	.047	.054	.060	.067	.074
8	....	. 35	.043	.054	.062	.072	.081	089	0.98
9	....	.042	.055	.066	.078	.089	.100	.110	.123
10	....	....	.067	.080	.094	.107	.122	.136	.150
11	....	..	.c79	.c96	.112	.128	.145	.163	.18
12	....	....	....	.111	.131	.150	.168	.190	.21
13	...	....	....	....	.149	.171	.193	.215	240
14	....	....	....	....	.168	.193	.217	.242	.27

In all operations of this nature a considerable proportion of the total length of the tree has to be wasted and discarded as useless, viz., that part of the tree near the top, because this tapers very rapidly, is full of knots, and therefore cannot be handled profitably. In some cases where the cost of the wood is high, a much larger portion of the tree is utilized for pulp wood, and the tree cut to a smaller diameter than is customary. When pulp wood is plentiful the logs cut will not measure less than four or five inches at the small end, but with a scarcity of material logs of four and three inches would be accepted.

In the latter instance a greater proportion of the tree is taken for pulp wood.

The amount of pulp which can be obtained from a cord of wood is a question of some importance and one that may be referred to at this point. The yield differs considerably in various mills according to the quality of the pulp and the manner in which the raw material is treated.

When spruce is simply ground into mechanical wood pulp the yield varies from 1,600 lbs. to 1,900 lbs. for every cord of wood consumed. A usual average obtainable under ordinary conditions is 1,800 lbs. The form o grinder employed in the manufacture has a good dea to do with the yield, as some machines are so con structed as to produce a quantity of slivers or pieces o untreated fibre, which cannot afterwards be dealt with

When spruce is treated by the sulphite process and converted into sulphite pulp, the yield is from 1,000 lbs to 1,300 lbs. of dry pulp from a cord of wood. Here again, there is plenty of scope for the skilful manufac

urer to exercise his energy in the direction of keeping up a good precentage yield.

Poplar, which is used almost exclusively for the soda process, will give about 1,000 lbs. of pulp for every cord of wood. Pine, sparingly used in limited quantities for special purposes, will also yield 1,000 lbs. of pulp from a cord when submitted to the soda process.

The theoretical yield of pulp varies from 48 per cent. to 55 per cent. for the several kinds of the pulp wood commonly employed in the manufacture of pulp. The table of precentages has already been given.

(Concluded.)

PULP NOTES.

It is reported that the Dominion Iron & Steel Company, of Sydney, N.S., are going into the manufacture of sulphuric acid on a large scale.

It is said that American capitalists will erect a pulp mill at Lake Weedon, Wolfe county, Quebec, the municipality of Weedon having granted a bonus of $20,000 and exemption from taxation for twenty-five years.

A special meeting of the shareholders of the Sissiboo Pulp & Paper Company will be held in Montreal this week to consider a proposal to increase the capital stock of the company to $650,000.

Edgar G. Murphy, representing a New York syndicate, has purchased the timber limits and mill property of Henry V. and Frederick Dewar at St. George, N.B., and will in all probability build a large pulp mill.

Messrs. C. S. Cameron and John Sutherland, financial agents, of Ottawa, were in Toronto recently in connection with the formation of a company to build a large pulp and paper mill in the eastern townships of the province of Quebec.

The Sissiboo Pulp and Paper Company, of Weymouth, N. S., which defaulted on its bond interest payment in October, 1901, is undesrtood to have met the deferred interest, and is said to be rapidly getting into good shape again.

The Blanche River Pulp & Paper Company is reported to have purchased the power on the Quebec side of the Ottawa river four miles northwest of Mattawa, for $25,000, and is now ready to go on with the work of building the mill.

Last spring Mr. J. W. Munro, M.P.P., of Pembroke, took the contract of erecting the works of the Spanish River Pulp & Paper Company at Webbwood, Ont. The engineer of the works was not satisfied with the progress that was made, and in August last Mr. Munro relinquished the contract, which was turned over to Carpenter & Williams, a Connecticut firm. The new contractors did not execute the work very rapidly, however, and the contract has reverted to Mr. Munro, who, we understand, has been given a substantial bonus to complete the work. Mr. Munro is now calling for tenders for the construction of a concrete dam, for the foundation of the building, and for laying about 1,000,000 bricks.

The St. Mary's River Lumber Company's deal in Nova Scotia is now practically completed. It is understood that the American syndicate, of which A. Myers, of New York, is at the head, has secured 260,000 acres of timber land on Jordan, St. Mary's, Gaspereau and Clyde rivers, and 100,000 acres of Crown land on Clyde River, for which application has been made to the Government. The proposed site of the pulp and paper mills is on the Gaspereau river.

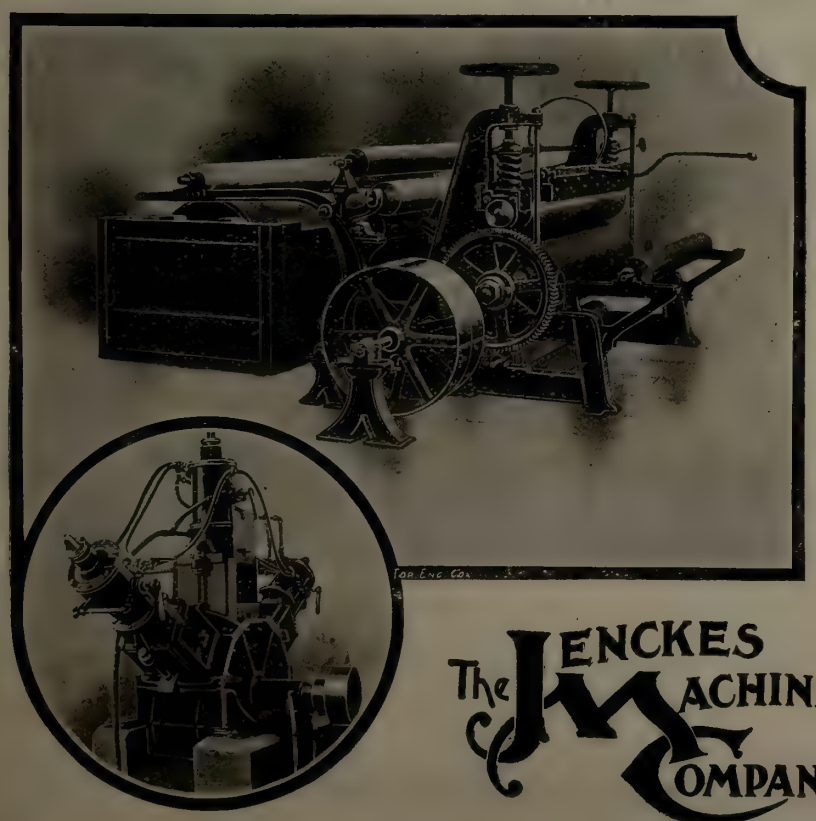
Pulp Mill Machinery



We make a specialty of equipping Ground Wood Pulp Mills from start to finish, and are prepared to build and install Water Power Plants, including Turbines, Steel Cases, Tubing, etc., together with the Pulp Mill Machinery proper, such as

Port Henry Grinders, Centrifugal Pumps, Pressure Pumps, Diaphragm Pulp Screens, Screen Plates; Wet Machines, either of our New Hydraulic Pattern or of our Standard type shown in cut at left; **Cylinder Moulds, etc., Hydraulic Presses and Pumps, Baling Presses, etc.**

Among recent customers may be mentioned The Canada Paper Co., The Royal Paper Mills Co., Fraserville Co., Cushing Sulphite Fibre Co., Chicoutimi Pulp Co., St. Raymond Co., Toronto Paper Co., Kenleith Paper Co., and others.

We are now engaged in filling extensive contracts for the Spanish River Pulp & Paper Co. and the Montmagny Light & Pulp Co.

Correspondence invited from those about to build new mills or renew and enlarge existing plants.

THE NEWS

—A sash and door factory is being built at River John, N. S., by John Mitchell.

—W. E. Turner has bought the lumber and machinery business of S. G. O'Brien at Ponoka, N. W. T.

—The Montreal Lumber Company is seeking to increase its capital stock to $100,000.

—The Spencer Island Company, lumber, etc., Spencer Island, N. S., has been dissolved.

The Rat Portage Lumber Company propose building a large addition to their Rainy River mills.

—The dissolution is announced of Halstead & Quick, saw millers, Harrow, Ont., T. R. Quick continuing.

—James Ritcher, of La Riviere, Man., has left for the Rainy River country, where he has purchased a saw mill.

It is said that the Saginaw Lumber & Salt Company will erect a large salt factory near their saw mill at Sandwich, Ont.

—Anderson's saw mill at Sundridge, Ont., lately purchased by O'Neil & Shivley, is being remodelled and a new boiler installed.

—The Lake Superior Lumber Company, Limited, Windsor, Ont., has been granted a provincial charter, with a capital of $50,000.

—The Canada Wood Specialty Company, Orillia, are installing a 125 horse-power engine and 150 horse-power capacity in boilers.

—It is said that negotiations are on foot for the purchase by an American syndicate of large timber limits in the vicinity of Campbellton, N. B.

—The Chaleurs Bay Mills Company has been incorporated in the province of Quebec, with a capital of $150,000, to manufacture and trade in lumber.

—L. F. Hill has sold a lumber property at Sackville, N. B., to W. M. Mackay, and has transferred leases of the Fenerty property there to the same party.

At the annaul meeting of the Burrill Lumber Company, Shawinigan Falls, Que., William Mitchell was elected president, Jos. Patrick vice-president, and Vivian Burrill manager and secretary.

—A new veneer factory has been built by the Canada Wood Specialty Company at Orillia, Ont. It is the intention to introduce a novelty in the shape of a veneer nail keg, also to manufacture large veneer baskets.

—During the coming season George Gordon & Company, of Cache Bay, Ont., intend to operate another circular saw, for manufacturing long dimension timber. They expect that their total cut will be about 15,000,000 feet.

—The Orillia Export Lumber Company, Orillia, Ont., have decided to establish a box factory, for which purpose the old shingle mill of the Longford Lumber Company will be used and an addition built thereto. Steam power will be used.

—Thomas Southworth, of the Ontario Bureau of Forestry, recently received a letter from an American firm asking for the names of persons who can supply soft wood charcoal. The article is wanted for the manufacture of explosives.

The Broadbent Turning Company, Limited, has just been formed in Toronto, for the purpose of carrying on a timber and wood manufacturing business at Broadbent, Ont. R. H. Stewart, of Toronto, is president of the company, and J. H. Patterson manager.

—The Rideau Lumber Company, of Ottawa, manufactured last year 5,250,000 feet of lumber, 120,000 cedar ties, and 6,500,000 cedar shingles. The stock was cut by A. Hagar & Company, Plantagenet, who have sawn for the Rideau Lumber Company exclusively since the year 1898.

—The saw mill plant of William Peter at Bay City, Mich., has been purchased by the Algona Commercial Company and is being removed to Sault Ste. Marie, Ont. The new plant is to have a capacity of 130,000 feet a day and will be equipped with band saws. Pitts & Company's plant at Bay City has also gone out of commission, and it is thought that the machinery will be moved to Ontario.

—It is the intention of the Hastings Shingle Manufacturing Company to erect at Coal Harbor, near Vancouver, B. C., what will probably be the largest shingle mill in Canada. It will have a capacity of over 1,000,000 shingles in 24 hours, and will cost, including site, about $100,000. This, with a small mill they recently purchased in Washington, will more than double their capacity.

To Purchasing Agents:

Corner 22nd and Centre Avenue,

CHICAGO, October 12th, 1901

GENTLEMEN:

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and rkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO

NEW BRUNSWICK FOUNDRY AND MACHINE SHOPS

FREDERICTON, N. B.

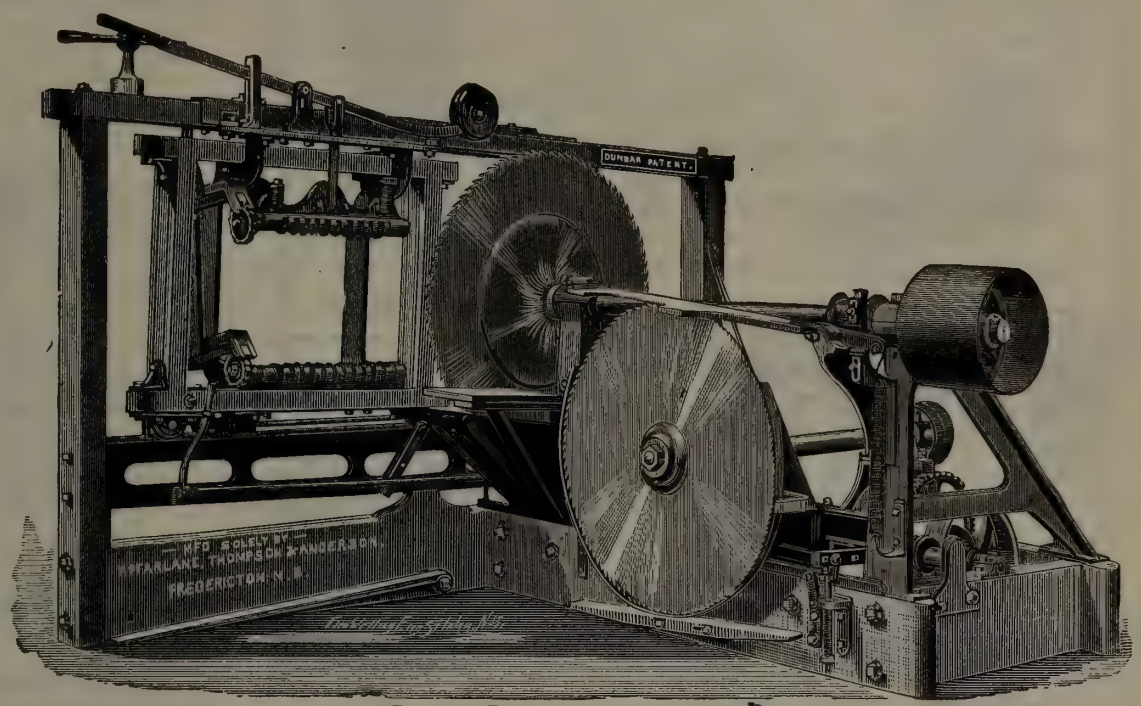
McFarlane, Thompson & Anderson

Manufacturers of the only original

PATENTED DUNBAR SHINGLE MACHINE

And Sole Proprietors of the said patent

Universally admitted as being the best machine on the market from the Atlantic to the Pacific.

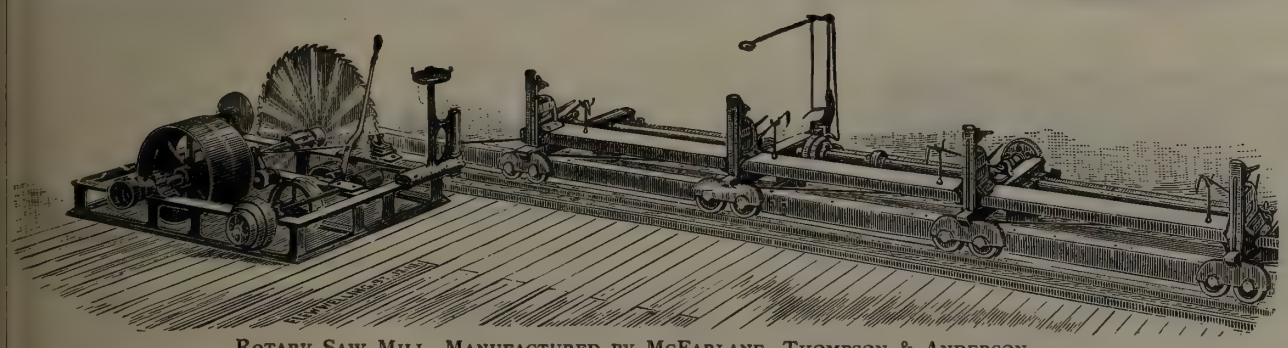


PATENT DUNBAR SHINGLE MACHINE.

The following well known firms are a few of the many who are using the celebrated Dunbar Shingle Machine:—Metis Lumber Co., Quebec, 15 machines: John A. Morrison, Fredericton, N. B., 16 machines; Gibson R'y. & Manufacturing Co., Marysville, N.B., 10 machines; Hastings Shingle & Manufacturing Co., Vancouver, B.C., 16 machines.

The McFarlane, Thompson & Anderson Dunbar Shingle Machine is a record breaker in the west—(New Whatcom Blade, Washington State). The following may be of interest to mill operatives and others; it is we believe the best six day record ever made on this class of machine—a Dunbar upright; the bolts were taken as they came from the woods, without selection, and were a good average quality. This remarkable run was accomplished last week at the George A. Cooper mill, Chuckanut siding: Total cut for six days, 2 shifts of 10 hours each per day, 394,000 eighteen inch shingles. In the day shift, Harry A. Edison, sawyer, cut 218,000, an average cut of 36½ thousand, and the night shift, Levi Loop, sawyer, cut 176,000, an average of 29⅓ thousand of eighteen inch shingles per day.

"When all the rest fail, or are down for repairs, or are cutting shims, the McFarlane, Thompson and Anderson's DUNBAR SHINGLE MACHINE is still cutting the standard shingle of the world." From the Atlantic to the Pacific they all say it



ROTARY SAW MILL, MANUFACTURED BY MCFARLANE, THOMPSON & ANDERSON.

Latest Bulletin from the seat of war, October 17th, 1901—From the Metis Lumber Co., Price, Que., in reference to the 15 Shingle Machines sold them this season:

"Replying to your enquiry as to the running of the Shingle machines you sold us, would say that they have given entire satisfaction, and have run very successfully so far. We have sawn 30 million shingles in 70 days to date, and count on sawing 10 million more this season."

THE METIS LUMBER COMPANY.

We manufacture a complete line of IMPROVED ROTARY SAW MILLS, BUCKEYE AUTOMATIC CUT-OFF ENGINES and all kinds of MILL MACHINERY.

Our prices are right.

Kindly allow us to quote before purchasing.

McFarlane, Thompson & Anderson

Fredericton, N. B.

THE LUMBER UNDERWRITERS.

In another part of the paper will be found an advertisement of the Lumber Underwriters, an insurance organization formed by a group of officers and prominent members of the National Wholesale Lumber Dealer's Association. Many Canadian lumbermen who have lumber interests in the United States are familiar with the fact that for a number of years there has been considerable agitation of the insurance question, in the annual meetings of the National Wholesale Lumber Dealer's Association. There has long been a feeling among the lumber dealers of the country that the prevailing rates fixed by the old line, or tariff companies, on lumber risks are too high. As a result of this feeling, several prominent lumber dealers were led to form an organization for the purpose of carrying fire insurance on lumber and wood working risks only, with the intention of bringing an influence in the reduction of insurance rates.

The gentlemen who have taken up this work are Charles M. Betts and Robert C. Lippincott, of Philadelphia, Alfred Haines, and George B. Montgomery, of Buffalo, Guy Gray, of the Mills-Gray Carleton Company of Cleveland, Ohio, C. H. Prescott, of the Saginaw Bay Co., Cleveland, Ohio, and four New York men, Frederick W. Cole, F. W. Mattocks, J. J. McKelvey, General Counsel of the National Wholesale Lumber Dealer's Association, and E. F. Perry, Secretary of the National Wholesale Lumber Dealer's Association. In order to carry out their plan, these men became underwriters in the Mutual Lloyd's, and on March 15th of last year commenced business, confining the lines of the company absolutely to risks of the class named. The name of the company was changed to "Lumber Underwriters," this being more distinctive.

This additional insurance facility proved of great advantage to a large number of lumber dealers of the United States, and the business has grown to large proportions, considering the carefulness and caution with which risks have been accepted. At the end of eleven months more than $1,:00,000 has been written, consisting for the most part of small lines on widely scattered risks.

The methods of the company are not materially different from those of the ordinary stock company, except that they are in no instance represented by local agents, all business being done direct between the policy holders and the home office. This elimination of local agents effects a great saving to the company, so that, for this reason alone, they are enabled to do a profitable business, at lower rates, than the stock companies.

Owing to the recent advance in insurance rates in Canada, on the part of stock companies, this is a particularly opportune time for Canadian dealers to take advantage of the decreased rates offered by the Lumber Underwriters. The inconvenience of doing business by mail with an outside company is so slight that considering an appreciable saving in premiums, there seems no reason why a large number of dealers should not avail themselves of this company's offer. At the same time they will be lending their encouragement to a movement which should have a great influence in ultimately reducing tariff rates in this country, as well as in the States. Full information can be secured by addressing the Lumber Underwriters, 66 Broadway, New York.

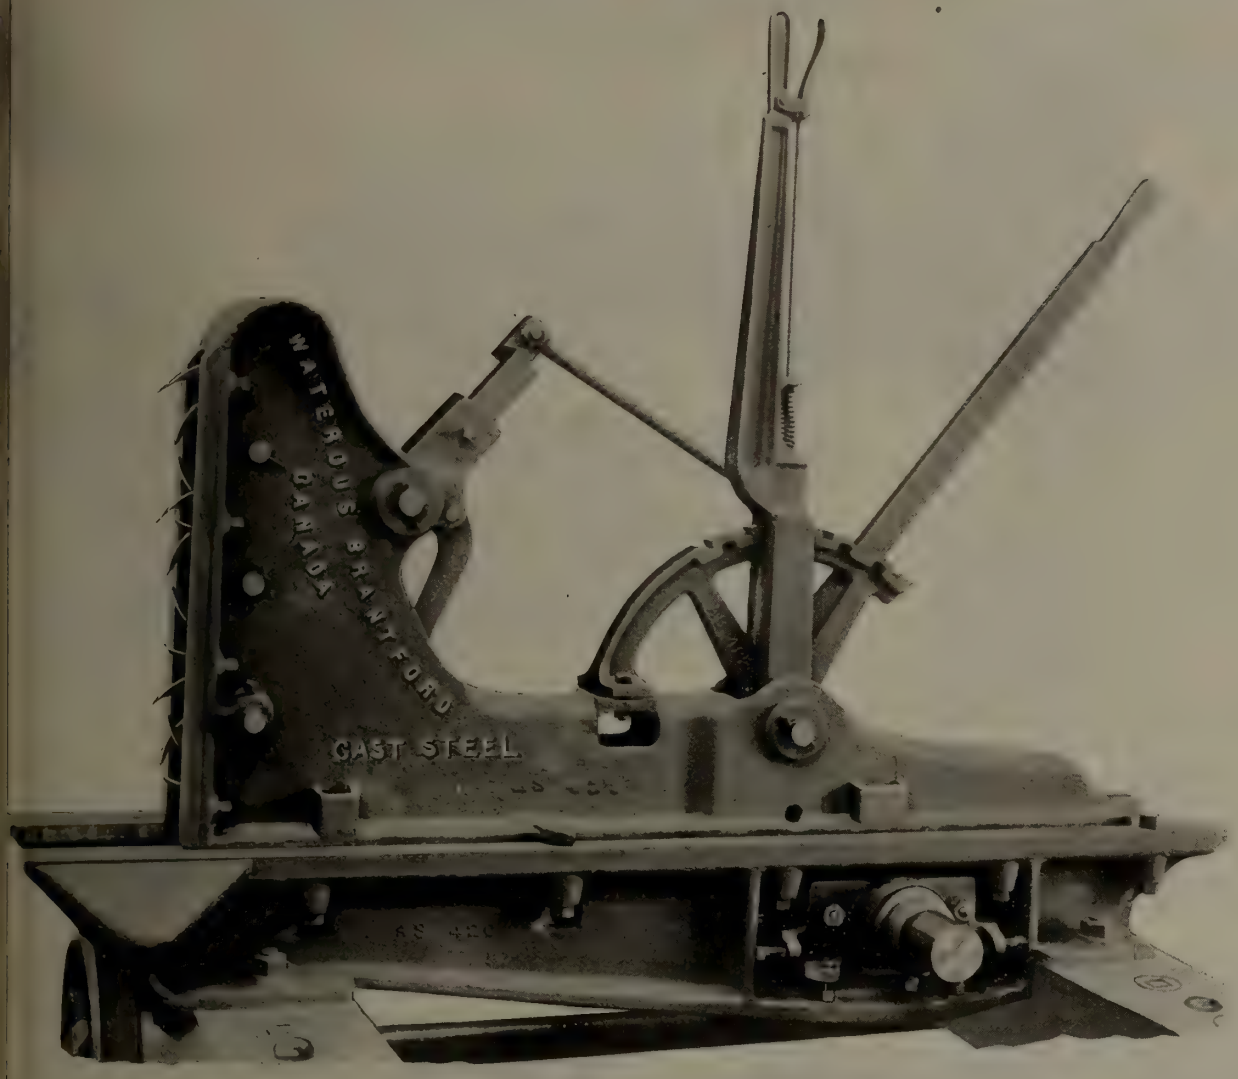
3 Saw Mill Specialties for 1902



This new Cast Steel

SAW MILL CARRIAGE

Combines Lightness and Strength

The cut illustrates No. 2 size 40 in. opening with dog lever brought to setter's hand.

Lever connection to steel segment is made at back end of segment with two steel straps and adjustable nut, making adjustment of knee quick and accurate.

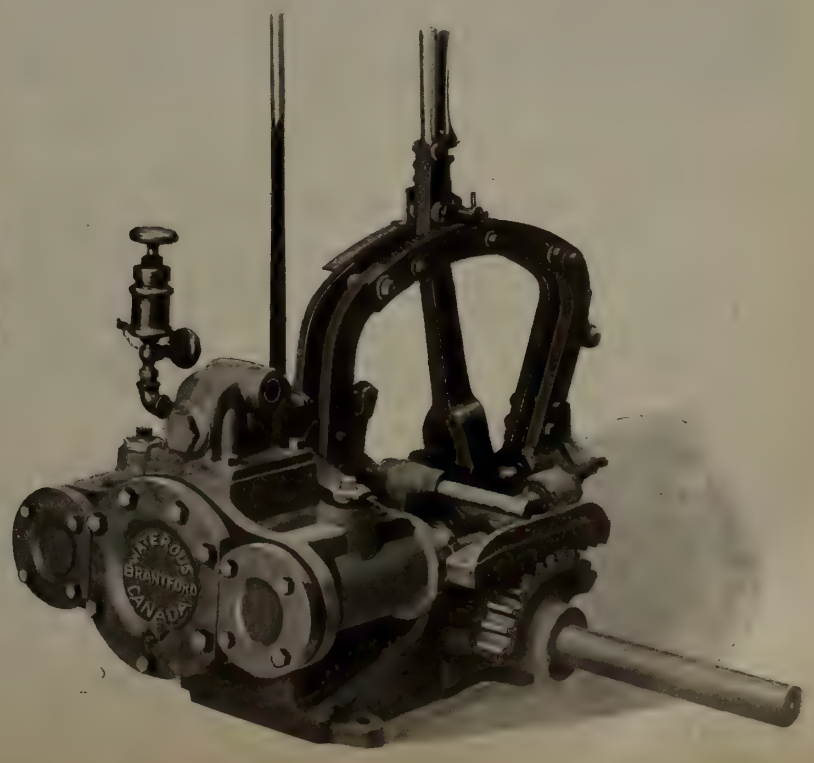
Log seat is faced with 3″ x 1″ steel on each side which gibs knee down.

No better carriage built in America.

Canadian Agents for Corry & Baker's

Patent Steam Set

Simple, easy of attachment to any carriage; operates your set works by steam in place of muscle; never gets tired; as fresh after 50,000 as before. This machine makes setting, which is one of the hardest places in the mill, most easy, increasing cut of mill 5 to 8,000 feet per day; combined with our new 18 inch 4 inch face steel wheel set works, makes a rig unsurpassed.

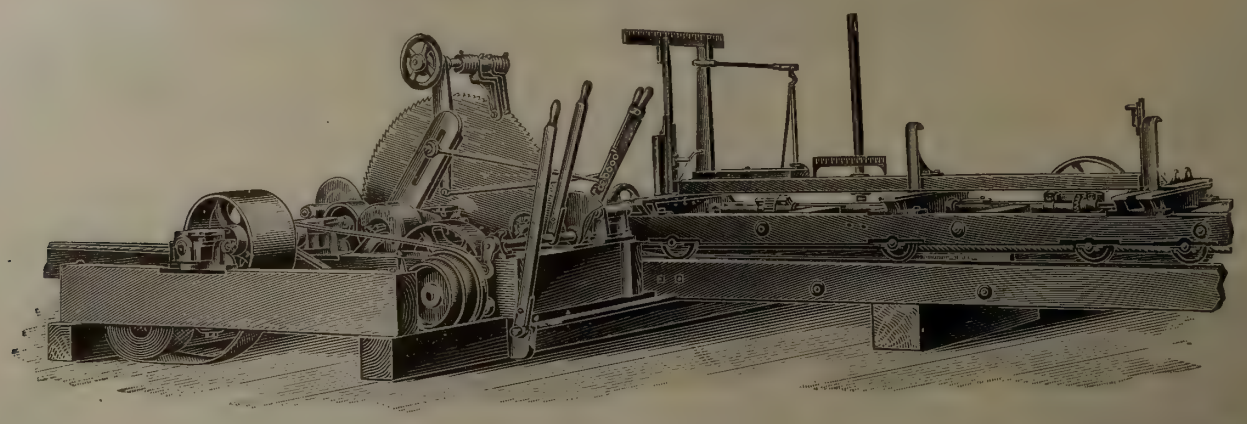


IRCULAR RESAW For Slabs, Deals, etc. Has 14 inch diamete Rollers, one stationary operated by set works to y thickness; the other yielding operated by Steam Cylinder and Spring. 36 inch w. Satisfaction guaranteed.

Waterous, Brantford, Canada

The "Canadian" Over Log Saw Guide

PATENTED IN CANADA AND UNITED STATES.



Your Mill would make more money if you would make more lumber from the same quantity of logs. You can do it by using a thinner saw, and you can use a thinner saw with one of my Patent Over Log Saw Guides. They are adapted to either Stationary or Portable Saw Mills, Re-sawing Machines, &c, &c. The illustration shows one of my Portable Saw Mills equipped with this Guide and carrying a saw 60 in. diameter, 12 guage. All my Portable Mills will take saws up to 72 in. diameter, and this guide will take saws from 36 to 72 in. diameter. It is adjustable every way. I am prepared to fill orders for complete Circular Saw Mill Outfits, or will make the guide to fit any ordinary existing saw frame.

THE LEFFEL AND VULCAN TURBINES

POSSESS DISTINCTIVE MERITS, which should have the attention of water power owners 1st—They are strongly and carefully built. 2nd—They are economical in their use of water. 3rd—They develop more power in proportion to the water used than any other Turbine built. Mr. J. D. Flavelle, of the Flavelle Milling Co., of Lindsay, writes us under date of March 7th as follows:

"Referring to the two 74" water wheels (Leffels) purchased from you during the past year. As far as we have had an opportunity of testing, they have done their work excellently, in fact are doing more than you guaranteed them for. We took a test of the power they were developing with a head of water of 3 ft. 10 in., and they developed very close to 100 h. p. We are thoroughly satisfied with same."

This letter is but one of many such.

THE STANDARD DRY KILN

READ THE RECORD

In so important a matter as the purchase of a drying plant, it is worth while to "read up" on the subject and learn thereby that

THE STANDARD DRY KILN

has made the one record worth the reading. It has been before the public nearly fifteen years. It leads, as it always has, in improvements. It is used by more representative concerns than all others.

It has met with a greater degree of success than all others, consequently it has many imitators. It is not an experiment—It does not infringe on anyone's patents.

Send for Catalogue, testimonials and estimates.

The Wm. Hamilton Mfg. Co., Limited

Branch Office: VANCOUVER, B. C. PETERBOROUGH, ONT.

R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

Mill Stream, Que., on I. C. R'y, December 17th, 1894.

R. H. Smith Co., Ltd., St. Catharines, Ont.

Dear Sirs,—Driving a 20 in. 13 gauge sawnto frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

Campbellton, N.B., Nov. 17th, 1894.

R. H. Smith Co., Ltd., St. Catharines, Ont.

Dear Sirs,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well, but after giving your saw a trial have continued to use yours, as theyare cheaper, and in regard to working qualities are all that is needed.

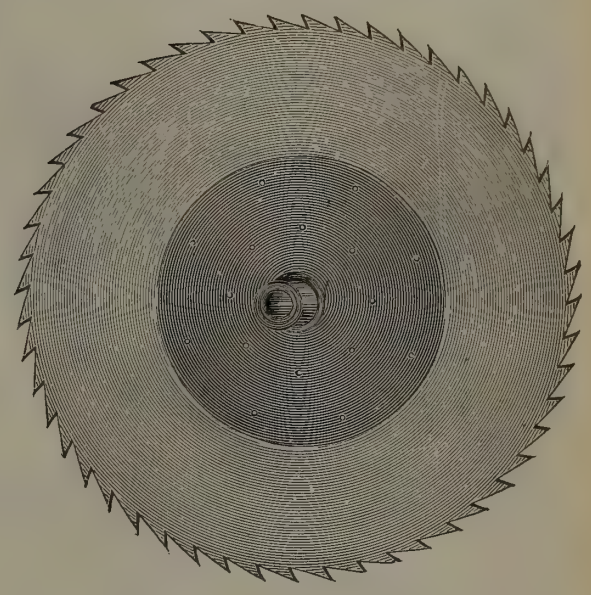
Yours truly, KILGOUR SHIVES.

Clavering, Ont., May 3rd, 1897.

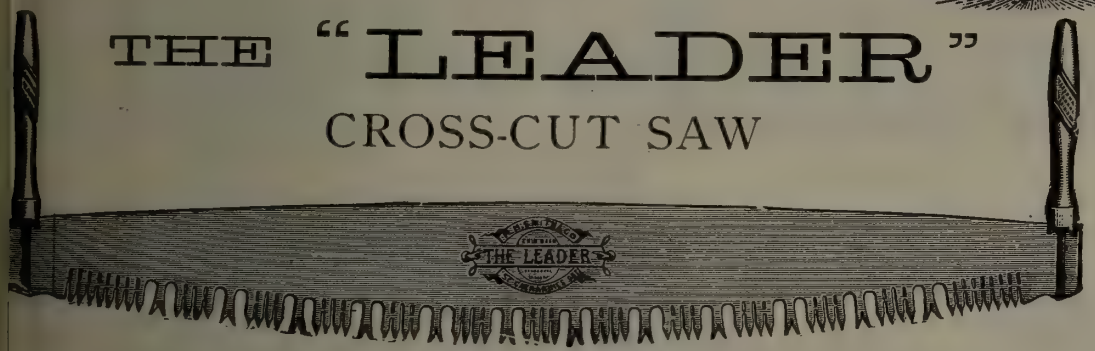
R. H. Smith Co., Ltd., St. Catharines, Ont.

Gents,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws. Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



THE "LEADER" CROSS-CUT SAW



These Saws are made from the best Double Refined Silver Steel, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, nsuring a perfectly uniform temper throughout the plate, and stand without a rival as the Best, Fastest, and Easiest-Cutting Saw Known. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

THE "LEADER" SAW SWAGE

Made in 3 Sizes—$2.00, $2.50, $3.00, etc.

Our Prices are Right. Kindly Allow Us to Quote You Before Purchasing.

CANADIAN FORESTRY ASSOCIATION

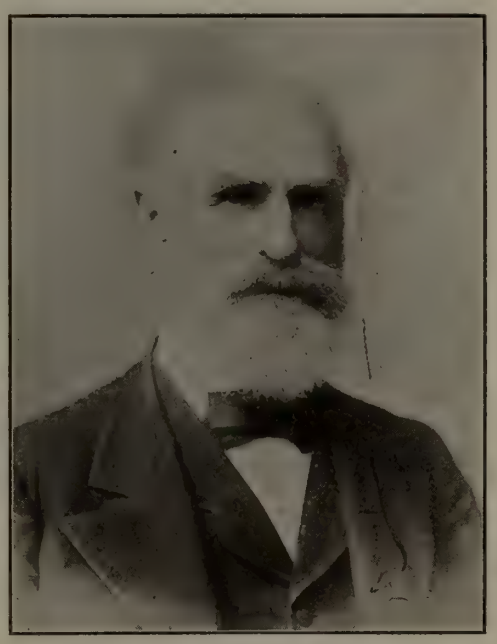
Third Annual Meeting of the Organization at Ottawa.—The Various Aspects of Forestry Discussed in a Most Practical Manner.—Three Interesting Papers Relating to the Pulp Industry.

NOW that the third annual convention of the Candian Forestry Association is over, it is admitted to have been the most interesting and practical meeting yet held. The first session convened in the Railway Committee Room of the House of Commons, Ottawa, at 10 a.m. on Thursday, March 6th, Mr. Hiram Robinson, in the absence of the president and vice-president, occupying the chair. The attendance included the following: William Little, Westmount, vice-president; E. Stewart, Superintendent of Forestry, Ottawa, secretary; R. H. Campbell, Ottawa, assistant secretary and treasurer; Dr. William Saunders, Director of Experimental Farms, Ottawa; Dr. James Fletcher, Dominion Entomologist, Ottawa; Thomas Southworth, Ontario Director of Forestry, Toronto; D. Lorne McGibbon, manager Laurentide Pulp Co., Grand Mere, Que.; Dr. B. E. Fernow, Principal New York State College of Forestry, Ithica, N. Y.; A. A. Wright, M. P., Renfrew; Prof. John Macoun, Geological Survey, Ottawa; George Johnson, Dominion Statistician, Ottawa; J. B. McWilliams, Superintendent of Ontario Forests, Peterborough; W. N. Hutt, Southend; E. G. Joly de Lotbiniere, Quebec; A. Broder, M.P., Morrisburg; Senator Power, Halifax; Hon. Sydney Fisher, Minister of Agriculture; Senator Primrose; T. B. Flint, M. P., Yarmouth, N.S.; W. J. C. Hall, Quebec; Mr. Davies, Prof. Robertson, Mr. Drummond, W. T. Macoun, Hiram Robinson, A. C. Campbell, J. R. Booth, C. Jackson Booth, Robert Gorman, H. C. Ross, A. M. Campbell, O. D. B. Dowling, R. B. White, W. H. Boyd, S. Stewart, J. Kiel, F. C. King, F. W. Cowie, Colonel Neilson, Mr. Clark, E. C. Grant, A. Gibson, Ottawa; Roland D. Craig, Ithica, N.Y.; C. J. Thompson, Virden, Man.; Professor W. L. Goodwin, Kingston; W. R. Ross, Montreal; C. E. E. Usher, Montreal; T. S. Young, CANADA LUMBERMAN, Toronto.

The secretary read the minutes of the last meeting, also letters of regret from the president, Sir Henry Joly de Lotbiniere, and others. The president sent a very instructive paper giving the results of experiments of growing eastern trees in British Columbia. It was read by his son, Mr. E. G. Joly de Lotbiniere, and stated that the results accomplished had been quite satisfactory.

REPORT OF DIRECTORS.

The secretary read the report of the Board of Directors, which showed the membership to be as follows: Ontario, 117; Quebec, 28; New Brunswick, 9; Nova Scotia, 6; Manitoba, 73; Assiniboia, 17; Saskatchewan, 4; Alberta, 58; British Columbia, 16; Yukon, 2; United States, 15; England, 1; Germany, 1; Prince Edward Island, 1; a total membership of 347, as compared with 244 at the annual meeting



MR. WM. LITTLE, WESTMOUNT,
President Canadian Forestry Association.

last year. The revenue for the year ending December 31, 1901, was stated to be $454.60, and the expenditure $140.74, leaving a balance of $313.86. There were, however, outstanding liabilities which would considerably reduce the balance. The account for subscriptions to the official organ was not received in time to be dealt with before the close of the year. In view of the forest fires in British Columbia and in the Temiscaming district, the directors prepared and communicated to the Governments of the various provinces a general resolution on the subject, and urged the inclusion of an amended penalty clause in the British Columbia Fire Act. During the past summer the Forestry Branch of the Department of the Interior made a forestry exhibit at the Winnipeg Industrial Fair at Winnipeg and at the Western Fair at Brandon, the purpose being to afford an object lesson to the settlers of Manitoba and the Territories on the possibilities of growing trees in these districts. The system of co-operation with the settlers of the western prairies in forest tree planting adopted by the Dominion Government was developing into large proportions. Upwards of five hundred farmers prepared their land last season under instruction from the agents of the Forestry Branch and would be supplied with seedling plants this spring. The work of guarding the forests from destruction by fire had been attended during the past season with very satisfactory results, although in the province of Quebec the measures taken were not effective in preventing a serious loss in the Temiscamingue district. In New Brunswick the Government and the lumbermen were taking up seriously the work of forest protection with good success, and was is hoped that in Nova Scotia and Prince Edward Island steps will be taken in the near future to make the forests a greater factor in the wealth of the provinces. With the object of assisting this work, it was proposed to hold a forestry meeting in Halifax in the near future. The directors in conclusion congratulated the Association on the representative character of its membership, as well as on the lively interest in the forestry problem that it is fostering in all parts of the Dominion.

Mr. R. H. Campbell read the treasurer's report, which was referred to the auditors.

Mr. A. C. Campbell enquired what steps had been taken to increase the membership of the Association, to which the secretary replied that he had written to lumbermen and other interested persons and had distributed 3,000 copies of the annual report. Mr. Southworth suggested that each member should submit the names of persons likely to become members of the Association.

Mr. R. H. Campbell brought up the question of continuing the present arrangement with the official organ, Rod and Gun. He was not certain that Rod and Gun was the most suitable medium that could be found, as in it the forestry problem seemed to be placed subordinate to sporting, etc. After considerable discussion a committee was appointed to report on the question of a forestry propaganda, including the publication of an official organ for the Association.

Referring to the growing of eastern trees in British Columbia Dr. Saunders said that he was struck when visiting the coast in 1886 with the scarcity of hardwoods, and decided that the Experimental Farms should begin experiments to determine how far the hardwoods of the east would grow in British Columbia. The first experiment was in sending out black walnuts and butternuts, which

were planted on the mountain side, many of them coming up. Then several thousands more were sent out, also elm, maple, hickory and oak, with equal success. He had thought that the rapid growth might make the trees less tough and valuable, but Dr. Fernow had said that the rapidity of growth did not affect the strength of wood. He said that trees would grow after they got a good start without much saturation. The whole Pacific coast was covered with a coniferous forest, but that did not prevent the growth of hardwoods.

AFTERNOON SESSION.

Mr. William Little, vice-president of the Association, having arrived, presided at the afternoon session. The first business was the reading of a paper by Mr Thomas Southworth, on "Forestry in Ontario," an abstract of which is given :

Forestry in Ontario.

BY THOMAS SOUTHWORTH.

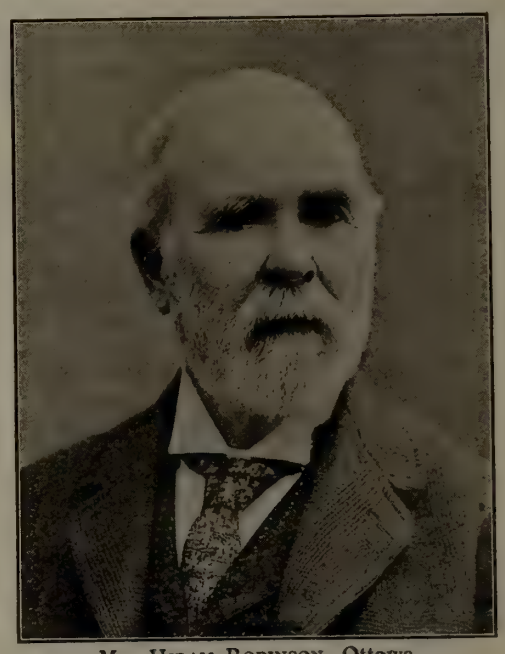
At the outset Mr. Southworth explained the sylvicultural conditions existing in the different sections of the province. The most interesting division to the forester, he said, was the central division, extending from a short distance west of Ottawa to Rat Portage, about 1,000 miles in a straight line east and west, as it was in this district that the great permanent forest of the province is likely to be maintained and a field afforded for the skill of the trained forester. To explain the progress and present condition of the movement for the more systematic working of the provincial forest, Mr. Southworth gave a summary of the development of the Crown timber regulations from the earlier days up to the present time. From the outset of the system the principle was adopted of giving to the licensee merely the right to cut timber while retaining in the Crown the title to the land. The main consideration which actuated the government in reserving the title to the land when disposing of the timber was that they might be able to offer the inducement of free or cheap land to settlers. The conditions of the timber licenses were drawn so as to leave the government free to withdraw from the territory included such land as might be required for settlement and allow homesteads to be located. In a large portion of older Ontario the lumberman thus became the pioneer of settlement and civilization, and in every locality where the character of the soil gave promise of successful agriculture the removal of the more valuable timber was followed by the opening up and cultivation of the land.

As lumbering operations were pushed further to the north a region of a different character was reached, where the larger portion of the land being sterile, rocky or broken, was unfit for settlement. With the exception of a few isolated districts there was nothing to attract population or allow the development of industries, the land once stripped of its timber being valueless. As a rule extensive and devastating forest fires followed the operations of the lumberman and completed the work of clearance. In a country destined to become the home of an agricultural community this was not a matter of vital consequence,though frequently entailing heavy losses. But the rough broken lands to the north of the settlements were worthless except for the production of timber, and repeated bush fires, destroying not merely such mature trees as had been spared by the axe but the young undergrowth, the seedlings, and frequently the thin covering of forest soil which clothed the rocks, rendered large tracts of country valueless for the only purpose for which they could be utilized.

These conditions rendered necessary the adoption of an entirely different system of management of the Crown lands from that pursued in dealing with the timbered land which it was intended to clear in order to make preparation for agricultural settlement. The chief difficulty in the way of maintaining any territory in which lumbering was permitted as a permanent forest was the liability to loss by fire, which furnished the lumberman with an incentive to rapid and thorough clearance and encouraged wasteful and reckless methods of cutting. To remedy this evil the fire ranging system was adopted in 1885, the subsequent extension and development of which has greatly lessened the danger from this source and thus rendered practicable the management of the Crown forest on forestry principles. Fire being kept out, the forest will perpetuate itself, and in the process of time even the waste lands will be gradually reclothed with trees. Experience has abundantly demonstrated that—excepting in cases in which repeated fires have destroyed old and young trees and the seeds in the ground—a pine forest when cut down will be succeeded by a young growth of the same species. They may at the outset be dominated by other varieties, the early growth of which is more rapid, but will eventually overtake and subdue them. This process of natural reproduction is now at work in very extensive tracts of burned and lumbered over territory where all that is necessary to be done to secure a valuable crop is to protect the young timber from fire.

We quote in full from Mr. Southworth's paper on the subject of forest reserves and reforestation :

The government has adopted the policy of withdrawing from settlement and setting apart as forest reserves, extensive areas which have been found upon examination to be manifestly unsuited for cultivation. The first step in this direction was the creation in 1893, by a special act of the Legislature, of the Algonquin National Park, which with subsequent additions comprises 1,109,383 acres.



MR. HIRAM ROBINSON, Ottawa,
Vice-President Canadian Forestry Association.

This park is not strictly speaking a forest reserve, as it was primarily designed for a game preserve and much of its area is under license, but as no settlement is allowed within its limits it largely partakes of that character. In the year 1897 the Director of Forestry drew attention to the subject, urging that both for economic and climatic reasons much of the territory that had been lumbered over and found unsuitable for tillage should be set aside as forest reserves.

In accordance with his recommendation, a Royal commission was appointed the same year to enquire into and report on the subject of restoring and preserving the growth of white pine and other timber trees on lands not adapted for settlement. The commissioners made a careful personal examination of large areas of cut and burned over land and their report strongly sustained the report of the Bureau. In accordance with their recommendation the Legislature in 1898 passed the Forest Reserves Act empowering the administration to set apart tracts of such land as might from time to time be deemed advisable. The first action taken under this measure was the setting apart of 80,000 in the counties of Frontenac and Addington, which was followed by the withdrawal from settlement as a forest reserve of 45,000 acres in Sibley Township, on the north shore of Lake Superior. Both these tracts had been lumbered over and subsequently swept by fire and in each case a new and promising growth of young pines had made its appearance, which if adequately protected from fire will replace the original forest.

In 1901 a more important and decisive step was taken by the setting apart of the pine bearing region around Lake Temegami, having an area of 1,400,000 acres. Unlike the previously constituted reserves this territory is virgin forest and has never been under license. The quantity of pine timber now standing within its limits is estimated at from 3,000,000,000 to 5,000,000,000 feet board measure. It is altogether probable that had this region been dealt with in the ordinary way followed in cases were forest-covered land is presumed to be available for settlement, the presence of squatters and others following upon the opening up of the country would have resulted in extensive fires. The influx of large numbers of tourists and sportsmen who resort to Lake Temagami in increasing numbers during the summer months rendered it all the more advisable to place it under strict regulations to anticipate this danger.

With the progress of settlement and industrial development in New Ontario, resulting in more accurate and detailed local information as to the character of the land, further action in the same direction will be taken from time to time, keeping in view the principle that tracts which can only be advantageously utilized in the production of timber ought to be permanently devoted to that purpose and operated on such a system that they do not lose their distinctively forest character, which can only be recovered by slow degrees after a long interval of non-productiveness.

There is no doubt that in the adoption of the Forest Reserves Act, the Commissioner of Crown Lands had in view the creation of a large permanent forest, and in order to be sure that the territory would remain in that condition it was necessary to pass a special Act. Under the ordinary regulations, the Lieutenant-Governor in Council may withdraw land from sale and settlement, but another Order-in-Council may re-open it. Under the Forestry Reserves Act, while an Order-in-Council may place territory within its operations, the land cannot aftewards be re-opened for sale or settlement by Order-in-Council, or by any means except a special Act of the Legislature. Under the ordinary regulations, if land upon which there was any considerable growth of timber were withdrawn from settlement, there would be a constant pressure upon the Government to have it re-opened in order that so-called settlers might enjoy the privilege of removing the timber, without the inconvenience of paying timber dues.

Over much of the territory in the central division the forest reserve system may be extended as fast as money is provided to protect and care for the reserves.

In the case of the Temagami Reserve the time had arrived when the timber must either be sold or protected until a more suitable time arrives to dispose of it to good advantage. Hence the creation of the reserve and the consequent protection of the timber. Extensive additions to its area can and probably will be made on the west. A considerable extent of land might also be added on the east, comprising the country bordering on Lake Temiskaming, except for the reason that the territory in question is under license. This brings us to one of the problems confronting the administration in the extension of the Forest Reserve System. I refer to the tenure of land under which the license holders operate their limits. Although timber licenses are only issued for one year, it has been the regular practice to renew them as a matter of course from year to to year, so long as the conditions were complied with and the annual ground rent paid, excepting only in cases where the land was needed for agricultural settlement. Relying on the good faith of the Government, licenses have been transferred from one holder to another, the same as bank stocks, without fear that the Government might exercise its undoubted legal right of cancelling the license at the end of the year. No better evidence of confidence in the continuance of this course could be adduced than the transfer of a license at Ottawa a few days ago covering 129 square miles of terrritory, which had been lumbered over at intervals during the last 40 years. It was sold I believe for no less a sum than $655,000 by the then holder to Mr. J. R. Booth, of Ottawa. Incidentally this case also affords evidence that the cutting off of the original crop of pine on so called virgin territory does not end

the chapter, in Ontario at least. In this connection, it might be urged, "Why not take in these licensed areas as an addition to the forest reserves?" I am of the opinion that this would be unfair to the province in that it would give the present license holders practically a perpetual tenure of their limits without securing to the public a fair proportion of the value of the stumpage. Take the case of the limit before referred to: The right to cut timber on this territory was sold many years ago, the original limit holder paying 50 cents per mile for the exclusive right to cut, the timber itself being subject to dues of $1.00 per thousand feet, when cut. After the limit had been operated for 40 years this exclusive right to cut changed hands at the rate of over $5,000 per square mile. It is safe to assume that the original commercial timber has all been removed, and that the holder is now cutting timber matured since the original issue of the license. The value of the stumpage is probably at least $6 per thousand feet, of which the public treasury only receives $1. From this it is easily seen that if the Government were to include lands under license in the Forest Reserves System it would remove any doubts as to their intention to continue the present tenure perpetually, unless it were done with some clear and distinct understanding as regards the future position of these holdings. On the other hand, the present condition of the tenure of licenses is an uncertain one, and it is probable that some readjustment may be eventually made, satisfactory to the limit owners and to the province, by which the provincial revenue may be increased and the present uncertainty of tenure in limits in non-agricultural areas removed.

Whether these areas come under the operation of the Forest Reserves Act or not, the non-agricultural country included in them will remain in forest to be operated, if not for the financial benefit of the province, at least for the profit for the holders and with good results to our industrial life and incidental advantage to the climate and water supply. It is fair to say that the difficulty arising from the vested rights or claims of limit holders is not likely to obtain in regard to the territory included in future timber sales. While the auction system has been retained by the government a definite term is fixed beyond which licenses will not be renewed. In the sales of the past two years the term has been fixed at ten years, and although licenses are thus limited, I cannot see the selling value has been affected to any great extent.

One of the important questions immediately confronting the government in its forward forestry policy is the exploitation of the timber wealth in the Temagami reserve. I have stated that there exists a large quantity of pine timber in this reserve, but only in part of the territory is the pine timber fully matured. A great deal of the northern part of the reserve contains timber only partially grown. How best to harvest the crop ready to cut is the problem immediately pressing. In the other reserves so far created the timber is all young, as they have been for the most part lumbered over and in some cases burned over, consequently they do not require any further consideration than one of fire protection for the present. While the timber in the southern part of the Temagami reserve is fully matured it is not dying so far as I have been able to see, and therefore our interests are not suffering from delay, as in fact there is very little of it that is not growing slowly yet. As we have felt that these forests are now reasonably safe from fire, there is probably no immediate necessity for harvesting this timber until we are fully prepared to do so. At the same time some plan for operating the reserve with less wasteful and extravagant methods than have been followed elsewhere needs to be adopted in the near future.

Two plans have been suggested. One is to sell the logs after having been cut by the Department, and the other is to sell the timber on the stump. I of course assume that under this latter plan the timber will not be sold in the same way as has been the case in the territory now under license, that is to say, paying a lump sum in advance as a bonus with fixed stumpage charge, but to be disposed of by public competition at the highest price possible per M on the stump, the whole of the price to be paid to the Government as the timber is cut.

As to these two plans I am afraid that just at present we are scarcely far enough advanced or in a position to put in our own men to remove this timber, and while if we had a scientifically trained staff of men it might be done effectively, such a policy would encounter strong opposition owing to the popular impression that no Government can conduct industrial enterprises as successfully as can be done by private individuals. I apprehend it will not be many years before there will be a change of sentiment in this respect, but at present it has considerable weight and for that reason I doubt whether it would be advisable to harvest this timber in this way, but that is merely my individual opinion.

The other plan proposed seems to me to possess many advantages. The lumbermen paying for the timber would have to do so on the understanding that he would be allowed to take from a certain territory so many million feet of timber within a specified time, paying therefor when cut the price agreed upon at the public sale and the timber to be cut subject to the supervision and control of the officers of the Department. One objection to the present system under which the limits are bought at auction with a cash bonus, is in the fact that although the lumberman may not have taken into account in estimating the value of the limits the small but growing timber on the territory, when he comes to cut the large timber, if there happens to be a quantity of young stuff worth the amount of the small fixed stumpage charge, there is a strong temptation to remove it, although it could more profitably be left to grow. Under the plan to which I have referred, the tendency would be in the other direction. It this timber were bought for $6 or $7 per M on the stump the purchaser would not be over anxious to take out stuff that was only worth half that figure, in fact the difficulty would rather be in the forest officers insisting on the removal of ill-shapen and small timber that ought to be removed.

Whatever plan may be adopted for disposing of this timber it is evident to thoughtful men that the time has arrived when we need more highly trained men in our forests than are now available in any considerable number. So long as lumbering was considered an ephermal business and not a permanent industry the need of scientifically trained men was not so apparent as now, and I believe the need will not only be appreciated generally in a short time but will be supplied.

To sum up briefly what has been done in the direction of establishing a practical system of forestry in Ontario, it is sufficient to say that we have established a fairly effective system of fire protection. The fee simple of our forest lands remains in the Crown. We have definitely inaugurated a system of forest reserves intended to form part of an extensive and permanent Crown forest from which the province may derive a large annual revenue and from which the individual people of the province may obtain wealth and employment. To the scientific treatment of this Crown forest we are only gradually approaching, but we are steadily ascertaining the problems to be solved and there is no doubt that the solutions will be found.

DISCUSSION.

The chairman referred to the tenure of license and to the fact that one lumberman had recently paid $655,000 just for the good faith of the government. He was delighted to know that the question of how to protect the timber was such a live question.

Mr. J. R. Booth said that he had attended the meeting in the hope of hearing from the government of some plan whereby agriculture and lumbering could be carried on satisfactorily in the same district. He could not see how the forests could be preserved when the government allowed settlers to go into the forests and start fires. The government should decide how far they would allow settlers to go into sections of country not suitable for settlement. Last year many fires in the Kippewa district were originated by settlers, and if the government continued the practise of allowing settlers in this country, it would be disastrous.

Mr. Joly said that colonists should not be allowed to take up little tracts of land all over—they should be confined to settlement along the colonization roads. It should be the policy to group colonization.

Mr. Hiram Robinson thought the first thing to be considered by the government should be whether the land was fit for settlement. If not, then it should be reserved. He had in mind a place on the Gatineau river where one fire had burnt over four hundred million feet of pine. One great difficulty in the province of Quebec was that so many members of the legislature represented the agricultural interests; they pressed upon the government to open up certain districts. He understood that the government was seriously considering the appointment of a commission to report upon the land fit for settlement.

Mr. Stewart said that certain areas should be set apart for forestry purposes. Much land that was not suitable for the purpose had been opened for settlement. The government should undertake a thorough exploration of the country.

Prof. Macoun urged that the government should more rigidly enforce the laws that now exist.

Mr. N. W. Hutt, of Southend, gave an interesting address on "The Management of Wood Lots," outlining a plan by which farmers could successfully cultivate forests.

Mr. R. H. Campbell read a paper on "The Forest Fires of 1901." Mr. Campbell evidently gave much time and attention to the collection of the data contained in the paper, which reviewed the fires of the year and their causes. He was tendered a vote of thanks, and it was ressolved, on motion of Prof. Macoun, that a similar report should be prepared each year in future.

Mr. J. B. McWilliams said that in 1874 he had recommended the Ontario Government to adopt a system of fire protection. Eleven years later a system was adopted. In his opinion lumbermen could blame themselves to a great extent for the losses sustained by fire, owing to the class of men they employed as fire rangers. He advocated exploration and the appointment of a committee to take up the question of settlement with the Government.

Mr. Booth said that the only way that the settlers could be prevented from doing harm was to keep them from going into the country not fit for settlement. It was not fair to the settlers to allow them to settle in a district where they could not make a living. Vermont, New Hampshire, Massachusetts and Maine had more pine to-day than forty years ago. Then what would our country be worth, he asked, if the forests were allowed to grow up. This winter he was taking out logs in a district that was cut over perhaps one hundred years ago.

Mr. Stewart suggested the setting aside of certain sections for timber and certain sections for settlement. There had been set apart one million acres of forest reserves in Manitoba and the North-West. It was suggested that the governments should employ a greater

number of fire rangers. The meeting then adjourned until the following day.

SECOND DAY.

Upon resuming at 10 a. m. on Friday, the chair was taken by Mr. Robinson, the president being unable to remain for the second day. A paper on "The Second Discovery of the West" was read by Prof. Macoun. In it he reviewed the early history of the west, which fifty years ago was looked on as a desert. Prof. Macoun was one of the first to make the transcontinental trip. He endeavored to show that there were no reasons why the cultivation of trees could not be carried on in the west with equal success as agriculture.

Mr. W. T. Macoun asked whether it was necessary to conserve moisture after the trees had a good start, say three years, to which Dr. Fernow replied that after that time moisture was not necessary. He said no general rule could be laid down for tree planting owing to the existence of different conditions.

Work of the Experimental Farms.

A paper on "Tree Planting on the Experimental Farms" by Dr. Saunders followed. He prefaced his paper by pointing out the large districts that are unfit for agricultural settlement, and showed the effect of trees upon the yield of grain in the west. In 1900 the yield of spring wheat on plots partly protected by tree growth was over thirty bushels per acre, while unprotected sections were in most instances totally destroyed by rain storms. On examining the fields at Indian Head which had been more or less protected by forest belts, it was found that every foot in height of tree growth had afforded protection to from fifty to sixty feet of grain in the field. Also forest growth frequently helped the crops on the western plains by bringing about more favorable conditions of moisture. Continuing Dr. Saunders said :

While the work of establishing tree growth mainly with native trees was in progress on the Western Experimental Farms, the more purely experimental side of this work, that of the testing of all sorts of trees and shrubs, for the purpose of finding out those which were suitable for the country, was carried on with vigor. Many thousands of young trees and shrubs were sent up from Eastern Canada, and many more imported from the colder parts of the United States and Europe and planted out under many different conditions, using considerable quantities of each variety, so that the test might be a thorough one. This was done both with forest and fruit trees, and the results widely published. In this way much of the importation of unsuitable material has been stopped, and a large and useless expenditure prevented. The experiments conducted on the Farm have been extensive and thorough, and the settler has been convinced of the futility of his expending money on unsuitable trees when they have been tried in numbers of from 50 to 500 or more each, on the Experimental Farm, and have utterly failed. These experiments have been exceedingly useful. Many varieties after thorough trial have proven hardy and the number of useful sorts of established hardiness is now ample to give great variety and attractiveness to new plantations. Similar work with like results has also been carried on during the same period at the Experimental Farm for Manitoba, located at Brandon. There, however, the conditions for tree growth are more favorable than at Indian Head. The success in tree growing has been great at both Farms, and those who visit these interesting places will find a very large number of species and varieties of trees and shrubs which have now been sufficiently tested to justify the recommending of them as hardy. In the annual report of the Experimental Farms for 1901, now in press, a list is given of over 130 different species and varieties of trees and shrubs which have been found hardy at Indian Head.

Careful records have been preserved of the cost of growing forest trees at Indian Head, account being taken of all the labor which has been devoted to the plantations and other expenses from the time the trees were put out until they were large enough to shade the ground so as to need no further cultivating. In some instances hoeing had to be continued for four years; in other cases, where the trees were slower in growth, for five years. The trees have been planted at different distances—2½, 3, 3½ and 4 feet apart each way; and leaving out the cost of growing the young seedling trees, which is very trifling, the total expense of planting and care for four or five years has varied from $12 to $18 per acre.

While the work of clothing the bare prairie section at Indian Head has been in progress, what has been done to help the individual settlers, many of whom live too far from sources of supply of native trees and tree seeds to procure them for themselves? For the first year or two, the erection of buildings and the organizing of the work occupied the entire attention of the staff; but in the spring of 1889 the work of distribution to settlers was begun. That season 700 1-lb. bags of tree seeds were sent out, chiefly of box elder and green ash. These were distributed in response to requests received from farmers in different parts of the country. There were also sent from Ottawa, through the mail, 131,600 young forest trees and cuttings in 1,316 packages of 100 each. These were all forwarded free and circulars accompanied them containing instructions as to the preparation of the soil and the sowing and caring for the seeds and trees. In 1891 200,000 more young forest trees were sent out from the Central Farm in 2,000 packages of 100 each, and 4,053 1-lb. bags of tree seeds. Similar distributions were made from year to year up to and including 1893; but since then the chief distribution to settlers in the North-West Territories has been made from Indian Head, and to those in Manitoba from the Experimental Farm at Brandon.

The total distribution which has been made to date to settlers in the Canadian North-west is as follows :—

	Young Forest Trees & Cuttings	Tree Seeds in 1 lb. bags
From Experimental Farm, Ottawa..	600,000	10,000
" " Indian Head	290,000	4,564
" " Brandon ..	610,200	2,742

This makes a total of one million five hundred thousand trees and cuttings distributed in fifteen thousand packages, and the total quantity of tree seeds distributed has amounted to about 8 tons and three-quarters. Specific instructions have accompanied all this material to guide the settler as to the proper preparation of the land and treatment and care of the seeds and young trees. In the meantime, the trees planted and now growing on the five Experimental farms number about 245,000.

The teaching and example of the Experimental Farms, associated with this large distrbution of young trees and seeds, have produced results in the Canadian North-west which are now everywhere apparent. On homesteads in almost every part of Manitoba and the Territories there are small plantations of forest trees which furnish more or less shelter to buildings and stock, also for the growing of garden vegetables, fruits, and flowers, and at the same time add beauty to the surroundings and make the dwellings of the settlers more attractive and homelike.

Since the establishment of a Forestry Branch by the Department of Interior, the Experimental Farms have rendered willing help in the collection of seeds of trees and shrubs and have set aside a sufficient area of land for the growing of a large number of seedlings for this special branch of work. During the past year over 200,000 young trees and shrubs have been grown from seeds and cuttings for this Forestry Branch, and preparations have been made for the further development of this useful work. It is not, however, proposed, on this account to lessen the good work the Experimental Farms have so long had in hand, but to vigorously carry on the propagation and distribution of useful trees as in the past, sending these out with tree seeds, as far as is practicable, to all who apply for them.

Many of the plantations of young trees established with the Experimental Farm material years ago, are now bearing seed, and with these seed centres increasing in number from year to year, the quantities of seed conveniently available annually will give an enormous and increasing impetus to tree growing on the North-west plains.

Mr. Stewart read a paper by Mr. Norman M. Ross, Assistant Superintendent of Forestry for the Dominion, outlining the work of the forestry branch in tree planting on the prairies. Mr. Ross studied with Dr. Schenck and spent some time in Germany with him.

Mr. R. H. Campbell submitted a paper on "Forestry in the Schools" by Mr. William Pearce, and another on "Forestry in Prince Edward Island" by Rev. A. E. Burke.

The four papers above mentioned were discussed conjointly. Prof. Robertson said that under the present system of manual training in the schools 8,000 pupils received instructions every week regarding woods, and 600 teachers were engaged in explaining the uses of trees, etc. He thought that one of the best methods of promoting forestry was by instructing school children.

Dr. Fernow urged the thorough co-operation of the Experimental Farms and the Government with the Forestry Branch. He was in charge of a nursery growing two million seedlings annually, and in his opinion it was advisable to establish nurseries where trees can be most easily grown, as the matter of distribution presented no difficulties.

Hon. Sydney A. Fisher, Minister of Agriculture, then entered the room and was asked to address the Association. He said the work of the Association was one of the most important in Canada. He was glad to know that in recent years some efforts had been made to check the destruction of timber. The Dominion Government, however, could not work very effectively, owing to the timber being largely owned by the provinces. He believed the great and chief method of reforestation was in the education of the people, and the Canadian Forestry Association could do much in awakening public opinion. This, of course, was a slow process, but he urged the members not to get discouraged.

There was some further discussion in which there was exhibited a strong feeling in favor of the Government assisting the Forestry Branch, and adjourment was made for lunch.

AFTERNOON SESSION.

The meeting in the afternoon might be termed a wood pulp session, as three papers bearing upon the pulp industry were submitted. The first was by Mr. D. Lorne McGibbon, manager of the Laurentide Pulp Company, Grand Mere, Que., and will appear in our May issue. The second paper was on "The Management of Pulp Wood Forests," by Mr. Austin Cary, forester of the Berlin Mills Company, Brunswick, Maine. It was read by Dr. Fletcher. The last paper on the programme was by Mr. E. G. Joly de Lotbiniere, pointing out some of the defects of the Quebec pulpwood regulations. This paper contains much of interest to pulp wood operat-

ors and lumbermen and will be found on page 17 of this issue.

Mr. Drummond opened the discussion on these papers by expressing his sympathy with the sentiments contained therein. He thought we had been viewing the matter in the wrong light by allowing logs to be exported. This remark applied to many other raw materials of Canada. Mr. Cary's paper brought up the question of the employment of trained foresters, and in Mr. Drummond's opinion that is what is required in this country. We had been looking at forestry from a theoretical point of view, while we should look at it from the practical side. He thought the time was coming when lumber and pulp companies would have to employ trained foresters, and he believed it would be found extremely profitable. He understood the matter would be taken up by one of our colleges.

Dr. Fernow said he must admit that there were hardly two sides to the question of allowing the export of raw material. It had always struck him as a piece of stupidity to allow the export of timber. Speaking of the cutting of pulp wood, he said that the diameter limitation was merely a make-shift for something better. There were various methods of getting a new crop of timber, but he had come to the conclusion that where there are culled woods it would be better to cut off the entire old crop and replant. No fixed rule could be applied for all forests, as the question of cutting would be governed by conditions. In giving instructions to his inspectors he allowed them to deviate from the limit wherever they found it advisable for sake of reforestation. Under certain conditions more harm was done in cutting as low as 12 inches in diameter than in cutting to 7 inches under other conditions. In a case cited he had found the 12 inch diameter a failure. The establishment of a diameter, therefore, did not solve the problem of reforestation. Many things that are right to do could not be accomplished owing to the necessity of respecting other conditions.

Mr. Southworth inquired as to denudation. He said that Dr. Fernow proposes to remove and replant, whereas Prof. Macoun says to remove the debris and let nature do the rest. He asked Dr. Fernow which system he would recommend for pine forests.

Dr. Fernow replied that the time was not yet ripe to undertake replanting in many lumbering operations. He did not advocate replanting as a method to be adopted everywhere. Each case should be diagnosed and advice given accordingly.

GENERAL BUSINESS.

In accordance with a notice of motion given a resolution was passed providing for the addition of a patron to the officers of the Association. A resolution expressing sympathy with the family of the late Hon. G. W. Allen and referring to the loss sustained by the Association by his death was carried.

The secretary introduced Mr. C. J. Thompson, of Virden, Man., who pointed out the necessity of furnishing the farmers of the North-West with an ample supply of trees. He submitted a resolution calling the attention of the government to the fact that the appropriation of $15,000 voted last year was inadequate to carry out the forestry work, and asking for a larger appropriation in future. The resolution was carried.

Mr. J. B. McWilliams moved that the Association urge upon the Federal Government the necessity of greater attention in opening up land for settlement, that the newer and unsettled portions of the country be explored in advance of settlement, and that the Lumbermen's Associations be asked to co-operate with the Canadian Forestry Association in urging upon the government that all lands unfit for agricultural purposes be reserved from settlement. Carried.

Mr. Southworth spoke regarding the tenure of land, squatters, etc. The Ontario Government, he said, recognized the difficulty in controlling the land so as to best protect the interests of both lumbermen and settlers.

Votes of thanks were tendered to the railways, the Dominion Government, authors of papers, and the press, after which came the

DR. B. E. FERNOW,
Director New York State College of Forestry, Ithaca, N.Y.

election of officers. To the new office of patron His Excellency the Earl of Minto, Governor General of Canada, was elected by acclamation. The other officers elected were :

Honorary President, Sir Henry Joly de Lotbiniere, Lieutenant-Governor of British Columbia.

President, William Little, Westmount, Que.

Vice-president, Hiram Robinson, Ottawa.

Secretary, E. Stewart, Ottawa.

Assistant secretary and treasurer, R. H. Campbell, Ottawa.

Directors, William Saunders, Ottawa ; Prof. John Macoun, Ottawa ; Thomas Southworth, Toronto ; C. Jackson Booth, Ottawa ; W. C. Edwards, Ottawa ; E. G. Joly de Lotbiniere, Quebec ; C. E. E. Ussher, Montreal.

Through the kindness of Mr. J. R. Anderson, Deputy Minister of Agriculture, Victoria, splendid specimens were exhibited at the meeting of the woods of British Columbia, including Douglas fir, yellow cedar, red cedar, willow cedar, western larch (tamarac), western spruce, canoe spruce, broad-leaved maple, red alder, western white pine, scrub pine, cherry and western white oak.

Lecture by Dr. Fernow.

On Thursday evening a most interesting and instructive lecture, illustrated by stereopticon views, was delivered in the Normal School by Dr. B. E. Fernow, principal of the New York State College of Forestry. He first took up the original formation of forests, explaining how they established themselves, and stated that only those which endured the shade survived and finally formed the virgin forest. He pointed out the great difficulty and expense which France had experienced owing to the clearing of the mountains. This had resulted in landslides which had destroyed villages and towns which it required millions to replace. Illustrations were shown of trees in Africa six thousand years old.

Speaking of the reforestation of Canada, Dr. Fernow explained that it was impossible to introduce the same system in Canada and the United States as was now in vogue in Germany. He pointed out that in Germany every section of the tree was put to some practical use, while in this country a large portion of the branches was destroyed. The large number of persons present apparently greatly enjoyed the lecture.

Dr. Fernow is one of the leading authorities on forestry on the continent of America. He is a native of Prussia and the son of a high government official. He received an education in the classical gymnasium, studied forestry at the Forest Academy of Muenden, and law at the University of Koenigsberg, and entered the Prussian Forestry Service. He participated in the Franco-Prussian war, and became a lieutenant in the reserve of the German army.

Dr. Fernow came to the United States for a visit to the Centennial Exposition, but remained in that country, becoming engaged in the metallurgical business, and later in the management of wood lands. In 1883 he was elected secretary of the American Forestry Association, and remained its moving spirit for many years. In 1886 he was appointed to the position of Chief of the Forestry Division, United States Department of Agriculture. Being a forester by profession, he was able to direct the work of the division with a knowledge of the requirements of the office as well as from the standpoint of a forester. He held this position until 1898, when he accepted the directorship of the New York State College of Forestry in Cornell University, a position for which he is eminently fitted. The work of the college, besides educating professional foresters, includes the management of the college forest, a tract of 30,000 acres, located in the Adirondack Mountains, on which forest management is to be demonstrated.

Dr. Fernow is a Fellow of the American Association for the Advancement of Science, first vice-president of the American Forestry Association, and a member of many other learned societies and of the Academy of Science of St. Petersburg. He holds the degree of Doctor of Laws (L. L. D.) from the University of Wisconsin.

He has written a large number of reports in his official position, and has been lecturing continuously for twelve years in many parts of the United States and Canada for the advancement of the forestry idea. Personally he is a pleasant conversationalist, with an individuality and a vein of humor that is most attractive.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C.H. Mortimer Publishing Company of Toronto, Limited

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICE :
IMPERIAL BUILDING, MONTREAL.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION :
One Copy, Weekly and Monthly, One Year, in advance....$ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.
ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensa ble for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE VALUE OF HEMLOCK.

Of late years the production of hemlock timber has increased both in Canada and the United States, and with this increased production has come about an appreciation in the value. It is beginning to be realized that the difference between the price of hemlock and white pine is too great, and that the former has been selling below its real commercial value. A prominent lumberman made the statement at the recent meeting of the Ontario Lumbermen's Association that in a short time the position of hemlock would be where white pine is to-day.

In the year 1897 the production of hemlock in the States of Michigan and Wisconsin was 462,000,000 feet. This, with the growing scarcity of white pine, has increased each year until in 1901 it was 1,264,000,000 feet. In the States of Pennsylvania and New York, however, the production has declined from the maximun of 1,200,000,000 feet to 600,000,000 feet last year. Hemlock is cut for two purposes, for lumber and for bark. In most cases in this country the two operations are combined, and the person who cuts hemlock trees realizes from the lumber and from the bark. Frequently the timber is cut, however, owing to the necessity of obtaining bark, and the timber is accordingly sold below its market value. This has been a distributing element in the lumber trade, and has also made it difficult for lumbermen to estimate the quantity of lumber in the market. In the face of this situation, however, hemlock prices have advanced until sales of lumber have been made during the past winter at $10 at the mill. Lumbermen are recognizing its enhanced value, and timber limits of which the pine had been cut off have recently changed hands for the sake of the hemlock thereon.

A process has been discovered for making certain kinds of leather without the use of tan-bark. It cannot be said as yet how far the new process will be found successful and will replace leather made by means of tan-bark, but if it should come in general use it might depreciate the value of hemlock timber. At the present time, however, there is a large demand for tan-bark from the tanners of the Eastern States as well as from local manufacturers, one Ontario lumberman recently receiving an order for five carloads for immediate shipment.

COLONIZATION VERSUS LUMBERING.

One of the perplexing questions calling for solution by the governments of Canada is in respect to the privileges which should be accorded to colonists and lumbermen. It is not an easy matter to define the rights of the settler, giving him the scope which he believes he should have, and at the same time properly protect the interests of the lumberman. The various phases of this subject were discussed at the recent meeting of the Canadian Forestry Association in a manner that shows the great public desire for the most practical and equitable laws that can be framed to govern the relation of the one to the other. Doubtless it is in the interest of the country to encourage settlement, but if should not be done, as we fear has been the case in the past to some extent, at the sacrifice of our timber wealth.

The complaint is made by lumbermen that the safety of their timber limits is often jeopardized by the carelessness of settlers; in fact, it is known that destructive forest fires have been caused by settlers. They have been allowed, it is claimed, to enter districts not suitable for settlement, and to take up land which afterwards was found to be not adpated for agricultural purposes. This contention has arisen chiefly since lumbering operations reached the more northerly limits of Ontario and Quebec and brought about, as it were, a new condition of things calling for a different system of managing Crown lands.

We are glad to observe the apparent appreciation by the Provincial Governments of the necessity of remedying some of the grievances which exist. How this can best be done is a question calling for much earnest thought. On one point, however, opinion is agreed, to wit, the necessity of having the country thoroughly explored with a view to ascertaining what land is fit for settlement and what should be reserved for lumbering operations or forest reserves.

Within the last fortnight the Quebec Legislature has brought forward a measure dealing with this subject. It provides for the appointment of a commission of four persons, whose duty shall be :

1. To make a critical study of the law and regulations respecting public lands, woods, forests, colonization societies, works and roads, and the protection of settlers, as well as the carrying out of such laws and regulations.

2. To inquire into the number of causes of the difficulties between settlers and holders of timber licenses, and to devise methods for their prevention and removal.

3. To find out what are the sections of the country most suitable for colonization.

4. To ascertain whether the present colonization roads are sufficient to give access to the good farming lands, whether the extent of the surveyed lands is large enough, and the work performed by colonization societies deserves encouragement.

5. To enquire whether, in the interest of the colonization of the Province, it is expedient to contribute towards the building of certain bridges, and to grant subsidies in lands to certain railway companies.

6. To study the new proposals or systems which may be submitted to it, and whilst taking into account the financial resources of the Province, to recommend those which tend to amend the laws and regulations so as to foster colonization and the development of forest industries.

The above measure is most commendable and would seem to cover the ground thoroughly. It should be the initial step towards the adoption of laws which will be of great benefit to the Province and bring the settler and the lumberman more into harmony with each other.

Associated with this subject is the question of reforestation, which brings up the important matter of the method of disposing of Crown timber. The policy most generally adopted by the Provinces of the Dominion is to sell the timber by public auction, the purchaser paying a certain sum at the time of the sale, and the balance as the timber is cut, the latter being known as stumpage dues. In addition he agrees to pay a certain annual ground rent. This system has in the past been considered fairly practical and satisfactory to all concerned, but the changed conditions existing of late years have brought to the surface one or two of the weak points of the policy. One of these is the difficulty of establishing forest reserves on timber areas now under license. In the case of the Ontario Government the limits are sold to the lumberman with the understanding that the licenses will be renewed from year to year so long as the purchaser desires aud pays the necessary dues and ground rent; consequently it has transpired that in few cases, if any, have limits reverted to the Government, the lumberman choosing to retain them after they had been cut over if only for investment or speculative purposes. Should the Government wish to incorporate as a forest reserve areas now under license, it would be necessary to cancel the license, which, to say the least, would be resented by the lumberman as an unjust procedure. At the last two public sales, the Ontario Government restricted the time of the license to ten years. This cannot be said to be an entirely satisfactory method, as it is open to the objection of stimulating the cutting of the timber and causing an over-production of lumber, as the buyer will doubtless aim to remove all the merchantable timber within the specified time.

In an unofficial paper read at the Forestry Association meeting Mr. Thomas Southworth, who has given some study to the effects of the various systems of disposing of Crown lands, refers to the tenure of lands and points out the chief objection to establishing forest reserves where lands are now under license as being the fact that a perpetual franchise would thus be given the licensee, and that the Crown would receive but a small revenue from the timber. The licensee would then be the owner of the timber beyond all doubt, whereas if the reserve were not established there would exist

the possibility that the Government might cancel the license. The right of the Government to do so, however, has never yet been exercised, and buyers of timber limits consider that they hold a perpetual franchise, as witness the large sum recently paid for a limit that had been purchased from the Government fifty years ago.

The management of our timber lands has in the past been executed in a satisfactory manner. The retention of the title of the lands in the hands of the Crown has been of inestimable value, and we look for the exercise of the same degree of caution and wisdom in the future. It may be found, however, that in order to secure for the people the full benefit of the vast forest resources and at the same time judiciously foster the lumber industry, a radical change in the manner of disposing of the timber may need to be adopted.

EDITORIAL NOTES.

While we are apt to look upon lumbermen as a class of citizens whose attention is engrossed by their particular industry, it is a mistake to assume that the social side of the lumberman's life is neglected. He, perhaps more than any other business man, seeks pleasure and recreation in intercourse with competitors. It was a pleasure the other day to hear the remark of a lumberman who had passed three score and ten that his nature seemed to yearn for the company of those engaged in the same branch of industry. The decision of the Lumbermen's Association of Ontario to held monthly luncheons is a manifestation of this desire for social intercourse. That these informal gatherings will be found both pleasant and profitable is a foregone conclusion, and it should be the aim of the members of the Association to participate in them as frequently as possible. Monthly luncheons have been held for some time by the lumbermen of Buffalo, who have found them of great value. It is proposed that the luncheons shall be of an informal character, matters affecting the trade to be discussed in an open and off-hand manner.

The proposal of the Canadian Manufacturers' Association to establish an office in London, England, as headquarters for Canadian manufactured goods, is one which calls for careful consideration. With movements of this kind, and all legitimate steps destined to extend Canadian trade, we are in entire accord; but it is necessary that the project should be inaugurated and carried out in such a manner as to accomplish the specific purpose in view. We are inclined to think that the results obtained from the so-called "sample rooms" have not always been satisfactory, chiefly for the reason that they have not been properly directed and that the persons in charge have not been sufficiently familiar with the trade of the countries they represent; in fact, the main object of the office has sometimes seemed to be overshadowed by the attention given to social functions. An office of this kind should be of a most practical character. It will, of course, be a difficult matter to place an official in charge who is thoroughly familiar with Canadian trade and also with the requirements of the British market, but it might be found advantageous to appoint a deputy who has the necessary knowledge of British requirements and business methods. If a practical and aggressive policy is pursued, we have no doubt as to the benefits to be derived from the establishment of a Canadian sample room in London.

BRITISH COLUMBIA EXPORT LAW.

It is understood that the Government of British Columbia has made an announcement that the law prohibiting the export of timber from the province will not be repealed. Representations were made by the Loggers' Association seeking to have the law set aside, but the Government is said to be well satisfied with the course of events and to believe that the province will be benefitted materially by home manufacture of timber. Already several representatives of Puget Sound concerns have visited British Columbia with the object of selecting sites for mills.

ONTARIO FORESTS.

The report of the Commissioner of Crown Lands for the year 1901 has been issued. It shows that the total revenue collected from woods and forests during the year was $1,479,847.35. Of this $571,383.59 was derived from bonuses, $63,042.72 from ground rent, $2,272.38 from transfer fees, and $843,148.66 from timber dues. The revenue from timber dues and ground rent was, with two or three exceptions, the largest in the history of the province.

The report states that a step in the direction of bettering the condition of the lumber employee is the establishment among the camps of a system of travelling libraries, for which the sum of $1,200 was voted by the Legislature at its last session. Some twenty-eight or thirty reading and recreation rooms for the purpose have been built by the lumbermen.

As a further result of the prohibition of export of pine logs cut on Crown Lands in Ontario, there was during the year a substantial extension in the sawing capacity of the mills of the province. Several Michigan mill men removed their plants to Ontario, while others erected new mills on this side of the Great Lakes. Examples of this can be seen at Blind River, Sarnia and Sandwich, where mills have been built which have a combined sawing capacity of 150,000,000 feet annually.

It is stated that the number of licensees who had fire rangers on their limits last year was seventy-six. The number of rangers employed on licensed land was 236. In addition to the rangers in the Temagami and Eastern Forest Reserves, there were 10 rangers employed on the Crown domain in the Wahnapitæ, Jocko and Rainy River districts. The total expenditure of the department for fire-ranging, covering one-half the cost of the staff on licensed lands and the whole cost on unlicensed lands, was $29,624.62.

Referring to the pulp wood industry the report states that the progress made during the year by the several companies which are under agreement with the government to build pulp and paper mills was on the whole satisfactory, though in some cases, perhaps, it did not reach so advanced a stage as was expected. The Sault Ste. Marie Pulp & Paper Company operated its mechanical mill throughout nearly the whole year, and has under construction a chemical mill of immense proportions. The Sturgeon Falls Pulp Company have let contracts for the immediate construction of paper mills, and the Spanish River Pulp & Paper Company expect to have a 100-ton pulp mill in operation during the coming summer. The Blanche River Pulp & Paper Company and the Nepigon Pulp, Paper & Manufacturing Company experienced some difficulty in the selection of suitable sites for their respective mills, but have had plans prepared and expect to proceed immediately with the erection of their mills. The Keewatin Power Company has expended $500,000 on their water power on the Winnipeg river, but nothing has yet been done in the construction of mills. Owing to heavy freight rates they will probably be unable to market their product in the east, and accordingly have recently been directing their attention towards the markets of Japan, New Zealand and Australia.

The Late John Harrison, of Owen Sound.

Following is a comparative statement for two years of the area under license and the quantity of timber cut on Crown lands :

	1900	1901
Area under license	16,732	18,191 acres.
Pine saw logs	643,510,766	598,433,958 ft. B.M.
Other saw logs	36,721,998	40,216,917 ft. B.M.
Boom and dimension timber	34,724,488	38,011,890 ft. B.M.
Square white pine	1,919,230	1,755,881 cubic ft.
Birch timber	2,380	5,023 cubic ft.
Ash timber	555	2,229 cubic ft.
Pile timber	524,387	719,107 ft. B.M.
Cedar	135,008	170,826 lineal ft.
Cordwood	29,184	37,724 cords.
Tanbark	1,253	7,948 cords.
Railway ties	1,143,374	1,449,427 pieces.
Posts	5,309	5,319 cords.
Telegraph poles	9,784	24,238 pieces.
Shingle bolts	1,145	1,087 cords.
Head blocks	164	660 pieces.
Pulp wood	65,051	44,738 cords.

Malloch's saw mill at Arnprior, Ont., will be operated this season by J. R. & J. Gillies.

The Canada Shingle Company have been operating a small shingle mill near Hastings, B. C. As a result of the provincial legislation prohibiting the export of logs, the company are building a large mill at Vancouver, utilizing as far as possible the old Buse mill. Twelve improved Dunbar shingle machines are being installed.

WESTERN RETAIL LUMBERMEN'S ASSOCIATION.

The annual meeting of the Western Retail Lumbermen's Association of Manitoba and the Northwest Territories was held in Winnipeg on February 19th. There was a large attendance of members, and the chair was occupied by the president, Mr. Henry Byrnes, of Winnipeg. At the first session consideration was given to the question of mills holding honorary membership opening retail yards within the jurisdiction of the association. It was pointed out that this was contrary to the by-laws. The matter of price cutting between members of the association was also taken up and ventilated to the evident satisfaction of a number of members who have suffered to some extent from this sort of disadvantage. The questions of competition from non-members and wholesale dealers selling retail were taken up and as a result of the discussion a better understanding was reached.

At the evening session honorary members were also admitted. The president read his annual address, as follows :

PRESIDENT'S ADDRESS.

Gentlemen and Members of the Western Retail Lumbermen's Association :

For the esteemed honor you have conferred upon me by electing me as your president for three consecutive years to preside over such a large and intelligent body of business men, I desire to express my heartfelt thanks, and I assure you I rejoice greatly in again having the privilege of greeting you with a hearty welcome in attendance at this, the eleventh annual meeting of this association, and I am sure its affairs will receive full and complete deliberation.

I am glad to be able to congratulate you as well as myself upon the bountiful harvest of the past year, which our Almighty Creator in His divine providence has blessed this country with, which has brought prosperity to our business along with the other business avenues of the community.

I have to report to you that the board of directors, having received pressing requests from the lumber dealers in the Territories to extend our association to the dealers in the Northwest Territories, and upon receiving authority from the board of directors to visit that district for the purpose of meeting such dealers, I, along with the secretary, proceeded early in May west to Medicine Hat, Calgary and the outlying places north of Edmonton. We were everywhere met with a desire to become members of this association, resulting in a much increased accession to our membership. It has, however, been found, owing to the great distance from here, to be necessary to form a special board or executive committee and a secretary at that district, with power alone to deal with matters pertaining to that district, and to arrive at such an arrangement, a delegate, Mr. Cushing, of Calgary, has been appointed to confer with this meeting on the matter. Mr. Cushing at present is with us.

During the year some complications of an arbitrary kind arose, which came before the directors, but the peculiarity of the circumstance rendered such beyond the control of the board. The fact was this, that the Winnipeg Association, which has hitherto been affilated with this association, has a member who was not also a member of our association. This precluded us from taking any action to discipline him. The party in question disregarding our association, shipped in car lots to points where price list was established, and sold his lumber at cut prices, thus being detrimental to the active member at the point in question. This is a very disturbing element to be contended with by active members not very far distant from Winnipeg.

The board of directors becoming aware of the fact that the reciprocal clause of the by-laws was not generally adhered to by some active members, and in some cases by the honorary members, it was resolved to deal more severely with such cases, and insist upon reciprocal buying and selling to and from members only. This is a matter of great consequence to the beneficial working of the association, and it does not appear to me that any good reason exists for violating this clause, considering the large number of honorary members on our list.

I now wish in conclusion to offer my grateful thanks for the many courtesies extended to me as your president, by both yourselves and the very capable board of directors, which it has been my good fortune to be associated with during the year.

HENRY BYRNES, President.

The address of the President was adopted, as was also the report of the Secretary-Treasurer which follows :

SECRETARY TREASURER'S REPORT.

Mr. President and Gentlemen :

I am glad to be present with you to-day and as your secretary I along with the worthy president extend to you a hearty greeting, and I am sure your attendance and deliberation at this meeting will be found to be of much advantage to this association.

In making the annual statement I have to add thereto for outstanding dues as follows :

1900	30.00
1901	332.50
	$362.50

Out of this amount I estimate $300.00 will be paid and I have already received $80.00 since making the financial statement. I estimate that there will be about six delinquents who have withdrawn from the association or are about to do so, being in part some of the Winnipeg active members, who have refused to pay, but may do so later on. I think it quite safe to state that our surplus up to the end of the year may be given as $3,000. The membership now stands at 244 active and 37 honorary members.

The interest in the association throughout continues unabated, and is regarded as an important feature in the lumber business. Indeed I find that any party who desires to enter the lumber business the first thought is to obtain membership of this association, and from the many applications of such nature which I receive I am prepared to give much to the credit of the loyal influence of honorary members and their representatives in suggesting this course to parties contemplating the lumber business.

During the year several instances have been brought to our notice when active dealers have been wrongfully interfered with by the wholesale dealers, some of whom were honorary members.

Along the line of the Glenboro railway, and in one case on the main line, an honorary member was led to ship to a non-member through the interest of a poacher, to the injury of a few of our active members. I was able, through correspondence and personal interview, to get the honorary member to stop further shipments to non-member, and so far as I know has not done so since the spring months.

There have been, perhaps, a few flagrant cases of this nature by the honorary members who are dealers in white pine, and I am sorry to have to state that we were unsuccessful in having a commission paid to the dealer interfered with in such cases, but a promise was given that shipment to non-members would not be made further. However, I think the honorary members have been sinned against by the active members in making purchases from non-members to a greater degree, in many localities, than the active members have been sinned against by the honorary members in selling to non-members. It is a poor rule that does not apply both ways.

Now, while on this point I wish to emphasize and impress this fact: that the dealer need not violate this rule long, as should he decline to buy from a non-member such wholesaler as may be nonplussed in not being able to make sale will very soon realize that it is to his own interest to become an honorary member so as to secure the desired trade. As to this, I again ask your thoughtful consideration and appeal to a sense of fairness one to another when tempted with a chance of making a few dollars by violating the rules in purchasing.

Again I am sorry to state that I have had before me a couple of cases in which one member has been shipping lumber to a point of another member at less than the established price. In the one case a settlement was arrived at between the dealers concerned. In another case a shipment of five cars was made by one active member to the points of two other active members at cut prices. In this case a penalty of $50 was levied and paid out to the dealers interfered with in proportion as they were affected.

The active members of Winnipeg are out of harmony with each other in their business interests, with an ominous outlook for trouble, from which country points are likely to suffer in a similar way as some active dealers suffered last year, through one of the dealers of the Winnipeg Association, but not a member of our association, shipping in lumber to non-members at less than the established price at the point in the question. During the year we had to expel a member for storing lumber for sale at a point where he was not a member and refusing to withdraw from that point. We were also for similar reasons compelled to suspend another member, who, however, undertook to withdraw from the point and his suspension was removed.

The president has referred to the extension of our association to the Alberta district as far west as Calgary and north to Edmonton. In that district we received an accession of 30 members to our list. The dealers are very enthusiastic members, but as yet are not on the whole quite as familiar with the rules and by-laws as many of our old members are.

They certainly should have a special board and secretary for that district to investigate and dispose of their local grievances. The matter will be brought up for discussion at your hands and an amendment should be made to the by-laws to meet this special circumstance of the great distance from here.

The charge often meets me that some dealers do not keep sufficient stock for the requirements of the trade, and I should like to hear your views as to what should govern as to a sufficient stock. I know that the condition of the volume of business to be done should be considered.

I have to thank the president for valuable assistance given me in his keen interest in the welfare of the association.

I also thank the board of directors for their valuable advice, cheerfully given at all times when requested.

ISAAC COCKBURN,
Secretary-Treasurer.

A memorial was presented to the meeting, asking the members to purchase only from members of the British Columbia Lumber and Shingle Manufacturers' Association when obtaining supplies from British Columbia. The matter was referred to the board of directors.

W. H. Cushing, of Calgary, was present as representative of the retail lumber dealers of Alberta and the western portion of Assiniboia. He stated that the dealers of his territory desired a local committee or board to consider membership proposals and other matters of interest to the far western members. On motion it was agreed to allow the western members to have a committee of five.

Mr. Cushing next brought up complaints against three British Columbia manufacturing concerns, who had sold bills of lumber to consumers or others not entitled to purchase wholesale, to the detriment of the regular dealers.

Mr. Campbell, of Melita, administered a lecture to those charged with this offence, and it was agreed to leave further action in the matter to the new board of directors.

Election of officers was next taken up, and resulted as follows : President, J. L. Campbell, Melita ; vice-president, A. M. Stewart, Morden ; board of directors, Thos. Turnbull, Manitou ; J. K. Robson, Treherne ; T. Meredith, Yorkton ; W. H. Duncan, Regina ; W. W. Ireland, Carberry ; D. E. Sprague, Winnipeg.

For the above report of the meeting we are indebted to the Winnipeg Commercial.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 24 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VIII. TORONTO, ONT., MARCH 26, 1902 No. 8

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:

IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday, Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at ome and abroad.

Lumberman, Monthly. A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED—A RAFT OF PINE LOGS ON Georgian Bay; apply at once to Box 20, CANADA LUMBERMAN.

CUSTOM SAWING

Can contract for one million feet or more, pine or hemlock; good shipping facilities. Write, SIMS LUMBER CO., Sault Ste. Marie, Ontario.

FOR SALE.

SAW MILL, CAPACITY 15,000; A BARGAIN for cash; f. o. b. G. T. R. or C. P. R., for $800. Box 156, Thamesville, Ont.

WANTED.

A FIRST-CLASS CIRCULAR SAWYER, must understand cutting dimension timber. Apply giving references and wages expected, to A. & P. WHITE, Pembroke.

TELEPHONE POLES FOR SALE.

THE UNDERSIGNED HAVE IN STOCK, and ready for shipment, 5,000 cedar telephone poles, in all lengths from 25 to 65 feet. Prices given on application for lots of one carload or more, f. o. b. here, or delivered at points required in Canada or United States. GEORGE & MCGREGOR, Killaloe Station, Ont.

SPECIAL TO LUMBERMEN.

WITH A THOROUGHLY EQUIPPED PLANING Mill at Orillia, we solicit orders for re sawing and planing of lumber, in any quantity; can match 26 inches wide; all work guaranteed first-class; prices on application. Address, NATIONAL BOX CO., Orillia, Ont.

DRY PINE.

WE HAVE ABOUT 1,500,000 FEET DRY PINE in 1, 2 and 3 inch common and better, prefer selling in bulk. Will quote freight rate to Buffalo, Chicago or Toronto on application. Correspondence solicited. N.B.—Would like to correspond with consumers of hardwoods. ST. JOE ISLAND LUMBER CO., Sault Ste. Marie, Ont.

WANTED—HARDWOOD LUMBER.

SOFT ELM, BIRCH, BLACK ASH, 1STS and 2nds preferred. J. F. STENGAL, 990 Ellicott Square, Buffalo, N.Y.

TIMBER SAWYER WANTED.

FIRST-CLASS MAN WANTED BY APRIL 1st for fast circular steam feed mill. Address, COLUMBIA RIVER LUMBER CO., Golden, British Columbia.

FOR SALE.

Rock Maple Peavey Handles, in any quantity. Lengths, 4 ft. 10 inch, to 5 ft. 6 inch. Write for quotations; prices will surprise you. DOUGLAS BROS., Stanley, N. B.

$8,000 WILL BUY A GOOD NEW Circular Sawmill; first-class site, mouth Thessalon River, and 3,000,000 ft. of standing pine, hemlock, cedar and birch, very convenient; mill alone worth more money. Apply DOBIE & CO., Thessalon, Ont.

WANTED.

NO. 1 SAWED SPRUCE OR PINE STAVES wanted. The above to be 23 in. long, plump ½ in. thick, and free as possible from knots and to be of standard, average width. Address, stating price, to M. CARL, Cooper, Goderich. Ont.

POSITION WANTED.

AS LUMBER SALESMAN; CAPABLE OF sorting lumber; have a thorough knowledge of the lumber business, having been connected therewith for fifteen years; not afraid of work. Address Box 37, CANADA LUMBERMAN, Toronto.

FOR SALE.

ONE HARDELL COMPOUND ENGINE, 45 h. p.; 1 Stave Machine and bolt Equalizer; 1 Shingle Machine with Saw Jointer and Bunchers; 42' 14" 5-ply Balata Belt; Mill Carriage Feed Gear, Saw Rig, Bull Wheel, Slab Saw, Shafting and Belts. All good as new. GEO. F. WEBSTER, Creemore, Ont.

FOR SALE.

100,000 ft. Dry 1", 1¼" and 1½" Maple.
30,000 ft. 1" Birch.
130,000 ft. 1" 1¼", 1½" Beech.
120,000 ft. 1" dry Pine, No. 1 Mill Culls and Box and Better Shorts.
Lath, Shingles, Pine and Cedar Timbers, etc.
A. P. EBERT, Wiarton, Ont.

CANADIAN TIMBER WANTED.

The advertiser solicits correspondence from Canadian firms who may be in position to supply ash, walnut and quartered oak timber for the New Zealand market. Address, in the first instance, "New Zealand," care of CANADA LUMBERMAN, Toronto, Canada.

PARTNER WANTED.

A MOWNER OF A ROTARY SAW-MILL with 40 horse-power boiler and engine; also six square miles of lumber licenses, timbered chiefly with pine and hardwood; near railway station in N. B. Am desirous of entering into a partnership to turn the business into a general wood-working establishment. Address "Pine," care of this paper, for further particulars.

FOR SALE.

100,000 feet of 1 x 6, 8 and 10 pine, 10 to 16 feet, common and dressing.
50,000 1 inch chestnut, wormy, and common and better.
20,000 1 inch soft maple.
20,000 3 inch soft maple.
12,000 1 inch soft elm.
30,000 1, 1½, 2 inch red oak.
Piece stock in Red and White Oak, Black and White Ash and Chestnut.
To cut to order { 40,000 of choice beech. 50,000 of hard maple.
Full particulars on application. THE LEISHMAN MAUNDRELL CO., Woodstock, Ont.

CURRENT TRADE CONDITIONS.

ONTARIO.

With one exception the outlook for the lumber trade is of the brightest character. That exception is the possibility of labor troubles in one or two of the larger cities of the province. Whether the present difficulties will be amicably arranged is a matter of much uncertainty, but with this obstacle removed there will doubtless be a large amount of building throughout the province. The demand for lumber during March was considerably greater than in the previous month. The heavy buying by United States concerns has continued. It is estimated by one who recently visited Georgian Bay manufacturing points that the greater portion of the coming season's production has already been contracted for. This is probably correct, inasmuch as the possible production has been reduced by the early breaking up of logging operations. In addition to the shortage in the quantity of logs that will reach the streams, it is probable that there will be low water for driving and that many logs that have been successfully banked will not reach the mills. The weather conditions of this spring would seem to have removed all prospects of lower prices for white pine during this year, and it would not be surprising if there should be a material appreciation in some grades. Even if the British market should continue depressed, there will be no difficulty in marketing all the lumber manufactured, as a considerable shortage in the production of the United States is predicted. Hardwoods hnve at last followed the course of white pine and are showing improvement. The buying is of a character which augurs well for the future. Dealers report no difficulty in effecting sales. One dealer who took the road for a couple of days ostensibly for the purpose of getting in touch with the situation reports that he was given orders for several carloads of hardwoods. The more sanguine ones predict that there will be a decided shortage in hardwood lumber during the year, as dry stocks are not large and the productiou of logs last winter was much below the average, perhaps not more than one-half that of 1900. In a certain section of the Wiarton district where three million feet of hardwood logs were taken out one year ago, not more than one million was cut the past winter. In quality, however, the logs are beiter than usual. There is a good demand for cedar and hemlock, of which the stock is light. Hemlock readily brings $9.50 at the mills. White pine shingles and lath are practically out of the market and buyers have almost given up searching for them. Hemlock shingles are bringing $2.40 and $2.50 at the mill.

QUEBEC AND NEW BRUNSWICK.

In order to take advantage of the exceptionally low freight rates now ruling, a considerable quantity of deals has been shipped to England by the regular liners from St. John to Halifax. Accordingly, the small wintering stocks at these ports and on the Miramichi will be almost depleted by the opening of navigation, and the first open-water shipments are likely to be lighter than usual. The market for spruce deals is likely to be firm through the spring months at least, and the early breaking up of winter cannot but have the effect of strengthening prices. The present indications are that the stock of logs which will reach the mills will not be sufficient for the season's requirements and will bring about a reduction in the lumber output. It is expected that large shipments will this year be made to South America, France and Germany. There will be considerable activity this season in square and waney timber, as it is estimated that the cut during the past winter was considerably greater than usual. There continues to be a good demand for clapboards and shingles for shipment to the Eastern States.

MANITORA AND BRITISH COLUMBIA.

Building operations in Winnipeg are starting off with a boom, and promise to be more brisk than for some years. Architects have plans in hand for many important buildings, including one to be built by Lord Strathcona which will cost about $150,000 and will require nearly one million feet of lumber. The extent of the lumber demand, however, will be to some extent in proportion to the movement of wheat. At the present time immense quantities of wheat have not been moved and elevators are being built to accommodate the surplus of last season's record crop. Prices of lumber and shingles are unchanged, although an advance in the price of British Columbia fir flooring and some lines of British Columbia cedar lumber is talked of. The lumber trade of British Columbia is quite

active. Seven vessels are loading lumber at Vancouver for export, shippers evidently wishing to take advantage of the present low freights. Large orders have been placed with Vancouver mills for piles for shipment to the Phillipine Islands, but it is feared that the exportation of piles is prohibited by the recent legislation. There is an active demand for cedar logs and prices have advanced $2 per thousand feet. The price of shingles is also firmer, although no sustained advance is looked for.

UNITED STATES.

The probability of an early opening of navigation is regarded favorably by wholesale dealers in the Eastern States whose stocks of white pine have become broken and who feared that they would not have a sufficient supply for their customers. The demand in the east is showing considerable activity, even the lower grades being more inquired for than for some time. Further advances have been made in the price of uppers, which are now selling in the Buffalo market at $70 for 1 to 2 inch and $75 for 2½ to 4 inch. Inch No 1 cutting-up stock has been advanced to $40 at Buffalo and Tonawanda. Our Bay City list this week shows an advance of $2 in 1 to 2 inch uppers and 1 to 1½ inch selects, and $4 in No. 2 inch cutting-up stock. Twelve-inch barn boards in all grades are marked up $2. There is a great scarcity of 12-inch boards. Manufacturers in the Lake Superior district will endeavor to make a large cut in the sawing season now approaching, but the short supply of logs will likely restrict the production. The spruce situation is gaining strength. Special frames for immediate delivery are quoted fifty cents higher, while randoms are a little weaker. Hardwoods are going into consumption quite freely. Dry stocks have become nearly exhausted and the outlook is encouraging for higher prices for all kinds of hardwoods. Basswood and oak are particularly scarce. Birch is in good demand, but ash and maple are moving slower than the other varieties. The recent advance in the price of hemlock lumber has been maintained and has apparently not affected the consumption, as the demand continues strong. The manufacturers in Michigan recently made an advance of $1.50 per thousand.

GREAT BRITAIN.

The desire of importers to reduce their stocks before the new goods arrive is responsible for a large quantity of lumber being offered at auction during the past fortnight. Spruce and pine deals comprised almost the entire catalogue of a sale by Foy, Morgan & Company, London, on March 12th. Prices on the whole were well maintained, although odd sizes did not sell nearly as well as regulars, the quantity of which is quite limited. First quality Quebec pine 3x11 brought £24 15s for 11 feet and 3x9 inch £18. Second quality 3x11 sold at $16. Quebec spruce was well taken on the basis of £9 5s for 3x9 inch third quality. The red pine was in little demand, and it is said that the prices realized in many cases represent a loss to the importers.

There is considerable buying of square timber. Oak suitable for wagon making is in demand, particularly in Scotland, where stocks are low. For prime timber 2s to 2s 4d per cubic foot is readily obtainable. Good ash logs are likewise in request, the quotation for them being about 2s per cubic foot.

So far as buying of this year's production is concerned, we are told that little progress has been made, and that shippers and importers must come nearer together in their ideas of prices before there will be much life to the trade. Nevertheless, Canadian shippers are said to have met with fair success. It is reported that they have reduced their prices in some instances and have made sales at £9 c. i. f. for 3x9 second quality spruce and £8 10s for third quality. A report from Belfast, Ireland, states that there has been considerable business done in Canadian spruce for spring shipment at advanced prices, although it is believed that the market will weaken towards midsummer. Sales of waney board pine have been made at very satisfactory figures.

STOCKS AND PRICES.

Gilmour & Company will have a quantity of lumber cut this season at Carew's mill at Lindsay, Ont.

The Rathbun Company, of Deseronto, took out some 35,000 logs and railway ties in Cavendish township during the past winter.

Present quotations for shingles at Buffalo are $4.50 for the best grade of 18-inch pine and $4.25 for red cedar Perfections.

The Revelstoke Lumber Company, Revelstoke, B. C., have secured a stock of about 3,500,000 feet of logs for this season's sawing operations.

James Ludgate, of Seguin Falls, has taken a contract to drive all the logs for the William Peter Estate and the Parry Sound Lumber Company that go down the Seguin river.

The Saginaw Lumber & Salt Company, of Sandwich, Ont., put in 200,000 feet of board pine last winter in the Georgian Bay district, which has been sold to Quebec parties for export.

It is reported that J. & T. Charlton, of Collingwood, have sold their entire season's cut, the last sale reported being 6,000,000 feet of white pine to Fish, Bradley & Company, of Bay City, Mich.

The cooperage market does not show the normal amount of activity for this season. Stock is offered freely. In the Minneapolis district some strength is exhibited and $8.50 is being asked for No. 1 Michigan staves.

Tonawanda and Buffalo dealers are reported to have purchased about 10,000,000 feet of white pine from the Ontario Lumber Company, to be manufactured this season at the company's mills at French River, Ont.

Twenty-seven car loads of square timber have been shipped this spring by Mooney & McDougall from Almonte to Quebec. The timber is pine, oak, ash and rock elm and is destined for the Liverpool market.

Destructful floods occurred last week in several sections at New Brunswick. By the breaking of a dam at Lepreaux 3,000,000 feet of logs owned by J. A. Gregory, of St. John, were carried away. They had been cut and hauled along the river banks ready for the spring drive. Mr. Gregory estimates his loss at $15,000.

The following vessels are loading lumber at Vancouver: "Reuce," for Sydney, Australia; "Andromeda," for Callao; "Rose," for Geraldtown; "Amaranth," for Taku; "Adderley," for Sydney; "Prince Louis," for Cardiff.

Keenan Bros., of Owen Sound, Ont., have purchased the mill of the Goderich Lumber Company at that place, together with their stock of dry lumber now in the yard, amounting to about 1,500,000 feet of hemlock, cedar and pine. They have also secured about 3,000,000 feet of hemlock and hardwood logs for this year's supply, and expect to have the mill in operation very shortly.

At a recent auction sale held by Churchill & Sim, London, England, oak timber sold at a range from 82s 6d per load for 12½ x 18¼ inch, 14 to 29 feet long, to 105s for 10 x 16 in., 31-47 ft. Ash timber from Quebec sold at the following prices: 13-21 in., 12 to 14 ft. long, 36s per load; 12½ x 15 in., 14 to 30 ft., 55s; 12 1/2 x 15 in., 14 to 29 ft., 47s; 11 1/2 x 15 1/2, 10 to 17 ft., 45s; 12¼ x 15 1/2, 15 to 30 ft., 47s; 12¾ x 16, 8 to 21 ft., 45s. A small quantity of elm timber, 11¾ x 12 1/2 in., 26 feet long, brought 41s per load of 50 cubic feet.

It is estimated that the cut of logs last winter on the South-west Miramchi, in New Brunswick, was a little more than one-half that of the previous winter, the shortage being due in a large measure to the scarcity of men and the high price of supplies. The cut of the different firms is given as follows: William Richard & Company, 11,000,000 feet; T. Lynch, 7,000,000 feet; M. Welsh, 5,000,000 feet; H. Bentley, 3,000,000 feet; E. Hutchinson, 500,000 feet, a total of 26,500 000 feet. The cut on the Restigouche river will be about 20,000,000 feet, as compared with 30,000,000 feet one year ago.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

Business is dull in local lumber circles shipments by rail being light. The American inquiry is not as active as it was a month ago, but better things are expected with the resumption of operations at the mills.

It is now a settled fact that the new mill talked of for several months will not be built before the autumn months at the earliest, and perhaps not till next spring. Difficulty over the question of transportation has caused a delay. The mill will probably be built at Deschenes.

All last year's mills will be operated again this season, and the small mill on the Bronson property at the Chaudiere, may be fitted up for a season's cutting. Gillies Bros. will operate four mills, one Bræside, one at Black Point, one at Sandy Hook, and one at Folger.

A gentleman who has just returned from the Kippewa and Temiscamingue districts confirms the report that the recent thaw has placed several of the lumber operators in a tight corner as regards the movement of their logs. All, however, hope to get most of this season's cut out of the woods before the roads break-up. One feature of the winter's operations was the amount of square timber produced. It was equal to that of any year in the previous decade. Fully 1,500,000 cubic feet of square timber will be rafted and floated down the Ottawa during the coming summer. Thomas Munro, of Pembroke, has four rafts, and Robert Hurdman, of Ottawa, three rafts, the combined cut amounting to about 900,000 cubic feet. The Rideau Lumber Company got out a couple of smaller rafts and other operators gave the square timber attention. Mr. Munro will be able to get his logs down early, as they are piled on the bank of the main stream of the Ottawa. The early break-up has made the transfer of fodder and supplies to the limits a difficult matter. Most of the operators were actively engaged in this branch of the work when the roads were broken by the thaw. They will have to complete their delivery by wagon and jumper at double the cost.

A feature in the market is the good prospects for spruce. This lumber was looked on for some time past as a poor seller at low price. Reports from New York show that it is in increased demand and likely to command better prices. This will prove gratifying news to mill owners who are going to cut any considerable quantity of spruce. The only hardwood that is in active demand is basswood.

The Rideau Lumber Company will cut considerable stock at Hagar & Company's mill at Plantaganet during the coming season.

Mr. Robert Hurdman's output of logs for the season just closing was between 82,000 and 100,000.

The best sale of the past few days was that made by Mr. T. A. Low, of Renfrew, who sold 3,000,000 feet of Barnet Low's stock cut at their mill at Little Current to a North Tonawanda firm.

No change in quotations is reported on the local market. Lath, shingles anp deals remain firm in price.

Mr. Wm. B. Bartram, late sargeant of Strathcona's Horse, and now representing Davidson & Thackray, of Ottawa, in Cape Town in the lumber business, has been elected a member of the Chamber of Commerce for South Africa.

The government has changed the position of the slides at the Chaudiere Falls on the Ottawa River in order to improve the water power and faciliate the passage of timber.

Ald. Charles Desmarais, of Hull, contractor for telephone and telegraph poles, reports the last winter's cut below the average. The deep snow and the short season combined to make the work in the bush difficult. Ald. Desmarais had 80 men at work and secured about 4,000 poles in the Gatineau and Pontiac districts. The supply, he states, is far short of the demand and he has had half a dozen offers for his entire stock. He looks for an advance in price.

Mr. Wm. Mackey, the veteran lumberman who recently sold his limits to Mr. J. R. Booth for $655,000, has presented St. Patrick's R. C. church with a new altar costing $5,000. It was consecrated on St. Patrick's Day. A tablet bearing mention and appreciation of Mr. Mackey's generosity will be placed in position in the church shortly.

The prospects for the season's building in Ottawa are good. Rumors of strikes furnish the only dark streak in the prospect. All the mill owners look for an active local demand. Shingles are exceedingly scarce and are bound to advance in price with the resumption of building operations.

OTTAWA, March 23rd, 1902.

THE BOSTON MARKET.

The outlook for spruce lumber is very strong. Freshets have carried supplies of logs down river, while the season for lumbering and getting new logs has been cut most decidedly short by the very early departure of the snow. The late drive last year contained 28,000,000 feet of logs for Bangor. About 5,000,000 of these logs were carried out to sea by a freshet early in the winter, and now the present freshet has carried at least 12,000,000 out to sea. Hence the Bangor supply must be very small till new logs come down. Meantime, the demand begins to improve, with every indication of a good business, and leading spruce men feel sure that under such conditions prices are extremely likely to go still higher, although already about the highest on record: Ten and 12 inch dimensions, $20; 9 inch and under, $18; 10 and 12 inch random lengths, 10 feet and up, $19.50; 2x3, 2x4, 2x5, 2x6, 2x7 and 3x4, 10 feet and up, $16.50; all other randoms, 9 in. and under, 10 feet and up, $17.50; 5-inch and up merchantable boards, $16; matched boards, $18 to $19; out spruce boards, $13; bundle furring, $16 to $17.

Hemlock is well sustained with the demand good: Boards, 12, 14 and 16 feet stock, $15 to $15.50 for good eastern; Vermont, $13.50 to $14.50; random, eastern, $13.50 to $14.50; Pennsylvania, No. 1, $16 to $17; No. 2, $14.50 to $15.

The great strength in the white-pine position is continued, with quotations very firm: Uppers, 1-in. $75 to $80; 2½ and 3 in. $80 to $85; 4-in. $85 to $88; selects, 1 to 1½ in. $68; 2-in. $69 to $70; 2½ to 3 in. $74 to $76; 4-in. $79 to $80; fine common, 1-in. $56 to $58; 1¼ to 1½ in. $62 to $66; 2-in. $68 to $70; 2½ and3 in. $69 to $71; 4-in. $80; barn boards, $23 to $33; coffin boards, $27 to $32.

Hardwoods are in quiet request, with prices very firm: One-inch, whitewood, $38 to $40; thicker, $39 to $42; ⅝ inch, $30 to $35; saps, inch, $25 to $30; common, $23 to $25; quartered oak, $56 to $65; fancy, $70 to $75; plain oak, $40 to $47; black ash, $40 to $50; white ash, $45 to $55; cherry, $90 to $130; maple, $32 to $40.

Shingles are in short supply and firm, though the demand is small: Extra cedar, $3.25 to $3.35; clear, $2.85 to $2.95; second clear, $2.35 to $2.50; sap, $2.10; extra No. 1, $1.75 to $1.90; Washington and British Columbia red cedar, 16-inch, five butts to 2 inches, $3.45 to $3.50; 18-inch, $4.25 to $4.50.

Clapboards are very firm, with the supply small. The demand is also small: Extra spruce, $38 to $40; clear, $36 to $38; second clear, $33 to $35; extra No. 1, $24 to $26.

Laths are very firm: One and five-eighths inch, $3 to $3.25; 1½ inch, $2.90 to $3.

BRITISH TIMBER SALE.

A large quantity of pine and spruce lumber was disposed of at an auction sale held by Foy, Morgan & Company, London, England, on March 12th. The large quantity offered "without reserve" is said to have had a depressing effect on the bidding, but on the whole prices throughout were better than anticipated and it is considered that the demand for both pine and spruce is improving. This is especially the case with the New Brunswick spruce. The result of the sale is given below:

PINE.—Ex. Ontarian, from Quebec.—12 ft. 3x11 first quality, £24 15s per std; 14-16 ft. 3x11, £25; 10-11 ft. 3x11, £22; 14-16 ft. 3x10, £17 16s; 13-16 ft. 3x9, £18; 13-16 ft. 3x8, £16 15s; 11-12 ft. 3x7-10, £13 15s; 9-10 ft. 3x7-10, £15 15s; 6-9 ft. 3x11-20, £19 10s; 6-8 ft. 3x7-10, £15 5s; 12 ft. 3x11, second quality, £15 15s; 13 ft. 3x11, £16; 14 ft. 3x11, £15 10s; 15 ft. 3x11, £15 15s. Ex. Prome, from Quebec—10-16 ft. 2x9 in. unassorted red, £10 5s per std; 10-17 ft. 2x7, £8; 10-16 ft. 2x4, £8; 10-18 ft. 2x5, £6 15s. Ex. Rosarian, from Quebec—11 ft. 3x11 in. first quality, £24 15s and £25; 10 ft. 3x11, £24 10s; 12-13 ft. 3x10, £18 15s; 12-13 ft. 3x8, £18 10s. Ex Bawtry, from Quebec—12 ft. 2x6-12 in. first quality, £19 5s; 11 ft. 2x6-13, £18 5s; 10 ft. 2x5-13, £17; 11 ft. 3x11 in. second quality £15 5s; 10 ft. 3x11, £16 5s. Ex. Strathavon, from Gander Bay, Que.—12-17 ft. 3x11-21 in. first quality, £22 10s; 12-18 ft. 3x5-8, £11 10s; 12-17 ft. 3x10, £9 15s; 12-18 ft. 3x9, £10 15s; 12-18 ft. 3x8, £9; 12-13 ft. 3x7, £9; 12-13 ft. 3x6, £9 5s; 12-18 ft. 3x4, £8 10s; 9-11 ft. 3x9-18, £10 10s. Ex. Manchester Shipper, from Quebec—12 ft. 3x11 in. first quality, 25 5s; 13 ft. 3x11, £25 10s; 12-18 ft. 3911 in. first quality, red, (planed one side and both edges), £16; 12-18 ft. 1x10 1/2, £13 5s; 12-18 ft. 1x9, £14; 12-18 ft. 1x8, £11 10s; 12-15 ft. 1x8 1/2, £11 15s; 12-18 ft. 2x9-10, £17; 12-18 ft. 1x11 in. second quality, red, £12 10s; 12-18 ft. 1x10 1/2, £9 10s; 12-18 ft. 1x9, £11 10s; 12-18 ft. 1x8 1/2, £9 5s. Ex. Vera, from Montreal—14-24 ft. 4x11 in. third quality red, £9 15s and £10; 16-24 ft. 4x11, £9 15s; 12-22 ft. 3x11, £9 5s; 9-25 ft. 3x7, £9; 12-22 ft. 3x7, £9 10s. Ex. Andoni, from Montreal—13-16 ft. 3x10 in. second quality, £13 15s; 14-16 ft. 3x9, £13 10s and £11 10s; 13 ft. 3x8, £11 10s; 13 ft. 3x7, £11 5s; 14-16 ft. 3x7, £11; 10-16 ft. 3x9-10 in. third and fourth quality, £8 5s. Ex. Montenegro, from Montreal—12 ft. 3x11 in. second quality, £16 5s; 11-13 ft. 3x11, £16 10s; 12-18 ft. 1¼x9, £8 5s. Ex. Nyanza, from Quebec—12-18 ft. 3x7 in. second quality red, £7 15s; 13-18 ft. 3x7 in. third quality red, £6 15s and £7; 11-13 ft. 3x10 in. second quality white, £12 5s; 12-13 ft. 3x9, £12; 12-13 ft. 3x7-8, £11 15s; 11 ft. 3x9, £11 10s. Ex. GRADING OF CANADIAN PINE.

The threatened boycott of Canadian pine by British importers as the result of the adoption by shippers of what was claimed to be a lower standard of grading has evidently been abandoned, as in the last issue of the Timber Trades Journal we find the following under the heading of "The Culling of Pine":

"The sub-committee of the Importers' Section of the Timber Trade Federation appointed to deal with the culling of pine has been in correspondence with the shippers, the negotiations culminating in a conference on Friday last week. A circular has now been issued by the Federation, in which it is stated that as the result of the interchange of views it has become evident to the committee that the resolution binding many members not to contract for new supplies of pine unless shippers undertook to revert to the old style of bracking cannot be maintained in face of circumstances which have been brought under their notice. At the same time the committee feel that the protest which has been made by importers has not been without practical effect in emphasizing the dissatisfaction which has existed in regard to the new culling, which was admitted by the representatives of the shippers to have greatly improved, the bracking towards the end of the year being better than previously. It has been explained to the committee that as regards shipments for the present season it would be quite impossible to obtain anything like the old culling, but they are informed that sales have been effected subject to a guarantee that the culling was to be "equal to that prevailing towards the end of last season, which was understood to be better than that immediately preceding it." In view of the determined and somewhat assertive attitude originally taken, the decision comes somewhat as a surprise. Possibly a more diplomatic course of procedure in the first place would have saved the Federation some loss of dignity."

New Mill Erected 1901. Capacity 100 Million a Year.

Spicer Shingle Mill Co., Limited

It is not the purpose of this advertisement to try and convince the Lumber Trade of Canada that we are the only company in British Columbia manufacturing and shipping shingles in large quantities, or that we "know it all." We recognize that "there are others" and that we are not the only "pebble on the beach." To try and make you believe that we are the only people who can supply you **promptly** and in **large quantities** with a **high-grade** shingle would not only be a **fish** and a **bear** story combined, but it would be gall of the bitterest kind.

Our competitors in the shingle business in B. C. are nice people, and we presume that they know their business; but we are nice people too, and as we have been in the trade as long as any of them, and a **great deal longer** than the most of them, we know that we know our business, and that our competitors are not in the possession of any points of value regarding the manufacture of shingles which has not come to **our knowledge**.

Our old mill was burned down in May last, and in its place we have built what is at the present time the **Largest** Shingle Mill in B. C.

Our new Mill has 7 of the latest improved type of Dunbar machine, which we run night and day—giving us a capacity of about **100 Million** a year.

Competent judges who have seen our new mill, tell us that it is one of the most **substantial**, carefully **constructed**, and best **planned** mills in this province. We ourselves think it is **the very best** shingle mill in B. C.; and we know that it is **equipped** with all the very latest improved Shingle Machinery.

Will the trade please note that our contract with the Pacific Coast Lumber Co. closed on December 31, 1901. Orders sent to us by letter or telegraph shall have our best attention.

We want our share of your shingle business, and can **guarantee** you satisfaction in **every particular.**

Spicer Shingle Mill Co., Limited,
VANCOUVER, B. C.

No Fish Stories

go when it comes to speaking about

OUR SHINGLES

FACTS ARE FACTS WHETHER TOLD ABOUT FISH OR SHINGLES

We make a fine 16-inch Shingle.
We make a fine 18-inch Shingle.
We make a fine 24-inch Shingle.
We make all thicknesses from 6-2 inch to 6-3 8/8 inch.

They are going out of our different mills at the rate of 200,000,000 a year. We make more shingles than any one firm in the world. Just think of it!

We claim to be experts. That is not gall. That is a statement which is proven constantly by the testimony of our customers from the Pacific Coast to the Atlantic Coast on the Canadian side, and from Maine to Puget Sound.

Mixed Cars our Specialty. Don't forget that we have all kinds of House Finishing Material in Fir and Cedar, and can load any quantity with shingles.

Come, let us deal together.

CUSTOMERS' ATTENTION.—Please take notice that on and after the 1st day of January, 1902, all arrangements with the Pacific Coast Lumber Co. of New Westminster, B. C., for the handling of any of our shingles will be ended, and until further notice our authorized general agents will be Mr. Jas. Twitchell, Clinton, Ont., for Ontario, and Mr. Samuel Ashfield of Winnipeg, Man., for Manitoba and the North-West; therefore, orders for straight or mixed cars sent through the above agents or direct to us will have equally prompt and careful attention.

THE NEWS

—W. H. Duffy has established a portable saw mill at Hillsborough, N. B.

—The Otter saw mill at Langley, B. C., has been purchased by Dan Smith.

—R. Cunnigham & Sons have completed a new saw mill at Port Essington, B. C.

—The Yale-Columbia Lumber Company has discontinued business at Rossland, B. C.

—Keenan Bros., of Owen Sound, Ont., will likely enlarge their mill next year.

—Turnbull & Davidson, lumber dealers, Manitou, Man., have dissolved partnership, Mr. Turnbull retiring.

—James K. Wallace was killed by rolling logs while working for Donald Fraser & Son at Temiscouata, Que.

—The British Columbia Shingle Manufacturing Company, Vancouver, B. C., recently suffered a slight loss by fire.

—The saw mill of the Goderich Lumber Company at Owen Sound, Ont., has been purchased by Keenan Bros.

—The Blonde Lumber & Manufacturing Company, Chatham, Ont., has been incorporated, with a capital of $80,000.

—Stewart Bros., of Pinkerton, Ont., advise us that they have sold their business to Messrs. Campbell & Pinkerton.

—It is said that John Stinson intends building a planing and matching mill at Seely's Bay, Leeds county, Ont.

—F. C. Taylor, of Seattle, was recently in Vancouver looking for a suitable site on which to build a shingle mill.

—Improvements have been made this spring to the planing mill of the J. D. Shier Lumber Company at Bracebridge, Ont.

—C. Kusick & Company are making extensive alterations to their saw mill at Buckingham, Que., and putting in a new boiler.

—The Meaford Manufacturing Company, Limited, has been incorporated at Meaford, Ont., with a capital of $50,000, to carry on a lumber and saw mill business.

—The Pacific Coast Lumber Company expect to have their new shingle mill at Vancouver in operation early in April. The daily capacity will be 250,000 shingles.

—An order has been granted for the winding up of the Shipe Manufacturing Company, Limited, manufacturers of bicycle rims, skewers, etc., Clarksburg, Ont.

—John Arbuthnot, lumber dealer, Winnipeg, has purchased property which will give him accommodation for a much larger yard. He will build a planing mill on the new site.

—John Sinnott has retired from the Swan River Lumber Company, of Grand View, Man., and the business will in future be carried on by A. M. McCutcheon and W. J. Osborne.

—It is learned that as a result of the prohibition of the export of timber from British Columbia, W. Wilson, McMoran Bros. and F. Robertson are erecting shingle mills near Revelstoke, B. C.

—C. M. Beecher, of the British Columbia Mills, Timber & Trading Company, states that his company will operate the Moodyville mill, on Burrard Inlet, opposite Vancouver, which they recently purchased.

—Hon. A. T. Dunn has introduced a bill in the New Brunswick Legislature to establish a forest reserve and provincial park, near the head-waters of the Tobique river. It is proposed to set apart a tract of land of 90 square miles.

—The dissolution is announced of Byrnes & Campbell, manufacturers' agents for lumber, shingles, etc., Winnipeg, Man. The business will be continued by Henry Byrnes, who will represent the Canadian Pacific Lumber Company, of Port Moody, B. C.

—A Dominion charter has been granted to the W. J. Poupore Company, of Montreal, to carry on business as contractors and saw millers. The capital is $300,000, and the incorporators include W. J. Poupore, of Montreal, and J. C. Malone, of Three Rivers, Que.

—John M. Swan and other residents of Tweedside, N. B., are building a large saw mill at that place. They own a large tract of timber land near the south shore of the Big Oromocto Lake, and are taking out logs for lumber, shingles and excelsior, which they intend to manufacture.

PERSONAL.

Mr. J. B. Miller, president of the Parry Sound Lumber Company, is at present on a trip to Europe.

Mr. H. S. Brennan, head of the Brennan Lumber Company, Hamilton, has been requested to stand as the candidate in the Reform interest in East Hamilton at the forthcoming provincial election.

Mr. John Kennedy has been appointed Crown Timber Agent at Pembroke, Ont., to succeed the late Mr. Russell. Mr. Kennedy has been in the employ of the Government for some years as ranger, and is regarded as eminently fitted for the position.

Mr. A. J. Burton, who is known to many Canadian lumbermen, has accepted a position with the Atlantic Coast Lumber Company, of Georgetown, South Carolina, and now has charge of their No. 2 mill. This mill contains two double cutting bands and a gang. It is reported that Mr. Burton is receiving a salary of $12 per day.

PUBLICATIONS.

The February number of the West Coast and Puget Sound Lumberman is a special annnal issue in which appear figures and other information concerning the lumber and shingle industry of the Pacific coast during the year 1901. It is carefully prepared and endowed by a liberal advertising patronage.

Three hundred and sixty-six pages are contained in the twenty-ninth annual special issue of the Timber Trades Journal, of London, England, recently to hand. This number is perhaps the most extensive work of the kind ever issued. It is profusely illustrated and contains a complete review of the timber trade of Great Britain and foreign countries, as well as many special articles. In connection with the review of the timber trade of Liverpool and Manchester and the Tyne, there appear colored supplement maps showing the Liverpool and Mersey docks and the Manchester ship canal. One of the most interesting features of the number is pen and ink sketches illustrating a Liverpool mahogany sale and the Manchester Exchange, in which are shown portraits of many prominent British timber dealers. Altogether, the number is most creditable and indicative of the enterprise of the publishers, Messrs. William Rider & Son, Limited, 164 Aldersgate street, London, E.C.

TRADE NOTES.

The Albion Iron Works, of Victoria, B. C., are supplying the boilers for the new shingle mill to be constructed at Vancouver by the Hastings Shingle Manufacturing Company.

The Ottawa Saw Company, Ottawa, Ont., are making a large shipment of band saws to Australia. This is the first shipment they have made to that country, and the saw are made of Sanvik Swedish steel. The company are this year doing a larger band saw trade than ever.

James W. Woods, manufacturer of lumbermen's supplies, Ottawa, has opened an office and sample room at 90 York street, Toronto (opposite the Rossin House), for the benefit of his Western Ontario customers. This office will be in charge of Mr. P. J. Loughrin, who is thoroughly posted as to the requirements of the lumber trade and personally acquainted with a large number of lumbermen. The goods manufactured by Mr. Woods are so well known to the lumber trade as to need no recommendation in these columns. He has recently built a new factory in Ottawa which is perhaps the most up-to-date establishment of its kind in Canada.

The tendency to employ iron and steel in the construction of buildings has in late years extended to saw mill building. This is in large measure due to the efforts of the Metallic Roofing Company, who were the pioneers in the sheet metal business. One of the greatest advantages in the employment of sheet metal is that its application to a building reduces the insurance rate, in some cases, we are told, as much as one-third. Thus the saving in insurance will soon repay the cost of metal covering even for the cheapest kind of structure. The various lines of sheet metal goods manufactured by the Metallic Roofing Company, and illustrated in their catalogue "S," would seem to meet every conceivable condition. Some of these lines are V-crimped iron roofing, rock-faced steel siding, "Eureka" diamond tiles, "Eastlake" steel shingles, steel clapboards, etc. What is known as the "Manitoba" siding is especially adapted for covering the sides of large buildings, such as elevators, mills, storehouses, etc., where there is liable to be considerable settling of the building. Mill men who have under consideration the erection of new mills or remodelling of old ones should investigate the merits of sheet metal construction and obtain prices from the Metallic Roofing Company, who have the largest factory of the kind in Canada.

PULP NOTES.

U. P. Tanguay, Mayor of Weedon Centre, Quebec, is interested in the proposed pulp mill to be built at Lake Weedon, Wolfe county, Que.

The Brompton Pulp & Paper Company, Brompton Falls, Que., are said to have spent $170,000 in building operations, chiefly hydraulic and foundation work.

The Belgo-Canadian Pulp Company, of Shawinigan Falls, Que., has appointed the firm of Laimmlett &

THE LATE WILLIAM HAMILTON OF PETERBOROUGH.

Cornet, Paris and Antwerp, as sole selling agents for their product.

E. G. Murphy is reported to have secured options on several water powers in the vicinity of St. George, N. B., and it is believed locally that the erection of a pulp mill at that place will be commenced at an early date. American capitalists are at the back of the project.

D. G. Mills, for some years connected with the management of the pulp mills at Sault Ste. Marie, Ont., has resigned his position there to take charge of the ground wood pulp mill now being built by the James Maclaren Company at Buckingham, Que. This mill will contain three lines of grinders, of four each, and will turn out 75 tons of pulp per day. Each line of grinders will be driven by a pair of 45-inch special new American turbines of a total capacity of 1,800 h. p. The mill was designed by Chas. H. Vogel.

The North American Pulp Company was recently incorporated in New Jersey, the members of the company being A. L. Meyer, 25 Broad Street, Benjamin P. Moore, 25 Broad Street, and F. G. Smith, 2077 Lexington avenue, New York. The capital stock is placed at $2,500,000. It is stated that the company already owns 265,000 acres of timber lands in Nova Scotia. The object is to establish pulp mills and to engage in the pulp and paper industry on an extensive scale. Most of the pulp will be exported to England.

The organization of the Atlantic Pulp & Paper Company, which has been going on for some months, has been completed. The capital is $3,000,000, and the board of directors includes W. C. Edwards, M. P., Ottawa, president; C. H. Waterous, Brantford; E. C. Eckardt, Toronto; R. H. Thompson, Buffalo. The company propose to acquire the limits, water power and saw mills at New Richmond, on the Bay of Chaleur, Bonaventure county, Quebec, and to erect mills for the manufacture of pulp and paper. The limits comprise 300 square miles of almost virgin forest, principally spruce.

CANADIAN BAND SAWS IN AUSTRALIA.

The Waterous Company, Brantford, Ont., have sent us a copy of the Sydney Mail, published at Sydney, Australia, containing some particulars and an illustration of one of their band mills which was shipped to Australia a short time ago. We reproduce herewith the illustration and description of the mill:

"On the 22nd ultimo there was opened at Pyrmont what may be termed an up-to-date saw mill. A party of gentlemen interested in the timber trade, to the number of about 40, accepted the invitation of Mr. H. M'Kenzie, proprietor of the Australian saw mills at Pyrmont, to witness the starting of the first vertical band-saw on a large scale which has been erected in the colony. The machinery has been put up at considerable expense on the first floor of Mr. M'Kenzie's saw mill. The saw, which is capable of cutting 30,000 feet of log timber per day into inch boards, completely revolutionizes the system adopted for many years in this and other colonies, viz., the use of the log brake down frames, and afterwards boarding the fletches on deal frames. In the new invention one handling does the lot, consequently more than six times the quantity of work is got through with less labor. The saw, comprising a 9 inch blade, runs over a 9 foot wheel. The carriage on which the log is placed is propelled by a direct-acting steam feeder, consisting of a cylinder 42 feet long and 10 in. in diameter. This moves the log to and from the saw. The log is set over the carriage by powerful set works, and the operator can easily set it to any thickness required for the planks. The log is held in its place on the carriage by what is known as the boss-dog, which grips the log, making it impossible to move when the saw is in the cut. The log carriage has an automatic device which throws the log clear of the saw three-quarters of an inch when gigging back. After the log is cut the knees of the carriage are automatically receded by large coiled springs. Buffers are provided at each end of the track to obviate any jar should the carriage run further than the length of the stroke. The sawyer, who stands behind the saw, has complete control of the carriage and can adjust the feed to any degree of speed. As the boards drop from the log they are, by means of live rollers, sent to be stacked at the other end of the building. Any boards requiring edging are quickly passed through a gang edger and made to any width required. The logs are turned on the carriage by a friction log turner. They are first brought from the harbor below to the mill by means of an endless chain running into the water. The filing room is on the second floor, where all the latest machinery for filing and keeping saws in order is seen. The automatic band-saw filer is a most ingenious machine. The machinery is driven by an engine of a new saw mill type, making 160 revolutions per minute. The whole plant is most complete and was supplied by Mr. W. Fleming, 24 Clarence street, Sydney."

Waterous Band Mill in Australia.

TENSION IN BAND SAWS.

Tension in band saws signifies the expansion of the metal throughout the central portions of the blade, so as to stretch the outside edges and particularly the back edge. A saw when strained on the wheels must be the tightest on the cutting edge, so as to not let the saw run in or out of the cut. The speed of band saws has very little to do with the tension, although it has much to do with the work and life of the saw; either too much or not enough speed will have similar influence in inducing cracks. Some band saw filers believe a band saw must not be open closer than an inch or an inch and a half from the edge. They claim a saw will crack if it is opened any closer than an inch from the edge. My saws are opened from edge to edge, and I am not bothered with any cracks; but I find that if a saw is open from edge to edge the tension must be put in evenly. If a saw is wide open and the tension not even the saw will chatter in the cut and is most likely to come off the wheels, cracked. It is well-known among practical band saw men that a band saw will not do good work without tension. The back of a saw must be looked after as well as the tension. The back of a saw should be crowned so as to not allow the cutting edge to dodge and make snaky lumber. I find that a saw crowned about 1/32-inch in every five feet gives good results where the wheels are in good shape and in perfect line.—"B. S. F.", in Wood-Worker.

WOOD PULP DEPARTMENT

THE DANGER THREATENING THE CROWN LANDS FORESTS OF THE PROVINCE OF QUEBEC.

By E. G. Joly de Lotbiniere.

Mr. Chairman and Gentlemen :—

I feel convinced that all those who have given the subject serious consideration will agree with me that the manufacture of pulp wood on our Crown Lands, as at present sanctioned by the regulations concerning Woods and Forests, constitutes a serious menace to the continuous supply of timber from that source.

It is also a matter of notoriety that the revenue derived from our Crown Lands is by far the most valuable of our Provincial assets, and consequently, all those who have at heart the prosperity and welfare of our Province, should unite their efforts towards securing such legislation as will safeguard our most important heritage, and so secure for future generations the same advantages we now enjoy.

The great and steadily growing expansion of the pulp wood industry renders it imperative to draw public attention to the condition of things which now prevails in the Province, in so far as pulp wood making on the Crown Lands is concerned.

Let me assure my hearers that I fully recognize the importance of this great industry to the Province. We have an enormous supply of the raw material on our Crown Lands, and it is but right that it should be turned to profit, but, in doing so, should not every possible care that science and experience can dictate be taken to preserve our forests for future generations, for whom we but hold them in trust.

When one takes into consideration the enormous area of forest land destroyed every year by fire, the extensive and much to be deplored waste of forest land, absolutely unfit for cultivation, which is going on under the specious pretext of colonization, as well as the inroads of the lumberman, doubly dangerous nowadays when the manufacture of pulp wood has given him an incentive to cut timber which a few years ago would not have paid the cost of production, it is manifestly our duty to give the subject of forest preservation our most serious consideration, and not allow ourselves to be lulled into fancied security as to the inexhaustible condition of our forest wealth.

And now comes the question : Do the existing rules and regulations affecting "Woods and Forests" of the Department of Lands, Mines, and Fisheries of the Province of Quebec afford such necessary protection to our forest lands as will guarantee, for the future, a continuous and inexhaustive supply of timber fit for pulp wood ? In my humble estimation they do not, for I consider that license holders are permitted to cut spruce and other timber fit for pulp wood at too low a standard.

Denuded or depleted tracts of forest land can be restored in two ways, either by "artificial reforestation" or "natural renewal." I do not propose to deal with the first method, though it is of vital importance at the present moment in certain treeless sections of the country, such as, for instance, the prairie lands of Manitoba and the North-West Territories and no doubt in many sections nearer home. It is gratifying to see that the Federal Government appreciates this fact, and that the Department of the Interior is prepared to assist farmers and others residing in the above sections in the growing of forest plantations and shelter beds. One notices with pleasure that the Local Government has also taken the matter up, and that it offers certain inducements to proprietors and those in possession of land to encourage them to utilize the unproductive portions of their properties, by planting forest trees. The day will come, and perhaps sooner than we expect, when "artificial reforestation" will have to be resorted to on our Crown Lands, but for the present "natural renewal," if Nature is only permitted to do her work, should be sufficient to ensure us a lasting supply of timber for all purposes.

Now to assist "natural renewal," to allow Nature to repair the ravages of man, what is necessary ? The answer to me seems evident. Stringent regulations should be made and strictly enforced by the Department of Crown Lands, so that a sufficient crop of young timber of proper dimensions be left on a tract to replace that which has been removed, and sufficient time should be given such timber to attain a proper growth before the limit holder be permitted to take off a new crop.

Now what are our Crown Land regulations as to the cutting of white spruce and other timber fit for pulp wood ?

Paragraph 12 of the Regulations concerning "Woods and Forests" for the province of Quebec is as follows :

"Licentiates are forbidden to cut on Crown Lands

Mr. E. G. Joly de Lotbiniere, Quebec.

pine trees measuring less than 12 inches in diameter ; spruce trees less than 11 inches in diameter ; and trees of other descriptions measuring less than 9 inches at the stump ; but they are permitted to cut black spruce, balsam, poplar, hemlock and other small timber intended for the manufacture of paper pulp at a diameter of 7 inches at the stump."

The idea is generally prevalent that a tract of timber land, denuded of timber such as license holders are allowed to cut, renews itself naturally in from 15 to 20 years at the outside.

Let us take for instance a tract of land where all the white spruce has been cut at 11 inches on the stump (such a tract, where pulp wood making has been going on would, I fancy, be hard to find, for I question whether the lumberman pays much attention to the diameter restriction in such a case), the tamarac, black spruce, aspen, hemlock and balsam at 7 inches on the stump. We will, however, suppose that what remains of the above mentioned varieties average, for the white spruce, 10 inches and less, tamarac, black spruce, aspen, hemlock and balsam 6 inches and less. Now, would this tract under the best of conditions be able to stand another crop in 15 or 20 years, if spared by fire and wind ?

Professor Fernow, at one time Chief of the Bureau of Forestry at Washington, and now Director of the New York State College of Forestry, whose opinion carries the greatest weight, gives me his views on this question, as follows :

"The idea of 'renewal' in 15 to 20 years, where the cut is down to 7 inches, is ridiculous. What is meant is that after 15 or 20 years some and enough of the left over trees will have attained a diameter which it pays to cut. This was perhaps true under some conditions, when the diameter to which the cut was made did not go below 12 inches, but even then it was not renewal. It stands to reason where spruce is culled and hard wood left, it is hardwood that renews and not spruce. Your Government, having control of the forest, should certainly limit the diameter to which trees may be cut, but the size must be variable according to local conditions, for even 9 inch trees would not stand up under the winds if left standing singly without the support of neighbours. The time is ripe for something better than diameter restrictions."

It is, of course, a well-known fact that where a crowded stand of timber has been judiciously thinned, the trees that remain grow more rapidly than they did before, as the survivors have a greater amount of nourishing material at their disposal; the sun's rays reach the smaller timber, the circulation of the air is better, and the tree has more room to spread its roots and branches; consequently trees in a virgin forest are of slower growth than those on tracts that have been cut over with discrimination.

Henry S. Graves, in his work on "Practical Forestry in the Adirondacks," has come to the conclusion, after most careful study and investigation, that it takes an average of nine years for spruce to grow one inch in diameter on lands that have not been cut over, and seven years for timber on "cut over" lands.

No hard and fast rule can be laid down for the growth of spruce in our Province, as our forests cover such a vast area that the conditions of soil, site and climate are necessarily most varied. As a natural result, the growth of timber cannot be absolutely uniform in all sections.

The differences in the rates of growth, however, are not likely to be such that a fair general estimate may not be arrived at by selecting a centre for one's observations where spruce is generally conceded to thrive well. I consider the Seigniory of Lotbiniere such a centre and my observations have been made there. The fact that we have steadily cut spruce on this property for the last half century and that we hope to continue doing so for many years to come (with due regard to the principles of "natural renewal") should be accepted as a proof that I have selected a favorable section of country for my observations.

I lately measured 100 white spruce (abies alba) in order to find the number of years required to grow one inch, with the following results :

No. of trees.					
1	grew	1	inch in diameter in	4	years
8	"	"	"	5	"
12	"	"	"	6	"
24	"	"	"	7	"
23	"	"	"	8	"
18	"	"	"	9	"
8	"	"	"	10	"
4	"	"	"	11	"
1	"	"	"	12	"
				13	"
100					

The average rate of growth of these 100 trees to gain one inch in diameter would therefore be eight years.

Leaving average growth aside and taking individual growths, it would follow from the above that on a tract from which all the 11 inch spruce had been removed, a tree 10 inches on the stump, growing one inch in six years, would take 18 years to attain 13 inches diameter.

One growing 1 inch in 7 years would take 21 years.
One growing 1 inch in 8 years would take 24 years.
One growing 1 inch in 9 years would take 27 years.
One growing 1 inch in 10 years would take 30 years.
One growing 1 inch in 11 years would take 33 years.
One growing 1 inch in 12 years would take 36 years.
One growing 1 inch in 13 years would take 39 years.

Taking for granted that the above statements as to the growth of spruce are fairly correct, it will be readily admitted that the regulation allowing spruce to be cut at 11 inches on the stump is most hostile to the scheme of "Natural Reforestation," as at least 65 per

*Paper read at third annual meeting of Canadian Forestry Association, Ottawa, March 7th, 1902.

cent. of our spruce takes from 8 to 10 years to grow 1 inch in diameter.

The cutting of spruce should therefore be absolutely prohibited under 13 inches on the stump.

A spruce cut at 11 inches diameter on the stump, if converted into logs 12 feet long, would give two logs, the first having a diameter of 9, and in some cases 9½ inches at the small or culling end, the second a diameter of 7 inches. These two logs would together contain, according to the table of contents of saw logs upon which the Crown Lands collect their dues, 52 ft. B. M. A tree cut at 13 inches diameter on the stump, made into logs 12 feet long, would also give two logs, the first of 11, the second of 9 to 9 1-2 inches diameter at the small end. These two logs, according to the tables I have already alluded to, would give together 82 feet B. M., or 32 feet more than the contents of a tree cut at 11 inches on the stump.

Logs 9 and 7 inches in diameter are hardly the kind a mill owner hankers after for sawing into deals and boards, and, as a result, a large percentage of this small timber is cut into pulp wood. On the other hand, a tree felled at 13 inches on the stump gives at least 1 fair sized log of 11, and a second of 9 inches. The 11 inch log is suited for deals and boards, and the 9 inch, should it pay better, can be converted into pulp wood. The benefit to our Crown Lands of a change in the felling diameter of spruce from 11 inches to 13 inches on the stump is so manifest that it is needless to insist any further on the subject.

Black Spruce (abies nigra). This tree, which is generally considered the most valuable for pulp and paper making, hardly ever attains a large size in the province of Quebec. A tree from 10 to 12 inches diameter on the stump is a rarity. Its growth is also very slow, taking an average of about 15 years to grow 1 inch in diameter. Under the circumstances, the diameter at which it may be felled, 7 inches, is not too low, were it not for the difficulty, when piled and corded, of distinguishing white from black spruce, and consequently, the opportunity afforded unscrupulous pulp wood makers to cut white spruce below the government's restriction of 11 inches.

Tamarac (Larix Americana). Under favorable conditions, that is, when found on slightly elevated ground and not in swamps, the growth of tamarac is about equal to that of white spruce, and the tree attains a very large size. When found in the vicinity of swamps and low damp soil, its growth is exceedingly slow, and the tree never attains a large size. I have measured tamarac found on moderately elevated ground that grew as much as 1 inch in diameter in 6 years. The swamp tamarac takes from 20 to 24 years to grow 1 inch. I regret to say, that as far as tamarac is concerned, the government might as well withdraw all diameter restrictions, for this valuable wood (alas! that its commercial value was not appreciated sooner), in most sections of the province is now dead or dying and found in various stages of decay, due to the persistent ravages for many years past of the "saw fly grub." Under the circumstances all tamarac which may yet be fit for any industrial or domestic purpose, should be made use of irrespective of any diameter restrictions.

Hemlock (abies Canadensis). It is generally conceded that hemlock, when properly and economically worked, is as valuable as white spruce. It is one of our few forest trees that can be thoroughly utilized, horns, hoof and hide. The bark commands, as a rule, a high price; the boards and deals find a ready market at remunerative figures; ties are made from that part of the tree unfit for logs and cord wood from log buttings, whenever the rate of transport to the nearest market allows a margin of profit. And yet our Crown Lands regulations allow the felling of this valuable timber at a diameter of 7 inches on the stump, classifying it (one of our largest forest growths) among the "small timber" intended for the manufacture of paper pulp. The measurement of 25 hemlock trees gave the following result:—

No. of trees.					
1	grew	1	inch in	diameter in	7 years
1	"	"	"	8	"
1	"	"	"	9	"
3	"	"	"	10	"
4	"	"	"	11	"
3	"	"	"	12	"
5	"	"	"	13	"
5	"	"	"	14	"
1	"	"	"	15	"
1	"	"	"	19	"

From the above measurements, the average growth of hemlock would be one inch diameter in 12 years. A seven inch felling restriction for hemlock is ridiculous, as a tree at that diameter cannot yield sufficient bark to pay the peeling, let alone the handling, loading, freight and other expenses. The timber is not fit for logs or ties, and could only be utilized for pulp wood. The marketable value of this tree, when of sufficient size, at least 13 inches on the stump, entitles it to the same measure of protection as that which should be afforded white spruce.

Balsam (abies balsamea). Among pulp woods, balsam comes next in value to spruce. Under favorable conditions it takes from 5 to 7 years to gain one inch in diameter. Notwithstanding its satisfactory growth, the cut should be limited to nine inches on the stump. Were this wood only fit for pulp, measures should be taken to assure a continuous supply, by increasing the diameter at which it might be felled, but apart from its value for the pulp manufacture, balsam logs, fit to be cut into boards, deals and other merchantable timber, command a price on the market equal to that of white spruce.

Aspen and Poplar. Apsen and poplar, under favorable conditions, are of rapid growth and take but from four to five years to grow one inch in diameter. I measured an aspen, 24½ inches diameter, which only took 55 years to attain this repectable size. Were it not for the damage resulting to continuous growths by felling large timber and only leaving unprotected pole wood, which falls an easy victim to the winds, no great objection could be found to cutting aspen and poplar seven inches on the stump, but, for the protection afforded the young growth, aspen and poplar should not be cut at a smaller diameter than balsam, viz., nine inches.

The result of my investigations, such as they are, lead me to conclude that, if we are to secure a continuous supply of pulp wood and at the same time give our forests a proper measure of protection, so as to permit "natural renewal," paragraph 12 of the Regulations concerning "Woods and Forests" should be amended by prohibiting the felling of white spruce and hemlock under 13 inches and that of black spruce, balsam, aspen and poplar under 9 inches on the stump. Tamarac, whenever it is dead, dying or suffering from the ravages of the "saw fly grub," should be cut irrespective of any diameter restrictions.

If, however, I am wrong in my views as to the time necessary for a forest to recover from the ravages caused by the ill-regulated cutting of pulp wood, if a after twenty years can offer the lumberman a second crop of a remunerative nature, well, let us be thankful; but on one point, which I now wish to mention, I confidently expect to have the support of all those who take an interest in the development of our forest resources, and that is, "the absolute prohibition of the export of pulp wood in its raw or unmanufactured state."

If nature has supplied us with a vast quantity of this valuable wood, infinitely more than we need, or may ever need, for our own use, by all means let us dispose of our surplus; but in doing so, let those who need it come to the Province of Quebec to get it. Let them purchase their limits, erect their mills and manufacture the raw material here. Their millions should be spent on Canadian soil. By adopting such a policy, we will, at least, derive the largest possible benefit from the impoverishment of the Provincial Domain. We have a right as Canadians and inhabitants of the Province of Quebec, to protest in every legitimate way open to us against the export of our pulp wood; nay, more, it is our duty to do so, and we should never rest satisfied until the manufacture of our raw material takes place on our own soil.

On the 18th January, 1900, the Government woke up to the fact that measures should be taken to check the export of our pulp wood, and a charge of $1.90 per cord was imposed on all stuff destined for export. Had this wise provision been adhered to, foreign capital, to a very large extent, would have been already invested in the Province, and thousands of Canadians now earning a living in the United States would have returned to their homes with the assurance of finding constant and remunerative employment in their own conntry. But it was not to be. The Government's wise and conservative policy was evidently regarded with disfavor by parties possessing large politica nfluence. The welfare of the Province had to givel way to private interests, for on the 1st of June, 1901, the charge was reduced from $1.90 to its present rate of 65 cents, which is hardly of a nature to discourage export.

Ontario has been far wiser than Quebec in the management of its pulp wood lands. In 1900, upon the report of the Honorable Commissioner of Crown Lands for Ontario, an Order-in-Council was passed absolutely prohibiting the export of pulp wood cut on the lands of the Crown. From the 30th day of April, 1900, every license or permit to cut spruce or other soft wood suitable for manufacturing pulp or paper on the Crown lands, was issued subject to the condition that all such timber be manufactured in Canada, into merchantable pulp or paper, or into sawn lumber, wooden ware, utensils, or other articles of commerce or merchandise, as distinguished from the said spruce or other timber in its raw or unmanufactured state. As a result of this wise restriction, several large American companies have already taken up Crown pulp lands, and have spent vast sums in the erection and working of their mills.

The Province of British Columbia has also been wise enough to insert the following clause in all timber leases of Crown lands:

"Provided further, that all timber cut from the said land must be manufactured within the confines of the Province of British Columbia; otherwise the timber so cut may be seized and forfeited to the Crown, and the lease cancelled."

Why should not Quebec be able to do what Ontario and British Columbia have done? This question is one of importance, not only to the Province of Quebec but to the whole of Canada, and the earnest efforts of this Association and of all those who take an interest in the prosperity of the country should be directed towards opening the eyes of our Provincial Government to the advantages which will accrue, not only to the provincial exchequer, but also to the working and industrial classes at large, by the absolute prohibition of the export of our pulp wood in its unmanufactured state.

This much needed reform could be brought about by the insertion in all timber licenses and permits of a

clause forbidding the export of pulp wood, or by raising the dues on wood for export to a practically prohibitive figure. Should the Province of Quebec refuse to take action in the matter, pressure should be brought to bear on the Federal Government to impose an export duty on the unmanufactured article of such a nature as would render the export impossible. Efforts, I am aware, have already been made in this direction, so far without success, but that is no reason why the agitation should not be continued and more earnestly than ever, until the desired end is secured.

I have translated into English a letter written by my father in 1894 on the pulp wood industry. My father at that time was completely opposed to the cutting of pulp wood on Crown lands. Since then his views have become somewhat modified, for the cutting of pulp wood on proper economic and scientific principles need not necessarily endanger the existence of a forest to any greater extent than would any other form of lumbering. May I be permitted to read a portion of this letter, which bears directly on the subject I have the honor to address you on to-day.

Quebec, 17th Nov., 1894.

To Ernest Pacaud, Esq.,
Proprietor of l'Electeur, Quebec.

My Dear Sir,—I have just read in yesterday's edition of l'Electeur an article on the pulp wood industry, in which you give extracts from a most interesting letter written by Mr. J. H. Lefebvre.

He speaks of the advantages which will accrue to the settlers from the establishment of pulp mills in the regions lately thrown open to colonization, as the settler now, when clearing lands, after taking off all timber fit for logs, is obliged, in order to prepare his lands for cultivation, to burn all small spruce and balsam, whilst should a pulp mill be in his vicinity he could sell such timber as pulp wood at a profit.

I strongly approve of this project, provided the lands thrown open to colonization by the Government are really fit for agriculture, and not, as too often has been the case in the past, poor and sterile lands, whose value consists simply in the timber which they may produce, lands which settlers are compelled to abandon after having wasted on them, all to no purpose, the best and most precious years of their lives.

But what I really object to is that the Government should allow the cutting of pulp wood on the Crown Lands. Our forests are our principal sources of revenue, apart from the annual subsidy that the province receives from the Federal Government.

By destroying the young trees, which in a few years wold replace the mature wood fit for log making, one condemns a forest to a speedy death, just as a nation would be swept out of existence if every child that was born was done away with whilst in its infancy.

If, at least, the country derived from this pulp wood all the profit that it should—were the pulp manufactured in Canada, it would be but half an evil; but the greater part being exported to the States, to be there converted into pulp, Canada not only loses the legitimate profit she should make by manufacturing it at home, but our working population, from lack of employment in Canada, has to go to the States to find work there in the American pulp manufactories and other branches of industry.

The Provincial Government appeared to appreciate this fact, when, this summer, an Order-in-Council was passed increasing the stumpage on pulp wood on Crown Lands when not manufactured in the province.

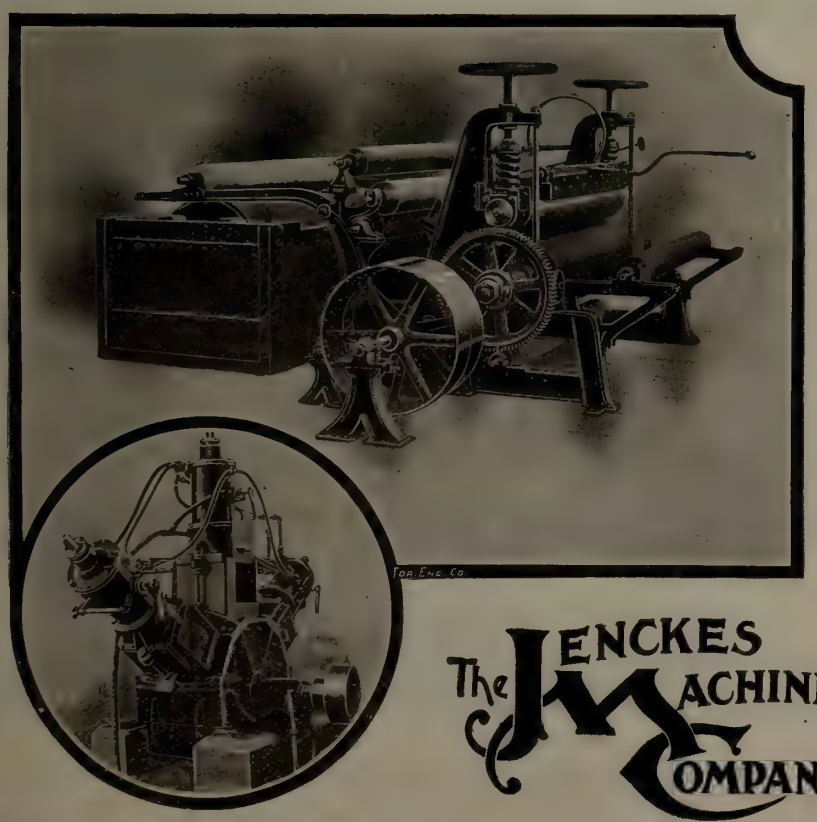
Pulp Mill Machinery



We make a specialty of equipping Ground Wood Pulp Mills from start to finish, and are prepared to build and install Water Power Plants, including Turbines, Steel Cases, Tubing, etc., together with the Pulp Mill Machinery proper, such as

Port Henry Grinders, Centrifugal Pumps, Pressure Pumps, Diaphragm Pulp Screens, Screen Plates; Wet Machines, either of our New Hydraulic Pattern or of our Standard type shown in cut at left; **Cylinder Moulds, etc., Hydraulic Presses and Pumps, Baling Presses, etc.**

Among recent customers may be mentioned The Canada Paper Co., The Royal Paper Mills Co., Fraserville Co., Cushing Sulphite Fibre Co., Chicoutimi Pulp Co., St. Raymond Co., Toronto Paper Co., Kenleith Paper Co., and others.

We are now engaged in filling extensive contracts for the Spanish River Pulp & Paper Co. and the Montmagny Light & Pulp Co.

Correspondence invited from those about to build new mills or renew and enlarge existing plants.

Unhappily, after a few weeks the Government, giving way no doubt to the pressure brought to bear against it by the pulp wood exporters, cancelled this Order-in-Council.

If England, instead of working her own coal and iron mines that Providence has so liberally endowed her with, had invited the nations of Europe to come and work them for her, and carry off the raw material to be used and manufactured in their own country, she would have acted with as much madness as Canada is now doing by permitting our neighbours to cut and carry away our forest wealth; to grow rich at our expense, manufacturing it at home, with the aid of our fellow-countrymen, who are obliged to exile themselves so as to find a living in a foreign land, etc., etc.

Believe me, Sir,
Your devoted servant,
H. G. JOLY DE LOTBINIERE.

In conclusion I wish to draw the attention of this Association to the thoroughly unreliable data furnished the public by the Provincial Government as to the quantity of pulp wood munufactured annually on the Crown Lands.

It would appear by the annual statement of spruce and pulp wood manufactured on Crown Lands that in

1895—213,237,200 ft. B. M. spruce were cut and 7,111 7-10 cords pulp wood.

1896—270,156,800 ft. B. M. spruce were cut and 11,778¾ cords pulp wood.

1897—276,482,200 ft. B. M. spruce were cut and 4,015 cords pulp wood.

1898—371,628,571 ft. B. M. spruce were cut and 4,451 1-2 cords pulp wood.

1899—303,393,832 ft. B. M. spruce were cut and 3,806 3-8 cords pulp wood.

1900—308,914,039 ft. B. M. spruce were cut and 6,926 cords pulp wood.

Now these returns are clearly erroneous, as far as pulp wood is concerned, and there is but one rational explanation of these misleading and insufficient statements.

The Department evidently only keeps account of whatever timber is made into pulp wood on or near the spot where it was cut, piled and measured. All spruce and other wood destined for pulp, which is floated to the mills in logs and there cut into pulp wood, is completely left out of its calculations. This condition of things should be remedied at once, for not only the Department of Lands and Forests, but the public as well, should be in a position to know how many cords of pulp wood are annually made on the Crown Lands, how many find their way to foreign markets, and how many are manufactured at home.

The government should take the necessary steps to oblige limit holders to declare what proportion of their cut was converted into pulp wood, what used at home and what exported. In no other way can a true and accurate account be kept of the annual cut of pulp wood on our Crown Lands.

To Purchasing Agents:

Corner 22nd and Centre Avenue,

GENTLEMEN: CHICAGO, October 12th, 1901.

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO.

The Lumber Uuderwriters are making a special endeavor to secure lines of insurance on Canadian lumber risks.

This company insures lumber only and the limit on a single risk is $5000, but we have facilities for placing double that amount of insurance at our reduced rate.

Rates on Canadian lumber yards having been advanced by the board companies, we can make especially favorable terms to Canadian dealers.

When writing to us send a copy of your form and let us know your present rate.

PETER HAY - - - - - Galt, Ont.

GREAT SAW MANUFACTURING WORKS.

The firm of R. Hoe & Company, New York, have been engaged in the manufacture of circular saws for nearly a century. They were the first to make circular saws from cast-steel, and later originated the inserted tooth saw, one of the greatest inventions ever made for the millman's benefit. Their entire works, including the manufacture of the famous Hoe printing presses, give employment to 2,500 men and have a floor area of over fifteen acres, occupying two blocks in the heart of the city of New York. Their saws are in use everywhere in the United States, and in many parts of Canada.

The Hoe establishment is a land-mark of New York city, the accompanying illustration being a bird's eye perspective of the works. The buildings stand on somewhat elevated ground, declining to the water front of the East river. The works face on Grand, Broome, Sheriff and Columbia streets. The most important feature is the clock tower, which can be seen from almost any point on Lower Manhattan Island or Brooklyn.

The great demand for the Hoe saw is illustrated by a review of the work going on in the vast buildings. In the saw shops, going from one department to another, we first see an almost endless line of anvils where in the hands of skilled artisans multitudes of saws are being put into shape under the hammer, after coming from the machines. These saws are of the best Sheffield steel. The machines in the manufacture of the plates have done their work well, but there still remain the final touches of the expert mechanic to give them their recognized excellence.

Further on are the punching machines for toothing saws, and then we come to a room where fine milling machines are engaged in grooving the shanks or bit holders for the patent chisel tooth saw, which is a specialty with this firm. The chisel bit room is filled with emery grinding machines which finish the bits for this saw. About six millions of these bits are made in a year, and as showing the skill and care required, each one is handled seventeen or eighteen times before leaving the factory. In the blacksmith shop are immense trip hammers under which the chisel-bits are forged at a single blow. The dies used in these hammers are all made on the premises.

WORKS OF R. HOE & CO. NEW YORK.

There is another important department where the "V" for receiving and holding the chisel-bits and shanks is put in the saw plate. As the "V" must be exactly in the center of the plate, this is a very delicate operation. Then there are the grinding shops where the circular saw grinding machines made under patents held by the firm are in ceaseless operation.

The greatest achievement of R. Hoe & Company in the manufacture of saws is their patent chisel-tooth saw brought out by them after long experimenting. As an inserted tooth-saw it is a marvel of simplicity and effectiveness. At its earliest introduction its merits were at once recognized by millmen, and, we are advised, the demand for it with its added improvements, has overtaxed the resources of the establishment. The saws as now made are guaranteed for any work from the half-inch feed of a small country mill to the enormous feeds cut in the regions of hemlocks, red woods and pines. This saw, it is claimed, will run with two-thirds the power taken to run a solid saw of the same size, while the lumber made by it is smoother.

BERMUDA LUMBER IMPORTS.

Mr. Robert Munro, president of the Canadian Manufacturers' Association, who recently vitited the West Indies to investigate trade possibilities, writes that the island of Bermuda last year imported 274,425 feet of box material from Canada, and 11,700 feet from the United States. In 1901 the quantity of lumber imported was 464,970 feet from Canada and 2,813,663 feet from the United States, compared with 241,231 and 2,640,529 feet respectively in 1900. Concerning lumber he writes: "Imports of building lumber are mainly by schooner from Florida. Importers desire to be put in communication with Canadian mills for building lumber, as well as for doors, sashes and mouldings. The largest importer has sent specifications to the secretary for the use of shippers. No wooden houses wanted. The native (coral) stone cut square costs only $7.50 per 100 cubic feet delivered on the site. The same stone is sawn into slabs for roofing. The standard roofing must always be the native stone, because rain is the one source of water supply."

R. H. Williams, lumber dealer at Yellow Grass, N. W. T., has sold out to W. A. Hunt.

UTILIZING PINE WASTE.

OSHAWA, February 18th, 1902.

Editor CANADA LUMBERMAN:

DEAR SIR,—In the February issue of the LUMBERMAN I saw an inquiry as to the best way to use up cuttings around a planing mill. Possibly there are not many who can give the necessary imformation, from the fact of not knowing just what the cuttings are like. I have had the honor, if honor it is, of growing up in a planing mill and lumber yard from a boy. I am in my present position over 22 years, so I think I am in a position to speak perhaps.

In an ordinary planing mill and jobbing shop anything from one-half inch square up to four inch strips is useful; of course, I mean in the way of strips, but if the cuttings spoken of are short ends of 1, 1½ to 2 inch lumber, one would need to see them, I think, before giving an answer that would cover the case. Now, from my experience I would say never cut up anything unless you know your business, never allow men to go and cut and slash into lumber as they like, because most men don't care, leave alone know how to be careful in cutting up lumber. I have know men who, if they wanted a piece of lumber 2 feet long, would cut it off a piece 3 or 4 feet long and leave a short end rather than just look around; and if the piece was not just to hand better to cut a piece from a long board, say in. 12 feet long, then the piece that is left is of some use. I saw an example of the fruit of men cutting up lumber like this in the city of Toronto. I was attending the exhibition for two or three days and was stopping at a friend's house. I went out with him to his wood-shed one morning to see the amount of kindling wood that he got for one dollar a load, and there were pieces of clear 1½ by 5 inches, from 14 to 18 inches long and some 2 feet long. "What do you hink of that?" said he. I said "the firm you get that wood from is not for very long, there is no firm can stand the likes of that to waste lumber in that way." The men who cut that lumber do not know their business or they would not do it, and in less than two years he told me that the planing mill had gone up, and I didn't wonder at it. A man to cut up lumber so as not to waste it must have a head on his shoulders, and know a board when he sees it.

Some men think that there must be a lot of short ends left after cutting up stuff, but I can't see it; of course there will be pieces from 8 inches long down to nothing, but there is no need of having a lot of ends that are really no use if a man knows what he is about. If you have to leave an end let it be long enough to be of some use and then you can use it to good advantage.

I could go on talking for a while yet, but perhaps it is not wanted, but I just want to say that this is my first attempt to answer or give any information in this way. If I were face to face with my man I would feel more at home.

Your truly,

"READER."

AN IDEAL DOOR, SASH AND BOX FACTORY.

At the mouth of the Trent, one of the finest and steadiest rivers in North America, and of which the water flow is remarkably constant and unvarying, Gilmour & Company, Limited, of Trenton, Canada, have established one of the most complete and up-to-date manufacturing plants in the world. Some idea of the truth of this assertion may be gained by a perusal of the following interesting items regarding the resources and affairs of this concern.

To begin with, their different factories, covering an area of over 100,000 square feet, are equipped in all departments with the latest and most approved machinery that provides them with appliances sufficient to cut up 25,000,000 square feet of lumber per year; of which lumber a great portion is brought in the log from the company's own limits and driven by them to their mills at Trenton, to be there sawn into the sizes required for the manufacture of hardwood and pine veneered and solid doors, sash, boxes, dressed lumber, lath, shingles, flooring, and, in fact, every species of wood goods required for the building trades, including their famous patent lumber doors, which, during the past year, have been meeting with such success in the large markets of New York and Chicago, and which they are at the present time shipping to all parts of the world.

In view of the fact that this firm enjoys large connections in Canada and the United States, they have also at their command the finest procurable assortment of hardwoods and veneers, which they use principally in the manufacture of patent lumber doors and finish.

The capacity of their door factory is about 300,000 doors per annum, which is equal to about 10,000,000 feet of lumber, and of their box factory 15,000,000 feet.

Very recently they have expended upwards of $100,000 in the enlargement of their factories, in the construction of a new power house fitted with water wheels of the latest and most powerful design, and in the installation of a complete and extensive system of dry kilns.

Situated as they are in the midst of a region most favorable for the manufacture and exportation of wood goods, having under their control almost unlimited waterpower from a river in which thousands of horse-power are daily going to waste, and assisted in their shipping operations by the Grand Trunk, Canadian Pacific and Central Ontario Railways, and by the lake steamers which call regularly at the port of Trenton, this large concern has obtained, and will continue to hold a very prominent position among firms in the woodworking business, and at the present time they are open to compete in their lines with any manufacturer in the world.

Besides the recent fitting up of the Canadian Pacific Depot at Montreal, and the completion of other large contracts, this firm has but recently secured a contract for the supplying of 1200 patent lumber birch (mahogany finish) doors, with the casings and mouldings, to the new King Edward Hotel, Toronto, Ontario.

Messrs. Gilmour & Company, Limited, have expressed a strong desire that, should any of our readers wish prices of or information regarding any of their products, they should at once communicate with the firm through their head office, Trenton, Canada, and they state that they will be most happy to give close attention to all such inquiries.

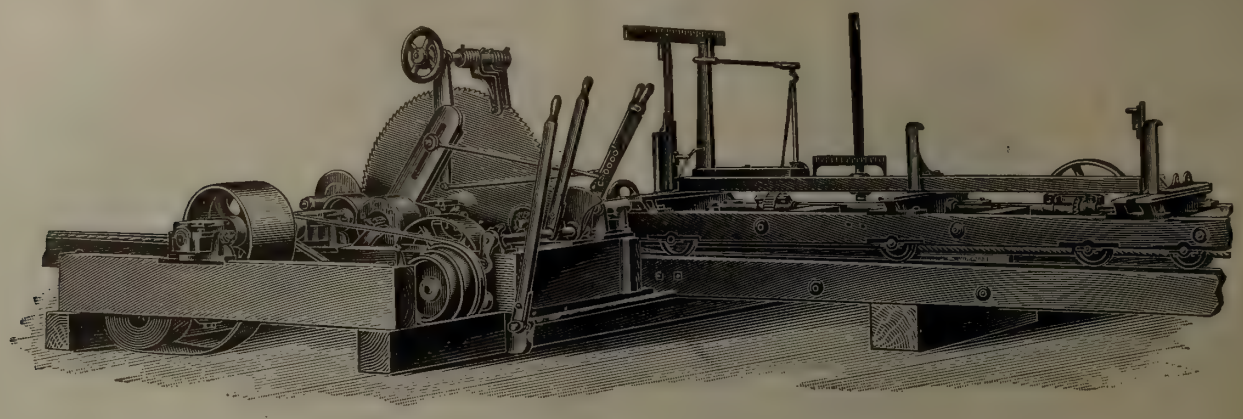
The "Canadian" Over Log Saw Guide

PATENTED IN CANADA AND UNITED STATES.



Your Mill would make more money if you would make more lumber from the same quantity of logs. You can do it by using a thinner saw, and you can use a thinner saw with one of my Patent Over Log Saw Guides. They are adapted to either Stationary or Portable Saw Mills, Re-sawing Machines, &c., &c. The illustration shows one of my Portable Saw Mills equipped with this Guide and carrying a saw 60 in. diameter, 12 guage. All my Portable Mills will take saws up to 72 in. diameter, and this guide will take saws from 36 to 72 in. diameter. It is adjustable every way. I am prepared to fill orders for complete Circular Saw Mill Outfits, or will make the guide to fit any ordinary existing saw frame.

THE LEFFEL AND VULCAN TURBINES

POSSESS DISTINCTIVE MERITS, which should have the attention of water power owners 1st—They are strongly and carefully built. 2nd—They are economical in their use of water. 3rd—They develop more power in proportion to the water used than any other Turbine built. Mr. J. D. Flavelle, of the Flavelle Milling Co., of Lindsay, writes us under date of March 7th as follows:

"Referring to the two 74" water wheels (Leffels) purchased from you during the past year. As far as we have had an opportunity of testing, they have done their work excellently, in fact are doing more than you guaranteed them for. We took a test of the power they were developing with a head of water of 3 ft. 10 in, and they developed very close to 100 h. p. We are thoroughly satisfied with same."

This letter is but one of many such.

We also Manufacture **The Lane Saw Mill, Four Styles of Shingle Machines, Lath Machine Edgers, Trimmers, Pulleys, Hangers, Boxes, Etc.**

DRIES FROM THE CENTRE OUTWARD

The "A B C" Moist Air Dry Kiln

What Others Say About It.

The Holland (Mich.) Furniture Company Writes as follows:

"We take pleasure in stating that the two dry kilns we purchased from you last year have been operated by us in drying oak, elm, ash and basswood lumbers, with results entirely satisfactory to us. We are very much pleased with the operation of your Moist Air Kilns and consider them the best on the market."

Can we send you our catalog No. 177L? It tells of practical, profitable lumber drying.

THE DRY KILN THAT DOES NOT Disappoint

Good Reasoning

..ON..

Wood Seasoning

Is the title of our new booklet. From cover to cover it is crammed full of live, up-to-date facts—helpful facts—printed for people who are vitally interested in the problem of **Successful Lumber Drying**, and particularly for saw and planing mill folk.

This new story of The Standard Moist Air System of drying and

THE STANDARD DRY KILN

Is told in a terse and interesting manner and is illustrated with half-tone cuts that really illustrate intelligently.

Appended thereto is a partial list of the army of people who whole-heartedly indorse its goodness, accompanied by extracts from their commendatory letters. That's the book in a nutshell. Have you time to read it?

It's Yours for the Asking

THE SARNIA BAY MILL.

Mr. Edmund Hull, of Detroit, has for many years conducted lumbering operations in Michigan. The difficulty of obtaining a supply of raw material induced him to establish, last year, a mill on the Canadian border, where he would have access to the pine timber of Northern Ontario. This mill has been built at Sarnia and is shown by the accompanying illustration. It contains a band saw, circular and gang, and has a capacity of 25,000,000 feet a running season. The power is supplied by seven boilers and two engines.

The timber manufactured is chiefly white and red pine and is obtained from the Spanish river. The lumber is disposed of both wholesale and retail, and shipments are made by water and by Grand Trunk Railway. There is about a mile of tramway leading to the St. Clair river docks and to G. T. R. sidings. Large quantities of lath and shingles are also manufactured, and the company are building a salt block.

Mr. Hall is the owner of sufficient standing timber to stock the mill for a number of years. The local manager is Mr. H. Morey.

THE SARNIA BAY MILL, SARNIA, ONT., OWNED BY MR. EDMUND HALL.

CANADIAN LUMBER WANTED IN SOUTH AFRICA.

Mr. James Cumming, special commissioner appointed by the Dominion Government to report respecting the possibilities of increased trade between the Dominion of Canada and British South Africa, has submitted the results of his investigations. First among the articles that will find a ready market he places lumber and manufactures of wood, concerning which he says :

The demand for lumber of all kinds is enormous, and this should be one of Canada's largest exports to South Africa ; Sweden, Norway and the United States have heretofore furnished the bulk of the timber and lumber required. Canadian lumber has been going in via New York, bought by United States dealers at a low price, in the rough, taken down in United States barges from Ottawa, Oswego and Buffalo, prepared and dressed in suitable width and sizes, as ceilings, skirting, flooring and casings, for the African trade, and $30.00 to $60.00 per M. realized, c. i. f. New York, for what probably cost $15.00 to $25.00 in Ontario.

In this as in other Canadian products, the United States exporters buy our raw materials, prepare them for the foreign consumer, and sell in the foreign market, thereby getting the cream of the trade and giving the skimmed milk to the Canadian lumberman, who is only the hewer of wood for the United States exporter. I would strongly urge our Canadian lumberman to study the methods of Scandinavian mills, import some Swedish or Norwegian mill hands, and economically prepare their lumber ready for consumption, and export direct to South Africa and Europe.

Most of the timber and wood imported is planed, grooved, and prepared ready for use, so that it can be easily worked up by the natives and Coolies. The scarcity of lime for plastering makes a large demand for wooden ceilings and interior housefurnishing. Large quantities of rough timber are also used for pit props in the mines and for docks and bridges, but the ravages of white ants in some districts cause southern United States pine to be preferred for work touching the ground.

The chief demand is for building purposes, as stone is not available and the bricks are generally very poor ; the principally buildings throughout the country consist of wood and iron. Africa is comparatively treeless and will always import all kinds of wood. The large imports from Norway and Sweden cannot be sustained in the future, as their supply is diminishing. Our red pine and spruce somewhat resembles the Norwegian lumber and should very easily fill its place ; consequently if our lumber is specially sawed and prepared in sizes, styles and finish now supplied from Norway and Sweden, there will be a healthy growing market.

Everything in the wood line for South Africa should be finished as near as possible ready for use, so that an ordinary carpenter can work it up. They require longer lengths of dressed lumber than is generally sold in Canada, ranging from 12 ft. to 24 ft. A steady demand exists for red pine and spruce, dressed and undressed, from 12 to 25 ft. in length, ¾-in., 1-in, 1¼-in., 1½-in. and 2-in., in thickness, by 6-in., 8-in., 9-in., and 11-in. in width. British Columbia cedar is in demand and lately Oregon pine deals have been introduced.

THE PULP INDUSTRY IN CANADA.*

By D. LORNE MCGIBBON,
Manager Laurentide Pulp Company, Grand Mere, Que.

You will notice by referring to your programme that the title of the paper which I am to give you is "The Pulp Industry in Canada." The pulp industry in Canada embraces so much matter that were I to attempt to cover it in all its details, I would consume so much of your valuable time and attention that I feel sure you would never want to hear the word "pulp" mentioned again.

When your worthy assistant secretary first requested me to give a paper before this convention, he mentioned the fact that Mr. J. C. Langelier, Superintendent of Forest Rangers for the Province of Quebec, in his paper entitled "The Pulp Industry in Relation to our Forests," had made reference to the complete system with regard to cutting timber, which would assure a supply ad finitum for the Laurentide Pulp Company and asked me for a paper dealing with the system and organization of the operation of our timber limits, as well as the system pursued for the preservation of our forests. In reply to this request I stated that I thought a paper on the subjects he mentioned would be superfluous at the present time, owing to the fact that enormous quantities of pulp wood were allowed to leave Canada with a very small export charge, and that in the procuring of pulp wood for exportation more ruthless cutting, damage to forests and depreciation of same took place annually than the Forestry Association could hope to offset by the preservation of limits controlled and owned by the Crown or Canadian manufacturers. At the same time I mentioned the fact to your assistant secretary that I was not competent to give a paper on forestry or the preservation of forests, but that if it would be acceptable to your Association, I would endeavor to show that Canada was not pursuing a proper policy for the preservation of her forests as an asset, and also was not getting the best possible results.

As you are all probably aware, pulp, whilst being a manufactured article from wood, is still only a basis of raw material for the manufacture of paper. The two principal grades of pulp in use to-day are mechanical, or ground wood pulp, and chemical, or sulphite pulp. Mechanical, or ground wood pulp, is almost explained by its name, as the process of manufacture is very simple, consisting principally of grinding wood into pulp. Chemical, or sulphite, pulp is a very much more intricate process of manufacture, and consists in treating the wood by chemical process, and thus separating the fibres of the wood by the extraction of resinous material. In the manufacture of paper 70 to 75 per cent. of the pulp used is mechanical, and the balance, 25 to 30 per cent. is chemical. Paper made altogether from mechanical pulp would not be satisfactory for newspaper or any of the finer grades, as the fibres of the pulp are to short too give the paper sufficient strength, so that it is necessary to use a proportion of sulphite pulp, which by its process of manufacture retains the long fibres of the wood, and thus gives the strength to the paper.

The first consideration, therefore, to the manufacturer of pulp is his raw material and power. An enormous quantity of water power, on account of its cheapness, is necessary for the manufacture of mechanical pulp, and therefore it is usual for a pulp manufacturer to locate his mill at a point where there is good water power and where his source of supply of pulp wood is close at hand. A pulp manufacturer, having his water power assured and his source of supply of pulp wood for his raw material located, then figures on the quantity of raw material he will require for a season's operations. For the manufacture of a ton of mechanical pulp it takes a trifle over a cord of spruce wood, and for the manufacture of a ton of chemical pulp it takes almost two cords of spruce pulp wood. If, therefore, the pulp manufacturer has a capacity of so many tons of each kind of pulp per day, it is very easy for him to figure the exact amount of pulp wood he will require for the operation of his mills for a year. If he should have his own limits, his first step in procuring his pulp wood is to know exactly what his limits consist of and the amount of available spruce logs that are contained in same. As the Government regulate the size of a tree to be cut, he must therefore only figure on cutting trees in accordance with these regulations. In the case of the Laurentide Pulp Company, who own such a large area of timber limits, we have found it more practicable to divide these limits into three districts, having a superintendent over each district. We have also found it much more practicable for each of these superintendents, by giving his whole time and attention to his district, to become thoroughly acquainted with all rivers, streams and lakes in same, and where the best points are to procure logs to advantage, rather than have one or two men for the entire limits, which by their large area would only permit them, to say the least, to have a superficial knowledge of it all.

Having, then, determined the quantity of pulp wood to get out in a season, and having your limits divided into districts, with a man thoroughly familiar with the conditions of each district, you determine the quantity you will get from each district. As a pulp manufacturer wants to ensure a uniform cost of his raw material for years, it is therefore bad policy for him to attempt to pick out the easiest spots to get pulp wood one year, and leave the hardest and more expensive places for a following year. Under the circumstances it is necessary for him to average this up, taking some of the expensive wood each year so as not to leave it all for future operations.

It is the policy of most pulp manufacturers to procure their pulp wood, or, at least, a large portion of it, by letting contracts to jobbers or contractors. This to my mind is a very cheap way to procure pulp wood, but from my experience the results of this method are but temporary. It has been the practice in the past to allot a certain territory to a contractor and give him a contract for a certain number of logs. As far as I can learn, the territory allotted to a jobber in the past has been much too large for the quantity of logs that his contract calls for. As a natural consequence this jobber, who has only one aim, viz., to make money out of his contract, picks out the easiest spots in his territory, and no matter whether there are some large fine spruce logs in his territory that should be cut, but which would cost him a trifle more to get out, he will leave these standing. The following year, therefore, when a contract is let in the same territory, a higher price is demanded owing to the timber being scattered and only the hard places left to lumber in, and it usually ends up with the result that no contractor will go into this territory except at an exorbitant price, and it therefore falls to the lot of the pulp manufacturer to establish his own camps and get out the remaining available logs at a very high cost. This point I wish to emphasize more particularly, and that is, when a contract is let for a certain quantity of logs the area of territory should be limited, and so thoroughly explored that it can be cleared systematically of the logs that should be cut. As contractors for logs are more or less men of moderate means, and who, if a bad season sets in and a possible loss in fulfilling their contract stares them in the face, either fall far short of their contract or abandon it, it is therefore necessary for a pulp manufacturer, in order to be safe regarding his raw material, to establish some of his own camps which will get the logs out no matter what the set-backs are. It has been amply demonstrated that a camp, or camps, operated by a company cannot get logs out as cheaply as a jobber or contractor, at least in the Province of Quebec where the timber is scattered and the country very mountainous, but the results obtained by operating camps direct are in the long run very much more beneficial than from contractors. The Laurentide Pulp Company, as mentioned before, having such a large territory, and requiring such an enormous quantity of pulp wood for the operation of their mills, have found it advisable to employ two inspectors, one for the jobbers or contractors and the other for its own camps. It is the duty of the former inspector to inspect regularly and frequently all jobbers' camps, and to see that these jobbers do not waste the timber nor break the Government regulations. He also sees that all logs are stamped and properly culled, and when he finds anything out of the way, he reports it direct to the management of the company. The inspector of the camps acts in a similar capacity, but reports on the general conditions of the camps in addition to the above.

Another bad feature of giving contracts to jobbers for logs is, that it is usual to give a contract for a certain quantity of logs to be of a uniform length. Suppose, for example, that a contract has been let for 50,000 spruce logs 13 feet in length, 7 inches at the small end and up. A contractor, when he cuts down a tree, will only make from this tree logs of 13 feet in length, and I have found from personal experience that a large proportion of these trees would permit of another log being cut from 8 to 10 feet in length, and still not be under 7 inches in diameter at the small end. This part of the tree is just as good for making pulp as anything else, but, as you know, the cost of handling and driving a small log is almost as great as a large log, and if a manufacturer only considers his immediate circumstances, and his immediate cost of raw material, he will not bother with these ends of a tree, but if he considers the fact that his raw material is worth money, and that by leaving these ends of the trees in the woods he is simply throwing away part of his assets, and in addition to this is enhancing the danger of forest fires, he will, even at a slight extra cost, have these taken to his mills with the larger logs. In the case of a company operating its own camps this should be done in any case. In the case of the logs being cut for export to the United States, these ends of trees are not considered of any value.

The next step in the cost of raw material is the handling and driving of these logs to the pulp mills, and this is a point I wish to emphasize very particularly. The cost of pulp is determined largely by the quantity produced, as the fixed charges of a pulp manufacturing concern are almost the same whether a larger or smaller quantity of pulp is manufactured. It therefore is apparent that a large pulp mill has an advantage over a smaller one, and this refers more particularly to the cost of handling and driving the logs to the mill. As you are all no doubt aware, it costs very little more to drive a larger quantity of logs than a smaller quantity, and therefore if a pulp manufacturer has a large quantity of logs to handle, it pays him to make permanent improvements on his streams, lakes and rivers so as to lessen the cost of driving operations as well as ensure the safety of the logs.

The cost of manufacturing pulp is determined largely by the cost of the raw material, viz., pulp wood, and it s natural, therefore, for a pulp manufacturer to endeavor to obtain his supply of raw material at the very lowest possible cost. In doing this, however, it seems to me that in the past, at least, it has been done at the expense of his prime asset, viz., his pulp wood limits, and he will find that each year his cost will grow greater; whereas by systematically getting a proportion of expensive wood each year with the cheap wood, and eliminating all source of wastefulness in the cutting of logs, and by making improvements so as to lessen the expense of driving operations, he will in the long run make more money and be better off than the manufacturer who simply looks one year ahead.

The raw material, or pulp wood logs, having arrived at the booms in front of the mills, their conversion into pulp is an entirely different business from the logging operations. I do not intend to go into the details of manufacturing pulp wood into pulp, except to say that so far as the pulp wood is concerned, it should be as carefully watched as coal or any other article that costs money. I fear, however, that a great deal of waste is incurred in preparing the pulp wood for manufacturing. In the case of the Laurentide Pulp Company, we allow nothing to go to waste, and even if a block of wood should come along with a certain amount of rot in it, instead, as is the usual custum, of using it for fire wood, the rot or imperfections in the wood are extracted and the balance used for manufacturing pulp.

In Canada there are more mills manufacturing mechanical pulp than anything else, and as this is a comparatively easy matter and requiring less capital, it is bound to grow considerably. The manufacture of chemical pulp is very much more intricate, entailing more expert labor, and therefore has not grown to the extent of mechanical pulp mills.

As stated previously, the manufacture of pulp is only a step in the manufacture of paper, and the object of my paper is more for the purpose of showing what Canada is losing by not manufacturing this pulp into the finished product of paper than anything else. As an example of what this means to Canada, we will commence with a cord of wood. We will say, for con-

* Paper read before the Canadian Forestry Association.

venience sake, that a cord of wood is worth $3.50. When this is exported out of the country all the benefit Canada derives from it is the amount of labor expended in cutting this cord of wood, and the stumpage, if any, which is paid the Government. By converting this cord of wood into mechanical or ground wood pulp, it means an expenditure in Canada of at least $7.00 per cord for both labor and material, and all of which can be obtained and produced by Canada. By converting a cord of wood into chemical or sulphite pulp, it means that an expenditure of at least $15.00 per cord is made for both material and labor. All of this, with the exception of the sulphur, which has to be imported from Sicily, can be produced in Canada. In the conversion of these pulps into paper, it means that a cord of wood, originally costing $3.50, is manufactured into a finished product worth about $40.00 per cord, all of which is for material and labor, the most of which could be produced and manufactured in Canada if the business were sufficiently large. At the present time there are over one million cords of pulpwood exported to the United States annually, worth, we will say, three and a half to four million dollars. If this quantity of one million cords of pulpwood was converted into pulp, and then into paper in Canada, it would mean that an expenditure for labor and material in Canada would take place of over thirty millions of dollars annually. For the manufacture of this large quantity of pulp and paper it would require, however, several times this amount for permanent investment in the limits, water power, mills and machinery, and this in itself would mean a huge thing for Cadada.

It therefore seems to me that the principal question before the Dominion and Provincial Governments is, first, how to accomplish the manufacture of this large quantity of paper in Canada, and secondly, how to dispose of it after it is manufactured. At the present time the United States exacts a duty of $1.67 per ton for mechanical, or ground wood pulp, and $3.33 per ton for chemical, or sulphite pulp, and has a duty on newspaper that is prohibitive. The effect of this policy is apparent on the surface, as it provides the manufacturers in the United States with their raw material in a partly manufactured state at a low cost, and prohibits the competition of foreign paper. In addition to this, Canada seems to be the ally and friend of the United States manufacturers, as it allows them to come into Canada and procure their raw material, in the shape of pulp wood, with little, if any charge, and the United States government allows it to enter into the United States free of any duty. The effect of this policy on Canadian manufacturers is, to say the least, very unfair. The Canadian manufacturer of both kinds of pulp has to compete with the American manufacturer of both kinds of pulp at a disadvantage, by the amount of the duty imposed by the United States government on the pulp. This competition at certain times has been ruinous to the Canadian manufacturer. As an example, during the summer of 1901 the paper market was very dull, and as a consequence the amount of pulp consumed by paper manufacturers diminished considerably. The over-production of pulp in Canada and the United States was very large, and the prices dropped until they reached a point where a loss was incurred. The over-production was caused absolutely by the American pulp mills that procured their supply of pulp wood from Canada, and as a consequence, owing to the protective duty the United States pulp manufacturers had, the Canadian pulp manufacturers were obliged to curtail their manufacturing operations until such time as prices reasserted themselves. This state of affairs would not have happened had not Canada allowed her pulp wood to go out of the country for a mere song.

As mentioned before, the overproduction of pulp was caused by the pulp manufacturers of the United States, who procured their supply of wood in Canada. If these mills had been out of the market, it would not have been necessary for Canadian manufacturers to have curtailed their operations last summer. It is true people say Canada has the world for its markets in pulp and paper, but I am afraid that too many people hazard this opinion without giving it the consideration it demands. In England, where our principal market at present for both pulp and paper lies, we have the serious competition of Norway and Sweden, and it is no mean competition. Whilst I do not believe that either Norway or Sweden have as good wood for manufacturing pulp or paper as Canada has, still they have many advantages that we have not, and as a consequence they are able to sell their pulp and paper in England at a very low cost, and which Canada is obliged to meet in order to procure business.

It certainly seems absurd that Canada should allow her pulp wood to be exported from the country for a very slight charge, and that the American manufacturers, who use this wood, do not have any competition in the finished product, paper, from Canada in the United States—but when Canada exports her paper to England or any other foreign country, she not only has to compete against paper and pulp manufactured in Norway and Sweden, but also comes into competition with paper and pulp manufactured in the United States from Canadian wood obtained from Canada almost for nothing. In addition to all this, the Canadian manufacturer to-day labors under great difficulties. He has to import from the United States the greater portion of his machinery and clothing of his paper machines, consisting of felts and wires, which amount to many thousand dollars a year; he has to use coal that is protected by the Canadian government to the extent of 60 cents per ton, he has to import his china clay from England, and the best grindstones also from the same place; he has to bring his sulphur from Sicily, and his chemicals from various countries of the world; he has to employ his expert labor from the United States, and which is controlled by a union which curtails the production, and which union, while enforcing this rigidly on Canadian manufacturers, makes exceptions in the United States. We are also handicapped in our export trade during the winter months by the long haul to our winter ports.

The sum up the whole matter, it appears very much as if the Canadian Government did not want to increase the manufacture of pulp and paper in Canada, but rather would prefer to supply American manufacturers with their raw material and be satisfied with a small revenue derived from the same. In conversation with a capitalist in New York two or three weeks ago, one who is largely interested in Canadian timber limits, I used the argument that if Canada prohibited the exportation of pulp wood until such time as the American government abolished, or diminished its duty on pulp and paper, the American manufacturers would in a very short while remove their mills to Canada. This gentleman, after arguing this point for a long time, said: "I believe that what you say is correct, but I cannot understand why you, representing a large manufacturing concern, should wish to make this fact prominent, as it would only invite competition for the company you represent." My answer to this was, that we would prefer all the competition that would take place, and having the United States market open to us, rather than have less competition and our present markets. In conversation with another United States manufacturer within the last few days, he made the same statement, and from my own personal knowledge, I feel quite certain that it would not be long before a certain proportion of the United States manufacturers would be obliged to remove their mills to Canada if they wished to compete with Canadian manufacturers when the United States market was open to them.

It is true that the United States is not wholly dependent upon Canada for its supply of pulp wood, as is evident by ex-Governor Powers' remarks at the Paper Trade banquet in New York, two or three weeks ago. Ex-Governor Powers made the statement that in Maine alone they had 12,000 square miles of territory, containing five hundred million feet of spruce, and which in his judgment, if properly handled, would be an inexhaustible supply for American paper manufacturers. I do not agree with ex-Governor Powers in this statement, as five hundred million feet is a mere bagatelle to United States manufacturers of pulp and paper.

In addition to this, the Canadian Government saw fit a short while ago to reduce the duty on newspaper entering into Canada. The Canadian market is so small that this only interferes with the smaller mills, who are dependent on the Canadian trade for their existence, but it certainly seems unfair that the Canadian Government should do this, as it will enable the United States paper mills, when their production is greater than the demand, to dump their surplus in Canada. As long as the United States have a prohibitive duty on paper, Canada should do the same, but an abolishment of both would be the best.

I ask you also, why is it that American capitalists have to-day invested in Canadian timber limits and Canadian water powers, without developing the powers and cutting the limits. Why is it, I ask, but to prepare for the time when Canada will come to her senses and they will be obliged to manufacture in Canada, or otherwise get out of business. These men are not short-sighted, and although they did procure a promise from the Quebec government that no extra stumpage over and above 25 cents per cord would be charged by them for the next ten years, they still feel that it is necessary to look farther ahead than this. I ask you also why it is that the Quebec government a short while ago raised the stumpage on pulp wood cut from Crown timber limits for export into the United States to $1.90 per cord, thus giving a preference to the Canadian manufacturer of $1.50 per cord—why is it that they reduced this later on to 65 cents per cord without any advance notice of what their intentions were? Why is it that they reduced this to 65 cents per cord, thus reducing the preference in favor of Canadian manufacturers to 25 cents per cord? Would it not be better for the Quebec government, instead of selling its timber limits with a guarantee of this kind, to assist in building up Canadian manufactures of pulp and paper, which would necessitate their purchasing further timber limits from the Quebec government, and in the development of these, the stumpage to the Quebec government would increase, and be a regular source of revenue, rather than to continue its present policy.

The Laurentide Pulp Company to-day manufacture about 100 tons of paper and cardboard per day; 125 tons of ground wood pulp per day; 70 tons of sulphite per day, and cut from ten to fifteen million feet of pine umber each year. To do this, it has required an investment of nearly four millions of dollars, and the annual payment in wages of about one million dollars, and as a result of this the town of Grand Mere, wholly and absolutely dependent upon the Laurentide Pulp Company, has sprung into existence, and to-day has a population close on to five thousand. In addition to this, the villages adjacent to Grand Mere have all grown, and the rural population in the vicinity of Grand Mere are thriving and doing well. Canada could have twenty such mills as these in a short time if she would come to her senses and adopt the proper policy. Would it not be better for Canadians to have a permanent advancement of this kind, even though it did take a few years to obtain?

Possibly the question might arise as to the Canadian farmers who dispose of their pulp wood at the present time. These farmers would have a better market with just as good prices as they have at present, if their purchasers were Canadian manufacturers instead of American manufacturers. Whilst on this subject, I might make mention of the fact that the so-called farmers of Canada who dispose of their pulp wood to American manufacturers do not deserve all the sympathy and support that one would think. In our own district, I know several instances where these men obtained lots from the government, presumably for settling purposes, but who, when the timber was cleared off, obtained another lot in somebody else's name. These men are doing more damage to Canadian forestry than any one else, and it is the duty of the present government to give this special attention, and see that it is stopped as soon as possible.

Canada has an opportunity to-day to show her wisdom and her foresight. If the government would take up this question as seriously and as vigorously as the Department of Public Works has taken up the question of river and harbor improvements, we might hope in the near future to see the paper industry of the world centered in Canada. At present Canada is floundering in the dark, and her wide-awake competitors are taking advantage of this. Nothing in this world is gained without a struggle, and a struggle cannot take place unless the parties are determined. Canada should be determined to make the most out of her timber assets, and should not fear to take a decided step in this connection. The trouble is that Canadian politicians do not study the question sufficiently, and are too easily swayed by outside influences. I do not say that it would be a wise thing for Canada to always have an export duty on her pulp wood, but I do say that there should be a sufficientiy high export duty on pulp wood so as to make it practically prohibitive until such time as the United States government open their market for the finished product to Canadian manufacturers. This is only fair and just, and I cannot see why any hesitation should take place in adopting it. Canada has an opportunity now that should be taken advantage of. If she does not do so quickly, it simply means that she is not only losing an opportunity, but is losing time that cannot be recalled.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C.H. Mortimer Publishing Company of Toronto, Limited

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICE:
IMPERIAL BUILDING, MONTREAL.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance... $ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

LOGGING METHODS.

AMONG the many problems which confront the saw mill man, that of getting the logs to the mill is perhaps surrounded by more uncertainties than any other. It is one, too, that is growing in importance as the timber supply adjacent to the streams becomes cut away.

This increased difficulty of insuring a log supply has not, it would seem, aroused the spirit of the inventive genius to the same extent as in other branches of lumbering. The modern saw mill represents improvements to meet almost every conceivable contingency which may arise; but in logging methods there has been little advance within the past decade at least.

It is indeed an ideal season when the logs do not become stranded at some point between the stump and the mill. If there is too much snow in the woods cutting is interfered with; if the snow leaves too early in the spring the logs cannot be hauled to the streams; if they reach the streams and the snow goes away rapidly, they are likely to be hung up; if the snow leaves too gradually and there are no heavy rains, the moisture sinks into the soil and the streams do not swell sufficiently for driving operations. The discovery of some practical method by which lumbermen will be less dependent upon weather conditions would be a great boon to the industry.

The building of railroads for logging purposes alone is expensive, yet it has been resorted to quite largely in some sections of the United States. The adoption of the cable and donkey engine, as employed in the west, suggests itself, but one of the difficulties with that method in this country is that the timber is too scattered. It is practical where from 20,000 to 40,000 superficial feet of merchantable timber per acre can be obtained.

The employment of steam logging machines instead of horses would seem to offer one of the most likely solutions of the logging problem, and yet the experience of Canadian lumbermen in this direction in the past has not been encouraging. A few years ago a logging machine was used by Messrs. Perley & Pattee, of Ottawa, but was found unsatisfactory. The Hawkesbury Lumber Company also sent a similar machine into the Petawawa country. They made a first-class road five miles long, and had some 30,000 logs to haul. The parties, however, failed in the contract. It is understood that the machine in question was too heavy. It weighed 13 tons and was 30 feet long. The claim of the manufacturers was that three men on a five-mile haul would perform the work of forty double teams and their drivers.

It is reported that a logging machine of unique design was employed last winter with success in the Maine woods. Its peculiar feature is said to be the system of driving the machine over the road. Outside the driving wheels, which have gear teeth cut in them, is an endless chain, made of heavy plates of cast steel. These plates also have gear teeth cut in the side of them that run on the driving wheels. On the outside of these plates are projections which prevent them from slipping as the wheels turn them round and give them a better hold on the road-bed over which they run. It is claimed that the engine can easily haul as much as forty horses.

It may be expected that some tangible improvements in logging methods will be accomplished in the near future, for which the lumber trade will be sincerely thankful.

THE TIMBER POLICY VINDICATED.

WE must once more refer to what is now recognized as the national timber policy of Canada, as another link has been added to the chain of evidence which so admirably vindicates the principle of home manufacture. Assurance has been given by the British Columbia Government that the export law of that province will not be repealed. The effects of the law have been almost instantaneous. Only a few months have elapsed since it became operative, yet in that time it has been clearly shown that the legislation is in the interest of the province. The shingle trade, the branch of the lumber industry directly affected, has quickly attained greater prominence. Many American firms which formerly operated their mills on Canadian cedar, are building mills in British Columbia. The result has been the immediate transfer of large industries from American to Canadian soil, and before long the British Columbia shingle industry promises to assume its true importance.

Subsequent developments have blotted out almost every argument which the opponents of the prohibitory measure put forward. More employment has been provided for the working man, and when the mills to be built by American firms are put in operation, the population will doubtless be considerably increased. There is little doubt that the improved conditions which are being brought about will be permanent, as it has been proven that the country which supplies the raw material may control the industry dependent on it. That Canada has not always done this in the past is due to a disposition to give away our raw material to our neighbors to the south.

And now we look to Quebec to fall into line by prohibiting the export of pulp wood. At present the law gives a preference of 25 cents per cord when the wood is manufactured into pulp within the province. This preference is not sufficient to restrict the export of pulp wood in the slightest degree, and it has never been clear why the government should have reduced the preference to this small sum.

As the export of pulp wood from Ontario is prohibited, almost the entire quantity which goes to the United States is exported from the province of Quebec. At the lowest estimate, about one-sixth of the pulp wood supply of the United States is obtained from Canada. In this way we are contributing to the building up of a large pulp and paper industry in the United States, the product of which is in large part exported to other countries. The exports of paper from the United States last year amounted to 115,000,000 pounds. By prohibiting the export of pulp wood, many of these pulp and paper establishments would be transferred to Canada, as has been the case with the saw and shingle mill industries in Ontario and British Columbia.

At the recent forestry meeting in Ottawa Dr. Fernow, Director of the New York State College of Forestry, remarked that he regarded it as a piece of stupidity for the Canadian Government to permit the export of timber. This opinion is more general in the United States than may be supposed. The American Lumberman, the exponent of the lumber industry of that country, elucidates this fact in the following extract from a recent issue:

"The pulp mills of the United States are able to bring across the border without duty all the wood they care to, and as a matter of fact they buy vast quantities in Canada, especially in the provinces of New Brunswick and Quebec. The latter province allows the exportation of pulp wood on very easy terms, the charge being only 25 cents a cord, and one of the chief sources of revenue of the roads that cross the St. Lawrence and enter the United States from Canada is the transportation of pulp wood. It is to be regretted that we have no statistics at hand as to this business, but it is heavy and growing rapidly. Something less than a year ago the Quebec Government lowered its discrimination against exportation of pulp wood, and many pulp mills on this side of the line get all or a large portion of their supplies of wood from the provinces. The lumbermen all along the St. Lawrence are busy getting out pulp wood for the American market."

Efforts are made by the United States to conceal their dependence upon Canada for a supply of raw material, but it is not difficult to realize the true situation. The Eastern States possesses comparatively little timber, and but for the lenient policy adopted in the past by some of our provincial governments, many of the mills established there would ere this have been removed to this side. With the precedents now existing, the Quebec Government should have sufficient backbone to compel the manufacture of timber within the province.

EDITORIAL NOTES.

APPARENTLY the British timber market is not to be disturbed by an import duty, as Sir Michael Hicks-Beach, Chancellor of the Exchequer, has submitted his budget, which contains no provision for a tax on timber. To some persons this is a surprise, as there was a firm conviction in certain quarters that a duty would be imposed. This is evidenced by the fact that insurance rates against the imposition of the tax rose to 30 guineas per cent. While Canada would not likely be seriously affected by such a duty, it is a matter of gratification that none has been imposed, as it would necessitate a certain readjustment of the timber business.

THERE is said to exist a slight prejudice against the use of spruce lath on the ground that sometimes they discolor the plaster. Recent inquiries from leading contractors in the Maritime Provinces would seem to disprove this contention. Messrs. B. Mooney & Sons, of St. John, write they have never seen any stain or discoloration from spruce laths, and that, when clear of sap and wane, they give good satisfaction. In the eastern markets, including Boston, New York, and Philadelphia, spruce laths made from slab stock bring higher prices than any other. It is claimed that pine laths containing knots or balsam will discolor the plaster, whereas this drawback is not met with in the case of spruce. As the merits of spruce laths become more generally known a greater demand for them will develop.

A VOLUMINOUS report on railway commissions and railway rate grievances was presented to the Dominion Government last month by Prof. S. J. McLean, commissioner appointed for that purpose. Prof. McLean has evidently thoroughly investigated the question, and his report seems to confirm the contention that there is room for improvement in the regulation of railway rates and traffic. Acting upon his recommendation, Hon. Mr. Blair has introduced a bill in the Dominion Parliament providing for the appointment of a railway commission and to amend and consolidate the existing railway laws. The commission is to consist of three persons, one a lawyer of large experience and some knowledge of railway business, another an experienced railway man, and a third a man with large knowledge of general business. This board will replace the existing railway committee of the privy council, and in it is to be vested power to fix all traffic rates on railroads and lakes, rivers and canals. While the appointment of this commission is not likely to lead to the redress of all grievances, it is in accord with popular sentiment, and will probably result in securing more equitable rates for all classes and localities.

THE papers relating to pulp wood and pulp wood logging published in this number, in conjunction with the one in the April issue by Mr. Joly, are valuable additions to the literature of interest to pulp companies. They contain many instructive points, not the least of which is Mr. Joly's observations regarding the growth of spruce, a question on which opinions differ. Mr. Joly holds that nine years will be required for spruce to grow one inch in diameter on land not cut over, and seven years when the land has been cut over. This is a slower rate of growth than is usually calculated. Mr. McGibbon offers some valuable hints regarding logging methods. His experience that the diameter regulation for cutting should not hold good under all conditions, but should be subject to variation under certain physical conditions, is borne out by Dr. Fernow, director of the New York State College of Forestry. Mr. McGibbon advocates restricting the territory allotted to jobbers and the exploring by competent persons of all territory before it is cut upon, with a view to adopting the most economical methods of cutting and of giving consideration to forestry conditions. A strong objection to giving contracts to jobbers is shown to be the disposition to waste timber, as the contract specifying, as it usually does, logs of a certain length, the jobber will leave all shorter logs in the woods, whereas if the pulp company were conducting the operations itself, these logs would be taken. By the former method there is not only the loss to the company, but the government loses the dues on the timber which is left in the woods.

NATIONAL HARDWOOD LUMBER ASSOCIATION.

The next annual meeting of the National Hardwood Lumber Association will be held at St. Louis, Mo., on May 15th and 16th. In pleading for a large attendance the secretary says : " It is especially desirable that the coming meeting be thoroughly representative and that every section and department of the trade shall have a voice in its councils. The inspection rules will be considered and passed upon. Sentiment is divided as to whether the rules should be amended or left as they are, but it is practically unanimous that whatever action is taken should be final. No department of the trade can afford to be unrepresented in the deliberations upon this matter."

LOAD OF PINE LOGS.

Below is a reproduction of a mammoth load of logs recently received at Mr. J. R. Booth's mill at Ottawa. The six logs on the load contain 14 standards, equal to 3,500 feet board measure. The logs were made 141 miles from Ottawa and railed to Ottawa next day, and sawn the following day.

A CANADIAN SAW LOG.

The illustration herewith is a reproduction of probably the largest pine saw log that has passed through an Eastern Canada saw mill in recent years. It holds the record in Mr. J. R. Booth's lumbering experience covering a period of 45 years. The log was seven feet in diameter at one end and 51 inches in diameter at the other. It was cut on Mr. Booth's limits near Madawaska, 181 miles from Ottawa, and brought by rail over the Canada Atlantic Railway to the Capital, where it reached the saw 24 hours after it left the stump. The log was too large to be sawn in the mill. About 6 inches had to be removed before it could pass under the upper saw guard.

A CANADIAN SAW LOG.

MANITOBA TIMBER RESERVES.

Mr. E. F. Stephenson, of Winnipeg, furnishes the following list of the timber reserves in Manitoba, and their areas :

	Acres.
1. Riding Mountain reserve, approximate area	927,376
2. Moose Mountain (Assa) reserve, approximate area	103,760
3. Turtle Mountain reserve, approximate area.	70,400
4. Spruce Woods reserve (near Carberry) approximate area	151,040
5. Lake Manitoba, West Tuelon reserve, approximate area	159,360
Total	1,411,936

LOST A CONTRACT.

A South African correspondent of the Toronto Globe writes as follows : " I remember a prominent Canadian out in this country had the option of giving a large contract. He knew that there were many firms in Canada willing and able to fill the contract, but could not recollect their names. I went over to the Government Library at Pretoria with him, to see if we could find any advertisement in The Canadian Magazine giving us the names we wanted. Oh, no ; we could find no advertisement. We then looked in Montreal, Toronto and Ottawa papers, but there was no hint. All these cities had the factories that could have filled the contract, but none of the factories had enough enterprise to advertise in any of the papers one would meet outside of Canada. The contract, of course, went to Australia, whose business men have agents in this country hunting for a market, and finding out the exact requirements of their customers. I think we are supposed to have an agent in Cape Town, but as one can never find him, and as no one ever sees or hears him in connection with commerce, it is hardly to be wondered at that we get none of the trade that legitimately belongs to us."

THE MANAGEMENT OF PULP WOOD FORESTS.*

BY AUSTIN CARY,
Forester of the Berlin Mills Company, Brunswick, Maine.

I have received here the programme of your meeting, and note that you have put my name down on it. It is, therefore, with more than the strong regret I feel at the loss involved to myself, that I have to tell you I cannot attend. Neither have I opportunity to write an extended paper. The best I can do is to tell you very briefly of the methods of control of lands and logging practised by the concern by which I am employed, and indicate what has been our experience in the way of conservative cutting.

But first I wish to put you and any others who may have control of spruce woods on your guard against a beetle which destroys spruce timber by boring round in the inner bark of the trees, thus girdling them. It is this insect, apparently, which has destroyed large quantities of spruce timber in Maine and New Hampshire at different time in the last thirty years. It is now doing considerable damage in the Androscoggin Basin and on neighboring land in both states, and I have myself traced it at different points across the boundary into Canada. This beetle, Dendroctonus by name, has been under observation in our forests for the last four years, and it has also been studied by an expert entomologist. From all we can learn it is by far the most formibable enemy that spruce has to dread in this country. Formidable it certainly is here. In my opinion it has destroyed half a million dollars worth of stumpage in the last ten years. You may have observed it in Canada. If not, I feel sure that its ravages have been overlooked and that careful examination of your land will disclose it. I will not say more of this matter, but will refer those interested to the literature sent and particularly to the box of specimens shipped you by express from Rangeley.

As for conservative cutting of spruce woods, I will say first and most emphatically that it a difficult and ticklish process, one that is likely to bring more loss than gain unless done with great care and considerable skill. It may be different in other countries, but that is the case here. Our timber is typically large and tall; much of it stands in exposed situations, on ridges and mountains; much is on extremely rocky lands, The winds are continually damaging our native uncut stands, and the thinning of woods in all such places as above is either entirely impracticable or must be done with the greatest caution to ensure what is left standing will not blow down.

As already said, the danger from the wind might be much less in another country. In this very region, indeed, considerable light cutting was done in decades past without incurring great proportional loss. That, however, was different work from what is required now.

Not more than a third or half the timber was taken then and that in bunches, the biggest and best, leaving thin strips and the difficult and steep places entirely alone. At the present time business conditions are different. A stick of spruce or fir scaling only 20 feet B. M. is merchantable, and has stumpage value if it is not too far away from other stuff. We are logging a good deal of rough, difficult lands with frequently a long and costly road built into it, requiring a heavy cut to pay the bills. At any rate, owners through this region expect that on any land logged over three-quarters of the stand shall be taken, and to take out three-quarters of the timber from most of the lands we have to handle, leaving the balance safe to grow and reproduce, is as I have indicated above, a very ticklish matter.

My experience in the actual handling of spruce lands covers four years. According to my observation, a logging boss trained to hard cutting when told that we wish to cut conservatively, is pretty sure to leave what he does leave not in the shape of small growth so much as in strips of scattering timber and odd corners on rough and difficult ground. This makes the logging show up cheaper, but it may be, on the other hand, that what is left standing is the very stuff that most needs cutting off. In other words, as a first result, instead of thinning or conservative cutting, we are apt to get simply slack cutting.

When this has been corrected and the man gets a better notion of what we are about, his next move is to leave the small growth uniformly all over the land. This may do in some countries, but it means loss here. Tall and slender trees left too open, anything less than a full stand, on divides and knolls, tall timber shoally rooted on rocky land—these items together may amount to a good deal in a logging job, and all of them are such that sooner or later they are sure to blow down.

Our day of reckoning came in December, 1900. Two gales came that month before the ground was frozen, one of them after a soaking rain. The loss suffered was not in cut over lands alone. Some of the down stuff we have picked up since at added expense. Some of it is so scattered that it is impossible to get it. Something of that, however, was to be expected.

We have not been discouraged, but have simply inferred that we must be more careful and exercise closer control of the work. We learned something ourselves by experience, and in course of time came to have a better understanding with the men. For the last two years I think we have been doing fairly well. Considerable merchantable stuff has been left to grow and for the most part I feel pretty confident about it. The key to success is variation of the cutting according to the stand and lay of the land. The critical matter, the thing which must be continually thought about, is the safety of what is left from wind. Mixed growth, that is to say, growth in which hardwoods comprise half or thereabouts of the total stand, can generally be thinned with safety and comparative ease. Elsewhere great care has to be exercised, and there is a great deal in picking strips and bunches to be left entire. This we frequently do with areas of small thrifty growth if there is no dead, failing or down stuff in them. Lastly, we do not hesitate, when we think that is the proper thing to do, to cut clean.

There is one side issue that might be elucidated here, and that is the form of contract under which work of this nature is secured from jobbers. The Berlin Mills Company owns serveral hundred horses and does its own logging largely, but a portion of its work is done by jobbers cutting by the thousand, and strange as it may seem, these men do their work as well and are fully as amenable to control as the company's own men. They have always cut quite as economically as the others in respect to stumps, tops, picking up windfalls, dead timber, etc., and think we are securing from them now quite as good work in this other line.

The clause in our contracts which covers this feature of the business is as follows: "Spruce and fir timber shall be cut to the size of 12 inches on the stump, but this rule may be varied by the Berlin Mills Company with a view to leaving the land in good growing condition." This form of contract is not recommended as a solution of all difficulties and guarantee of success. It does not replace supervision, but distinctly implies it. Then men might understand its terms differently and get at loggerheads with one another before they had been at work a month. But this form of contract does allow latitude and adaptation to the country, and with two of our concerns the past winter it has worked very well. The men in charge were active, capable men who were anxious to do the work as well as they could. I endeavored to be reasonable myself, and we had worked together before, so we understood one another. I have spent a couple of days in each concern every three or four weeks, examining all work done and looking over the timber ahead to see how it should be handled. In this way we have come through the winter so far with very little friction, and I feel that the work is being done substantially in the company's interest, as near, probably, as it would be done by any of its own men.

One favorable condition I should not fail to mention here is the long established reputation of the company for fair dealing, and the certainty the contractors have in consequence that they will not be subjected to any underhand tricks. As to the volume of cutting that one man can look after in the fashion outlined above, I will say that seven camps have been under my oversight the past winter, scattered over a round trip by the road of 150 miles. The aggregate cut is about 18 millions. Even if a man has no care of supplies that is enough to have under his control.

It seems to me quite likely that what I have written may hit entirely aside the mark as far as relates to your conditions. Spruce timber with us is a commodity in strong demand. Stumpage is worth $2 to $4 a thousand according to location; very small sticks have value, and great economy and care in cutting are consequently demanded, financially speaking. Some might think we had secured this. I do not think, however, that we yet do our work as carefully as the value of timber, present and perspective, warrants. In fact, it seems to me we ought largely to remodel our organization.

In Canada, on the other hand, I suppose your main problems relate to great tracts of natural forest which you are only beginning to log, and on which stumpage sells at a low rate. In respect to such a situation the most that occurs to me to suggest is close study of the health and condition of the timber.

Spruce woods contain trees of every age, the young coming on to replace the old when the latter fails, and it is natural to suppose that the replacing process is constant, the growth and decay on a tract, year after year, balance one another. As a matter of fact, according to my observation, that is not the case. The history of a tract is more often a wave motion, with a considerable difference oftentimes between the trough and the crest; that is to say, for a period of years a valley or a township of virgin timber land will be healthy and thrifty, gaining all the time without much loss from old age or disease. Then will come a turning point when things begin to go the other way. A big gale, perhaps, will start it, for some stands when once a break has been made in them keep on going down year after year. Insects oftentimes bear a large part in the destruction, and fungi, no doubt, do the same. But whatever the active agent, over-maturity of the timber is the great pre-disposing cause. It is no unusual thing for tracts to lose in this way in the course of a few years a quarter, half, or even a larger proportion of their value. Now it is evident that if this is the case, economical handling of large bodies of timber land must take this matter clearly into account. Very likely you in Canada are fully alive to all these matters. I hope you are, but I know on this side of the boundary they have been mainly overlooked by explorers and neglected by business men. Whole townships have died down and owners have hardly been aware of it. On one tract belonging to my own concern I can show where probably $50,000 worth of stumpage on very accessible land was destroyed and there was no realizing sense of it until two years ago. Looking after and controlling these things is one of the most profitable fields of work for well trained men in public or private employ.

I believe I am the first man calling himself a forester to be employed regularly by an American business firm. It is in this field that I feel surest that the measure has been justified. My work outside the logging season has been the survey and exploration of the lands as a basis for their operation. Topographical maps and models result from this, also sheets descriptive of the timber. As far as may be, the logging jobs are located on the territories that most need cutting, and we are careful while there to take all the defective but still useable timber. The tracts are kept under watch too, and no big blow-down can occur, nor bug work get much of a start without our being aware of it.

What has been lately written gives a clue to the motive for conservative cutting as we practice it. We have not settled down to the European idea of sustained yield, of running a business of a certain volume forever from a given tract of land. Whatever has been said I do not believe that any business concern in the United States, knowing what it means, has settled on that. The reason is that we have large tracts of timber that badly need cutting, and the sooner we can get over them, saving the dead and declining stuff and putting them in shape to grow, the better it will be. This is the chief motive and, balanced by considerations of cost and practicability, is the key to our operations along this line.

Of course, expected growth is a consideration as far as it is not offset by windfall. Then we believe that in the future better stumpage can be had on the smaller classes of timber. But certain of its tracts the Berlin Mills Company cuts as closely as anyone can cut, and if ever in the future the question comes up whether to shrink the volume of manufacture or to maintain it for a time longer by cutting the lands down to the lowest practical point, that will be a new question to decide. For myself and as a forester I feel like felicitating you Canadians on having retained so much of the timber land of Canada under Government control.

* Paper read at the annual meeting of the Canadian Forestry Association, Ottawa, March 7th, 1902.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 24 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VIII. TORONTO, ONT., APRIL 30, 1902 No. 13

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:

IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly. A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermer. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

Prepared by the Editor of the "Canada Lumberman."

Toronto, Canada
C H. MORTIMER, Publisher
1895

THE above is a fac simile of the title page of the latest and most complete Lumber and Inspection Book published.

We shall be pleased to send you a copy on receipt of six 2 cent Canadian postage stamps

THE CANADA LUMBERMAN,
Toronto, Canada.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED—A RAFT OF PINE LOGS ON Georgian Bay; apply at once to Box 20, CANADA LUMBERMAN.

WANTED.

ABOUT 300,000 FEET OF 10 x 10 HEMLOCK, sawn or hewn. Apply to ARTHUR BRYCE & COMPANY, 2 Toronto Street, Toronto.

WANTED—SEVERAL FIRST-CLASS DUNBAR Shingle Sawyers. Apply the Hastings Shingle Mfg. Co., Limited. See our ad in this paper about our new mill. Mill to be free from dust.

FOR SALE.

SAW AND SHINGLE MILL WITH BIG stock of logs, been running all winter. IMPERIAL LUMBER CO, Toronto, Ont.

WANTED—TO SAW BY THE THOUSAND or to purchase for spot cash, two to four million feet of pine logs, delivered North Shore or Georgian Bay, as early as possible after this date. Write, giving description, price and where located, to A. P. EBERT, Wiarton, Ont.

WANTED — POSITION BY A TRUSTWORTHY man, 34 years old, 5 years commercial accounting, eleven years railroading experience. Strictly sober and well recommended. Address Rhobythal, P. O. Box No. 163, St. Hyacinthe, Que.

WANTED—HARDWOOD LUMBER.

SOFT ELM, BIRCH, BLACK ASH, 1STS and 2nds preferred. J. F. STENGAL, 990 Ellicott Square, Buffalo, N.Y.

DRY PINE.

WE HAVE ABOUT 1,500,000 FEET DRY PINE in 1, 2 and 3 inch common and better, prefer selling in bulk. Will quote freight rate to Buffalo, Chicago or Toronto on application. Correspondence solicited. N.B.—Would like to correspond with consumers of hardwoods. ST. JOE ISLAND LUMBER CO., Sault Ste. Marie, Ont.

Wanted--Cedar Shingles

16 INCH AND 18 INCH, ALL GRADES, good quality, White Cedar. Would purchase mill output.

Give quantities both on hand and to be manufactured. J. G. STRAIT & SON, Wolcott, New York.

SPECIAL TO LUMBERMEN.

WITH A THOROUGHLY EQUIPPED PLANING Mill at Orillia, we solicit orders for resawing and planing of lumber, in any quantity; can match 26 inches wide; all work guaranteed first-class; prices on application. Address, NATIONAL BOX CO., Orillia, Ont.

TO

Pine and Spruce

MANUFACTURERS

CORRESPONDENCE IS SOLICITED WITH Canadian manufacturers of pine or spruce who wish to form a connection with a reliable British house. Advertiser is now in Canada and desires to have a personal interview with millmen now doing or seeking to do an export trade. Best of references as to reliability and standing. Box 42, CANADA LUMBERMAN.

WANTED

BY A THOROUGHLY COMPETENT shingle man, a position as foreman in a large shingle mill. Is good millwright, good mathematician, and an expert saw man. Best of references. Address FOREMAN, care of CANADA LUNBERMAN.

CANADIAN PACIFIC RAILWAY COMPANY

TENDERS

—FOR—

TRACK TIES, ETC.

SEALED TENDERS for the supply of track ties, fence posts, telegraph poles and piling required by the company for the next three or fiye years for the Ontario Division, will be received up to THURSDAY, MAY 15, 1902.

For specifications and other information apply to Jno. Wanless, Tie Inspector, C.P.R., Parkdale, or to the General Tie Agent, C.P.R., Montreal.

The Company does not bind itself to accept the lowest or any tender.

Tenders must be addressed to Geo. H. Webster, General Tie Agent, C. P. Ry., Montreal, and envelopes must be endorsed "Tenders for Ties, etc."

TIMBER BERTH

Township of Chisholm,

SAW MILL AND SHINGLE MILL

BY PUBLIC AUCTION,

AT THE

Orillia House, Orillia, on

THURSDAY, JUNE 12, 1902

at 2 p. m.

The subscriber will offer for sale by Public Auction at the above time and place

Timber Berth, Township of Chisholm
(Being 22 square miles.)

Together with Saw Mill, Shingle Mill, Buildings, Camp and Logging Outfit, Tools, Horses, about 650 Logs, Etc., as per inventory, which can be seen by applying to Mr. D. McRae, Powassen.

The whole of the above will be sold en bloc.

TERMS.—Half Cash, balance one year, with interest at Six per cent. on approved paper.

For further particulars apply to the Chisholm Timber Limit Co., Hamilton, Ont., or to Wm. Hendrie, Jr., and J. J. C. Thomson, Proprietors.

PETER RYAN,
Toronto.

NAME AND ADDRESS WANTED.

Messrs. Gellibrand, Heywood & Company, of Cardiff, Wales, would be pleased to receive the name and address of the person who, in answer to an advertisement in this paper, wrote them a letter from Bedford, N.S., quoting prices for birch chair seats, etc. If this paragraph should happen to meet the eye of the person referred to, he will confer a favor by communicating immediately with Messrs. Gellibrand, Heywood & Co.

The steamer Simonside is loading a cargo of deals at St. John, N.B., for the United Kingdom.

CURRENT TRADE CONDITIONS.

ONTARIO.

It is usual for the month of April to be characterized by a decline in the price of lumber in anticipation of the new cut, but the past month has been a notable exception. Prices of almost every grade of lumber are equally as firm as one month ago. The demand has been quite active, and sufficient to absorb nearly all the dry lumber on the market. There is practically no merchantable pine that has not passed out of first hands. A large percentage of the new cut has also been contracted for at prices considerably higher than those ruling one year ago. It is, probable, however, that those who have bought will be on the right side of the market, as should any quantity of logs be hung up, as now seems probable, the result would be a further stiffening of prices. That a shortage in the log supply is anticipated is shown by the fact that logs are changing hands in the Georgian Bay district at $11 per thousand feet. It is said that on the north shore several million feet are hung up. Among the grades of lumber most in demand are 10 and 12 inch dressing and better and 6 inch strips. Several sales of mill culls have been made at high figures. Manufacturers report more liberal buying of hardwoods, with less disposition to scrutinize the inspection.

QUEBEC AND NEW BRUNSWICK.

Interest now centres on the log drives. The situation has not improved and the prospects for getting the logs to the mills are not encouraging. Satisfactory progress is being made on the Tobique river but the conditions on the St. John have been less favorable. There has been considerable buying of spruce deals for the British market, as shippers seem to fear a shortage in the supply. It is estimated that the shipments from Nova Scotia will be considerably less than last year. Cedar shingles continue firm, while there has been a slight decline in the price of spruce lath.

MANITOBA AND BRITISH COLUMBIA.

The lumber trade in Manitoba and the Territories is steadily increasing in volume. Building operations in Winnipeg and the country towns are becoming quite active and will call for a large quantity of lumber. An advance in the price of white pine lumber has been put into effect by the manufacturers. It is equal to about fifty cents per thousand feet on timber and dimension, boards, shiplap, flooring, siding and ceiling. This is likely to be followed by a corresponding advance in retail prices. It is understood that the

mills in British Columbia are also considering the raising of prices probably one dollar per thousand, to offset the higher prices asked for logs. The demand is active and a prosperous season is expected by both lumber and shingle manufacturers.

UNITED STATES.

The lumber market generally is quite as strong as at last writing. The situation at the head of the lakes is not satisfactory to mill men, inasmuch as there is a shortage of logs and some of the mills may be compelled to close down unless good progress is made with the drives. Business is particularly active in Pennsylvania and New York States. The high prices of pine and spruce are causing the substitution of southern pine in a few instances. Piece stuff is selling in the Chicago market at $15.25. Dry stocks along the lakes are cleared up, and green lumber will not be ready for shipment for two or three weeks yet. It is not likely, however, that prices will be further advanced, as it would be better to maintain prices at the present basis than force them higher, and probably bring about a sharp reaction when the new cut is offered. In the Saginaw valley long run pine is selling at $17 to $25, box lumber at $14 to 16, and mill culls at $12 to $13. Norway pine has strengthened of late, an advance of $1 having been made at Toledo last week. The base price there is now $17.50 for 2x4 to 2x10, 12 to 16 feet. Hemlock prices are also moving upwards. Cargo shippers who were selling dry hemlock a few weeks ago on the basis of $9.50 to $10 at the mill now want $10.50 to $11. Recent sales were on the basis of $11 delivered in Chicago, so that the asking prices are an advance of over one dollar. At Toledo hemlock boards are quoted at $15. From the Pacific coast comes the report that the mills are crowded to their utmost with orders, and that shipments are limited only by the available stocks of lumber and the supply of cars. There has been within the past two months a complete reversal of the hardwood market. At that time all kinds were quiet, whereas there are few items that are not now moving freely. Higher prices are being asked for maple and birch.

Most of the lath to be cut at Duluth this season has been contracted for at high prices. In the Saginaw valley No. 1 laths are quoted at $4, and No. 2 at $3.50. The demand is good for all grades of shingles. It is said that sales of New Brunswick shingles are being made in Boston at a range from $3.50 to $3.75.

GREAT BRITAIN.

The knowledge that no import duty is to be placed on timber was no doubt responsible in part for the better tone of the British market during the past fortnight. The prospects of peace in South Africa have also had a reassuring influence. Buyers have entered the market to secure specifications that are likely to be required for early contracts. In addition, there have been large public sales of pine and spruce, as is usual at this season of the year, to make room for the new imports. The prices realized show a slightly advancing tendency. For a quantity of first quality pine, from Quebec, £27 5s was obtained. This price, however, seems low, inasmuch as £30 is asked by Quebec shippers for similar stock delivered at London. A parcel of regulars, containing a percentage of second-class deals, brought £24. Second quality pine, 14 to 15 feet in length, sold at £16. The stock of spruce deals is working down, and 9 and 11-inch bring good prices. For narrow sizes the market is dull. A correspondent at Liverpool writes that the stock of spruce on hand is of very poor quality, but that it is being firmly held owing to the attitude of shippers. It is said that contracts have been closed on the basis of £7 7s 6d per standard c. i. f. Liverpool, for June loading, and that for later delivery £7 10s is asked. The prices realized for square timber at a recent sale are given in another column.

STOCKS AND PRICES.

The Parrsboro Lumber Company, of Parrsboro, N. S., expect to ship 3,000,000 feet of lumber this season.

The barque Pallas sailed last week from the Hastings mill, Vancouver, B.C., with lumber, for the United Kingdom.

J. & C. Hickman, of Port Elgin, N.B., expect to cut this season about 3,250,000 feet of spruce deals and 2,000,000 lath.

The Keewatin Lumber Company, of Keewatin, Ont., expect to manufacture 20,000,000 feet of lumber this season.

McClellan Bros. have just finished sawing 370,000 feet of deals and boards at Hopewell, Hill, N.B., by a portable mill.

Sims Bros., of Little Current, Ont., last week sold to William Pulling & Company, of Windsor, 650,000 feet of mill culls at good figure.

J. Willard Smith, agent for Gibson's mill at Marysville, N.B., expects to place the first cargo of cedar shingles on the market this week.

It is estimated that 33,000,000 feet of deals were shipped to the United Kingdom from St. John's, N. B., during the past winter on the regular liners.

One of the novelties of recent shipments from British Columbia was a cargo of lumber from the Hastings Mill, Vancouver, for Philadelphia, Penn.

The CANADA LUMBERMAN would be pleased to learn of parties in a position to make immediate shipment of about 5,000 railway ties, in either cedar or tamarac.

The Moulthrop Lumber Company, of John's Island, Ont., have purchased a timber limit on the Vermillion river, estimated to contain 40,000,000 feet of pine.

John L. Peck and J. Nelson Smith, of Hillsboro, N.B., are reported to have purchased 1,400 acres of timber land in the vicinity of Albert Mines, N.B., from Capt. H. A. Calhoun.

It is estimated that there are 290,000,000 feet of logs to come out of the Spanish river and tributaries this spring. The water is low, however, and many of the logs may be hung up.

R. A. Estey, of Fredericton, N.B., has sold 1,500,000 feet of spruce logs of this winter's cut to John E. Moore, of St. John. Mr. Estey took out more logs than he can manufacture at his mill.

The Canadian Pacific Railway Company are asking for tenders in this issue for the supply of track ties, fence posts, telegraph poles and piling required by the Ontario division for the next three or five years.

The barque Rhoda cleared from Little Current, Ont., on the 18th inst., for Cleveland, with 541,000 feet of lumber for the Saginaw Bay Company. This is part of the stock purchased by the company from Sims Bros.

According to M. L. Tucker, the shipments of lumber from Parrboro, N. S, this season will be smaller than for some years. He estimates that the shipments from West Bay will not exceed 15,000,000 feet, compared with nearly 40,000,000 feet last year.

The Parrsboro Lumber Company, of Parrsboro, N.S., operated last winter in Newfoundland, getting out 2,500,000 feet of logs at Notre Dame Junction. The Highland Lumber Company, also a Nova Scotia concern, took out 3,000,000 feet at Norris Arm. The Exploits Lumber Company, operating at Botwoodville, Nfld., took out 10,000,000 feet last winter.

Messrs. S. P. Musson, Son & Company, in their report of April 12th, thus refer to the Barbadoes market: "There have been no arrivals of white pine, but the market is amply supplied at the moment. We could not venture to value a cargo at present over $20 to $20.50 for shipping, and $15 to $15.50 for second quality. In spruce we have had the "Josie," with 130,000 feet, which we placed at $18.37. The steamer "Bratsberg" brought a small parcel of long cedar shingles, which have been sold at $3.60; further arrivals, however, will probably not bring this price."

BRITISH TIMBER SALE.

The following prices were realized for Canadian deals, etc., at an auction sale held at London, England, by Foy, Morgan & Company, on April 16th:

PINE—Ex. Prome, from Quebec—10-17 ft. 3x5 in. unassorted red, £7 per std; 10-16 ft. 3x5, £6 15s. Ex. Manchester Shipper, from Quebec.—12-13 ft. 3x12-21 in. first quality white pine, £27 5s; 14 ft 3x12-23, £27 5s; 10-11 ft. 3x12-22, £25 15s; 12 ft. 3x11, £24; 13 ft. 3x11, £24 5s; 14 ft. 3x11, £24; 15 ft. 3x11, £23 15s; 16 ft. 3x11, £23 15s; 14 ft. 3x9-10, £18 15s; 15 ft. 3x9-10, £19 5s; 16 ft. 3x9, £19 10s; 14 ft. 3x7-8, £17 5s; 15 ft. 3x7, £17 5s; 9 ft. 3x11-19, £21 15s; 8 ft. 3x11-20 £19 15s; 7 ft. 3x11-21, £19 10s; 6 ft. 3x11-19, £19 10s; 9 ft. 3x7-10, £18 15s; 8 ft. 3x7-10, £18; 7 ft. 3x7, £17 10s; 6 ft. 3x7, £16 15s; 2-5 ft. 3x11-18, £15; 5 ft. 3x4-10, £15 5s; 4 ft. 3x4-10, £13 15s; 3 ft. 3x4-10, £12; 2 ft. 3x4-10, £9 5s; 12-13 ft. 3x12-22 in. second quality, £16; 14-16 ft. 3x12-22, £15; 10-11 ft. 3x12-22, £14 10s. Ex. Strathavon, from Gander Bay, Que.—12-18 ft, 3x11 in. third quality white, £11 10s; 12 ft. 3x12-20, £10 10s; 13-18 ft. 3x12-20, £10 10s; 9-11 ft. 3x11-18, £10; 12-18 ft. 3x10, £9 10s; 12-13 ft. 3x9, £10; 14-18 ft. 3x9, £9 15s; 12 ft. 3x8, £9; 12 ft. 3x7, £8 15s; 13 ft. 3x7, £8 10s; 14-17 ft. 3x7 £8 10s; 12-13 ft. 3x6, £8 5s; 14-18 ft. 3x6, £7 15s; 12-13 ft. 3x5, £8; 12-18 ft. 3x4, £7 15s; 9-11 ft. 3x9-10, £9 5s; 9-11 ft. 3x7-8, £8 5s; 9-11 ft. 3x4-6, £7 10s; 6-8 ft. 3x5-16, £7 10s; 2-5 ft. 3x3-11, £5 5s; 12-13 ft. 3x12-22 in. first quality, £14 15s; 9-17 ft. 3x12-20, £14 10s; 9-17 ft. 3x11, £17; 12-18 ft. 3x10, £14 10s; 12-19 ft. 3x9, £14 5s; 12-18 ft. 3x8 £12 5s; 12-18 ft. 3x5-7, £10 15s; 9-11 ft. 3x5-10, £12 15s; 2-8 ft. 3x3-18, £12; 12-13 ft. 3x12-22 in. second quality, £11 5s; 9-18 ft. 3x12-21, £10 15s; 9-18 ft. 3x11, £13 5s; 12-18 ft. 3x10, £10 10s; 12-18 ft. 3x9, £10 15s; 12-13 ft. 3x8, £10 5s; 14-18 ft. 3x8, £10; 12 ft. 3x7, £10 5s; 13-18 ft. 3x6, £9 5s; 13-19 ft. 3x4-5, £8 10s; 9-11 ft. 3x8-10, £9 10s; 9-11 ft. 3x4-7, £8 15s; 2-8 ft. 3x3-18, £7 10s. Ex. Norge, from Quebec.—12 ft. 3x11 in. first quality, £25 15s; 13 ft 3x11, £26; 11 ft. 3x11, £23 15s; 10 ft. 3x11, £23; 14-15 ft. 3x11 in. second quality, £16; 11 ft. 3x11, £13 10s; 10 ft. 3x11, £13 10s; 12-13 ft. 3x10, £12; 11-13 ft. 3x9, £12 5s; 6-14 ft. 3x8, £11 5s; 12-13 ft. 3x7, £10 15s. Ex. Devona, from Quebec.—7-16 ft. 4x5-6 in. unassorted red, £10 10s; 11-18 ft. 3x6, £10 5s; 10-18 ft. 3x6, £7 5s; 10-18 ft. 2x5, £7; 6-18 ft. 2x4, £7 15s. Ex. Monte Videan, from Quebec.—A quantity of unassorted red pine at from £6 10s. to £8 5s.

SPRUCE.—Ex. Verdandi, from Batiscan, Que.—11 ft. 3x9 in. second quality, £9 5s per std.; 10-11 ft. 3x9, £9; 12 ft. 3x7 in. second quality, £8 and £7 15s; 13 ft. 3x7, £7 15s. Ex. Fridtjof Nansen, from Quebec—13 ft. 3x9 in. third quality, £9 5s; 14 ft. 3x9 in. fourth quality, £8 15s; 6-16 ft. 3x9, £8 10s.

ASH TIMBER.—14-20 ft. 12¾x15 1-2 in., 45s per load of 50 cub. ft; 12-18 ft. 12¼x15¼ in., 45s.

OAK TIMBER.—23-31 ft. 17x25¾ in., 87s 6d per load; 22-35 ft. 16¼x23¼ in., 85s; 21-28 ft. 13¼x19¾ in., 82s 6d.

ROCK ELM TIMBER.—46-51 ft. 10 1-2 x15 in., 45s per load; 40-43 ft. 11¼x13¾ in., 52s 6d; 40-42 ft. 10 1-2x14 1-2 in., 50s; 36-40 ft. 11¼x15¼ in., 47s 6d; 36-39 ft. 11x15¾ in., 60s; 33-35 ft. 11x16 1-2 in., 67s 6d; 30x34 ft. 10¾x16 1-2 in., 62s 6d; 25-33 ft. 10¼x14¼ in., 60s; 25-30 ft. 11 1-2x16¼ in., 67s 6d.

BIRCH.—3x11-13 in. sawn, 11d per cub. ft; 3x10, 10 1-2d; 3x9, 10 1-2d; 3x8, 10d; 3x5-7, 9d; 3x10-16, 11d; 3x6-9, 10d.

TRADE OPENINGS.

The following were among the enquiries relating to Canadian trade received at the Canadian Government Office in London during the week ending 4th April, 1902. The names of the parties may be obtained from the publishers of this journal.

A firm of organ makers have asked to be furnished with the names of shippers of whitewood from Canada.

A firm at Leith, Scotland, make inquiry respecting the wood pulp trade of Canada, their object being to interest themselves in the importation of sulphite pulp.

The Canadian makers of butcher and other skewers ask to be placed in touch with English buyers.

DOORS AND MOULDINGS.

A large buyer of Canadian white pine doors and mouldings is open to contract with a mill for their entire output of No. 3 and 4 qualities of doors and all their mouldings during 1902. Write in first instance to Empire, CANADA LUMBERMAN.

Orillia Planing Mills

and Sash and Door Factory
Near G. T. R. Station.

PLANING, MATCHING AND RE-SAWING
Done in any quantity. We guarantee satisfaction. Write for prices. Address,

S. POMEROY, Box 428, Orillia.

TO THE LUMBER TRADE

We will be represented in South Western Ontario by Mr. Frederick Shaw, of Forest, Ont., who comes with us as travelling salesman on May 1st, and who will call on the trade regularly. We are running our mills day and night and offer to the trade a well manufactured stock of band sawed lumber put up in grades under Michigan inspection rules. We solicit your inquiries, and all correspondence given prompt attention.

The Cleveland-Sarnia Saw Mills Co., Limited
SARNIA, ONT

THE OTTAWA VALLEY.

[Correspondence of the CANADA LUMBERMAN.]

The activity about the mills is the present prominent feature of the lumber business. Every preparation has been made for a big season's cut, and all that remains to transform expectations into realizations is a large and steady supply of logs. Gilmour & Hughson's large mill on the Hull side of the river is working on dimension timber. The W. C. Edwards Company's mill has also started for the season with a large gang of men. The Ottawa mill got down to business this year about a week before the larger mill at Rockland. Booth's mill is also running night and day, the night gang having been placed at work this week. Over 1,500 men are now employed in the Booth mill and yard. A large burner is in course of erection. In it the refuse sawdust will be disposed of. The E. B. Eddy Company's saw mill and the mills of smaller concerns in and about the city are all working on the season's cut.

From present indications very little lumber available for present sale is likely to be carried over. The mill men are daily in receipt of inquiries from local and outside dealers, and the prospects for a rapid turnover of lumber in the yards are good.

The Ottawa Transportation Company has got its fleet of 80 barges in readiness for the movement of the Ottawa and Hull mill cut. Shipments will commence early next week, and an extra busy season is looked for. The above company has a monopoly of the river carrying business. American barges carrying return cargoes of lumber have to get permission and pay for the privilege. Each of the Ottawa barges has a capacity of 350,000 feet of lumber, equal to 25 car loads. A couple of new barges will be placed in commission with the opening of the canal on Monday.

There is absolutely no change in the lumber prices this month. They are stationary and several lines are all held in second hands. Lath and shingles figure in this list, with several measurements of the better grade of lumber. Everyone is waiting for a slice of the new cut on which the mills have just started. When it is placed on the market it will no doubt have an effect on prices.

Building operations in the city have not as yet taken on the accustomed activity, but better things are looked for. The talk of strikes in the building trades is dying out, and local dealers are anticipating a busy season with the city trade. Shipments to the States have picked up, and the C. P. Railway and C. A. Railway report an increased inquiry for cars. The trade with the States by water will be large this season.

The dry weather has given the Ottawa lumbermen considerable trouble, and unless an abundance of rain marks the weather for the next week, many logs will be tied up, as the water is low. The Riordan Paper Company, of Hawkesbury, is said to have a considerable quantity of stuff on the Rough River which will have to be left there. This week a couple of large booms passed down the river to Grenville, en route to Montreal. The report that the Canadian Pacific Railway has purchased the Ottawa, Northern and Western Railway and the Pontiac line is good news for the local lumbermen, the improved service will facilitate the handling of supplies. If the C.P.R. extends the lines as is predicted, new and valuable territory will be opened up.

In the provincial campaign the local lumber trade is deeply interested, as two of its members are prospective candidates. They are ex-Mayor Bingham and Alex. Lumsden, ex-M.L.A. Mayor White, of Pembroke, son of the late Andrew White, M.L.A., will contest North Renfrew in the Conservative interests against Mr. Munro, the sitting member, who is a well-known lumberman. Mayor White controls his father's interests in the lumber business. Mr. Alex. Lumsden, who returned a few days ago from the Temiscamingue district, states that the Kippewa Temiscamingue, and smaller lakes are still full of ice. Navigation will not be opened for some time. None of the mills are running yet.

At the annual meeting held here last week Mr. W. C. Edwards, M.P., the well-known lumberman, was elected President of the Canadian Association for the Prevention of Tuberculosis.

OTTAWA, April 25th, 1902.

FIRES.

The saw mill of H. Elderkin & Co. at Port Greville, N.S., was destroyed by fire recently.

The saw mill of John Cooper, of Wallaceburg, Ont., was burned a few days ago. The loss is heavy.

The saw mill of George Tennant, at Bracebridge, Ont., together with a quantity of lumber, was burned last week.

The sash and door factory of Robertson & Hackett, Vancouver, B.C., was damaged by fire recently to the extent of $4,000.

Simmie's saw mill at Clavering, Ont., together with a quantity of lumber was destroyed by fire last week. The loss is about $6,000.

The sash and door factory of James York, at Chesterville, Ont., was destroyed by fire recently. The loss is estimated at $50,000, with no insurance.

GILMOUR & COMPANY, LIMITED
TRENTON, CANADA

THE BOSTON MARKET.

The spruce lumber situation still hinges on the log drives. The weather conditions east still continue unfavorable for driving, and the probabilities thoroughly favor a hang-up of a good portion of the new logs in the tributaries of the big rivers. Manufacturers, consequently, ev nce a determination to either withdraw otations entirely, or bid $1.50 to $2 per usand over last winter's prices. Quotations are $18 to $20 on ordinary frames; 10-in. and over, $20 to $22, with the lower quotations more nearly nominal than otherwise.

Hemlock is still very firm, with the supply limited: Boards, 12, 14 and 16 feet stock, $15 to $15.50 for good eastern; random, eastern, $14 to $14.50; Pennsylvania, No. 1, $16 to $17.50; No. 2, $15 to $15.50.

White pine continues remarkably strong: Here, uppers, 1-in, $75 to $80; 2½ and 3 in, $80 to $85; 4-in. $85 to $88; selects, 1 to 1½ in. $68; 2-in. $69 to $70; 2½ to 3 in. $74 to $76; 4-in. $79 to $80; fine common, 1-in. $60 to $63; 1¼ to 1½ in. $64 to $66; 2-in. $68 to $70; 2½ and 3 in. $69 to $71; 4-in. $80; barn boards, $23 to $33; coffin boards, $27 to $32.

Hardwood lumber is very firm, with exception of common plain, oak which is weak and easy: Quartered oak, $64 to $66; plain oak, $41 to $45; common and rejects, $20 to $25; red oak no market; white wood, $42 to 43; sap and common, $30 to $35; brown ash, $41 to $44; white ash, $43 to $46; maple, $28 to $30; end-dried white maple, $38 to $42; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

Shingles continue very firm, with spot prices 15c above quotations on extras and clears, with a very light demand for second clears: To arrive, extra cedar, $3.35 to $3.40; clear, $2.85; second clear, $2.35; extra No. 1, $1.75 to $1.90; Washington and British Columbia red cedar, 16-inch, five butts to 2 inches, $3.75 to $3.80; 18-inch, $4.25 to $4.50.

Clapboards are very scarce and firm, with prices at wide range, depending on how badly they are wanted: Extra spruce, $38 to $40; clear, $36 to $38; second clear, $33 to $35; extra No 1, $24 to $26.

Laths are firm: 1⅜ inch at $3.15 to $3.20; 1½ inch, at $3.

New Mill Erected 1901. Capacity 100 Million a Year.

Spicer Shingle Mill Co., Limited

The purpose of this advertisement to try and convince the Lumber Trade of Canada that we are the only company in British Columbia manufacturing and shipping shingles in large quantities, or that we "know it all." We recognize that "there are others" and that we are not the only "pebble on the beach." To try and make you believe that we are the only people who can supply you **promptly** and in **large quantities** with a **high-grade** shingle would not only be a **fish** and a **bear** story combined, but it would be gall of the bitterest kind.

Our competitors in the shingle business in B. C. are nice people, and we presume that they know their business; but we are nice people too, and as we have been in the trade as long as any of them, and a **great deal longer** than the most of them, we know that we know our business, and that our competitors are not in the possession of any points of value regarding the manufacture of shingles which has not come to **our knowledge**.

Our old mill was burned down in May last, and in its place we have built what is at the present time the **Largest** Shingle Mill in B. C.

Our new Mill has 7 of the latest improved type of Dunbar machine, which we run night and day—giving us a capacity of about **100 Million** a year.

Competent judges who have seen our new mill, tell us that it is one of the most **substantial**, carefully **constructed**, and best **planned** mills in this province. We ourselves think it is **the very best** shingle mill in B. C.; and we know that it is **equipped** with all the very latest improved Shingle Machinery.

Will the trade please note that our contract with the Pacific Coast Lumber Co. closed on December 31, 1901. Orders sent to us by letter or telegraph shall have our best attention.

We want our share of your shingle business, and can **guarantee** you satisfaction in **every particular**.

Spicer Shingle Mill Co., Limited,
VANCOUVER, B. C.

Another Little Mill

There will be over a million feet of sawn lumber used in this one plant for construction only; over 30,000 lin. feet of piling, besides rock foundations; two car-loads of shingle machines only; over 7 miles steam pipe 1 1-2 inch and up in diameter. A summary of all the material that will be used in the construction of this plant shows that there will be over 320 car-loads, or 21 trains of 15 car-loads each.

With all our past experience in the shingle business, of which we make a specialty, and with all the latest and best improvements in machinery and mill construction, we expect it to be the most complete and up-to-date mill in North America, where shingles can be made better than in the ordinary mill.

The above plant will be in operation about the first of June, and although this mill will have a daily (24 hours) capacity of 1,250,000 shingles, the dealers and consumers need not be afraid of any particular surplus, but can rest assured that there will be one firm on the coast manufacturing red cedar shingles from whom they can get their wants supplied in a hurry with that old reliable "Hastings Brand" so much talked about.

CUSTOMERS' ATTENTION.—Please take notice that on and after the 1st day of January, 1902, all arrangements with the Pacific Coast Lumber Co. of New Westminster, B. C., for the handling of any of our shingles will be ended, and until further notice our authorized general agents will be Mr. Jas. Twitchell, Clinton, Ont., for Ontario, and Mr. Samuel Ashfield of Winnipeg, Man, for Manitoba and the North-West; therefore, orders for straight or mixed cars sent through the above agents or direct to us will have equally prompt and careful attention.

Shingle Mill, Hastings, B.C.; Lumber and Shingle Mill, Vancouver, B.C.; Shingle Mill, New Whatcom, Wash.; Shingle Mill, Sumas, Wash.; Shingle Mill, Carroll Siding, Wash.

The Hastings Shingle Mfg. Co., Limited
Office, 450 Westminster Ave., Vancouver, B.C.

WHAT CONSTITUTES A COMPLETE FILING ROOM OUTFIT.

Successful saw fitting requires two essentials—a well equipped filing room and a capable saw filer in charge of it. Saws do not run or fit themselves and they require fine fitting to produce a maximum quantity and improved quality of output on a minimum saw kerf. Hence it is usually an unwise economy that does not provide both essentials, and the most successful sawmill and factory operators consider it good practice to supply every machine or tool calculated to improve or facilitate the filer's work.

Every operator of a sawmill or woodworking plant has a substantial investment in mill and saws. His profits depend largely upon having his lumber or finished product well manufactured on a maximum output and a minimum saw kerf. He spends money for saws which for some operators last for years until worn out; for others, last for weeks until worthless from cracks or other defective conditions.

There are some operators whose saws run finely;others whose saws run ndifferently well or poorly, on an irresponsible wave line, because of poor swaging, sharpening, side-dressing, irregular tensioning, etc. This is a suggestion of no swage, no sharpener, no shaper, no stretcher; or, if such tools are in use they are defective, out of repair, and not uniform or efficient in operation. As a result the buyer may take the stock for a dollar or more less per thousand feet than market prices.

This suggests that the filing room is the initial point for profits in the use of saws. The purchase of filing room equipment is variously approached by different operators. One can observe all manner of ideas on the subject, ranging from those of the man in whose mind is predominant this proposition: "I want just as few and cheap machines as my filer can possibly get along with. I want him to work and earn his money by continuous hand labor—what have you second-hand, cheap?" to those of the man who says: "I want the best saw fitting outfit obtainable—a machine and tool for every service, everything must be up-to-date if not ahead of date."

A proper conservatism in buying is always judicious, and it is manifestly true that not all mill men have the same purchasing power, or can afford to be similarly equipped, or can carry on their business with equal success and profit, but it is a self-evident truth to the well informed that the best results from saws are contingent upon fine swaging, sharpening, sidedressing, tensioning and brazing; results obtainable only from the use of high-grade, efficient saw fitting appliances in the hands of a capable operator. The life of saw fitting machinery depends directly on the quality and strength of construction, and on the care bestowed by the operator. Defective contruction and lack of proper care account for the number of sharpeners, stretchers, swages, brazing clamps, etc., in the mills to-day in disuse or unsatisfactory use.

The ideas of millmen and filers differ as to what machines and tools comprise an efficient filing room outfit, but as manufacturers of such equipment familiar with the possibilities in the way of a machine or tool for every service, we enumerate below the several appliances that are found in practice to be necessary or desirable for the several processes of sharpening, swaging, sidedressing, jointing, leveling, tensioning, retoothing, shearing, lap making, brazing, patching, etc. This list contemplates an outfit that will please the most critical and provides a machine or tool for every service so far as conceived to date—our own manufacture. It is an elactic list that will accommodate itself to the requirements of the most or the least critical or liberal buyers. It may be observed that there are "degrees" in filing room outfits, the "positive degree" applying to the outfit that includes only the absolutely indispensable machines; the "comparative degree" to that outfit which includes in general a fair assortment, fully up to the equipment of the average operator; the "superlative degree" to that outfit which includes a machine or tool for every service, each the best obtainable, and the whole calculated to secure the greatest efficiency in mill operation as a result of the perfect fitting of the saws. The practical millman or filer can profitably compare his own outfit in use with the list below and note his comparative efficiency. A few hundred dollars more or less is the measurement in money between the "positive" and the "superlative" degree in filing room equipment, the saving in investment cost at 7 per cent. ranging from $15 to $50 per year. There are millmen who are saving this difference in first cost and fixed investment and who are losing thousands of dollars annually in poorly manufactured lumber, ruined saws and expense for labor idle while the mill waits on the saw fitting. There are millmen who spend from $10,000 to $50,000 on a plant, critical to a degree in everything that pertains to the heavy machinery, power plant, belting and saws, who fail to maintain the same high standard of excellence in the saw fitting department, regardless of the fact that a magnificent power plant, and the rapid handling of logs by steam, and their manufacture by the most modern of mills, cannot compensate for poor saw fitting.

A LOG BAND SAW FILING ROOM OUTFIT.

For Sharpening.—An antomatic sharpener of suitable capacity, equipped with double feed finger device and post brackets for support of saw, and with idle pulley for use in fitting up work. This system does not contemplate the support of saw to sharpener on a set of adjustable pulleys, the use of which for this purpose has been largely discarded owing to the fact that they are not found to afford the most accurate feed.

For Swaging.—An automatic power or hand swage, either of which may on occasion be supplemented by the use of an upset swage or a swage bar. A grasshopper type of swage is desirable in any filing room and a power swage also unless the teeth cannot be maintained of fairly even length.

For Sidedressing.—A swage shaper or pressure sidedressing tool is now generally regarded as indispensable, as its use secures the ideal tooth. A file sidedresser may also prove useful, but for regular use it is not highly recommended.

For Leveling and Tensioning.—A doghead and a crossface hammer weighing from 2 to 3 lbs. An iron leveling block, face 14x72 inches or smaller, surfaced both sides to permit of reversing. A steel faced anvil 12x16 or smaller. A concave back gauge from 6 to 10 feet long for testing the back of saw. A straight edge and tension gauge of proper lengths. A saw stretcher of abundant power, with rolls properly crowned that track and travel together. Perfect efficiency in this machine is of the utmost importance and a machine lacking in the particulars mentioned is inferior, as its work may have to be undone. If there is much shearing of saws, the stretcher should be equipped with a rotary shear, a feature of our geared machines.

For Shearing.—A combined shearing and crosscutting machine that may be used either to shear the back or toothed edge of saw or to cut saw in two preparatory to lap making.

For Retoothing.—A retoother with dies made specially to suit the special requirements. This machine may also have combined with it dies for shearing. Additional sets of dies for special requirements are often to advantage.

For Lap Making.—A lap grinder or a lap cutter. As between an efficient machine of either type there is little to choose.

For Brazing.—A powerful brazing clamp that will insure uniform pressure across the entire surface of the lap. A machine for this service cannot be too heavy and powerful. A forge for heating the irons. The ordinary open hearth portable forge may be used for the purpose, but a special forge with tuyures arranged to secure a uniform heating of the irons their entire length, is more efficient. Good silver solder, brazine, etc

For Fitting Up.—An iron filling clamp with planed jaws of proper length. A set of adjustable pulleys for support of saw is convenient but not necessary if saw is fitted in connection with sharpener, and an idle pulley is in place for use in pulling saw around. A file jointer. An emery wheel dresser. Instruction book on hammering.

For Checking Cracks.—A crack drill or prick punch may be used for checking small cracks. But the use of our patch machine for preparing the surface of a cracked saw ready for repairing by means of the application of a patch is highly desirable.

For Power.—An engine for driving the filing room machinery independent of the mill machinery, to afford a steady, independent power at any time, is highly desirable.

Add to the above good saws and emery wheels and a capable saw filer and the successful fitting of the saws will be assured.

A BAND RESAW FILING ROOM OUTFIT.

Band resaws in general use vary from 2 to 8 inches wide and from 16 to 24 gauge, and differ from the log band saw only in size. Compared with log bands, resaws require as great or even greater care and skill in fitting, because of the thinner gauges employed and the desirability of perfectly converting valuable lumber into proper thicknesses without waste.

The attempt to fit resaws without a suitable equipment of machines and tools is not economical, because of the waste in stock, poor manufacture involving extra care and labor on the part of those that work up the stuff into manufactured form, and the loss arising from breakage and destruction of saws. The greater need of suitable appliances is also evident from the fact that many of the filers called upon to take care of band resaws are men of little or no previous experience on such saws, and hence whatever is calculated to facilitate and improve their work is not only desirable but also essential.

Our outfits as regularly furnished comprise the following: (1) Automatic sharpener equipped with double feed finger device and post brackets for support of saw, with an idle pulley for use in fitting up work. (2) A stretcher for tensioning. (3) A grasshopper swage, with a small upset for occasional use. (4) A swage shaper for sidedressing, which is indispensable to the best results, although some make use of a file sidedresser. (5) A brazing clamp. (6) A filing clamp. (7) A jointer. (8) A steel faced anvil 6x10 or larger. (9) A leveling block 8x48, surfaced both sides. (10) A pair of 2 to 2½ lb. resaw hammers. (11) A set of resaw straight edges and tension gauges. (12) For those that make their own saws or have much shearing or retoothing to do, a retoother and shear. (13) A lap cutter or lap grinder, if many brazes are necessary. (14) A forge of suitable character for heating the brazing irons, silver solder, acid. (15) An emery wheel dresser. (16) A book of instruction on band saw fitting and tensioning will be found of use to beginners or those who have had little experience in saw work, and are not familiar with the best practice.

A SMALL BAND SAW FILING ROOM OUTFIT.

The appliances necessary to the proper care of small band saws ranging from 1-8 to 1, 2 or 3 inches, include an automatic filing machine, automatic setting machine, set of adjustable stretching wheels for support of saw, a filing vise, a brazing lamp, solder or spelter, etc.

A FILING ROOM OUTFIT FOR RECIPROCATING SAWS.

For gang, frame, web, and jib saws, the outfit of machines and tools must depend upon the size and kind of the saws and the methods employed in the fitting, which vary in different localities,but in general for saws that exceed 3 inches wide and 18 inches long, the following appliances, in size suited to requirements, are found desirable:

Automatic sharpener, swage, upset swage, or bar and swaging hammer, filing clamp, stretcher, jointer, swage shaper or file sidedresser, anvil, hammers, straight edges, emery wheel dresser.

For very small gang saws a swage, shaper and filing clamp.

A CIRCULAR SAW FILING ROOM OUTFIT.

The selection of circular saw fitting equipment must depend entirely upon the size and character of the saws, which differ materially in the various sawmills and woodworking plants.

No sawmill of 10,000 or more feet per day capacity can afford to do without an automatic sharpener, and in mills or factories where there are a considerable number of rip and cut-off saws in use, an automatic rip and cut-off sharpener should be employed.

The use of a machine swage on all large ripsaws is indespensable, and a more general introduction of such a tool for swaging small factory saws would afford results far superior to hand swaging or the mixed use of swage and spring set, or the use of spring set only.

A suitable outfit of hammering tools is always essential. A good equipment will include the following: Automatic rip saw sharpener for large saws. Automatic or hand rip and cut-off sharpener for medium or small saws. Swage shaper or file sidedresser Jointer. Hammering bench. Anvil and hammers of proper size. Emery wheel dresser. Instruction book on saw hammering and fitting.—From catalogue of Baldwin, Tuthill & Bolton, Grand Rapids, Mich.

THE NEWS

—D. R. Galbraith is starting a saw mill at Mar, Ont.

—G.B. Johnston is opening a lumber yard at Edrans, Man.

—John Reid contemplates building a saw mill at Fort Francis, Ont.

—Laird Bros. are building a new planing mill at Dresden, Ont.

—Coward & Company are opening a sash and door factory at Fernie, B.C.

—S. Larue & Son are building a sash and door factory at Mountain, Ont.

—Mr. Moses, of Kemptville, Ont., is building a saw mill and tub factory at Carp.

—W. W. Peck & Son have registered partnership as lumber dealers at Sutton, Ont.

—Hamm & Klassen have purchased the planing mill of J. Wiebe, at Hague, Man.

—Truman Bros. have sold their saw mill at Ponoka, N.W.T., to Loewen & Company.

—A. A. Ryley is refitting his mill at Little Current, Ont., and putting in a Dutch oven.

—Delorme & Cardinal have just commenced business as lumber dealers in Montreal.

—James McEwen, lumber dealer, Arcola, N.W.T., has been succeeded by R. E. Gordon.

—Owen Bros. have installed a new shingle machine in their mill at Richard's Landing, Ont.

—M. Brennan & sons, of Hamilton, Ont., are building an addition to their woodworking factory.

—The saw mill of George Gilmour at Edraelon, N. B., which was recently burned, is being rebuilt.

—Robert Hannington is building a saw mill near Glassville, N.B., for the manufacture of hardwoods.

—Mork ll & Whitworth, lumber dealers, Morris, Man., have sold out to the Morris Lumber Company.

—It is said that T. &. J. Conlon, of Little Current, Ont., intend installing a new band saw in their mill at Picnic Island.

—E. Hutchison s saw mill at Campbellton, N.B., commenced operations on March 31st, the earliest in its history.

—Charles Miller's shingle mill at Pokiok, N.B., which was closed down last fall, has commenced operations.

—The Prescott Lumber Company, New Mills, N.B., are building a shingle mill of an annual capacity of about 12,000,000 shingles.

—Clarke Bros., of Beaver River, N.S., are adding a planer and other machinery for the purpose of utilizing the waste of their saw mill.

—A new saw mill is being built at Hintonburg, Ont., by James Lunney & Company. It is expected to be ready for operations in May.

—The ratepayers of Sturgeon Falls, Ont., carried a by-law on April 4th to assist Cockburn & Sons, of that place, in building a new saw mill.

McLachlin Bros., of Arnprior, Ont., are macadamazing the roads throughout their extensive lumber yards. Stone to a depth of eight inches is being laid.

—A bill to encourage the establishment of industries in the province of New Brunswick for the manufacture of hardwood specialties was defeated in the legislature last month.

—The lumber firms of Willoughby & Duncan and R. F. Williams, Regina, N.W.T., have been amalgamated under the name of the Regina Lumber & Supply Company, Limited.

—It is the intention of the J. & T. Charlton Saw Mill Company to operate their mill at Collingwood, Ont., day and night during the greater portion of this season. The company are building a new office.

—William Bradon, of Bayfield, Ont., recently cut an elm tree which measured 7 feet across the butt and made eleven 10-foot logs, containing in all about 6,000 superficial feet of lumber and 10 cords of stove wood.

—Caldwell & Company, of the Virden, Man., Nurseries, has received an order from the Dominion Government Forestry Department for 200,000 Manitoba maple seedlings and 60,000 Russian poplar trees.

—Recent heavy rains in New Brunswick caused destruction to the property of C. M. Bostwick at Salmon River. The large dam gave way and the mill was practically destroyed. The damage will exceed $20,000.

—The Revelstoke Lumber Company, of Revelstoke, B.C., have made improvements to their saw mill, having added a moulding machine, resaw and a 30 h.p. engine for driving the planers. The mill and boiler house have been roofed with iron.

—The Keewatin Lumber Company, of Keewatin, Ont., repaired their saw mill prepatory to commencing the season's operations. They had a stock of logs on hand, and did not have to wait for the opening of navigation on the Lake of the Woods.

—The Muskoka Wood Manufacturing Company, Limited, has been organized for the purpose of manufacturing broom and tool handles, dowels, chair parts, and other wooden specialties. It is proposed to build a factory at Huntsville, Ont., and to engage in the export trade.

—The annual meeting of the Lower West Miramichi Log Driving Company was held at Fredericton, N. B., on March 12th. A small dividend was declared, and the following officers elected: President, W. M. Richards; secretary, H. Beckwith; directors, M. Welsh, T. Lynch and William Richards.

—The shareholders of the Blonde Lumber & Manufacturing Company, Chatham, have elected the following officers: President, William Ball; vice-president, N. H. Stevens; secretary-treasurer, T. C. O'Rourke; assistant secretary, T. J. Doyle; manager, Benjamin Blonde; assistant manager, George Blonde.

—It is understood that the British Columbia Mills, Timber and Trading Company, who purchased the property of the Moodyville Land and Saw Mill Company, will not operate the Moodyville mill, the object in making the purchase being to secure the ownership of the timber limits, which are estimated to contain 150,000,000 superficial feet of spruce, cedar, etc.

—M. J. McKercher and associates have just completed the erection of a saw mill at a point fourteen miles from Elko, B.C., on the line of the Crow's Nest Southern Railway. The mill has a daily capacity of 40,000 feet, and will be operated night and day for the next three months. The owners have a contract to supply piling, bridge timber and ties for the Crow's Nest Southern road.

—The Cushing Box Company, Limited, which is applying for incorporation, has not been formed to take over the lumber business of Andre, Cushing & Company at St. John, N. B., but is a new concern. The company have fitted up a box mill at Milford, where modern machinery has been installed for the manufacture of box shooks. George S. Cushing is associated with the enterprise.

—The largest tree known to have been discovered in British Columbia was found recently by Mr. Higgins, who purchased the timber in Hastings Park from the city of Vancouver, and is now taking out shingle bolts there. He came across the shell of a burnt cedar that measured sixteen feet across on the inside. It is fifty-seven feet in circumference and six horses could, according to Mr. Higgins, stand abreast inside the tree.

—The business of the Boake Manufacturing Company, Toronto, has been transferred to the Boake Manufacturing Company, Limited, G. W. Boake becoming president and manager, A. U. DePencier vice-president, and F. K. Ebbitt secretary. Mr. Ebbitt was for a number of years with J. R. Booth, of Ottawa. It is the intention of the new company to extend their yards and build a large dry kiln. They have the sole agency for the J. D. Shier Lumber Company's end-matched birch and maple flooring.

—The employees of A. Cushing & Company's shingle mill at St. John, N.B., went on strike last month for higher wages. It is said to have been the custom to reduce the wages of the employees during the winter months and to restore them to a higher scale on May 1st. The employees demanded that the advance to the summer scale should be put into effect earlier in the spring. It is stated that if the men do not accept the terms of the engagement it is possible that the mill may be closed all summer.

—McDougal, Brandon & Austin, of Lindsay, Ont., have purchased Grand Island, in Balsam Lake, from the executors of the R. C. Smith estate. The island contains 1,200 acres, 300 of which is totally cleared, the remainder being good hemlock and hardwood bush.

—The Cleveland Sarnia Saw Mills Company, of Sarnia, Ont., has recently been sinking a well, hoping to find salt. When the well was driven a depth of 700 feet a gas vein was struck. The tools were driven out of the well as though shot from a dynamite gun. The drill house and a derrick were demolished, and the gas was ignited by a fire in the building. The result was a pyrotechnic display such as is seldom seen. A blaze of gas rose to a height of 75 feet and for several nights illuminated the St. Clair river about Sarnia. The gas burned itself out in a few days and work on the salt well was continued.

—In reply to a question in the Quebec Legislature as to the area in square miles sold as timber limits in Quebec, Hon. Mr. Parent submitted the following figures:—1. 61,886 miles, or 39,607,040 acres. 2. Upper Ottawa, 22,230 miles; Lower Ottawa, 5,796 miles; St. Maurice, 11,598 miles; St. Charles, 1,474 miles; Lake St. John, 5,876 miles; Bonaventure and Gaspe, 3,483 miles; Rimouski, 2,175 miles; Saguenay, 5,030 miles; Granville, 1,393 miles; Montmagny, 867 miles; Metapedia, 665 miles; Chaudiere, 688 miles; St. Francis, 517 miles; Arthabaska, 94 miles.

—In the British Columbia Legislature Mr. Tatlow moved for an order for the return setting forth the amount of royalties collected on timber cut within the Esquimalt and Nanaimo Railway belt in the past three years, from which such royalties were collected and the amount of timber cut; also how much had been exported not manufactured, and what quantity paid no royalty whatever. His object was to show that the amendment of the land act prohibiting the export of timber was ill considered. He contends that provincial lands are thereby decreased in value, to the advantage of those held privately, such as those within the Esquimalt and Nanaimo Railway belt. Hon. Mr. Wells said that so far as the Esquimalt and Nanaimo Railway lands were concerned, the Government had no means of exacting terms in regard to them, as they were held in free simple, and not amenable to the laws of the province.

CASUALTIES.

Fredinand Demers was killed recently in his father's saw mill at St. Raymond, Que., by being caught in the shafting.

A Chinaman employed at Roche's mill on Burrard Inlet, B.C., fell across a circular saw and was almost severed in twain.

THE LAURIE ENGINE COMPANY.

The Laurie Engine Company, of Montreal, which has for years been well-known as the principal builders of large engines in Canada, has just had an important change made in its control. The majority of the old board of directors having retired, the company's affairs are now under the direction of a new board, consisting of Messrs. C. E. L. Porteous, Wm. Yuile, F. L. Wanklyn, C. W. Davis, W. G. Ross, Walter H. Laurie and John Laurie. Mr. Porteous has been chosen president, and Mr. Yuile vice-president. The change will, without doubt, result in a large extension of the business, as on account of the extensive connections of the new members of the board, it will bring the company into touch with a much larger field. The increased financial facilities afforded will also enable the company to undertake much larger work than before, although it now holds the record for the biggest engine in Canada. The change will also add greatly to the strength of the company. The intimate connection of Mr. Porteous, who is president of the Montreal & St. Lawrence Light, Heat & Power Company, and a director of several of the leading companies in Montreal, and Mr. Yuile, who is president of the Diamond Glass Company, with a large number of Canada's principal financial interests, will lead to a large increase in the financial resources of the company. Mr. Wanklyn, general manager of the Montreal Street Railway Company, and Mr. Davis, who is general manager of one of the largest manufacturing concerns in the city, will take an active interest in the mechanical side of the business. There is no change in the other offices, the position of managing director being retained by Mr. Walter H. Laurie, known to be an expert as a steam and mechanical engineer, thus assuring the continued success of the company in engineering matters.

THE E. LONG MANUFACTURING COMPANY.

T business of the above company was established n t year 1865, by Mr. Robert Brammer, as a ounry and machine shop. Mr. Brammer made a speel study of shingle machines, he being the inventor of th celebrated "Clipper," as well as holding patents for several other machines. In the year 1895 Messrs. Long & Thompson entered into partnership and purcased the business of the late Mr. Brammer. New buildgs wers erected, including moulding shops, finishting room, pattern rooms, etc., and the entire plant was equipped with the latest improved machinery necessary for the manufacture of saw and shingle mill machinery and general mill supplies. This firm carried on business for five years, when Mr. Thompson sold.

T E. Long Mfg. Co. was organized in 1890, Mr. Long being appointed general manager. This company purchased the foundry and machine shops owned by F Sutton & Sons, and moved the plant into one building.

During the past two years, owing to the increase of business, it has been found necessary to enlarge the plant and the company recently added a number of new machines, including lathes, drill presses, shapers, and complete plant for the manufacture of wood-

MR. E. LONG.

working machinery. With this increase of new machinery, and their already thoroughly equipped plant, the company are now in a position to manufacture all kind of saw and pulp mill machinery, engines, boilers, etc. The company are now installing an induction plant, manufactured by the Canadian General Electric Company, Toronto, to be used in operating their machinery, the power being generated at Ragged Rapids.

One of their leading features is the manufacture of the celebrated "Clipper" shingle machine, which has many new improvements. This machine has been on the market for a number of years, and is widely and favorably known, being used from coast to coast.

The machine is automatic in set and feed, cuts all taper all butts from either end of bolt, or will cut a tip or butt alternately, also runs long and short stroke. The seven trip dogs for shortening the stroke each quicken the speed of the carriage, so that at the stroke for narrow shingles the carriage will make as high as ninety cuts per minute ; the average cut per minute is about sixty ; speed of saw, 1300 to 1600. Seven sets of ratchet wheels are sent with each machine, so that the shingles can be kept to a uniform thickness with a thick or thin saw.

The average cutting capacity of this machine, with the usual run of bolts, is from 35,000 to 45,000 per day of ten hours. With good timber 60,000 has been cut in nine hours.

LUMBERING ON DOMINION LANDS.

The last annual report of the Department of Interior furnishes particulars regarding lumbering operations on lands controlled by the Dominion Government during the year ended June 30th, 1901. The total revenue on account of timber dues amounted to $209,399.32, or an increase of $83,053.50 over the previous year. Three hundred and seventy-one licenses to cut timber over a total area of 4,479.20 square miles were issued, as compared with 306 licenses, and an area of 3,610.37 square miles, during the year 1899-1900.

The total revenue received from timber in Manitoba, the North-West Territories, British Columbia and the Yukon Territory, up to July 1, 1901, was $2,060,998.94. The total revenue from timber within the railway belt in British Columbia up to the same date was $418,521.36, and in Manitoba and the North-west Territories, $1,434,105.97.

The output of manufactured timber in Manitoba during the past season was 23,532,300 feet B.M., as compared with 23,692,680 during the previous year, or a decrease of 160,380 feet B.M. It is estimated, however, that the total quantities of lumber disposed of in Manitoba during the year amounted to 150,532,300 feet B.M. Although about one-sixth of the above quantity was imported, in the log, from the United States, it may be observed, the report states, that as regards manufactured lumber our importation from the States is decreasing year by year, it having fallen off to 11,000,000 feet this year from 24,000,000 during the year ending June 30th, 1900. The same remark applies to shingles, there having been but 2,340,000 imported during the year 1900-1 as compared with 10,235,000 during the previous year.

The output of manufactured lumber in the North-west Territories was 16,129,189 feet B. M., showing an increase of 2,618,902 over the preceding year; in the railway belt in British Columbia the output was 32,877,216 feet, or an increase of over 3,000,000 as compared with the year 1899-1900, and for the Yukon Territory it was 6,233,917 feet B.M. The total output of manufactured lumber by mills operating under licenses of the department was 78,772,622 feet B.M., as compared with 66,886,970 for the preceding year.

The number of timber berths licensed, or authorized to be licensed, in Manitoba and the Territories is 209, and on Dominion lands in the province of British Columbia, 177. Ninety-seven berths have been granted in the Yukon Territory, covering a total area of 225.11 square miles.

The report of Mr. E. H. Stephenson, Crown Timber Agent at Winnipeg, contains the following statement showing approximately the quantities of lumber disposed of during the year in Manitoba:

	Feet, B.M
Rat Portage Lumber Co., Rat Portage, Ont.	55,000,00
Beaver Mills, Rainy River, Ont	6,000,00
Keewatin Mills, Keewatin, Ont	12,000,00
Savanne Mills, Savanne, Ont	5,000,00
Port Arthur Mills, Port Arthur, Ont	4,000,00
Fort William Mills, Fort William, Ont	8,000,00
Imported from British Columbia	16,000,00
Manufactured under government license in Manitoba	23,532,300
Cut under Dominion government permits for sale	4,000,000
Taken under settler's free permits (approximately)	6,000,000
Manufactured lumber imported from the United States	11,000,000
	150,532,300

Mr. Stephenson states that the American shingle is evidently being forced out of the market by the British Columbia product. The prices for the various classes of manufactured lumber, lath and shingles are pretty much the same as for the preceding year, ranging from $14 to $20 for spruce, and from $19 to $36 per thousand feet for high grade stocks of pine, fir and cedar, &c.; laths, $4 to $4.50, and British Columbia shingles, $2.75 to $3.75 per M.

The completion of the Lac du Bonnet branch of the Canadian Pacific Railway has led to increased lumbering operations in the country tributary to the Winnipeg river and has made accessible to market an extensive area of timber lands. Last winter 5,000,000 feet of logs were taken out by Mr. J. D. McArthur, as as well as 175,000 railway ties. It is roughly estimated that between two and three hundred million feet of merchantable timber, lying along the Winnipeg and English rivers, can be manufactured at Lac du Bonnet. Much of the timber is poplar and spruce.

The number of mills operating within the different agencies is as follows: Winnipeg agency, 33 mills; New Westminster, 24 mills; Calgary, 7 mills; Edmonton, 5 mills; Prince Albert, 3 mills.

To Purchasing Agents:

Corner 22nd and Centre Avenue,

GENTLEMEN : CHICAGO, October 12th, 1901.

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO.

WOOD PULP DEPARTMENT

MILLS OF THE BELGO-CANADIAN PULP COMPANY.

(Special Correspondence)

Shawinigan Falls is situated on the St. Maurice river, about 120 miles below Montreal, and 25 miles west of the St. Lawrence river, where there is a natural fall of 142 feet, and 50,000 horse power in the season of low water.

In July, 1900, the Belgo-Canadian Pulp Company, of Brussels, Belgium, came to this country to look over some water powers upon which former Consul-General Mr. Ferdnand von Bryssel had secured options. They also visited some of the modern pulp, sulphite and paper mills, both in the United States and Canada, that had been designed by different engineers, and decided finally to locate at Shawinigan Falls, and to engage Mr. A. C. Rice, the well-known hydraulic and mechanical engineer, of Worcester, Mass., to take location in its natural state, covered with a virgin forest, to furnish all plans, place all contracts, and furnish a managing superintendent to make the product for which the mills were designed.

The work of clearing the forest was begun on September 24th, 1900, and the ground wood mill completed in December of that year, starting off without any delays. It is now making 50 tons of 45 per cent. dry, and 30 tons of 88 per cent. dry pulp per day.

The ground wood mill is 64 x 270 feet, two stories, each 20 feet high. The shipping store house and wood preparing room are 100 x 250 feet, one storey and basement, each 18 feet high, and the boiler house 38 x 64 feet, one storey high. These buildings are of the most modern design and built of concrete, brick and steel, with concrete floors and gravel roofs. The mills when completed will use 15,000 horse power of water, taken from the upper bay of the St. Maurice river and conducted to the mills through two steel feeder pipes, 12 feet in diameter, and each about 850 feet long, where it is used through the turbine wheels and discharged into the Shawinigan river, which is at the same elevation as the lower bay of the St. Maurice river.

The wood is taken from the upper bay of the St. Maurice river through a tunnel and down an incline slide to the wood preparing room, where there are two cutting up saws, twelve barkers, two double splitters and necessary conveyors. After the wood is barked it is dropped through the floor into a concrete wood box and trough of running water so that it floats to each of the twenty-four grinders. Two of these grinders are driven by one special wheel of 600 horse power and 225 revolutions per minute. The pulp from these grinders flows by gravity to a large concrete tank, where it is pumped to the 26 screens and thence to the thirteen wet machine presses and two drying machines. The thirteen wet machine presses are intended to press fifty tons, about 45 per cent. dry, and the two drying machines fifty tons, about 88 per cent. dry, every twenty-four hours. This pulp is all pressed into bundles weighing 450 pounds each, and wrapped with jute for foreign shipment.

The wood preparing machinery was furnished by Waterous Engine Works Company, of Brantford, On the grinders, screens and wet machine presses by Friction Pulley and Machine Works, Sandy Hill, N. the drying machines, cutters and Jordan engines the Black & Clawson Company, Hamilton, Ohio; centrifugal pumps by the Lawrence Machine Compa Lawrence, Mass.; the wheels, feeder gates hydraulic presses by the Holyoke Machine Compa Holyoke, Mass.; the boilers and steel chimney by Sterling Company, Chicago, Ill.; the steel struct work, steel feeders and draft tubes by the Riter-Con Manufacturing Company, Pittsburgh, Pa.; and the air heating plant by the B. F. Sturtevant Compa Boston, Mass.

The turbine wheels are all of the horizontal type, special design by Mr. Rice, to meet the requireme for the high fall of 142 feet. Between each wheel the main feeder is an hydraulic feeder gate, so that one of the wheels can be removed for repairs with stopping any other part of the mill.

Some of the new and important features in the des of this mill are that twenty-six screens and centrifugal pumps are driven without a belt, the Jo engines driven without a belt, drying machines only the cone belts; the line shafting for the machine presses and wood preparing room is dr without a belt, as also the generator for lighting fact, all the belts used through the mill, making tons of pulp per day, cost less than $1,000, and a the stock is handled with only two pumps, all of w is appreciated by both the superintendent, opera and the man that pays the bills for operating expe This mill has been inspected by expert engineers manufacturers, who pronounce it to be one of the modern mills running in Canada or the United Stat

PULP NOTES.

It reported that J. R. Booth has definitely decided bu a pulp mill at Ottawa. He is said to have let nt cts for the water wheels and machinery.

T prospectus of the Bonaventure Pulp Company s en issued. The proposed mill of the company l located on the Bay de Chaleurs, near Bonaven- e, Que.

Chago capitalists are reported to have decided to l large pulp mill on the Prince of Wales Island, Bish Columbia, the product to be exported to the e al markets.

. Hardy, C.E., of New York, has been commis- n by the Canada Paper Company to prepare plans superintend the construction of a new mill to be lt St. Francis, Que., to replace the one destroyed f last fall.

'er Lyall & Sons, of Montreal, have closed a con- ct with the Sturgeon Falls Pulp & Paper Company, r on Falls, Ont., for the completion of the develop- ment of their water power and erection of pulp and paper mills. The contracts will approximate about half a million dollars.

Large quantities of pulp wood are lying along the route of the Athabaskaville division of the Grand Trunk Railway in Quebec, owing to lack of car accommodation. The railway has not sufficient cars to move the wood. As a result the owners will lose heavily owing to the deterioration of the timber.

A bill was introduced in the United States House of Representatives last month to repeal clause 393 of the existing tariff act levying a duty of one-twelfth of one per cent. per pound on mechanical wood pulp, one-sixth of one per cent. per pound on chemical unbleached wood pulp, and one-fourth of one per cent. per pound on chemical bleached wood pulp.

It is understood that the Pulp & Lumber Company which proposes to establish a pulp mill at Baddeck, N.S., were forced to abandon work in the woods, during a part of the winter, owing to the great depth of snow. The mill is to be built during the coming summer. The two locations under consideration are North River Central and Big Pond Barasois.

The Power, Pulp & Paper Company of North America has been incorporated by R. J. Campbell, of New York; John Foster, J. E. Gauthier, and E. J. C. Kennedy, of Montreal; C. S. Cherrier, of Laprairie; and J. Morin, of St. Hyacinthe, Quebec. The capital of the company is $5,000,000. It is proposed to build pulp and paper mills at La Tuque, Champlain county, Que.

The Sprague's Falls Manufacturing Company are seeking incorporation from the Dominion Government. The capital stock is to be $5,000,000, and the head office will be at St. Stephens, N. B. The company propose to erect a pulp mill at or near Sprague's Falls, on the St. Croix river, in the county of Charlotte. The members of the company are F. Todd, H. F. Todd, J. F. Grant, W. C. H. Grimmer and J. G. Stevens, jr.

Mr. Charles H. Vogel, A. M. Can. Soc. C.E., mill and hydraulic engineer, has established an office at 47

and 48 Carleton Chambers, Ottawa, and is open to accept engagements. Mr. Vogel makes a specialty of designing paper and pulp mills and water power developments. He built the pulp mill of the Thorold Pulp Company at Thorold, Ont., and has just completed the mill of the James MacLaren Company at Buckingham, Que., which is operating most successfully. Mr. Vogel will co-operate with Mr. Charles Proper, who is in a position to undertake anything in sawmill building.

Henry Holgate, C.E., of Toronto, is actively engaged in connection with the preliminary operations of the North Shore Power, Railway & Navigation Company. This company, promoted by Thomas Meaney, of Toronto, purposes establishing extensive pulp mills and other industries at Seven Islands, below the city of Quebec. Men are now at work clearing and grading the proposed railway from the harbor to the water power on the St. Marguerite river, and the building of the pulp mill will be commenced as soon as the railway can be got in operation to carry the supplies. Contracts have been awarded to Carrier, Laine & Company, of Levis, for a large quantity of iron, 25,000 barrels of cement, and a locomotive.

We have received from the promoters a copy of the prospectus of the Atlantic Pulp & Paper Company, which has been incorporated by the Ontario Government to manufacture pulp and paper in Canada. Mr. W. C. Edwards, M.P., of Ottawa, is president of the company. The prospectus states that it is proposed to erect a paper mill of 50 tons daily capacity, a ground wood pulp mill of 50 tons daily capacity, and a sulphite mill of 40 tons daily capacity. The mills will be built at New Richmond, on the Baie des Chaleurs, and about two miles from the limits. The Little Cascapedia river flows from end to end through the centre of the limits, and the large number of tributary streams does away with the greater part of the hauling usually entailed in getting out pulp wood, thereby greatly decreasing the cost. Mr. George Hardy, of New York, who has been retained by the company as consulting engineer, estimates the cost of erecting the pulp and paper mills, and of developing the water power, at $900,000. There is on the property a sawmill, equipped with the latest improved machinery, capable of turning out from 35,000 to 40,000 superficial feet of lumber in ten hours. The company has secured the services of Mr. William M. McIntyre, formerly mechanical superintendent for the Laurentide Pulp Company at Grand Mere, Que. Mr. McIntyre has had over twenty years experience in pulp and paper making, and will act as manager of the construction and operation of the mill.

PERSONAL.

The death is announced of Mr. Daniel K. McDonald, lumber merchant, Sunny Brae, N.S.

The death took place last month of Mr. Hugh H. Chalmers, government log scaler, of Bathurst, N. B., in his 68th year.

Mr. Robert Nobles, a well known lumberman, was taken suddenly ill at Fredericton, N.B., last month, and at last reports was in a precarious condition.

Mr. Wm. J. Rogers, Inspector of Timber for the British Admiralty Department, left England for Canada on April 24th. For the summer he will be located at Quebec.

The Conservative Association have nominated Mr. J. W. Pearce, of the Pearce Company, Marmora, Ont., as the candidate for Hastings at the provincial election.

Mr. George Porter, who has been manager of Victoria Mills at Truro, N. S., for some years, has accepted a position with Mr. Alfred Dickie, and will manage his lumber interests at Ship Harbor, N. S.

Mr. Albert McGowan, who has for some years been treasurer of the Davidson & Thackray Association, of Ottawa, was recently presented by the members with a gold locket as a token of appreciation of his valued services.

The Liberals of the New Ontario Constituc... Fort William and Lake of the Woods have nomi... Mr. D. C. Cameron, manager of the Rat Po... Lumber Company, to contest that riding at the ... vincial election this month.

Messrs. William Craig, Allan Craig, and Th... Simpson left Dunchurch, Ont., on April 9th to ... after a boom of logs in Whitestone Lake. Their ... was crushed by the ice and sunk, Mr. William C... owner of the saw mill at Dunchurch, being drowr...

TRADE NOTES.

Messrs. R. H. Buchanan & Company, Montreal, nadian agents for the Rossendale Belting Company, Manchester, report heavy orders for belting. Mr. E. Pi kington, a member of the Rossendale Com- ny who has recently been in Canada, returned to gland last month.

A very attractive booklet has been issued by The hn Palmer Company, Limited, of Fredericton, N. B., ing illustrations and particulars of the larrigans, pe packs and waterproof sporting boots of which this mpany are extensive manufacturers. We understand t a very large edition of this booklet has been blished.

Messrs. Baldwin, Tuthill & Bolton, of Grand Rapids, ich., have issued a new catalogue of their saw fitting chines and tools. It is most complete, and in addi- n to illustrations and particulars of their various de- vices, contains many special articles on saw fitting and kindred subjects. Every mill owner should have a copy of the catalogue.

C. N. Cornell, Vancouver representative for the William Hamilton Manufacturing Company, of Peter- borough, Ont., has secured the contract to furnish the following apparatus: One 14 x 20 inch Corliss frame slide valve engine and one 60 inch by 16 feet stationary tubular boiler for Thomas Kirkpatrick, shingle manu- facturer, Vancouver; one pair 20x24 inch engines for the new shingle mill of the Hastings Shingle Manufac- turiug Company; one 10x12 inch logging engine for the British Columbia Mills, Timber and Trading Company, Vancouver. The above will be of the William Hamil- ton Manufacturing Company's make.

Attention is directed to the advertisement of the Winnepeg Machinery and Supply Company. This company was organized in October of last year, Mr. J. C. Gibson being appointed vice-president and general manager. "Everything for Power" is their motto. They make a specialty of installing complete saw mill outfits, and are dealers in engines, boilers, iron and wood-working machinery, motors, dynamos, elevators, etc. In addition to the above they are sole Canadian representatives for the celebrated "Keasey" split wood pulley, with malleable iron hub, and western agents for the Jenckes Machine Company, Sherbrooke, Que., and Maddison Williams, Port Perry, Ont. Although only organized a short time, the company have found it nec- essary to erect new premises in order to meet the in- creasing demands of their business. The new building is 80x50 feet.

VIRGIN PINE BELT.

Mr. J. F. Whitson, of the Ontario Crown Lands De- partment, while in the Algoma district on an explora- tion trip, discovered a large belt of virgin pine forest aloug the Mississaga river. He reports that it com- prises probably one thousand square miles. In some places it runs above four million feet to the mile, and, on the whole he thinks it will equal in quantity and quality the pine of the Temagami forest reserve, which is generally estimated at 3,000,000,000 feet. It is of the very best quality.

NTERIOR DECORATION

THAT RETAINS IT'S BEAUTY!

Our Metallic Ceilings AND Walls

are in highest favor with practical and artistic people alike.

We make countless beautiful designs, with borders, friezes, dados and every detail to match; they are easily applied, in old buildings over plaster, or in new ones where plaster is not required.

They are suited for every building where practical, durable beauty is desired in the decorative finish, and are fire-proof and sanitary.

EXPENSIVE? Not at all. First cost is small. The plates are so carefully made they fit accurately.

We will give you an estimate if you send an outline showing shape and measurements of your ceilings and walls. Let us hear from you.

M.R Co.

The Metallic Roofing Co. Limited, Toronto.

This cut represents our

LOCKPORT SWING MACHINE

For cutting Shingles, Barrel Heads, Pail, Tub and Cheese Box Bottoms, Box Boards and Cloth Boards, Etc., Etc.

The swing is made of steel and is very light and strong, and dogs very close to saw, thus reducing the waste to the least possible amount.

The Saw on this machine is 40 inches in diameter, or larger if so desired. The mandrel and balance wheel are very heavy. The pulley is 12 inches diameter, 10 inches face. Weight about 1300 lbs.

THE LATE JAMES SCOTT.

The death of Ex-Alderman James Scott, of Toronto, which took place simultaneously with the issue of our April number, brought the deepest regret to a wide circle of friends and acquaintances. Although Mr. Scott's illness for a year past was generally known, no one expected that the end was so near.

For twenty years Mr. Scott had been one of the most prominent lumber operators in Ontario, and until about three years ago he was manager and secretary-treasurer of the Georgian Bay Lumber Company, whose mills are at Waubaushene.

The deceased was born in Ireland, and came to this country when a boy and settled in Brockville. For many years he was connected with the Crown Lands Department. His entry into the lumber business was under the late W. E. Dodge, of New York, who organized the Georgian Bay Lumber Company. On Mr. Dodge's retirement Mr. Scott assumed the business management. He was also head of the Georgian Bay Navigation Company.

Mr. Scott, on the earnest solicitation of his many friends, consented to become an aldermanic candidate in 1894 for Ward No. 6. He was returned by a large majority. He continued to represent the ward for three years, when he retired. Four years ago, his friends requested that he become a candidate for the Mayoralty, but he would not be persuaded. In politics, he was a Conservative.

Always taking a deep interest in the welfare of the community in which he lived, his death is a distinct loss. Charity was one of his characteristic features. Of this trait a friend has said: "The late Mr. Scott was a man who employed a great deal of his time in unostentatious and energetic charitable work. Indeed, he was so reserved that, although I saw him almost every day in regard to his legal busines, it would be impossible for me to mention more than one or two of the charitable societies he belonged to, and the particular church interests in which he was engaged, though I know that they were many."

W. H. Miller has his new shingle mill at Campbellton, N. B., nearly completed.

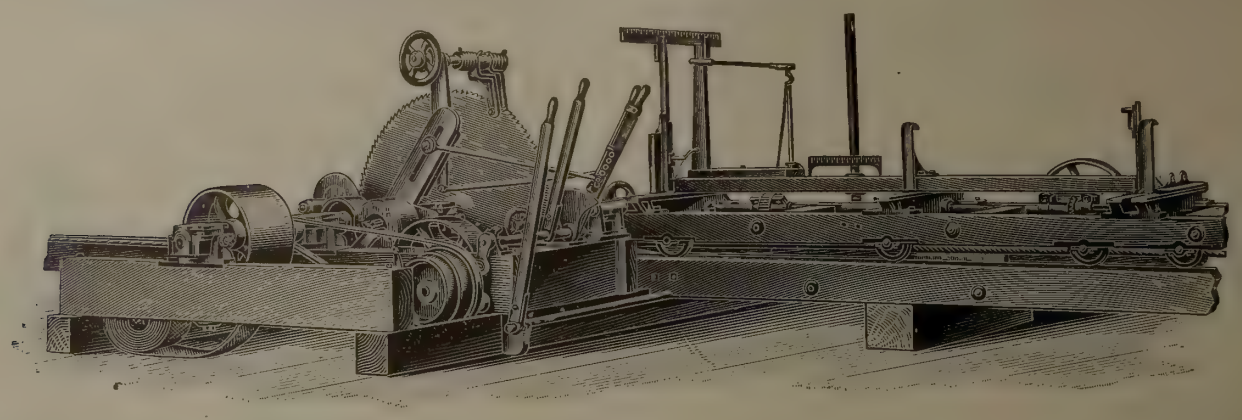
The "Canadian" Over Log Saw Guide

PATENTED IN CANADA AND UNITED STATES.



Your Mill would make more money if you would make more lumber from the same quantity of logs. You can do it by using a thinner saw, and you can use a thinner saw with one of my Patent Over Log Saw Guides. They are adapted to either Stationary or Portable Saw Mills, Re-sawing Machines, &c., &c. The illustration shows one of my Portable Saw Mills equipped with this Guide and carrying a saw 60 in. diameter, 12 guage. All my Portable Mills will take saws up to 72 in diameter, and this guide will take saws from 36 to 72 in. diameter. It is adjustable every way. I am prepared to fill orders for complete Circular Saw Mill Outfits, or will make the guide to fit any ordinary existing saw frame.

THE LEFFEL AND VULCAN TURBINES

POSSESS DISTINCTIVE MERITS, which should have the attention of water power owners 1st—They are strongly and carefully built. 2nd—They are economical in their use of water. 3rd—They develop more power in proportion to the water used than any other Turbine built. Mr. J. D. Flavelle, of the Flavelle Milling Co., of Lindsay, writes us under date of March 7th as follows:

"Referring to the two 74" water wheels (Leffels) purchased from you during the past year. As far as we have had an opportunity of testing, they have done their work excellently, in fact are doing more than you guaranteed them for. We took a test of the power they were developing with a head of water of 3 ft. 10 in, and they developed very close to 100 h. p. We are thoroughly satisfied with same."

Many Users—One Sentiment.

Here's an expression that voices the sentiment of all our customers

Schnectady, N. Y., March 13, 1902.

American Blower Co.,
141 Broadway, N. Y. City.

Gentlemen :—

In reply to yours of the 10th, would state that your dry kiln apparatus placed in our plant early last spring, is giving entire satisfaction and is doing all the work that was anticipated and expected of same. We would cheerfully recommend that any person desiring a new dry kiln system, use the American Blower Company's outfit.

Very truly yours,
PECKHAM, WOLF & Co.

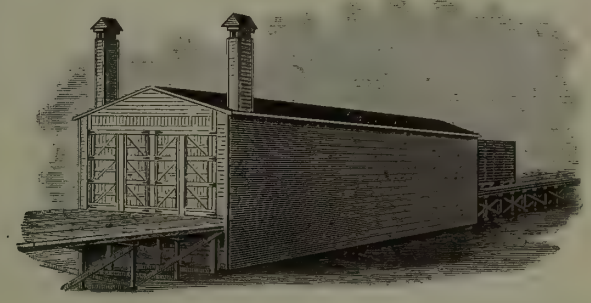
The Standard Dry Kiln



A Dry Kiln that will thoroughly dry your product inside and out, without warping, checking, discoloring or in any way injuring the lumber.

A Dry Kiln that will dry stock in less time than any other Kiln on the market ; dry more lumber and in a more satisfactory manner than any other.

A Dry Kiln whose construction is simple, and its equipment the finest money can buy ; every single part is to be relied upon.

A Dry Kiln whose Heating Apparatus does not leak, because of the high-grade of pipe and fittings used, and the extraordinary provisions made for expansion.

A Dry Kiln that doesn't need engineers or experts—because it has no engines nor complicated machinery, and can be operated by any man with common sense.

A Dry Kiln that will dry every variety of lumber—because it can be regulated to perfectly suit the requirements of each and all.

A Dry Kiln that you need not be afraid to leave—because you can be sure it is not going to burn up your plant.

In brief, the most practical and economical Dry Kiln to be had. If you don't own one, it's time you did. We instal Kilns of any capacity.

Branch Office: VANCOUVER, B. C. PETERBOROUGH, ONT.

R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge sawnto frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well but after giving your saw a trial have continued to use yours, as theyare cheaper, and in regard to working qualities are all that is needed.

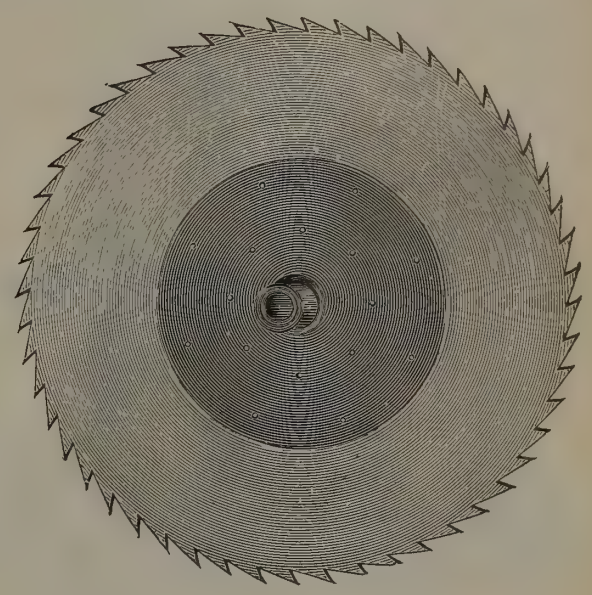
Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

R. H. SMITHCO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws. Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



THE "LEADER" CROSS-CUT SAW

These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patent Process, insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

THE "LEADER" SAW SWAGE

Made in 3 Sizes—$2.00, $2.50, $3.00, etc.

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

WILLIAM RICHARDS & COMPANY.

One of the pioneers of the lumbering industry in the Maritime Provinces is Mr. Wm. Richards. He commenced operations over thirty years ago, and since that time his business, under able management, has steadily increased, until now it is one of the largest of the kind in the country.

In 1899 Mr. Richards decided to form a joint stock company, admitting members of his family and relatives into the business, which is now conducted under the name of Wm. Richards & Company, Limited. The head office of the firm is at Boiestown, N.B., and in addition to the mills at that place they also operate mills at Chatham and Campbellton, N.B.

The accompanying illustration shows the largest of the three mills, situated at Chatham, which is also the principal shipping point. The equipment of this mill consists of gang and rotary saws, patent edgers, lath machines, etc. The cutting capacity is 120,000 feet of lumber per day and from six to seven thousand of lath. In connection with the mill there are lathes, drills, and every equipment for a first-class machine shop, so that all the repairing is done within the mill. There is also a first-class electric light plant which permits operations being carried on night and day.

Mr. Richards has been fortunate in having associated with him men who would conscientiously labor in behalf of his interests. Mr. J. E. Rundle, his manager at Chatham, entered Mr. Richard's employ some ten years ago, and since that time has had practically the entire oversight of his lumbering operations. Mr. Richard's millwright has been in his employ some years. He is thoroughly acquainted with millwright work in every department and has proven his ability beyond a doubt in the construction of the mills. There are employed constantly between one hundred and twenty-five and one hundred and fifty men at the Chatham mill.

The company do an extensive trade and manufacture principally spruce and pine deals, yards, scantling, and ends, all of which is exported to the British market, the lath being manufactured for the United States trade.

SAW MILL OF WM. RICHARDS & COMPANY, CHATHAM, N. B.

The scarcity of labor has already entailed a heavy loss upon most of the mills here, as a good deal of the business they otherwise would have got, especially for the New England states and Ontario, has been going to the manufacturers of pine and white cedar shingles.

At the present time there is no timber of any kind in the water on the B. C. Coast, neither in the form of logs or shingle bolts, and unless the labor market very materially improves in the near future, the rainy season will be upon us here again next fall and find all the mills without any stock of raw material on hand.

Another feature in connection with the shingle business here of late has been the speculation in staking off timber limits, under the special License Act. I understand that a great many loggers have quit work and have gone into the business of cruising for timber limits for speculators, who advertise them and procure a license, with the expectation of selling them to the mills at a large profit. This

Last year two million cedar poles were used in the United States for general electrical construction.

SHINGLE CONDITIONS IN BRITISH COLUMBIA.

[Special Correspondence.]

The demand for B. C. shingles is heavy and the mills are all behind in getting out their orders. This is occasioned to a considerable extent by the great scarcity of labor, both in the woods for getting out the raw material and for millmen. This scarcity of labor applies to Chinamen and Japanese, as well as white men. In view of the constant agitation which has been going on here for a long time against the employment of Chinese and Japs, it seems a curious situation that not nearly enough of this kind of labor can be obtained either for the woods or for the mills, and I am sure that there is no shingle manufacturer who would not be very glad to get any kind of labor at the present time, regardless of the color or nationality.

business has in fact during the last few weeks developed into a kind of a boom.

So far as the present outlook for the shingle business is concerned here it largely depends on the prices in the United States. If they were to drop to such an extent that the B. C. mills could not get into that market and pay the duty, it would certainly mean the closing down of a great many of the mills in British Columbia for all or part of the time, for when the present mills in the course of construction are finished and have a full supply of timber, the output will be enormously in excess of the Canadian demand.

Thomas Kirkpatrick's mill in Vancouver was burned down a couple of weeks ago. He has sold his site to E. H. Heaps & Company and has bought the mill in New Westminster erected by A. R. Welsh.

Notwithstanding the increased cost of timber, prices on red cedar shingles are 15 cents a thousand lower in Ontario than they were last year.

The prohibition of the export of logs from this Province is giving eminent satisfaction among the millmen. S.H.

THE ST. JOHN LOG DRIVING COMPANY.

The annual meeting of the St. John Log Driving Company was held at Fredericton, N. B., on May 7th. Considerable dissatisfaction was expressed with the manner in which the driving was done last season. A balance of $2,600 was withheld from the contractors for the corporation drive, and it was agreed that this balance should be paid in full to Mr. Morrison, who has bought out the share in the contract held by the late Mr. Noble. It was decided to employ an inspector of driving this season, to be appointed by the directors. The company drove about 100,000,000 feet of logs last season, all of which was rafted at Fredericton and Springhill. The expense of driving was about $15,000.

Officers and directors were elected as follows: President, A. H. F. Randolph; secretary-treasurer, J. F. Gregory; directors, F. H. Hale, E. H. Murchie, R. A. Estey, Donald Fraser, jr.

Mr. J. L. Richardson, who has been representing D. K. McLaren, of Montreal, in the province of Ontario, has accepted a position as salesman for The Durham Rubber Company, of Bowmanville.

FORESTRY IN THE PHILIPPINES.

Capt. Geo. P. Ahern, Director of the Forestry Bureau at Manila, recently spent several months in the United States studying forestry conditions. He visited the forest schools of Cornell, Yale, and Baltimore, and conferred with the professors, graduates, and students of those institutions. To the editor of the Forester, from which the accompanying illustrations are reproduced, he gave the following particulars regarding the forests and forestry work in the Philippines :

"I consider the Philippines the most interesting field in the world for the practice of scientific forestry. There are more than 50,000,000 acres of public woodland in the archipelago. Up to date 665 species of trees have been classified and it is the opinion of botanists that a close examination will bring the total up to fully 1,000. In several large districts of the southern islands of the archipelago, more than 50 varieties of rubber trees are found. The true gutta percha (Isonandra gutta) is found there. Hardwoods make up the bulk of the timber found, a number of these being especially valuable for ship-building.

The forest service in the Philippines will grow, and more men will be needed from time to time. The Bureau of Forestry of the United States Department of Agriculture has been made an agent for the Forestry Bureau of the Philippines in securing men for the service there. Only men who have had some training in forestry will be considered, and all applicants will be required to take the Civil Service examination. Arrangements are being made with the forest schools of the United States looking to the establishment of courses in the study of gutta percha and rubber. At present there is no official in the Philippines competent to take charge of the large rubber and gutta percha districts.

A timber testing laboratory is to be established at Manila, and will be in charge of Mr. S. T. Neely, who conducted the timber testing for the Division of Forestry a few years ago. The work at this laboratory will include the investigation of all native woods, methods of preservation, and economic uses. During the first year or two the effects of the Bureau will be concentrated on learning what we have in the way of forest products, the uses of the woods, and looking up markets.

FIG. 1.—MEASURING LOGS IN RAFT ON TONDO BEACH, MANILA. THIS PICTURE SHOWS METHOD OF MAKING A RAFT BY TYING LOGS WITH BAMBOO STRIPS.

The Forestry Bureau of the Philippines during its first fiscal year produced in revenue over $199,000 (Mexican), solely from forest products, and it may be stated that the receipts were quite poor during the early months, thus showing a remarkable gain as the year advanced. At present the revenues are almost $30,000 (Mexican) per month.

The Spanish administration in its best years never collected over $12,500 per month (Mexican) from the sale of forest products, and there is this interesting difference to be noted: Spain charged more than 90 per cent. of the revenue receipts for service and materials. Under the present Bureau only 26 per cent. of the revenues goes for service and materials. Spain on an average issued 1,000 licenses per year, while the United States has about 500 licensees operating.

As to the question of markets, at present every stick of timber cut is sold in Manila. People in other provinces are unable to get timber owing to the high prices paid by consumers in Manila ; but in a year or two people in other provinces will begin to build and when they are somewhat satisfied, builders in Hong Kong and other Oriental ports may secure a few cargoes. Engineers at Hong Kong were informed last December that it would be three years before they could receive any timber from the Philippines.

The United States will receive only a few of the high grade cabinet woods which can be delivered at San Francisco, at a figure to compete favorably with the hardwoods of Central and South America. In, say, from five to ten years the Philippines will be able to supply the entire demand of the archipelago and a great deal of Oriental trade, especially at Hong Kong and other Chinese ports. China will certainly be the best market.

A great deal of building is going on in Manila, and better houses are being erected since the arrival of the Americans. Many towns were burned during the war, and the people have been unable to rebuild them owing to the lack of material.

Present methods of lumbering are entirely too primitive. The Spaniards and Filipinos do the bulk of the cutting, very few Americans being engaged. The natives are poor lumbermen and in comparison with the Americans

FIG. 2.—HAULING LOGS IN TARLAC PROVINCE, LUZON, P. I. THE WAGON WHEELS ARE SOLID WOOD.

workmen are greatly outclassed, one American being as useful as half a dozen Filipinos.

In lumbering operations in the Philippines the question of transportation is the most serious one. Wagon roads are poor, there is but one railroad, and the rivers are not in good condition for log driving ; though there are many streams that with a little cleaning

ill do very well for log driving. At present he only mode of transportation is the water uffalo or caribou, an animal much weaker han the ox used in American lumbering. here are also the Filipino ponies, which are mall and lack strength, but there are no

FIG. 3.—NATIVE METHOD OF SAWING TIMBER. THE NATIVES FIND THIS PRIMITIVE METHOD OF SAWING PROFITABLE EVEN WHEN COMPETING WITH A STEAM SAW MILL.

merican horses in the Philippines except those elonging to the army. There has been some alk of importing elephants from India, but as ttendants would have to be brought, and conitions are so different, the feasibility of the lan is doubted.

To show the extent of lumbering operations nder present methods it is only necessary to tate that the cut of the past year has been nly 30,000,000 feet board measure.

Mr. Ribbentrop, lately retired Inspector eneral of the forests of India, has written to s, in reply to an invitation from our Bureau, ffering his services for the purpose of devising rational forest policy for the Philippines. We e much pleased at Mr. Ribbentrop's offer, nd it is hoped that arrangements can be made secure his services, as the forest problems f the Philippines are much the same as those ie Indian foresters have had to contend with. Ve also hope to secure for a limtted period ie services of a few of the conservators of ie Indian forests to help out in the inaugural ork of the Philippines. These men would e especially valuable owing to their practical xperience under very similar conditions that re to be met with in the Philippines."

PRINCIPLE VS. PRACTICE.

In many filing rooms the operators have anaged to wander far from the path which ie construction of a band saw sharpening mahine should naturally lead them to take. Not ecause filers are inclined to go astray, but beause the importance of adhering to these rinciples has not been thoroughly pointed out them in a forcible manner.

Nearly all band saw sharpening machines are constructed on the slide principle, on which the saw rests while being sharpened or gummed. These rest are of various lengths, from 1 to 14 inches. As a filer, writes E. L. Haskins in the Wood-Worker, I prefer one of about 10 inches. The length of rest is not of very much importance, provided the back of saw has been correctly fitted.

Most filers proceed somewhat after this fashion : In fitting the backs of band saws they use a straightedge from 4 to 7 feet long. Some use one with a little concave, that leaves the back a little long. The long straightedge will give a good idea of the straightness or convexity of the saw, less this difference. If saws should have a high spot at ends and another high spot at or near middle of straightedge, then there would be no spring to saw or straightedge when pressed by hand, and probably would be so small as to hardly be perceptible to the eye. To test the back of saw thoroughly for these short crooks and bends, use a 20-inch straightedge. Unless you have heretofore tried this way of testing you may be somewhat surprised at the number of high and low places you will find when the saw is not uniformly curved, or straight either for that matter.

Now, this is where principle and practice do not join hands, for these small imperfections, as well as the large, are all reproduced on tooth edge of saw by the sharpening machine, when the back of saw is passing over the slide rest. Besides this trouble, and as a direct result of these high and low places on back of saw, you will quickly discover that the teeth on saw are becoming very irregular as to spacing, and with these conditions existing we can hardly expect to obtain good results on fast feed, that is, if you want to saw a million a month with a 6-inch band resaw.

FIG. 4.—HAULING LOGS INTO TARLAC, LUZON, P. I. FOUR BUFFALOES AND THREE DRIVERS TO HAUL ONE MEDIUM SIZED LOG. TO HAUL ONE LARGE LOG AS MANY AS TWENTY-SIX BUFFALOES AND DRIVERS IN PROPORTION HAVE BEEN SEEN.

What is probably the biggest tree in the world has been discovered to belong to the cypress family, and was found in Mexico. Its circumference, we are told, 6 feet from the ground is 154 feet, 2 inches, and to see the top of it one must stand many yards away. It is near the famous ruins of Mitla, in the state of Oaxaca. It is called the "big tree of Yule," and its age is variously estimated at from 500 to 1,000 years.

The Telephone Company of Egypt, Limited, which operates a large telephone system in the land of the Phaarohs, is said to have met with a great deal of difficulty in securing poles which would withstand the effects of the climate. No timber suitable for the purpose grows in Egypt, and the timber so far imported is soon destroyed by dry rot. The company have now given an order to a Michigan firm for 1,500 white cedar poles, which will be shipped to Alexandria and Cairo. It would seem to be worth while for Canadian lumbermen to watch the outcome of this experiment with Michigan timber. If it should prove capable of withstanding the climate of Egypt, Canadian grown timber would probably also meet the conditions, and a share of the orders might be obtained.

Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C.H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICE:
IMPERIAL BUILDING, MONTREAL.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance....$ 1.00
One Copy, Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

WESTERN CANADA EDITION.

THE July number of the CANADA LUMBERMAN will be designated a "Western Canada Edition." Some one has said that before many years Canadian lumbering will be confined to British Columbia. While this is an extreme view, the fact is apparent that the Province of British Columbia has already become a very important lumbering centre, and that her magnificent forests are daily attracting greater attention. This, in conjunction with the rapid growth of population throughout Manitoba and the Northwest Territories, demands that special attention should occasionally be given by this journal to the interests of the lumber manufacturers and dealers of Western Canada. In the July number it is hoped to introduce special features which will be of particular interest to them.

Throughout Manitoba and the Territories there are several hundred retail dealers. It is the purpose to place a copy of this number in the hands of each of these dealers, in addition, of course, to the saw mill owners, logging contractors and others identified with the lumbering industry. This number will offer an excellent opportunity to reach the lumbermen of the West—an opportunity of which advantage should be taken by all manufacturers and dealers in saw-mill machinery and supplies, as well as by lumber manufacturers seeking to secure a portion of the rapidly growing trade of Western Canada.

The lumber market of Manitoba and the Territories is gradually being wrested from the hands of United States manufacturers. During the year 1901 the quantity of lumber imported from the United States was only 11,000,000 feet, as compared with 24,000,000 feet during the previous year. Canadian lumbermen should put forth every effort to totally prevent the importation of American lumber.

TIMBER INVESTMENTS.

THE forests of Canada constitute one of the most promising fields for the investment of money. Whether in lumber or standing timber, opportunities are afforded for persons with capital to secure good returns on their investment. It is most necessary, however, that the character of the investment and the conditions existing at the time shou'd be carefully considered.

It is contended by some persons that within the past three months there has been reckless buying of white pine lumber by certain concerns. Be that as it may, the present is, in our opinion, a time for caution and conservative adventure. There have been several years of prosperity in the white pine trade, and while the constant and extensive development of this country would seem to warrant a continuance of such conditions, it is well to remember that trade depression frequ ntly comes so gradually as to almost conceal its existence until felt quite keenly. We are not pessimistic as to the future of white pine, which is certain, on account of the declining supply, to advance towards a higher value, but as all commodities are subject to periods of depression and inflation, so white pine lumber is likely to rule at a lower price temporarily, whether this year or five years hence. The dealer who exercises caution in the extent and character of his purchases, and the manufacturer who limits his production, reserves his timber, and reduces his holdings of lumber at favorable opportunities, will follow the safest course.

The investment of capital in timber limits is almost certain to prove profitable. Mistaken judgment and unexpected events have been responsible for a few losses in this direction in the past, but the person who invests in timber is likely to reap handsome profits in years to come. The one great risk in purchasing timber limits is destruction by fire. It is wisdom on the part of owners to employ an efficient staff of fire rangers. The number of fires extinguished each year by rangers, as reported by the different provincial governments, proves conclusively the economy of such service.

Investment in stock companies calls for the exercise of shrewd judgment. There are comparatively few lumber companies whose stock is offered to the public, as where such companies exist the stock is largely held by those identified with the business. The pulp industry has apparently presented a more attractive field for the flotation of stock companies. If timely advice should be given to the investing public, it is to discriminate between companies organized by Canadian capitalists and those controlled by United States capitalists, as the former are almost invariably on a more solid footing. It is the custom of the United States press to belittle Canadian enterprise, but it is vastly more desirable to proceed conservatively than to encourage such a disaster as occurred recently to the North American Lumber and Pulp Company. This company, capitalized at $2,500,000, acquired 200,000 acres of timber lands in Nova Scotia for the supposed purpose of manufacturing pulp and paper. The recent crash on Wall Street makes it extremely doubtful that the project will ever be undertaken, even if it were intended at one time that it should be.

THE MEASUREMENT OF LUMBER.

Lumber exporters on this side of the Atlantic will learn with much satisfaction that at a recent meeting of the Timber Trades Federation of the United Kingdom a proposal was adopted that in future all American hardwood lumber should be measured by the board measure rule. The unanimous sentiment of Canadian shippers is doubtless voiced in the wish that the movement may not end here, but that the American method of measurement may become universally adopted in Great Britain. Eliminating, if possible, all prejudice in the matter, there seems no good reason why there should exist such a complicated system of measurement as is in vogue in the Mother Country, unless it be the well known and ofttimes wise conservatism of the Britisher. What is known as the American system is simple, while at the same time accurate.

From the Atlantic to the Pacific coast, in Canada, lumber and logs are sold by the thousand feet, a foot being one inch thick, twelve inches wide and twelve inches long. The basis for square timber measurement is the cubic foot. In Great Britain numerous terms and systems of calculation are employed. In wholesale transactions deals and boards are usually sold by the St. Petersburg standard, containing 1,980 feet board measure, but in some parts of Ireland the Irish standard of 3,240 feet is used. Thus, to an already complicated system is added the uncertainty, on the part of exporters, as to which standard is adopted in the particular port to which they may be shipping. When deals, boards and planks are sold by retail, the square or superficial foot is usually taken as the basis on which to fix the price. At public sales in England battens are usually sold by 144 feet run, mouldings and flooring by 100 feet run, palings by 100 pieces of four feet, laths by the bundle, lathwood by the fathom, and mahogany by the square foot one inch thick. The measurement applicable to square timber in England is the cubic foot, as in this country, but it is customary to make sales on the basis of a load of fifty cubic feet.

It is no easy task for Canadian shippers to acquaint themselves with the numerous terms as above indicated, and their consequent calculations. Business between the two countries would be greatly simplified by the adoption of the board rule as the standard of measurement. The time is opportune for such a change, in so far as the tendency is for the manufacturer and consumer to come closer together. In the past the manufacturer, being unfamiliar with the

peculiar British customs and terms, but knowing them to exist, has been content to dispose of his product to a middleman, who, by means of a large annual turn-over, is enabled to establish a branch in Great Britain, and is likewise in touch with prevailing methods there. Importers who are seeking for direct shipments from Canadian mills may do much towards accomplishing this end by striving to have eliminated the old-fashioned and tedious British method and to obtain the adoption of the American board measure rule.

EDITORIAL NOTES.

THE question of wood paving for streets is being much discussed in England at the present time. It has been advocated that suitable Canadian woods could be obtained which would be much cheaper than jarrah or red gum, which have been largely used in the past. A few years ago pavements of Canadian white pine were put down in Cardiff. These have, it is said, worn better than the more expensive hardwoods. Spruce has also been put forward as a suitable paving wood the supply of which would be abundant. As against this wood it is claimed that it will not take creosote, which is applied as a preservative. The Douglas fir of British Columbia has also been mentioned, and is likely to be experimented with by some municipalities. Now that it is a live question the opportunity should not be lost of proving the merits of Canadian timber for paving purposes.

WE cannot but doubt the figures sometimes set forth in the prospectuses of pulp companies. While the cost of manufacturing pulp depends to some extent upon local conditions, there are certain fixed charges which keep the maximum and minimum cost within certain limits. That mechanical pulp can be manufactured at six dollars a ton, and sulphite pulp at sixteen dollars a ton, is, to our mind, extremely doubtful. Perhaps these estimates are intended to represent only the cost of wood and labor, without considering interest on plant investment, depreciation, insurance and other items which enter into the actual cost of turning out the manufactured product. If such figures are intended to represent the actual cost, the pulp companies of Canada are to be congratulated upon having reduced to a very low limit the cost of manufacture.

WE are glad to observe that the establishment of departments of forestry in connection with our universities is being given consideration. Hon. Mr. Harcourt, Minister of Education, in a recent speech at Kingston, expressed the hope that in the new buildings now being built at Queen's University, accommodation would be provided for a forestry department. He also stated that the Government stood ready to assist in laying the foundation of such a department. The assistance thus promised is extremely timely. While we cannot hope in the immediate future to develop our forests along highly scientific lines as in Germany and some other countries of Europe, the time is coming when the services of scientific foresters will be required, and there seems no reason why they should not be graduates of our own colleges. Lumbering is quite as important as agriculture and mining, and the question of the preservation of our forests should not be overlooked by those at the head of our educational interests.

THE railroads of this country have not as yet experienced any difficulty in obtaining a supply of ties at a reasonable figure, owing to the large quantity of hemlock timber to be found in our forests. The quantity of timber cut each year for railway ties is exceedingly large. While the figures for Canada are not obtainable, it is estimated that in the United States something like five billion feet are required annually. This requirement is gradually making inroads on the hemlock supply, and it is only a question of a short time when steps will have to be taken to preserve this timber, as has been done in the case of pine and spruce. It may be that the experiments which are being conducted to find a suitable substitute may eventually be successful, but the metal tie, owing to its excessive cost, is not likely to solve the problem. A few of the large railway corporations in the United States, anticipating the decline in the hemlock supply, are establishing forest reserves for the purpose of cultivating the growth of hemlock trees. The lesson from this is that manufacturers of ties should not sacrifice their timber, but should endeavor to obtain a price commensurate with its value, keeping in view the increasing demand and declining supply.

AN American engineer who recently built a pulp mill in Eastern Canada in which Canadian machinery was installed gives his opinion to the CANADA LUMBERMAN that our manufacturers should give greater attention to the finish of their machines. He states that in this respect alone do they compare unfavorably with machines manufactured in the United States. Another expert contends that the weakness of Canadian machinery is in the design. This, he claims, is due to the fact that in this country the English practice of building massively is followed. To use his own words, "English manufacturers build machines to last forty years, while the Americans build for five years only." His argument is that in about five years the machines of today will have become obsolete and be superseded by others more up-to-date. Much of the money which the English manfacturer expends in making his machine solid and massive is expended by the American manufacturer on design, with the object of securing the maximum efficiency of production at lowest cost. Perhaps there is some truth in this argument, and Canadian manufacturers may profit thereby.

PRIZES AT THE FAIRS.

The Massey-Harris Company, of Toronto, have donated the sum of $1,000 as prizes at the Toronto, London and Ottawa Exhibitions. The prizes are given for the benefit of the agricultural and horticultural community, and most of the competitions are open to farmers and their sons and daughters only. The competitions for which prizes are given include natural history, photography, architecture, poultry, horses and grain.

MAKING HARDWOOD FLOORING.

A writer in the Wood-Worker describes his method of making hardwood flooring as follows: First, the lumber is brought into the mill and ripped to even widths on a one-saw edging table, allowing 3/8-inch for matching; that is, ripping 3/8-inch wider than I want my flooring to show on the face. Then it is put through a single surfacer, the worst side up, thereby knocking off all humps and inequalities in thickness. Lastly, the material goes to the planer and matcher and is fed through with the dressed side down, the top cylinder taking a light cut off the face of the stock, the side heads cutting the tongue and groove, and the bottom cylinder at the tail of machine hollowing the back. After an experience of several years in getting out hardwood flooring, mostly oak, I have found this to be the best way for me with the machines mentioned. My top cylinder on planer and matcher carries only two knives, and I set them out from the lip of cylinder not to exceed 1/8-inch, being very careful to get them as nearly alike as possible. My matching heads are of the expansive pattern and carry four bits to each head. I would not like to undertake to match hardwood flooring without the improved head with this expansive feature. They are much easier kept in order, more readily adjustable to the different kinds of matching and to the different kinds and conditions of material than anything of the kind I have ever used or seen.

LUMBER IN THE WEST INDIES.

TORONTO, May 7, 1902.

EDITOR CANADA LUMBERMAN:

Before leaving for the West Indies you asked for certain information regarding the lumber used in the West India Islands. In the year 1900 the importation was a little over forty-one million feet. Of this amount thirty million was provided by the United States and eight and one-half by Canada. These figures, however, do not represent the true proportion, as practically all the white pine that goes into the Islands is Canadian pine, and merchants in nearly all the Islands asked me why it was that they had to buy their Canadian lumber through New York houses.

Since returning I have made enqniries about this matter and find that our lumber exporters say that such are the facts. The reason is that the whole output of the mills is sold to one dealer in New York and is sorted by him.

The class of lumber that goes to the West Indies is the lowest grade, and all of the Canadian lumber which goes through New York is given credit in the Blue Book to the United States. At the present time the most of the lumber which goes direct from Canada is from the Maritime Provinces. A considerable portion of the above figures consists of pitch pine, which is taken to the Island in schooners from Florida.

As to freight rates, there is an agreement between Canadian and New York boats whereby the same prices for transportation are charged to the different Islands. This is about all the information I can give you with regard to freight rates, as considerable of the lumber is carried through by sailing vessels, which is, of course, a cheaper way.

Yours faithfully,

J. M. STEWART,

Asst. Secretary Canadian Manufacturers' Association.

An authority on power transmission gives an estimate of 10 per cent. for the power necessary to run loose pulleys. That this amount of power is saved where the belts are run loose with a binder to start and stop the machines, is a logical conclusion, if the statement is true.

J. M. STEWART,

Asst. Secretary Canadian Manufacturers' Association.

An authority on power transmission gives an estimate of 10 per cent. for the power necessary to run loose pulleys. That this amount of power is saved where the belts are run loose with a binder to start and stop the machines, is a logical conclusion, if the statement is true.

THE CANADA WOOD SPECIALTY COMPANY, LIMITED.

Mr. CHAS. B. JANES.

The history of the Canada Wood Specialty Company, Limited, of Orillia, Ont., as at present organized, covers only the brief period of two years, but the development accomplished would do credit to a much older institution. Two years ago the business of Messrs. Janes & Sons, proprietors of the Acme Veener Works, became amalgamated with that of the Wood Specialty Company. The latter company was under the management of Mr. Lavallee, now president of the Orillia Export Lumber Company. In October last Mr. Charles Janes became the manager, Mr. Lavallee's other interests demanding all his attention. Under the energetic and skilful direction of Mr. Janes, whose portrait accompanies this article, the business continues to prosper and rapidly expand, so much so that in the near future the present buildings and equipment, although of generous proportions, will require to be largely increased.

As its name implies, the company manufacture a variety of hardwood products, principal among which are flooring, broom handles, cornice poles and rings, cheese box hoops, butter dishes, berry boxes, etc. The timber, which consists of elm, maple, oak and birch, is all obtained in the neighborhood. There is said to exist an abundant supply, so that one of the most essential factors of the future continuance and success of the industry is assured.

The elm logs, previous to being cut into veneer for cheese box hoops, are cut into lengths of five feet and placed in vats of boiling water, where they become so thoroughly cooked as to render the removal of the bark and the slicing into veneer an easy process. Berry baskets, butter dishes and dowels are made from the refuse, and are afterwards passed through a dry kiln at the rate of 60,000 per day, which is about equal to the daily capacity of the factory. There is also a large hot air dry kiln in which the lumber is thoroughly seasoned before being manufactured into flooring. For this purpose, oak, maple beech and birch are employed. The product bears the mark of great care in the selection and preparation of the stock as well as in the manufacture. The company are supplying 115,000 feet for the new cereal factory at Peterborough. Among other orders on hand is one for 56,000 folding chair frames for Great Britain. The factory is capable of producing 8,000 tapered broom handles and 30,000 curtain rings per day.

The equipment, which is operated by a McEwen high speed engine manufactured by the Waterous Company of Brantford, consists almost entirely of special automatic machines, by which the largest possible output and perfection of manufacture is obtained.

It is a singular thing that almost every machine is of American manufacture. With the rapid growth of factories of this character devoted to the production of specialties and the utilization of almost every inch of the timber, it is surprising that the makers of wood working machinery in Canada are not prepared to meet the demand for the automatic machinery required for that purpose.

Within the last few months the Canada Wood Specialty Company have bought some very valuable hard-wood limits, mostly maple.

COST OF TIMBER AND MANUFACTURE.

Granting that any manufacturer has a right to a profit from the work he does and, more than that, owes it as a duty to himself and the country that he secure such a profit, it is of the first importance that cost be definitely determined. Yet in the lumber business this is one of the most difficult things to get at and there are comparatively few who have such an accounting system and who adopt such correct premises that they know with exactness what the cost of their product is, and consequently what their selling price should be.

The lumber business was very prosperous during the last year and large amounts of money were made in it, but if all operators should adopt a uniform and accurate basis of accounting many of them would discover that their profits were not as great as they thought, and not a few of them that they had no profit at all. Yellow pine producers are among the greatest sinners in this respect, and one of the greatest difficulties is in the methods of estimating stumpage values and charging the same to the manufacturing account.

What stumpage is worth as a speculative proposition is not easily determined. Some will say that it is the average value during the total life of an operation, discounted by as much as the date of computation is an advance of the average date. Thus if a mill has ten year's cut, its timber is now worth what it will be worth in five years from now less interest for five years. If a man believe that in five years from now his timber will be worth $5 a thousand, on this basis of computation its present value is $3.50, with interest at 6 per cent. Others go to the opposite extreme and charge stumpage at what it cost them to date. This same timber might have been bought at $1.25 an acre, and so the cost might be figured at, say, 50 cents a thousand.

There is just one absolutely sure standard of value, and that is the price at which anything can be sold. Putting too high a price on the raw material has the merit of being safe, while putting too low a price on it is simply a method of self-deception, but neither is right. Cost of stumpage is only one element, to be sure, to which must be added a number of others about which there is not much uniformity of method. The result is that different concerns operating side by side under the same conditions will show a variance of 25 per cent. in cost. It is no wonder there is a lack of uniformity in prices.

The better class of concerns are coming somewhere near an agreement nowadays, but there still remain many that seem to have little conception of correct accounting. The result is that most absurd prices are occasionally made, and in certain classes of trade there is an inconsistency which causes much loss.

One of the weak spots in the yellow pine business is in the timber department. We believe it to be absolutely true that no concern owning its own timber can afford to manufacture long and large yellow pine timbers at any price that can be obtained for them. Short lengths and ordinary sizes may be profitably taken sometimes, but the long timbers never are. Every cost is underestimated from the woods to loading on cars.

The most serious objection to this class of business is that it makes a tremendous draft on the future value of timber holdings. A mill man with a few thousand acres of timber will take an order for 100,000 feet of timber ranging from 25 to 50 feet in length and of various sizes up to 12 by 12 or 10 by 16 inches, and is "tickled to death" at anything above $12 a thousand on board cars. He goes out into his timber and, at much more than ordinary logging expense, brings in his choicest trees to run through the mill into this cheap stuff. It costs him more for logging, hauling, manufacture in the mill, dressing and handling than the regular run of stock, and yet because it takes only eight or twelve cuts on the carriage he thinks it is profitable stuff to make. The worst feature of it all is the detriment to the value of his timber. Let any man go through a yellow pine tract and pick out the best tree in every ten and he has knocked 25 per cent. off from the value of what remains. The damage is not only immediate, but permanent.

If these things were taken into consideration by the yellow pine industry it would be found that many of its members are not making as much money as they think. It is a crying shame the way the forests of Mississippi, Alabama, east Texas, Georgia and of other long-leaf states have been slaughtered on behalf of the timber business.—American Lumberman.

NEW BRUNSWICK CROWN LANDS.

Hon. W. P. Flewelling, Deputy Surveyor-General of the Province of New Brunswick, supplies the following interesting statistics as to the quality and kind of lumber cut from Crown Lands during the year ending October 31, 1901: Spruce and pine logs, 83,449,123 superficial feet; spruce pulp wood, 176,850 s. ft.; cedar logs, 11,187,791 s. ft.; cedar shingles, 6,351 M.; hemlock logs, 1,907,816 s. ft.; hemlock bark, 2,013½ cords; hardwood logs, including spool wood, 3,560,741 s. ft.; hardwood timber, 102 16-40 tons; spruce timber, 40 tons; fir logs, 1,164,283 s. ft.; fire, stave and pulp wood, 1,294 cords; railway ties, 94,719; telegraph poles, 195; cedar rails, 300; cedar posts, 400; boom poles, 790; brackets, 2,328; rafting pins, 50,000; knees, 895; weir stakes, 411; weir ribbands, 475; birch hubs, 180, and the total stumpage on the same was $101,710.48.

Wilson Bros,, of Collingwood, Ont., have secured a block of land alongside of the Grand Trunk Railway tracks and are about to build a large brick planing mill. It will be equipped with the most modern machinery, including dry kilns, exhaust fans, elevator, etc., and will be one one of the most up-to-date plants in Ontario for the manufacture of all kinds of builders supplies. It is understood that the orders for machinery have not yet been placed.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 24 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VIII. TORONTO, ONT., MAY 28, 1902 No. 17

CANADA LUMBERMAN

PUBLISHED BY

The C. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:

IMPERIAL BUILDING MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects are especially valuable to saw mill and planing mill men and manufacturers of lumber products.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

Prepared by the Editor of the 'Canada Lumberman."

Toronto, Canada
C. H. MORTIMER, Publisher
1895

THE above is a fac simile of the title page of the latest and most complete Lumber and Inspection Book published.

We shall be pleased to send you a copy on receipt of six 2 cent Canadian postage stamps

THE CANADA LUMBERMAN,
Toronto, Canada.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED—A RAFT OF PINE LOGS ON Georgian Bay; apply at once to Box 20, CANADA LUMBERMAN.

WANTED FOR A MILL IN BRITISH COLumbia, 1 Shingle Jointer, 1 Shingle Packer. Apply to G. O. Buchanan, Kaslo, B.C.

WANTED—SEVERAL FIRST-CLASS DUNBAR Shingle Sawyers. Apply the Hastings Shingle Mfg. Co., Limited, Vancouver, B.C. See our ad in this paper about our new mill. Mill to be free from dust.

WANTED—PRICE ON LARGE TRACT OF Balm of Gilead timber; must be near the waters of Lake Ontario and not too far from the mouth of the Niagara river, with waterway if possible; name price per acre; give exact situation, rail and water facilities. Address "W", Lewiston, N. Y., Box 51.

WANTED—HARDWOOD LUMBER.

SOFT ELM, BIRCH, BLACK ASH, 1STS and 2nds preferred. J. F. STENGAL, 99 Ellicott Square, Buffalo, N.Y.

FOR SALE.

200,000 FEET OF PINE, TAMARAC and cedar, all lengths, can be cut to order; also 2,000 fence posts. N. H. HOWARD, Killean P. O., Leslie's Station, C. P. R.

FOR SALE.

1,000,000 feet B M. Round Hemlock.
300,000 feet B. M. Round Spruce.
Ready to be sawn into any size and lengths. Shipment by rail or water. Address JAS. SHEPPARD & SON, Box 630, Sorel, Que.

Wanted—Cedar Shingles

16 INCH AND 18 INCH, ALL GRADES, good quality, White Cedar. Would purchase mill output.

Give quantities both on hand and to be manufactured. J. G. STRAIT & SON, Wolcott, New York.

Cedar Shingles Wanted

WILL BUY FOR CASH ANY QUANTITY of good quality Cedar Shingles. I handle all grades and will advance 75 per cent. cash on receipt of bill of lading. Write or telegraph. IVERS P. LAWRENCE, Fitchburg, Mass.

SPECIAL TO LUMBERMEN.

WITH A THOROUGHLY EQUIPPED PLANING Mill at Orillia, we solicit orders for re sawing and planing of lumber, in any quantity; can match 26 inches wide; all work guaranteed first-class; prices on application. Address, NATIONAL BOX CO., Orillia, Ont.

FOR SALE

STEAM SAW MILL AND TIMBER LIMIT. Mill is situated on the Quyon River, two miles from Bristol Station, on the Pontiac Pacific Railway, consists of one Waterous band mill with all necessary tools for grinding and fitting saws, one double power feed edger slash table, swing butting saw log haul up, and everything necessary to make a complete mill. Timber limit contains ten (10) square miles Mill is now in operation and can be seen running Proprietors are removing where a larger plant can be installed. Price $5,000, half cash, balance in six (6) and twelve (12) months secured. For further information apply to

DAVIDSON & THACKRAY,
250 Sparks St., Ottawa.

DRY PINE.

WE HAVE ABOUT 1,500,000 FEET DRY PINE in 1, 2 and 3 inch common and better, prefer selling in bulk. Will quote freight rate to Buffalo, Chicago or Toronto on application. Correspondence solicited. N.B.—Would like to correspond with consumers of hardwoods. ST. JOE ISLAND LUMBER CO., Sault Ste. Marie, Ont.

FOR SALE

INTERNATIONAL CO. MILLS,

Newport, Vt.

Just across the line, on Lake Memphremagog; junction C. P. R. and B. & M.

Entire plant, consisting of saw mill, 36x96, 2 stories, dressing and box-mill, 50x180, brick boiler house, office and other buildings; complete equipment of machinery, six 80 horse-power boilers and two 200 horse-power engines, all in good running order.

The best location and best plant in Vermont for handling Canadian Lumber.

Cost $104,000 in 1883.

Price $25,000.

Inquire of

RICKABY & CO.,
St. Johnsbury, Vt.

TIMBER BERTH

Township of Chisholm,

SAW MILL AND SHINGLE MILL

BY PUBLIC AUCTION,

AT THE

Orillia House, Orillia, on

THURSDAY, JUNE 12, 1902

at 2 p. m.

The subscriber will offer for sale by Public Auction at the above time and place

Timber Berth, Township of Chisholm
(Being 22 square miles.)

Together with Saw Mill, Shingle Mill, Buildings, Camp and Logging Outfit, Tools, Horses, about 650 Logs, Etc., as per inventory, which can be seen by applying to Mr. D. McRae, Powassen.

The whole of the above will be sold en bloc.

TERMS.—Half Cash, balance one year, with interest at Six per cent. on approved paper.

For further particulars apply to the Chisholm Timber Limit Co., Hamilton, Ont., or to Wm. Hendrie, Jr., and J. J. C. Thomson, Proprietors.

PETER RYAN,
Toronto.

STANDING TIMBER FOR SALE.

900 ACRES OF HEMLOCK, BASSWOOD, Oak, Pine, Maple and Beech, near R. R. station; will take all the cordwood part payment, delivered at the station. THOS. MYLES' SONS, Hamilton. There is a large amount of tan bark

Wanted—A Partner

COMPETENT OR SILENT, WITH $6,000 OR $8,000, to increase the business of a good saw mill on the sea shore, Gulf St. Lawrence. Good facilities for shipping. Plenty Spruce, Cedar and Hardwood. Address J. DIDACE BEAULIEU, 188 St. Antoine Street, Montreal.

PROVINCE OF QUEBEC.

Department of Lands, Mines and Fisheries.

WOODS AND FORESTS.

Quebec, 19th April, 1902.

Notice is hereby given that, conformably to Sections 1334, 1335 and 1336 of the Consolidated statutes of the province of Quebec, the timber limits hereinafter mentioned, at their estimated area, more or less, and in their present state, will be offered for sale, at public auction, in the Department of Lands, Mines and Fisheries, in this city, on TUESDAY, the THIRD day of JUNE, 1902, at ELEVEN o'clock A.M.

NDITIONS OF SALE.

No limit will be adjudged at less than the minimum price fixed by the department.

The limits will be adjudged to the highest bidder on payment of the purchase price, in cash or by cheque accepted by a duly incorporated bank. Failing payment they will be immediately re-offered for sale.

The annual ground rent of three dollars per mile, with fire tax, is also payable immediately.

Those timber limits, when adjudged, will be subject to the provisions of all timber regulations now in force or which may be enacted hereafter

Plans of limits offered for sale are open for inspection in the Department of Lands, Mines and Fisheries, in this city, and at the office of the Crown lands and timber agents in the different agencies in which said limits are situated, up to the day of sale.

N B.—No account for publication of this notice will be recognized, if such publication has not been expressly authorized by the department.

S. N. PARENT,
Minister of Lands,
Mines and Fisheries.

CURRENT TRADE CONDITIONS.

ONTARIO.

The conditions in the lumber trade are almost the same as at last writing. Lumber sells very readily and is sought after by buyers. The movement during the month of May was quite heavy, water mills especially showing an increase in business over the corresponding month last year. Buyers for wholesale dealers in the Eastern States are constantly travelling through the white pine territories in search of suitable stock. In the face of such conditions prices are not likely to weaken. In the Ottawa valley good pine strips and sidings have been marked up about $2 a thousand. While the price lists of manufacturers do not show a general advance, certain grades for which there is an exceptionally good demand are quoted at higher figures than one month ago. Hemlock lumber and timber is in strong demand and owing to the limited supply an advance of about fifty cents has been made. For 2 x 4 hemlock in 12-foot lengths $10 is asked at the mill, and for 1 x 13 inch and wider $11 is the current quotation. For such small lots of dry No. 1 lath as can be found $3 is willingly paid, f.o.b. cars at the mill. Sales of 32-inch lath have been made at $1.50 at the mill. The stock of dry hardwood lumber is being steadily absorbed, although prices have shown little disposition of late to advance. On the other hand, the prospects of a decline are considered very remote, owing to the certainty of a light production this season.

QUEBEC AND NEW BRUNSWICK.

A large quantity of the early cut of the spruce mills has been contracted for. The demand is improving and it would seem that manufacturers are in a position to advance prices for later shipments very easily. Should the quantity of logs hung up be as great as predicted, it will doubtless result in higher prices towards the fall. Clapboards are very scarce and bring $40 for best quality, Boston delivery. There is no perceptible weakening of the cedar shingle market. Dealers are experiencing much difficulty in filling orders, nothwithstanding that as high as $3.60 for extras on Boston rate of freight has been offered in some instances. Laths are also firm.

Reports from the Upper St. John river state that 40,000,000 feet of logs are hung up. Of this quantity 12,000,000 feet are for Cushing & Company and 13,000,000 feet for W. H. Murray. Crews are being kept on hand in the hope that the water may rise.

MANITOBA AND BRITISH COLUMBIA.

The weather throughout Manitoba and the Territories has not been favorable for building operations, but still a large quantity of lumber has gone into consumption. The demand for the better grades has caused another slight advance in prices. British Columbia spruce lumber has been marked up $1.50 per thousand and is very scarce. Conditions in British Columbia, while satisfactory from the standpoint of demand, are not altogether favorable to manufacturers. It is almost impossible to secure labor for the mills and logging camps, and it is probable that some of the mills will be compelled to close down for this reason. While there is a strong demand for Canadian shingles, it is reported that the shingle market in Washington is somewhat depressed and that several of the largest manufacturers have decided to close down their mills in order to sustain prices. The Puget Sound Timbermen's Association recently advanced the price of fir logs fifty cents per thousand.

Vancouver mills have just figured on a contract for 1,000,000 feet of lumber for the building of twenty barges to be operated on the Yukon river.

UNITED STATES.

Reports from the Eastern States say that the lumber market is somewhat quiet on account of strikes and consequent checking of building operations. In the Lake Superior district and in Michigan the situation seems to be fully as strong as one week ago. A Bay City firm last week purchased 12,000,000 feet of lumber in the Georgian Bay at a reported consideration of $18 for log run. Buyers generally are showing a disposition to purchase at current prices whenever the desired stock can be found. It is evident that the supply of the upper grades of pine will be inadequate to meet the demands. The Wisconsin Valley Lumbermen's Association have issued a new list making a substantial advance in the upper grades. Two-inch dimension in all widths and lengths was advanced 50 cents; 8 and 10-inch No. 1 rough and their products 50 cents and $1, according to length; rough lumber, 13-inch and up wide, $1; and shop lumber, selects and finishing $1.50 to $2.50. Hardwoods continue to make a gain. Basswood is scarce and higher, and maple is firm, although the supply is comparatively large. There is some difference in the prices of lath. Recently it has been retailed in Buffalo and Tonawanda at $4.25, but a correspondent states that it is now selling as low as $3.75. As lath prices have been abnormal, it would not be surprising if lower prices should rule.

GREAT BRITAIN.

A healthier tone pervades the British timber market. The peace negotiations have stimulated buying and restored in some degree confidence to the trade. Prices are being well sustained and indications point to higher values in the near future. Spruce deals have shown exceptional strength, 3x9 and 3x11 being very scarce and wanted. There is a fair stock stock in first hands of 3x9 of long average width, but they are scant in thickness. It is understood that shippers some time ago refused £8 5s c.i.f. for such stocks and are holding them for £9. Spruce deals of the best quality have advanced 7s 6d a standard within the past three months. Pine deals are meeting with favor, but the stock of the poorer grades has prevented any noticeable advance in price. Red pine deals have not sold well at recent auction sales, but they will no doubt recover with the general market.

BIRCH SQUARES AND SEATS.

A large buyer of Birch chair seats and of Birch squares is open to contract with a mill for their output. Also open for Broom Handles and Dowels in large quantities. Write in first instance to "Finance," care of CANADA LUMBERMAN.

Orillia Planing Mills

and Sash and Door Factory
Near G. T. R. Station.

PLANING, MATCHING AND RE-SAWING
Done in any quantity. We guarantee satisfaction. Write for prices. Address,
S. POMEROY, Box 428, Orillia.

STOCKS AND PRICES.

The steamer Holmea is completing her cargo at Quebec for the United Kingdom.

The steamer Pydna left the Miramichi last week for Manchester, England, with a cargo of deals.

The Tobique Manufacturing Company, of Plaster Rock, N.B., expect to cut 6,000,000 feet of deals this season for the British market.

Graham & Horne, of Fort William, Ont., have secured the contract for piles for the new Canadian Northern Railway elevator at Port Arthur.

It is reported that Chew Bros., of Midlane, Ont., have purchased timber limits and a saw mill on Wilson Creek in British Columbia, from Hill Bros.

Recent shipments of pulp wood from Quebec included the following: 245 cords for Ticonderoga, by Auger & Son; 85 cords for Ticonderogo, by John Breakey.

An auction sale of unmarked logs was held at St. John, N.B., last week. The spruce was purchased by N. H. Murchie for $11.20 per thousand, the hemlock by J. F. Gregory for $4 per thousand, the cedar by Hilyard Bros. for $9 per thousand, and the pine by the same firm at $6 per thousand.

Messrs. S. P. Musson, Son & Company, say of the Barbados market: We have only one arrival of white pine to report, the "Rachael H. Boyd," from Liverpool, N.S., with 85,000 feet, which has sold at $24.36 for shipping and $19.36 for second quality. The market having been suddenly strengthened and a large demand created by the information that another batch of Boer prisoners would be sent here, for which building to a considerable extent must be undertaken, several cargoes could be placed at the above figures or a little better. No receipts of spruce have taken place, and we think one or two cargoes could be placed at about $18 to $19. The "Boyd" brought 23,000 feet of hemlock, which sold at $16.06 for shipping and $12.06 for second quality. Gaspe shingles would bring $3.50 to $4 and laying $2 or over."

Mr. W. J. Raynham, representing Walcot, Limited, London, England, is now in this country visiting the different firms whose English and Continental wood business is handled by Messrs. Walcot. Any letters sent to the CANADA LUMBERMAN for him will be forwarded.

TO THE LUMBER TRADE

We will be represented in South Western Ontario by Mr. Frederick Shaw, of Forest, Ont., who comes with us as travelling salesman on May 1st, and who will call on the trade regularly. We are running our mills day and night and offer to the trade a well manufactured stock of band sawed lumber put up in grades under Michigan inspection rules. We solicit your inquiries, and all correspondence given prompt attention.

CANADIAN LUMBER SHIPMENTS.

The following shipments of lumber, etc., from Canadian ports are reported since last issue :

From Chatham, N. B.: May 21, barque Aureola, for Manchester, 733,963 ft. deals, scantling, etc., by F.E. Neale.

From Ship Harbor, N.S.; Str. Aureola, for Liverpool, spruce deals, etc., value $23,000.

From Hopewell Cape, N.B.: Str. Peerless, for Manchester, 3,105,663 ft. deals, value $34,030, by J. Nelson Smith. Schr. R. Emmerson, for Boston, 118,647 ft. scantling, value $1,186, by John M. Hicks. Str. Derota, for Bristol, Eng., 2,715,156 ft. deals, value $26,584, by W. Malcolm Mackay.

From Parrsboro, N. S.: May 19, Str. Gena, for Cardiff, Wales, 2,058,839 ft. deals, 260,451 ft. ends, value $22,322, by George McKean.

From Vancouver, B.C.: May 16, barque Challenger, for Delagoa Bay, South Africa, 1,090,233 ft. rough fir, value $12,000, by British Columbia Mills, Timber & Trading Co.

From Halifax, N. S.: May 22, barque Globus, for Sharpness, Eng., 840,590 ft. lumber, value $9,734. Str. Bratsburg, for British West Indies, 73,326 ft. lumber, value $1,079.

From St. John, N.B.: Ship Honolulu, for Bristol, Eng., 1,095,792 ft. deals, 100,170 ft. scantling, 33,944 ft. ends, 37,942 ft. boards, 117,865 ft. plank, 20,000 ft. birch ends and scantling, by George McKean.

From Montreal: Str. Frisia, for Hamburg, 11,771 pieces pine boards, 10 pieces pine timber, by Dobell, Beckett & Co.; Str. Livonian, for Glasgow, 902 pieces deals by C.P.R., 234 bundles boards by D. Cream & Co; 4,283 pieces deals by Dobell, Beckett & Co.; 321 pieces logs, 19,254 pieces deals, by W. & J. Sharples; 2,602 pieces deals by E. H. Lemay. Str. Anatolia, for Antwerp, 42,925 pieces deals, etc., by Watson & Todd; 39,726 pieces deals by Dobell, Beckett & Co. Str. Dunmore Head, for Dublin, 4,617 pieces deals by W. & J. Sharples. Str. Dominion, for Liverpool, 23,220 pieces deals and boards by Watson & Todd; 858 pieces oak lumber by C. P. R. Str. Pretorian, for Liverpool, 3,195 pieces boards by E. H. Lemay. Str. Lakonia, for Glasgow, 13,476 pieces deals, ends and boards by Robert Cox & Co.; 6,774 pieces deals, ends and planks, 277 pieces timber, by Dobell, Beckett & Co. Str. Bellonia, for Leith, 10,204 pieces deals and ends by Robert Cox & Co.; 6,672 pieces deals and ends, by Watson & Todd; 78 pieces timber by G. T. R. Str. Montfort, for Bristol, 3,732 pieces lumber, by R. Cox & Co.; 1,020 pieces lumber, by McArthur Export Co.; 9,311 pieces lumber by J. Burstall & Co.; 6,499 pieces lumber by Watson & Todd. Str. Lycia, for London, 3,184 pieces ends, by McArthur Export Co.; 9,663 pieces lumber, by Watson & Todd; 6,594 pieces lumber, by Dobell, Beckett & Co.; 22,314 pieces lumber by Charlemagne Lumber Co.; 209 pieces lumber by McLaurin Bros.; Str. Loughrigg Holme, for London, 54,465 pieces deals and ends, by Watson & Todd. Str. Sardinian, for Glasgow, 564 pieces elm lumber by C. P. R.; 494 pieces deals by D. Cream & Co.; 4,312 pieces deals, 100 pieces logs, by W. & J. Sharples. Str. Tiger, for Rotterdam, 105 pieces deals by W. & J. Sharples; 300 pieces deals by J. Burstall & Co.; 216 pieces deals by McArthur Export Co.

The saw and shingle mills of W. Porter & Sons at Minesing, Ont., were destroyed by fire last week, at a loss of $5,000.

A shingle mill at Pike Bay, Ont., belonging to L. Mouke, was burned recently. No insurance.

THE OTTAWA VALLEY.

[Correspondence of the CANADA LUMBERMAN.]

Lumber prices, as predicted, have advanced on account of the increased spring and early summer demand. These prices will hold until the present season's cut is available, which will not be for several weeks. The present prices are as follows : Good pine sidings, 1¼ in. and 1½ in., 8 in. and up, $42 to $48 per M ; 2x8 in. and up, $48 to $52 ; good strips, one in., $30 to $32 ; strips, 1¼ and 1½ in., $32 to $36 ; strips, 2 in., $34 to $38. These prices were paid for stock in small quantities. Holders are not soliciting trade and can afford to quote stiff prices, as the stock must be had, and it is not at all plentiful. No changes are reported in other lines of lumber, but the maximum figure in nearly every case represents the actual selling price.

While building operations in Hull and Ottawa are only fairly active, the outside demand for good lumber is such as to make the prediction of a strong market almost a certainty.

Bush fires during the past week did considerable damage in the vicinity of Ottawa, but fortunately the efforts of the rangers and the assistance of Nature in the way of heavy rains, combined to check the threatened ruin of valuable limits. Ex.-Ald. R. J. Davidson, of the firm of Davidson & Thackray, returned today from the firm's mill and limits on the Coulonge. He states that fully six miles

of young pine was destroyed through the carelessness of a settler. The latter started a fire on Wilson's and Argue's limits. It got beyond his control and soon worked its way into the Davidson & Thackray limits adjoining. Rain fell at an opportune time and the larger standing timber was saved. Smith Bros. mill on Long Lake, near Campbell's Bay, was threatened. The fire had eaten its way through the firm's limits to within a few acres of the mill when the rain fell. The loss in this district can hardly be estimated, but it will not be large. On the Parry Sound or Western Division of the C. A. Railway fire swept a territory extending about 25 miles between Egan Estate and Whitney. Fortunately little or no green timber suffered, the fire being confined to territory cut over before. The St. Anthony Lumber Company and Mr. J. R. Booth were interested in this fire. South of the city bush fires threatened property along the Canadian Atlantic Railway. It was kept in check.

Davidson & Thackray's new mill at the junction of the Ottawa and Coulonge rivers is being operated. It has a capacity of 5,000,000 feet for a seven months' run. Shipments will be made in about three weeks. The mill is a well equipped affair and there is sufficient standing timber to keep it running for years.

Reports from the drives now go to show that many logs will be hung up if frequent rains do not keep the water in the creeks at a good level. On the Coulonge river Gillies Bros., of Braeside, W. C. Edwards & Co., Rockland, McLaurin & McLaren, East Templeton, and other firms have large numbers of logs waiting movement to the mills. What applies to the Coulonge applies to the other lumbering streams tributary to the Otta-

GILMOUR & COMPANY, LIMITED
TRENTON, CANADA

wa. Several rafts of logs of last year's cut have reached the Ottawa and the supply of logs in sight is a large one.

This week the first raft of square timber of the season passed down the Ottawa river. The raft, which contained about 150,000 square feet, belonged to Mr. Robert Hurdman. The trip from Pembroke to Ottawa was made in two weeks. At Ottawa, however, a delay of five days was experienced. The repairs at the Government slides at the Chaudiere delayed the movement a couple of days.

Mr. George Fowler, lumber agent of the C. P. R., reports a brisk movement from all the mills between Biscotasing and Montreal. Shipments to the United Kingdom via Montreal and to the States are better than they were during the same period last year. Pennsylvania and Ohio points are receiving Canadian lath in considerable quantities. Mr. Fowler has been appointed railway lumber agent for the Ottawa Northern and Western Railway and the Pontiac and Pacific Junction Railway recently acquired by the C.P.Ry. He will be in a position to give shippers and manufacturers better facilities in the way of car accommodation and time service than were possible under the old order of things. Mr. Fowler is conversant with every detail of the lumber business, and will be able to satisfy to the limit the requirements of each particular case.

Hurdman & Elmitt, lumber dealers, of Ottawa, have been appointed agents for Gilmour & Company, of Trenton. Their territory will include Ottawa, Hull and district. They will handle all the products of the Trenton mills and factories operated by the Gilmour Company. The Ottawa end of the business could not have been placed in better hands, as all members of the firm of Hurdman & Elmitt have gained the experience and enjoy in the fullest degree the confidence of the buying public.

Inquiries have been received in Ottawa for pulp wood. The Raymondville Paper Company, of Watertown, N.Y., invites quotations on the following stock : Spruce pulp wood 24 inches long either barked with machine or hand shaved. Prospective sellers should communicate direct with the company.

New Mill Erected 1901. Capacity 100 Million a Year.

Spicer Shingle Mill Co., Limited

It is the purpose of this advertisement to try and convince the Lumber Trade of Canada that we are the only company in British Columbia manufacturing and shipping shingles in large quantities, or that we "know it all." We recognize that "there are others" and that we are not the only "pebble on the beach." To try and make you believe that we are the only people who can supply you **promptly** and in **large quantities** with a **high-grade** shingle would not only be a **fish** and a **bear** story combined, but it would be gall of the bitterest kind.

Our competitors in the shingle business in B. C. are nice people, and we presume that they know their business ; but we are nice people too, and as we have been in the trade as long as any of them, and a **great deal longer** than the most of them, we know that we know our business, and that our competitors are not in the possession of any points of value regarding the manufacture of shingles which has not come to **our knowledge**.

Our old mill was burned down in May last, and in its place we have built what is at the present time the **Largest** Shingle Mill in B. C.

Our new Mill has 7 of the latest improved type of Dunbar machine, which we run night and day—giving us a capacity of about **100 Million** a year.

Competent judges who have seen our new mill, tell us that it is one of the most **substantial**, carefully **constructed**, and best **planned** mills in this province. We ourselves think it is **the very best** shingle mill in B. C. ; and we know that it is **equipped** with all the very latest improved Shingle Machinery.

Will the trade please note that our contract with the Pacific Coast Lumber Co. closed on December 31, 1901. Orders sent to us by letter or telegraph shall have our best attention.

We want our share of your shingle business, and can **guarantee** you satisfaction in **every particular.**

Spicer Shingle Mill Co., Limited,
VANCOUVER, B.C.

Another Little Mill

There will be over a million feet of sawn lumber used in this one plant for construction only ; over 30,000 lin. feet of piling, besides rock foundations two car-loads of shingle machines only ; over 7 miles steam pipe 1 1-2 inch and up in diameter. A summary of all the material that will be used in the construction of this plant shows that there will be over 320 car-loads, or 21 trains of 15 car-loads each.

With all our past experience in the shingle business, of which we make a specialty, and with all the latest and best improvements in machinery and mill construction, we expect it to be the most complete and up-to-date mill in North America, where shingles can be made better than in the ordinary mill

The above plant will be in operation about the first of June, and although this mill will have a daily (24 hours) capacity of 1,250,000 shingles, the dealers and consumers need not be afraid of any particular surplus, but can rest assured that there will be one firm on the coast manufacturing red cedar shingles from whom they can get their wants supplied in a hurry with that old reliable "Hastings Brand" so much talked about.

CUSTOMERS' ATTENTION. — Please take notice that on the 1st day of January, 1902, all arrangements with the Pacific Coast Lumber Co. of New Westminster, B. C., for the handling of any of our shingles ended. Until further notice our authorized general agents will be Mr. Jas. Twitchell, Clinton, Ont., for Ontario, and Mr. Samuel Ashfield of Winnipeg Man., for Manitoba and the North-West ; therefore, orders for straight or mixed cars sent through the above agents or direct to us will have equally prompt and careful attention.

BRITISH COLUMBIA LOG SCALING ACT.

An act to provide for the measurement of logs by official scalers has just been passed by the British Columbia Legislature. The act was first drafted by Mr. H.G. Ross, secretary of the British Columbia Loggers' Association. It was subsequently amended by the government and afterwards by a joint committee of loggers and mill men. The principal clauses of the law are given below.

The Lieutenant-Governor in Council may appoint and fix the remuneration of a Supervisor of Log Scaling. It shall be the duty of the Supervisor to supervise the work of the Official Scalers appointed under this Act, and to perform such other duties as may be assigned to him by any rules or regulations, or as he may be directed by the Chief Commissioner of Lands and Works.

The Supervisor may act as arbitrator in any dispute that may arise between a vendor and a purchaser, or either of them and the Official Scaler, as to the measurements and classification of any timber, and his award shall be final and binding upon all parties without appeal. Whenever the Supervisor acts as arbitrator, as aforesaid, he shall collect from the person requiring his services the following fees, in addition to all reasonable expenses incurred by him, viz:

For scaling logs and spars, 5 cents per 1,000 feet, B. M.

For measuring piles and poles, 5 cents per 200 lineal feet.

For measuring railway ties and cedar bolts, 5 cents per cord of 128 cubic feet.

and shall immediately transmit such fees to the office of the Timber Inspecter for the Province, to be accounted for as Provincial revenue.

The Chief Commissioner of Lands and Works may, from time to time, appoint Official Scalers, and fix the scale of fees to be paid to them as their remuneration, which shall constitute a lein upon the logs until paid. Official Scalers shall hold office during good behaviour.

No person shall be appointed Official Scaler unless he is a British subject, and is duly qualified by experience and has paid to the Chief Commissioner of Lands and Works a lisence fee of twenty-five dollars.

The Supervisor shall have the power to suspend any Official Scaler who, in his opinion, is not properly performing the duties of his office.

It shall be the duty of Official Scalers to measure fairly and correctly, to the best of their skill, knowledge and ability, and to classify when so requested by the vendor and purchaser all timber on which there is any royalty due to the Crown, and enter in their books of record, for the purpose of return to the Supervisor, what they believe to be the proper contents and grades of said timber, noting the number of saw-logs or other pieces of timber rejected as worthless, commonly called culls. They shall also deliver a copy of the scale to the vendor or owner upon demand, and upon paymen of his fees.

It shall also be the duty of an Official Scaler, when called upon by a vendor or owner of timber on which royalty is not due to the Crown, to measure and classify such timber as in the manner provided by section 9 of this Act, and to furnish such vendor or owner with a copy of scale and classification upon payment of his fees, and which shall be a lien upon such timber or logs until paid.

Forthwith after measuring any timber as aforesaid, the Official Scaler shall transmit to the Supervisor a correct copy of the record of said measurment, as entered in his book of record, and shall, when called upon so to do, submit said book of record to the Supervisor or other officer of the Department of Lands and Works, and shall give all information asked for, in his power to give, and shall furnish any statement or copies of statements which the Supervisor or other officer of the said Department may from time to time require.

Should any Official Scaler neglect or refuse to carry out and obey the provisions of this Act, or any regulations to be made under it, the Chief Commissioner of Lands and Works may cancel his license, and such Official Scaler shall not thereafter be eligible to measure timber upon which there is any royalty due to the Crown.

If any Official Scaler wilfully undermeasures, or mis measures, or wilfully culls and rejects any timber, or makes a false return, for the purpose of deceiving or defrauding, such Official Scaler's license shall be revoked, and he shall not thereafter be permitted to act as Official Scaler under this Act, and in addition he shall be subject to a penalty of not less than fifty dollars, or more than two hundred dollars, to be recovered, with costs, on summary conviction before any Stipendiary Magistrate, Police Magistrate or Justice of the Peace, and in default of payment he shall be imprisoned for a period of not less than one month, nor more than three months.

No timber shall be sawn, or caused to be sawn, until the same has been scaled in accordance with the requirements of this Act, and every person violating this provision shall be liable to a penalty not exceeding five hundred dollars ($500), to be recovered upon summary conviction before a Police Magistrate, Stipendiary Magistrate or Justice of the Peace, and to have such timber seized and forfeited wholly or in part to the Crown, as the Chief Commissioner of Lands and Works may direct.

Nothing in this Act shall debar any Official Scaler from being employed by a mill owner or logger who is the holder of a lease or license from the Provincial Government, but no Official Scaler so employed shall exact fees from a vendor or purchaser or be allowed any compensation as such for services rendered in his capacity as Official Scaler.

In the event of a vendor objecting to the Official Scaler employed by a purchaser, or to his scaling, then on application to the supervisor, another Official Scaler may be selected to scale the boom in question, and in such case the party requiring such services must pay such remunerations as is fixed under the provisions of section 5 of this Act.

The "British Columbia Log Scale" shall be used for the measurement of all timber on which there is any royalty due to the Crown.

The following is the classification of fir logs for scaling purposes as agreed upon by the Loggers' association and Lumber and Shingle Manufacturers' association:

Grade A or First Class—Logs suitable for flooring, and decking planks; reasonably straight; not less than 20 feet long; 30 inches in diameter; clean and free from visible knots.

Grade B., or Second Class—First class merchantable, sound lumber, reasonably straight, free from unsound limb knots; not less than 16 inches in diameter, and if longer than 40 feet of greater diameter in proportion to the length; with half clear timber.

Grade C., or Third Class--Second class merchantable timber, sound, reasonably straight, and free from rotten knots, but too rough to pass as first class.

Culls—All timber not coming up to the standard of second class merchantable.

CARE OF A BOILER.

A writer in the American Electrician cites a case which came under his observation where the boilers of a certain plant were nearly ruined in a short time because the drip from the oil separator was led into the receiver instead of to the sewer, so that the oil passed into the receiver even more directly than it would have done had there been no separator present. Defects are almost certain to appear in the boiler when heavy lubricating oils, or oils of any sort that leave a considerable residue upon evaporation, find admission to a boiler.

The commonest way for oil to get into a boiler is, according to the writer, by being pumped into it together with the drips from a system where exhaust steam is used for heating, and the water of condensation is returned to a receiver. In all systems of this kind an oil separator should be used, and the drip from this should be carried to a sewer. In some cases the exhaust pipe from the engine may be provided with a separator, and yet the receiver may receive the returns from one or more pumps, each of which contributes a certain amount of oil.

Oil also gets into the feed water in connection with condensing engines, when the condenser water taken from the hot well is used as part of the feed. It is impossible to prevent oil from getting into the boiler when feed water is taken from this source. The importance of excluding oil from boilers can hardly be understood by those who have not seen the damaging effects that may result from the admission of even a small quantity of it.

Pitting in boilers or piping is usually observed where the water is kept for a considerable time at a temperature somewhat between 212°. The boilers that are mostly affected by this sort of trouble are those that are used for heating, and in these it is observed chiefly in the fall and spring, when the boilers are used only a part of the time. At such times pitting is likely to be very marked, and it is nothing unusual to see a set of tubes used up in two or three years.

In one instance a new boiler was put into service, fo power, in the month of December, being used in connection with five others. Business becoming slack at this factory about the time the new boiler was installed, only three of the available six boilers were needed at any one time. The practise was to use three of the boilers for two weeks and then to allow these three to stand idle for two weeks without emptying them. In the following August three of the tubes in the new boiler gave way. Upon examination it was found that the tubes in this boiler were all badly pitted. The three that had given out were replaced with new tubes, and the boiler was thoroughly boiled with soda ash. Two more tubes gave way during this process and were replaced.

The battery was then put in use again under the same conditions as before, except that every boiler was now emptied when not in service. This occurred eight years ago, and the tubes are still in good condition. The tubes in the older boilers were not affected, as they were covered with a film of scale which protected them. To protect boilers in which pitting takes place, about ten pounds of lime should be slacked and put in each boiler. This will cause the formation of a thin lime scale which will prevent pitting for a time. When this thin protective coating is dissolved the operation should be repeated. Of course, this treatment is not recommended for a boiler in which there is already a plentiful supply of scale. This would naturally be understood, because it is not in these boilers that pitting occurs. Still, it may be as well to speak of this point explicitly, in order to avoid musunderstanding.

The difficulty attending the stopping up of tubes that may be leaking in a water tube boiler without taking it out of commission, has been overcome, it is reported, by the invention of an engineer in the French navy of a self-acting plug for burst water pipes.

This plug is described as consisting of a hemispherical bulb, about half again as large as the bore of the tube. One of these plugs is located at each end of each tube. The stem is inserted into the end of the tube, allowing the plug to hang down outside, just clear of the opening. These plugs are kept from falling out of the tube entirely by a rod which extends across the ends of the tubes horizontally.

The action of the device is very simple. When a tube bursts the water naturally rushes into the damaged tube at a high velocity. The plugs lying at the end of the tube are picked up by the current, and, guided by the stem, are jammed into the end of the tube and held there by the unbalanced pressure exerted on them.

The body of the plug is made of iron or steel solid with the stem and is coated with a soft layer of lead. When the plug is driven into the tube by the rush of water this lead makes a tight joint between the tube and plug and effectually blocks the opening. In sectional boilers, where the tubes are arranged in separate series, it may be sufficient to put a plug at the end of each series, only instead of at the ends of each tube.

This device has been tried on a torpedo boat boiler and was found to act admirably. The bursting of a tube gave no trouble at all, and the vessel continued her trip, putting to sea again next day unrepaired, the damaged tube being completely closed by these automatic plugs.

These have been in use, it is said, on tugs and other vessels for many months and have been found to act very satisfactorily. They are made of such shape and proportion and so placed that they cannot block the tubes during the ordinary working of the boiler, and their arrangement can be changed to suit different types of water tube boilers.

THE NEWS

—A new planing mill has been built by James Brown at Midland, Ont.

—Lupien & Lupien is the name of a new saw mill firm at West Wickham, Que.

—The Rathbun Company have built an addition to their saw mill at Bancroft, Ont.

—It is said that James Smith is preparing to build a shingle mill on Burrard Inlet, B.C.

—T. L. Arnett has bought the lumber and coal business of A. J. Hughes at Souris, Man.

—Jacob Cathers, of Dauphin, Man., is operating a portable saw mill in the Rainy River district.

—W.C. Irwin, of Dundalk, Ont., has purchased a site at Toronto Junction for a sash and door factory.

—Adolphe Fischer has retired from the saw mill firm of Blue, Fischer & Deschamps, Rossland, B. C.

—J. D. Carew, of Lindsay, Ont., has purchased the saw and shingle mill of W. Burgoyne at Fenelon Falls.

—Tenders were recently invited for the assets of the Shipe Manufacturing Company, Limited, of Clarksburg, Ont.

—John Walker has sold his lumber business at Grenfell, N. W. T., to the Grenfell Milling & Elevator Company.

—Morkill & Whitworth, lumber and implement dealers, Lowe Farm, Man., have been succeeded by E.McTavish.

—The Digby Woodworking Company are erecting a sash and door factory at Digby, N.S. A. H. Holdsmith is manager.

—It is understood that the Hanbury Manufacturing Company, of Brandon, Man., intend building a new sash and door factory.

—The shingle machines have been taken out of the Barlow mill at Bayswater, N.B., and it is probable that the mill will be dismantled.

—The Seaman-Kent Company, Toronto, has been incorporated, with a capital of $100,000, to manufacure and deal in lumber and wood.

—The Hastings Shingle Manufacturing Company, of Vancouver, B,C., have established a branch at Winnipeg, in charge of S. Ashfield.

—G. B. Housser & Company, of Portage la Prairie, Man., have disposed of their branch lumber yard at Macdonald to Rodger & Glennie.

—G.B. Gordon has purchased the lumber business of the Northern Lumber Company at Gilbert Plains, Man., and will continue it in his own name.

—It is reported that the Prescott Lumber Company, of Dalhousie, N.B., are considering the building of a saw mill at the mouth of the Charlo river.

—The Blonde Lumber & Manufacturing Company, of Chatham, Ont., have established a hardware department in connection with their lumber business.

—The late James Scott, of Toronto, left an estate valued at over $250,000, a large proportion of which was bequeathed by his will to charitable institutions.

—By a boiler explosion in a saw mill belonging to Walter Stayser at Parry Station, Ont., G. Deavo and J. Everett were killed and W. Gillian seriously injured.

—Frederick McGowan, of Fredericton, N. B., has been appointed by the St. John River Log Driving Company to inspect the driving operations this season.

—At a meeting of the directors of the Tobique Log Driving Company, held at Woodstock, N.B., last month, R. A. Estey, of Fredericton, was elected president.

—It is reported that the New Brunswick Railway Company have disposed of their property in the province of New Brunswick, amounting in all to 1,764,000 acres.

—The cylinder head blew out of the engine in R. O'Leary's saw mill at Richibucto, N.B., last month, the escaping steam scalding and killing a lad fifteen years of age.

—The St. Anthony Lumber Company are building a railway from Whitney to Big Opeongo lake, a distance of fifteen miles. The work is in the hands of Thomas McLaughlin, contractor, of Ottawa.

—George H. White, of Sussex, Edmund A., Robert G., Samuel H., and Louise Flewelling, of Hampton, N. B., are seeking incorporation as the Hammond River Lumber Company, with a capital of $40,000.

—The Albion Iron Works, of Vancouver, B.C., have just completed the installation of machinery in the shingle mill of the Chilliwack Shingle Mill Company on Harrison river. There are five shingle machines.

—The Porto Rico Lumber Company has concluded to close its Rossland retail branch and will devote its energies to the wholesale trade of Manitoba and the North-West Territories. A. G. Lambert is manager of the company.

—The Cleveland Sarnia Saw Mills Company, of Sarnia, Ont., who have for some time past been drilling for salt on their premises on the bay shore, struck a solid bed of salt at a depth of 1,560 feet. The company will proceed at once with the erection of the necessary salt plant.

—H.L. Maddocks & Company, of St. Jacques, N.B., are doing a large trade in hardwood specialties, made chiefly of birch and maple. Recently a veneering machine was put in. St. Jacques is situated on the Madawaska river, some miles above Edmundston.

—Incorporation has been granted to the Standard Lumber Company, of Manitoba, with a capital of $125,000. The members are Peter Mc Arthur, A. D. McArthur, and George Barr, of Westbourne, G. O. Bellamy, of Winnipegosis, and J. G. Harvey, of Dauphin. A general lumbering business will be conducted.

—Work has been commenced on the large saw mill to be built at Vancouver, B. C., by the Pacific Coast Lumber Company, of which J. G. Scott is manager. The new shingle mill of this company has been completed. A battery of eight large boilers has been installed, only two of which will be required to operate the shingle mill. A store house of a capacity of 12,000,000 shingles has been built.

—Hon. H.T. Duffy, Provincial Treasurer of Quebec, referring to the remarks of Mr. Joly at the recent meeting of the Canaadian Forestry Association, stated in Ottawa recently that it would be simply impossible to strip this province of its pulp wood, as enough wood remains to supply all wants for hundreds of years. He also stated that he had come to believe that there was a good deal more pulp wood in the United States than was supposed.

—The Jervis Inlet Cedar Lumber Company, the principal shareholders of which are W.G. Tretheway, L.D. Taylor, J.C. Williams, and H.W. Findlay, of Vancouver, are about to build a large saw and shingle mill up the coast, to be operated by water power. The company secured two hundred acres of timber limits, and with other available timber in the vicinity, it is estimated that 500,000,000 feet of cedar are obtainable. Three shingle machines will be installed in the new mill.

—George M. Mason is just completing a large addition to the Bayswater planing mill at Ottawa. The addition will provide floor space of 2,800 feet. A new dry kiln has been erected, with a capacity of 200,000 feet. Mr. Mason was formerly of the firm of William Mason & Sons, who were engaged in the saw mill business in Ottawa from 1868 until 1898. His present turn-over is nearly 4,000,000 feet annually, consisting of dressed lumber, flooring, moulding, sash, doors, etc.

A Pacific coast publication has the following to say in answer as to whether or not redwood will shrink endwise: "Redwood, as is known, is the most contrary wood in the world. It will sink like a stone; it will float like a cork. It is soft and will cut like cheese; it is hard, flinty and brittle. Boards twelve inches wide and ten feet long have been easily split, while other specimens were so crooked they could hardly lie still. Some redwood will defy rot for forty years, while some will decay in a few months. Some will lose three-fifths of its green weight in drying and some will not lose any weight. It is found straight grained or it may vie with rosewood, mahogany or French walnut for beauty of figure. Name any quality in redwood and its opposite can easily be found."

LINING UP SHAFTING.

BY JOSEPH E. LEWIS.

The following method of lining up shafting seems to be known by very few engineers: Referring to Fig. 1, A is a straight-edge, which may be made from a piece of pine board about 4 feet long. It must be rigidly supported by uprights, from the floor, or otherwise, as is most convenient, so that the top is at the height of the centre of the shaft. Bring the straightedge to the true horizontal by the use of a spirit level and fix it securely in place. For short lines of shafting it may be located at one end, for long lines at the middle. On each rafter that supports a hanger, nail a short stick B, with one nail, so that it may be swung up out of the way when not in use as shown in Fig. 2. The bottom ends may all be brought into line

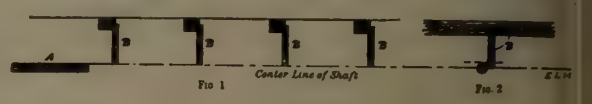

FIG 1 FIG 2

by sighting carefully along the straightedge. For long lines sight in both directions from the middle. The ends of these sticks will also lie in the same horizontal plane at the height of the center of the shaft.

The hangers may now be put up and the shaft placed in position and adjusted to the true level by testing each bearing. For this purpose the sticks B may be turned down as shown in Fig. 2, and the center of the shaft brought to the level at each bearing. This may easily be done by the eye. To test the result, a small spirit level may be laid across the top of the shaft and a line drawn on B as shown. The distance from the end of this line to the end of B should be just one-half of the diameter of the shaft. The sticks should be turned up out of the way and left where they are, so that the alignment may be tested at any time.

Having adjusted all of the bearings to the same horizontal plane, we may now test them on the vertical plane. This is easily accomplished, whether the pulleys are in position or not. We will suppose that they are, and that the shaft varies from 3" nominal, at the middle, to 1¼" at the ends. Take two pieces of string and tie a nut to each end of each piece. Throw one piece over the shaft near the bearing at one end and the other piece at the other end. See Fig. 3. Now stretch a stout cord C from one end to the other, low enough down to clear the pulleys. The end of the cord should be brought exactly central between the two ends of the

FIG 4

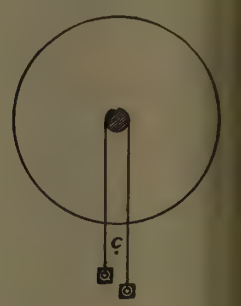

FIG 3

string hanging over the shaft. The weights may be kept from vibration by allowing them to hang in a pail of water. A small pail of oil is better yet, since its great viscosity more readily checks any motion. Having pulled the line C taut in the correct position, it is an easy matter to adjust each bearing by throwing the string with the nuts on the ends over the shaft at the bearing to be tested, and adjusting the set screws until the line C is exactly central between the two ends of the string. You will notice that variations in the size of shafting do not hinder this operation in the least, as is the case when a line is stretched at one side and attempts are made to measure in from it to the shaft; and, furthermore, the presence of the pulleys is no objection whatever. Any shaft may be tested in this manner during the noon hour, except when the belts interfere with the line C. Where this is the case sufficient time must be allowed to remove such belts as are in the way.

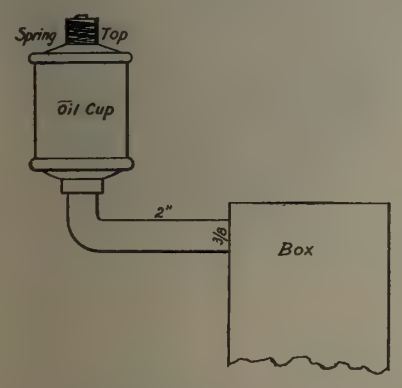
If the shafting was put up with sticks, as above explained, it may also be tested for the horizontal plane in a very few moments. If these sticks are not in posi-

tion, and it is desired to test the alignment of a shaft already up, it is possible to run the line below the pulleys in the manner shown by Fig. 1, the ends of the sticks B being brought down to this plane. Now, starting at any bearing the exact center of the shaft is marked on the stick. To be accurate a small spirit level may be used to mark across top and bottom, see Fig. 4, and the space thus marked off divided in half to get the exact center. Measure carefully the distance to the end of the stick from this center line and cut a measuring stick to just that length. Use this to make a similar line on each of the other sticks B. One of these sticks will be located at each bearing and the center of the shaft may be readily brought to the line. All of the sticks may now be sawed off the right length and swung up out of the way for future use.

One should be cautious about always relying upon them, however, and if it is suspected that any portion of the building has settled since they were put up, they should be discarded, and a new line run.—Science and Industry.

A HANDY OILING DEVISE.

No doubt many of your readers have had trouble with the side spindles of matching and moulding machines running warm. I used to, and here is how I stopped it on the top boxes of a planer and matcher.



I drilled a hole in the side of box at the top, tapped it out for ⅜-inch gas pipe, screwed in a piece 2 inches long, put on an elbow, then a good brass cup fitted with spring top, put a little waste in horizontal pipe, filled the cup with oil, and have never seen these boxes warm since. You don't have to stop machine to oil, neither do you have to oil often. Were I to buy a new machine without some such device as this I should put it on before starting the machine—see sketch. The expense is trivial and the annoyance saved very great.—C. C. H., in Wood-Worker.

ROPE DRIVING FOR SAW MILLS.

The transmission of power by means of ropes running in grooved wheels has made considerable progress of late years. The system is low in first cost, and is particularly useful in conveying power to various points from the same centre. The great drawback to their use arises from the difficulty of obtaining an equal tension on all the ropes, some being strained, whilst others are performing their fair share of work.

During the last few months the writer has been consulted by several firms who have introduced rope driving as to difficulties they have encountered from ropes flying off, &c., and in each case it has arisen from the system not being properly designed and arranged in the first instance; consequently, a few general remarks on rope driving may be of interest.

DRIVING CENTRES.—Ropes will transmit power much better when arranged to run at long centres, and in comparing ropes with flat leather belts for conveying power considerable distances the balance is undoubtedly in favor of ropes, but when shafts are near together, say, 20 ft. or under, and the pulleys less than 4 ft. diameter, the advantage is in favor of belt driving. Ropes have been worked up to between 300 and 400 ft. centres when supported by idler pulleys, but this is, of course, exceptional. The slip of ropes is about 0.33, and leather belts working under similar conditions 0.96.

MATERIAL OF ROPES, &C.— The driving ropes are usually made of cotton, manilla, hemp, leather, or wire. For most purposes cotton ropes are to be preferred; they should be of the best quality, and firmly and solidly made. Pure Egyptian throstle yarn, without weighting material, can be recommended. The lower side of the ropes should be the driving side, and a moderate amount of "sag" should be allowed on them, and when first put on they should be stretched as equally as possible. Cotton ropes are more pliable than those made of hemp or manilla. In splicing a rope the splice should be about 60 times its diameter. Ropes should be as elastic as possible, but lubricant should be used very sparingly, or there will be an excess of "slip".

DIAMETERS OF ROPES AND PULLEY.—It is of the utmost importance to secure successful working that the diameters of the ropes are properly proportioned to the diameter of the pulleys. Ropes of a moderate diameter are to be preferred to larger, as the friction of working and from bending and unbending is reduced in proportion. For like reason the driving pulleys should be of as large a diameter as may be convenient, say, not less than 30 times the diameter of the driving rope. Combe adopted the following minimum diameters of pulleys for the various sizes of ropes :—1¼ in. diameter of rope, 3 ft. diameter pulley, ratio 1 to 28.8 ; 1½ in. diameter of rope, 4 ft. diameter pulley, ratio 1 to 32.0 ; 1¾ in. diameter of rope, 5 ft. diameter of pulley, ratio 1 to 34.0 ; 2 in. diameter of rope, 6 ft. diameter pulley, ratio 1 to 36.0. The ratio of pulleys to each other should not be greater than 4 to 1, but 3 to 1 is better practice.

SPEED OF ROPES.—A good average speed for economically transmitting power is from 3,000 ft. to 5,000 ft. per minute. Ropes are often run faster than this, but we fail to see any corresponding advantage, as any gain in power is counteracted by increased wear to ropes and bearing, and the centrifugal action, or tendency of the ropes to fly off is also increased.

ROPE GROOVES IN PULLEYS.—Another very important matter in effective working is the proper construction of the grooves carrying the ropes. The general consensus of opinion is in favour of grooves formed with straight sides at an angle of about 40 to 45 degrees. The grooves should be of sufficient depth that the ropes cannot rest on the bottom. Grooves are sometimes made with curved sides, but these are not to be recommended, as the ropes cannot bed themselves properly, and have a tendency to roll round, and, consequently, more rapidly deteriorate. Grooved wheels made of wood largely increase the driving power of the ropes.

SHAFTS CLOSE TOGETHER, &C.—Although ropes do not give the best results for driving shafts which are close together, they are sometimes used. In this case a single continuous rope is often employed, the rope being laced backwards and forwards from one groove to the other, a tension pulley being employed for leading the rope from the last groove into the first. For keeping the ropes from flying off an idle grooved tension pulley is sometimes employed.

CROSSED VERTICAL AND ANGULAR LINES.—This form of driving should be avoided wherever possible, but if absolutely required special forms of grooves are necessary, and for right angle drives a pair of additional specially arranged horizontal guide pulleys are required. For successful vertical driving extra ropes are required, as the ropes have a tendency to fall out of the grooves. Ropes convey power best when worked horizontally, or at an angle of about 45 degrees.

RENEWING ROPES.—Ropes should be renewed, as far as possible, altogether, as it has been found in practice that if new ropes are put on to work with old ones that the new ropes brake the old ones till they are all rubbed down to the same size. To get over this difficulty, in America a single continuous rope is often employed.

ROPES FLYING OFF DRIVING WHEELS.—Some of the chief reasons for ropes flying off may be stated as follows:—(1) Improperly proportioned driving wheels and ropes, (2) excessive speed, (3) too short driving centres, (4) a suddenly applied load, (5) too powerful an engine for the work, (6) too early a cut-off, or too much "cushioning" in the engine. If an engine has a fairly full load, and other things being equal, the jumping of ropes is usually not much, but if the power of the engine is larger than is generally required, and the slide valve is set to cut-off early, when the steam is turned on great stress is immediately put on the tight side of the ropes, which causes the slack side to fly up suddenly.

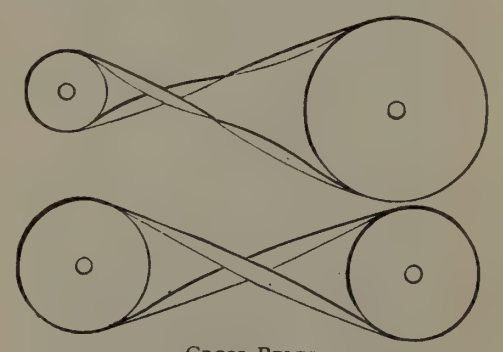
TO FIND THE HORSE POWER TRANSMITTED BY ROPES.—Rule. Multiply the sectional area of rope in square inches by 100 times the speed of the rope in feet per minute, and divide by 33,000, which will give the horse power (approximately) transmitted by each rope.

TO FIND THE INDICATED HORSE POWER TRANSMITTED BY ROPES.—Rule. Multiply eight times the square of the circumference of one rope by the number of ropes, and by the circumferential velocity of the driving pulley in feet per minute, and divide the product by 33,000.

ADVANTAGES OF ROPE DRIVING.—Amongst the advantages claimed for properly arranged rope driving may be mentioned low first cost and cheapness of repairs, and freedom from serious accidents. Power can be conveyed from the fly-wheel direct to various floors, and shafts that are not quite parallel may be readily driven.—M. Powis Bale, M. I. M. E., in the Timber Trades Journal.

CROSS BELTS.

What are usually known as cross belts are very common in driving machinery, and it is a well known fact that they run best when the two pulleys which they connect are somewhere near of one size. But sometimes it is almost necessary to use a cross belt on pulleys of very different diameters, and it does not seem to be generally known how this may be done and still have the belt run smoothly. If the belt connects two



CROSS BELTS.

horizontal shafts on the same level, and is given the ordinary single turn or twist, it will naturally stand in a vertical position at a point midway between the two shafts. Now, if the two pulleys are nearly of one size, this midway point is the natural crossing place for the two parts of the belt and all goes well. But if one pulley is much larger than the other, then the belt must cross at a point much nearer the small pulley than the larger one, and with the ordinary twist the two parts of the belt are apt to quarrel, so to speak, at this point. To remedy this, in many cases, it is only necessary to give the two parts of the belt an extra twist as they pass from one pulley to the other. The belt then will stand vertical at two points, making the thirds of the distance between the shafts, and if the pulleys are of such sizes that the belts cross at or near one of these points they will run smoothly again and with very little friction. The sketch shows the two positions.—J. C. Green, in American Machinist.

OBITUARY.

The death occurred at Fredericton, N.B., on April 22nd, of Robert A. Noble, a well known lumberman. Mr. Noble had suffered from lung trouble and about a fortnight before his death was seized with an attack of hemmorage. He was fifty-three years old and had been identified with the lumber industry on the St. John River all his life. He was foreman for the late Robert Connors and afterwards employed in a similar capacity by Cyrus Dickie, of Fort Kent, Maine. Of late years he had taken logging contracts on the St. John headwaters for Cushing & Co., of St. John. Last year, in conjunction with John A. Morrison, he had charge of the corporation drive between Grand Falls and the boom limits.

The Hull and Ottawa district has lost one of the few survivors of the old By-town lumbermen in the person of Mr. Basile Tessier, who died at Hull last month. Deceased was only seventeen years of age when he began his career as a lumberman in the Ottawa valley. He was once engaged by the barge companies as ship-builder. Mr. Tessier retired from business eight years ago.

WOOD PULP DEPARTMENT

QUEBEC PULP WOOD ASSOCIATION.

A meeting of those interested in pulp wood in the province of Quebec was held at Sherbrooke on April 22nd to consider the formation of an association of pulp wood dealers. There were present about twenty representatives from all parts of the province, and it was decided to form an association to be known as the Province of Quebec Pulp Wood Association. The object of the association is to protect generally the interests of those who are dealers in and shippers of pulp wood or in any way interested in pulp wood property.

MR. HERBERT M. PRICE,
President of the Quebec Pulp Wood Association.

The pulp wood industry has grown from a small beginning to a very large trade, and it has become necessary to have some means of concerted action on several questions, such as overproduction, uniform system of selling to the United States mills, facilities given by the railways and carriers by water, and the legislation affecting pulp wood limits. It has been the custom when shipping to the United States to sell the wood delivered at the mill, as a result of which shippers of pulp wood are more or less at the mercy of the mills without any redress. The association will also assist in the direction of encouraging shippers to export only first-class material, so that the reputation of Canadian pulp wood may be kept up.

It was arranged at the organization meeting to subdivide the province into districts according to railways, to be looked after by eleven directors.

Mr. H. M. Price, of Quebec, was elected president, and Mr. E. C. Gatien, of Sherbrooke, secretary-treasurer. The directors for the different districts were chosen as follows :

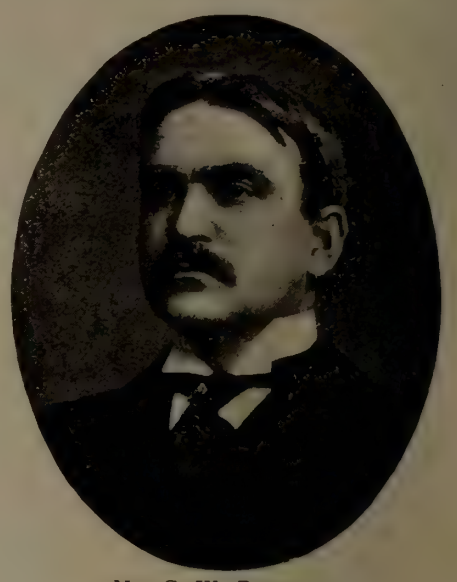
H. M. Price, Quebec Division of Grand Trunk and Intercolonial Railways ; E. W. Tobin, M.P., Richmond Division ; F. N. McCrea, Sherbrooke, east on the G.T.R. and B. & M. ; B. C. Howard, Quebec Central main line ; O. C. Morissette, Megantic Division ; C. H. St. Pierre, Cookshire Division ; G. T. Smith, on the C.P.R. and North Shore of St. Lawrence, below Quebec ; W. J. Augur, I.C.R., below Quebec ; O. Brouillard, on the I.C.R., west of Aston ; G. C. Poulin, Labelle Division.

Mr. H. M. Price, the president of the association, has just been unanimously elected as mayor of the newly-formed municipality of Montmorency.

Mr. W. G. Jones, managing director of the Acadia Pulp & Paper Mills, of Halifax, N.S., was in England last month in connection with the proposed increase of of the capital stock of the company. Mr. Jones states that he has secured large contracts which will take the output of the mills for many years. The company operate three mills, one of seven grinders at Rapid Falls, Queen's county, another of four grinders at Morgan Falls, on the La Have river, and a third of three grinders at Cowie's Falls. The total output is about 140 tons per day. It is proposed to construct new dams and reservoirs which will prevent freshets such as occurred in the spring of 1901. When this and other improvements are completed it is expected that the earning capacity of the company will be greatly increased. Messrs. Becker & Company, of 64 Cannon street, London, E.C., are sole agents for the product of the company in Great Britain.

MR. C. W. RANTOUL.

Mr. C. W. Rantoul, jr., whose portrait is presented herewith, has been appointed general manager of the Sturgeon Falls Pulp & Paper Company, of Sturgeon Falls, Ont., and assumed the duties of his new office on June 7th. Mr. Rantoul was previously sales manager for the Ticonderoga Pulp & Paper Company, of Ticonderoga, N. Y. He is a comparatively young man, having been born in Newburyport, Mass., in 1865. He has had a wide experience in the pulp and paper trade, and was for



MR. C. W. RANTOUL.

a time secretary of the American Paper & Pulp Association. The Sturgeon Falls plant will produce 140 tons of paper per day.

PULP NOTES.

It is understood that McLaren & Company, of Buckingham, Que., intend erecting a paper mill in the near future.

It is reported that C. H. Vogel, consulting engineer, of Ottawa, has been engaged to build a pulp mill in the vicinity of Port Arthur, Ont.

The steamer Manchester Engineer has just taken on a cargo of mechanical wood pulp at Chicoutimi, Que., for shipment to Manchester. The cargo amounted to 6,300 tons.

E. G. Murphy, of New York, is said to have completed the purchase of the properties required by the St. George Pulp and Paper Company for the pulp mills to be built at St. George, N.B.

We have received from the Great Northern Railway Company, of Quebec, a folder on which is printed their time table and other information relating to their railway and other interests. This folder is printed on a sample of the first dry ground wood pulp manufactured by the Belgo-Canadian Pulp Company at Shawinigan

Falls, Que. It is the best sample of ground pulp that we have ever seen, being entirely free from blemishes, and ought to satisfactorily meet the requirements of paper makers.

Messrs. H. Abbott, H. Shannon and Dr. Carroll, of Vancouver, are said to be interested in the proposed pulp mill to be established on Prince Royal Island, B.C. The company will be known as the Oriental Power and Pulp Company.

There has been only a small demand for mechanical pulp in Great Britain of late, and consequently prices show a downward tendency. Norwegian producers report stocks as small, and it is probable that the weakness of the market will be only temporary.

It is said that United States capitalists have submitted an offer for the pulp mills of the Maritime Sulphite Pulp Company at Chatham, N. B., provided they can acquire the timber limits under lease by the late company. The figure is understood to be $550,000.

Mr. T. Obalski has been intrusted by the Minister of Public Instruction of France, and by the Natural History Museum, with a scientific mission to Canada, the object of which is to make collections for the national museum and to report on the industries of the country. Mr. Obalski will give particular attention to pulp and paper making.

On May 20th fire was discovered in a large wooden structure at Sturgeon Falls, Ont., built and operated for two years as a pulp mill by the Sturgeon Falls Pulp Company. Owing to litigation over the property the mill was shut down and has not been operated for some time. The mill, together with tramways and a quantity of timber, was destroyed. The loss is estimated at $40,000 and is covered by insurance.

The North Shore Timber Company, of Port Arthur, Ont., is the only company holding a Government license which permits the export of pulp wood from the province. This privilege was granted to the company by the predecessor of the present Commissioner of Crown Lands, as a result of which the company expended large sums of money which they claimed would be lost if their privilege to export pulp wood was cancelled. In consideration, an exemption for two years was granted.

Becker & Co., of 64 Cannon street, London, E. C., have just completed a seven years' contract with the owners of the steamship Norfolk. Beginning in the spring of next year the vessel will carry a cargo of 2,500 tons of wet pulp from Chicoutimi, Quebec, to Queenboro'. For the seven years she will carry four cargoes per season. The charter is undoubtedly the largest which has ever been made in the wood pulp trade. The owners of the Norfolk are Furness, Withy & Co., Ltd. From inquiries made we find that Becker & Co. have entered into other large contracts, including a charter of a steamer for seven years to run from Canada to Manchester, for over 100,000 tons, and another to Scandinavian ports.—British Paper Maker.

A Cincinnati paper says that the spruce forests are being cut down at an amazing rate because the wood pulp trust has been given a license "to charge and to chop." But it is not necessary to chop down spruce trees in this country to get pulp wood when it can be brought across the border from the spruce forests of Canada in unlimited quantities and with no import duty and a very small export charge.—American Lumberman.

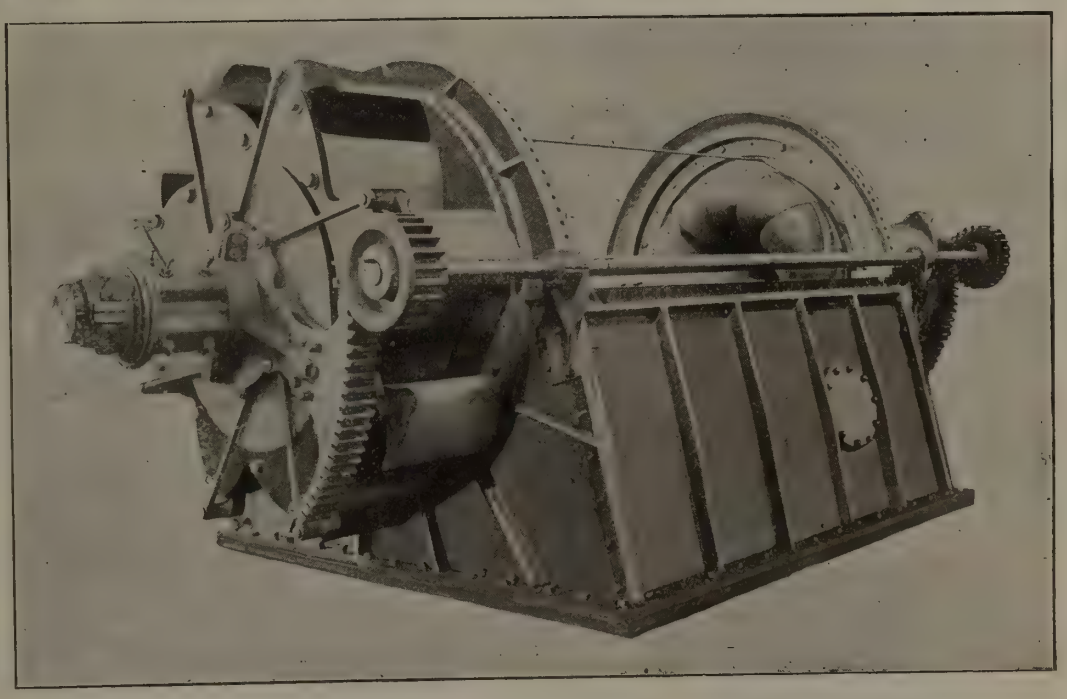
OPEN FLUME TURBINE PLANTS

For use under moderate heads where local conditions permit its adoption, there is probably no more satisfactory setting for horizontal wheels in pairs than the draft chest with central discharge, placed in an open flume.

The first cost is moderate.

The flow of water is unobstructed and ample, and as a result speed regulation is easy.



Pair of 35 Inch Wheels, Mounted on Draft Chest with Top Removed.

Direct connection to Pulp Grinders or other machinery may be arranged with facility.

Wheels are readily removed and replaced.

We have several styles of cases for use in open flumes, either steel plate or cast iron construction as may be required, or cast iron sides with steel plate top as shown in the engraving.

We are now engaged in building a 10,000 H.P. Wheel Plant, each pair of wheels being of the general type shown above, arranged for direct connection to Wood Pulp Grinders. Send us particulars for estimate, or write for catalogue and information.

A MODERN DRY KILN.

Dry kilns having become solidly established in the estimation of all progressive lumbermen and manufacfacturers, the problem of choice confronts those who are about to put in new kilns, or replace old and unsatisfactory ones. The following brief description of the Standard kiln is here given for the benefit of such as

THE "STANDARD" DRY KILN.

are not yet aware of the strong, practical featurers of the method employed in this kiln.

The makers of the Standard moist air dry kiln have had full experience in the manufacture of other drying systems, and emphatically claim for their process many important advantages over the old types. They back up these statements by a rigid guarantee to all buyers, who thereby take no chances. The Standard is warranted to dry any and all woods without warming, checking or other kindred injuries; and to do this in less time than is possible in other kilns. It can be regulated to exactly fit the drying requirements of any lumber, and dries hardwoods and shingles equally well.

The appearance of the Standard kiln is shown in the accompanying illustration, but an explanation of the process will be interesting to dry kiln users. One of the good points of the Standard moist air system is the entire absence of engines and machinery complications, which at the start cuts off a large item of repair expense. Green lumber entering the receiving end of kiln is enveloped by hot moist air, the dampness of which prevents the stock from baking, warping, case-hardening, etc. On the contrary, it softens the surface of the wood and opens the pores. The heat penetrates at once to the heart of the product and begins the drying there. From centre to surface is the way the Standard does its work, and every lumberman knows this to be the only sure method of perfect drying.

The cars advance stage by stage through the kiln, constantly finding a higher temperature and less humid atmosphere. Once the kiln is filled, this process becomes simple and continuous and entails no more labor and attention than to merely load and discharge and keep up the steam supply. Outside atmospheric conditions, it is claimed, cannot affect the operation of the Standard, because the construction of the kiln makes impossible the entrance of drafts of cold air, except through the air duct where the inflow is regulated to maintain the desired circulation. It is a kiln that can be operated without halt day after day.

The equipment of the Standard is first-class in every particular. The heating apparatus is as nearly perfect as possible, the pipe being especially made for this purpose out of selected stock and carefully worked. It is heavier than regular pipe and each individual length is tested to a pressure of 600 pounds. Long, heavy couplings are furnished, and the heavy cast iron headers give four times as much metal for threads as is secured in the usual pipe header. The Standard system of piping affords extraordinary provision for expansion. From these facts it will be understood that leaky joints are almost an absolute impossibility in the Standard kiln. Nevertheless, all pipes and joints are

easily accessible for inspection and should a leak occur, any pipe can be removed in five minutes.

One of the latest improvements in this kiln is the introduction of steel foundations and the use of brick and stone in the construction of building, thus adding permanency to the structure and reducing the fire risk from outside exposure to a minimum. The nature of the system renders the kiln of itself absolutely safe from fire, regardless of the construction of building.

The entire construction of the Standard is strength and simplicity embodied, and no expense has been spared to make it the most useful and practical kiln on the market. The experience of its users shows that the Standard kiln is actually all it is represented to be. The Bodcow Lumber Company, of Stamps, Ark., write that they have been using the Standard dry kilns for the past eight years. At present they have nine of them, all of which are giving perfect satisfaction. They consider "The Standard" the best manufactured.

The Standard dry kiln has been on the market fifteen years. It has been given the hardest tests possible and has never failed to do all that is claimed for it. When its makers say that it will dry any and all kinds of wood, they do so confidently and without fear of contradiction, because it is doing that every day, being in operation in almost every climatic section of the country.

In their regular advertising space in this issue The Standard Dry Kiln Co. make mention of the "Standard" literature on lumber drying, which will be sent free to all interested in the subject.

Wilson Bros., of Collingwood, Ont., manufacturers of dressed lumber, propose to be right up-to-date, inasmuch that their product will in the future be dried by the Standard Moist Air System. This progressive firm is now putting in two of the latest improved type "Standard" dry kilns, which are to be constructed of brick, thus reducing the fire risk fro utside exposure to a minimum. The nature of the Standard system renders the Kiln of itself absolutely safe from fire.

To Purchasing Agents:

Corner 22nd and Centre Avenue,

GENTLEMEN: CHICAGO, October 12th, 1901.

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO.

his cut represents our

LOCKPORT SWING MACHINE

for cutting Shingles, Barrel Heads, Pail, Tub and Cheese Box Bottoms, Box Boards and Cloth Boards, Etc., Etc.

The swing is made of steel and is very light and strong, and dogs very close to saw, thus reducing the waste to the least possible amount.

The Saw on this machine is 40 inches in diameter, or larger if so desired. The mandrel and balance wheel are very heavy. The pulley is 12 inches diameter, 10 inches face. Weight about 1300 lbs.

BOWMANVILLE, ONT.

ELECTRICITY IN THE SAW MILL.

The part electricity takes in the modern power plant for most any kind of service is becoming so general as to excite little comment, but saw mills generally seem to fail to appreciate that it is capable of a much wider range of usefulness than merely to furnish light. It is the purpose of this communication, writes S. S. Ingman, in the Wood-Worker, to briefly describe how it is employed in the plant of the Atlantic Coast Lumber Company, Georgetown, S. C., as an illustration along this line.

This company operates four band mills now, two single, one double with a resaw, and one double with gang, all double-cutting bands. The combined capacity of these mills is close around half a million feet of boards daily of what is known in the New England markets as "North Carolina pine," or what is termed here as sap or spruce pine. The electric plant consists of four 45 k. w. and two 400 k. w. 250-volt direct-current dynamos, the four 45's being driven by a 225-horse power Reynolds-Corliss engine and the 400's each by a direct-connected Harrisburg "Ideal" engine of 150 horse-power each. The combined electrical horse-power at normal rating is over 300, and capable of 50 per cent. overload for long periods, or 100 per cent. overload for short periods.

Besides lighting the mills, machine shops, foundry, car shops, planing mill offices and store rooms immediately connected with the mills, the company lights an immense store, probably one of the largest in the state, a large hotel, and several buildings in which officials of the company reside, and drives by means of motors the machine shop, pattern shop, foundry, car shops, planing mills, etc., all the file room machinery and sorting rolls in the sorting sheds, also a device connected with the kilns for moving the cars in the kilns, and by means of four trolleys distributes all the product from the kilns to the sorting sheds and to the loading wharves, and disposes of the refuse in excess of fuel requirements.

These trolleys are immeasurably superior for this service to the steam locomotive, are quicker and easier handled, and I believe will do from 25 to 50 per cent. more work without the danger from sparks, the trouble and expense from petty repairs, and requires a great deal less skill to handle. The expense to install will compare favorably with mechanical appliances for these purposes, with operating expenses reduced in the majority of cases, if not all.

THE STANDARD LOG.

For the benefit of one of our subscribers, it may be explained that the standard referred to in last issue in connection with Mr. Booth's large load of logs is the "standard" log as known in the Ottawa valley. This log is 21 inches in diameter at the base, and the six logs on the load taken in the aggregate were equal to fourteen "standard" logs. There is no reference to the St. Petersburg standard of lumber measurement, fourteen of which would give a total of 27,720 feet B. M., instead of 17,720, as stated in the commucation sent us.

You can get practically twelve good Axes to the dozen in buying . . . . **Dundas Axes**

Link Belting—
Malleable Chain—Steel Chain—for all Saw-Mill Work.

Municipal Machinery—
Rock Crushers, Elevators, Screens, Steam Road Rollers, 10, 12 and 15 tons, Steam Fire Engines, etc.

For over 50 years we have been building a reputation for High Class Machinery. Our Mills and Machinery extend, in Canada, from the Pacific to the Atlantic—Newfoundland, Central and South America, New Zealand, Australia, Austria, Roumania and the far east. Our aim is ever to produce the Best, not the Cheapest, with the invariable result that where we receive one order others follow quickly. Our new works, occupied in 1895, gave us the much needed room for expansion, coupled with the most modern facilities for economic production and prompt shipments. We have found it necessary to increase our buildings and add very materially to our already large equipment of tools and employees.

LUMBERING IN BRITISH COLUMBIA.

The Provincial Government has given its final decision upon the proposition that special licenses should be granted providing for the exportation of logs cut upon other than Crown lands, and the decision absolutely prohibits such exportation. The decision settles apparently for all time to come a question about which there has lately been much vexed controversy. Since the absolute prohibition of the exportation of cedar logs went into effect the shingle industry has experienced a period of activity hertofore unknown. New mills have been erected and the capacity of old ones increased.

A syndicate of capitalists from Orillia, Ont., have purchased timber limits and are about to establish a large saw and shingle mill near Vancouver. The company is composed of Mayor J. B. Tudhope and Messrs. J. H. Lavallee, William Tudhope, Allan Macpherson and George Chew. W. H. Strathearn is to be manager of the company.

The old Green shingle mill on the north shore of False Creek at Vancouver, which was destroyed by fire some months ago, is now being rebuilt by Welsh Bros., who formerly operated at New Westminster.

An amalgamation of the saw mills in the Kootenay district has just taken place. The new corporation will have a capital of about $500,000 and will include the following mills: Archibald Leach, Cranbrook, 30,000 feet daily capacity and 12,000 feet at Palmer's Bar; Leask & Slater, Cranbrook, 20,000 feet; King Mercantile Company, Cranbrook, 15,000 feet; McNab Lumber Company, Jaffrey, 25,000 feet. It is understood that the corporation have secured from the Canadian Pacific Railway the sole right to cut timber on the railroad timber reserves in East Kootenay. The railroad also contracts to purchase from the corporation 8,000,000 feet of lumber annually, together with the ties required.

MR. FRANK L. JOHNSON, Sapperton, B. C.:

Dear Sir,—Replying to your inquiry of a few days ago, as to how we like the Improved Johnson Shingle Machine which we recently purchased from The Schaake Machine Works, we are glad to be able to state that we are much pleased with it.

We have had experience with a good many different styles of Shingle Machines, and in our opinion this one is the best of all. The two important points in which this machine excels all others is the style of friction and the method of driving the carriage, the former being very simple and positive, and the latter improvement making the machine work very smooth and easy without any jar or jerk.

If we were building another mill we would have no other kind of machine.

Yours truly,

THE LUMBER SITUATION IN BRITISH COLUMBIA.

BY A. HASLAM.

I cannot say that British Columbia has shared to the same extent the prosperity that other provinces of Canada (in fact all lumber producing countries) has enjoyed lately. There is an improvement, but not so marked as in other countries. As a number of your readers are interested in timber in British Columbia, it might be interesting to mention some of the obstacles that have to a certain extent retarded the prosperity of the lumber industry here, and prevented British Columbia from keeping pace with other countries in the lumber industry.

In the first place, our timber is entirely different from that of any other Canadian province, and requires different methods as well as different tools and machinery to manufacture. The tools and machines are just the same as are used in the States of Washington and Oregon. Some of these machines are made in Canada, the greater part are made in the United States only. The price of the Canadian-made machines is increased very largely on account of the freight from the east here, and the American-made machines pay the freight and duty too.

The food supplies for both men and horses cost very much more here than in any other lumber producing country. There is not enough of either raised in the province, consequently the prices paid here are Washington State prices with both freight and duty added. The actual difference between the cost of supplies in the State of Washington and British Columbia is 34 per cent. The average duty is 27 per cent. The freight and commission is 7 per cent. You will readily understand how difficult it is for British Columbia lumbermen to compete with the Americans when placed at such a disadvantage in the cost of production.

In selling the advantage of the Americans over us is very much greater. The Dominion Government allows the American product to be sold in Canada free—paying no duty nor in any way contributing to the Government of this country. At the same time our lumber is subject to a tax of $2.00 per thousand feet when shipped into the United States. To illustrate the situation clearly, take a thousand feet of rough lumber manufactured in British Columbia, say at a cost of $7 ; 27 per cent. on that is $1.89, so that our lumber sold in the Canadian market pays to the Dominion Government $1.89, and if sold in the American market it pays to the American Government $2, or in other words the American product in our market has an advantage of $1.89 and in the American market $3.89.

The eastern Canadian lumberman does not come in contact with this condition, as all his food supplies, tools and machinery are produced in his own country just as cheaply as they are on the American side of the line.

The friends of the Government of Canada say this condition is maintained for the benefit of the Northwest. The enemies of the Government say free lumber is the purchase value of the vote of the Northwest. We will not consider what the enemies say, but will, for argument's sake,

LOGGING IN BRITISH COLUMBIA.

admit that free lumber is a necessity to the Northwest and that the prosperity of that country demands it. This admission is only made for argument's sake, as the Americans have made a success of settling a very much larger prairie without sacrificing any industry in their own country. I think no fair-minded honest man can deny the fact that if Canadian lumber is by law compelled to compete with the free untaxed product of other countries in the Canadian market, the producers of the Canadian article should have the option of purchasing the supplies needed for the production of lumber in the cheapest market and pay no duty on those purchases.

As an evidence of the bad effect unjust legislation can have on all industry, I would mention a notable instance in the State of Washington immediately adjoining the B.C. boundary line. The lowest increase in the value of standing timber is 300 per cent. in four years, and in British Columbia in the same time the increase in value is not 10 per cent. It is increasing now in British Columbia, but will so long as present conditions prevail be $1.89 per M. below the value of standing timber in Washington State.

THE BRITISH COLUMBIA LUMBER AND SHINGLE MANUFACTURERS' ASSOCIATION.

It is difficult to state when the above Association first took shape, as it was a gradual outcome of trade conditions affecting the lumber

MR. JOHN HENDRY,
President British Columbia Lumber and Shingle Manufacturer's Association.

and shingle industry in British Columbia. It originally started by one or two mills agreeing to sell at the same price for certain districts where they found that they had to protect themselves from American competition; then other mills sent travellers into these districts, and as the trade was very dull, they joined with the other mills from time to time as to selling certain classes of lumber. This went on until December, 1899, when nine manufacturers met together, appointed a secretary, and drew up a Constitution and By-Laws, the members simply holding together as a matter of mutual protection and being at liberty at any time to withdraw from the Association without any penalties.

In December of last year the Association made rapid strides forward, the membership increasing from 14 to 22 and representing practically all the mills in the Vancouver, New Westminster and Fraser River districts. At the same time, the Constitution and By-Laws were amended and the business of the Association divided into three branches: Lumber Mills Branch, Shingle Mills Branch and Sash

MR. J. A. MCNAIR,
Vice-President British Columbia Lumber and Shingle Manufacturers' Association.

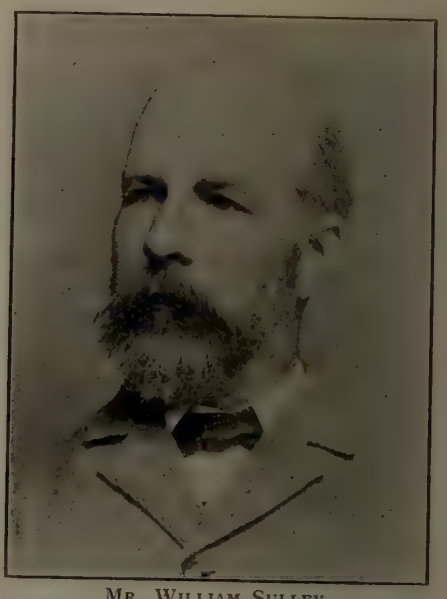
and Door Factories Branch, each branch having complete control over its own interests, while the executive business was placed in the hands of a general committee consisting of the President and Vice-President of the Association and the Chairman of each of the three branches, all these officers to be elected annually.

The members find that they are deriving great benefit from the working of the Association, not so much in the matter of prices as in deciding questions affecting the industry as a whole. Prominent among these are logging and timber regulations for both Provincial and Dominion lands in that province, while with

MR. WILLIAM T. STEIN,
Secretary British Columbia Lumber and Shingle Manufacturers' Association.

regard to the question of a reciprocal tariff against the United States, the Association is unanimous. This matter is one of vital importance to the lumber industry in British Columbia, and is of such importance that all the mills are ready to sink their differences and unite in making representations to the Government in order to obtain what they feel is only justice with regard to this matter. The mill owners are at a loss to understand on what equitable grounds the Government of Canada can refuse to grant this request; why a mill owner in this country should be taxed on his machinery and mill supplies to pay the revenue of the country, while manufactured lumber is admitted free in immense quantities from the United States without contributing one cent to the Dominion revenue, is the point which the mill owners are unable to grasp, and this injustice forms a strong link in binding the members of the Association together.

Since its formation the Association has, of course, taken up many matters dealing with the lumber industry which have contributed to the present prosperity of the industry in that Prov-



MR. WILLIAM SULLEY,
Honorary-President British Columbia Lumber and Shingle Manufacturers' Association.

ince, and the members trust that the Government of Canada will in time sufficiently realize the position of the lumber industry in that Province to grant it, not any concession or bonus, but such a tariff as will place it on an equal footing with competitors from outside the Dominion.

MR. J. D. McARTHUR.

One of the largest contractors and lumber dealers in the west is Mr. J. D. McArthur. In the year 1880 he went to Winnipeg from Lancaster, Ont. He has been engaged in railway contracting since that date and has carried out some of the largest railway contracts that have been awarded. At the present time he has a number of contracts for the Canadian Pacific and the Canadian Northern Railways.

In addition to his extensive contracting business, Mr. McArthur owns and operates three saw mills, situated at Lac du Bonnet, Milner and Birtle, Man. These mills have a combined capacity of 140,000 feet per day of ten hours. The machinery installed is of the latest design and complete in every detail. In connection with the mills Mr. Mc Arthur owns large timber limits, consisting chiefly of poplar and tamarac. He also has a retail yard situated at the corner of Princess and Fonseca streets, Winnipeg. This was formerly operated by the B. C. Mills, Timber & Trading Company, as a wood yard, but in March of this year Mr. McArthur purchased the site and decided to branch out into

the wholesale and retail lumber business. Mr. Jno. M. Chisholm was appointed general manager. In three months the retail yard has more than doubled its capacity, and has grown to such an extent under the able management of Mr. Chisholm that in a short time new and commodious offices are to be erected on the opposite corner.

In a large main building all the finer grades of lumber are safely housed. The building is divided into numerous different compartments, so that every grade is kept in one particular place and every size has its own compartment.

The material carried by Mr. McArthur consists of a complete assortment of spruce, white pine, B. C. fir, white and red oak, birch, mahogany, maple flooring, elm, hickory, birch squares, sash and doors, also cypress and yellow leaf pine, in addition to large quantities of tamarac wood and slabs.

Mr. Chisholm is making a specialty of the wholesale business by carrying a large and complete stock, thus assuring purchasers from outside points of no delay in supplying their requirements.

Mr. Chisholm came to Winnipeg in 1882 from Paris, Ont., and has been connected with the lumber trade for a number of years. He has a thorough knowledge of the business and is widely and favorably known to the trade.

E. H. HEAPS & COMPANY.

The operations of the above company in British Columbia date from the year 1892, when business was established in Vancouver. The present establishments of the company are shown in the accompanying illustrations. Their first mill was known as the Cedar Cove mill. It was commenced with two shingle machines and the employment of ten men. The establishment now comprises a sawmill 400 feet long and 50 feet wide, with double

E. H. HEAPS & COMPANY, VANCOUVER, B. C.—RUSKIN MILL.

circular and band mills, automatic slash butters and trimmers, steam feed and all the latest improvements. A special circular saw adjoining the large one is used for manufacturing cedar lumber.

The shingle mill is 135 x 65 feet, with three rows of shingle machines, the combined capacity being 1,200,000 per day of twenty-four hours. Six large dry kilns are used, the combined capacity of which is about 5,000,000 shingles.

The sash and door factory was added in the year 1899, and the business of the company is steadily increasing, the planing mill being operated day and night.

The boiler house in connection with the Cedar Cove mill is 50 x 100 feet and contains ten boilers, while the engine room is 20x120 feet and contains the following engines: One Corliss engine 22x42 inches; one pair of saw mill engines for one side of mill; one pair saw mill engines for band mill and trimmer; one engine to drive refuse conveyors; one engine to drive filing room; one engine for hauling dry kiln cars; one engine for dynamo. In all seventeen steel cylinders are used in operating the plant and fifty circular saws for cutting up lumber. The establishment is lighted by a private electric plant.

A large machine shop is operated in connection with the mill, where special machinery is made and adapted for use in the different departments.

The company have a glass department, where a full stock of plain, fancy and stained glass is kept on hand.

Fourteen camps are operated in the woods, employing about 300 men, and two steamers are employed for towing logs from the camps.

There is a railway siding capable of accommodating a full train of freight cars; ten or more cars can be loaded at once. There is a water frontage of 1,000 feet and the company own scows for delivering lumber to coast points, also fifty houses which are occupied by their employees.

The Ruskin mill, recently completed, is situated at the junction of the Stave and Fraser rivers, about thirty miles from Vancouver and on the main line of the Canadian Pacific Railway. It comprises saw, shingle and planing mills, general store, post office, blacksmith shop and workmen's dwellings, all owned and operated by the company. The timber is obtained from Stave river, Stave lake and the Fraser river, the nearest timber being within three miles. A tramway with locomotive and logging cars is being built to convey logs to the mill. The product of this mill is marketed mostly in the United States.

THOMAS KIRKPATRICK.

A representative shingle manufacturer of the Pacific coast is Mr. Thomas Kirkpatrick, who removed from Parrsboro, N. S., to Vancouver

E, H. HEAPS & COMPANY, VANCOUVER, B. C.—CEDAR COVE MILL.

in the year 1886. In 1890 he purchased a site at Cedar Cove and erected a shingle mill, which he operated until it was destroyed by fire a couple of months ago.

From the beginning his business steadily increased, and in the year 1900 he purchased the mill owned by the late Archibald McNair and situated at Hastings. This mill was reconstructed and many improvements made; the dry kiln capacity was increased and a new engine and other machinery installed. This mill is still operated by Mr. Kirkpatrick, who since the destruction of his Cedar Cove mill has purchased the A. R. Welsh mill property at New Westminster.

In connection with the mills are electric light plants, which permit of operations being carried on night and day. The Hastings mill is located at a convenient point on Burrard Inlet and on the main line of the Canadian Pacific Railway, thus affording excellent shipping facilities. Mr. Kirkpatrick is increasing the capacity of the mill and may erect a new one at Hastings.

Mr. Kirkpatrick's success cannot be attributed to a superabundance of golden opportunities, but rather to his ability to recognize such opportunities. He has encountered numerous obstacles, but these have been successfully overcome. He ships quite extensively to Manitoba and the Territories and eastern points, and his product is regarded as A 1.

There was a time when the question was asked, "Where will all the masks come from?" and the echo answered that it did not know. Masts went out of date to some extent, however, when steam took the place of wind as a propelling power. The question is asked today, "Where will all the telephone poles come from?" and no man is so wise as to give an answer that satisfies. The cedar swamps are giving up their poles rapidly and the supply is not inexhaustible. Whatever may take the place of these poles, the dealers in them have the satisfaction that at present they are having a harvest.—American Lumberman.

THE PACIFIC COAST LUMBER COMPANY.

The members of the Pacific Coast Lumber Company, Limited, are all practical and successful Ontario lumbermen, who recognize that the magnificent timber of British Columbia will steadily become a more important factor in Canada's contribution to the world's lumber supply. There are few better known or more highly respected lumbermen in Ontario than Mr. W. J. Sheppard, the president of the company. Mr. Sheppard is one of the heaviest operators in the business in Ontario. He is president of the Georgian Bay Lumber Company, of Waubaushene, Ont., and a director of the Traders Bank.

The manager of the company, Mr. J. G. Scott, is also a lumberman of Ontario training. When the company was formed in 1891 Mr. Scott was appointed manager, which position he still fills. The company's first plant was located at New Westminster, B. C., and although going there a stranger, Mr. Scott soon made many friends, and from his public spiritedness, good business management and excellent executive ability, he was honored by being twice elected Mayor of that city and retired from office on his removal to Vancouver.

The entire plant of the company at New Westminster was destroyed by fire last year, and it was decided to rebuild at Vancouver, this point being closer to the company's timber limits. The site selected is eminently suited for the purpose, being situated at the extreme westerly end of the Canadian Pacific Railway, and on a sheltered little bay at Vancouver called locally Coal Harbor, which affords excellent shipping facilities to the markets of the world either by water or rail.

The plant when completed will consist of a double band saw mill, a planing mill and a shingle mill. The saw and planing mills are now in the course of construction, and it is expected that they will be completed this fall. A general description of these mills as they will be when finished is at the time of writing impossible, but the CANADA LUMBERMAN will have pleasure in describing them later. From present appearances the entire plant promises to be one of the most modern and most conveniently designed on the Pacific Coast, and should be a money maker for its owners.

The shingle mill, which commenced operations serveral months ago, is already proving quite a strong factor in the trade, and has attracted considerable admiration. The mill is what is known as a log mill, that is, the stock from which the shingles are manufactured is taken from the green log, experience having taught the company that this plan is more satisfactory than using split bolts, as is generally done in the smaller mills, inasmuch as it enables the company to make a better and more uniform grade of shingles.

The log is dealt with at its entrance to the mill by a "Filer & Stowell" steam drag saw, a powerful and speedy running machine which cuts it into sections 16 or 18 inches long, as may be desired. These sections are next passed on to a power feed bolter, where they are split into quarters by a saw, next two knee bolters remove the sap and knots from the quarters, and then the blocks, as they are now called, are passed over an automatic equalizer and the ends are retrimmed by two fine-tooth saws set a positive distance apart. Most mills think a drag saw butt good enough; not so with this company, this "equalizer" is called into use to overcome the rough end section and unevenness of length left by the drag saw, and by its use even length and smooth butt shingles are secured.

The block then passes on by chain conveyosr up to the sawing floor of the mill, where a hungry line of eleven Johnson upright and one Perkins hand shingle machines awaits them and quickly converts them into shingles, which drop into bins and are sorted as to grades and bunched by a carefully trained and carefully watched corps of packers. The bunches are then placed on kiln cars, which run along the entire length of the shingle mill close alongside the line of packing bins, and with loads of 100,000 shingles on each, these cars pass down a slightly inclined track and without any unloading or re-handling are passed into the dry kiln, where they are allowed to remain for four or five days. The car is then passed along the track by gravity to the railway car for shipment or is unloaded in an immense storehouse capable of holding about 15 million shingles, through which the track passes.

This shingle mill is certainly a marvel of ingenuity and thoroughness and the style of construction is strong and simple; economy of labor has evidently been well considered.

The Johnson shingle machines were made by The Schaake Machine Works, New Westminster, B. C.; the Perkins hand machine, boilers, engines and general machinery by The Wm. Hamilton Manufacturing Company, of Peterborough, Ont.; the belting by the Gutta Percha and Rubber Mfg. Company, of Toronto; and the dry kiln apparatus and kiln cars by the Standard Dry Kiln Company, of Indianapolis, Ind. The capacity of the mill is 700,000 shingles per day.

It will no doubt be interesting to many readers to know that the Pacific Coast Lumber Company shipped the first car of red cedar shingles to Ontario. Great difficulties were encountered in introducing the shingles and opening up a market, as British Columbia shingles were unknown by eastern dealers. The idea of bringing shingles about 3000 miles in the hope of being able to sell them in competition with locally made white pine shingles was looked on as a kind of a mad freak. The alternate dark and light streaks, which are characteristic of red cedar, was thought to be decay, and it was predicted that kiln drying would ruin the lasting qualities of the shingles, and all sorts and kinds of objections had to be met and overcome. However, all these troubles are now over, and this important branch of the lumber industry has a large market and an increasing demand.

Neatness is all pervading around the Pacific Coast Lumber Company's plant, and to accomplish neat branding a Prouty wood printing press is called into use and a sharp, clearly printed brand goes on each bunch bearing the company's name, a description of the grade and thickness and the company's registered trade mark "Best Brand". This brand of shingles is now being used from coast to coast and is uniformly admitted to be one of the best made. As an evidence of this fact it may be mentioned that the company's shingle trade has more than doubled each year up to the present.

The most perfect system prevails in every department of the company's business. The accompanying illustration of the shingle mill portion will give an idea of the magnitude of the plant. The saw and planing mills are not sufficiently advanced for illustration. All in all the plant promises to be a wonderful exposition of labor saving appliances and completeness of detail, and the CANADA LUMBERMAN predicts for the company continued success.

NEW SHINGLE MILL OF THE PACIFIC COAST LUMBER COMPANY, VANCOUVER, B. C.

TO OUR READERS.

The advertisement pages of this number, no less than the reading columns, will repay careful perusal. They constitute a very complete directory of the leading lumber manufacturers of Western Canada, and of manufacturers and dealers in machinery and supplies for lumbermen. A post card addressed to any of our advertisers will bring you a copy of their catalogue and full particulars regarding their goods and prices. When writing please mention having seen their advertisement in THE CANADA LUMBERMAN.

A PIONEER IN THE SHINGLE BUSINESS.

Few men have been as closely associated with the shingle business of British Columbia as Mr. H. H. Spicer, whose portrait we have the honor of presenting to our readers. Mr. Spicer may be said to be a pioneer in the business, and particularly in the introduction of B.C. shiugles in the eastern markets.

One of the necessary requirements of a successful business man is a thorough training in his chosen calling. This Mr. Spicer obtained in his early days. Being born in Nova Scotia, he gained several years' experience in connection with the manufacture of spruce lumber there. Removing to the United States he was employed for ten years in connection with the manufacturing and retail lumber business, five of which were with the Diamond Match Company, of Ontonagon, Mich., as log scaler in winter and in charge of their local yards during the summer. For a time he was associated with retail lumber yards in Missouri and Kansas, having had charge of the retail business of J. S. Watson & Company at Emporia, Kanas, for about two years.

In the spring of 1888 Mr. Spicer removed to

MR. H. H. SPICER.

Vancouver, since which time he has been constantly connected with the manufacture and sale of British Columbia red cedar shingles. In the spring of 1893 he made a visit to Ontario and introduced B. C. shingles into that province. Previous to that time we understand that one or two concerns had sold a few car loads in Ontario, but had made little effort to push their sale. Mr. Spicer extended his trip to Boston and sold the first B. C. red cedar shingles ever marketed in that part of the United States. During the year 1893 he sold 159 car loads of B. C. shingles in Ontario and 30 car loads in Boston, in addition, of course, to his regular trade in British Columbia and the Northwest.

The Spicer Shingle Mill Company, of which Mr. Spicer is the head, built a new and up-to-date mill in the fall of 1901. It is located at Vancouver and consists of a two-storey frame structure, 35x110 feet, with a boiler house 35x 60 feet. The equipment consists of seven latest improved type of Dunbar shingle machines, built by the Schaake Machine Works, of New Westminster, also automatic saw filing and automatic regrinding machines and other necessary machinery for a modern mill. The capacity is 100,000,000 shingles a year. The dry kiln in connection therewith has a capacity of 2,500,000 shingles, and the storage shed of 7,000,000 shingles. An illustration of the mill appeared in the CANADA LUMBERMAN of January last.

ROBERTSON & HACKETT.

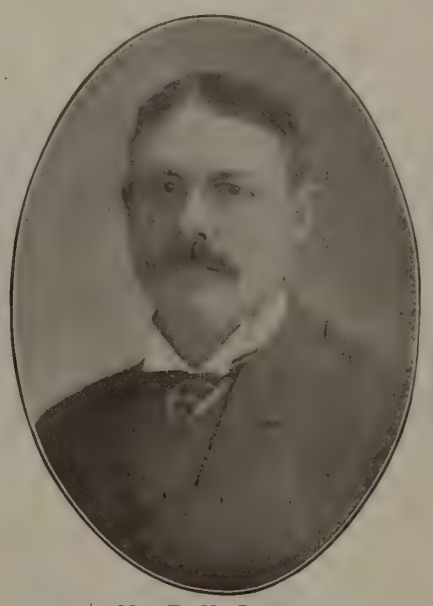
The above firm commenced business in Vancouver, B.C., in the year 1887 as contractors and builders in a small building situated on Pender street. In a short time they became the leading contractors in the city, erecting a number of the largest and most substantial buildings. During this time their business increased to such an extent that in 1891 they decided to establish a factory for the manufacture of all kinds of woodwork to be operated in connection with their contracting business. Two years later a saw mill was erected, and with more concentrated attention to the development of the lumber industry they ceased contracting and devoted all their time and energies to the manufacture of all kinds of rough and dressed lumber, shingles, lath, doors, turned work, etc. The saw mill consists of circular saws, edgers, trimmers, slab table, lath and shingle machines, and all other accessories of a first-class plant. The planing mill and sash and doorfactory is equipped with the latest improved machinery and is first-class in every respect. The success that has followed their efforts is evidenced by the extent of their plant and the many different points to which their products are shipped.

THE LAKE SUPERIOR TIMBER COMPANY.

The Lake Superior Timber Company, Limited, of Port Arthur, Ont., was incorporated in Ontario the first of the present year. It is one of the new concerns of Canada in the pulp wood business. The company acquired 57,000 acres of land bought in fee simple by the old Ontario Minerals Land Company in 1847, and, therefore, has probably the largest tract in Ontario from which spruce wood can be exported to the United States.

The company has no affiliation with any pulp or paper mills, but disposes of its pulp wood in the open market. With only 250,000 cords of spruce they do not feel justified in building a pulp mill.

The lands being situated along Nepigon Straits and adjacent Islands, enables them to load vessels with ease and security in all kinds of weather. The lands extend back only five miles from the water front, and the haul is



MR. E. H. BISHOP,
Manager Lake Superior Timber Company.

largely down hill. There are few streams on which any driving is necessary.

The company have established a large camp and loading grounds and own a powerful tug, the "Superior," purchased by Mr. Bishop from the Victoria Harbor Lumber Company. She is well built, with large accommodation. The company employs over one hundred and fifty men in road-making and cutting and hauling pulp wood. Their cut this year will be about 5,000 cords, all red-knot, highland spruce. Next year it is expected to put in the water 25,000 cords spruce and a quantity of tamarac and cedar.

The officers of the company are: President, Clarence Carpenter; secretaay-treasurer, Louis H. Case; general manager, Edwin F. Bishop.

SAW MILL OF ROBERTSON & HACKETT, VANCOUVER, B. C.

MR. D. E. SPRAGUE.

Mr. D. E. Sprague, lumber manufacturer, of Winnipeg, is a native of York county, Ontario, and before going west was for some time connected with the Georgian Bay Lumber Company of Waubaushene. In 1872 he removed to Winnipeg with W. J. Macauley, and ten years later, in 1882, he established his present lumber business on Higgins Avenue. From time to time he has added such new saw and planing mill machinery as the growth of the business justified, until at present he has one of the best equipped saw and planing mill plant in the province.

The saw mill consists of a circular saw, edger, trimmer, slab-table, lath and shingle mills, etc. Last year Mr. Sprague added a two-hundred foot sorting platform of the most improved pattern, equipped with endless chains and automatic wagon loader. He also put in a cordwood cutting machine, the invention of Mr. Rowe, his millwright, with which he purposes to saw from five thousand to ten thousand cords of wood per year. This machine is a miniature saw mill in itself, having a carriage, friction feed, kicker, etc., and is pronounced by all who have seen it to be the most efficient machine for the purpose yet devised.

In addition to the saw-mill Mr. Sprague has two well equipped planing mills, containing two matchers, two surfacers, three self-feed rip saws, a large circular re-saw, a moulding machine, two swing cut-off saws, and the necessary blowers, shaving vault, etc. This year a new boiler was added to the larger planing mill in order to supply power for the

RAFTING OPERATIONS OF MR. D. E. SPRAGUE.

many machines that have been put in since the factory was first built.

Mr. Sprague has also one of the newest and most approved dry kilns, with a capacity of forty-eight thousand feet. This is the only up-to-date dry kiln between Port Arthur and the coast, and has proved a great boon to builders in Winnipeg, we are now able to procure thoroughly seasoned material for finishing purposes, which formerly it was impossible to do.

The saw-mill has a capacity of fifty thousand feet in ten hours, and the average season's cut, running night and day, is eleven million feet. Over one hundred and twenty-five men are employed the year round in the manufacturing of the lumber and the cutting of logs on the timber limits. About forty horses are employed during the summer months and in the winter this number is largely increased. The mills and lumber yard cover in all over twenty acres of ground, which is situated in the heart of the city's manufacturing district, and has increased in value enormously since Mr. Sprague purchased the land twenty years ago.

Visitors are always welcome to inspect the plant and they will find much to admire in the bright and spacious office, the clean, airy stable, and the neat, well-kept appearance of the entire premises. The most perfect discipline prevails in all the departments, and Mr. Sprague has been particularly fortunate in surrounding himself with energetic and capable employees, who are as proud of the growth of

MR. D. E. SPRAGUE, Winnipeg.

the institution and as solicitous for its continued prosperity as he is himself.

Any person who is interested in the lumber business or in Western Canada's thriving industries will be amply repaid by a visit to Mr. Spargue's up-to-date establishment.

THE VANCOUVER CITY IRON WORKS.

Messrs. Ross & Howard, the proprietors of the above establishment, commenced business in Vancouver, B.C., in the year 1892, with a very small machine shop about 30x50 feet on Alexander street, employing only two men. Four years later their business had increased to such an extent that they were forced to build a new foundry and machine shop, which are located on Carrall street. The foundry is 40x60 feet and the pattern shop 30x68 feet. These premises have since been found too small to meet their requirements, and they are now erecting extensive buildings, situated in the east end, the location being known as Woodland drive. The works will comprise machine shop, moulding shop and boiler room. The foundry is now in operation and the other departments are being rushed ahead as fast as possible.

The new works, when finished, will be very complete and equipped with the latest and most approved machinery necessary for turning out all classes of work, Messrs. Ross & Howard intend making a specialty of boilers, saw and planing mill machinery, marine and and all kinds of repair work, etc. Both the City and the East end works will be operated in order to supply customers as promptly as as possible.

THE HASTINGS SHINGLE MANUFACTURING COMPANY.

A gigantic shingle mill is rapidly being brought to completion by the Hastings shingle Manufacturing Company, of Vancouver, B. C. It will be known as their No. 2 Vancouver mill, and will have a capacity of 1,200,000 shingles in 24 hours. In its construction over 1,000,000 feet of sawn lumber and 30,000 lineal feet of piling will be used. The owners claim that over 320 carloads of material will be reqnired in the erection of the complete plant.

The mill building is 246 feet long and from 32 to 60 feet wide. It will contain about 500 horse power capacity in boilers and 400 horse power in ingines, with an equipment of fifteen Dunbar shingle machines, one 10-block, one shingle block power feed, and hand machines.

There will be six dry kilns, 20 x 152 feet, and over seven miles of 1½ inch piping. The equipment will also comprise dust collecting system claimed to be the first to be installed in a shingle mill in British Colombia.

Plans have been prepared for twelve sheds for stocking shingles in the winter, to be about 200 x 20 feet and having a capacity for 50,000,000 shingles.

All the machinery in this mill is of the latest improved design and has been installed in the best possible manner, being supplied with auxiliary equipments and everything necessary to manufacture shingles in first-class manner.

The Hastings Shingle Manufacturing Company, of which Mr. James A. McNair is president and general manager, is an extensive concen. In British Columbia they have two shingle mills having a yearly capacity of 450,000,000 shingles and a storage capacity of 60,000,000 shingles, the dry kiln capacity in connection therewith being about 11,000,000 shingles. They have also a saw mill with an annual capacity of 11,000,000 feet of lumber and a woodworking factory with an output of about 8,000,000 feet a year.

The mills of the company in Washington consist of four shingle mills with a yearly capacity of about 225,000,000 shingles, dry kiln capacity about six and half million and storge sheds for about 20,000,000 million shingles.

A portrait of the general manager appears on another page.

JUDGMENT FOR A LUMBER COMPANY.

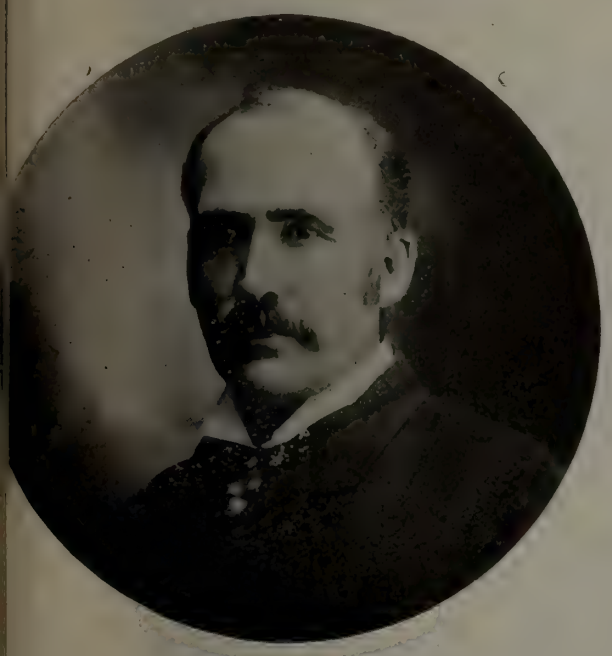
At Osgoode Hall Toronto, before Chief Justice Falconbridge, judgment was recently given in favor of the Skillings, Whitney, Barness Co., against the Royal Insurance Company, an action to recover on a policy of insurance against loss by fire issued by the defendants in favor of the plaiatiff, whose head office is in Orillia. This policy, it is claimed, covered a quantity of lumber was burned on the 5th of June last year. The fire started on the date mentioned and was extinguished on the following day. The lumber company had a few days previous to the fire decided to cancel the policy, and on May 30th posted a letter for the defendants' agent at Barrie, enclosing a policy with surrender endorsed on it, which was to expire on January 21st, 1902, and asking for its cancellation and for a return of unearned premiun; but the letter was directed to Parry Sound in mistake and not received in Barrie until June 6th. It was held by Chief Justice Falconbridge that this was not sufficient notice to satisfy the Ontario statutory condition 19, nor the receipt by the agent to satisfy condition 23, so judgment was given for plaintiffs, with costs.

THE HANBURY MANUFACTURING COMPANY.

Among the lumber industries of the west, the business carried on by the Hanbury Manufacturing Company, of Brandon, M an tob takes a prominent position. This applies more particularly to Manitoba, of which province they are the largest lumber manufacturing concern in operation at present.

The mills of the company are situated at Brandon, on the banks of the Assiniboine River, down which their crop of logs are driven. The logs are cut on the firm's limits in the Duck Mountain district some two-hundred and fifty miles, as the crow flies, north and west of Brandon. These logs are landed during the winter months on the banks of the Shell River, a tributary of the Assiniboine and which empties into the latter at Shellmouth. In all the distance from the winter's dumping grounds to the mill, by the water route, is between 600 and 700 miles, and in an average season it takes about six weeks of driving to bring the rear into the booms. Over 100 men are employed on the Shell River part of the drive, as the stream is very narrow and jambs are of common occurrence, but the Assiniboine is handled by from 40 to 50 men.

SAW MILL OF THE HANBURY MANUFACTURING COMPANY, Brandon, Man.



MR. JOHN HANBURY, Brandon, Man.

The logs are cut in two camps, about 150 men and from 20 to 30 teams being employed at each camp. Cutting usually starts about October 15th and is completed about March 15th, the latter date, of course, depending on the early or late spring. As the hauling is done almost entirely on the iced roads, the first warm weather ends the season's operations so far as the logging is concerned. The cut of logs for the past season was between 90,000 and 100,000 pieces, which will, when sawn, be about 7,000,000 feet of lumber.

The principal timber cut by this firm is spruce, with a slight sprinkling of tamarac. We have been informed by lumbermen of experience that they prefer the Manitoba spruce, when well manufactured, to pine, and judging from the small stock of this material which The Hanbury Manufacturing Company carried over from last fall, it is finding a ready market, as we understand that they produced in the neighborhood of seven million feet last year after May 20th.

Besides the manufacture of lumber, they deal both as jobbers and retailers (extensively) in Pacific Coast products of the forest, American grown hardwoods and Minnesota pine.

They have also a sash and door factory near their saw mill, and work from this factory may be seen in practically every retail yard in the province and eastern territories, as a travelling representative is kept out during the building season looking after business.

Mr. John Hanbury, the proprietor and manager of this enterprising concern, is widely and favorably known as a man of sterling qualities, both in business and socially, and it is through his enterprise and shrewdness of management that the business has grown from what was, no longer than four years back, considered a small dot in the business world.

The Owen Sound Iron Works Company, of Owen Sound, Ont., are now manufacturing a saw mill carraige for which they claim exceptional advantages. An illustration of the carraige appears in their advetisement in this issue.

On another page will be found the announcement of the A.H. Andrews Company, of Chicago, manufacturers of the Morton patent moist-air down-draft dry kiln. This kiln has been on the market for some time and is well adaped for the efficent drying of lumber, shingles, etc.

Referring to the advertisement of John J. Gartshore, of Toronto, in another column, of second-hand logging outfit, such logging tramways are much used in some districts. They overcome difficulties where water-ways are not available and obstacles which are encountered in getting material taken out. Mr. Gartshore has also on hand standard gauge locomotives suitable for yard purposes.

A WATEROUS SAW MILL IN THE ROCKY MOUNTAINS.

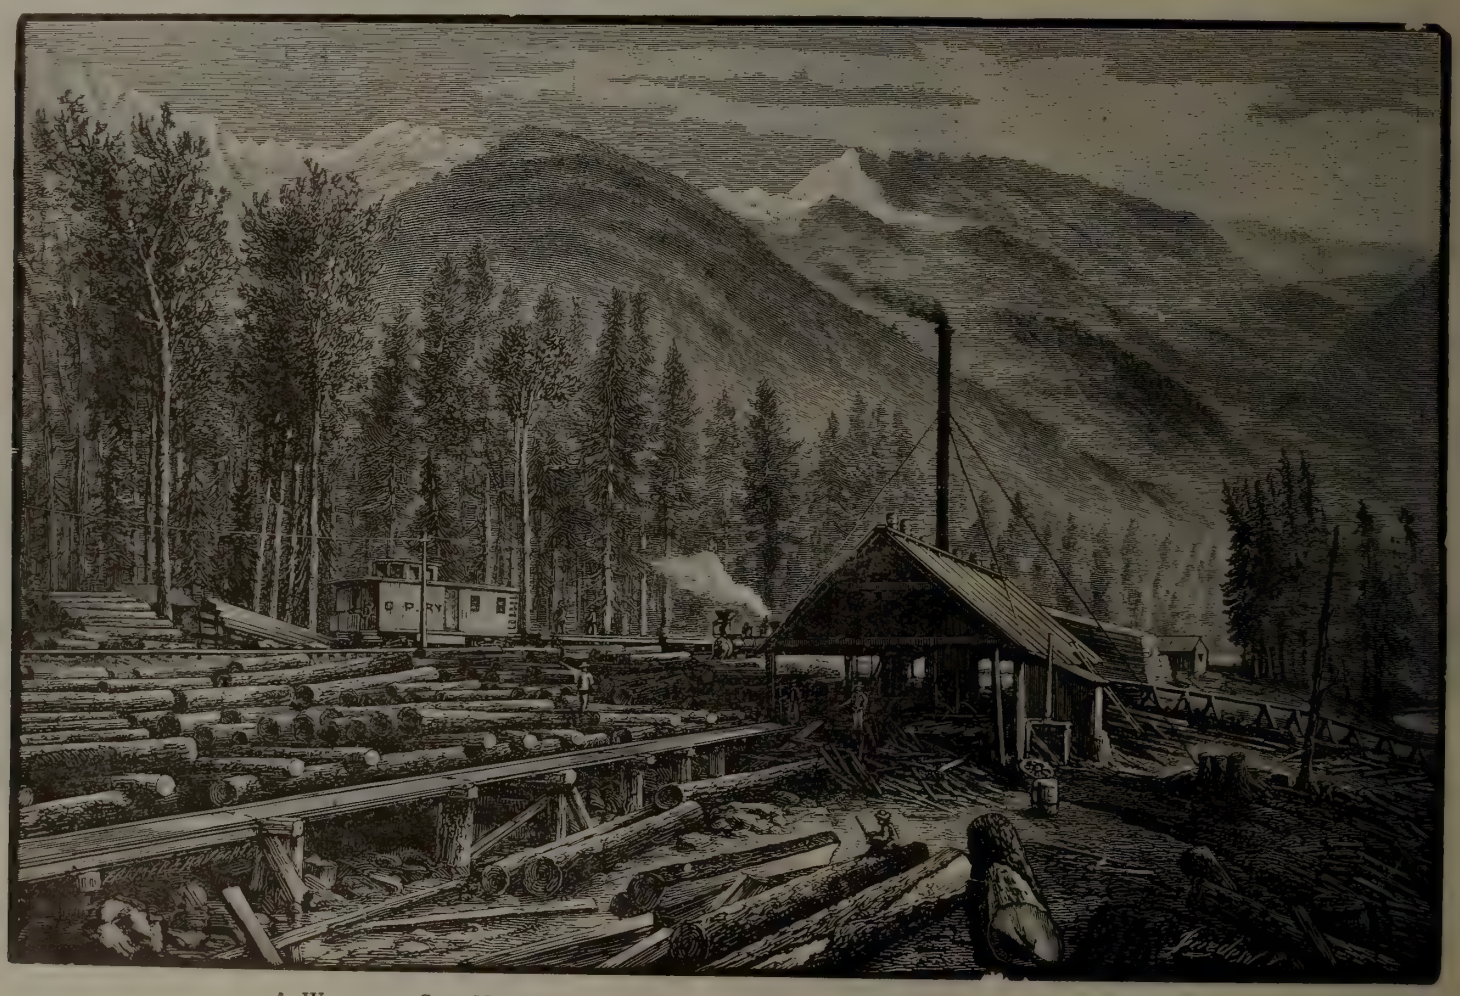
The accompanying illustration shows one of the first saw mills built in the Rockies after the passing of the C. P. R. This was erected the first season after the railway got through to the Coast. The mill was bought by the contractors, Messrs. Ross & McDermid, to cut timber for the snow sheds, which were found to be absolutely necessary to protect the track from snow slides. The mill was erected on Duggan's Siding, on the main line about the centre of the Selkirk Mountain, after passing the Rocky Mountains.

The plateau on which the mill was erected was one of the few level spaces that could be found in this vicinity. The plateau had been made by the bursting of a water spout on the mountain and throwing down a great quantity of earth and debris, filling up the river, changing its course, and leaving this plateau just about large enough for a mill site. The track of this small mill of this kind, from the fact that the cut was entirely 3 inch plank, which was edged to 7, 9 and 14 inches wide on the large saw, there being no edger in the mill. This was a phenomenal cut for a mill of this kind.

The river at the mill made a bow formed by the land slide mentioned before, and the tramway on the left side of the picture shows the log way running down to the river, from which logs were taken. The tramway on the right hand side was used as a skid-way on which to run the slabs down to the river to get rid of them. To dispose of the saw-dust a small creek was diverted under the mill and this carried the saw-dust out to the river. In ordinary times the slabs would be made into lath and shingles, but with the contractor his only idea was to get rid of the refuse as quickly as possible.

BRITISH DEMAND FOR TIMBER.

Mr. Harrison Watson, Curator of the Canadian Section of the Imperial Institute, London, have already contracted for all they can possibly produce. There are some lines, such as box shooks for example, where competition keeps prices down to levels which would be unprofitable to Canadian shippers, but on the whole there would seem to exist a profitable field for further investment in the wood-working and turnery industry which deserves the attention of Canadian capitalists. Attention has previously been called to the advantages which the Maritime Provinces offer for the erection of such establishments where export trade is the main consideration, owing to their proximity to European markets and the possession of open harbours throughout the year. Merchants on this side often express their surprise that more has not been accomplished in this part of the Dominion. Among other inquiries one worthy of note has been as to the suitability of Canadian sleepers or ties for railways in South Africa and other semi-tropical countries.



A WATEROUS SAW MILL IN THE ROCKY MOUNTAINS, ON THE CANADIAN PACIFIC RAILWAY.

land slide could still be followed for miles up the mountain. The black streak of the edges could be seen and the centre part was stripped of earth and stones and laid bare.

This mill was one of Waterous' 30 horse power saw mills, erected by their engineer and millwright, Mr. John Lyle, who was present when the photographer took the picture of the mill, and secured a copy of it from which this cut was made.

Some three or four million feet of lumber and timber were required for the snow sheds, all of which was cut by this 30 h.p. sawmill at the rate of thirty to thirty-three thousand feet of lumber per day, the average for the last month being thirty-three thousand per day. This average, of course, could only be secured from a

England, in making his annual report for 1901, refers as follows to the demand for timber and manufactures of wood :

"There continue to reach this office numerous inquiries for the names of Canadian mills which can supply such lines as doors, mouldings, flooring, blocks, handles, seats, chair-stocks, &c., and on the other side application from Canadian manufacturers and shippers for information as to demand for above and similar goods over here. These industries appear to be gradually developing, but apparently the supply of goods is not increasing in the same ratio as the demand, for the usual report of visitors to the Dominion in search of supplies is that practically all the concerns which are really in a position to deal with export trade

"From time to time letters are received from Canadian firms for information as to the demand for wood skewers, and expressing the opinion that they are well equipped for supplying same. From enquiries made it would, however, appear that only one Canadian maker does any trade of any account in this market, and it is therefore probable that my Canadian correspondents find, after due investigation, that they cannot compete in price with the skewers produced by the special machinery of the American corporation. Another point is that most Canadian skewers are of maple, whereas until recently hickory skewers were practically the only variety used, and even now a large section of the trade maintains its conservative preference and will not use maple."

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE PROGRESS OF THE WEST.

To one who for the first time travels over the Canadian Pacific Railway between the Georgian Bay and the Pacific coast, the impression is one of surprise regarding the extent of the Canadian territory. Some of the land, of course, is barren, but there are yet immense areas of fertile soil awaiting cultivation. Much has been done in the past decade towards the settlement of Western Canada, as witness the many milllons of bushels of wheat that are grown annually. But still greater strides towards the development of the country are likely to be made during the next ten years.

The prosperity of the people of the west is exhibiting itself in a desire to provide more comfortable homes. Building operations in Manitoba and the Territories are each year showing an improvement both in volume and character.

The importance of the west as a lumber market is more fully recognized to-day than ever before. It is a most significant fact that in the face of adverse circumstances Canadian manufacturers were able during the past year to greatly limit the amount of lumber imported from the United States. The Dominion Government has in many ways shown its desire to develop the western country, but still leaves the lumber market open to American competition. This market is supplied largely by British Columbia manufacturers, who, owing to location, are obliged to import most of their machinery and mill supplies from the United States and pay a duty thereon. Their lumber is also taxed when shipped to the United States, but the American manufacturer contributes not a cent to the Dominion treasury when supplying the Canadian consumer. A readjustment of the tariff law would greatly assist the lumber industry of the west.

The announcements which appear in this number testify to the growth of the lumber industry of British Columbia. Saw mills with a daily capacity of over one hundred thousand feet of lumber and shingle mills turning out daily one million shingles are sufficient proof of advancement. But we look for a still greater development of the lumber business of the Pacific coast and the time when lumber and manufactures of wood from Canadian establishments will be more extensively in demand in the markets of South Africa, Australia, China, Japan and other eastern countries. Our export trade in lumber, as in other commodities, is bound to expand, and with the settlement of Manitoba and the Territories which is now taking place at such a rapid rate, the lumber industry of the west should become a more important factor in the commerce of the Dominion.

DEMURRAGE IN UNLOADING VESSELS.

A judgment which is of interest to Canadian shippers was rendered last month in the County Court at Bristol, England. It concerns the detention of a vessel for the purpose of unloading.

It appears that the steamer Huelva, owned by C. T. Bowering & Company, carried a cargo of spruce deals from St. John, N. B., to Bristol, the lumber being consigned to May & Hassell, timber merchants. The action was brought by the owners of the vessel against the latter firm to recover £90 for three days' demurrage of the vessel. The time occupied in unloading was ten days, whereas the owners claimed that the steamship should have been discharged in seven days. They contended that the delay was due to the fact that the consignees did not have sufficient room in their yard. The discharge was at the rate of 110 standards a day, whereas 150 standards was the amount which the plaintiffs claimed should have been unloaded daily.

For the defence it was pointed out that there was ample room in the yards of the defendant and that the cargo was exceptional, consisting of small stuff, which was more difficult to unload than large timber. No evidence was submitted to prove that defendants had caused delay.

Judge Austen said that he would not say that 110 standards per day was too slow a rate of unloading, as it would be idle to attempt to lay down any such rule. He would arrive at the number of days which the steamer ought to have taken to discharge by something in the nature of guess-work. In this manner he came to the conclusion that 133 standards a day ought to have been discharged, in which case the vessel would have been free in eight days. Judgment was accordingly given the plaintiffs for £60 and costs.

Considering the evidence submitted, the judgment seems unfair. When reference is made to the terms of the charter party, however, some justification may be found for the decision. One clause of the charter party stated that "the usual custom of the wood trade was to be observed by both parties in cases where not specially expressed." This made it incumbent to discharge as quickly as at other ports, although it is known that, owing to the absence of the usual facilities at Bristol, it is almost impossible to do so. Another clause stated that "the cargo was to be received at port of discharge as fast as required by the master during the ordinary working hours of the port." In this clause the usual words "with customary steamship dispatch" are missing. In this way an obligation was cast upon the consignees to discharge the cargo as fast as the master required it to be unloaded. The consignees were in this way placed entirely at the mercy of the ship-owners and bound to unload within any time which might be specified.

By the omission of proper protective clauses in the charter agreement the defendants in the above case were called upon to pay damages to the extent of $300, not to speak of the additional court costs. This should be a warning to persons chartering vessels to obtain explicit agreements, in order that possible points of dispute may be covered.

MODERN INSPECTION RULES.

The elimination of the word "culls" from the inspection rules of the National Hardwood Lumber Association of the United States is a decided step in advance. The proposition was opposed by some of the members of the Association on the ground that it would be difficult to secure the adoption of the new terms by the lumber trade generally, whilst others thought that the motive might be considered an attempt to deceive buyers as to the character of the stock. The main argument in favor of the change was that the word "culls" was a misnomer so far as it applied to the lumber business, and that it was frequently difficult to dispose of the cull grades owing to their designation. Finally it was decided by a large majority to substitute No. 2 common for shipping culls and No. 3 common for mill culls.

The term "culls" found its way into the lumber business many years ago, when only the best lumber, or clear stuff, was taken and the balance left as refuse. Then the term was appropriate, but now, when practically everything in a log is marketed, its existence should not be continued.

The new terms as adopted by the National Association seem appropriate. That they have met with the approval of the trade is shown by their adoption by the Hardwood Manufacturers' Association formed at St. Louis last month. This Association went a step further by adopting a grade known as No. 4 common. Probably this grade will in a short time become generally employed, as the tendency is toward a closer grading of stock.

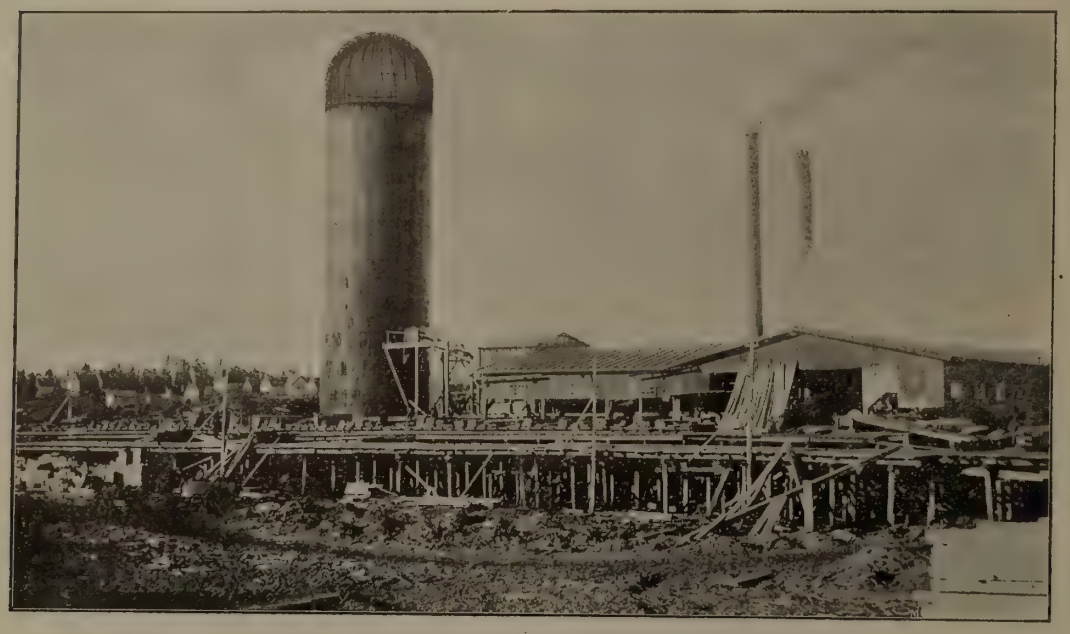
By eliminating the word "culls" from their grading rules the National Hardwood Lumber Association have taken a step in keeping with the progress that is being made in the lumber business. Doubtless Canadian hardwood lumbermen will in time conform to the change.

The subscription price of the CANADA LUMBERMAN, including both weekly and monthly editions, is $1.00 per year.

THE RAT PORTAGE LUMBER COMPANY.

The Rat Portage Lumber Company, Limited, is a combination of the Western Lumber Company, the Minnesota & Ontario Lumber Company, the Safety Bay Lumber Company, Cameron & Kennedy, and Ross, Hall & Brown.

In 1892 these companies were amalgamated under the name of the Ontario & Western Lumber Company, which has since been changed to the Rat Portage Lumber Company. The six mills operated by this company have a combined capacity of over one hundred million feet annually and constitute the largest lumbering plant in Western Ontario. In connection with the mills there are planing mills and sash, door and box factory, all equipped with modern machinery, electric light plants and electric tramways for delivering the lumber from the saws to the yards.



RAT PORTAGE LUMBER COMPANY—RAT PORTAGE MILL.

Mr. Cameron, the president and general manager, was formerly of the firm of Cameron & Kennedy and is well known from the Atlantic to the Pacific as an able and competent lumberman. The secretary, Mr. Robinson, is recognized on all sides as an adept in mill management, and it is safe to say that he has made the mill second to none. The treasurer, Mr. J. E. Young, brings to the company the financial experience of a banker, in which occupation he was engaged before assuming his present position.

The Rat Portage mill is 182x56 feet wide, wih a wing 48x45 feet, and boiler house 48x46 feet containing seven boilers. The mill is equipped with one Prescott band, manufactured by the Wm. Hamilton Manufacturing Company, of Peterborough, which is used as a double cutter; one Waterous band single-cutting 40-inch Wickes' gang, driven direct by a 14x16 engine. The log deck is equipped with steam kickers, loaders and niggers, the carriages being worked by a 10-inch steam feed and equipped with McDonough s t works. The main engine is a 24x30 inch cylinder and is equipped with Crows' Nest condensers which enables the water to be pumped back into the boilers at a temperature of 200 degrees.

The planing mill is a two-storey building 115x48 feet, and includes box factory and machine shop, shipping rooms, etc. The machinery consists of dimension planer, surfacer, three matchers, sticker, Mershon band re-saw, rip saws, etc. There is a lath and shingle mill in connection.

RAT PORTAGE LUMBER COMPANY—NORMAN MILL.

The company are now turning out 150,000 feet of lumber per day of ten hours.

The sash and door factory is a two-storey building 50x100 feet, with an annex 40x50 feet, and is equipped with the latest improved machinery. A warehouse, 40x80 feet, is used for storing sash and doors. The dry kiln is 18x130 feet, with a capacity for 60,000 feet of lumber. It was manufactured by the American Blower Company, of Detroit, Mich.

The Norman mill is situated one and one-half miles west of Rat Portage. It is 180x50 feet wide, with a wing 25x40 feet, and is equipped with an Allis telescopic double-cutting band mill manufactured by the Waterous Company, of Brantford, one rotary and one 38-inch gang saw. The carriages are operated by a 9x11-inch steam feed, and the band saw by a 16x20-inch cylinder engine. The main engine has a cylinder 24x30-inch. There is a battery of eight boilers.

The planing mill in connection is 32x70 feet and the warehouse 24x40 feet. The equipment includes a dimension planer, surfacer, three matchers, sticker, and a 55-inch Cornell & Dangler band re-saw, operated by a separate engine. The main engine and the planing mill has a 12x18-inch cylinder. The dry kiln in this department was supplied by the A. R. Williams Machinery Company, of Toronto.

There is a tie mill in connection, used for cutting ties, cedar posts and piling.

The third mill of the company is located on the Rainy River, and was purchased in June, 1901, from Mr. H. Long, of Brandon. It is on the new line of the Canadian Northern Railway, which runs from Port Arthur to Winnipeg. The dimensions of this mill are 40x130 feet, with a wing 30x50 feet. Situated in a solid brick boiler house are five boilers. The saw mill is driven by a 24x30-inch engine, a separate engine 12x14 operating the planing mill in the ground floor of the wing.

MR. D. C. CAMERON,
President and Manager, Rat Portage Lumber Company.

The equipment of the Rainy River plant includes a McDonough double-cutting band mill, 36 inch gang saw, Waterous band resaw, two matchers, dimension planer, etc. Mr. Donald Robertson, who has been in the employ of the company for a number of years, is in charge.

The Rat Portage Lumber Company own extensive limits in the Rainy River district, consisting chiefly of white pine. It is one of the most extensive lumber concerns in Canada, employing nearly 1,000 men. Several steam tugs and an alligator are owned by the company. Three large tugs are used for towing logs across the Rainy Lake, the others being employed for handling logs at the different mills and towing ties. Branches of the company are located at Winnipeg and Brandon, Man.

Mr. D. C. Cameron, M. P. P., the manager of the company, is well known in public life as well as in lumber circles. He is Mayor of Rat Portage, and at the last provincial election was successful in carrying the riding as the Liberal representative in the Ontario legislature.

The Retail Dealer

THE WESTERN RETAIL LUMBERMEN'S ASSOCIATION.

By J. L. CAMPBELL, President.

It is just about ten years since this association was organized. It commenced in a small way, confining its jurisdiction practically to the province of Manitoba. Since that time the institution has grown until now it comprises among its members practically every retailer and manufacturer of note from Port Arthur to Vancouver. At the outset it was confronted by adverse public opinion. The general idea entertained was that the association was formed to force up prices and generally to fleece the public. Time has proven these fears to be groundless, and to-day it stands as one of the most complete associations of its kind in America, and commands the respect of business institutions and the purchasing public.

The principle of protection to the deserving member, coupled with due regard for the rights of the public, has been the guiding one of the organization, resulting in the improved condition of the retailer and in a better service to the public. The manufacturers and dealers enter into a compact to sell and buy from and to each other only. In this way petty and irregular dealers are kept out of the trade.

A person wishing to become a member of the association makes application, stating the point for which he desires membership. If there be no dealer at that point, or if the stocks kept be insufficient to meet public requirements, or if the volume of business will warrant the establishment of another yard, membership is granted. If none of these conditions exist the application is rejected and the local dealer is left to enjoy the full benefit of the trade so long as he lives up to the rules of the association and meets the needs of the public. In this way undue competition is avoided. The dealer having all the trade, can do a more profitable business on the same capital and expense, and is thereby enabled to give the public a better service, without increasing the price of his goods. The financial standing of the retailer is improved, which rebounds to the advantage of the wholesaler, who in consequence makes fewer losses, and is thereby enabled to sell on a closer margin. The retailer buying for less money, can sell cheaper, so that benefits accrue to all parties concerned—the wholesaler, the retailer and the public.

Besides the above direct advantages there are those arising from meeting together if only once a year. The wholesaler and retailer meet and become acquainted, which is of greater value than generally recognized. The retailers learn from each other improved methods of conducting their business. Even the quiet chat over a friendly cigar in the hotel rotunda has many advantages, and pointers are learned that can be turned to good account.

The workings of the association are not by any means perfect, but a great deal has been done to improve the condition of those interested. While all evils have not been eradicated, much has been done to minimize them. Grievances, of course, crop up, but they are few indeed to what would be were there no association.

The organization is on a firm and broad basis; much has been accomplished in the past; much can be done in the future. Its members get the greatest benefits just in proportion as they live up honestly and loyally to the principles of the association, principles which, if properly observed, work no injustice to anyone, but bring many and substantial advantages to those who practice them.

RAMBLES AMONGST RETAILERS.

By W. T. CREIGHTON.

To anyone who has travelled through Manitoba and the Northwest Territories during the past five years, and more especially to those in touch with the retail trade of this territory, the fact must be apparent that there has been a rapid increase in the amount of building material consumed throughout the country, and that the retail men, as a whole, have enjoyed a very satisfactory and large volume of business, which is steadily increasing.

The expansion of trade during the past five years has been due to several causes that are generally incident to the development of a new country, amongst which are the increased railway facilities and new branch and trunk lines recently brought into operation, the increased prosperity of the farmer (for up to the present this is essentially an agricultural country), and also, that throughout the towns and villages there has been a strong desire on the part of the general merchants to make comfortable homes for themselves, and also to increase the capacity and value of their store buildings, by the erection of more pretentious and up-to-date places of business in keeping with the progress and advancement of their present surroundings. This has led to the result that, where some eight or ten years ago a modest two-story building was about as large a store as was generally to be found in any of the western towns, many of these have since been replaced by fine brick, stone and frame business blocks of from two to four stories, and built on a much larger and more modern scale than those formerly used. The consumption of lumber has increased from about eighty-five million feet some five or six years ago, to almost one hundred and seventy million feet for 1901, and present prospects are that the year 1902 will show a considerable advance on the last named figure.

The retail lumber merchant with us, taking him from all points, is a pretty good fellow, and one of the best citizens of the west. He is as a rule shrewd, intelligent, and a very hard worker, and withal a very sociable and entertaining person to meet with. Many started in the earlier days with little, or no capital, and have won their way to success by steady attention to the trade.

And here let me say, it is to the writer a very astonishing fact, and one that is very much to the detriment of the individual dealer, that you find on going through the country that it is very rarely a dealer is met with who is as well posted in his line of business as he should be. This is largely due to the fact that he does not endeavor to keep up with the times, in reading the latest trade news, as given by the several lumber journals that are now published, and in other ways. There is not a dealer in this territory who cannot afford to subscribe to one or more of the trade journals without feeling the cost of it, (and the return to him would be an hundred fold and more) or the time and expense thus demanded in keeping posted on the present conditions of trade, more especially when the numerous fluctuations of the market are considered, as instanced during the past two years. In speaking to a bright man (a retail man from a country point) a few days ago, he appeared to think that white pine uppers were next to being a drug in the market. I said to him, "What! do you get no trade news from your lumber papers," and he smilingly answered me, "I don't read anything of that kind, I haven't the time." I replied that if he had not the time to make his business a success he might as well be out of it, and on further conversation he decided to subscribe for two of the lumber papers at once. This is only a case in point, there are many other men in the trade here who are not in the first rank, for want of time to learn a little about the business they are engaged in.

Another fact about our retail men which is noticeable to those engaged in the trade is, that many a man who is doing a fair business looks about him for something else to invest money in, when if he had put it into his lumber business, he would realize more than he would in any outside issue. I have known a number of dealers who had acquired a competency in the trade to lose all, or nearly all of their capital in a few month's ventures, in grain or other speculation, and when you consider the matter broadly, it is hardly a fair thing to the manufacturer, who in such cases is often carrying the dealer for a considerable amount.

Did you ever notice the impression you receive on entering a store that is kept clean and fresh, with the stock well arranged? Is it not a favorable one, whether you desire to purchase or not? Well, it is exactly the same with the retail yard, and there is a good deal in it, for the retail dealer who understands. Lumber, and more especially finishing lumber and the finer grades of matched lumber, if kept out of doors, is a perishable commodity, but if well housed and taken care of, it is staple and may be kept for years in good condition; and here let me say there is no better investment for the retailer than a compact, well arranged lumber shed and a well fenced yard. Some dealers cannot see these points yet, but the time may come when they will profit by the experience

of dealers who are making a success of their business all the time.

Until within the last few years the retail lumber business was largely confined to Manitoba, and very little trade was done in a retail way west of that province; but with the advent of the Crow's Nest Pass branch of the Canadian Pacific Railway, the Calgary & Edmonton, and Regina & Prince Albert branches, the Soo line and other extensions made by this and other railroad companies, numerous young and stirring towns and villages have sprung up at intervals along the railways, which have also, at the same time, opened up to the farmer a grand stretch of country, the settlement of which is rapidly being made by a good class of agriculturalists. At all these points new retail yards have been put in operation, in many cases by men who have been in the trade in the older settled portions of this territory, who have branched out, and extended their business into the far west. Unlike the retail trade as carried on in the Northern and Western States, there is very little done here in the operation of line yards, excepting those carried on by some of the pine manufacturers of Rat Portage; the dealer occasionally extends his business to two or more points, but this is the exception rather than the rule. The market is kept supplied in all lines of manufacture by the several large milling companies in British Columbia, by the various mills along the main line of the Canadian Pacific and the Crow's Nest Pass lines in the Rocky Mountains, by the pine and spruce mills located east of Winnipeg at Whitemouth, Keewatin, Rat Portage, Savanne and Port Arthur, and by numerous local spruce manufacturers on the line of the Canadian Northern Railway, and at other points in Manitoba. A considerable amount of American pine lumber has also been handled from Minnesota, and fir and other lumber and shingles from Washington Territory.

Hardwoods of all descriptions are purchased from Eastern Ontario and from points in the United States. With the present large immigration from the south, as well as from the Eastern Provinces and Europe, it is thought that this season will give an impetus to the trade throughout the west that it has never received before.

The greater number of retail dealers are formed into what is known as the Western Retail Lumbermen's Association, with a view of having uniform retail prices in each city or group of towns and villages adjacent to the other, throughout the territory which it covers. The manufacturer who is selling in this market is brought in as an honorary member, and assists in preserving the objects of the association, which of itself has done much good in the trade, and although operated as a close corporation, and not on the broad lines of the associations of the North-Western States, there is no doubt but that the improvements needed will gradually assert themselves, as this is practically in the hands of the manufacturer, who will presently wake up to realize matters which affect his interests. The association is in the hands of a board of six directors, with a president, vice-president and secretary, all of which positions are honorary except the latter. The present membership runs to almost 400 yards, and the association has been in operation some ten years, the writer being one of the originators of it, at a time when there were but few yards established. The annual meeting is held in February of each year, at Winnipeg, when many of the dealers gather together, with the object of the betterment of the trade, and also of creating a cordial sociability amongst their members, so many of whom have not otherwise the privilege of meeting the dealers in their vicinity during the busy summer season.

It has lately been found that to handle the dealers in the western portion of the Territories was too cumbersome an undertaking to be done from Winnipeg, and it was found necessary owing to the trade in that portion of the country to the west of the town of Moose Jaw making such an increased development, to form a branch of the parent association, with a small board of directors and secretary, with headquarters at Calgary, N. W.T., to be operated under the guidance of and subject to the by-laws and rules of the main association.

One of the newest features of the trade is the extraordinary demand that has arisen for all lines of British Columbia Douglas fir, spruce and red cedar lumber. Formerly a very scattered and limited amount of orders were placed with this section of the manufacturers, but for the last few years the demand has been abnormal, taxing to the utmost capacity the several large establishments now in operation on the coast, and inciting the building of other large mills during the present season.

I trust that there may be some items of interest in the foregoing to the retail dealer, who is a wide awake man of business on everything pertaining to his trade, and it is very often the case that by using a little thought and calculation, he can make matters run more smoothly for himself, and unquestionably can increase the source of his profits. It is conceded by many in the trade that a number of the dealers commence with limited experience in it, and at times but a small amount of capital. To these I would suggest the devotion of some little time in going into the question of supply, as well as demand, and of investigating the ever changing quotations of the market and the several modes of manufacture utilized in preparing the material for shipment which they are almost daily receiving, and they will find the time occupied about as profitable as any of their daily work. I hope the retail trade of the west will enjoy continued prosperity, and that much pleasure also may go with "the daily round of toil," to a class of men who are rapidly building up this western country.

—A new saw mill has been completed at Sturgeon Falls, Ont., by Cockburn & Sons.

—A. Nichols & Son, of Carleton Place, Ont., have purchased from the Canada Lumber Company all the piers, booms, chains and other river improvements on the north side of the river at Carleton Place.

MANAGEMENT OF A RETAIL YARD IN THE WEST.

BY W. H. DUNCAN.

Commencing business in the west as a retail lumber dealer, the first thing necessary is to obtain the most convenient site in the town where you purpose doing business—that is, a central location as near the railway as possible, that the expense of unloading and placing in the yard may be small—close to other business places that your customers may not suffer any inconvenience or loss of time when coming to do business with you. The location being suitable, have the property fenced with a high board fence to keep your stock in safety. The property should contain an area of about 150 feet square, which gives ample room to have sheds on one or two sides for the finer grades of lumber, such as flooring, siding, ceiling, shiplap, clear lumber and mouldings or any other lumber used in finishing a building, with a good closed-in building for doors, sash, etc.; the other two sides for dimensions and common boards, shingles, lath, posts and all rough material, with the centre of the yard all open that loads may be backed up to piles loaded or unloaded, as the case may be, and leave room for customers, teams in the yard. This is necessary in a farming community, and one man can attend to a great number of customers at once in a busy time.

There should be a commodious office 24 feet on front by 16 feet back and divided into two compartments—general and private office fitted up with good heating stoves and made comfortable for customers in winter and furnished with chairs and desks, safe, letter press, files, map of the district that each customer can be located, and a set of the latest books and all necessary stationery.

When this far, have a stock of the best lumber of its kind put in your yard, with 2x4 scantling in rotation up to 20 feet long in space of about 4 feet in racks to keep all straight; 2x6, 2x8, 2x10, 2x12, in the same way with the finer grades in the sheds, and the lath, shingles or posts in the corners. Have all material piled with each size, that is, thickness, length and width, in its own place. In this way time is saved by having a general knowledge of the yard and knowing where to find each piece wanted. The yard being in good shape, part of the office stationery should consist of counter-check books; give each customer a statement of material taken when sold, the duplicate to be entered in loose leaf ledger when the account is made out as the books are entered, and all accounts are rendered at the end of each month, when a settlement should be made either by cash or note. Have a price list with a fair margin of profit and stick to it, as no person expects you to do business for nothing.

Keep a well assorted stock always on hand, attend to your customers promptly, be pleasant to all—treat all with respect and on an equality. Keep a strict account of all transactions—trust nothing to memory—do as large a cash business as possible and as little credit as possible, and with strict attention to business and the continued properity of the west the retail lumber dealer will continue to make a modest living in the west.

W. H. CUSHING.

Mr. W. H. Cushing, is one of the largest manufacturers of sash and doors west of Winnipeg, and unquestionably he is one of Calgary's most enterprising and successful business men. Removing in June, 1883, to Calgary, when it was but a police-post on the prairie, there being only the Hudson Bay stores, R. G. Baker & Company and and a few Indian tents, Mr. Cushing started in an unpretentious way as a contractor, which business he followed exclusively for a few years. He then erected a planing mill and sash and door factory, carrying on the contracting business in connection therewith. In 1884 Mr. Cushing entered into partnership with Mr. S. M. Jarrett, which connection existed until the year 1887, when Mr. Jarrett retired. During this time a large contracting business had been established and a number of the town's finest buildings were erected. Mr. Cushing also worked up a large retail business, his yard being at that time the only one in the place.

Later Mr. Cushing abandoned the contracting business and devoted his attention to the factory and retail yard.

In public life Mr. Cushing has always taken a prominent part. Besides representing the town at the council board, he had the honor of occupying the Mayor's chair in 1900, and has

since been re-elected alderman. He has served on almost every board of public institutions and has for a number of years been president of the Hospital Board. On several occasions he has been pressed to enter political life as the representative of West Calgary, but through pressure of business has been forced to decline.

Mr. Cushing has taken into partnership with him his two brothers, Mr. A. B. Cushing and Mr. A. S. Cushing. The former is a graduate of Victoria University, Toronto, and was for a short time principal of Essex High School, after which he occupied the position of classic teacher in Brandon Collegiate Institute. Mr. A. T. Cushing was connected with the business for a number of years, after which he attended and graduated at Victoria University.

With his usual wonted ability to see and grasp a good investment, Mr. Cushing two years ago purchased the planing mill and retail yard of Mr. K. A. McLeod, situated at Edmonton. This branch of the business is known as Cushing Bros. and was carried on by his two brothers until a short time ago, when Mr. A. T. Cushing removed to the head office in Calgary to become business manager. Owing to the increase of business at Edmonton, it is the intention in a short time to make extensive alterations in the factory. Mr. A. B. Cushing is now in charge of this branch.

In 1901 Cushing Bros. leased the business and purchased the stock of the retail lumber yard of Mr. C. J. Duggan, of Strathcona. Mr. Fred W. Erwin is manager of this yard. Mr. Erwin came from South Dakota and is a very capable man, with a wide and varied experience in the lumber industry. This last mentioned makes the second of the firm's branch institutions, and with their already well developed trade places them in the front rank in the lumber business.

Extensive alterations are now being made to the factory at Calgary. There have been erected a large and commodious office and a new fire-proof engine and boiler room 25x45 feet, built of stone. These are under one roof, as well as other manufacturing rooms. New machinery of the latest and most approved pattern is now being installed, including engines, moulding machines, planers, etc., supplied by the Stuart-Arbuthnot Machinery Company, of Winnipeg, Man. When other contemplated improvements are carried out this will be the largest and most complete plant for the manufacture of windows, sash and doors and woodwork in the west. The capacity will be 150 doors and 200 windows per day of 10 hours. Shipments are made to Alberta, Assiniboia and Eastern British Columbia.

Mr. Cushing has established for himself a reputation for reliability and honesty, and it is largely through his indefatigable efforts and business foresight that the business has reached its present proportions. The accompanying illustrations shows the former factory, the new building not being far enough advanced to permit of securing the necessary photograph.

RETAIL YARDS IN THE WEST.

BY "GALASHIELS"

The successful management of a retail yard in the west, as elsewhere, depends largely on the individual. While environment counts for something, such as localities subject to hail, drouth, frosts, etc., retailers who have conducted business successfully during the past fifteen years will bear me out in saying that success depends on the retail merchant himself.

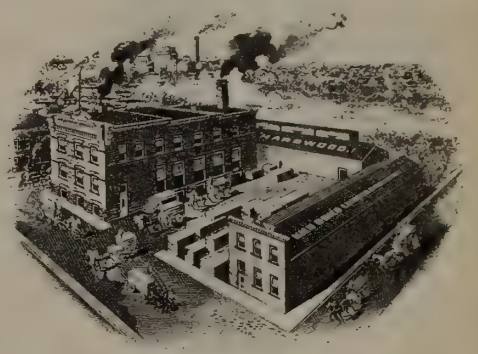
The best grades that money can buy must be kept in stock. Wholesale lumbermen make the statement that the west has the most critical lumber market in the world. We have found it so. The price of any article in this western country is really not the first consideration. Quality comes first; poor lumber at $5.00 per M will not satisfy a customer as well as clear lumber and good stocks at $40 per M, nor will it be as good an advertisement for a yard. To save losses in business where credit is given, refuse doubtful customers. It is cheaper and more satisfactory to have a row with a doubtful customer before selling than after. New districts opening up this season with new yards will make it necessary for the retailer to be careful. In the older districts where customers are known success is almost certain, with proper care.

—William Millions is superintending the erection of a large saw mill at Gaspe, Que.

THE ROYAL PLANING MILL, WINNIPEG.

The Royal Planing Mill, operated by G. W. Murray on Market street, Winnipeg, has justly earned a reputation as an up-to-date factory. The old mill was erected by Messrs. Bladanon & Cadham on Smith street in 1881. This firm operated the factory for some time and experienced all the ups and downs of the boom. Mr. Murray purchased the site and factory and after making extensive changes and improvements met with the mill owner's fate, the mill being destroyed by fire in 1899. But though experiencing a heavy loss, Mr. Murray at once secured a new mill site with a frontage on Red River and a spur track to the Canadian Northern Railway. Much time was spent in securing plans for the best type of a modern factory, with the result that the Royal Planing Mill is now equal in arrangement and equipment to any in Canada, it having been quoted by the Canadian Board of Underwriters as arranged with more than usual security from fire risks.

The manufacturing is divided into three branches of mill work, moulding, matching



ROYAL PLANING MILL, WINNIPEG.

and band sawing. One floor is devoted to general joinery in pine and other soft woods, while another floor is devoted to cabinet and interior finish. Many of the finest buildings and residences are being fitted up from this factory. A complete stock of high-grade hardwood is stored in the sheds, which is always carefully kiln-dried and stored away for use, but is never manufactured without again being put through one of the smaller kilns and prepared for all the high-class work which is now being manufactured. The general management is in charge of Mr. Newell and Mr. Carter, and the hardwood and cabinet work is looked after by Mr. Weir. The large experience and ability of these gentlemen have enabled Mr. Murray to produce designs and manufactured work which will bear comparison with that of the eastern factories or of those in the United States. A high standard of material and workmanship is the aim and object of the management, and where quality is an object lower-priced manufactured goods is not a factor of competition.

—The Parry Sound Lumber Company, of Parry Sound, Ont., have decided to build a large addition to their box factory erected last year. The company have received large orders for boxes and box shooks for shipment to England.

—In mine-timbering it is calculated that square timbers are about one-fourth stronger than round ones of the same diameter. The safe load of a timber column is 600 pounds per square inch for heights less than 20 feet. Freshly cut timbers are from 25 per cent. to 40 per cent. weaker than when seasoned.

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VIII. TORONTO, ONT., JULY 2, 1902 No 22

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:

IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

Prepared by the Editor of the "Canada Lumberman."

Toronto, Canada
C H. MORTIMER, Publisher
1895

Toronto, Canada.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED—A RAFT OF PINE LOGS ON Georgian Bay; apply at once to Box 20, CANADA LUMBERMAN.

WANTED FOR A MILL IN BRITISH COLumbia: 1 man to joint and one man to pack shingles. Apply to G. O. BUCHANAN, Kaslo, B. C.

DRY PINE.

WE HAVE ABOUT 1,500,000 FEET DRY PINE in 1, 2 and 3 inch common and better, prefer selling in bulk. Will quote freight rate to Buffalo, Chicago or Toronto on application. Correspondence solicited N.B.—Would like to correspond with consumers of hardwoods. ST. JOE ISLAND LUMBER CO., Sault Ste. Marie, Ont.

SPECIAL TO LUMBERMEN.

WITH A THOROUGHLY EQUIPPED PLANING Mill at Orillia, we solicit orders for resawing and planing of lumber, in any quantity; can match 26 inches wide; all work guaranteed first-class; prices on application. Address, NATIONAL BOX CO., Orillia, Ont.

Wante --Cedar Shingles

16 INCH AND 18 INCH, ALL GRADES, good quality, White Cedar. Would purchase mill output.

Give quantities both on hand and to be manufactured. J. G. STRAIT & SON, Wolcott, New York.

CHAIR STOCK WANTED.

A BRITISH FIRM IS PREPARED TO BUY for cash the output of a mill turning out shaped birch chair stock. The firm will take up to two or three million feet, partly in turned stuff and partly in band-sawn stock. The stock would be for shipment to London principally and would have to be accessible to the summer and winter liners. A representative of the firm will shortly visit Canada, and in the meantime correspondence should be addressed to "H. G.," care CANADA LUMBERMAN.

TO SPRUCE MANUFACTURERS

WANTED, FOR PERIODICAL SHIPMENT, lots of about 20 St. Petersburg Standards, seconds white spruce boards, 12ft. long and over; one inch x 7" to 11"; planed both sides and edges or both sides only. Quotations f.o.b. with particulars of shipping facilities to C. L. Jones, Post Office Contractor, Church Street, Islington, London, England.

TELEPHONE POLES FOR SALE

THE UNDERSIGNED HAVE IN STOCK, and ready for shipment, 2,000 Cedar Telephone Poles, all lengths, 25 to 60 feet. Prices quoted by mail or wire for car lots f. o. b cars this station or delivered at points required.

GEORGE & McGREGOR,
Killaloe Station, Ont.

FOR SALE.

THE ENTIRE CUT OF 190 OF SEVERAL mills on the Ottawa Valley of all number one white pine mill culls, strips and sidings, 1" to 3" thick, and also other grades. Shipments by water or rail. Write for particulars and quotations to A. F. BURY AUSTIN, Wholesale Lumber & Timber, Room 507 Merchants Bank Bldg., Montreal. Also spruce lumber of all grades.

FOR SALE

ONE STEAM POWER PLANING FACTORY; will sell cheap for cash. For further particulars apply to MITCHELL & McRAE, Powassan, Ont.

HARDWOOD WANTED.

BASSWOOD, 1, 1 AND 2 INCH; SOFT Maple, 1½, 2, 3 and 4 inch; Soft Elm, 3 inch; all largely 12 feet long. State lowest price f.o.b. cars. Address J. W. COLLINS, Queen's Wharf, Toronto.

STANDING TIMBER FOR SALE.

600 ACRES OF CHESTNUT, WHITE WOOD, Hard and Soft Maple, Red and White Oak, Black and White Ash, Basswood, Soft Elm, Beech; a little Hickory, Butternut and Cherry; two railroads running through property; 10M per day mill, 40x100 ft., planer and matcher, shingle machine and other machinery; large dwelling house and house for men; barn and sheds; large bearing orchard; plenty of water; splendid market for wood; best lot of hardwood in this western Ontario; good investment for enterprising man. Bismarck Station, M. C. R., West Lorne, P. O. I. C. SCHLEIHAUF.

FOR SALE

INTERNATIONAL CO. MILLS,

Newport, Vt.

Just across the line, on Lake Memphremagog; junction C. P. R. and B. & M.

Entire plant, consisting of saw mill, 36x96, 2 stories, dressing and box-mill, 50x180, brick boiler house, office and other buildings; complete equipment of machinery, six 80 horse-power boilers and two 200 horse-power engines, all in good running order.

The best location and best plant in Vermont for handling Canadian Lumber.

Cost $104,000 in 1883

Price $25,000.

RICKABY & CO.,
St. Johnsbury, Vt.

CURRENT TRADE CONDITIONS.

ONTARIO.

July and August are usually quiet months in the lumber business. Consumers have by that time supplied their nearby requirements, and dealers are content to relax their efforts to sell lumber and prepare for fall trade. Consequently it is often a period of temporary weakness in prices. It remains to be seen what the coming two months will bring forth. If prices are to recede, there should be some indications at the present time of such a movement. But, on the contrary, everything points towards higher prices. Our Toronto price list this week shows an advance of about one dollar on common, mill run and flooring. This is owing to the fact that no old stock is now coming in and the value of the new cut has been advanced by the heavy buying that has taken place.

The condition of the crops in Ontario is good and should do much towards maintaining the degree of general prosperity now prevailing, in which case lumber will continue to be in active demand.

Hardwood lumber is showing exceptional strength. The light production this season is apparently recognized by buyers, who are in almost every case meeting the manufacturer's price. Basswood is a very scarce article, and any manufacturer having a quantity which he desires to market should make the fact known. Dealers are meeting great difficulty in finding a supply to fill orders. In Toronto 1½ and 2 inch basswood has sold as high as $26 per thousand. White ash is also wanted at higher prices, and elm is in good enquiry.

QUEBEC AND NEW BRUNSWICK.

The spruce lumber market is gradually strengthening. Clapboards have been bought up as fast as manufactured, and if the demand continues there will be very little stock available for the late fall and winter trade and a further appreciation in price may take place. Manufacturers report numerous inquiries for British deals, which bring about $14 per thousand alongside vessel for a cargo of about 50 per cent. 7 and 8-inch, 15 per cent. 11-inch, and balance 9-inch x 3-inch. SouthAmerican lumber is worth $14.50 per thousand with 15 per cent. 12-inch and 50 per cent. 6-inch. Some sales of deals for shipment to France have been made recently. Nova Scotia spruce scantlings and boards are finding a ready market at $8 to $9. It is estimated that the production in Nova Scotia is sold up to September, and as the mills usually cease operations about October 1st, there will be very little stock to be carried over the winter by manufacturers. The tendency of prices is higher, owing to the greater cost of production, but it is probable that they will remain at about the present level, as a further advance of any account might curtail the demand. Spruce prices are now higher than pitch pine at points of production. Cedar shingle prices have not weakened in the least. Extras are being being sold at $3.50 to $3.60, clears at $3 to $3.10, and second clears and saps at $2.40 to $2.50, Boston delivery.

MANITOBA AND BRITISH COLUMBIA.

The outlook for crops in the North-West could scarcely be better. The wet weather of a fortnight ago has given place to favorable harvesting weather, and busi-

ness generally has improved in response to better conditions. There is much building in progress and lumber is going into consumption actively. Several advances in prices have been made. Under the new white pine list, first common pine boards are quoted at $25 for 12-inch and $24 for 8 and 10-inch, while the corresponding prices for second grade are $20 and $19. There has also been an advance of $1 per thousand in the wholesale price of British Columbia fir lumber, and of $2 per thousand in the price of cedar. The higher price of British Columbia cedar shingles which went into effect two months ago have been maintained without difficulty. The movement is quite brisk and the mills are behind with orders.

UNITED STATES.

Farmers are now busily engaged with their crops, and for that reason are not purchasing lumber in any quantity. The consumption for building purposes in the cities is as heavy as ever, the record of building operations for May showing a substantial gain over the corresponding month of the previous year. The movement of lumber, taken as a whole, is entirely satisfactory. The eastern requirement is large, and notwithstanding the labor troubles in the anthracite mining district, a considerable quantity of lumber is finding a market there. A report just received from Pittsburg states that the outlook is for an early advance in the price of lath. Stock is more plentiful in eastern wholesale centres than it has been for months, but there is still a scarcity of some grades owing to the fact that dealers have not yet been able to get their lumber shipped from the mills. At Buffalo and Tonawanda slight advances have been made on some of the better grades within the past week. No. 1 and No. 2 barn in 12-inch has been advanced 50 cents. In Chicago dealers are experiencing greater competition than earlier in the year, in consequence of which prices have been shaded in one or two instances. A cargo of common inch pine, practically No. 2, but with 10 per cent. of No. 1 and 15 per cent. of No. 3, was sold last week from $17.50 to $18. Piece stuff is reasonably firm at $15.50 for short and $17.50 for long. Spruce lumber is strong with the exception of small randoms, the demand for which has been curtailed by the recent strikes in the New England States, which have interfered with the class of building in which they are used.

GREAT BRITAIN.

The lumber market of Great Britain remains steady. The volume of business is not unusnally large, but it is encouraging to learn that Canadian spruce and pine lumber has held stronger than almost any other class. Cargoes of spruce have been sold at £7 10s to £7 12s 6d c. i. f. Liverpool for New Brunswick stock. The former price is for inferior specifications and the latter for the usual proportion of 10 per cent. 3 x 11. At recent auction sales high prices were obtained for spruce, third quality bringing £9 10s and fourth quality £9. What effect the postponement of the Coronation celebration will have upon the lumber market is yet unknown, but it has involved considerable loss to persons who had invested heavily in undertakings of various kinds.

Accurate figures have been compiled showing the reduction in the log production in Sweden last winter. The total number of logs taken out by one hundred of the leading firms was 18,930,430, as compared with 31,735,503 in the previous winter. This is a reduction of about 40 per cent., which, taken in conjunction with the lessened quantity of lumber for export from Canada to Great Britain, should cause an all-round advance in prices. The fact that freight rates are so low is an indication that there is no great quantity of lumber awaiting shipment. A steamer has been chartered at 30s from St. John, N. B., to Liverpool, which is about the lowest rate on record.

STOCKS AND PRICES.

Extra cedar shingles are selling at $2.80 delivered in Chicago.

Owing to the water rising at St. Francis, N.B., a number of cedar logs were carried away.

The Newville Lumber Company, of Parrsboro, N.S., shipped 171,381 feet of scantling to Vineyard Haven last week by the steamer St. Bernard.

The steamer Mechamician sailed from St. John, N. B., last week for Liverpool with 1,500 standards of deals and a quantity of box shooks and pulp.

All the logs cut on the St. John river and its tributaries are now believed to be in safe quarters except 3,000,000 feet for Stetson, Cutler and Company.

It is reported that the Cook-Lummis Company have sold their cut, estimated at over 25,000,000 feet, to Mershon, Schuette, Parker & Company, of Saginaw.

The steamer Inishowen Head sailed from Montreal last Saturday for Davenport and Plymouth, England, with a cargo of timber and deals for the Imperial Government.

Eddy Bros. & Company, of Blind River, Ont., are reported to have sold the Norway lumber in their stock to Walworth & Neville, of Bay City. It is estimated at 4,000,000 feet.

The Tobique Manufacturing Company, of Plaster Rock, N.B., have shipped in the past two weeks fifty cars of lumber. Their cut this season will be about 5,000,000 of spruce and 25,000,000 shingles.

McArthur Bros. & Company, of Little Current, Ont., are operating their mill day and night, cutting their own stock and about 2,000,000 feet for the Edward Hines Lumber Company, of Chicago. The mill will cut about 30,000,000 feet this season.

L. H. Swan & Company, of North Tonawanda, have bought the balance of the stock, 750,000 feet of white pine, which was purchased by Montgomery Bros., of Buffalo, from the Clark-Swan-Jackson Company. Swan & Company have also bought the remainder of Shepherd & Morse's stock of white pine, nearly 1,000,000 feet.

N. N. Wright & Company have been cutting 5,000,000 feet of logs at Cutler, Ont., for Frank Perry, the stock being sold to E. B. Foss & Company, of Bay City. About 5,000,000 feet will be cut for Pitts & Company, which has been purchased by Prescott & Company, of Cleveland. The Spanish River Lumber Company's mill will cut 16,000,000 feet for Foss & Company, of Bay City.

DOORS AND MOULDINGS.

A large buyer of Canadian white pine doors and mouldings is open to contract with a mill for their entire output of No. 3 and 4 qualities of doors and all their mouldings during 1902. Write in first instance to "Empire," CANADA LUMBERMAN.

PRICE OF B. C. SHINGLES.

VANCOUVER, B.C., June 23, 1902.

Editor CANADA LUMBERMAN:

DEAR SIR,—I notice in your weekly issue of June 4th, that a correspondent who signs himself as "One Interested" takes objection to my letter in your monthly edition of June in relation to the price of B.C. shingles in Ontario. Your correspondent is quite correct in stating that the prices were advanced 15 cents a thousand about April 1st. Now, while this statement is quite right in this respect, at the same time it is a fact, which I have no doubt all the manufacturers in B.C. very much regret, that practically all the shingles which have been sold so far in Ontario this year have gone on the market at last year's prices, and I have very grave doubts if more than a few car loads have been sold at the advanced price. The simple reason of this is that about all the mills had contracted their shingles before the advance at the old price. This is, of course, unfortunate for the manufacturers, but it is nevertheless true.

Yours truly,

S. H.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN).

The June activity in the local lumber market was fairly well pronounced. The railway report a good movement of lumber to Montreal for export, and consignments for points in the States are numerous. While the mining and other industrial strikes across the line had a depressing effect on the lumber trade with the New England States, the demand from other States comprising new territory is quite strong.

Generally speaking, the business can be said to have a buoyant tone. The voice of the chronic kicker is heard in the land, but the majority of the mill men and operators speak well of the present and hopefully of the future. While prices have not advanced they have not declined, and it would appear as if they had reached a limit. Be this as it may, the trade does not seem to fear an early decline. Inquiries for good stock continue to roll in with every mail and there will be "doings" when the present season's cut is ready for shipment.

Mr. George H. Fowler, Lumber Agent of the C.P.R., reports a brisk movement of telephone and telegraph poles, a movement in advance of that of previous years. From points on the Pontiac and Gatineau branches and Buckingham, Arnprior and Ottawa the "long fellows" are being shipped in large numbers.

Other stock that is moving freely from points in the vicinity of Ottawa is wood pulp and lath. The wood pulp is bound for mills in New York State. The lath is consigned to points in Pennsylvania and Ohio. While this year's cut of lath is being handled in large quantities, shippers are still busy with last year's cut. There is a brisk movement of lath from Rockland. The Interior Lumber Company, of Pittsburg, Pa., last fall closed a deal with the W. C. Edwards Company for two millions and a half of lath cut at the Rockland mill. This stock is being shipped now. J. R. Wheeler, a lumber operator of the same American city, closed a big deal with the Hawkesbury Lumber Company for a large stock of lath, which is now being shipped from the Hawkesbury yards.

"Everything is moving along O.K., there's no chance for a break in prices." This parting shot from a well known operator sums up the situation.

The tributaries of the Ottawa are full of logs these days, and the main stream has received several of the drives. A large quantity of pulp wood is in sight ready for the saws. The Rouge river, which enters the Ottawa on the Quebec side at Calumet village, is literally floored with logs and pulpwood. The logs belong to Mr. George H. Perley, who operates a large mill night and day at Calumet. This mill was formerly operated by the Ottawa Lumber Company. Last winter Mr. Perley overhauled it and fitted it up anew. The pulp wood on the Rouge river belongs to the Riordan Paper Company, of Hawkesbury. Mr. Thos. Mackey, M.P., who was in the city this week, reports the mills in and about Pembroke doing a rushing business. Steady rains have brought along the drives which were in the early part of the season accepted as abandoned for this year at least. The same report applies to the Coulonge, Gatineau and Black rivers.

Mr. W. A. Sheriff, slide master at Chats Rapids, states that fully two-thirds of the present season's cut of square timber has passed down the Ottawa river en route to Quebec. He figures that fully 590,000 cubic feet of square timber has passed down in cribs, with 250,000 feet to follow, making 840,000 feet to traverse the water route this summer. So far 478 cribs have been moved.

This year's movement of square timber has been the best and largest in recent years. The timber taken out by Mr. Hurdman is, according to knowing ones, of the first quality. Much of the timber is being handled by Dobell, Beckett & Company for export to England. It is there used largely in pattern making.

The square timber trade has an advantage over the saw mill business, as it gives quick cash returns. The monetary equiv-

alent leaves Quebec the day the timber arrives. A delay of a year or so often confronts the man who saws his lumber and allows it to season. He has also to run the risk of seeing his logs hung up for a considerable period if the weather conditions are not favorable.

The St. Anthony Lumber Company, operating at Whitney, on the Western or Parry Sound division of the Canada Atlantic Railway, is building a branch railroad 15 miles in length. It will run from Opeongo to Whitney and will be used for the purpose of conveying logs from the company's limits to the mill. The Canada Atlantic Railway Company is building 25 flat cars at its car shops in Ottawa for use on the new road. This is the second distinctive lumber road on the western division, Mr. J. R. Booth having one extending from Madawaska to his limits. He is thus able to convey logs during the winter season and the St. Anthony Lumber Company will likely follow suit.

A few days ago 111 cribs of timber belonging to Munro & McCool, of Pembroke, and valued at $150,000, were seized at a small village on the St. Lawrence river near Quebec City. The seizure was made at the instance of four river men who claimed they were dismissed at Ottawa while a balance of $85 was due them. As the firm was anxious to rush the timber to Quebec the costs of the seizure and the back bill of wages were paid and the release of the lumber thus secured.

GILMOUR & COMPANY, LIMITED

TRENTON, CANADA

THE BOSTON MARKET.

Spruce lumber is in better request at Boston for schedules. For a couple of days the past week orders were very brisk, with an improved inquiry all the time. Prices are thoroughly maintained on frames, with the mills having a good many orders. The lots of small and short random recently shipped here, that had to be sold, have been pretty well worked off. Such randoms are still weak, however: Ten and 12 inch dimensions, $20 to $22; 9-inch and under, $19 to $20; 10 and 12 inch, random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9-inch and under, 10 feet and up, $16.50 to $18; 5-inch and up, merchantable boards, $17; matched boards, $19 to $20; out spruce boards, $13.50 to $14; bundle furring, $17 to $18.

Hemlock lumber is very firm, with offerings small; Boards, 12, 14 and 16 feet stock, $15 to $15.50 for good eastern; random eastern, $14 to $14.50; Pennsylvania, No. 1, $16 to $17.50; No. 2, $15 to $15.50.

All the firmness in white pine is continued: Uppers, 1-in., $75 to $80; 2½ and 3 in. $80 to $85; 4-in. $85 to $88; selects, 1 to 1½ in. $68; 2-in. $69 to $70; 2½ to 3 in. $74 to $76; 4-in. $79 to $80; fine common, 1-in. $60 to $63; 1¼ to 1½ in. $64 to $66; 2-in. $68 to $70; 2½ and 3 in. $69 to $71; 4-in. $80; barn boards, $23 to $33; coffin boards, $27 to $32.

Hardwood lumber continues in good demand, with the position firm: Quartered oak, $64 to $66; plain oak, $41 to $45; common and rejects, $20 to $25; whitewood, $42 to $43; sap and common, $30 to $35; brown ash, $41 to $44; white ash, $43 to $46; maple, $28 to $30; end-dried white maple, $38 to $42; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

Shingles continue firm, with the supply yet small. The demand is not large but well up to the supply: Extra cedar, $3.60; clear, $3.10; second clear, $2.50; extra No. 1, $1.90 to $2; Washington and British Columbia red cedar, 16-inch, five butts to 2 inches, $3.75 to $3.80; 18-inch, $4.25 to $4.50.

Clapboards are yet in small supply with a very firm market: Clear, $36 to $38; second clear, $33 to $35; extra No. 1, $24 to $26.

Laths are steady at $3.15 to $3.20 for 1⅝-inch; 1½-inch $2.95.

The flour and saw mills of the Wolverton Milling Company at Wolverton, Ont., were totally destroyed by fire last week. The loss is about $25,000.

The assignment is reported of A. Gagnon & Company, lumber and general store, Victoriaville, Que.

WANTED

MESSRS. JOSEPH OWEN & SONS, Ltd., of Liverpool, Eng., are open to treat for regular supplies of large quantities of HARDWOOD LUMBER, and will be glad to hear from hollers who have to offer WHITE ASH, WHITE OAK, SCALY BARK and SECOND GROWTH HICKORY, POPLAR and WALNUT, in logs, planks and boards, also primefresh BIRCH LOGS of large dimensions.

VANCOUVER, B. C.

Another Little Mill

There will be over a million feet of sawn lumber used in this one plant for construction only; over 30,000 lin. feet of piling, besides rock foundations; two car-loads of shingle machines only; over 7 miles steam pipe 1 1-2 inch and up in diameter. A summary of all the material that will be used in the construction of this plant shows that there will be over 320 car-loads, or 21 trains of 15 car-loads each.

With all our past experience in the shingle business, of which we make a specialty, and with all the latest and best improvements in machinery and mill construction, we expect it to be the most complete and up-to-date mill in North America, where shingles can be made better than in the ordinary mill.

The above plant will be in operation about the first of June, and although this mill will have a daily (24 hours) capacity of 1,250,000 shingles, the dealers and consumers need not be afraid of any particular surplus, but can rest assured that there will be one firm on the coast manufacturing red cedar shingles from whom they can get their wants supplied in a hurry with that old reliable "Hastings Brand" so much talked about.

CUSTOMERS' ATTENTION. — Please take notice that on the 1st day of January, 1902, all arrangements with the Pacific Coast Lumber Co. of New Westminster, B. C., for the handling of any of our shingles ended. Until further notice our authorized general agents will be Mr. Jas. Twitchell, Clinton, Ont., for Ontario, and Mr. Samuel Ashfield, of Winnipeg, Man, for Manitoba and the North-West; therefore, orders for straight or mixed cars sent through the above agents or direct to us will have equally prompt and careful attention.

A MODERN COAST SAW MILL.

One of the most up-to-date saw-milling establishments on the Pacific Coast is that located at Chemanus, B.C., and owned by the Victoria Lumber and Manufacturing Company. This company was organized in the year 1888, the officers being : J. A. Humbird, president ; T. J. Humbird, treasurer ; W. H. Phipps, secretary ; and E. J. Palmer, manager.

When operations were commenced twelve years ago they purchased the saw mill owned by Mr. H. Croft, which had a daily capacity of 40,000 feet of lumber. This mill was operated until a new one was erected a year later. Chemainus is situated on a bay of about 300 acres of water area, which, from its shape, is called "Horseshoe" bay, with a good anchorage in from 20 fathoms at the entrance to five at the wharves. It is easy of access, yet sheltered from all winds, and with ample wharf accommodation affords excellent shipping facilities either by rail or water. It is about fifty miles from Victoria, B.C., on the Esquimalt and Nanaimo Railway.

The principal business is for export, and at the wharves may be seen vessels loading for all quarters of the globe. Shipments are made principally to Australia, South America, Africa and the United Kingdom. The excellence of the company's product is so well known and recognized that the directors are now considering the advisability of engaging in the Eastern trade in Manitoba and the North-West Territories.

The company are represented by R.P. Rithet & Co., Limited, Victoria, B. C., and Welch & Company, Incorporated, San Francisco. These firms practically dispose of the entire output to foreign markets.

The company is the largest lumber concern and largest lumber exporter in British Columbia. Two years ago it was decided to double the capacity of their mills, and a new addition was erected in order to meet the increasing demand for export.

With the rapid improvement in machinery which has taken place of late years, a modern mill seems to be the climax of invention. Advantage was taken in building to introduce the latest and most improved machinery, and the mill is without doubt one of the best equipped and largest on the Pacific Coast. It has a capacity of 200,000 feet per day of ten hours and can cut timber up to 140 feet in length. Following are the dimensions and list of machinery installed. The mill is 544 feet long by 72 feet wide, and at the front end extends 436 feet ; the rear end is 92 feet wide and extends 108 feet. It is equipped with two Allis band mills, one Hill steam nigger, one Simonds' log turner, one Wickes' gang, two gang edgers, two gang slab slashers, one patent trimmer 50 feet long, one timber planer

VIEWS OF THE VICTORIA LUMBER AND MANUFACTURING COMPANY'S OPERATIONS, CHEMANUS, B.C.

capable of planing a stick 30x30 and 130 feet long, conveyors, carriages and a complete equipment of saw mill machinery usually found in a well appointed mill.

The boiler room is a separate stone building 64 feet square containing fireproof doors, and is built as neary fireproof as possible. There are four tubular boilers and four two flue boilers. The engine room is 20 x 140 feet, containing two slide valve engines 26x30 inches diameter now used for operating the mill machinery ; one upright engine 14 x 22 inches used to operate the electric light plant, and two Worthington No. 10 pumps used principally for fire protection. A new twin slide valve engine 22 x 28 inches is now being installed. This will be used to operate the mill machinery, taking the place of the two slide valve engines now used for this purpose.

The machine shop is 20 x 140 feet and comprises large lathes, metal planers, bolt cutter, drill presser, hydraulic wheel presser, etc. The filing room is 20 x 140 feet, having automatic grinders and power rollers, and is up-to-date in every way. The filing room, machine shop and engine room are under the same roof.

The planing room is 92 x 108 feet and has three planers, band re-saw machines, gang edgers and cut-off saws. The lath mill has a capacity of 25,000 to 30,000 lath per day of ten h urs.

Nearly all the machinery in the mill was supplied by the Wm. Hamilton Manu acturing Company of Peterborough, through their Vancouver agency. The plant throughout is lighted with electricity, a dynamo of 600 candle power being used.

The entire management of the mill is carried on under the supervision of Mr. E. J. Palmer, to whom credit is due for the complete system which prevails in every department.

A gallery runs the length of the mill, thus affording visitors an excellent opportunity to see the mill in operation. The company have their own timber limits, covering an area of 120,000 acres, consisting of Douglas fir and cedar. Three logging camps are operated in the summer and two in the winter. All operations are carried on by steam power.

An idea of the quantity of plant supplies, etc., required may be gathered from a glance at the view of the logging railway showing a train of cars just starting for the mill eight miles distant, with logging camp in the background. Hoists weighing from 15 to 20 tons are used in the woods to place logs in position, to load them on the cars, and finally to dump them into the water, while smaller ones load the lumber into the ships and assist to stow it in the hold.

The trees are cut with cross-cut saws into lengths from 20 to 150 feet long, hauled out by steam donkey engines into a landing and loaded onto logging trucks. They are hauled down to the mill by heavy locomotives of standard gauge, from where they are unloaded into the mill pond and hauled up into the log slip by an endless chain with steel saddles. Some are cut up into timber by the band saw alone, others being cut into cants, carried over by endless chain to the gang, and then cut into any size desired from small timber to flooring. The lumber is carried on line rollers to the different patent trimmers and cut-off saws. The small timber goes to the planing mill and is manufactured into siding, ship-laps, flooring, etc., the remaining timber being carried to the wharf.

The company employ about 150 men in and about the mill itself, while the logging camps, etc., outside take another 150 hands, the total monthly pay roll amounting to the large sum of $20,000.

WINNIPEG BRANCH OF THE RAT PORTAGE LUMBER COMPANY.

The Rat Portage Lumber Company are represented in Winnipeg by Mr. John C. Graham, who has been associated with the company for five years. Although the yard at Winnipeg was started less than two years ago, the business has grown to large proportions. The office is a two-story building on Point Douglas avenue, and is finished in first class style. The lumber shed is 420 feet long and 210 feet wide and is capable of housing over one million feet of dressed lumber. It is divided into numerous different compartments and these are again subdivided. The yard furnishes accommodation for eighteen cars. A spur from the C. P. R. pro-

WINNIPEG BRANCH OF THE RAT PORTAGE LUMBER COMPANY.

vides the necessary shipping facilities. The yard is well planked and in every way provided with the necessary equipment to enable orders to be executed promptly.

In addition to this yard the company conduct a wholesale sash and door factory situated west of Main street and facing the C. P. R. track. The building is 120 × 40 feet and two-storeys high. A large stock of sash, doors and mouldings is constantly carried in stock.

The annual turn-over at the Winnipeg yard is over seven million feet of lumber, in addition to a large quantity of sash and doors and red cedar shingles. While a specialty is made of red and white pine, there is also carried in stock an ample supply of British Columbia fir, cedar and spruce, also basswood, tamarac, native spruce, maple flooring, elm and birch.

The stables of the company provide accommodation for sixteen horses. They are lighted by electricity and designed in every way to meet the requirements of the company.

Prior to assuming the management of the Winnipeg branch of the Rat Portage Lumber Company, Mr. Graham had gained a wide experience in the lumber business, he being for ten years manager of the sales department and a member of the firm of Graham, Horne & Company, of Fort William, Ont.

THE KEEWATIN LUMBER AND MANUFACTURING COMPANY.

The Keewatin Lumber and Manufacturing Company, Limited, is the pioneer company of the Lake of the Woods District, having begun operations at Keewatin in the fall of 1879, when the railway was only built from Winnipeg to Cross Lake, and having to haul the machinery from there to the mill, a distance of 40 miles. The company built in 1880 sever-

MILLS OF THE KEEWATIN LUMBER AND MANUFACTURING COMPANY, KEEWATIN, ONT.

al trestle bridges for the railway in the vicinity of Keewatin, but were not able to ship any lumber west till the spring of 1881. Their sawmill, which is driven by water power, has two band mills with capacity of 20 million feet of lumber for the season, and this year it is expected that this amount of lumber will be produced, besides a large quantity of lath and shingles. They also have an extensive planing mill which has been running night and day since March last up to its full capacity. Shipments for May this year amounted to 2,317,000 feet, fully 80 per cent. of which was dressed. They deal extensively in pickets, posts, telegraph poles and piling, and all the product is shipped to Manitoba and the Territories.

The company has extensive limits tributary to the Lake of the Woods, on Canadian territory, besides a large amount of standing timber in Northern Minnesota which can be floated to Rainy River, rafted there, and towed across the Lake of the Woods to the mills, by their own tugs.

Two years ago the company acquired the retail yard and property of the late firm of Dick, Banning & Company in Winnipeg, and under the successful management of Mr. Geo. A. Lister, are doing a large business there, handling, be-

MILLS OF THE KEEWATIN LUMBER AND MANUFACTURING COMPANY, KEEWATIN, ONT.

sides their own products, British Columbia lumber of all kinds, shingles, mouldings, building paper, sash and doors, etc. They also have a yard at Portage la Prairie, Man., under the management of Mr. William Armstrong, and their representative on the road is Mr. Chas. Burley, of Portage la Prairie, who has been with the firm since 1886.

The head office of the company is at Hamilton, Ont., the president of the company being Mr. Richard Fuller, of Hamilton. Mr. John Mather, of Ottawa, is vice-president and managing director, and the manager is Mr. R. A. Mather, residing at Keewatin.

ONTARIO FORESTRY REPORT.

In the annual report of Mr. Thomas Southworth, Director of Forestry, for the year 1901, the forestry situation in Ontario is reviewed in an able and instructive manner, apparently the main object being to inspire the public to a proper appreciation of the necessity of cultivating the growth of trees. Under the caption of "Farm Forestry", Mr. Southworth gives the areas of woodland in the settled portions of the province, excluding the newer districts. These show that thirty of the counties have less than 25 per. cent of their total area under timber. The figures showing the extent and percentages of wood land of each province are given below:

	Total Woodland in Acres.	Percentage Woodland.
Essex	105,685	23.59
Kent	77,672	13.75
Elgin	91,740	20.49
Norfolk	91,445	22.84
Haldimand	44,431	15.80
Welland	23,690	10.04

FORESTRY ON CROWN LANDS.

The section of the report dealing with private forestry on Crown lands is of considerable interest to lumbermen and is copied herewith:

There are large areas of timbered land under license, which, owing to the character of the soil, are not likely to be utilized for general farming purposes. Some of these limits are being operated by the licensees on conservative forestry principles, that is to say, an attempt is being made to regulate the annual cut so as to approximately equal the annual growth, as far as the special conditions in each case will permit. It is not pretended that these forests are operated with a view to their greatest productivity. Such an undertaking in the mixed forests of Ontario would require the removal of many of the useless or less valuable trees to make room for more profitable varieties. In some cases the more valuable kinds of timber stand so thickly on the ground that extensive thinning would be necessary to secure the maximum of production. In the intensely worked forests of Europe these methods are pursued with great profit, but conditions are so widely different here that such a course would be impracticable or unprofitable, which is much the same thing in forest management. Many sorts of trees and young saplings, which in Europe have sufficient commercial value to make their removal from the forest directly remunerative, have here no value whatever, and hence the thinning out process would entail considerable expense, with no immediate return, and it is doubtful in many cases whether the future gain from the increased growth of the remaining trees would at all approach the cost incurred.

One case came under the observation of the writer in which a "second growth" of young pine was standing so thick as to impede the development of all the trees. It was a forest of long, slender poles, growing so slowly as to defer indefinitely the time when such of them as succeeded in dominating and killing out their competitors would attain the dimensions of merchantable timber. The license-holder was fully aware that in order to enable these pines to assume the normal rate of growth, a considerable proportion of them should be removed, but he also realized that at the then price of red pine the outlay would be unprofitable. In another instance a forest contained considerable quantities of hemlock of good size. This limit was under the old form of license, issued prior to 1888, when all woods were included in the license. The price of this wood was at that time so low that it was not advisable to cut it, and as the output was practically restricted to pine, this tract under operation was gradually becoming a hemlock rather than a pine forest. If the hemlock could have been harvested in such a way that the bark could have been sold for tanning purposes, it would have paid to cut it, but from the location this was impossible. There were no local markets, and no roads passable for wagons on which to haul it to a shipping point. Since that time the price of hemlock timber has advanced sufficiently to make the cutting of the hemlock on this limit profitable, but the bark, which has a commercial value, is not saved, but wasted, and to that extent proper forestry methods are not followed in this case. In this connection the paper on tannin, by Mr. DeCew, appearing elsewhere in this report, will be found of interest. It is true that the making of hemlock extract was condemned by a Parliamentary Committee in 1868, but in the cases under investigation at that time the hemlock extract was manufactured from the bark, while the timber was wasted, the logs being left to rot in the bush. It is doubtless better to sell the bark direct to the tanner where the location of the forest renders this practicable, but when this cannot be done it seems to the writer that the installation of portable extract plants is desirable, if they can be obtained and operated at a cost sufficiently moderate to allow a reasonable profit on the sale of the extract.

It does not seem to be in keeping with the regard to the economy in production characteristic of the modern industrial system, that so considerable an item of our raw material as hemlock bark should be wasted. The importance of hemlock to our tanning industry was shown by the legislation of 1899, by which the exportation of hemlock bark was prohibited, yet large quantities of it are yearly wasted by leaving it on the logs cut in territory remote from a market.

Another serious problem affecting our forestry operations lies in the disposal of the waste material left by the lumbermen. This waste, comprising the tops and branches of the felled trees, constitutes a constant and serious danger, owing to its readily combustible character, which renders it the cause of many forest fires. Its presence also to some extent militates against the proper seeding of the cut-over area. Its removal would necessarily entail some expense, and without some experience it is difficult to determine whether the cost would be offset by the resultant advantage to the forest, in the lessening of the fire risk, and the more rapid seeding and reclothing of the territory from which the waste is removed. In this, as in many other cases, the experience of older countries affords no guide for us. The tops and branches left on the ground after logging have here no commercial value whatever, and to carry them away from the forest would be a very costly proceeding.

It is reported that in some cases in Michigan this waste has been removed successfully by fire and at a cost of only ten dollars per square mile, and if this could be done here there is no doubt whatever that it would be profitable and in every way advantageous. Several lumbermen to whom the writer has referred the matter have expressed doubts of the practicability of the plan. So far as I know it has never been tried in Canada except in the case of one operator, in which the circumstances are somewhat unusual. The Rathbun Company, of Deseronto, in some of their eastern Ontario limits, have burned the waste on their cut-over territory for several years, but as the limit is a mixed forest of coniferous and hardwood trees and the company cut trees of all sorts, the waste is not so inflammable as would be the case where only conifirous trees are in question, and the fire can more easily be controlled.

In the Michigan cases referred to the tops and branches were not piled up, but a gang of men with tin coal oil torches either in the early spring as soon as the snow had melted and before the ground had got dry, or else in the fall after heavy rain or the first fall of snow, set fire to each lot of debris as it was left by the loggers. No attempt was made to burn the larger limbs, or the upper part of the trunk, but the needles and small twigs that constitute the fire danger were burned off, and no great difficulty was experienced in controlling the fire.

If in thus burning the refuse the pine "duff" or carpet of needles, existing in an old pine forest to the depth of several inches in some cases, were burned it would greatly enhance the value of the operation. In the investigations of the Forestry Commission in 1897 and 1898 it was noticed that the crop of young pine was much more prolific and vigorous when fire has followed lumbering operations, provided that it had not been repeated so as to destroy the young growth after the removal of the seed-bearing trees. This was no doubt largely due to the failure of the pine seeds to reach the soil owing to the depth of the forest litter. There is little doubt that it would be found that in the places where the lumbering waste was burned off, the crop of young pine trees following a seed year would be much larger than if the forest litter had been allowed to remain.

INQUIRY FOR WOODEN HOUSES.

A gentleman in Hamilton, Bermuda, writes the CANADA LUMBERMAN that he has a client

MR. H. G. ROSS, Vancouver,
Secretary-Treasurer of the British Columbia Loggers' Association.

who desires to erect several small wooden houses of about three or four rooms each, to rent to the West Indian mechanics who work on Imperial works. Rough boards on roof, on which corrugated iron roofing is placed, would be required, but all other parts to be as usual in cheap construction. He is of the opinion that suitable portable houses might be obtained in Canada, and desires to get into communication with manufacturers of such houses.

The party states that the Government of Bermuda will shortly invite tenders for widening and deepening the channel into St. George's harbor at Hamilton, which will cost about $500,000, also that a scheme for a light railway through the colony for defence purposes is under consideration by the Military authorities.

NEW KINKS IN SAWING METHODS.

The hardwood industry and, in fact, saw mill men in any line, are indebted to G. Von Platen, of Boyne City, Mich., for an idea which will save timber and produce better lumber.

Often a hardwood log will contain a bad split at one end, that if it is not followed by the saw, will ruin or seriously depreciate the value of a number of cuts. Every mill man has doubtlessly had the same difficulty in this respect. Sometimes it is necessary to put a man from the log deck or elsewhere back of the log in order to let the sawyer know when he has turned the log into the proper position.

Mr. Von Platen saw plainly that if the sawyer could only see both ends of the log at the same time it would be of great assistance in both expediting work and improving the quality of the product. Asking himself the question, Why can not that be done? he answered it with a mirror placed at the other end of the track from the sawyer's position, so that looking into it the sawyer could see not only the end next to him, but the other end as well.

This mirror is nearly back of the bumpers, practically on a line with the saw. It need not be more than 2x3 feet in size, the long way horizontal, and being once adjusted to the correct position the sawyer can see the exact position of any defect in the opposite end of the log with respect to the saw just as well as though he were there. When he first puts the log in place or when he wishes to turn it, he can see how any split there may be stands in relation to the saw, or he can tell in regard to heart defects.

To protect the mirror a heavy but course-mesh wire screen is placed a short distance in front of it between the glass and the carriage. This in no wise interferes with the view of the log and its reflection is soon not even noticed by the sawyer.

Mr. Von Platen says he has materially increased the amount of his product by the use of this simple device. He is not entirely altruistic in giving his invention to the public, for he tried to secure a patent on it; but finding that it was not capable of protection in that way, he decided to give the benefit of it to the hardwood fraternity.—American Lumberman.

LUMBER HORSES

A SPECIALTY

THE TELFER & CLIMIE COMPANY

19 St. Maurice Street, *MONTREAL*

To Purchasing Agents:

Corner 22nd and Centre Avenue,

CHICAGO, October 12th, 1901.

GENTLEMEN:

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO

THE CANADA WOOD SPECIALTY CO. LIMITED

ORILLIA, ONT.

THE BEST EQUIPPED FACTORY IN CANADA FOR WOOD SPECIALTIES.

MANUFACTURING AT PRESENT

Floorings, Mouldings, Spring Bed Frames Hand Rails, Etc., Hammoch Chairs,
Lawn Chairs, Handles, Broom Handles, Curtain Poles, Curtain Rings,
Dowels, etc., Veneers, Birch, Elm, Basswood, and Maple Cheese Box Hoops.

SPECIALTIES

Butter Dishes, 100,000 per day, Grocery Pails, Baskets, all Kinds, from Quart Berry to Bushel Basket.

Glad to make new friends, and to hold the old ones.

THE NEWS

—McMahon Bros. have started a shingle mill at Revelstoke, B.C.

—Considerable loss by forest fires was sustained last month in the vicinity of Amherst, N.S.

—The Northern Lumber Company have commenced rebuilding their mill at Pine River, Man.

—A new hardwood flooring machine has been installed by F. McGibbon & Son, Sarnia, Ont.

—W. M. Wellman has bought the lumber business of the late Robert Rolston at Killarney, Man.

—A. Shushock is announcd to have taken over the business of Mohr & Ryan at Killaloe Station, Ont.

—J. U. Dupuis & Company have registered as proprietors of a saw mill business at Hereward, Que.

—R. E. Gordon and J. E. Jamieson have formed a partnership in the lumber business at Arcola, N.W.T.

—Incorporation has been granted to the Powassan Lumber Company, of Parry Sound, Ont., with a capital of $20,000.

—John Dodds was killed recently in the shingle mill of David McGill at Hall's Glen, Ont., by being caught in a pulley.

—J. R. McConnell has leased the Victoria saw mill at Fredricton, N.B. R. J. Sheldon will manage the mill for Mr. McConnell.

—The Parrsboro Lumber Company will build a new saw mill in Newfoundland to replace the one destroyed by fire last month.

—The Hastings Shingle Manufacturing Company, of Vancouver, B.C., have opened a branch in Winnipeg, in charge of S. Ashfield.

—The Imperial Veneer Company, of Toronto, has been incorporated, with a capital of $40,000. The provisional directors are O. M. Hudson, E. Bayly and E. A. McHolm.

—The Hartwell Lumber Company, of Chicago, have opened an office in Midland, Ont. They have recently made large purchases of lumber in the Georgian Bay district.

—Brown & Son, of Carleton Place, Ont., have sold the saw mill machinery in the old water mill there to Caldwell & Company, who will remove it to Lanark, where they are building a new mill.

—The machinery is being installed in a new saw mill at Lizard Creek, near Fernie, B. C., to have a daily capacity of 40,000 feet. Those interested are H. A. Canouse, H. Lever and H. Bentley.

—James Murphy, employed in the saw mill of Lequime & Powers at Midway, B.C., met his death on May 24th while driving logs in the Kettle River. It is supposed that he slipped and was crushed between the logs.

—David Ross, lumber manufacturer, Whitemouth, Man., has been succeeded by his sons, H. H. and J.W. Ross, and the business will be continued under the firm name of Ross Bros. & Company. Mr. Ross, sr., will enjoy a well-earned rest.

—One of the large boilers in the saw mill of the Ontario Lumber Company at French River, Ont., exploded on June 16th. George Webster, sawyer, and Hugh Campbell, fireman, were instantly killed. At the time of the accident the mill was shut down for repairs.

—Officers of the Muskoka Wood Manufacturing Company, Limited, Huntsville, Ont., have been chosen as follows: President, Dr. J. W. Hart; vice-president, R. J. Hutcheson ; secretary treasurer, H. Packwood. The company is preparing to begin the erection of a factory.

Samuel R. Conner, logging contractor for the Brunette Saw Mill Company, of Westminster, B.C., has applied to the British Columbia Legislature for power to dam the Brunette River and the Barnaby Lake, in order to render them suitable for rafting and driving logs.

—The Hammond River Lumber Company, Limited, of Hampton N.B., is applying for incorporation to manufacture lumber and timber products. The capital stock is placed at $40,000. The provisional directors include George H. White, of Sussex, and E. Flewelling, of Hampton.

—Application has been made for the incorporation of the Shives Lumber Company, Limited, with headquarters at Campbellton, N.B. The first directors are to be Kilgour Shives, Campbellton; Franklin Stetson, St. John; F. B. Cutler and G. C. Cutler, Boston; and John Cutler, of New York. The capital of the company is to be $750,000.

—According to the statement presented at the annual meeting of the Quebec & Lake St. John Railway, the freight carried by that road during the last fiscal year included the following : 10,900 cords cordwood ; 431 carloads square timber; 3,645 carloads sawn timber; 230 carloads ties; 179 carloads logs; and 988 carloads pulp and paper. The pulp and paper industry promises to greatly increase the revenue of this railway.

—It is reported that Alfred Dickie, of Lower Stewiacke, N.S., has purchased extensive timber areas in Labrador and that he will build a saw mill on Goose Creek, 120 miles from the Labrador coast. The region is unsettled and it would be necessary to take supplies and build living quarters and wharves before commencing the construction of the mill. Navigation on the stream is closed except between July and October.

—An interesting suit is now before the courts in Toronto. The Standard Chemical Company, of Toronto, leased the charcoal works of the Rathbun Company at Deseronto, the latter company agreeing to supply 66 cords of wood per week, of which 70 per cent. should be hardwood. The Chemical Company was to extract the chemical properties from the wood and to supply 85,000 bushels of charcoal monthly to the Deseronto Iron Company on the order of the Rathbun Company. The latter company claim that there was a shortage in the returned charcoal and that more than 70 per cent. of hardwood was used. The defendants claim that the shortage of charcoal was because of the inferior quality of the wood, hence the suit.

TRADE NOTES.

The Canadian Rubber Company has established a branch at Victoria, B.C.

An English journal, noting the increasing sales of Dodge wood split pulleys in England and her colonies, says these pulleys are made in Canada and are much superior to any wood pulleys made in the United States.

W. B. Mershon & Co., the Saginaw, Mich., builders of band-sawing machinery, are showing a letter which states that one of their band resaws, placed in the mill of the Bradley-Miller Co., West Bay City, Mich., in 1895, is cutting 216 feet of 12-inch stock per minute, doing first-class work.

The well known saw manufactures, Shurly & Dietrich, of Galt, Ont., suffered a severe loss last month by the complete destruction of their saw factory by fire. When discovered the fire had made such headway that it was impossible to save the factory. It is said that the loss is somewhat greater than the insurance, but no doubt this enterprising firm will rebuild immediately and in the meantime will make the best possible arrangements to supply the wants of their customers.

Lumber and Mining Suppiies

Our Specialty

Our particular business is the supplying of the Lumber and Mining Trade with anything and everything they require.

WOOD PULP DEPARTMENT

PROVINCE OF QUEBEC PULPWOOD ASSOCIATION.

The officers of the Quebec Pulpwood Association are putting forth their best efforts to induce all persons interested in the pulpwood business to become members of the association. It is hoped to secure the support of holders of timber limits, as well as pulpwood operators. The membership fee is $10. For the benefit of the trade we print below the constitution of the Association:

CONSTITUTION OF THE QUEBEC PULPWOOD ASSOCIATION.

1st. The object of the Association shall be to promote the interests and conserve the rights of those engaged in the pulpwood business or in the manufacture and preparation of pulpwood, to hold meetings of the members for the consideration and discussion of questions affecting those interests, and by union and co-operation to build up and foster the pulpwood business.

To inaugurate a uniform system of measuring and selling pulpwood to Canadian and American pulp and paper mills.

To assist in encouraging shippers to export only a good class of pulpwood so as to maintain a good name for pulpwood shipped from the Province of Quebec.

To encourage strict observance of contracts between producers of the wood, shippers of the same and the mills in Canada and the United States who consume it.

To look after the facilities for shipment of wood given by the railroads and water transportation companies.

To foster good-will between the shipper of the wood and the consumer and to be the means of removing differences between them.

2nd. Any person engaged in the pulpwood business, in the manufacture of pulpwood, or holding timber lands in the Province of Quebec, shall be eligible for membership.

3rd. Any person desirous of becoming a member of the Association may make application to the Secretary, and on payment of the proper fee shall immediately become a member of this Association subject to the approval of a majority of the members present at the next special or general meeting, expressed by a vote given by ballot.

4th. No member shall vote at any meeting of the Association who has not paid his fees, but a member of the Association who is entitled to vote and is not present at the meeting, may be represented by his partner, employee or a member of the Association to whom he shall give a proxy.

5th. Every member shall pay a fee of $10.00 on his joining or being elected to the Association, and afterwards, assessments proportionate to the number of cords of pulpwood made or bought by each member, which shall be deemed necessary, fixed at so much per cord of wood and levied by the Board of Management to pay the expense of carrying on the work of the Association. Where more than one member of a firm are members of the Association, then an assessment on the firm's operations shall only be necessary, exclusive of the subscription of each member of said firm joining this Association.

6th. Any member who may wish to withdraw from the Association may do so by giving notice to the Secretary and paying up his subscription to the expiration of the year then current, together with all arrears of assessments.

7th. The affairs of the Association shall be managed by a Board of eleven members elected at the annual general meeting of the Association, who shall hold office for one year or until their successors are appointed. The Board shall meet at such time and place, and so often as they may be called together by the President, or on the requisition of three members of the Board, or five members of the Association, by giving five days notice thereof and stating the purpose for which the meeting is called.

8th. At the first meeting of the Board of Management in each year, a President and Vic-President shall be elected, who shall hold office for one year, or until their successors are appointed, and a Secretary and Treasurer, who need not necessarily be a member of the Association. The Secretary and Treasurer's remuneration and amount of security to be given by him shall be fixed by the Board.

9th. The annual general meeting shall be held in the City of Sherbrooke, on the second Tuesday of April, in each year, or as the Board of Management shall decide, and notice thereof shall be sent to each member, at his registered address, at least ten days before the date fixed for such meeting.

10th. The Board of Management shall have power to call special and general meetings at such times as they see fit, the object for which the meeting is called to be stated in the circular convening the same.

11th. Seven members present shall constitute a quorum for the transaction of business at all meetings of the Association and four at meetings of the Board of Management.

12th. In the event of any dispute as to the intent or meaning of any of the sections of this Constitution or of any By-Law which may hereafter be made, the interpretation by the Board of Management shall be final and conclusive.

13th. The Constitution and any amendments thereto which hereafter may be made, may be altered by a two-thirds vote of the members present at any special or general meeting of the Association.

14th. The Board of Management shall have power to frame by-laws for the carrying on of the work of the Association, which shall be in force until the next general or special meeting of the Association, when they shall be submitted, and if not confirmed by a majority of the members present shall cease from that date to have any validity.

CANADIAN EXPORTS OF PULP AND PULP WOOD.

Canada's exports of wood pulp and pulp wood during the year ended June 30th, 1901, amounted to $3,335,265, of which $966,920 was sent to Great Britain, and $2,302,215 to the United States, $66,194 going to other countries. The total is an increase of $616,477 over the exports of 1900, those to Great Britain showing an increase of $366,372, and those to the United States a gain of $244,321. An increase of $494,247 is apparent in the exports of pulp wood, the United States taking $500,744 more in 1901 than in 1900, and Great Britain $6,172 less, the difference ($325) being sold to other countries. Of wood pulp, the increased value disposed of is $122,230, the details being: Increase in Great Britain, $372,544; to other countries, $6,109; decrease to the United States, $256,423.

It is worthy of note in this connection that two or three years ago little interest was felt in England in Canada's pulpwood, but in that interval the change has been so rapid that Great Britain is now receiving from Canada one-sixth of its total consumption, and Canadian competition with Norway and Sweden has been most successful, the latter having been placed on the defensive by the excellent quality of the Canadian product.

THE PRICE OF PULPWOOD.

The operators in pulp wood have in the past made little attempt to fix a standard price for pulp wood, but there seems to be a disposition to make a change in this respect. This will be one of the matters taken up by the Province of Quebec Pulp Wood Association. It is understood that there is a strong sentiment in favor of forming a similar association in Ontario with the object of putting the pulp wood business on a profitable basis. In the past many sales of pulp wood have been made for delivery at the paper mill, but as a rule these have been found unsatisfactory. A strong effort is now being made to make delivery at point of shipment instead of at the mill, so that in case of legal trouble suit would have to be entered in Canada.

No standard price is paid by the shippers of pulp wood to the parties who make and sell it along the railways, but in the Province of Quebec it is in the neighborhood of $4.50 a cord. The price differs, of course, according to the freight that has to be paid on the wood and also in relation to the profit the party is willing to accept.

Mr. Charles H. Vogel, mill architect and engineer, of Ottawa, has recently returned from a visit to his former home in Wisconsin. Mr. Vogel states that ten years ago more pulp and paper were manufactured in the state of Wisconsin than in any other state in the United States excepting Maine. Since removing to Canada Mr. Vogel has designed and superintended the erection of several large pulp mills, one of his most recent commissions being the building of the pulp mill of the James McLaren Company at Buckingham, Que. This mill is of large capacity and running very satisfactorily.

PULP NOTES.

A scheme to erect a pulp mill at Lac du Bonnet, Man., is being discussed in Winnipeg.

The pulp mill at Oniachouig, Lake St. John district, Quebec, will shortly be put into operation.

It is reported that the British Columbia Mills, Timber & Trading Company intend utilizing the Moodyville saw mill property for pulp mill purposes.

M. F. Mooney, manager of the St. John Sulphite Fibre Company, of St. John, N. B., left early in June on an extended trip to Europe.

The St. George Pulp & Paper Company are making preparations to commence the building of dams, etc., in connection with the proposed pulp mill at St. George, N. B.

Munro Bros. have assumed the contract of building the works of the Spanish River Pulp & Paper Company at Webbwood, Ont., which was in the hands of the late J. W. Munro, M. P. P., at the time of his death.

The Brompton Falls Pulp & Paper Company, of Brompton Falls, Que., are reported to have given a contract to D. G. Loomis & Sons, of Sherbrooke, for the erection of a pulp mill, to cost in the neighborhood of $50,000.

George D. Scott, of Vancouver, a director of the Western Pulp and Lumber Company, has been investigating the extent of the timber resources in the vicinity of Kamloops, B. C., with a view of establishing a pulp mill. Several Americans are said to be interested.

Smith, Tyrer & Company, of Halifax, N. S., have been appointed agents in Canada for the firms of Thomas Robinson & Sons, Limited, of Rockdale, and Robey & Company, Limited, of Lincoln, England. These firms manufacture pulp and saw mill machinery, boilers, engines, etc.

A special meeting of the Province of Quebec Pulp Wood Association was held last month, at which the constitution and by-laws governing the organization were adopted. A delegation was appointed to wait upon the Grand Trunk and Canadian Pacific Railroads regarding freight accommodation.

The courts have decided that the property of the Maritime Sulphite Fibre Company at Chatham, N. B., shall be sold jointly by the liquidators and the receiver, after an advertisement of not more than thirty days. It is said that British capitalists are likely to purchase the mill and continue its operation.

The Metabetchouan Pulp Company, of Quebec, are offering for sale 1,000 shares of stock at the par value of $100 each. This company owns 172 square miles of timber limits situated on both sides of the Metabetchouan River and is about to begin the erection of a pulp mill at St. Andre, which will have a capacity of 45 tons of dry pulp and 15 tons of cardboard per day.

Charles Henderson has been appointed Crown Timber Agent for the Sudbury district.

Henry B. Foster, formerly of Bangor, Me., has taken a position with the Algoma Commercial Company, Limited, as general superintendent of their saw mills and wood-working plants. This company is now building a veneer factory.

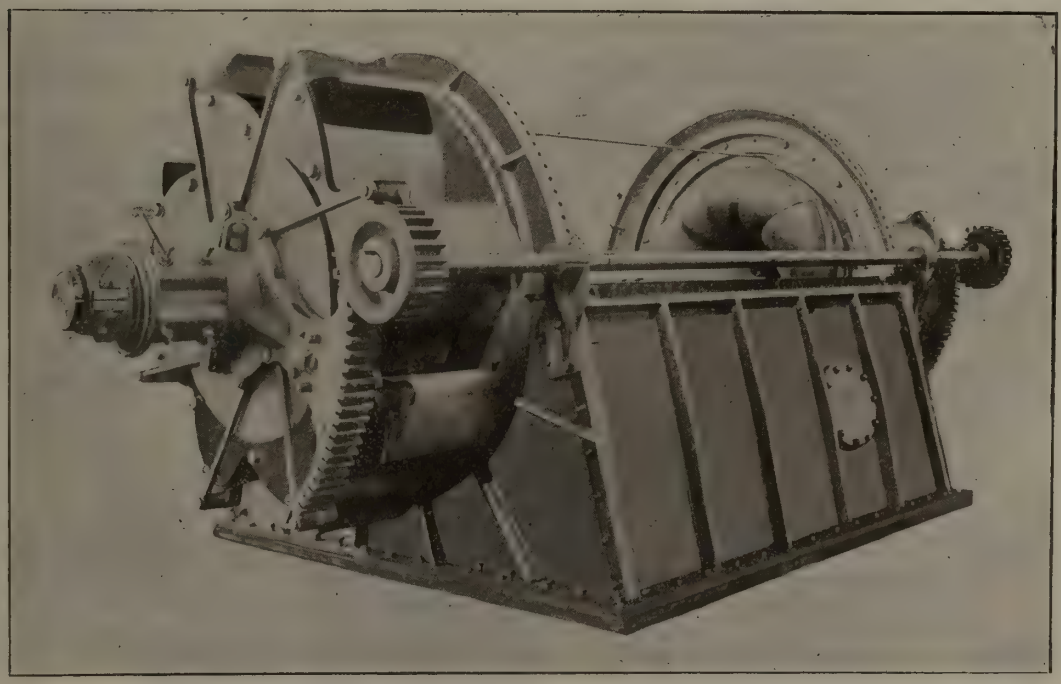
OPEN FLUME TURBINE PLANTS

For use under moderate heads where local conditions permit its adoption, there is probably no more satisfactory setting for horizontal wheels in pairs than the draft chest with central discharge, placed in an open flume.

The first cost is moderate.

The flow of water is unobstructed and ample, and as a result speed regulation is easy.



Direct connection to Pulp Grinders or other machinery may be arranged with facility.

Wheels are readily removed and replaced.

We have several styles of cases for use in open flumes, either steel plate or cast iron construction as may be required, or cast iron sides with steel plate top as shown in the engraving.

Pair of 35 Inch Wheels, Mounted on Draft Chest with Top Removed.

We are now engaged in building a 10,000 H.P. Wheel Plant, each pair of wheels being of the general type shown above, arranged for direct connection to Wood Pulp Grinders. Send us particulars for estimate, or write for catalogue and information.

NEW SYSTEM OF MEASURING LUMBER.

By the courtesy of Messrs. Churchill & Sim, we give herewith the regulations agreed between the London and India Docks Company and the London section of the Timber Trade Federation of the United Kingdom, for the measurement of American sawn lumber and sawn mahogany, to take effect July 1, 1902.

In these regulations the term "Lumber" embraces boards, planks and scantlings cut from the following:

Ash, basswood, black walnut, cedar, cherry, chestnut, cottonwood, elm, hickory, holly, maple, mahogany, oak, poplar, satin walnut, sycamore, and other hardwoods.

1.—The measurement of lumber shall be ascertained by the "American Board Measure Rule," but with the odd feet in the lengths marked.

2.—No allowances are to be made for defects.

3.—The contents shall be returned in superficial feet; all parts of a superficial foot up to and including a half shall be disregarded, and over a half shall be reckoned the next foot.

4.—All lumber under 1 in. in thickness shall be measured to the eight of an inch; 1 in. and up to quarter inches.

5.—The lengths shall be taken to the full foot only, odd inches to be disregarded. Example (A).—A board measuring 12 ft. 11 in. must be returned as 12 ft. long; and (B) a board measuring 13 ft. 11 in. as 13 ft. long, and so on.

6.—In ascertaining the measurement of tapering boards and planks the same shall be taken, as regards width, one-third from the narrower end.

7.—The Docks Company shall return planed lumber as actual size; Example (A).—Planed to ⅜ in.; Example (B).—Planed to ½ in., and so on.

8.—Piling to thicknesses. Up to 1 in. to be piled and returned separately to ⅛ in.; above 1 in. to 2 in. to be piled and returned separately to ¼ in.; 2¼ in., 2½ in., and 2¾ in. to be piled and returned together; 3 in. to be piled and returned separately; 3¼ in., 3½ in., and 3¾ in. to be piled and returned together; 4 in. to be piled and returned separately, and so on, the even inches being piled and returned separately.

In cases where pieces of more than one thickness are piled together they are to be so shown on the Docks Company's return.

9.—When wood is piled to widths, the width shall be returned in quarters of an inch, up to and including 6 in.; over 6 inch all fractions of an inch shall be disregarded.

10.—When lumber is stack-piled at reduced rates, the Docks Company will not be required to show the widths, unless specially requested to do so, in which case a charge may be made for returning the widths.

11.—In the absence of special inrtructions from the owners, or agents of the goods, the quantity in a stack-pile is to be regulated by the description and thicknesses of the wood, say 800 superficial ft. of 1 in. oak; 1,000, superficial ft. of 1 in. walnut; 1,200 superficial ft. of 1 in. whitewood. Other descriptions and thicknesses of wood to be in about the same proportion.

PERSONAL.

Mr. J. M. Burke, of Vancouver, B. C., who is identified with the shingle industry of the Coast, recently spent some time in Ontario and the Eastern Provinces.

The village of Melita, Man., has just been incorporated, and Mr. J. L. Campbell, president of the Western Retail Lumbermen's Association, has been elected by acclamation as its first Mayor.

Mr. E. H. Newton, formerly of Mississippi, Ont., but for the last two years superintendent of a large mill at Van Buren, Me., has removed to Vancouver, B. C., to assume an important position with the Hastings Shingle Manufacturing Company.

Mr. W. D. Johnston, President of the American Lumber & Manufacturing Company, of Pittsburg, Pa., wasa recent visitor at the office of the CANADA LUMBERMAN. Mr. Johnston was making a trip through Ontario for the purpose of arranging for increased shipments of white pine. His company prefer to purchase in car lots, and Mr. Johnston states that manufacturers are begining to realize the advantages to be obtained in certain cases by making shipments in this manner. Many million feet of lumber each year are handled by this Pittsburg concern.

The Buffalo Forge Company, manufacturers of engines, heating and drying apparatus, etc., is about to establish a Canadian subsidiary company, with head office in Toronto.

The United States is shipping white cedar telegraph poles for use in the hot arid climates of South Africa and Egypt. It has been found that this variety of wood is the only material that is proof against the destructive insects that very soon destroy the poles that are of any other wood.

It is a mistake to presume hat the public is familiar with the goods you carry, says Printer's' Ink. In writing ads its a good idea to presume that people generally know nothing at all about your business or the goods you sell, and that it is your especial duty and privilege to enlighten them on these points.

To Those Who Carry Insurance on Lumber

You are compelled to pay more for your insurance to-day than a year ago. This is particularly true in Canada where rates have been abnormally increased by Tarriff Association Companies. It is our business to insure nothing but lumber. We study the advantages offered by each risk submitted and accept only the best moral and physical hazards. Thus by carrying only selected risks we can offer lower rates. We are saving money for hundreds of lumber dealers. Why not let us take care of from $1,000 to $20,000 of your insurance?

For information apply direct to our home office,

Province of Ontario

CANADA

THE Province of Ontario offers one of the most inviting fields for the employment of capital and labor in the development of natural resources to be found anywhere in the world.

The extensive forests of White Pine in the northern districts have long furnished large quantities of Sawn Lumber, as well as Deals and Square Timber for the export trade. Birch Timber for cabinet making, Hemlock for bark and rougher building purposes, and especially Spruce and other woods suitable for the manufacture of pulp and paper, have come very actively into demand.

Extensive tracts, comprising thousands of square miles, covered with the foregoing and many other useful varieties of hard and soft woods, are still in the hands of the Crown.

The mineral wealth of Ontario is very great, but as yet is for the most part undeveloped. This Province is one of the two sources of the world's supply of Nickel, and a large portion of the Nickel Belt remains unexplored. The Gold fields of Northwestern Ontario are steadily growing in number of mines and value of output. Important developments are in progress in Iron ore, large bodies of both the magnetic and hematite varieties of which exist in various parts of the Province. Copper, Silver, Zinc, Graphite, Corundum, Tale, Actinolite, Mica and other valuable minerals occur in workable deposits, besides Marl for cement-making, Limestone, Building Stone, Granite, etc., also Clay for brickmaking and pottery. The Petroleum, Salt and Natural Gas industries of the Province are well known and extensive.

There are numerous water powers on the rivers of northern and northwestern Ontario, many of them of large capacity and suitable for manufacturing purposes. Crown leases on condition of actual development are obtainable on easy terms.

The Crown is owner of immense tracts of wild land, much of it suitable for agriculture. In fact, the unsettled part of the Province is of much greater extent than Old Ontario. In certain districts the lands are disposed of as free grants, in others sold for 50 cents an acre ; and the occupants obtain their Crown patents upon completion of settlement duties.

Trout, Bass, Whitefish, etc., are abundant in the great lakes and inland waters, and there is plenty of game in the forests, such as Deer, Mouse, Grouse, etc , which may be taken in the lawful seasons.

For fuller particulars, methods of acquiring title to land, timber and minerals, etc., also for copies of reports and publications descriptive of the newer regions of Ontario and their resources, apply to

HON. E. J. DAVIS,

Commissioner of Crown Lands,

Parliament Buildings, TORONTO, ONTARIO, CANADA.

DECISION IN A LUMBER SUIT.

His Honor Judge Bole has given a decision in the suit of the British Columbia Mills, Timber & Trading Company, of Vancouver, against John Leberry and H. R. Townsend. The judgment is as follows:

The plaintiff company claim a mechanics' lien for $633.08 against the estate and interest of John Leberry and H. R. Townsend in certain lots in the vicinity of New Westminster, for lumber furnished under the following circumstances:

Herbert Townsend, the registered owner of these lots, agreed to sell this land for $1,200 to Leberry. Fifty dollars was paid down and the balance, $1,150, was to be paid immediately.

No agreement in writing as required by the Statute of Fraud was executed, but Leberry entered into possession of the premises and proceeded to fit up the buildings for the purpose of his business as butcher for a slaughter house, spending considerable money in so doing, and the timber the subject matter of the lien was used in building and repairing the slaughter house and putting up a fence on the land.

The main question for decision is who is the owner for the purposes of this proceeding? Is it Leberry? Is it Townsend? Sec. 2, s.s. 3, as amended 1900, defines an owner thus: "Owner shall extend to and include a person having any estate or interest legal or equitable in the land upon or in respect of which the work is done at whose request and upon whose credit or on whose behalf or with whose privity or consent or for whose direct benefit any such work is done or materials are placed or furnished.

Sec. 6 provides the procedure in case of liens against mortgaged premises and Sec. 8 of Chapter 20 of 1900 amended Sec. 6 as follows: "(a) Mortgage in this section shall include a vendor's lien and an agreement for the purchase of land and for the purposes of this act and within the meaning thereof the purchaser shall be deemed a mortgagor and the seller a mortgagee."

It seems to me that bearing in mind the decision of the Full Court in Anderson vs. Goodsall, 7 B.C.R., 404, especially the judgment of Mr. Justice Drake at page 408, the lien herein only attaches to the interest which Leberry had or has in the lands in question, which as I understand is that on payment of the balance of the purchase money, i.e., $1,150, with legal interest computed from the date of sale, Leberry may be entitled to receive from Townsend a conveyance in fee simple of this land free from incumbrances, and it appears to me that plaintiff company are entitled to judgment against Leberry for $633.08 and to a lien against whatever interest Leberry may have in these lands with costs, but as I think they have failed to sustain their claim against Townsend he is entitled to judgment in his favor with costs.

Good advertising is telling a man what he wants and where he can get it. It ought to include the telling of the price, also. This information, when told in an attractive way, rather leaves the obligation on the side of the reader.—Business Problems.

This cut represents our

LOCKPORT SWING MACHINE

The swing is made of steel and is very light and strong and dogs very close to saw, thus reducing the waste to the least possible amount.

The Saw on this machine is 40 inches in diameter, or larger if so desired. The mandrel and balance wheel are very heavy. The pulley is 12 inches diameter, 10 inches face. Weight about 1300 lbs.

For cutting Shingles, Barrel Heads, Pail, Tub and Cheese Box Bottoms, Box Boards and Cloth Boards, Etc., Etc.

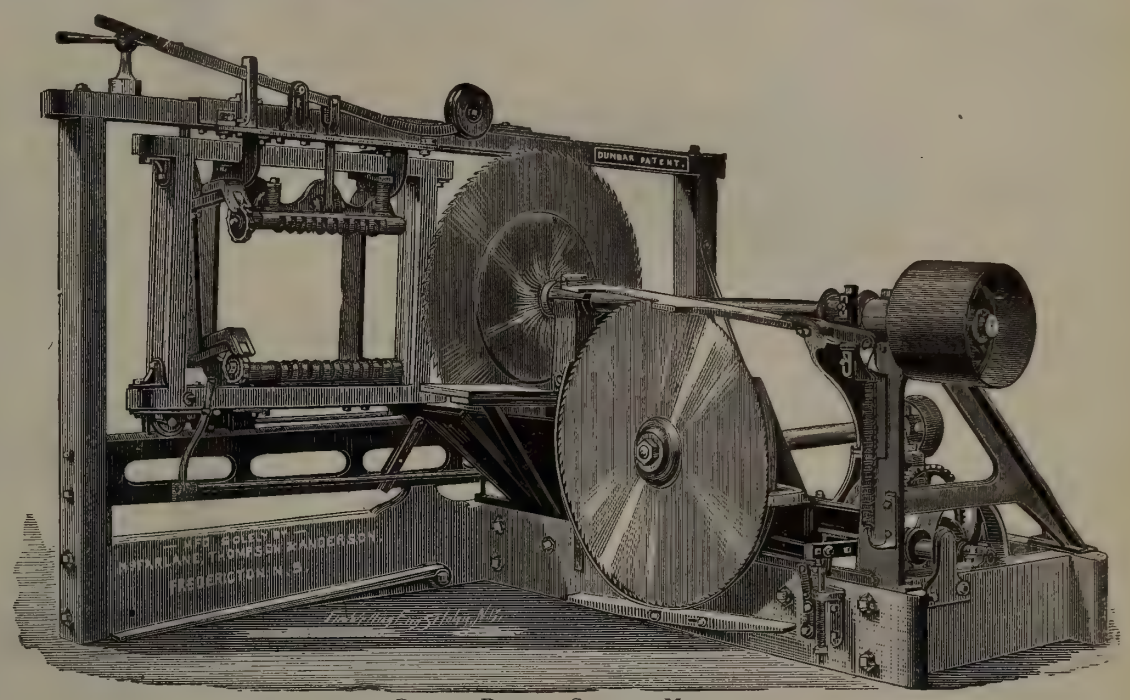
PATENTED DUNBAR SHINGLE MACHINE

And Sole Proprietors of the said patent

Universally admitted as being the best machine on the market from the Atlantic to the Pacific.



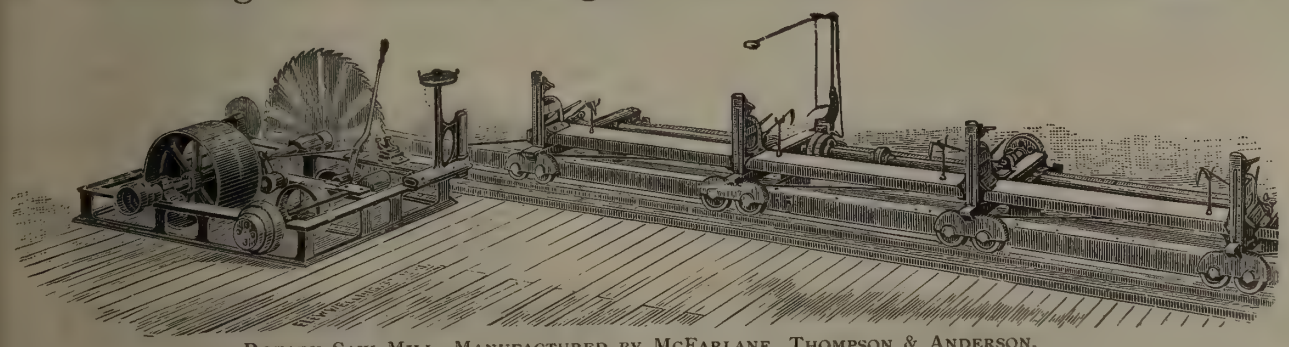
PATENT DUNBAR SHINGLE MACHINE.

The following well known firms are a few of the many who are using the celebrated Dunbar Shingle Machine:—Metis Lumber Co., Quebec, 15 machines; John A. Morrison, Fredericton, N. B., 16 machines; Gibson R'y. & Manufacturing Co., Marysville, N.B., 10 machines; Hastings Shingle Manufacturing Co., Vancouver, B.C., 16 machines.

The McFarlane, Thompson & Anderson Dunbar Shingle Machine is a record breaker in the west—(New Whatcom Blade, Washington State). The following may be of interest to mill operatives and others; it is, we believe, the best six day record ever made on this class of machine—a Dunbar upright; the bolts were taken as they came from the woods, without selection, and were a good average quality. This remarkable run was accomplished recently at the George A. Cooper mill, Chuckanut siding: Total cut for six days, 2 shifts of 10 hours each per day, 394,000 eighteen inch shingles. In the day shift, Harry A. Edison, sawyer, cut 218,000, an average cut of 36½ thousand, and the night shift, Levi Loop, sawyer, cut 176,000, an average of 29⅓ thousand of eighteen inch shingles per day.

"When all the rest fail, or are down for repairs, or are cutting shims, the McFarlane, Thompson and Anderson DUNBAR SHINGLE MACINE

is still cutting the standard shingle of the world." From the Atlantic to the Pacific they all say it.



ROTARY SAW MILL, MANUFACTURED BY MCFARLANE, THOMPSON & ANDERSON.

Latest Bulletin from the seat of war, October 17th, 1901—From the Metis Lumber Co., Price, Que., in reference to the 15 Shingle Machines sold them last season:

"Replying to your enquiry as to the running of the Shingle machines you sold us, would say that they have given entire satisfaction, and have run very successfully so far. We have sawn 30 million shingles in 70 days to date, and count on sawing 10 million more this season."

THE METIS LUMBER COMPANY.

We manufacture a complete line of IMPROVED ROTARY SAW MILLS, BUCKEYE AUTOMATIC CUT-OFF ENGINES and all kinds of MILL MACHINERY.

Our prices are right.

It Gives Perfect Satisfaction

A prominent lumber firm bought a Mumford Portable Boiler for one of their sawmills, and a short time afterwards wrote us as follows:

"We are delighted with the new Mumford Portable Boiler. It is all that we expected, in fact it gives perfect satisfaction. Its heating capacity is away beyond the old style Monarch boiler that we had."

Save Labor — Save Gumming
Save Time — Save Files

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

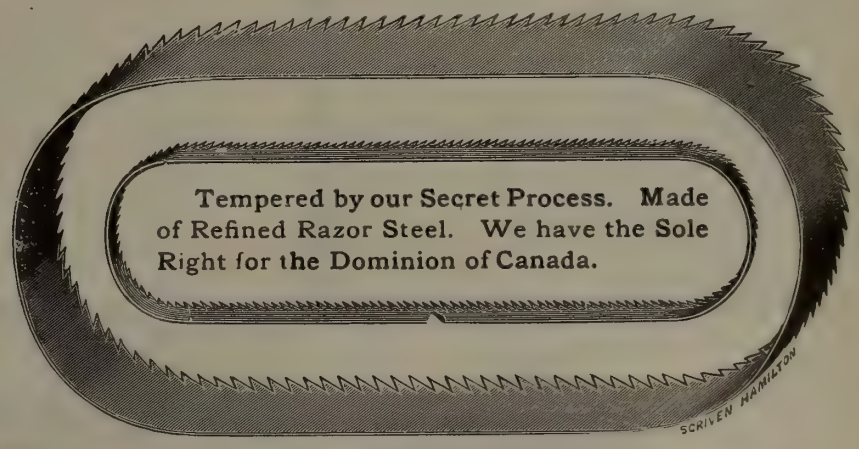
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



Tempered by our Secret Process. Made of Refined Razor Steel. We have the Sole Right for the Dominion of Canada.
SCRIVEN HAMILTON

We Manufacture

HIGH GRADE BAND SAWS

of All Widths and Lengths.

These Saws are made of Refined Swedish Steel imported direct, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

JOSHUA OLDHAM & SONS
INC!
NEW YORK SAWWORKS
OFFICE
130 TWENTY SIXTH STREET,
BOROUGH OF BROOKLYN,
NEW YORK CITY.
Saws for Saw-Mills.
Our Saws are Fully Warranted in Temper, Tension, Toughness and Workmanship.
The Oldham Saws are fully warranted against all defects, VISIBLE or INVISIBLE.

There are SAWS and SAWS

The saws we make are perfect in workmanship and superior in finish.

For Temper,
Tension,
Toughness

They are the Best.

Every saw we make for you is a bid for your next order.

There are other saws besides ours for which you pay the same price, but you cannot find others that stand the wear and tear, or present such an unbroken front in all kinds of work

If low prices make a bargain high quality doubles it, that is why we are sure of our ground.

In the make up of our saws the trouble arising from others poorly made are foreseen and obviated.

If poor saws reach your filing room it not only costs money to make them ready for the mill ; but they cause constant worry to the filer and sawyer ; and to yourself—by turning out lumber not sawed to the desired standard—thus causing general

Dissatisfaction

We could make saws at much less than it now costs us and get as much for them ; but we maintain our standard because we have found that it pays to make the best.

We honestly believe—or we would not make the statement—that we are making better saws than can be had anywhere else.

In every case we guarantee perfect

Satisfaction

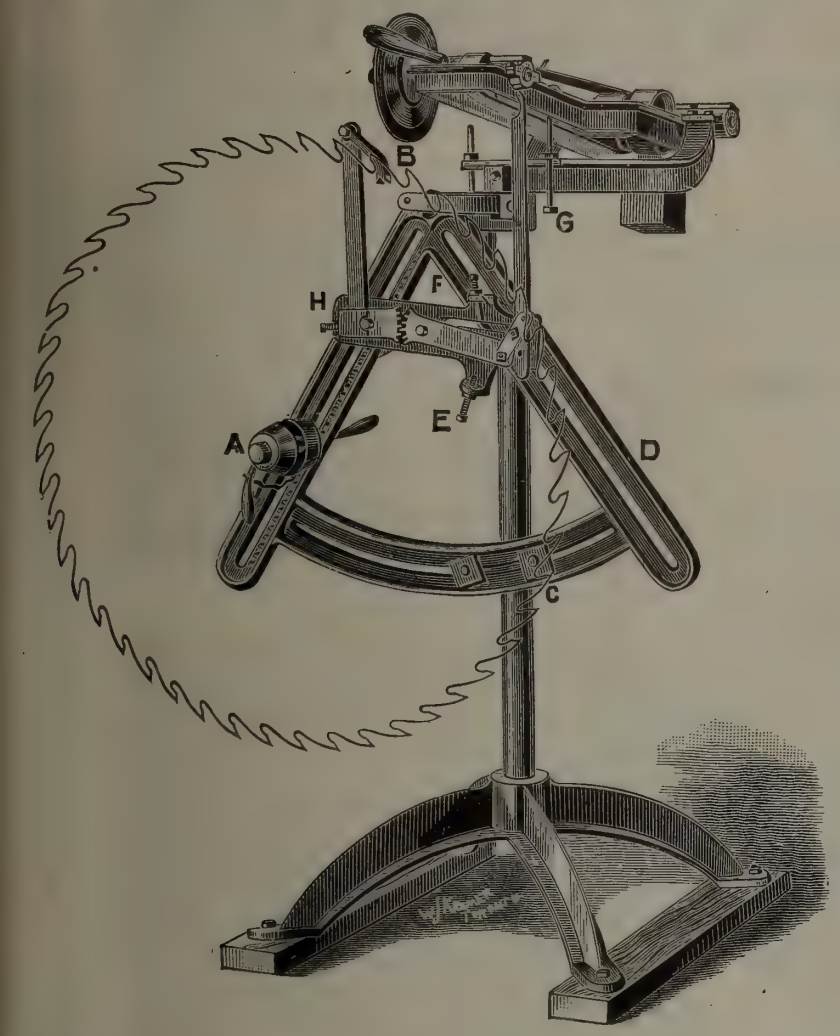
Certainly

The foregoing propositions speak for themselves.

When once you have tried an "Oldham" Saw you will be surprised to find how much you did not know about good saws, and you will never know what the best is until you do try them.

JOSHUA OLDHAM & SONS
(INCORPORATED)
DOUBLE EDGE BAND SAWS
NEW YORK SAW WORKS

The XXX Saw Gummer and Sharpener



Has no Rival

FOR VARIETY, CAPACITY OR QUALITY OF WORK

OR FOR

SIMPLICITY, DURABILITY, CHEAPNESS

Will take saws from 6 inches to 6 feet diameter; sets the saw forward one tooth at a time automatically; sharpens any saw perfectly, giving the teeth any desired pitch, and making all the teeth exactly alike. Will sharpen 20 teeth in an ordinary saw mill in one minute, or 100 teeth in a shingle saw in four or five minutes. The cut shows outline of mill saw 54-inch diameter.

PEMBROKE, ONT.

MR. F. J. DRAKE, Belleville.

Dear Sir,—Re the conversation you had with our manager, I am instructed to inform you that the machine we purchased from you early last spring has proved to be a very useful piece of machinery. Our Mr. McCool, who uses it, is greatly pleased with it, and recommends it to any person who may require a Saw Filer. Wishing you every success with your Filer, we remain,

Yours truly,
(signed) THE PEMBROKE LUMBER CO.

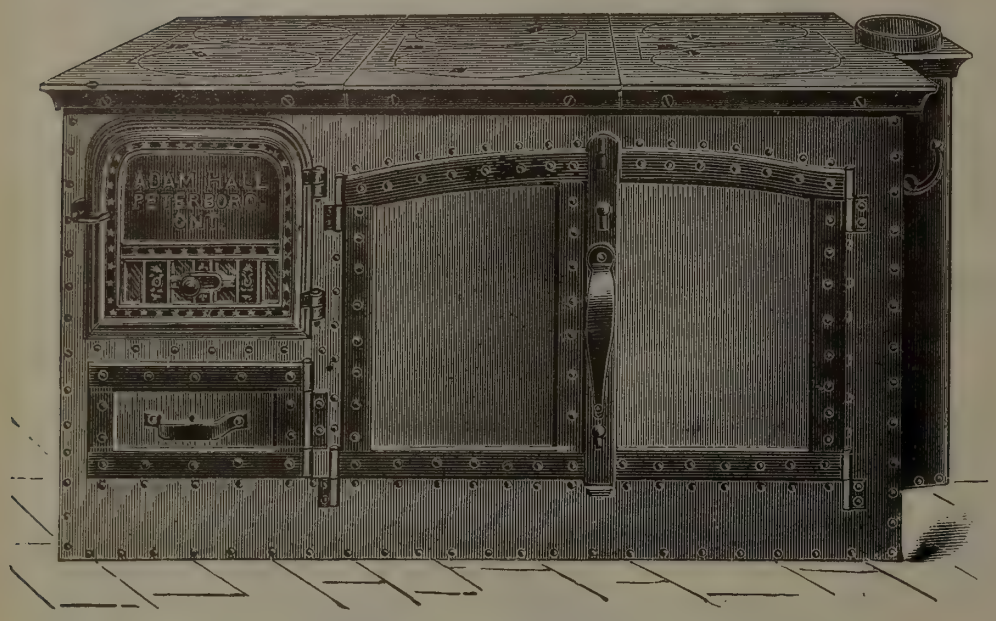
STEEL RANGES

For Lumbermen's and Railway Camps, Boarding Houses and Hotels

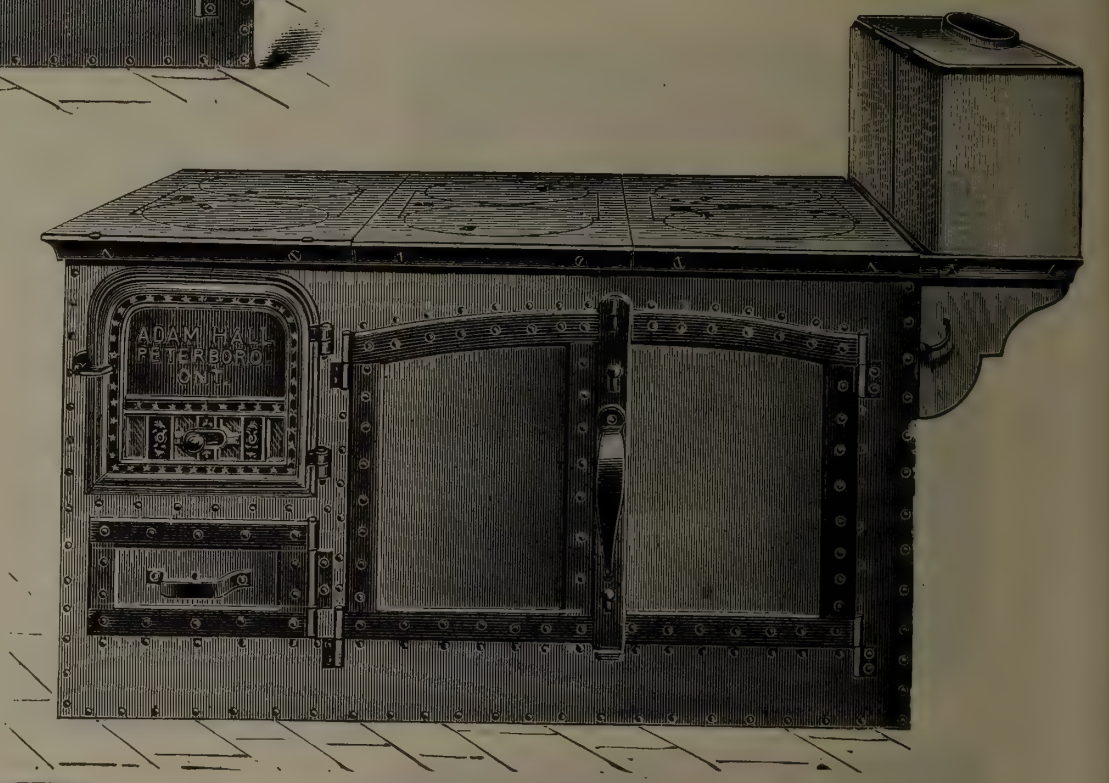


Lumbermen's Six Pot Hole Range.

We have been manufacturing Steel Ranges and Heaters for Lumber Camps for the past Twenty-four Years, and have supplied the wants of nearly all the Lumbermen in Quebec, Ontario and Manitoba—they are unexcelled for Baking and Cooking, and are strong and durable.

This No. 1025 Six Pot Hole Range is largely used in Camp of Fifty (50) Men and for use when driving the Rivers. Weighs 400 Pounds.

This No. 1025 Range with 25 Gallon Copper Reservoir is the one we sell the most of, owing to the convenience of having a supply of hot water at all times. Will cook for 50 to 60 men. Weighs 450 pounds.



Lumbermen's Six Pot Hole Range with Reservoir.

Coal or Wood Range for Hotels and Boarding Houses.

This No. 1026 Leader Range with Front Hearth and Copper Reservoir is made for either Coal or Wood and is largely used in Boarding Houses and Hotels. The Wood Range weighs 500 pounds; the Coal Range weighs 600 pounds.

We make a number of other sizes of Ranges, also a **Lumberman's Box Stove** of Heavy Steel Body and Cast Metal Ends, in 36 inch, 42 inch and 48 inch—they are Excellent Heaters Strong and Durable.

R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

MILL STREAM, QUE., on I. C. R'y, December 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—Driving a 20 in. 13 gauge saw into frozen hardwood, using a 9 in. 4-ply belt, if it can be done satisfactorily, is a very severe test. Your saws have stood that test better than any I have tried. I have been experimenting with different makes—both home and imported—during the last five years, and give yours the preference. Last order is just to hand and will report on them by and bye.

Yours very truly, JAMES McKINLAY.

CAMPBELLTON, N.B., Nov. 17th, 1894.

R. H. SMITH CO., LTD., St. Catharines, Ont.

DEAR SIRS,—In regard to your Shingle Saws, you can say that I have been using Shingle Saws of your make (Simonds) for the past four years, and they have given good satisfaction. I am running nine machines and use a good many saws, but have never had a saw yet that did not work satisfactorily. Before using your saws I used saws of American make, which worked well but after giving your saw a trial have continued to use yours, as theyare cheaper, and in regard to working qualities are all that is needed.

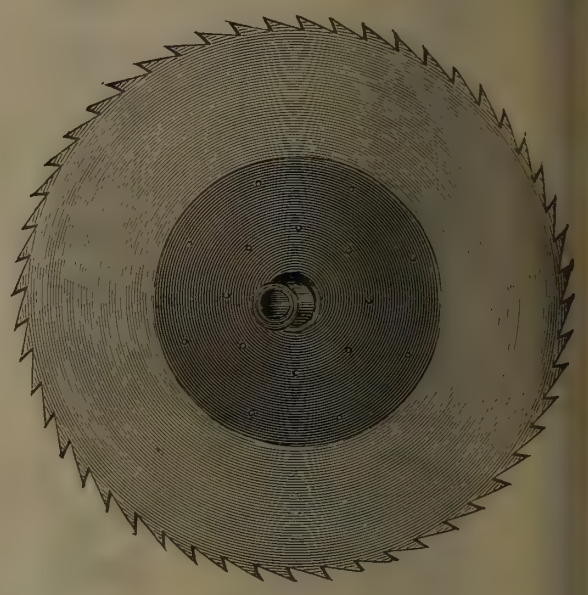
Yours truly, KILGOUR SHIVES.

CLAVERING, ONT., May 3rd, 1897.

R. H. SMITH CO., LTD., St. Catharines, Ont.

GENTS,—In reply to your letter asking me how I liked the 62" SIMONDS Saw, I must say in all my experience I never had a saw stand up to its work like the one purchased from you last month. Having used saws for the last 22 years, and tried different makes, I can fully say it is the best saw I have ever had in my mill, and would recommend the SIMONDS' Process Saws to all mill men in need of circular saws. Yours truly, W. G. SIMMIE.

P.S.—I am sending you my old saw to be repaired; please hammer to same speed as new one. W.G.S.



THE "LEADER" CROSS-CUT SAW

These Saws are made from the best DOUBLE REFINED SILVER STEEL, warranted four gauges thinner on back than front, and the only Saws on the market that are a perfect taper from the points of the teeth to the back, and require less Set than any other Cross-Cut Saw.

They are tempered by the Simonds' Patert Process insuring a perfectly uniform temper throughout the plate, and stand without a rival as the BEST, FASTEST, AND EASIEST-CUTTING SAW KNOWN. A gauge to regulate the clearing teeth is furnished with each saw.

Directions for Setting and Filing are plainly Etched on every Saw. None genuine without our Registered Trade Mark as shown in cut.

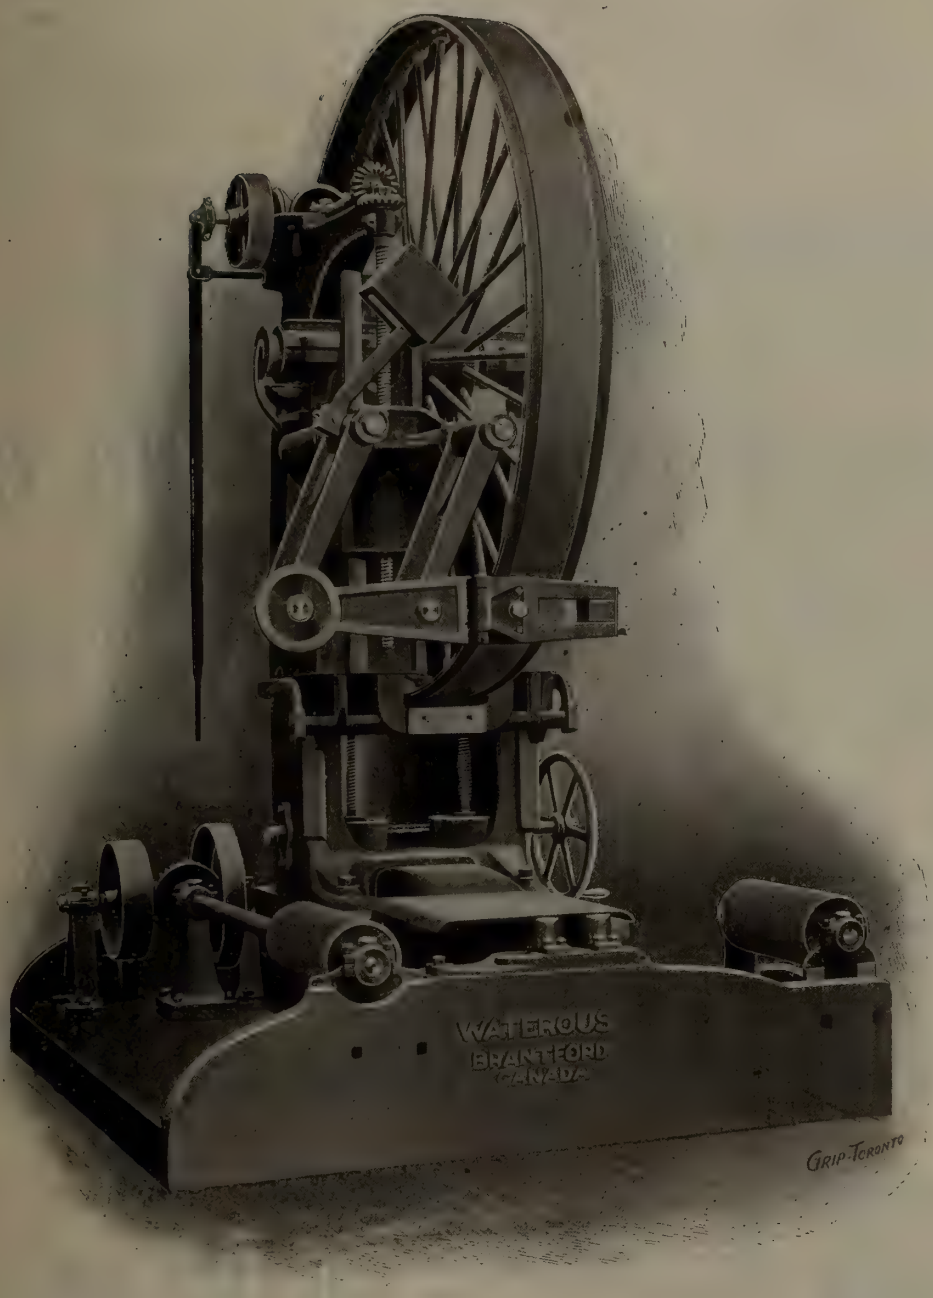
THE "LEADER" SAW SWAGE

Made in 3 Sizes—$2.00, $2.50, $3.00, etc.

OUR PRICES ARE RIGHT. KINDLY ALLOW US TO QUOTE YOU BEFORE PURCHASING.

R. H. SMITH CO., Limited, St. Catharines, Ont.

WHY NOT INCREASE THE PROFITS OF YOUR BAND MILL 30 TO 40 PER CENT. ?



The Allis Double Cutting Addition to your Band Mill will increase the capacity of your output from 30 to 40 per cent. without increasing the labor cost a cent.

It cuts both ways--divides your expenses—multiplies your profits.

The cut shown herewith shows how simple and solid this attachment is. It can be kept in order easily, requires no unusual skill to operate, can be attached to any Allis Band Mill, and will effect at least a one-third increase in the output without increased labor cost.

It can be attached to any Allis Band Mill and secure perfect operation, requires no more skill to handle and is as easily cared for as a single band mill.

You are losing profits every day you neglect to secure this attachment.

Write to us and let us tell you more about increasing the net profits of your Band Mill by use of the Allis machinery.

FORESTRY EXHIBIT AT THE MANITOBA FAIRS.

Last year a forestry exhibit was made at the summer fairs in Winnipeg and Brandon, Man. The exhibit was in charge of Mr. Norman M. Ross, Assistant Superintendent of Forestry, who, in his report to the Department of Interior, thus refers to the work :

"Towards the end of June I received instructions to get up an exhibit to be shown at the summer fairs in Brandon and Winnipeg held at the end of July and beginning of August. Owing to the short time given for the preparation of the exhibit the collecting of native woods was necessarily done hurriedly, and only average specimens were obtained. Some varieties we had not time to procure at all. The wood being green, it was not possible to finish it off at all to show the grain. The exhibit consisted of sections of as many of the native woods as we could collect in the time, and alongside of these were shown sections of the same and other introduced varieties grown under cultivation, affording a good comparison as to the rates of growth under natural and artificial conditions. The varieties of native woods shown were: Elm, scrub oak, basswood, white spruce, iron wood, green ash, birch (white), native white poplar, Manitoba maple, balm of gilead, and western black willow. Most of these were cut near Nelson, in southern Manitoba, and a few in the Turtle Mountains. The spruce came from the Riding Mountains. Seedlings, one, two and three years old, of the varieties of trees best suited for planting in this country were shown growing in boxes. Seed and cones were put up in glass jars, and the leaves of the principal trees were pressed and mounted on sheets."

DOMINION FORESTRY EXHIBIT AT THE MANITOBA FAIRS.

ELECTRICITY AS RELATED TO THE LUMBER INTERESTS.

The attention of lumbermen, as indeed of every mill man, has been directed at times in recent years to the advantages of the electric drive over the various forms of mechanical drive. Up to the present time, however, only a few lumber mills have adopted the electric drive. I believe the next year will witness a marked increase in the electrical H. P. used in the driving of lumber mills. I believe the history of the electrically driven cotton mills will be repeated as the electrically driven lumber mill. The first textile establishments using electrical transmission were in Connecticut and Massachusetts, but to the southern manufacturer is due the honor of first adopting the system which is now in most general use. The operation of the large cotton mills at Columbia, S. C., by a large number of small electric motors was so successful and satisfactory that many large mills soon followed their lead, using both steam and water power for the generation of the electric current. In June, 1899, the total electric power used in the driving of textile establishments was 13,000 H. P. One year from that time this amount was increased to 30,000 H. P., with more rapid growth since. On the surface of these facts is an unanswerable argument : If textile manufacturers have found it to their interest to use electrical transmission, even when the electrical energy had to be generated by steam, how much greater benefit should accrue to the lumber mill when the power is more widely scattered; the convenient and cheap handling of the product is one of the most important items, and when a tramway or cableway may be operated by electric power if desired. I believe portable motors can even be taken into the forest and used for felling the trees.

If I were allowed a lengthy discussion I would be glad to point out to you in detail the advantages of the electric drive. Dr. Bell, in his book on "Electric Power Transmission," gives the following comparison of the efficiencies of the various methods of transmission of power:

System.	Efficiency. Per cent. Full Load.	Efficiency. Half Load.
Wire Rope	68	46
Hydraulic high pressure	53	45
Hydraulic low pressure	50	50
Pneumatic	50	40
Pneumatic re-heated (virtual efficiency)	65	50
Electric	73	65

LOG HAULING MACHINES.

The lumbering operations of Lawrence, Newhall & Page are conducted near Eustis, Maine. Last winter they emp'oyed two machines for the hauling of logs which are said to have accomplished good results. The inventor of the machine, shown in the accompanying engraving, is Mr. A. O. Lombard, of Waterville, Maine, who has designed several pulp wood machines. The builder and mechanical engineer was Mr. Samuel W. Lombard, brother of the inventor.

The first machine built was the steam machine, which was used in the winter of 1900 and transported logs over a distance of about 25 miles at an average of four miles an hour. This machine is constructed of very heavy ma terial. It is fitted with a 25 horse power reversible engine. The drivers are endless lagg beds supported by roller bearings, and the frame of the bed is so pivoted that it adjusts itself to all cradle knolls. The machine weighs fourteen tons. The cog gear of the machine is so constructed that no matter what the position of the machine, the gear is always in place. In operating this machine the waggon sleds

HAULING LOGS IN THE MAINE WOODS.

are loaded just as though they were to be drawn by horses.

During the summer of 1901 Mr. Lombard invented a second machine, to be operated by electricity rather than steam. The frame of this machine, built like that of a common flat car, is 20 feet long and 6 feet wide. It is fitted with two 25 horse power Westinghouse controllers, and so geared that when the motors are running at normal speed the machine travels at about four miles an hour. This machine is fitted with a rocker pivotted over the axle of the machine so that one end of the load may be placed on the machine and the other end on a common wagon sled; and as many more sleds be attached to the load as the machine will haul.

The trolley system employed consists of two trolley wires strung about eighteen inches apart at the side of the road supported by braces to the poles, and upon these run a miniature trolley car which makes the necessary circuit. The power house is located on Alder stream, the fall being ten feet. It is equipped with a 17 inch Leffel water wheel furnishing 110 horse power. Belted direct to this is an Edison generator. There is a reserve steam plant of 20 horse power which can be attached to the generator when the water is low.

The electric machine was given several trials during the past winter and was found fairly successful. With some minor alterations which will be made this summer the inventor expects to have a machine which will produce wonderful results when it is put into the woods next winter.

THE WHITE SPRUCE.

The Spruce has been an important timber tree in New Brunswick and Nova Scotia ever since the disappearance of the pine, but farther west the latter has overshadowed it up to the present, and it is only in recent years, with the great expansion of the pulp and paper industry, that it has begun to be realized what a great part the spruce is destined to play in the future history of Canada. The pulp-wood forests in Eastern Canada have been estimated as covering an area forty-four times that of England, or, by another calculation, an area of 219,259,958 acres, while in northern British Columbia there is stated to be a forest of spruce the immensity of which cannot be conceived of by any person who has not seen it. There is in the Dominion a supply in abuudance to meet the needs of the world, and it becomes our citizens, as thinking men and Canadians, to take due care that this great source of comfort and prosperity, which we can destroy in a day but cannot re-create in a century, be managed with skill and wisdom, so that not only shall the present need be supplied but the Canada of the future shall enter into an inheritance that shall stand as a monument to the wisdom and foresight of a generation that had sufficient power of imagination to have a vision of what the coming years might be, and strength enough to ensure that it should become a reality.

The spruces and other firs are differentiated from the pines by having their much shorter leaves arranged singly along the branches instead of two or more in a sheath, and the spruces have the additional distinguishing feature that the leaves are terete or four-sided. The White Spruce (Picea alba or Abies alba) attains a height of 100 feet and is a beautiful tree when growing in the open, its straight branches spreading in rows from the trunk and decreasing in extent from the bottom upward so as to give a pyramidal form to the whole. The foliage is light in color, sometimes approaching to a glaucous white. The branchlets are glabious, that is smooth or devoid of hairs, and this is, one of the chief distinctions between this and the Black Spruce. The cones are one to two inches in length, longer and slenderer than those of the Black Spruce, and drop from the branches. They are green at first, later changing to a brown or straw color, and the edges of the scales are entire. An examination of the cone is considered necessary to finally determine the species. The leaves, when crushed, have a peculiar feline odor, and for this reason it is not advisable to use this species in the manufacture of spruce beer.

The range of the White Spruce is from Nova Scotia westward to the Rocky Mountains and north indefinitely, it being yet undecided whether this or the Black Spruce has the more northern habitat. The White Spruce shows a preference for the higher and drier situations. It reaches tree-like proportions in about thirty years and is mature in one hundred, but in the Atlantic Provinces the rate may be more rapid. This is the timber tree among the Canadian spruces, and produces a white, clear, easily-worked lumber, a large part of which is exported to Great Britain.

The process by which this tree is turned into pulp and the qualities possessed by it which make it suitable for this purpose form a subject of much interest. The woody parts of the tree are largely built up of cellular tissue, or woody fibre. A fibre of good length and toughness ensures a strong paper, and a clean, white wood is a requisite for the production of a properly colored pulp. These qualities are found pre-eminently in the wood of the spruce tree. There are, however, other substances, such as resin, etc., in the tree structure, and the object of the manufacturer is to separate the wood fibre from the incrusting substances. The most simple method adopted is that for the production of mechanical pulp, which simply consists of breaking up the wood by pressure against a grindstone under a stream of water. This is a comparatively cheap process, but it results in the breaking up of the fibre and does not remove the impurities to any extent.

The chemical process, that which results in the production of what is called "cellulose" to distinguish it from mechanical pulp, is much more intricate and expensive, involving an additional output for boilers, chemicals, etc. The two main chemical agents used are sulphite and caustic soda, and the resultant products are designated as sulphite pulp and soda pulp. The wood is barked, cleaned of knots and imperfections, and after being cut into chips by a strong revolving knife, is placed in the boiler. By the assistance of heat and the pressure developed in consequence the sulphite is driven into the pores of the wood, disolving the resin, and leaving finally the clear white pulp of wood fibre which is drawn off, washed and prepared for shipment by rolling and drying.—Rod and Gun.

Any kind of an advertisement may be better than none at all—but a good one is many thousand times better and costs little more.—The Advisor.

AN IDEAL FILING ROOM.

I want to say something about filing rooms and equipments which may be of value to a few of the many filers, foremen and others interested in this line. Where a shop, factory or mill is doing enough business to require the services of a filer day after day, year in and year out, much of his success depends on the size of the filing room and the quantity and quality of his equipment.

There are many filing rooms whose equipment is far from being complete. Planer knives have to be sent out to be ground; saws have to be sent away to be sheared, retoothed, brazed, etc.; when boxes need babbitting, ladles must be borrowed and the metal heated in the fire room, and many other little jobs have to be done outside, which could be done at home, if the proper equipment were at hand, thereby saving many a dollar and lots of time to the employer.

Many filing rooms are not properly lighted, either naturally or artificially, which is another handicap. I know of one filer, who, when filing a large band saw, is obliged to stand in his own light, and when it gets dark he has to stop work for want of light.

Some filing rooms are laid out with a view to saving space for other work, and the result is a small, crowded corner, poor light and plenty of jar and vibration, caused by the line of shafting, put through from the mill, with which to run the grinders, etc. I have worked in just such places and know how to appreciate a good thing when I get it, and am happy to say I have a filing room now which I think a model for anybody to copy. I take pride in keeping it in good condition, having everything handy and convenient, a place for everything and everything in its place. I herewith give a detailed description of my filing room and its equipment, feeling certain it will serve the majority of purposes.

Room is 30 feet wide and 29 feet deep, with height of 14 to 18 feet. There are six large windows on the front and three on the side, besides some on the back that give an indirect light. In the front and left corner is the bench on which is the band resaw sharpener. This bench has a large drawer for tools, etc. Next is the automatic planer knife grinder, and next to that is the circular saw sharpener for circular rip saws.

In the front and right corner is a bench 7 feet long and 2 feet 6 inches wide. On this is a vise and circular saw filing clamp, also a saw set. On the left end I have brazing clamps, gas jet, glue pot, wire belt lacing machine and a clothes closet. On the right end is a rack for all the circular saws, matcher knives, collars, etc., and pegs for unused band saws. On the right end and center is an 8-horse power engine, and in the

X—Drawers. XX—Windows.

center of the room is the portable forge, radiator and saw stretcher. On the left end and center is the lap grinder and retoother.

In the back and left corner is a locker for supplies, such as belting, fasteners, rivets, glue, babbit, wire lace coil, rawhide, etc. Next is the main work bench, 10 feet long and 2 feet 3 inches wide, on which I repair belts; back of this is the stairway. There is a small bench for odd ends of belting, etc., and two long shelves on which I keep made-up belts, old belting, arbors, chain belts, pegs, rope, etc.

There is a large trap door in the floor, for various purposes, and a large stepladder and ordinary 15-foot spurred ladder come very handy. I also keep on hand several sets of belt clamps and rods, and several wide boards of various lengths, used in cementing large belts. Seven 16-candle incandescent lights, placed judiciously, give fairly good light, and with a 40-foot and 18-foot extension string light, there is no excuse for working in the dark.

Every tool necessary for a first-class filing room is contained in this room. During hot weather there is a small blower, which can be connected and which sends a cool breeze across the room. There is also an electric bell, used for signals between the foreman's office and the filing room.

I think I have given a pretty fair description of an ideal filing room. I wish every filer had as good a one to work in, for it makes work systematic and easy.—"Judd," in Wood-Worker.

CUTTING BELT HOLES IN FLOORS.

BY "A. B. C."

To those who have occasion to belt machinery through floors, a few remarks on the subject may not come amiss. Of course, most machine operators and mechanics have methods of their own for doing these things, but I have seen men go at such jobs in such a hap-hazard way that a sort of "Oh, that's good enough" job is apt to be the result. There is a right way to do everything, and the right way is always the cheapest in the end. Belt holes are often cut through floors as much by guess as anything else, and when you get through and find you are not in line, then the hole has to be made twice or three times as large as is necessary before a belt will run through it. The result is an unsightly job that will always be an eyesore to the one that did it.

The first item of importance is placing the machine to be belted. As a general rule, a machine can not be put in any old place, but must be set in just exactly a certain spot, in order to not conflict with other machines, posts or other obstacles; sometimes it is necessary to have it right in front of a certain window, in order to get light. So first and foremost, place your machine just where you want it, then go below and see that the countershaft and the drive belt are not going to conflict with any other shafting, belting, beams, or anything of the kind. Also see that you are going to have room on the line shaft to put the drive pulley, for where the pulleys are pretty thickly distributed on the line shaft, and where there are hangers and couplings to look out for, you can not always put a pulley where you would like to. These obstacles can generally be overcome by moving the pulleys on the countershaft, or, if necessary, by moving the machine a few inches one way or the other.

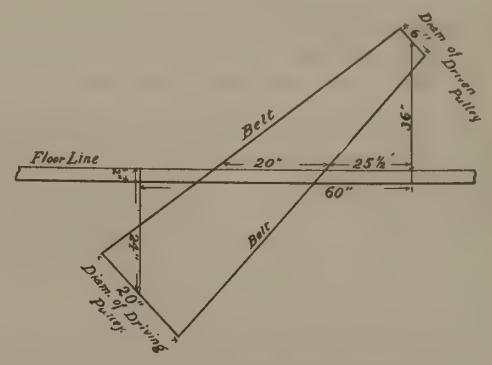
After having seen to these matters, the next step is to line the machine with the line shaft. In order to do this, a line should be drawn on the floor directly over the line shaft. This may be done by squaring from the floor to the center of the line shaft, boring a couple of ¼-inch holes up through the floor at each end of the shaft, drawing a tight chalk line from one to the other, then plumb from one end of the cylinder or arbor on the machine, to the floor, and move the machine till the other end of the cylinder plumbs to the floor the same distance from the chalk line that the first end did. When this is right, the machine may be bolted down.

It is not advisable to put the countershaft directly under the machine, as this gives such a short belt that if the machine is a planer or other machine requiring a good deal of belt power, it is necessary to run the belts very tight, which is hard on the belts and hard on the bearings. It is better, therefore, to put the counter a few feet one way or the other from directly under the cylinder, and it should be toward the feeding-in end of the machine if possible, so the belts will draw from under side of pulleys; and it should be as far in that direction as possible without having it where the belts will be in the way as they come up through the floor.

The counter may be put in proper position by plumbing from the center of end of cylinder to the floor, and boring a ¼-inch hole through the floor, then measuring back 4, 6 or 8 feet, as the case may be, and put up the counter so the edge of the driving pulley on the counter will come directly in line with the hole through the floor, providing the driven pulley on the cylinder above is flush with the end of cylinder, as is generally the case. Then line the counter with the line shaft by means of a long rod or a steel tape, if you have one, so that both ends of counter will be just the same distance from center of line shaft.

Next come the holes through the floor. You have already plumbed from center of cylinder to floor and bored a small hole through. You also have the distance from cylinder to counter, which we will say is 60 inches along the floor. Now get the distance from center of cylinder to floor, which we will say is 36 inches, also the distance from center of counter to floor, which we will call 24 inches.

Next select a clean spot on the floor and draw a line 6 to 7 feet long, with a straightedge. This will be top of floor line. Draw another line parallel to it, 2 inches



PLAN FOR CUTTING BELT HOLES.

below, if the floor is 2 inches thick. Now at the right-hand end of floor line, square up 36 inches, which will be center of cylinder. Then measure back along floor line 60 inches, and from this point square down through floor lines 26 inches, which will give center of counter.

We will say the diameter of driving pulleys on counter is 20 inches and the diameter of driven pulley on cylinder is 6 inches. Draw a line the diameter of driven pulley across the end of 36-inch line at an angle of 45 degrees with floor line, also a line 20 inches (the diameter of driving pulley) across the end of 24-inch line, at the same angle, so that the two pulley diameters will be parallel with each other. Then with a straightedge draw the belt lines from outside to outside of pulley diameters. Where these belt lines intersect the floor line will be the center of belt holes; or, in other words, by measuring back along the floor, the center of the first belt hole will be found to be 25½ inches from line of cylinder, and the center of second belt hole 20 inches from the first one.

It takes but half as long to lay out this outline on the floor as it has taken to explain it, and when it is done there will be no mistake about location of belt holes.—The Wood-Worker.

THE COMMERCIAL RECORD.

In the report of failures in Canada and the United States, compiled by Bradstreet's, the present year compares favorably with 1901, which was regarded as a favorable year. Comparisons for either the past month, the quarter or the half year show a marked improvement. The record for June is the best, with one exception, during the past nine years, and the same is true of the record for the past three months. The number of failures for the half year closing with June exceeded the record for the corresponding half year in 1899 and also in 1900, but with these two exceptions it is the best record made since 1888.

Canadian failures for the past half year number 603, with liabilities $5,113,404, and assets $2,247,210, a decrease, as compared with the previous year, of 15 per cent. in the number of failures, and 20 per cent. in the aggregate liabilities. Ontario had 230 failures as compared with 251 for the corresponding six months of 1901; $1,782,123 liabilities, as compared with $2,574,436, and $655,631 assets as compared with $1,124,533. The record for Quebec was 224 failures, compared with 251, while the total liabilities were $1,770,990, and total assets $734,500, as compared with $2,312,128 and $847,750, respectively, a year ago. British Columbia's phenomenal growth is shown even in her record of failures, which increased in number from 51 to 53, in total liabilities from $717,550 to $1,073,791, and in total assets from $464,500 to $624,220.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C.H. Mortimer Publishing Cmpany of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICE:
IMPERIAL BUILDING, MONTREAL.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance . $ 1.00
One Copy. Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensa ble for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE FIELD OF THE WHOLESALER.

In the United States there are well defined lines indicating the field of the wholesale dealer. This line is occasionally disregarded by unscrupulous persons, but it is generally recognized as representing the rights of the wholesaler. It would be folly to say that this section of the lumber trade could, without detriment, be eliminated from the business.

The wholesale dealer has cultivated new markets for lumber and has assisted in many ways in building up the trade. He has been a necessary medium between manufacturer and consumer, giving valuable advice to both. The National Wholesale Lumber Dealers' Association is perhaps the greatest organization of the kind that exists to-day, representing as it does the leading dealers of the United States.

In this country, unfortunately, the wholesale dealer does not occupy the prestige that has been attained by his confrere across the border. The reason for this is obvious. Owing to the scattered population and the absence of large wholesale lumber centres, the mill man frequently sells direct to the retail dealer and in many instances to the consumer. The business of the wholesale dealer is thus limited. His rights are frequently enroached upon and altogether his lot is not an enviable one.

The time is coming when the wholesale dealer will occupy a more prominent position in the lumber trade of Canada. This country is growing, and as our industries expand and multiply the field of the wholesale dealer will be more clearly defined. Wholesale dealers have purchased more lumber in Canada this year than in any previous season, and mill men are becoming more accustomed to transactions of this kind. There has been some opposition to the work of the wholesaler; this is, to say the least, imprudent. By cutting out the profit of the wholesaler, it may be possible sometimes to give the consumer cheaper lumber, but the ultimate result will show little to be gained thereby. The business of the wholesaler is perfectly legitimate and should be encouraged.

FOREST MANAGEMENT.

The demand for something practical along the line of forest management has in a measure been met by a recent bulletin issued by the Bureau of Forestry of the United States. It is entitled "A Working Plan for Forest Lands near Pine Bluff, Arkansas," and although particularly appliable to yellow pine timber, contains much of general interest.

The Bureau of Forestry was commissioned by the Sawyer & Austin Lumber Company to present a scheme of management for a forest tract comprising 105,000 acres, and to determine whether this tract would be sufficient to furnish a sustained yield equal to the capacity of their mill, which is 40,000,000 feet annually. Thus the results may be said to be a business policy recommended after an expert investigation.

It is shown that placing the cutting limit at 12 inches diameter, an area of 276,906 acres would be required for a sustained annual yield of 40,000,000 feet, and the time required before a second cut equal to the first could be obtained would be 42 years. Cutting to the advised diameter limit of 12 inches breasthigh, or about 14 inches on the stump, with stumpage reckoned at $2 per thousand feet, and the value of cut-over land at $1 per acre, the annual average interest represented by the future crop on cut-over lands would be, for a period of forty years, nearly 9 per cent. In other words, after the Sawyer & Austin Lumber Company had lumbered their present tract at the rate of 14,500,000 feet per year, the lands which had been cut over would be producing timber which, at a conservative estimate, would represent an income of 9 per cent. on the capital invested. It is shown that, in order to assure a sustained annual yield equal to the capacity of the mill, the addition of 170,000 acres to the present tract would be necessary.

It is recommended that the cutting limit for pine should be placed at 14 inchs on the stump (12 inches breasthigh), this limit being advisable for the reason that a sustained annual yield equal to the capacity of the mill could be obtained by the addition of a much smaller forest area than that required by a higher diameter limit, and an equal cut could be harvested after the same number of years required in case a higher cutting limit were used.

One of the main points urged is a thorough system of fire protection for the cut-over land. The tops of felled trees are said to be a source of great danger and should be burned as soon as they are dry enough, probably the cheapest and most effective way being to skid them into piles and burn as many together as can conveniently be skidded to one point.

A summary of the rules for lumbering recommended by the Bureau of Forestry include the following: (1) The cutting limit for pine to be 14 inches on the stump. (2) A certain number of pine trees over 14 inches on the stump to be marked and left standing for seed purposes. (3) Hardwoods on pine lands to be cut whenever practicable. (4) All pine 18 inches and over in diameter on the stump to be sawn not higher than 18 inches from the ground, and that below 18 inches diameter on the stump at 12 inches from the ground. (5) Care to be used in the felling to do as little damage as practicable to valuable young growth.

SOUTH AFRICAN TRADE.

WITH the ending of the war in South Africa will come a period of great development in that country and a consequent demand for many lines of manufactured goods. German and Austrian syndicates are said to be forming to exploit the South African market. With cool audacity the continental countries which as far as possible supported the Boer cause and obstructed the British, are now seeking to reap the commercial advantages arising out of the conditions established by Great Britain at an enormous cost in men and money. The United States have been exporting largely to South Africa, and their trade returns for the first half of this year show a substantial increase above the same period of 1901. It seems only fair to her own interests that Great Britain should impose some restrictions in the form of duties on foreign goods entering the South African market, thereby giving a preference to home and colonial industries, which will have to bear a considerable proportion of the expenses of the war, and compelling foreign countries to pay something for the commercial advantages which are the direct result of the long continued and successful struggle conducted by Great Britain. Canadian exporters of manufactured goods should lose no time in establishing trade connections in South Africa, and should be properly represented at the South Africa, British and Colonial Industrial Exhibition to be held in Cape Town from November to February, 1903-4.

EDITORIAL NOTES.

The recent visit to this country of Mr. Horatio A. Massey, of New Zealand, emphasizes the importance of Canada as a timber producing country. Mr. Massey is the owner of large timber areas in New Zealand and desired to learn the extent of our resources in order to assist him in placing a reasonable valuation upon his property. Thus the timber of Canada regulates to some extent the value of timber in New Zealand, and vice versa.

The British Columbia law prohibiting the export of timber from the province has been subjected to bitter attacks, since its enactment, by persons interested in the business of exporting timber to Washington. We are told that the Chief Commissioner of Lands and Works has promised to further investigate the matter and to provide some relief for the loggers. The Loggers' Association is reported to have received legal assurance that the Government cannot grant a special license to loggers to cut timber and then prevent their selling it where

they choose. We fear, however, that in this connection they are being misled. The case is analogous to that which existed in Ontario, and it will be remembered that the decision of the Trial Court so strongly upheld the Legislation of the Government that the licensees decided that it would be fruitless to appeal to the Privy Council, as was originally intended. Doubtless if any action is taken in respect to the British Columbia law, the result will be similar.

The man who finds time to study market conditions and places himself in a position to take advantage as far as possible of the fluctuations as they occur, is usually successful in business. This is especially true of the lumber business. Many persons are familiar with the incident which occurred in Buffalo at the time of the last sharp rise in hardwoods. A dealer had for some time relied upon such trade as came to him unsolicited or without the aid of salesmen; consequently he was not as familiar with the shortage of stock and the favorable conditions for a sharp advance in prices as were his competitors. They, more closely in touch with the market, entered his yard and purchased practically all the hardwood lumber in stock, with the result that within a few weeks they turned it over at a handsome profit. White ash which they purchased for $34 per thousand was sold for $45. The dealer in question profitted by the experience and has since given more attention to studying the prospects for a rise or fall in the market.

RIGHTS OF LUMBERMEN TO CONSTRUCT DAMS.

Following is a judgment delivered by Mr. Justice Street, of Toronto, in an interesting case affecting the rights of lumbermen to construct dams.

NEELY v. PETER.—Judgement (R.) in action tried without a jury at Parry Sound. The plaintiff was the owner of land upon the Seguin River, and brought this action against the administratrix and administrators of the estate of William Peter and against the Parry Sound Lumber Company for flooding his land by a certain dam upon that river, which, he alleged, was maintained and used by William Peter in his lifetime, and by the company. At the trial the Parry Sound River Improvement Company were added as defendants, and the statement of claim was amended by adding allegations that they owned the dam and charged toll to the other defendants for using it. The new defendants admitted these allegations, but relied upon the powers conferred upon them by the act under which they are incorporated. The original defendants with their defence brought $142 into court, and said it was sufficient to satisfy the plaintiff's claim, and such payment in was afterwards attributed to the new defendants, as well as the orginal defendents. Held, upon the evidence, that the effect of the dam has been to throw upon plaintiff at certain seasons a larger quantity of water than would naturally be there, and to inflict upon him a certain amount of injury and inconvenience. There is nothing in the timber act, R.S.O., ch. 194, under which the defendants the improvement company are incorporated, which confers upon them any right to flood private property unless they have first taken steps authorized by the act for expropriating the property or settling the compensation for flooding it, and that has not been done here. As regards the other defendants, they cannot be held liable for any damage sustained by plaintiff by reason of their having during any freshets caused damage to plaintiff by using or repairing or maintaining any dam necessary to facilitate the transmission of their timber down the stream. But the improvement company are in a different position. The rights giving to persons desiring to float their own timber down a stream should not be extended to companies incorporated for the purpose of making a profit by improving streams and charging tolls to lumbermen. The improvement company built or acquired a dam below plaintiff's land; there was an opening in the centre of the dam which could be closed with stop logs. When the stop logs were out all that remained of the dam at this point was the "bed timber." The result, at times when there was more water coming down the stream than could escape through the loose framework of the dam, was to back the water to the depth of about three inches on the lowest parts of plaintiff's land. The effect of confining the flow of the water to the opening in the dam after the stop logs had been taken out was to prolong the period of high water upon plaintiff's property. The dam as built was necessary for the purpose of enabling the lumbermen to get their timber down the river, and no unnecessary damage has been inflicted upon plaintiff. As against original defendants, action dismissed with costs. The added defendants are liable to plaintiff for the injury caused by the dam. But the plaintiff has accepted $30.75 in full of his damages to the end of 1898 and his claim must be limited to damage done in 1899 and 1900, this action having been begun in March, 1901. The sum of $142 paid into court was sufficient to cover plaintiff's damage for 1899 and 1900 as well as his increased outlay upon a certain bridge. Judgment for plaintiff for $142 against added defendants without costs. The $142 to be applied pro tanto in payment of the costs awarded against plaintiff.

THE LATE E. D. DAVISON.

The business community of Lunenburg County has been greatly shocked by the sudden death of E. D. Davison, senior member of the lumber firm of E. D. Davison & Sons, Limited, which is a close family corporation, with headquarters at Bridgewater, N.S. Mr. Davison was holding the position of representative of the County of Lunenburg in the House of Assembly and serving his third term as the Mayor of the town of Bridgewater, so besides his extensive interests in the lumber business he was actively engaged in the public service. He was in his 57th year and had spent his lifetime in the lumber business, being particularly engaged in opening the streams and roads and providing timber for the mills. The principal operations were on the branches of the LaHave, Medway and Nictaux Rivers circulating through the 200,000 acres of the firm's timber lands which have been conducted under his direction.

Having always been of a studious, observing character, Mr. Davison had established the reputation as the best authority on forestry and timber values of any man in Western Nova Scotia. Having educated juniors to conduct his lumber operations, he had lately taken a great interest in public affairs in his section of the country, and his advice and counsel were highly esteemed by the public men of the province.

Though he had warnings of failing health during the last year, Mr. Davison's ability to prosecute his work seemed as good as ever, and he was never more closely tied to his various occupations than at the time of his death. He has been universally regretted by the whole community. His surviving children are Mrs. Henry Howell, of Atlanta, Ga., and two boys, Edward and Harold by his second marriage, who inherit his estate subject to several legacies.

The business being a joint stock company, the transfer of shares will be the only change, and as Mr. Davison had arranged to dispense with his personal attention to the business it will likely proceed in the same lines.

Mr. Davison was particularly interested in the construction of the Halifax & South Western Railway now being located in the district, aud his influence will be greatly missed in reconciling the various interests along the route of the railway, as there is no one of his influence and experience whose counsel would have the same effect with the Government or the county.

His sudden removal makes it impossible at this time to fully estimate the loss sustained, which will only be learned as the years pass by. His friends fondly hoped he would have been spared to fill a higher place in the councils of the country. His funeral at Bridgewater was attended by very many of his friends from the surrounding country.

FEEDING A BOILER.

The operation of getting water into a steam boiler is so closely interlinked with the operation of heating it, that it is scarcely practical to consider the two separately. It is unnecessary to point out the saving obtainable from heating the feed water; this is amply and strikingly demonstrated by the fact that using live steam to heat the feed water before it enters the boiler is more economical than putting it in cold. But it is frequently perplexing to determine just what method of heating and what means of delivering the feed water will be most economical. The first cost of the apparatus considered enters into the question, of course, as the interest and cost of maintenance form part of the operating expense of the plant, and the class of help obtainable must also be considered, simplicity frequently being preferable to economy.

Speaking generally, it is safe to assert that for all plants of a size too small to justify the installation of economizers, it is good practice to employ heaters in the exhaust pipes of the engines, absolutely regardless of the condensing question. If the plant be non-condensing, it is self-evident that exhaust steam heaters are imperative; even if the exhaust steam be used for heating purposes, it will usually pay to put in a heater between the engine and the heating system.

In condensing plants, primary heaters will be found advisable under average conditions. Of course, if the plant is a very large one, economizers claim consideration, but in a plant of ordinary size an economizer is usually barred by the cost of installation and attention. A primary heater will bring the feed-water temperature from 40 to 50 up to about 110 degrees F.; a higher temperature could be secured by imposing back pressure on the engine, but this is obviously not good practice with a condensing engine. It will be advisable, therefore, to still further heat the feed water by passing it through a secondary heater after it leaves the primary heater. If sufficient heat can be obtained from the exhaust steam of the air, circulating and boiler-feed pumps to carry the feed-water temperature up to about 200 degrees F., without deliberately using pumps of low efficiency for the sake of their exhaust heat, then the combined exhausts from all the pumps should be passed through the secondary heater.

If, however, the efficiency of the auxiliaries is so high that a gain of only 40 to 50 degrees in temperature is obtainable in the secondary heater, it will usually be advisable to run the pumps condensing, still passing the exhausts through the secondary heater in order to extract as much heat as possible before delivering to the condenser, and to reinforce the secondary heater with live steam bled from the receiver or the high-pressure exhaust of the engine. If the engine is provided with a reheater which superheats the receiver steam, says the American Electrician, then the steam used in the secondary feed-water heater should be taken out from the high-pressure exhaust before that steam reaches the reheater, in order to avoid a waste of superheat. The plan outlined would be almost universally more economical than to sacrifice the efficiency of the pumps in order to obtain sufficient heat from their exhaust steam to give the feed-water the proper temperature. Air and circulating pumps should preferably be engine-driven, but whether they are of this type, or are ordinary forms of direct-acting pumps, they should be run condensing unless their exhaust steam added to that of the boiler feed pumps will supply sufficient heat for the feed-water without bleeding the engine receiver.

Belt-driven pumps are not, as a general rule, commendable for boiler feeding, on account of their inefficiency at partial loads when driven at constant speed, as they would have to be in all modern central stations and isolated plants. If it were practical to vary the speed of the pump according to the requirements of the boilers, without interposing a lot of power-consuming gear, the belted type would show the highest efficiency of any form of boiler feeder.—Boston Journal of Commerce.

THE PRODUCTION OF TANNIN IN ONTARIO.*

By J. A. DECEW.

One of Ontario's important industries is that of tanning, and for this purpose hemlock bark is the commonest and cheapest material used. The bark is taken from the common Hemlock (Tsuga Canadensis) by felling and peeling it in the spring of the year, when the bark has been loosened by the growth of the cambium layer. The bark is cut into four-foot lengths and carefully piled in order that it may become properly seasoned, for if a fermentation occurs in it the tanning properties will be greatly reduced. During the winter following the bark is drawn on sleighs to the nearest siding and shipped by rail to the tannery, where it is ground to a powder and leached with the hot water of exhaust steam, the liquors coming off from these leaches being used in the tanning.

As the consumption of bark goes on, all that country contiguous to the railways becomes denuded of hemlock trees, thus each year the haul to the railways becomes greater and is an ever increasing factor in the price of bark. The stumpage value of the bark need hardly be considered, for the average settler will sell his bark for a price barely sufficient to pay him for his labor expended since he gains thereby a market for the peeled timber and a winter's work near home. But with the recent increased demand for labor and the rapid rise in wages the settler can now find much more lucrative employment elsewhere and this has forced the tanners to put in camps themselves in order to procure a sufficient quantity of bark. This places the price of tan bark at last absolutely upon a labor basis, with its value varying directly with the price of labor and the amount of work done upon it. And this being the case the time must surely come when we shall be forced by economy to separate the tanning ingredients from the bark at the source of the supply and thereby save the unnecessary expense of freighting a very large amount of non-essential materials. That the time has already arrived the following discussion will attempt to demonstrate. Let us first investigate some of the properties and sources of the materials that are generally used in tanning.

There are a number of substances found in certain woods, barks and leaves which have an astringent taste and acid reaction, and are known under the general term, "Tannin," on account of their resemblance or relationship to tannic acid. They are formed in the leaves of the plant under the conditions necessary for general assimilation, transmitted through the leaf stock and distributed through the permanent structure. The tannins formed in the various plants differ somewhat in properties and composition, but they all possess in common the property of combining with hides to form leather penetrating and reacting with the animal fibres in such a manner that hides thus treated will not be decomposed and are insoluble.

The tannins are subcrystaline solids, neither fusible nor volatile, and although fairly soluble in cold water, they are quite soluble in hot water and such solvents as alcohol, acetic ether and acetone.

They may be identified by two typical reactions.

1. With the salts of iron they give a blue, black or green color, and this reaction is the basis of most of our writing inks.

2. With a solution of gelatine they form artificial leather, the reaction being quite similar to that taking place with hides.

All of the natural tannins are strong reducing agents, absorbing oxygen readily, especially in alkaline solutions.

The tannins have quite an extensive application as mordants in the dyeing industry, for they have the property of combining with the textile fabric and giving to it an increased affinity for coloring matters.

It is quite apparent that these valuable properties will give to the tannins an extensive industrial application, and as their synthetic preparation on a commercial scale is as yet merely speculative, the vegetable kingdom remains the only source of supply and an exceedingly variable one it is. We find tanning principles in the fruit, wood, bark and leaves of a great number of plants and future investigation will doubtless reveal them in many more at present unknown. The following incomplete list will indicate somewhat the wide diffusion of these principles :

Northern trees—Oak, chestnut, willow, sumach, elm, ash, elder, birch, cherry, poplar, hazel, pine, fir, hemlock, etc.

Other sources and products — Tea, gall nuts, gambier, divi divi, catechu, valonia, quebracho, etc.

The most important of the tropical tannin producing plants are exported to England, United States and other countries and there made into extracts which are used for tanning and other purposes.

Galls or gall nuts are excrescences formed upon the leaves and leaf stocks of a species of oak (the Quercus Infectoria) which grows in the Levant. They are produced from the puncture made by the female gallwasp in depositing her eggs, around which the juice of the tree exudes and dries in concentric portions. The galls are gathered before the insect has escaped from its shell, when they contain a large percentage of gallotannic acid.

Gambier is an extract prepared from the leaves of the "Uncaria Gambier," and is principally imported from Singapore.

Divi-divi is the pod of a leguminous shrub, the Cæsalpina Coriaria," which is indigenous in South America, and from it a tannin extract is made.

Catechu or "Terra Japonica," is an extract prepared from the heart wood of the Acacia Catechu, which is generally imported from India.

Valonia is an extract made from the acorn cups of the Quercus Aegilops, which grows in Morea in China.

Quebracho is an extract made from the wood of the Aspidosperma, many species of which are found in tropical America.

Sumach is the name applied to a number of plants of the genus Rhus, which although natives of Asia, are cultivated in Sicily and other parts of Europe for the tannin which they contain. The leaves are cut from the tree just before it blooms, and after being dried are ground to a fine powder. Nearly all the Sumach we use is imported from Sicily either as powder or extract.

The willow bark is used extensively for tanning in Russia and the oak was the native tan bark of England, but in North America the hemlock, chestnut and oak have the commercial importance, both as a local and foreign supply.

The chestnut extract is prepared from both wood and bark, and is greatly valued on account of its freedom from the coloring matters common to other extracts, with which it is often used in admixture as a modifying agent.

The oak derives its tanning properties from the Quercitannic acid contained in both wood and bark, and although the bark is the prevailing source, an extract is also made from the sawdust. This tannin also occurs in the elm and produces a leather that is highly esteemed. It belongs to that class of tannins which produce a bloom upon leather during tanning.

Many other barks are rich in tannin, but are very little used, either from lack of knowledge concerning them, or that they are not found in sufficient quantity to become a marketable commodity.

As the oak and chestnut are fast becoming rare and valuable, they are scarcely to be counted on as the source of any considerable quantity of tannin in the future, and in order to maintain or increase the supply we are forced to look to other sources.

Now we have in our own Province the hemlock tree, which occurs in such enormous quantities that with proper treatment it might be and forever remain an extensive source of tannin. At present, however, the cost of hemlock tannin in Ontario is more than it should be on account of the expensive methods employed, and in consequence its consumption is limited to the local tannery and barely keeps pace with the demand for the timber, in spite of the cheap grade of lumber that the tree produces.

In the United States the annual production of solid hemlock extract is said to be considerably over ten thousand tons, but none is produced in our Province notwithstanding the enormous hemlock limits it contains and the small value of the timber, the hemlock extract we actually consume being shipped to us from Nova Scotia. Our Government has apparently endeavored to encourage its local manufacture, for hemlock is the only extract on the market upon which there is an import duty, and the export of the bark is prohibited. What more favorable conditions could be required for its manufacture, and yet the tanners say that the making of extract is unprofitable. They shudder at the enormous and expensive plant that would be required, and as they should be more familiar with the subject than any one else their decision is final. They have in mind, however, the large permanent extractive plants of the United States, which make tannin and dye wood extracts from materials gathered from all parts of the world. These plants contain huge and expensive extractors and vacuum pans, resembling those employed in sugar refining, and are of course too costly to establish in the forest.

But if we are to experience the industrial evolution of other nations we must change our methods and in this instance adopt those that were employed by the Germans under similar conditions. When they were confronted by an expensive tan bark, which was made so solely by the excessive cost of transportation, they solved the question in the following manner : Small plants, consisting of a cheap portable power, a bark cutter or grinder and wooden extraction vats, were set up in or near the source of supply, and with these they made a fairly concentrated extract. The cost of shipping this extract to the tannery was but a fraction of the transportation cost of the bark, and the cost of extraction in the forest but slightly in excess of the grinding and leaching process that would have been eventually employed by the tanner.

The plant may be stationed for a season's run in any locality where there is a sufficient block of timber, and this is not hard to find in Ontario. After the bark is peeled it should be treated as soon as possible and consumed the same year. It may be cut into fine shavings by being fed from the end against a series of revolving knives, and as each shaving is a thin transverse section of the bark cells the tannin is extracted without difficulty. The bark may, however, be ground to a fine powder by the usual form of grinder. It is now placed in a series of ten wooden tanks, which are arranged in a circle, the bottom of each being connected by a pipe to the top of the other. Steam from the boiler is now turned into number one, and passes through each in turn, until it is drawn off from number ten as a quite concentrated extract. A number of these vats are employed, because the extraction of the tannin depends upon the laws of diffusion. Thus, in boiling water, the tannin will leave the bark and become diffused throughout the solvent until equilibrium is established. If the solution is now removed and more solvent added the tannin remaining in the bark will now become diffused, forming a weaker solution, and if this process is continued all of the tannin will be finally extracted. Therefore if hot water is passed successively through ten vats, in which the bark of number two is richer than number one and number three richer than number two, etc., it is evident that the solution must become continually stronger as it passes through each in turn, and when discharged from number ten is a quite concentrated extract. When the tannin in tank number one is exhausted it is refilled and then becomes number ten.

By this process we eliminate the harmful effects of the open evaporating pan, in which the tan leach is concentrated in the open air, and a large part of the tannic acid thus destroyed by oxidation. Tan liquors or extracts should never come in contact with iron pipes or tanks, for the tannic acid will corrode the iron, combining with its salts with the formation of ink, and correspondingly neutralizing its tanning properties. Carbolic acid or corrosive sublimate added in minute quantities to an extract will prevent the growth of fungi and an addition of one-half cubic centimeter of glacial acetic acid to one litre of extract is valuable as a preventative of oxidation.

If several of these portable plants are in operation in the same locality and an extract for export is desired, a solid extract may be prepared by further concentration in a vacuum pan. This apparatus will evaporate all of the moisture in the extract at a temperature below 100 degrees centigrade on account of the partial vacuum at which it is kept, and as there is no access of air, the tannin can not be decomposed either by hydrolysis or oxidation. A solid extract may be composed of various quantities of tannic, gallic or other organic acids, coloring matters, starch, gums and any other extractive ingredients soluble in hot water. Therefore the percentage by weight of tannic acid is an exceedingly variable factor, depending upon the method of extraction and the relative amount of extractive materials contained in the original substance. In the liquid extract all of these inert ingredients affect the specific gravity of the solution, and the customary habit of expressing the strength of the extract in terms of degrees Baume is very unreliable, and often gives a fictitious value to a worthless extract because all of the tannin might have been decomposed during extraction and yet the density remain the same.

The extraction of tanning materials is not an elaborate process, but proper methods are necessary to obtain good results, and it is more than probable that any failures in the past in the preparation of tan extracts are traceable to mistakes in this respect rather than that the business is in itself unprofitable.

The possibilities in the development of this industry appeal more to the lumbermen who own the limits than even the tanners, for it could be carried on in harmony with other lumbering operations, and other tannins beside the hemlock, such as ash, birch, etc., might also be profitably introduced. There is no reason why our lumbermen should not supply all of the local tanners with an extract at a price less for equal tanning power than that now paid for bark, and still have a considerable amount for export. Under these conditions a large quantity of hemlock timber now inaccessible could be lumbered with a profit, as the bark would have a stumpage value and would pay the cost of seasoning the timber. Hemlock is now taken out in localities where the bark has no value, and in endeavoring to float it in the green state large quantities are lost. As hemlock has also a value for sulphite pulp making, there will soon be an urgent need for some method of consuming the bark in the distant forest, and if one such as has been suggested be employed it will pave the way to the more scientific development that accompanies the application of the principles of forestry and economy.

*From the last Report of the Director of Forestry for Ontario.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 24 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VIII. TORONTO, CANADA, JULY 30, 1902 No 26

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Office:

IMPERIAL BUILDING, MONTREAL.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

Prepared by the Editor of the "Canada Lumberman."

Toronto, Canada
C H. MORTIMER, Publisher
1895

THE above is a fac simile of the title page of the latest and most complete Lumber and Inspection Book published.

We shall be pleased to send you a copy on receipt of six 2 cent Canadian postage stamps

THE CANADA LUMBERMAN,
Toronto, Canada.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in the current week's issue.

WANTED—A RAFT OF PINE LOGS ON Georgian Bay; apply at once to Box 20, CANADA LUMBERMAN.

LUMBER WANTED.

BIRCH SQUARES 5" x 5" and 6" x 6", dry or green. Liberal price on one or more cars. J. E. MURPHY, Hepworth Station, Ont.

HARDWOOD WANTED.

BASSWOOD, 1, 1½ AND 2 INCH; SOFT Maple, 1½, 2, 3 and 4 inch; Soft Elm, 3 inch; all largely 12 feet long. State lowest price f.o.b. cars. Address J. W. COLLINS, Queen's Wharf, Toronto.

DRY PINE.

WE HAVE ABOUT 1,500,000 FEET DRY PINE in 1, 2 and 3 inch common and better, prefer selling in bulk. Will quote freight rate to Buffalo, Chicago or Toronto on application. Correspondence solicited. N.B.—Would like to correspond with consumers of hardwoods. ST. JOE ISLAND LUMBER CO., Sault Ste. Marie, Ont.

SPECIAL TO LUMBERMEN.

WITH A THOROUGHLY EQUIPPED PLANING Mill at Orillia, we solicit orders for resawing and planing of lumber, in any quantity; can match 26 inches wide; all work guaranteed first-class; prices on application. Address, NATIONAL BOX CO., Orillia, Ont.

RAILROAD TIES AND TROLLEY POLES WANTED.

10,000 Sound Cedar Ties. 250 Cedar Trolley Poles, 30 feet long, 7 inch small end, fairly straight, delivered at Hamilton. GEO. E. WALLER, Manager Hamilton, Grimsby & Beamsville Electric Railway Company, Hamilton.

FOR SALE

INTERNATIONAL CO. MILLS,

Newport, Vt.

Just across the line, on Lake Memphremagog; junction C. P. R. and B. & M.

Entire plant, consisting of saw-mill, 36x96, 2 stories, dressing and box-mill, 50x180, brick boiler house, office and other buildings; complete equipment of machinery, six 80 horse-power boilers and two 200 horse-power engines, all in good running order.

The best location and best plant in Vermont for handling Canadian Lumber.

Cost $104,000 in 1883.

Price $25,000.

Inquire of

RICKABY & CO.,
St. Johnsbury, Vt.

TUG WANTED—Second-hand, 20 to 30 Horse Power. Box 99, CANADA LUMBERMAN.

WANT TO CORRESPOND WITH PARTIES that wish to open up a trade in all kinds of Hardwood Blocks for the English market. Specifications, prices, etc., obtained from E. D. G. PIDGEON, St. John, N. B.

SECOND HAND GANG WANTED.

A GANG 48 INCHES OR WIDER, HAMILTON or Wickes make preferred. Give full description and lowest price for cash. Address X, care of CANADA LUMBERMAN.

Timber For Sale

THE UNDERSIGNED OFFER FOR SALE 44½ Square Miles of Timber Limits in the Township of Chapman, Parry Sound District, either in bulk or any part thereof to suit buyers. The limit comprises Pine, Birch, Hemlock, Cedar and other woods. Alternate offers are also invited for logging and manufacturing the timber on the basis of per thousand feet. For further particulars address CHARLES QUERENGESSER, Brodhagen, Ont.

FOR SALE.

THE ENTIRE CUT OF 190 OF SEVERAL mills on the Ottawa Valley of all number one white pine mill culls, strips and sidings, 1" to 3" thick, and also other grades. Shipments by water or rail. Write for particulars and quotations to A. F. BURY AUSTIN, Wholesale Lumber & Timber, Room 507 Merchants Bank Bldg., Montreal. Also spruce lumber of all grades.

MACHINERY FOR SALE

AT A BARGAIN

300 H. P. BROWN AUTOMATIC CUT-OFF Engine (Thompson & Williams make), in excellent order, cylinder 20 x 54; 175 h. p. Water Wheel; 4 Boilers, 1 only in good condition, with steam trap and connections; Worthington Steam Force Pump, with automatic sprinklers, complete for building 40 x 300 feet, 4 storeys, in good order; about 100,000 feet Steam Pipe; 1,000 feet 3 inch Shafting, with latest improved hangers, with couplings and pulleys; can be seen at Weston Woollen Factory, near Toronto. For further particulars apply PETER RYAN, Toronto.

STANDING TIMBER FOR SALE.

600 ACRES OF CHESTNUT, WHITE-WOOD, Hard and Soft Maple, Red and White Oak, Black and White Ash, Basswood, Soft Elm, Beech; a little Hickory, Butternut and Cherry; two railroads running through property; 10M per day mill, 40x100 ft., planer and matcher, shingle machine and other machinery; large dwelling house and house for men; barn and sheds; large bearing orchard; plenty of water; splendid market for wood; best lot of hardwood in this western Ontario; good investment for enterprising man. Bismarck Station, M. C. R., West Lorne, P. O. I. C. SCHLEIHAUF.

CURRENT TRADE CONDITIONS.

ONTARIO.

The lumber trade is not as lively as it was a few weeks ago, but there promises to be renewed buying for stocking-up purposes within a short time. No stocks of any consequence are accumulating at the mills, and we would not be surprised to witness a further advance in the price of white pine. Lower prices are usually caused either by a general depression in business or by an overstocked market. Neither of these conditions may be expected to exist within the next year, so that the stability of the market seems assured for some time to come. Wages in the woods during the coming winter will be high, probably $28 to $30 per month for first-class loggers, $27 to $28 for teamsters, and $20 to $23 for road-makers. This factor will have a tendency to further enhance the value of white pine lumber. Mill culls are now held at from $9 to $10 at the mill, and in no instance is stock being sacrificed to effect a sale, as American buyers are willing to purchase wherever any quantity can be secured.

Hardwoods are in the ascendancy, and it is generally believed that they will sell materially higher when the shortage in stocks becomes more generally known. Implement and furniture factories report that millmen are running short in their contracts, the reason being that they were unable to secure sufficient logs last winter to keep their mills in operation.

QUEBEC AND NEW BRUNSWICK.

The scarcity of clapboards is still commented upon. The demand from the Eastern States has absorbed almost the entire supply of dry stock, and prices have receded but little from the high point reached last spring. Spruce lath are also in good request at firm prices. The cedar shingle market is, if anything, a trifle easier, although the large manufacturers are still holding their extras at $3.60 for Boston delivery.

Square and waney pine timber is steadily seeking a high level. A few sales are reported to have been made at prices higher than those recently quoted, but the stock was in most instances of exceptionally good quality. Birch timber shows a tendency to appreciate.

MANITOBA AND BRITISH COLUMBIA.

Lumber is going actively into consumption throughout Manitoba and the Territories. The requirement at the present time is chiefly for building operations, which are being carried on extensively. The country demand will develop after the crops are harvested and will doubtless be of large proportions, as an abundant yield of grain is promised. Laborers are greatly in demand, it being almost impossible to secure a sufficient number of loggers to keep the camps in British Columbia in operation. Manufacturers there have large orders for lumber on their books and will be kept busy throughout the season. Five vessels are expected to arrive at Chemainus this week to load lumber for South America.

UNITED STATES.

The prospects for a very large yield of wheat and corn are having an effect upon the lumber market. When harvesting is over, there will no doubt be a heavy demand for lumber of all kinds and particularly for the class called for in the agricultural districts. Although white pine prices are high, influences are at work to bring about a further advance of about one dollar per thousand, as it is believed by many persons that such an advance could be put into effect without having any restrictive influence upon the demand. It is contended that the output of white pine this season will be inadequate to meet the demand, and that this is shown by the fact that up to the present time the mills have been unable to accumulate the usual quantity of stock. Our Buffalo list this week shows an advance in the price of 12 inch No. 1 barn boards. Chicago dealers last week put into effect an advance on several items of fifty cents and one dollar. Dealers state that they are finding a normal demand and are able to do business without as much effort as is customary. Albany advices state that good lumber is exceptionally firm, 3 and 4-inch uppers bringing from $78 to $80. There is more inquiry for hardwoods than at any previous time this season. An expansion in the demand for white ash has taken place, implement factories being reported as large buyers. Basswood continues scarce and birch is none too plentiful. Hemlock has advanced in the Chicago and Boston markets. In the former city it is sellling on the basis of $14 for 2x4, 2x6, 2x8 and 2x10, 12 to 16-foot, which is the highest price ever obtained for hemlock in that market. At Buffalo and Tonawanda the base price is still $14. There is no change in the shingle situation, but a heavy movement is looked for during the fall months, with possibly a rise in values.

GREAT BRITAIN.

While there has been some improvement in the tone of the British timber trade, the outlook for the future is still surrounded by uncertainty. The pessimist is predicting that prices have now reached the point where they are likely to react unless there should be an increased demand. On the other hand, the import this year is considerably behind that for the same period of last year. This has permitted stocks to become reduced in many instances. Building operations, which suffered from wet weather, are now more active and are assisting consumption. Importers seem to be surprised that shippers hold stocks so firmly and refuse to accept orders except at their own prices. It must be said that the foundation of the lumber business is on a better footing than it has been for some time. There have been no important failures and little tendency towards risky speculation. At recent auction sales prices were well maintained, fourth quality Quebec spruce bringing £8 10s. The London market is slightly overstocked with the common grades of red pine, but as the import this season will be light, the situation is likely to improve.

At Liverpool the stock of good spruce is comparatively low. Prices have shown an upward tendency, based upon £7 7s 6d to £7 10s per standard, according to specification, with about 60 per cent. of 7 and 8 inch. Other New Brunswick spruce, with a good proportion of 3x9 and 3x11, is being sold at extreme prices.

STOCKS AND PRICES.

M. Hyatt, of Revelstoke, is getting out 3,000,000 feet of logs, which will be used for bridges on the Canadian Northern Railway.

The steamer Kong Haaken is completing a cargo of deals at Montreal for the United Kingdom. The steamer Avona is expected to arrive in Montreal this week to load a cargo of deals for the U. K.

E. T. Carrington, Secretary of the Spanish River Boom Company, states that there are 185,000,000 feet of logs to be hauled by the Spanish River Boom Company this season, of which over 80,000,000 feet has been rafted.

White pine shingles are being offered in Chicago by rail at $3.20 for extras, $2.60 for standards and $1.50 for No. 1. Lath are in good request and bring $3.70 to $3.75 for No. 1 mixed by rail and about $3.50 by water. No. 2 lath are quoted at $3 by rail.

A report from Boston, Mass., says that the predominant feature of the hardwood market is the difficulty of securing the class of quartered oak needed, and this, of course, limits actual business. For the very highest grade quartered oak as high as $70 is asked.

J. & T. Charlton, of Collingwood, Ont., last week loaded the barge Carpenter and her consort the Tyson with lumber, consigned to Bradley, Miller & Company, of Bay City, Mich. The combined cargoes contained over 1,000,000 feet, entirely of this year's cut.

The lumber receipts at the Saginaw river during the week ending July 19th were as follows: Schooner J. B. Donaldson, from Midland, Ont., 440,547 feet, consigned to Mershon, Schuette, Parker & Company; schooner A. W. Wright, from Midland, 674,366 feet, same consignees; steamer Benton, from Spanish River, Ont., 307,117 feet to E. B. Foss & Company; schooner David Ferguson, from Spanish River, 47,785 feet lumber and 779,450 pieces lath, to Foss & Company; schooner C. J. Filmore, from Spanish River, 548,948 feet lumber and 68,000 pieces lath, to Foss & Company.

A Liverpool report says: The Quebec and Montreal season is now in full swing, but imports are chiefly by the liners. The chief exporters of pine goods are filling their contracts to other ports and are not sending here at present any larger quantity than they can help, except under their considerations for their positive engagements. For instance, Robert Cox & Co. have by the "Parisian" only 170 standards of deals and boards, and by the "Lake Ontario" only 15 standards of pine sidings; whilst Watson & Todd's importations per "New England" and "Roman" are only 200 standards of third pine deals, red pine deals, pine sidings, strips, etc.

THE SITUATION ON THE UPPER LAKES.

MINNEAPOLIS, MINN., July 23.—In local lumber circles there is already a sentiment in favor of making further advances in the list prices on white pine in the near future. It is improbable that these advances will occur before the meeting of the Mississippi Valley Lumbermen's Association, which is to be held August 20, but so firm are some of the local firms in their views that they want the advance to go into effect at that time and are beginning the agitation in favor of higher prices for the purpose of bringing it about at that time.

There are elements in the white pine situation which make it look much stronger than it has before this season. Owing to the favorable crop conditions in the spring wheat belt and in the states to the southwest, demand has kept up remarkably well during July thus far and has showed some gains over June. It was anticipated that the volume of business this month would be about normal on the June basis. An increased demand was therefore unexpected and is a source of surprise and is giving the market a firmer tone. And judging by the business that has been transacted the past three weeks and the outlook for the future August will also show a heavy consumption of white pine. At that time the crop movement in the winter wheat states will be on in full force and southern lumber manufacturers will have more difficulty in securing cars than they have at present. Harvest will be commencing in this section, but the crop movement will not have begun and northern manufacturers will therefore be in a position to supply the demand. They will have plenty of cars until well into September and their business will show a large increase. This will help the situation and will make prices stronger than ever.

Another feature which is contributing to a strong market is the continued shortage of assortments. White pine manufacturers are producing at the maximum of their ability, but apparently they are unable to accumulate stocks for next fall and winter after the sawing season will close, and this is causing a strong feeling. Manufacturers would prefer carrying over sufficient stocks so that they can take care of their customers in good shape next season to selling it out at the present time.

Whether those who are in favor of advancing prices will be able to accomplish this at the August meeting remains to be seen. It is known that they will use all of their influence in this direction. On the other hand, many of the large manufacturers, conservative in their views, are inclined rather to favor a list which is too low than one which is too strong, in the belief that prices on a steady and satisfactory basis are better than where they are irregular and where the list is not observed by all of the factors. It is certain, however, that the price list will be revised to some extent at that time and in all probability there will be advances on some items.—American Lumberman.

Messrs. Charles Querengesser and John Bennewies, of Broadhagen, Ont., have purchased from Burton Bros., of Barrie, a valuable timber limit in the township of Chapman, Parry Sound district. The limit comprises 44½ square miles and is well covered with pine, birch, hemlock and other commercial woods.

BRITISH COLUMBIA LETTER.

Owing to a continuance of fine weather during the last few weeks a large number of logs have been placed in the water, consequently the scarcity which prevailed during May and June has been relieved to a large extent. The mills are running full time and the trade is somewhat brisk, but it is thought that all orders coming in will be filled within a reasonable time. Prices on all grades of lumber and shingles are firm, and there is every reason to think that they will remain so for the next three months.

Owing to the high prices of logs, the millmen have decided to discount, in future, all payments for same 2 per cent.

A large number of orders for heavy donkey engines for logging have been placed with the foundries and the day of the hand-logger and man of small capital is nearing its end. The smaller class of donkey engines are being largely discarded for a heavier type, which are found to be more economical.

The rush to secure timber limits has practically subsided, although there are a few cruisers still in the field. Very few sales have taken place, although a number of United States millmen have been here looking over the ground.

The fight between the millmen and loggers re the prohibition of the export of logs to the United States still continues, but nothing is likely to be done with the law until the next sitting of the Legislature.

GILMOUR & COMPANY, LIMITED
TRENTON, CANADA

THE BOSTON MARKET.

Spruce lumber is only fairly steady, with a quiet demand. Still, the arrivals of small randoms are pretty free, and these have to be sold under the market. Nominally quotations are unchanged: Ten and 12 inch dimensions, $20 to $22; 9-inch and under, $19 to $20; 10 and 12 inch, random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9-inch and under, 10 feet and up, $16.50 to $18; 5-inch and up, merchantable boards, $17; matched boards, $19 to $20; cut spruce boards, $13.50 to $14; bundle furring, $17 to $18.

Hemlock is in quiet demand at full prices: Boards, 12, 14 and 16 feet stock, $15 to $15.50 for good eastern; Pennsylvania, No. 1, $16 to $17.50; No. 2, $13 to $13.50.

White pine does not lose one iota of the firmness noted all along, although trade is quiet. Uppers, 1-in., $75 to $80; 2½ to 3 in. $80 to $85; 4-in. $85 to $88; selects, 1 to 1½ in. $68; 2-in. $69 to $70; 2½ to 3 in. $74 to $76; 4-in. $79 to $80; fine common, 1-in. $60 to $63; 1¼ to 1½ in. $64 to $66; 2-in. $68 to $70; 2½ and 3 in. $69 to $71; 4-in. $80; barn boards, $23 to $33; coffin boards, $27 to $32.

Hardwood lumber is in a firm position, with the demand fair: Quartered oak, $6 to $66; plain oak, $41 to $45; common an rejects, $20 to $25; whitewood, $42 to $43; sap and common, $30 to $35; brown ash, $41 to $44; white ash, $43 to $46; maple $28 to $30; end-dried white maple, $38 to $42; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

Shingles are unchanged, with some unfilled orders: Extra cedar, $3.60; clear, $3; second clear, $2.50; extra No. 1, $1.90 to $2; British Columbia red cedar, 16-inch, five butts to 2 inches, $3.75 to $3.80; 18-inch, $4.25 to $4.50.

Clapboards continue scarce and firm. A few new are coming in, with the position very firm at: Clear, $38 to $40; second clear, $35 to $37; extra No. 1, $25 to $30.

Laths are about steady at $3.10 to $3.15 for 1⅝-inch 1½ inch, $2.95 to $3.

Henry Hunter, general store and lumber, Westchester Station, N. S., is advertising his property for sale.

The steamer Treasury sailed last week from West Bay, N. S., for Manchester, Eng., with 1,299 standard of deals.

The steamer Raymore Head sailed from Montreal last week for Dublin, with deals.

The La Ferriere Lumber Company, of Malbaie and Montreal, has been organized.

THE NEWS

—Scott's saw mill at Springhill, N. S., has been equipped with an electric light plant.

—A. Jardine has sold his saw mill at Main Gut, Nfld., to the Cumberland Company.

—Austin Blaine has purchased the lumber business of Thomas Greenway at Crystal City, Man.

—Captain Clarke has purchased an interest in the saw mill owned by John Collins at Honora, Ont.

—Robinson & Company are installing considerable new machinery in their saw mill at Selkirk, Man.

—Henry F. Blair has sold his wood-working factory at Fredericton, N.B., to the J.C. Risteen Company.

—T. H. DeCew, of Fenelon Falls, Ont., is looking for a suitable place at which to build a stave factory.

—The Pigeon River Lumber Company, of Port Arthur, Ont., are opening a lumber yard at Fort William.

—The saw mill of the New Richmond Lumber Company at New Richmond, Que., is being removed to Mission Point.

—John Warren, of East Branch, N.B., has purchased the saw mill and farm property of R. N. Dougherty at South Branch, N.B.

—Efforts are being made by the people of Fallbrook, Ont., to induce Donaldson Bros. to rebuild their saw mill recently destroyed by fire.

—The largest raft of timber ever sent down the Mississippi river is now on its way to St. Louis. It contains 11,000,000 feet of logs.

—John Fenderson & Company, of Sayabec, Que., are building a new shingle mill at Salmon Lake to replace the Amqui mill recently burned.

—A. H. F. Randolph has been elected president and treasurer of the Fredericton Boom Company, as successor to the late Hon. A. F. Randolph.

—Wm. K. Ratz has sold out his lumber business at Lake Talon, Ont., and is about to re-establish himself about twelve miles north-east of North Bay.

—The Board of Examiners for Cullers of the Province of Quebec will meet in Quebec on August 12th, to examine candidates desirous of obtaining licenses to quality as lumber cullers.

—It is the intention of E. W. Tobin and F. N. McCrea, who recently purchased the lumber property of King Bros., of Quebec, to form a joint stock company and proceed at once to cut the timber on the limits.

—The Batiscan River Lumber Company, composed principally of American capitalists, has been incorporated with offices at St. Gabriel, Que., and Elizabeth, N.J. L. T. Champlain is manager of the Canadian branch.

—James Sheppard, of Sorel, Que., has installed in his saw mill a new dry kiln, manufactured by the McEachren Heating & Ventilating Company, of Galt, Ont. It has a capacity of 40,000 feet. He is also installing shaving and saw-dust exhaust blowers in his planing mill.

—A special summer meeting of the American Forestry Association will be held at Lansing, Mich., on August 27th and 28th, followed by an excursion through the hardwood forests of northern Michigan to Mackinac Island and return. The meeting will be devoted to a discussion of forest conditions and methods in Michigan.

—George Chew & Son, of Midland, Ont., claim to have the fastest two-band saw mill on the Georgian Bay shore. On June 28th, with James Patterson (foreman), Fred Tuer (filer), L. McMillan and J. McLaughlin (sawyers), A. Nolan and Geo. Snyder (setters), and Miles Coulson (edger), 170,500 feet of lumber and 66,000 bundles of laths were manufactured in a little over ten hours.

—An action has been instituted in the Superior Court at Quebec by O. W. Orgway, of Beaupre, against Charles Villeux, of Levis, to recover $37,500 claimed to be due as commission on a sale of timber limits. The defendant owned extensive timber limits on the Port Neuf river, Saguenay county, which were sold recently to C. P. Easton & Company, of Albany, N. Y., the purchase price being $112,500. The plaintiff claims $37,500 in virtue of a deed of transfer between both parties. The action will be contested, and it is reported that heavy damages will be claimed owing to the allegations contained in plaintiff's declaration.

—The new mill of the Pigeon River Lumber Company at Port Arthur, Ont., is now in operation. The main building is 180 feet long and 50 feet wide, with an annex in which the shingle and lath machines are installed. The perfection of machinery for handling lumber is reached in the mill, the only purpose for which human agency is required being the operating of levers to bring certain rolls or conveyors into play. The speed of handling is increased by the first band saw being only required to square the log, which is rapidly passed from it to the resaw, where it is automatically fed, and a man by the kick of a foot operates a lever which either switches it back to the saw or allows it to travel to the edger. The power is supplied from four 60-inch by 16-foot boilers, and one 68-inch by 14 feet, to a 14x32 cylinder engine. An electric plant of 400 lights capacity is being installed.

TRADE NOTES.

Dyment, Butterfield & Company, of Barrie, Ont., have secured the contract for supplying machinery for the new saw mills of the Imperial Lumber Company at Warren, Ont.

The Dodge Manufacturing Company, of Toronto, have just issued blue book No. 4, containing illustrations, price list, testimonials, etc., of the Dodge standard wood split pulleys, also fac similes of diplomas awarded for these pulleys at various expositions.

A SCHOOL OF FORESTRY FOR ONTARIO.

By W. L. Goodwin.

In the April Quarterly, Dr. A. T. Drummond has given reasons for a more scientific treatment of our forest areas, and has shown that to this end we must provide for the education of foresters and forest engineers. He cites President Roosevelt's forcible allusions to forestry and irrigation in his recent message to Congress, and the expansion of the U. S. Division of Forestry into a Bureau of Forestry, with an appropriation this year of $185,440. Colleges of forestry have been established at Cornell and Yale universities, and forestry departments in several other universities. Lumbermen, pulp companies, and owners of forest areas in thirty-three states, from Maine to the Rocky mountains, have taken advantage of the offer of the Bureau of Forestry to make working plans of their forest lands. The Dominion has an equal interest in the subject. Private owners and provincial governments derive large revenues from forests, and the sources of these revenues should be conserved by scientific management. Problems of water supply for canals, lakes, and navigable rivers, and of drainage and irrigation, are also involved. Both Provincial and Dominion governments have made good beginnings by setting aside large areas as forest reserves, by inaugurating systems of tree planting and fire protection, and by popularizing the idea of forest conservation. Dr. Drummond also points out that there are thirty species of trees now being used in the United States for manufacturing, and that an investigation of our woods other than pine and spruce would probably show some with valuable qualities of an especial kind. He concludes that the time is ripe for the appearance in Canada of the forest engineer. Many companies in the United States now employ such college educated men, and the Forestry Bureau employs only skilled foresters. The forest engineer must be a highly educated engineer with an especial knowledge of forests. A suitable place for training such men would be a school of forestry connected with the school of mining, where practical experience could be obtained by utilizing the Ontario government reserves to the north of Kingston.

Dr. Drummond has clearly shown the necessity of forest engineers for Canada, and of a School of Forestry to educate them; but he has not indicated the way in which students for such a completely new profession might be brought to the school, nor the steps which might be taken to ensure their finding employment after graduation. It is quite plain that the mere opening of a School of Forestry in Canada would not cause fifty or a hundred young men to seek its walls the first session. There is no great thirst for forestry education yet. The very meaning of it is just beginning to be known throughout the land, and forestry as a profession would be looked upon as very problematical by our practical youth. The conditions are somewhat similar to those prevailing some ten or fifteen years ago in mining, when the men who were studying mining engineering could be counted on the fingers. Now there are some two hundred students of mining engineering in Canada. When the School of Mining was opened at Kingston nine years ago, the outlook for students was not more promising than it is now for forestry. To create the demand for such education was our problem. It was solved by three means: (1) Short courses for practical men (prospectors and others), held here in January and February. These attracted many students, some of whom entered upon and completed a four years' course and are now practising as mining engineers. (2) Summer mining classes in mining camps and other centres. These classes have been found so valuable and popular that they are still being carried on, an annual appropriation for that purpose being made by the Ontario government. Students have been attracted to longer courses in this way. (3) By exploring parties of students and others interested, under the guidance of professors. In all these ways education in mining has been popularized, and the supply of educated men has created a demand for them, so that, at this date, graduates have no difficulty in securing employment.

The Provincial and Dominion governments have helped on this movement by adopting in part a policy which they might well carry out in toto, viz., reserving for students of this class the minor positions on survey and exploring parties, and other scientific work carried on during the summer.

The educational problem in forestry is precisely like that just described, and a somewhat similar course will lead to the same results. There are large numbers of men now engaged in Canada in the care of forest areas. Some of these could be gathered to the school every winter for short courses of a simple and practical character but scientific enough to open their eyes to the larger fields beyond. The professor of forestry would spend part of each summer in visiting places where forest interests

are large. He would by lectures and class instruction spread the idea and arouse the interest of young men looking toward a scientific profession. Squads of men could be instructed every summer in the practical details of forestry, by assembling them on the forest reserve in charge of the school. Provincial and Dominion Governments would naturally adopt the policy now pursued in the United States of employing students in the summer on their forest reserves and survey parties. But it must be remembered that the great majority of ambitious and able young men in Canada are almost too poor to bear the expense of a scientific education. 'Earning their way' is undoubtedly a fine discipline, but it is often too severe a trial of endurance, and I have sometimes seen it fatal. There is another way—a ladder of learning. Great Britain is now pouring out her wealth in scholarships for this purpose, and in many counties in which these scholarships are awarded, there is a 'poverty limit.' A boy whose parents have an income above that limit cannot take a scholarship. The limit ranges in different counties from $750 to $2,000. Such limits might have to be considerably lowered to suit our case. The Dominion might well make an annual appropriation to defray in part the expenses, at the School of Forestry, of a certain number of students from each Province, the selection to be made by a matriculation examination, or in some other way which would secure the ablest students. Fellowships or scholarships could also be awarded to the best graduates, in the form of appointments to certain junior positions in the Departments of Forestry (Dominion and Provincial.) In this way two purposes would be served, (1) Graduates would be initiated into their profession, and (2) The country would secure in time a corps of finely educated and practically trained men to work out our problems in forestry, irrigation and drainage. Private owners would, as in the United States, soon see the advantage of employing such men as managers of their forests; and the profession would thus become an established one.

The first step was taken towards this at the School of Mining in January, 1901, thus appropriately marking the beginning of the new century. A conference was held on the subject of forestry education, opening with a most brilliant and suggestive lecture by Professor B. E. Fernow, of New York State College of Forestry. We were fortunate in having with us on that occasion the Minister of Education, who expressed himself as delighted to see that the question of forestry was receiving attention here, and thought it would be a grand thing for the country, if a school of forestry were established at Kingston; for Canada had reached the time when she must face the question of how her lands are to be re-timbered. A year has passed, and the interest then shown in the subject by the Minister of Education and many others gathered at the conference has become widespread. The growing interest was evident at the annual meeting of the Canadian Forestry Association in Ottawa in March. The sessions were largely attended, and a noticeable feature was the presence of many prominent lumbermen, whose contributions to the discussions showed that they are ready for the coming of the forest engineer. His coming has now been assured by the announced intention of the Ontario Government to assist the School of Mining in establishing a Colloge of Forestry in Kingston. —Queen's Quarterly.

IN THE ROCKY MOUNTAINS, NEAR LAKE LOUISE. SPRUCE AND LODGE POLE PINE ON THE MOUNTAIN SIDES.
[From the Annual Report of the Dominion Superintendent of Forestry.]

THE LATE J. W. MUNRO.

Recently the news were flashed throughout the province of the death of J. W. Munro, M.P.P., of Pembroke, Ont., who only two days previously had been re-elected as Liberal member for North Renfrew in the Ontario Legislature. His illness was the result of blood poisoning, which in the excitement of an election campaign, was probably neglected. In his native town and neighboring vicinity intense grief was caused by his death, but it was by no means confined to that locality. Hundreds of acquaintances and friends, Conservatives and Liberals alike, mourned, for Mr. Munro was a man of great energies and one of the largest lumbermen and contractors in Canada. He was a man who had done much for Pembroke, a true friend of the working man, for although a large employer, he always advocated that the working man should be paid his worth. He was of a kind and genial disposition, a man whose life it is said showed not a flaw. His death is a national loss.

Mr. Munro was born in Rossshire, Scotland, and came to Canada with his parents in 1854. They settled near Fitzroy Harbor, where Mr. Munro was brought up on a farm. Afterwards he learned the trade of stone mason. In 1873 he married Miss Martha Trail, of Lanark county. He afterwards moved to Renfrew, where he started in business as a builder and contractor. He removed to Pembroke in 1885 and soon became a prominent contractor, erecting many of the finest build-

ings in the town. His ability and thoroughness as a contractor could not be concealed and he shortly was called upon to execute important works in other places. He secured large contracts from the Canadian Pacific Railway, and just before his death had been awarded one of the most extensive contracts that had ever been given by that road. The building of pulp and paper mills at Webbwood, Ont., for the Spanish River Pulp and Paper Company had engaged his atttention for a year or more, and was nearing completion at the time of his death.

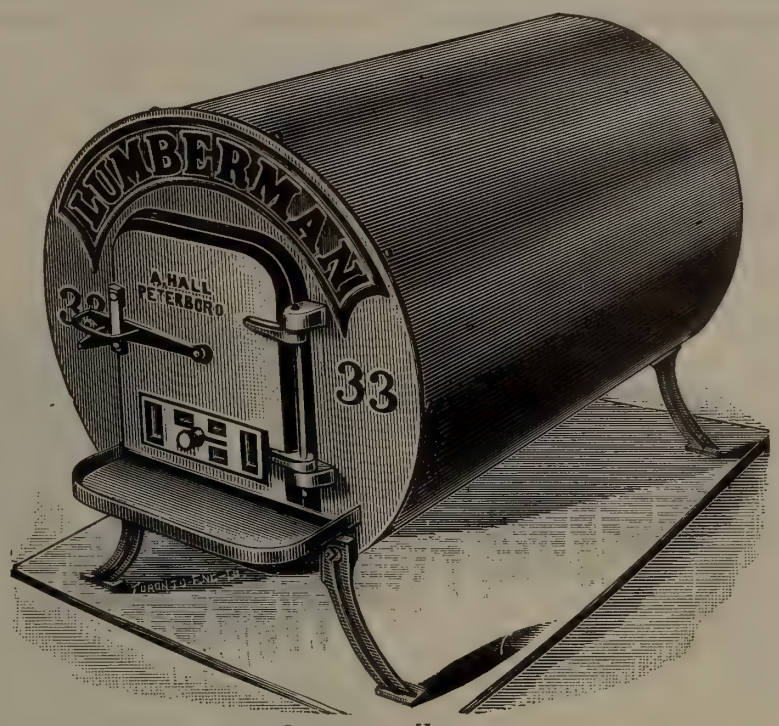
In 1900, on the death of Mr. A. T. White, Mr. Munro was elected to the Ontario Legislature by acclamation. He has served his constituents faithfully and well and obtained for them, it is said, more than did any other member in a similar time. His large business connections and parliamentary duties frequently called him to Toronto, where he was a familiar figure.

As a lumberman Mr. Munro was most successful. He was a large holder of Ontario pine timber limits, and his operations in the woods each winter were quite extensive. The firm ot Munro & Son are well known as operators in square and waney timber, the stock usually being sold to Quebec shippers. Mr. Munro was a shrewd buyer and a recognized authority on the value of timber limits.

Individuality in journalism has attained its most surprising results in trade papers. People are seeking more technical information, and while they skim hurriedly over the great dailies for the press news of the world, they study the technical paper for the more vital references to their own immediate business and concerns.—Charles H. Bergstresser.

THE LUMBERMAN'S HEATER.

The accompanying illustration represents a type of stove familiar to many lumbermen. It is manufactured by Adam Hall, of Peterborough, Ont., and is commonly termed the Lumberman's Heater. It is manufactured for the special purpose of heating lumbermen's camps and boarding houses, for which service it has given excellent satisfaction. The standard sizes are 36, 42 and 48 inches. The body of the heater is made of heavy boiler plate and the ends of heavy cast metal, with a large fire door. The construction is such as to make the heater very durable.



LUMBERMAN HEATER.

Mr. Hall has been engaged in the manufacture of steel ranges for 24 years, being the oldest manufacturer in the business. His goods are well known to lumbermen throughout the Dominion and his sales are constantly increasing. He is prominent in commercial circles in Peterborough, being president of the Canadian Cordage Company and vice-president of the Otonabee Power Company.

Any lumberman who is not acquainted with the Lumbermen's heater should ask Mr. Hall to send him one of his latest catalogues.

The Price-Porritt Pulp & Paper Company has been organized at Quebec, with a capital of $250,000. The promoters include William, Edward and Arthur John Prcie, all of Quebec.

An ad in a trade journal will do what travelling men as a rule do not do. It will go to towns off from the railroad where there are no hotels. It will work nights, Sundays and holidays, in wet weather or dry, hot weather or cold. It will talk to a merchant before some of the boys are out of bed in the morning and after they have gone to bed at night. It's one of the few things that has not yet struck for eight hours.—Construction and Supply Review.

To Purchasing Agents:

Corner 22nd and Centre Avenue,

GENTLEMEN: CHICAGO, October 12th, 1901.

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO.

Lumber and Mining Supplies

Our Specialty

Our particular business is the supplying of the Lumber and Mining Trade with anything and everything they require.

Ask for our Price List on your requirements, and we will be pleased to quote you We will merit your trade.

THE T. LONG & BRO. CO., Limited. Collingwood, Ontario

WOOD PULP DEPARTMENT

THE SAULT STE. MARIE PULP MILLS.

The pulp mills of the Sault Ste. Marie Pulp and Paper Company at Sault Ste. Marie, Ont., are capable of turning out 170 tons of dry pulp every twenty-four hours, the operators working in two shifts. The mills are exceedingly handsome buildings, of mottled sandstone blasted out in the construction of the power canal. Mill No. 1 is 600 x 80 feet, and Mill No. 2 300 x 100 feet. Somewhere around $2,000,000 was expended in the construction of the two buildings and in equipment. A view of the grinder room is shown on this page, and below is given some particulars of the process of manufacturing mechanical pulp there adopted.

The wood is cut along the line of the Algoma Central Railway, brought to the Soo on cars and thrown into the bay beside the mill. Here it is ready for the sawyers, who drag it out of the water, saw it into lengths of twenty-four inches, which are thrown into a tank that extends half the length of the mill, and from this the men who run the barking machines pick out the blocks. They strip the wood of its covering, which is immediately blown by an ingenious device to the boiler room. The stripped blocks are then thrown into endless carrying channels and these convey the blocks to the floor above, where they are piled on little cars which run to all parts of the building. From these cars the men running the grinding machines help themselves.

The grinder is an iron case containing an ordinary grindstone fifty-four inches in diameter and twenty-six inches wide. On each side of the grindstone is an iron wheel clamped to the stone to keep it from flying to pieces when it gets hot. To overcome this difficulty a stream of water is also kept going on the stone. Hydraulic cylinders, adjusted in position about the circumference of the grindstone, press the blocks of wood against the surface of the stone, which is revolved at the rate of 2,300 revolutions a minute by a turbine wheel. Each grinder requires the enormous power of 350 horses. A grinder will produce about five tons of pulp per day. There are thirty-two now in operation, and preparations are now being made to double the capacity of No. 2 mill, which has a dozen at the present time. From the grinders the pulp passes over a series of screens, from which it emerges free from all impurities. Up to this period the process has been by gravity, but as the screens are situated on the ground floor it becomes necessary to pump it back to the pulp machines, which are situated upstairs. To this end huge pumps are brought into requisition. The pumps convey the pulp to the pulp machines, of which there are twenty-four in operation, each having a capacity of six tons per day.

These machine are the acme of perfection, and were invented and manufactured in the company's works. The wet pulp passes into a metal receptacle, and is in turn caught up and evenly distributed on a revolving blanket, from which it passes between huge metal rollers, which subject it to a pressure of 500 pounds to the square inch. After emerging from the rollers it is 50 per cent. water and 50 per cent. pulp. It then passes over a large steam heated metal drum, and is in turn rolled on a spindle, a continuous sheet of thin, dry, pressed pulp, resembling a grade of coarse wrapping paper. The pulp dryer is considered the ne plus ultra of pulp machinery. It solved the water problem, and made the manufacture of dry pulp a possibility.

GRINDER ROOM OF THE SAULT STE. MARIE PULP AND PAPER COMPANY.

THE SHAWINIGAN PULP MILL.

Some particulars have been furnished the CANADA LUMBERMAN of the pulp mill of the Belgo-Canadian Pulp Company at Shawinigan Falls, Que. The ground wood pulp mill was designed to produce 100 net tons per day of twenty-four hours; 50 tons of this to be dried on a drying machine to 88 per cent. dry, and 50 tons from the wet machine 45 per cent. dry. The mill started and made its first pulp January 13, 1902, and ran without any delays whatever until May 28, 1902, when they were obliged to stop for the want of wood.

On June 9th they got wood down the river and started again. On June 13th they made 100 tons, June 26th 104 tons, July 2nd 113 tons, and are now making over 100 tons every day.

The greater part of this product is shipped to Belgium, and the mill is advised that it is the finest grade of ground wood pulp, and commands the highest price of any pulp ever shipped into the Belgium markets, and when it is considered that this mill was started with only eight experienced operatives, and educating the balance from common laborers, we think the results exceed any ever before produced in Canada, if not in the United States.

The mill was designed by the well known engineer, A. C. Rice, State Mutual Building, Worcester, Mass., and was built under the personal supervision of Mr. C. A. Ring, who is also general superintendent.

PULP NOTES.

The death is recorded of Mr. John Cassils, vice-president of the Laurentide Pulp Company, of Grand Mere, Quebec. Mr. Cassils was born at Renton, near Glasgow.

The Bagley and Sewell Company, of Watertown, N.Y., have secured the contract for paper and pulp machines for the Sturgeon Falls Pulp Company at Sturgeon Falls, Ont. The S. Morgan Smith Company, of York, Pa., will supply the turbines.

During the five months ended May 31st last the British imports of pulp wood amounted to 177,136 tons, of the value of £816,552, a heavy falling off compared with the corresponding period of last year, when the quantity was 180,044 tons, of the value of £1,011,185.

The Tacoma Steel Company is reported to have obtained 150 square miles of timber at Quatsino Sound for the purpose of commencing immediately the construction of a large pulp mill. The timber will be hauled out by cable to the coast. It is expected that markets for the pulp will be found in Japan, China and Australia.

Concerning the market for mechanical wood pulp the World's Paper Trade Review says: "The market continues dull. From various sources, however, it seems pretty clear that stocks on the other side are only small, and as there is a good British enquiry, especially for early delivery, no further reduction in prices is anticipated. On the other hand, whilst no big advance is likely, sellers are inclined to believe that an advance of 2s. 6d. to 5s. per ton will rule before long. The weakness of the market has largely been due to the anxiety of some mills to effect sales."

There is little change to report in the market, although there now seems to be a better inquiry for all classes of pulp, says the London Paper and Pulp. Prices, however, have not advanced, and, if anything, have dropped slightly. For mechanical pulp 40s. c. i. f. seems to be about the utmost paper-makers will pay for moist pulp. Low prices have been ruling for chemical pulps, especially for delivery this year, and sales have been made at from £7 upwards, according to quality. As the American Sulphite Association has collapsed, it is more than likely that makers will dump their surplus in this country again at the best prices obtainable, and, if so, this will prevent any advance for some time to come at any rate.

The capitalists interested in the St. George Pulp & Paper Company, which has commenced the construction of a pulp mill at St. George, N.B., include James Goodfellow, of Fort Edward, N.Y., president; E. G. Murphy, of Sandy Hill, N.Y., vice-president and manager; E. W. Murphy, of Albany, N.Y., secretary and treasurer. A dam 15 feet high and 120 feet long is nearing completion. The mill will be located on the property formerly owned by Messrs. Gilmour and will be 65 x 120 feet, one story high. It is planned for eight grinders, with a daily capacity of 50 tons of pulp. The water wheels and steel tubes are being manufactured by the Jenckes Machine Company, of Sherbrooke, Que., but the pulp machinery, it is understood, has not yet been ordered. The electric light and power equipment will be furnished by John Starr, Son & Company, of Halifax, N.S.

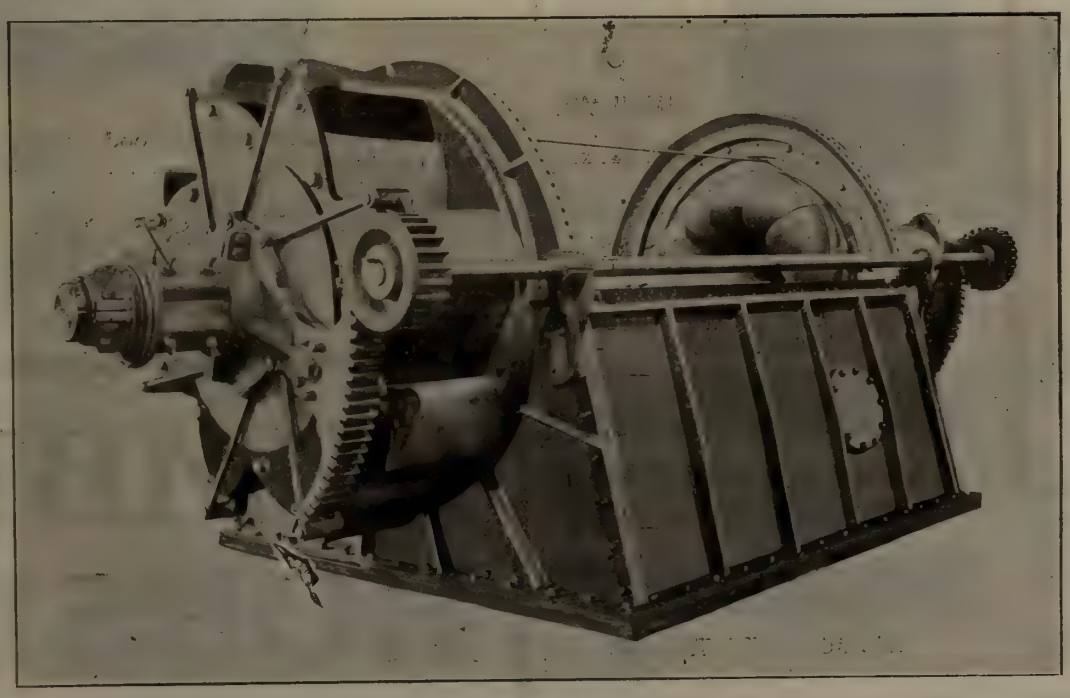
OPEN FLUME TURBINE PLANTS

For use under moderate heads where local conditions permit its adoption, there is probably no more satisfactory setting for horizontal wheels in pairs than the draft chest with central discharge, placed in an open flume.

The first cost is moderate.

The flow of water is unobstructed and ample, and as a result speed regulation is easy.



Pair of 35 Inch Wheels, Mounted on Draft Chest with Top Removed.

Direct connection to Pulp Grinders or other machinery may be arranged with facility.

Wheels are readily removed and replaced.

We have several styles of cases for use in open flumes, either steel plate or cast iron construction as may be required, or cast iron sides with steel plate top as shown in the engraving.

We are now engaged in building a 10,000 H.P. Wheel Plant, each pair of wheels being of the general type shown above, arranged for direct connection to Wood Pulp Grinders. Send us particulars for estimate, or write for catalogue and information.

MESSRS. LUNNY & CO.'S NEW MILL AT HINTONBURG.

J. Lunney & Company have erected a new planing mill on Queen street, Hintonburg, the flourishing suburb to the west of Ottawa. It is a two-storey factory with modern equipment. The saws for rough work and the four planers are situated on the first floor. The shavings from each planer are carried to the furnace room through a special tube, power for the purpose being furnished by compressed air.

The light band saws, turning lathes and scroll saws are situated on the second floor.

The machinery is operated by a 120 h.p. engine steam driven. All sawdust and shavings carried by the tubes above described are used as fuel. There is thus absolutely no waste. On the right side of the mill are two large drying kilns, heated by coils. Transportation is facilitated by a C.P.R. switch connecting with the mill yards. A gang of 30 men is now employed.

To Those Who Carry Insurance on Lumber

You are compelled to pay more for your insurance to-day than a year ago. This is particularly true in Canada where rates have been abnormally increased by Tarriff Association Companies. It is our business to insure nothing but lumber. We study the advantages offered by each risk submitted and accept only the best moral and physical hazards. Thus by carrying only selected risks we can offer lower rates. We are saving money for hundreds of lumber dealers. Why not let us take care of from $1,000 to $20,000 of your insurance?

For information apply direct to our home office,

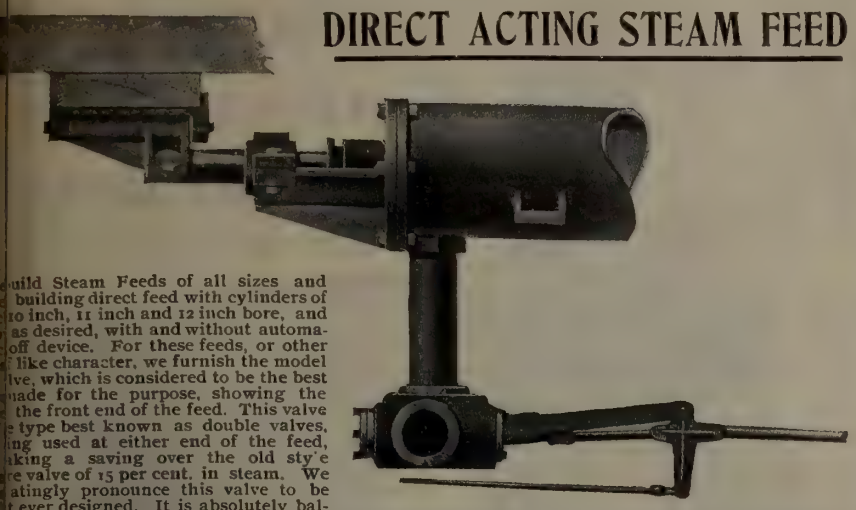
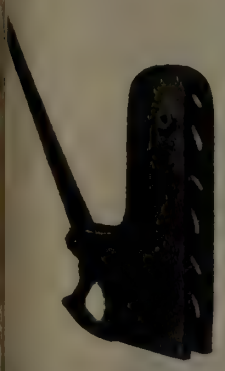
DIRECT ACTING STEAM FEED



uild Steam Feeds of all sizes and building direct feed with cylinders of 10 inch, 11 inch and 12 inch bore, and as desired, with and without automa- off device. For these feeds, or other like character, we furnish the model lve, which is considered to be the best nade for the purpose, showing the the front end of the feed. This valve e type best known as double valves, ing used at either end of the feed, aking a saving over the old sty'e re valve of 15 per cent. in steam. We atingly pronounce this valve to be t ever designed. It is absolutely bal- does not stick or kick, has larger steam openings than any other valve made for correpond- es of pipe, is economical in the use of steam, and handles the largest and longest feeds, under any e, with perfect ease and accuracy. We have also designed a new style of stuffing box which is a wing in packing, and has an outer support, and is fitted with an oil well, filled with felt or waste keeps the piston thoroughly lubricated.

Improved Double-Tooth or Boss Dogs



The accompanying cuts fully illustrate our Improved Double-Tooth Dogs with inserted teeth, making the teeth themselves of the finest tool steel. This allows them to be drawn to a slender point that will penetrate without crowding the log or board away from the carriage The teeth in case of bending or breaking can be replaced in a few moments, and without having to take the whole dog case apart — an operation requiring an hour or more.

These Double-Tooth Dogs are controlled by a wrought iron lever that can be bent to suit the operator, and this lever is held by a spring, positively in or out, so that there is no danger of the Dogs pushing out toward the saw. This method of holding the dogs has the merit of being permanent, the ordinary light pawls and connections commonly furnished for this purpose generally lasting but for a few days. Our latest improved carriages are fitted with these dogs.

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

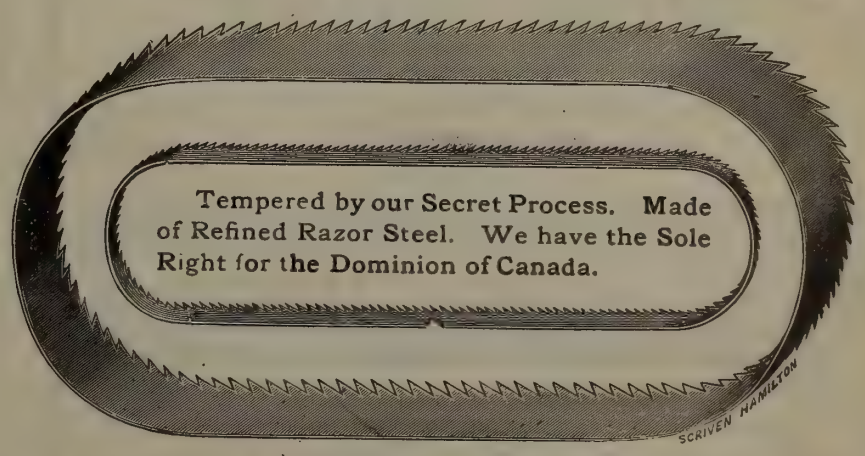
MANUFACTURED BY

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. **On receipt of 40 cents we will send one by mail.**

We are the only manufacturers in the world who export Saws in large quantities to the United States.



Tempered by our Secret Process. Made of Refined Razor Steel. We have the Sole Right for the Dominion of Canada.

THE WOLVERHAMPTON ART AND INDUSTRIAL EXHIBITION.

At the Art and Industrial Exhibition now in progress at Wolverhampton, England, the Dominion of Canada is the only Colony that is represented. Through the efforts of Mr. W. D. Scott, the Canadian Commissioner, a creditable display of the products of Canada is made. The Canadian pavilion, shown on the following page, is one of the most notable features of the Exhibition. It is classical in design, rectangular in plan, surmounted by a lofty gilded dome, and covers an area of 8,000 square feet.

A large portion of the space is devoted to a display of forestry products. Specimens both in the log and square are shown, also polished and unpolished sections. Amongst these are cedar and blue oak from Manitoba, red oak from Western Ontario, black ash, white oak, black walnut, rock elm, white pine, white birch, red birch, soft maple, cherry, spruce, western cedar, balsalm poplar, tamarac, etc. Splendid samples of hardwoods are shown by Messrs. John Harrison & Sons, Owen Sound, J. H. Grant & Company, The Sutherland - Innes Company, of Chatham, and others. Gilmour & Company, of Trenton, show two specimens of their patent doors.

VIEW OF PORTION OF FORESTRY EXHIBIT, WOLVERHAMPTON EXHIBITION.

Photographs of many varieties of Canadian trees are displayed in frames made from the wood which they represent. This method of display is highly commendable, as it enables visitors to recognize more easily the many species of timber which are displayed. A few pieces of furniture are also shown illustrating the manufactured products, such as tables, chairs, desks, etc.

The forestry section includes splend d specimens of some of the noble animals in which sportsmen take great interest and in which Canadian forests abound.

E. H. Matthias has opened out in the lumber business at Morningside, Alta.

The Manitoba Free Press last month issued a special supplement dealing with the crop prospects in Manitoba and the North-West Territories. Illustrations were shown of the actual crops, which this year promise to give a yield larger than any in the history of the country.

HOW TO KEEP LUMBER FROM STAINING.

During the warm months of the summer, and especially of those summers when there is a considerable amount of moisture in the air and lumber does not dry quickly, the manufacturers of pine have a considerable amount of difficulty drying their upper grades of lumber so that they will not stain. By the regular methods of piling and drying in the open air it is practically impossible to keep out all traces of stain. The sap will show, if not at other places, at least where the cross pieces come in the pile and wherever else the green stock comes in contact with other lumber. As every evidence of stain means a lowering of the value of the lumber, it can readily be seen that any method of getting the sap out without a resultant stain will be of great value to the manufacturer.

Care in piling will do a great deal. By using narrow strips between the courses; piling the boards so they do not touch at the edges, and leaving a vacant place or chimney up through the center of the pile where the air can circulate freely, much can be accomplished along the desired line. But in the most favorable drying weather and with the greatest possible care in piling stain will still show to some extent, and the lumber will be just that much less in value. Other processes have been tried. A favorite one over in Michigan for a number of years has been sprinkling the lumber with salt. At a great many points in that state, salt blocks and lumber mills make up the same plant. Here the various courses of lumber in pile have been covered with a thin sprinkling of salt, and the effect is said to be good, though too much salt, or too little, have been found to have a harmful effect rather than otherwise.

The Yawkey Lumber Company, of Hazelhurst, Wis., have recently been experimenting with a system that appears to be the most successful yet tried. They have built a tank that will hold from fifteen hundred to two thousand feet of lumber. In this the stock is piled with thin strips between the courses. The tank is then filled with water and the exhaust steam turned into it. The sap is literally boiled out. The first lot of lumber that came out of the tank was covered with a green substance, and at first sight it appeared that the lumber was spoiled. However, it was found that the green coating brushed off readily, leaving the lumber perfectly white. After the water dried out, it was free from stain. The experiment has proved so successful that the Yawkey Company expect to enlarge their capacity for removing the staining sap from their upper grades of stock.

Along this same line the experiments of a western manufacturer of Washington pine may be of interest. Most of the western mills have as a part of their equipment modern dry kilns, and the larger part of the upper grade lumber that comes from that section of the country has been through the kiln. Steam or hot air are the usual methods, but a concern at Chewelah has recently made experiments with smoke. According to the man who has made the experiment, the lumber takes on a brightness that the steam kilns do not impart. By actual estimates he also claims that the lumber that comes from the smoke kilns is much lighter even than the air dried stock. He does not know how they would work with other lumber, but believes they are the best thing for Washington pine.—Mississippi Valley Lumberman.

TO PRESERVE THE FORESTS OF SWEDEN.

It has been discovered by the Royal Commission appointed to examine into the condition of the national forests that about 5,500,000 cubic metres of wood is annually wasted in Sweden, while the timber export is only 6,500,000 cubic metres. Finding that the recuperative power of the forests is thus too severely taxed, parliament has pointed out that private enterprise has failed to use the forests economically, and has requested the government to formulate a scheme for their regulation.

An eastern firm wishes to find a market for nail keg staves and heading.

TIMBER LICENSES IN BRITISH COLUMBIA.

In view of the increased interest which has reeently been aroused in the timber lands of British Columbia, we give below extracts from the Land Act governing the granting of timber licenses :

(1) Leases of surveyed, unpre-empted Crown timber lands, which have been previously offered to public competition, may be granted by the Lieutenant-Governor in Council for a period not to exceed twenty-one years to any person, for the purpose of cutting spars, timber, or lumber, who has tendered the highest cash bonus, subject to the payment of a royalty of fifty cents per thousand feet on the scale measurement of the logs cut on the leased premises, and to the payment in advance of an annual rental of fifteen cents per acre; arrears of rental to bear interest at the rate of five per centum per annum : Subject also to the condition that, when the royalty so chargeable, together with the said rent, amounts to less than fifty cents per acre of the leased lands in any one year, the lessee shall pay such additional amount as will make up the revenue from such leased lands, including the said rent of fifteen cents per acre, to the total amount of fifty cents per acre : Provided, further, that the holder of any such leased lands shall have a properly equipped saw-mill appurtenant to such leasehold, capable of cutting not less than one thousand feet of lumber, in inch boards, per day of twelve hours for each and every four hundred acres of land included in such lease. And such saw-mill shall be kept running for at least six months in every year, cutting not less than the said capacity, unless the Lieutenant-Governor in Council, on account of poor markets or other good reasons to be specified, excuse the said lessee from running the said mill for the whole or any part of the said period of six months in each year. If this proviso is not complied with, it shall be lawful for the Lieutenant-Governor in Council to cancel such lease, but such cancellation shall not affect the right of the Crown to collect all royalties and rent payable up to the time of such cancellation.

(2) It shall be lawful for the Lieutenant-Governor in Council to provide that any specified unsurveyed lands may be leased in the same manner as is in this section provided with regard to surveyed lands, and the Lieutenant-Governor in Council may make such regulations with regard to the staking of such unsurveyed lands, and the giving notice thereof, and having the same surveyed, as may be thought advisable.

(3) All leases of unsurveyed and unpre-empted Crown timber lands, which have been granted for a period of twenty-one years, may be renewed for consecutive and successive periods of twenty-one years, subject to such terms, conditions, royalties and ground rents as may be in force by Statute at the time of the expiration of such respective leases : Provided that such renewal is applied for within one year previous to the expiration of the then existing lease; and provided that all arrears of royalties, ground rents and other charges are first fully paid :

All existing leases of Crown timber limits which have been granted previous to the passage of this section of the "Land Act," and now in force, may be renewed for consecutive and successive periods of twenty-one years, provided that such existing leases shall be surrendered within one year from the date of the enactment of this section :

And it is further enacted that such leases may be renewed for the unexpired portion of the term mentioned in the leases to be surrendered, on the same terms, conditions, rents and royalties as so specified in the said leases to be surrendered ; the remainder of the term of twenty-one years for which the said leases shall be renewed on surrender shall be subject to such terms, conditions, royalties and ground rents as may be in force by Statute at the same time the existing leases, surrendered under the conditions of this section, would expire :

All timber cut from Provincial lands must be manufactured within the confines of the Province of British Columbia, otherwise the timber so cut may be seized and forfeited to the Crown and the lease cancelled.

Section 43. It shall be lawful for the Lieutenant-Governor in Council to grant leases of unpre-empted Crown lands for a term not to exceed thirty years, for the purpose of stripping hemlock trees of bark, subject to such rent and conditions as the Lieutenant-Governor in Council may see fit to impose.

Section 48. It shall be unlawful for any person, without a license in that behalf, to be granted as hereinafter mentioned, to cut, fell, or carry away any trees or timber upon or from any of the Crown or patented lands of this Province.

Section 50. The Chief Commissioner of Lands and Works may grant licenses, to be called special licenses, to cut timber on Crown Lands and patented lands at the rates by this Act imposed, and subject to such conditions, regulations and restrictions as may from time to time be established by the Lieutenant-Governor in Council, and of which notice may be given in the British Columbia Gazette.

Section 53. A special timber license shall not be granted for a larger area than six hundred and forty acres (640) of land, which shall be in one block, of retangular form bounded by straight lines drawn to the cardinal points and measuring either 80 chains by 80 chains or 40 chains by 160 chains, nor shall the license be granted for a longer period than one year. The license shall not be transferable, and may be surrendered at any time. No person shall be entitled to more than two special licenses at the same time. The licensee shall pay to the Commissioner, for the use of His Majesty, the sum of one hundred dollars for each license, payment to be made upon the granting of the license. In default of payment, the license shall not issue. Such license may be granted or renewed at the discretion of the Chief Commissioner of Lands and Works.

CANADIAN PAVILION, WOLVERHAMPTON EXHIBITION OF ARTS AND INDUSTRIES.

Section 54. The special license shall vest in the holder thereof all rights of property whatsoever in all trees, timber, and lumber cut within the limits of the license during the term thereof, whether the trees, timber and lumber are cut by authority of the licensee, or by any other person with or without his consent, and such license shall entitle the holder thereof to seize, in re-vindication or otherwise, such trees, timber, or lumber, where the same are found in the possession of any unauthorized person, and also to institute any action against any wrongful possessor or trespasser, and to prosecute all trespassers and other offenders to punishment, and to recover damages, if any ; and all proceedings pending at the expiration of any license may be continued to final termination, as if the license had not expired.

Section 55. In addition to the special license authorised by section 50 of this Act, the Chief Commissioner may, upon payment of the sum of ten dollars therefor, grant a general license to any person to cut timber upon Crown lands, not being timber limits, without any reservation as to area ; but such license shall be personal, and shall only grant authority to the person named therein to cut timber as a hand logger, and such license shall be in force for one year from the date thereof and no longer.

Section 57. In addition to the royalty hereinafter reserved on all timber cut on timber leaseholds, there

MR. D. MCNAUGHT,
Retail Lumber Dealer, Rapid City, Man.

shall be paid annually, as ground rent, the sum of five cents per acre for each acre included in any timber lease which has been granted since the 31st day of December, 1879, and prior to the 28th day of April, 1888.

Section 58. There is reserved to and for the use of Her Majesty, Her heirs and successors, a royalty of fifty cents for every thousand feet, board measure, upon and in respect of all timber suitable for spars, piles, saw logs, or railroad ties, props for mining purposes, shingle or other bolts of cedar, fir or spruce, and a royalty of twenty-five cents for every cord of other wood, cut upon Crown lands, patented lands, timber leaseholds, or timber limits, and upon any lands hereafter granted. Piles shall be measured by the running foot, and railway ties and props shall be measured by the cord ; and for the purposes of this Act two hundred running feet of piles, or one cord of ties or props, shall be taken respectively as equal to one thousand feet board measure.

Section 70. The Lieutenant-Governor in Council may allow, on the exporation beyond the limits of the Province of any piles and spars, or of any timber manufactured at any mill in British Columbia upon which the royalty of this Act imposed has been paid, a drawback or rebate equal to one-half of the royalty paid upon such timber.

In addition to the provisions contained in the Land Act, an Order-in-Council was passed in July of this year providing that "all timber cut under authority of special licenses heretofore issued, or which may hereafter be issued, shall be manufactured within the confines of the Province of British Columbia ; otherwise the timber so cut shall be seized and forfeited to the Crown and the license cancelled."

It is rumored that the Sheppard & Morse Lumber Company have purchased the Mason saw-mill at Hintonburg, Ont.

The sales of the Pembroke Lumber Company for the month of July last amounted to $26,000. Lumber was shipped to Great Britain, United States and elsewhere.

Cuts or engravings should be used freely in advertising tools and machinery, always bearing in mind that a poor cut is like a caricature, and the best engravings are none too good and are the cheapest in the end.—Printers' Ink.

MAKING VENEERED DOORS.

The subject of veneered doors has often been touched upon in these columns, and yet it will not suffer, if repeated, inasmuch as the various factories have particular ways of their own of producing this rapidly-growing popularity in the door line. Instead of trying to lay down any fixed rule, saying thus and so shall they be made, let us consider some of the essential points which may be adapted to suit each condition as the manufacturer finds it.

I.—EQUIPMENT.—Aside from the usual door-making machinery, this consists of larger facilities for preparing and applying glue, veneer press, resaw for veneers and panels (unless they are purchased from a dealer in veneers), a warm room where the glue may be applied and material gotten ready for the press. Unless the factory is already supplied with a large kettle for preparing glue, it will be found of advantage to make a large copper kettle that will fit the holes in the heater, but large enough to hold three or four ordinary-sized kettles of liquid glue. This can be done by making it higher and wider about the flange, as shown in Fig. 1. In this way sufficient glue may be made ready for a good-sized batch of doors without fear of running out.

Of course, these remarks do not apply to the factory having modern glue-spreaders, hand or power-feed, which are very essential in strictly veneer establishments. Our remarks apply only to the shop where veneered doors are one of the many by-products, so to speak, which accompany the usual line of mill work.

For spreading the glue by hand, procure a 4-inch flat wall brush and prepare it by pouring alcohol gum-shellac into the roots of the bristles, and driving blind staples into the butt end, as close together as possible, thus preventing the bristles from coming out. Have a pair of "horses" about 3 feet high, strongly made, and having an angular piece on the top, to prevent waste of the glue, and squeezing it off the work at the bearing point—see Fig. 2.

Make the veneer press wide enough between the upright to permit of veneering a table top or wide panel if needed, and have two rows of screws, so that two stacks of cores may be pressed at one time. A strong press can be made with 6x6-inch maple crosspieces and ⅞-inch round iron rods, with jambnuts to hold the upper piece in place, having regular veneer press scews at least 1⅜ inches diameter. The bed-piece should be lagged up and trued, so that it will be straight and out of wind. To prevent the work from sticking to the bed, it should be covered on the top with zinc or tin—see fig. 3.

For resawing veneers and panels, where there is no band resaw, a gage (fig. 4.) and pressure roller (fig. 5.) used on the band saw table, and 1½-inch saw in proper trim, with right management, should turn three or four veneers out of inch stock, which may be applied direct to the coring without dressing, as described later on.

To do a good job of gluing to advantage it is necessary to have a warm room, so that a large batch of material may be worked at one time. There are various other purposes to which this room may be put, but to make a veneered door properly, without waste material or loss of time, a warming room is very essential. First, the parts of wood to be glued must be thoroughly warm, also the temperature of the room where the work is to be done must be such as not to chill the glue and hinder its spreading and makeing good joints.

II.—MATERIALS.—Dry coring is the first thing that is required to make good doors. It is usual to cut up the material and put it in the dry (or warm) room referred to above, or in a dry-kiln, properly stacked, and leave it there as long as possible to drive out every particle of dampness. All waste material of suitable size and too poor to be used for any other purpose may be used for coring. It is preferable to have the strips wide enough so that when glued up they may be split through the center to make two stiles or rails—see Fig. 6—thereby saving much labor in gluing, which item cuts quite a figure in veneered door work. The stock sawyer can lay aside such material from time to time and have it stored as mentioned, so that there is a supply of dry stuff to draw on when a batch of doors is wanted.

The glue for coring need not be of high grade, and where quick preparation is desired, a ground or pulverized bone glue will answer the purpose admirably. The men soon become accustomed to handling the glue and it needs no soaking, as the flake or noodle glue does. For veneering a medium grade of hide-stock glue is to be preferred; one that is free from acid, clear in color, and not too quick-setting. It will pay to follow up the glue question more closely than we usually have done to obtain good results with economy. The glue for veneering does not want to be too thick. Practice in the work makes the workman proficient in its preparation. It should flow freely from the brush without being "tacky," as the painter would say.

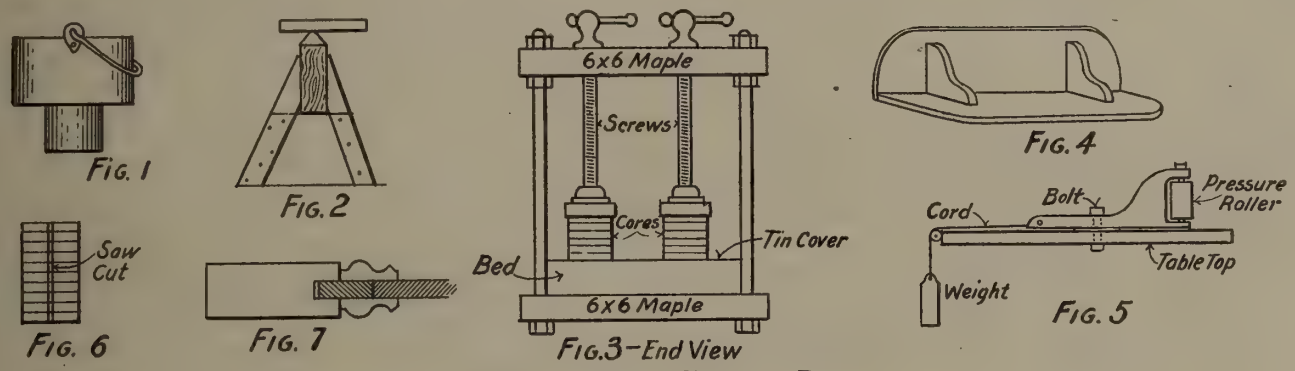
The veneers and panels should be cut up and resawed before they are kiln-dried. The ends should be glue-sized, and they should be stacked straight and even in the kiln. Those who have tried resawing kiln-dried hardwoods, are aware of what a sorry job it makes; and how the veneers buckle, spring out of shape, pinch the saw or make it run crooked. When the saw has not too much set, the veneers may be glued onto the cores without planing, provided the sawing is a good, smooth job. Care must be taken in dressing veneers or panels not to chip them out, as that is ruinous in this work.

III.—CONSTRUCTION.—The man who is doing this work needs to be familiar with the work and its methods to do it well and economically. Filling the doors is the first work towards the desired end. A list of the size, style, thickness of doors and kinds of wood should be on each working bill, and follow the material in its progress out of chaos into stiles, rails, panels, and finally the finished product. This bill should include the edge strips, the width, length and thickness of each bundle of cores, the finished size of the parts they are in fact, all machine work on veneered doors must be carefully done to have true work and tight joints.

Instead of putting the panels in when the doors are put in the clamps, the frame work is glued together with open panels, the stiles and rails being grooved, and after the doors are polished and put on the finishing bench, a panel strip is put in all around the edge of each panel, to which the panel mold is glued and nailed. The molding is put in one side first, panels laid in, and molded the other side, as shown in Fig. 7. This arrangement prevents the molding from pulling away from the stiles, should the panels shrink, and allows enough play for the panels to keep straight with natural working of the wood in the changes of the atmosphere. There is advantage, too, in gluing up the frame work without the panels. This cannot be done in the case of solid molded doors.

The finish of a veneered door should be first-class; the panels, molds and frame work well sandpapered, and flat surfaces scraped smooth, as every defect seems magnified when the filler and varnish are applied.

Special care should be taken not to scrape, scratch or mar the face of the doors in shipping. Many a good door has been injured by careless packing or handling in shipping, after the cabinetmaker has finished his job. They should be crated, if shipped on a railroad or by boat, or they will not be worth much on arrival at their destination.—H. T. Gates, in the Wood-Worker.



APPLIANCES FOR MAKING VENEERED DOORS.

A VISITOR FROM NEW SOUTH WALES.

Mr. G. W. Hudson, of the firm of G. Hudson & Son, timber merchants and lumbermen, Sydney, Australia, has been visiting in Canada, looking into the lumber market for Australian hardwoods and also with a view of placing orders with the mills on the Pacific Coast for the export to Australia of some British Columbia pine, fir and cedar.

Speaking of his visit, Mr. Hudson stated that in some respects the Canadian lumbermen appeared to be ahead of the Australian millmen in the style and efficiency of their machinery.

The different conditions ruling in the two countries necessitate different methods of handling logs, and whereas in Canada the logs are cut on the limits and floated down, often a hundred miles or more to a mill, in Australia the mill itself is usually located right in the limit, and it is the sawn lumber and finished product mainly that is shipped out of the woods. Again, the skid road in the timber limits or woods is almost unknown in Australia, as is also the portable engine and cable for this purpose. The method of hauling logs most generally in operation there is on a "junker," which is a two-wheeled vehicle, very strongly built, and consisting only of an axle and long tongue or pole in addition to the two wheels. To the tongue a pair of bullocks are harnessed, and often from 14 to 24 head of oxen constitute a logging team. The average Australian log being shorter, enables this method of haulage to be adopted, the log being rested upon the wheels, and but a very slight portion upon the trailing end. The weight of the logs necessitates, apparently, an excessively numerous number of bullocks to handle them. It also necessitates this method, and transportation and the establishment of the timber mill either in the limits or in close proximity thereto.

Although rivers are not lacking in the timber districts, booms of logs cannot be made up in the Australian forest and floated down to the mill, as is done here; the weight of the wood prohibits this, as the majority of the Australian hardwoods sink very quickly after being submerged in water. Water transportation is, however, used where the mills are situate at some distance from the standing timber. In this case steam punts are used. These are stern-wheel steamers with all their machinery, etc., placed well aft, the tow being built with almost a flat bottom. The weight of the machinery being aft, causes the bow to be raised up out of water, consequently when reaching the place where the logs are to be loaded, the nose of the punt is easily run ashore; two sticks are then run out from the bank on the side of the boat, and the logs are rolled on board, and it does not matter if the logs project on either side 8 or 10 feet. Logs from 25 to 35 or 40 feet are easily carried by these craft. As a rule, however, the logs are sawn up at mills in or near the limits, and the planks, flooring and other classes of manufactured lumber only shipped out according to order. The finished lumber is shipped in ketches or sailing vessels capable of handling from 20,000 to 90,000 feet of lumber each trip. A few small steamers are also employed in the trade.

Speaking of the Australian hardwoods, some of which, Mr. Hudson thinks, should find a ready market throughout Canada, he remarked that Vancouver business men would very probably have an excellent opportunity of judging their quality shortly, as Messrs. C. Woodward and W. Murgatroyd had secured some thirteen or sixteen samples, which arrived on the Moana. They included the sample of the noted turpentine wood which is used extensively for wharf and dock piles, being teredo proof and very strong. Only a few months ago a turpentine wood pile was removed from the old Piermont Bridge, Sydney, which had been in the water for 55 years, and was yet found to be as good as new. There are also pieces of iron bark, blackbutt, tallow wood, box, mahogany, blue gum, spotted gum, grey gum and ti-tree. The iron bark wood is used extensively in New Zealand for the planking of wharves and also for piling, and for the spokes of wheels; it is also regarded as one of the most serviceable woods in existence.

The ti-tree wood is used very largely in boat and ship-building, for knees or ribs of boats, etc., and Mr. Hudson's firm supply large quantities of this wood to the Fitzroy dock, Sydney, for Government boat-building purposes. The spotted gum is also used extensively in coach and boat building, as it will bend readily when steamed, and is a very strong wood. The tallow wood is used largely for flooring, especially of dancing rooms, etc., the boards being slippery and tallowy as the name indicates.

A wood of which no sample was apparently sent over is the Australian rosewood, which is hard and very prettily grained, and is much in demand for furniture and similar class of work.

GRADING OF LATH.

There are no recognized rules either in the United States or Canada for the grading of lath, this branch of the lumber business being unique in this respect. None of the large lumber associations have considered the subject, although the lumber section of the Toronto Board of Trade, in 1890, adopted two lath grades, as follows:

No. 1 lath shall be 4 feet long and shall be when cut 1 1-8, 1⅜ and 1⅝ inches in width, cut out of good, sound, live timber, free from wane, rot or knots, well manufactured and trimmed square at the ends.

No. 2 lath shall be of the same width and length as No. 1 lath and shall admit of a small portion of wane and also will admit of lath sap stained, and of small, sound knots; must otherwise be well manufactured.

It is claimed that lumber seasons much better when piled each width by itself, and that the difference in results pays for the expense of careful sorting. This also applies to piling in kilns. The ideal method of drying hardwoods is on end, the next best, for hard or soft woods, to give the piles as much pitch as they will stand.

PLANS FOR THE HOUSE OF HOO-HOO.

So much has been said and written about the House of Hoo-Hoo, the lumbermen's club building to be erected on the grounds of the Louisiana Purchase Exposition, St. Louis, that it has brought out a perfect volume of inquiry as to what this building will look like, the size of it, what will be attempted in the way of privileges for the members, and the general scheme of the exterior and interior arrangement and decorations. The illustrations on opposite page will partially answer these questions and will give a clearer idea of the intentions of the Board of Governors than anything that could be written.

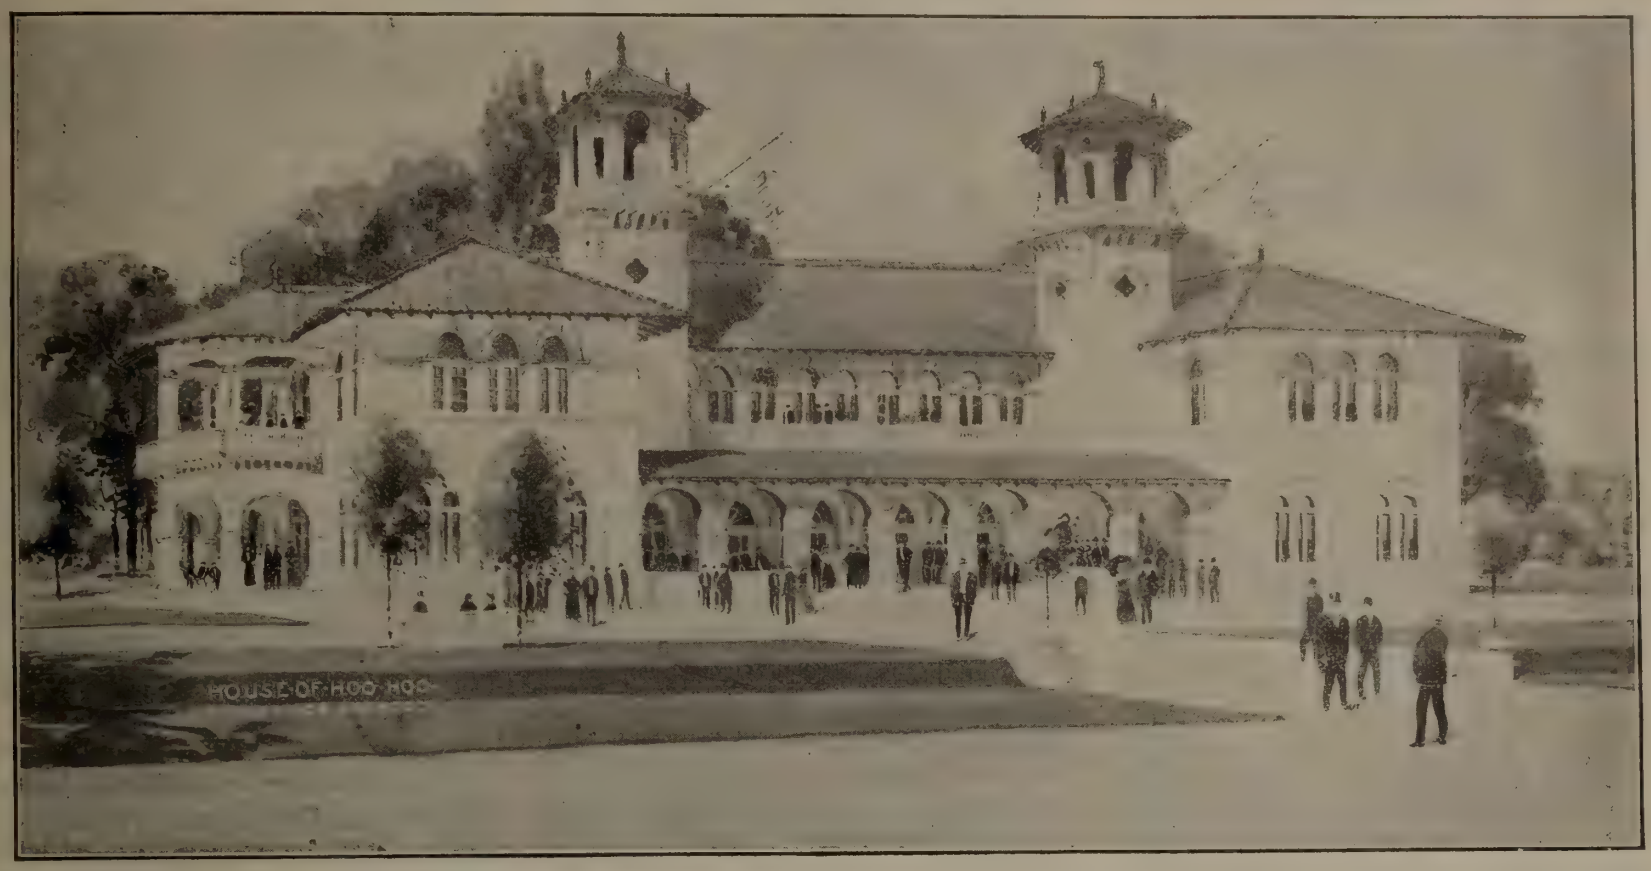
The selection of these plans involved considerable time and labor on the part of the Board of Governors. Architectural competition was invited about three months ago, and, from the plans submitted the board selected the design of F. C. Bonsack, the well-known St. Louis architect, which, with the slight changes that have been made, is deemed perfect for a building of this character.

The general plan, in form, is that of the letter 'H,' the central court on the front forming the principal entrances, veranda and approaches to the terraces, while that of the rear is surrounded by a peristyle connecting the different parts of the main building with the service building, which, because of the heat of the kitchen, will be detached. Within this peristyle will be arranged a cozy flower garden, with space for tables and chairs, affording a quiet, cool and private place for refreshments.

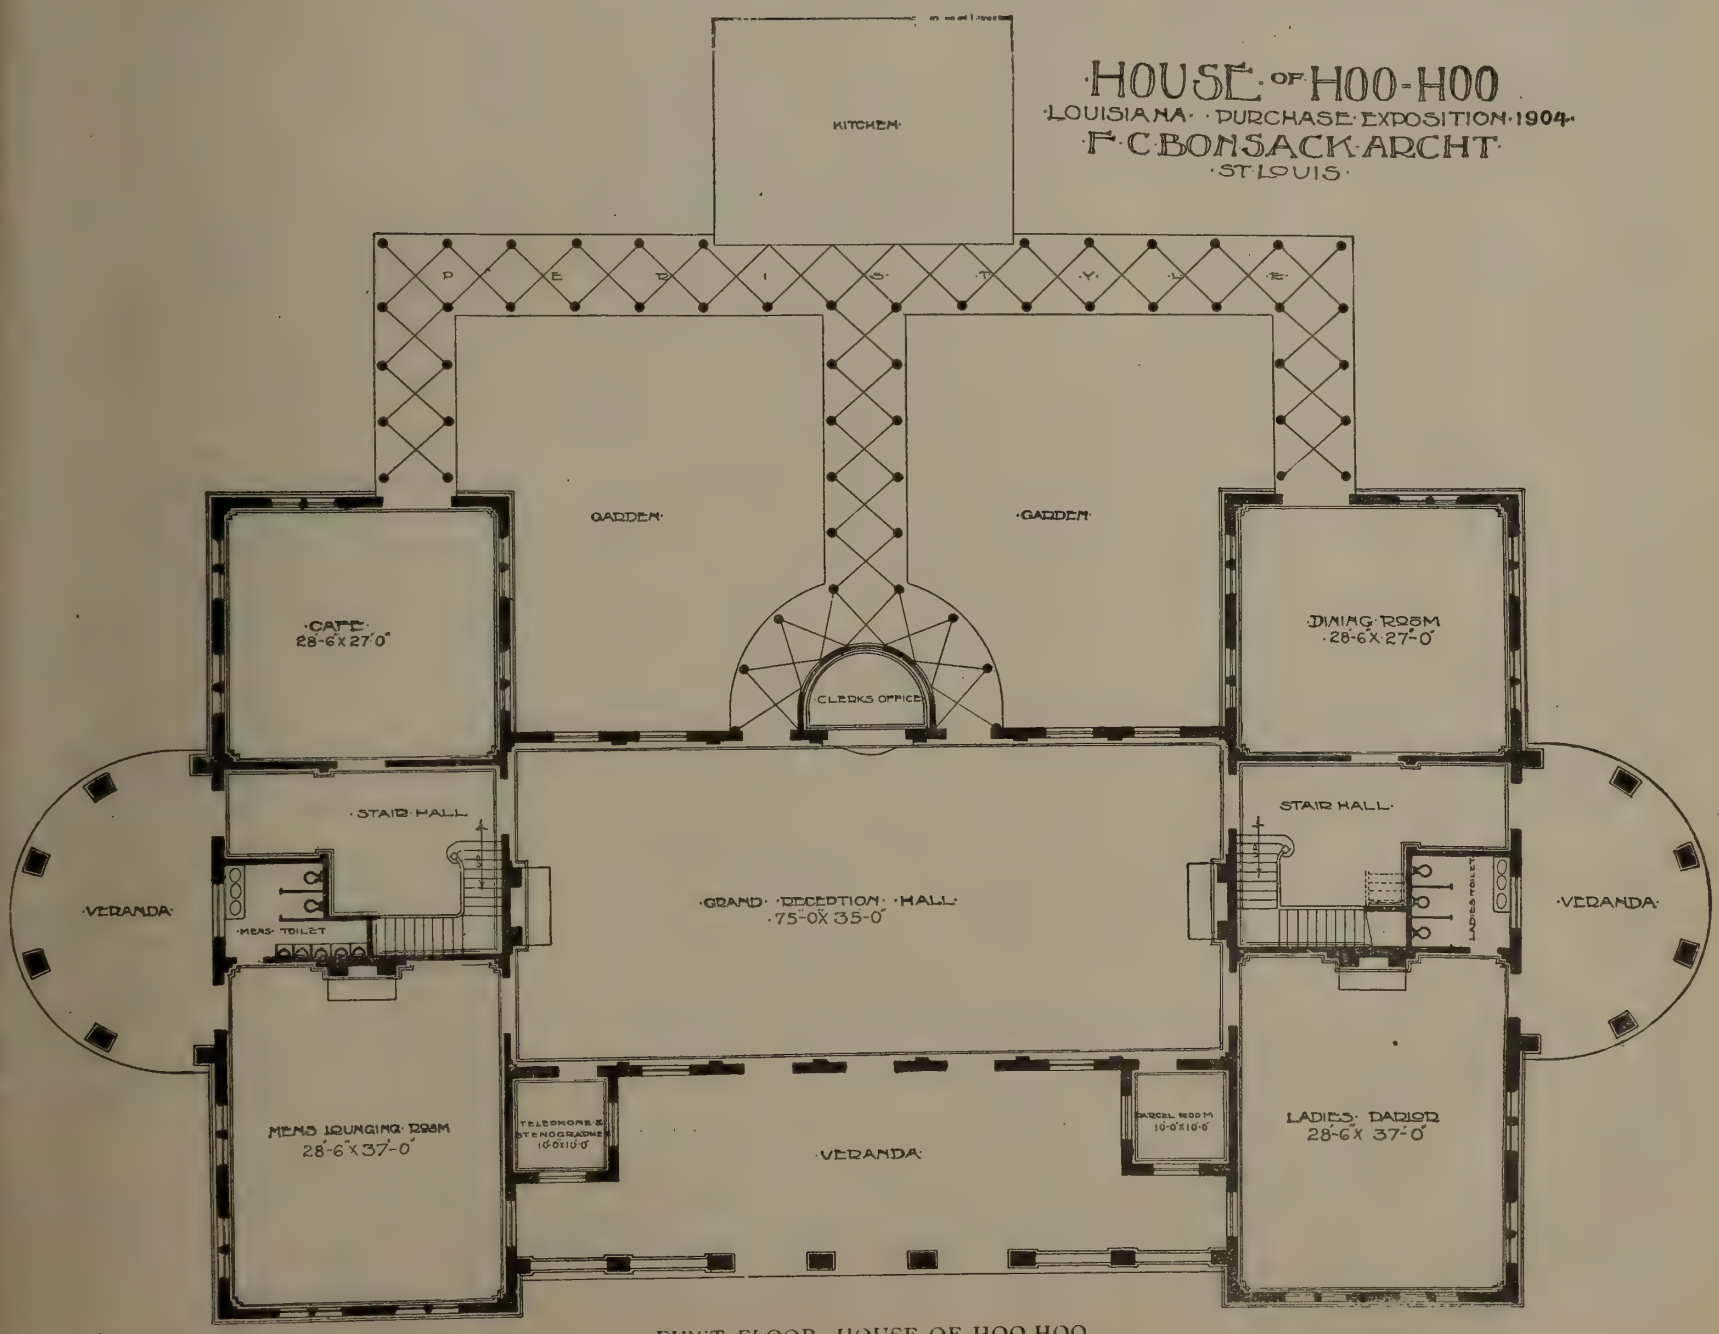
The various lumber associations throughout the country will each take a room to finish in each of their special lumber commodities, the whole being made to harmonize and comply with the general design of the architect. In this way the building will show the results and effects obtained by a proper handling of the various woods and will be a beautiful exploitation of the commercial woods of the United States. It will be noticed that the ladies are taken care of in the plans, practically the whole of one wing of the building having been reserved for their use. The assembly hall on the second floor will have a seating capacity of 700 and will be used for all special occasions such as lumber conventions, receptions of various sorts, lectures on forestry and lumber topics, Hoo-Hoo concatenations, the Hoo-Hoo annual and various other events which will be a feature of the Exposition and this club. It is intended that the members may receive and handle their mail at the building and every convenience of this sort that will be beneficial will be adopted.

As has been stated in the foregoing, the House of Hoo-Hoo is a club for lumbermen which will have its doors open during the World's Fair to be held in St. Louis in 1904. Broader than this, it is a club for lumbermen, lumber newspaper men, saw mill supply men and railroad traffic officials. Although it derives its name from the Concatenated Order of Hoo-Hoo, a man need not be a member of that order to be a member of this club. The membership fee is $9.99, payable with the application, and this includes all dues to the club so long as it may exist, which will be until the close of the exposition. The benefits to be derived by members need not be explained to those who have visited other World's Fairs and been at a loss for some home-like place where they could rest, be comfortably taken care of, eat their meals away from the crowded restaurants and meet their friends. Even broader plans than these are gradually being evolved which will make the club wonderfully complete and attractive.

From the office of the secretary of the club, 1200 Fullerton Building, St. Louis, comes the information that the lumbermen throughout the country are taking to the idea with great enthusiasm. While the membership books have been open but a short time, there are already members in 26 states and territories and the daily additions to the roll are very gratifying. The point is also brought out by him that the fact that the fair has been posponed until 1904 does not in the least lessen the necessity for prompt action in securing the full quota of members, 9,999, as the detailed planning and construction of the building will take a least a year, and it is important to have the work completed several months before the opening of the fair because of the labor troubles and rush which will exist during the beginning of 1904.



HOUSE OF HOO-HOO, LOUISIANA PURCHACE EXPOSITION, ST. LOUIS, MO.



FIRST FLOOR, HOUSE OF HOO-HOO.

THE Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION :

One Copy, Weekly and Monthly, One Year, in advance . $ 1.00
One Copy. Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is in dispensa ble for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

RETALIATION AGAINST DIFFERENTIAL STUMPAGE TAX.

About one year ago the Quebec Government passed a law allowing a rebate of 25 cents a cord on pulp wood taken from Crown lands and manufactured into pulp in Canada. According to report, the Assistant Secretary of the United States Treasury has decided to increase the duty on Canadian pulp to the amount of this rebate. The increased duty is 25 cents per ton of 2,240 pounds of ground wood pulp and 40 cents per ton of 2,240 pounds of sulphite pulp. The above amounts are equal to 25 cents per cord of wood, as a cord of wood will make about a ton of ground wood pulp or 1,400 pounds of sulphite pulp. This countervailing duty went into force on July 25th, since which time Canadian manufacturers have been obliged to pay the extra charge upon shipments to the United States.

Section 393 of the Dingley tariff provides as follows : "That if any country or dependency shall impose an export duty on wood pulp exported to the United States, the amount of such export duty shall be added as an additional duty to the duties herein imposed upon wood pulp, when imported from such country or dependency."

We fail to see how the differential stumpage tax can be construed as an export duty; indeed, it is not within the power of the Provincial Governments to impose an export duty. Such power rests with the Dominion Government alone. But even if the provincial bounty on home manufacture called for the retaliation provided for by the Dingley bill, the increased duty should not apply to pulp shipped from other provinces of the Dominion.

It is understood that the question is receiving consideration at Washington, and we feel certain that the authorities will decide to abolish the duty and refund the amounts collected. Should the duty be allowed to stand, however, it will not seriously affect the export of pulp from Canada to the United States.

The circumstances above referred to prove one point very clearly, namely, that the Quebec Government, instead of imposing differential dues, should have followed the example of Ontario and British Columbia and absolutely prohibited the export of all kinds of timber and pulp wood from the Province. This would have settled the matter at once and for all time.

EMBARGO ON HEMLOCK.

THE Ontario Government is gradually perfecting its timber policy. At a meeting of the Cabinet on July 29th, an Order-in-Council was passed prohibiting the export of hemlock logs from the province after April 30th next, the end of the license year. Thus hemlock is placed in the same category as pine, spruce and pulp wood.

Owing to the greater value of hemlock the export has greatly increased within the past year or two. According to the figures given in the Statistical Year Book, the quantity exported from Canada last year was over 20,000,000 feet, as compared with less than 2,000,000 feet in the previous year. The figures in detail for the last five years are as follows :

1897	1,956,000 feet.
1898	1,121,000 feet.
1899	961,000 feet.
1900	1,824,000 feet.
1901	20,217,000 feet.

This remarkable expansion in the export of hemlock timber is doubtless largely the result of the law prohibiting the export of pine. The value of hemlock has gradually increased of late, until to-day its selling price is within a few dollars of that of pine. The Ontario Government has wisely recognized the changed conditions and taken measures to confine the manufacture of the timber to the province.

It is a question what effect the legislation will have upon the tanning industry. It may result in curtailing the cut of hemlock timber and consequently the supply of hemlock bark for export. On the other hand, it may stimulate the hemlock trade, as was the case when the legislation affecting white pine was put into force.

Statistics show that while there was a large increase in the export of hemlock timber last year, a corresponding increase was not made in the export of tan-bark, as will be seen by the figures for the past five years as given below :

1897	24,888 cords.
1898	26,493 cords.
1899	13,879 cords.
1900	16,124 cords.
1901	17,037 cords.

For the past ten years there has been a gradual decline in the export of tan-bark. It might be supposed that the use of tan-bark is on the decrease owing to the various substitutes that are now employed to some extent for tanning purposes. Notwithstanding these discoveries, however, hemlock and oak bark still furnish the great bulk of the material upon which the manufacturers of leather rely for their tannin. In the United States there were used for tanning purposes in the year 1900, 1,170,131 cords of hemlock bark, of a value of $7,347,242, and 445,934 cords of oak bark, of a value of $3,174,995. This was in addition to other extracts. For sole leather hemlock bark is used very largely.

THE TIMBER SITUATION IN BRITISH COLUMBIA.

A GREAT deal has been heard of late regarding the lumber industry of British Columbia, the reason being the putting into effect of legislation prohibiting the export of the timber from the province. It is quite evident, however, from the number of questions propounded and the statements—or rather misstatements—which appear in the press, that the exact situation is not understood even by the inhabitants of British Columbia. On another page we publish extracts from the British Columbia Land Act as amended to the end of last year, and shall endeavor to make an explanation which, in conjunction with this act, will assist to a better understanding of the law.

The first misapprehension in the minds of some, and one which we ourselves must confess, was that the law passed last year prohibiting the export of timber applied to cedar only. This was not the case, as it included all varieties of timber.

It was supposed that the law in the first instance covered all the lands in the province over which the Government has supervision. This was doubtless the intention of the Government, but it was found that timber taken from certain Crown lands could still be exported legally. Three methods for the disposal of timber are adopted in British Columbia, namely, first, by lease ; second, special license ; and third, hand-loggers' license. It is claimed that nearly one-half of the logging operations are carried on under lease, and one-half under special permit, the operations of hand-loggers being of small account and chiefly by Indians. The law as first passed prohibited the exportation of timber taken off lands held under lease, not making any reference to timber cut from licensed lands. The clause reads as follows :

"All timber cut from Provincial lands must be manufactured within the confines of the Province of British Columbia, otherwise the timber so cut may be seized and forfeited to the Crown and the lease cancelled."

Therefore, parties cutting under authority on special licenses could, according to law, export their timber. When the Government saw this omission it was considered necessary to pass an Order-in-Council prohibiting the export of logs cut under license. This was done in July last and is intended to cover what the previous law did not provide for.

This recent Order-in-Council seems to have confused not only the public but the lumbermen also, as it was understood that the law in the first instance covered all the lands in the province.

The order, we understand, has no reference to land-loggers' licenses, presumably for the reason that the Government considered it too primitive a method of taking out logs to demand any consideration.

The statement has frequently been made

that the Government is considering the repeal of the export law. This is not the case. After thoroughly investigating the conditions prevailing in logging and lumbering operations since the enactment of the legislation, Hon. Mr. Wells, Chief Commissioner of Lands and Works, stated that the most satisfactory conditions existed throughout the province as a result of the law, and in the absence of any pronounced injustice to the loggers it would be unwise to interfere with the operation of the act as it stands. He promised, however, to provide relief if possible where apparent injustice was inflicted in individual cases.

EDITORIAL NOTES.

SINCE the publication of the special Western Canada Number of THE LUMBERMAN, we have received a large number of new subcribers from the Northwest and British Columbia, which may be taken as conclusive evidence of the appreciation of this number by manufacturers and dealers in the West in whose interest it was specially prepared.

"BE sure you are right, then go ahead," is evidently the motto of Mr. L. H. Maxwell, who recently visited THE LUMBERMAN sanctum. Mr. Maxwell is the inventor of a boot calk, and had come from Eureka, California, to obtain the opinion of Canadian lumbermen as to the merits of his invention. The opinion of the American lumbermen had been favorable, but to this he wished to add the assurance of a favorable reception by the Canadian woodsmen.

ACCORDING to the laws of the United States, a rebate of duty is given on imported materials used in the manufacture of goods exported from the country. This provision is particularly appliable to lumber, a percentage of the imports of which is used in the manufacture of boxes, doors and other goods for export. The regulations to be followed in order to secure the rebate are of interest. In the case of a recent shipment of doors the instructions were as follows:

"The preliminary entry must show the marks and numbers of the shipping packages and the number of doors of each size and grade contained therein respectively. When shipped loose in quantities, the edge of each door must be stenciled to show its size and its identifying mark and number, which also must appear in the preliminary entry. The drawback entry must show the number of doors of each size and grade exported and the quantities of lumber of the several sizes and thicknesses, board measure, contained therein, separately and in the aggregate. The said entry must further show, in addition to the usual averments, that the exported doors of the several sizes and grades were manufactured of materials and in the manner set forth in the manufacturer's sworn statement dated June 18, 1902, now on file in the office of the collector. In the liquidation of entries, the quantities of lumber, board measure, in condition as imported, which may be taken as basis for allowance of drawback, may equal the quantities declared in the drawback entry, after official verification of exported quantities and measurements, provided that in no case shall they exceed the quantities for each size and grade of door, as figured for the corresponding size and grade in a tabulated statement attached to the manufacturer's sworn statement, and provided further that 9.6 per cent. of such quantities may be added thereto to compensate for loss incurred in manufacture."

The execution of the above details called for a rebate of about eight cents a door, a small item in comparison with the amount of red tape.

CANADIAN lumbermen might extend their trade in partially manufactured timber products. The British consumer is willing to buy, and the Canadian manufacturer wants to sell. Of this we are convinced by numerous requests from parties to be placed in communication with business firms. One just to hand reads: "We have on our limits a large quantity of small wood, both spruce and hardwood, for which we are anxious to find a market. We think there must surely be some more profitable way of manufacturing this wood than simply selling it in the rough for pulp wood; for example, we thought the hardwood might be worked up into such small articles as circular covers for bottle corks provided a market could be found for them. There must also be numerous other small articles that might be profitably manufactured from both the spruce and hardwood." The same mail brings a letter from a British importer who wishes to buy chair and broom handle stock, mouldings, etc. The manufacture of wooden specialties is a branch of the lumber industry as yet little developed in this country, but which offers excellent opportunities. Some of the lines for which there is a demand in Great Britain are pine and spruce box shooks, mouldings, wagon and furniture stock, spruce sheathing, birch squares, tool handles, mangle rollers, veneers, wooden chimney pieces, flooring blocks, wooden screws, birch and maple dowels, panels for piano key makers, etc.

A MAHOGANY LOG.

The London Timber Trades Journal tells of a remarkable Cuban mahogany log recently purchased in the London market by an American buyer, who in turn is said to have dispnsed of it to a Cincinnatti, O., veneer factory. The log is practically 20 feet long and 31 inches deep by 29 inches broad. It is perfectly straight from end to end and of the most beautiful texture and color. It may be said to be a perfect piece in all respects, there being practically no faults of any kind on either of the four sides or two ends. The log contains about 1,670 superficial feet of extreme measurement and weighs 3 tons 10 cwt. It is beautifully figured in every part and is unique in the fact that the figure is apparently as strong on one side as it is on the other—highly figured wood being strongest on one side of the tree. This log is an exception, as it appears to be equally fine in every part. This mahogany tree will become a much-traveled one, for it grew in Cuba, was shipped to Liverpool and then conveyed to London. It will now be carried back to the western hemisphere for conversion, and will thus have been conveyed between 8,000 and 9,000 miles over land and water since it was felled. It is also quite within the range of probability that some of the veneers manufactured from it will eventually find their way back to Europe.

OUR BRITISH OFFICE.

Owing to increased British business, the publishers of the CANADA LUMBERMAN have established a branch office at 22 Great St. Helen's, London, E.C. Persons interested in Canadian lumber are requested to avail themselves of the facilities thus afforded for securing information regarding the lumber industry of Canada. Our representative will be pleased to call personally upon timber merchants in response to a request. Address, The C. H. Mortimer Publishing Company, 22 Great St. Helen's, London, E.C.

THE LATE GEORGE J. COOK.

After scarcely two week's illness, Mr. George J. Cook, president of the Cook & Bros. Lumber Company of Ontario, passed away at his late residence, "Englefield," 208 Spadina avenue, Toronto, on August 21st. Up till a fortnight before his death he had been in excellent health. At that time he was stricken with an affection of the heart, to which he succumbed.

Mr. Cook was one of the oldest and most respected business men of Toronto, and was widely known throughout the Dominion. He was born on August 22nd, 1824, in the Township of Williamsburg, Dundas County. His father was the late George Cook, of Dundas county. From the time of his youth he was actively engaged in the lumber business. His first operations, early in the forties, were on the Nation river. He then removed to Belleville and subsequently went further west. He was one of the first lumbermen to take out board pine between Toronto and Barrie.

The Cook & Bros. Lumber Company, of which he was president, has a capital stock of $1,200,000, all paid up. The mills are located at Spragge, in the Algoma district. Extensive timber limits are owned by the company, and Mr. Cook was at the time of his death very wealthy. He was also president of the Cook Land Company, owners of large mining lands in Marmora township.

Kindness and generosity were two of Mr. Cook's most striking characteristics. Owing to his reserved disposition, few of his many generous acts ever became public knowledge. He took an active interest in church work and for years had been a prominent member of St. Philip's church.

Mr. Cook leaves one brother, Mr. H. H. Cook, of the Ontario Lumber Company, and two nephews, Mr. George W. Cook, vice-president of the Cook & Bros. Lumber Company, and Dr. G. E. Cook, of Chicago. Mr. George W. Cook will doubtless succeed him as president of the company, and the business will be continued as heretofore.

The funeral was the occasion of many tokens of respect, one of which was a beautiful wreath from the employees of the mills at Spragge.

A maker of loose pulleys recently received an order for one pulley 9 inches diameter with a face 10½ inches, 9 inches of the face being for the belt to travel on, and the other 1½ inches to be 10 inches in diameter, to be run next to the tight pulley, for the belt to shift on. While the idea is by no means a new one, the width of the shifting edge of the pulley is rather unusual. It is said to be very successful in practice, however, and to materially reduce the trouble of shifting the belt, which is one of the faults of this method of construction of loose pulleys.

CORRESPONDENCE

THE BRITISH COLUMBIA LAW.

VANCOUVER, B. C., 15th August, 1902.

Editor CANADA LUMBERMAN :

Dear Sir,—Allow me to correct the second item under the heading "Editorial Notes" on page 10 of the August number. The legal opinion referred to was to the effect that the change in the law did not prevent the export of timber cut on special licenses. To rectify this, an order-in-council was passed in July last.

Although the loggers were aware of this defect in the law, they saw that it was clearly the intention of the government that it should refer to licenses as well as to leases, and made no attempt to make any shipments to the American side, which they might have done.

Thanking you for inserting this correction, I remain,

Yours truly,

H. G. Ross,

Secretary B. C. Lumberman's Association.

THE OTTAWA VALLEY.

[Correspondence of the CANADA LUMBERMAN.]

Letters patent have just been issued for a new lumber company to be known as the Read Lumber Company. It will have headquarters at Ottawa. The members are Charles Edwin Read, George Halsley Perley, Frederick Wells Avery and James Adam Laing, of Ottawa, and Walter Gillespie White, of New York City. The total capital stock is $500,000.

The company asks the usual extensive privileges covering the purchase of limits, operation of mills, building of roads, wharves, movement of boats, etc. The letters patent cover sawmill, furniture, planing mill and pulp wood branches.

The personnel of the firm is practically that of the Hull Lumber Company, which is now operating the Mason mill in the suburbs of Ottawa, and which before the fire of April, 1900, operated the Hurdman mill at the Chaudiere. Mr. Perley was accepted in partnership a year ago. He operates under his own name a mill at Calumet, Que., at the juncture of the Rouge and Ottawa Rivers, formerly operated by the Ottawa Lumber Company. It is understood the company will engage in the manufacture of California sugar pine.

Ald. Desmarais, of Hull, recently secured an order for 1500 telegraph poles from an electric company in Sydney, Cape Breton, which is establishing a new line.

In all probability the Upper Ottawa Improvement Company, which has charge of the movement of all saw logs on the Ottawa River between Des Joachims above Pembroke and Ottawa City, will extend its sphere of operations and erect booms and place tugs on Lake Temiscamingue and the upper reaches of the Ottawa River in that district. Mr. Alex. Lumsden, Ex. M. L. A., has at present full charge of the business on that section of the far reaching river. He works in conjunction with the above company.

VENEER-CUT STAVES.

I no not believe there is a machine made that will inspire as much enthusiasm and cause a man to see such enormous profits as a veneer machine when cutting 3/8-inch stock and geared up to full capacity, says a correspondent of Packages.

If a back roller is employed to cut the staves to ramdom widths, and an apron conveyor carries the staves from the machine, 50,000 staves can be cut in ten hours. The way the staves roll off the end of the conveyor reminds one of the way straw is discharged from the elevator of a thresher. You will at once commence to figure on the output and the sight of the cost of finishing the staves, which is the most expensive part of the process.

After seven years experimenting in cutting veneer staves, the writer has learned that the following facts cannot be ignored if one succeeds :

First. The stave must be bone dry before it is jointed. Well air-dried will not do. Staves that have been air-dried until they weighed only 700 pounds per thousand changed after being jointed so much that they could not be used They would swell and shrink like a sponge, and seemed never to settle to any one bilge, the change ranging from 7/16 to 1 inch, the bilge originally put on the staves being 11/16. After numerous tests we came to the conclusion that on account of the position of the grain of the wood, it was impossible, at any stage of air-drying, to secure a joint that could be relied upin to remain unchanged, and abondoned it as a failure.

Second. If the staves were joined as soon as they were cut and put through the kiln green, the joint was so bad the staves were ruined. One experiment was ample to settle the matter.

Third. We next air-dried the staves thirty days, put them through the kiln and jointed them after being dried. This was a great improvement, and we felt encouraged, but the nice circle the staves had when cut was destroyed, and they were flat boards instead of staves. We supposed, as they were cut in random widths, varying but a little above and under 4 inches, they would make just as good barrels. We were led into this error by the argument that the more uniform the stave the better the barrel, but the report we got from the cooper who tried them did not warrant us in continuing this method, nor were they a howling success. It would take too much valuable space to enumerate the defects that the cooper heaped on those staves.

Fourth. We now decided to cut the veneer in sheets wide enough to make four staves when dry. This was done by putting one knife in the back roller which cut the sheets 20½ inches wide. The sheets were passed through the kiln and ripped at random widths by a gang edger. Here we encountered another serious obstacle. In cutting in sheets, we lost all the circle in the stave. They were simply slats, flat and stiff. In fact, they were so stiff the cooper could not work them, and both sides of the stave looked so near alike that no one but an expert veneer cutter could tell which was the outside, and, if jointed on the wrong side they would cup in and cause the barrel to fall.

Fifth. Our faith was still strong and we continued to experiment. We were informed that if the slats could be steamed after they were bone dry they could be jointed and rolled to proper circle and bent to any desired curvature, and that they would dry out afterward, without changing the joint. We did this and secured the most perfect stave that has ever been produced ; but the moisture did not leave the stave and they were a failure also. If we dried the stave in the kiln again it spoiled the joint, and we decided to let some other fellow solve the problem.

It will be observed that we come out just where we started—simply that the veneer staves will not remain as they are jointed. They will, on account of the way they are cut, take up moisture more easily than the ordinary stave, and it is impossible to get them dry without ruining the joint. That staves can be cut smoother, more solid, more even in thickness, length and width, than by the old method, is a fact that cannot be disputed, but when the enormous amount of waste, the extra cost of drying and jointing, the uncertainty of the stock being right, are considered, they so greatly overbalance the advantages that the old method still remains the better process.

If the output of the veneer machine could be passed through the complete process as perfectly in every detail as it comes from the machine, there would be no question about its being much the better method, but to finish the stave after it is cut is where all the trouble is encountered. If the stock is cut to width by the back roller and dried before being jointed, there will be a loss of fully 50 per cent. in stock that cannot be jointed, and those that are jointed will be so stiff that the cooper cannot work them. If the staves are jointed before they are dried, the joint will be ruined.

This is equally true with veneer staves cut in sheets and clipped to random widths. The shrinkage of veneer while drying is over 10 per cent. If the sheet is dried before it is clipped to widths, it becomes so warped and buckled that good staves cannot be made from it. It makes no difference how successfully the kiln does its work ; the shrinkage will be uneven, on account of the laps drying slower than the balance of the sheet or stave.

What we have stated above are facts secured from experience, and these results must be expected by every one who attempts it. On the other hand, if a system of drying is employed that will dry the veneer flat and smooth, soft and free from checks, without making the sheets as hard as a bone, the process will be a success, because more staves can be made from same amount of timber by the veneer process, and they can be made much cheaper.

WHAT BECOMES OF TIMBER.

Some interesting figures are quoted in a contemporary on the subject of the consumption of timber by various industries. Over 4,000,000,000 feet of pine are used annually for matches, the equivalent of the product of 400 acres of virgin forest. On American railways about 620,000,000 cross ties are laid, and 90,000,000 new ties for renewals are required annually. The amount of timber used every year for ties is equal to 3,000,000,000 feet. There are now standing nearly 7,500,000 telegraph poles. The average life of a pole is ten years, so that about 750,000 are required every year for renewals. These figures do not include telephone poles or railway telegraph poles. The amount of timber consumed annually for poles and ties is equivalent to the timber grown on 100,000 acres of virgin forest. For making shoe pegs every year the amount of timber used is equal to the second growth on 3,500 acres of hardwood land. Lasts and boot trees require about 500,000 cords of wood. Although the making of paper from wood pulp is a comparatively new process, the annual consumption of wood for this purpose is equal to over 800,000,000 board feet of timber, or which it would be necessary, were the trees all growing together, to cut about 80,000 acres of forests. America is now using for the lumber and paper trade about 40,000,000,000 feet of lumber a year, which is equivalent to about 4,000,000 acres of virgin forest—an area equal to Rhode Island and Connecticut. These figures do not include the wood used for fuel, which is four and one-half times as much. With these statistics in view, it is easy to appreciate the need for scientific forestry.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 24 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VIII. TORONTO, CANADA, AUGUST 27, 1902 30

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING, MONTREAL.
22 Great St. Helen's, London, E.C.

Weekly Lumberman, published every Wednesday. Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

Prepared by the Editor of the "Canada Lumberman."

Toronto, Canada
C H. MORTIMER, Publisher
1895

THE above is a fac simile of the title page of the latest and most complete Lumber and Inspection Book published.

We shall be pleased to send you a copy on receipt of six 2 cent Canadian postage stamps

THE CANADA LUMBERMAN,
Toronto, Canada.

WANTED AND FOR SALE

WANT TO CORRESPOND WITH PARTIES that wish to open up a trade in all kinds of Hardwood Blocks for the English market. Specifications, prices, etc., obtained from E. D. G. PIDGEON, St. John, N. B.

FOR SALE.

THE ENTIRE CUT OF 190 OF SEVERAL mills on the Ottawa Valley of all number one white pine mill culls, strips and sidings, 1" to 3" thick, and also other grades. Shipments by water or rail. Write for particulars and quotations to A. F. BURY AUSTIN, Wholesale Lumber & Timber, Room 507 Merchants Bank Bldg., Montreal. Also spruce lumber of all grades.

Wanted at Once

ONE CAR CULL SOFT ELM, BASS, PINE or Hemlock for making packing cases, any thickness from ½ inch up to 1 inch. dead culls out; 2 cars No. 1 and 2 Dry Soft Elm, 1½ inch thick; also 1 car No. 1 and 2 White Birch or Maple, thoroughly dry, with a large percentage 10 inch and up in width. Quote best price f.o.b. shipping point or Markham. Address TAYLOR & LOUNT, Markham, Ont.

STANDING TIMBER FOR SALE.

600 ACRES OF CHESTNUT, WHITE-WOOD, Hard and Soft Maple, Red and White Oak, Black and White Ash, Basswood, Soft Elm, Beech; a little Hickory, Butternut and Cherry; two railroads running through property; 10M per day mill, 40x100 ft., planer and matcher, shingle machine and other machinery; large dwelling house and house for men; barn and sheds; large bearing orchard; plenty of water; splendid market for wood; best lot of hardwood in this western Ontario; good investment for enterprising man. Bismarck Station, M. C. R., West Lorne, P. O. I. C. SCHLEIHAUF.

SAWMILL MACHINERY FOR SALE

CAPACITY OF MILL 40 M. PER 10 HRS. Will fit up mill with band or circular saw, long timber or lumber mill, will cut from 5 to 6 ft. long, with large edger, slash table and lumber trimmer and jump-up saws, endless log chain and bull-wheel and drag-saw for sawing logs in water, also lath machines and trimmers and live rollers, turn tables, lumber cars and some track iron, with large powerful boiler and engine. Will erect mill for anyone wishing to buy or would go partner with person who has a large pine or hardwood limit and convenient place for shipping. For further particulars apply to XAVIER BAECHLER, Sarnia, Ont., Box 117.

FOR SALE

SAW MILL AND FLOUR MILL

FOR SALE AT VERNER, IN THE DISTRICT of Nipissing, Ont., on the C. P R. line and located on the banks of the river Veuve, the following properties in first-class running order in every respect:

1. A Saw-mill, two stories high, 84x48 feet, well built and having a sawing capacity of 25,000 feet of wood per day. A 100 horse power engine works the mill. A planing machine is also attached to the above, with a capacity of 8000 feet per day. There is also a shingle mill capable of turning out 40,000 shingles a day.
2. A six miles square pine wood limit, located two miles from the saw-mill.
3. Two large houses in perfect order, sheds, etc.
4. A flour mill capable of preparing 300 bushels of bran per day and 150 bushels of flour.
5. 18 acres of land under cultivation.

Good reasons for selling. For terms apply to
W. LALONDE & CO.,
Verner, Ont.

WANTED—2, 3 and 4 inch White Oak. A. BRYCE & CO., 2 Toronto Street, Toronto.

WANTED—MACHINERY SUITABLE FOR A good circular mill that would have a capacity of 30,000 feet per day. Apply at once to Box 20, CANADA LUMBERMAN.

FOR SALE — First-Class Portable Saw and Shingle Mill; good locality; plenty of timber. For further particulars apply to GEO. A. PATRICK, Emo P.O., Rainy River District.

SITUATION WANTED AS BOOK-KEEPER in lumber office by man experienced in Canadian and British trade. State salary given. Answers to "BOOK-KEEPER," CANADA LUMBERMAN office, Toronto.

WE ARE IN THE MARKET AND WILL pay highest cash price for immediate shipment of Birch, Black Ash, Basswood, Red Oak and Soft Elm, any thickness; will inspect at mill LONDON LUMBER COMPANY, London, Ont.

WANTED.

LUMBER SALESMAN—YOUNG MAN WITH knowledge of Tonawanda grades preferred. Apply by letter to Box 34, CANADA LUMBERMAN, Toronto.

WANTED

INSPECTOR OF WHITE PINE AND NORWAY Deals for the English market—Resident Midland district preferred; state age, experience salary, Box 105, CANADA LUMBERMAN.

BOOM CHAINS FOR SALE.

A LARGE QUANTITY OF 9/16 AND 11/16 Wire, B B. grade, Cable Chain at second-hand. Lengths 10 to 16 feet. In quantities as desired. Write for prices. DETROIT LUMBER Co., Detroit, Mich.

DRY PINE.

WE HAVE ABOUT 1,500,000 FEET DRY PINE in 1, 2 and 3 inch common and better, prefer selling in bulk. Will quote freight rate to Buffalo, Chicago or Toronto on application. Correspondence solicited. N.B.—Would like to correspond with consumers of hardwoods. ST. JOE ISLAND LUMBER CO., Sault Ste. Marie, Ont.

SPECIAL TO LUMBERMEN.

WITH A THOROUGHLY EQUIPPED PLANING Mill at Orillia, we solicit orders for resawing and planing of lumber, in any quantity; can match 26 inches wide; all work guaranteed first-class; prices on application. Address, NATIONAL BOX CO., Orillia, Ont.

HARD MAPLE LOGS

ANY person able to supply us with from 10 to 25 carloads hard Maple logs, 50% to be large enough to turn 22" in diameter and 5 % large enough to turn 27" in diameter, 10 to 12 ft. in length, not over 25% under 12 ft., to be free of knots, shake and seam, for immediate shipment, write us at once, quoting price and naming point of shipment. OTTAWA LUMBER COMPANY, Ottawa, Can.

Lumber Specialties Wanted

A BRITISH IMPORTER DESIRES TO communicate with Canadian manufacturers of wooden specialties, such as broom and tool handles, picture mouldings, back boards for pictures, etc. The party has been established in business for twelve years, and offers as references several of the leading banks of Europe. Representation upon a commission business is preferred. For particulars address, "T.M.W.", care CANADA LUMBERMAN.

Octave Blier, sash and door manufacturer, Fraserville, Que., is reported to have assigned.

CURRENT TRADE CONDITIONS.

ONTARIO.

The lumber trade has been influenced by the assurance of good crops, and prices in one or two instances have further appreciated. While the better grades of pine lumber have been out of the market for some time, the same condition is now being experienced in respect to some of the lower grades. Such a situation at this season of the year, when stocks usually accumulate, is almost unprecedented, and has created a very general opinion that lower prices will not be witnessed this year at least. Wholesale and retail dealers are buying for requirements and are not waiting in the expectation of obtaining better terms. It is said that preparations are being made for extensive operations in the woods this winter, but the excessive cost of labor and supplies is likely to prevent a large increase over the production of last season.

Manufacturers of flooring have advanced prices from $1 to $2 per thousand, to correspond with the higher values ruling in the United States. In Toronto retail trade is quite active, but prices on the best grades are lower accordingly than in any other market.

Among the hardwoods oak and basswood lead. Both kinds are in short supply and likely to advance in price. Shingles and lath are steady, with some manufacturers asking $1.85 for XX pine shingles at the mill.

MANITOBA AND BRITISH COLUMBIA.

Weather conditions are most favorable for harvesting operations in Manitoba and the North-west Territories, and the prediction of an abundant yield of grain is certain to be realized. This will mean much to the lumber business. The demand is gradually expanding and promises to be exceptionally large. The prosperity of the surrounding country is indicated by the volume of building operations in Winnipeg, where buildings representing a value of over $2,500,000 have been erected this year. Almost each day the announcement is made of the proposed erection of a large structure. Lumber and shingles are advancing in British Columbia, the mills being behind with orders. For Ontario delivery 6 to 2-inch cedar shingles are quoted at $2.90, and 5 to 2-inch at $3.30.

UNITED STATES.

Prospects are good for an immense demand for lumber in the United States.

The present movement indicates an active trade later in the season, to meet which retail dealers are now stocking up quite heavily. Green lumber is being shipped from Duluth, not only of the best grades, but of the poorer qualities also. The features of the past week have been an increased scarcity of piece stuff and an improved demand for low grade boards. At Buffalo cuts, barn boards and box are strong and moving in considerable quantities, with prospects of an advance in price before long. Dealers in Norway say that they are getting fully one dollar more than a month ago, and believe that the demand will be good enough to maintain it. Wholesale and retail dealers are stocking up for fall and winter and are contracting wherever they can find suitable stock almost regardless of price.

At a meeting of the price list committee of the North-western Hemlock Manufacturers' Association, held at Marshfield, Wisconsin, last week, all items of short piece stuff were advanced from fifty cents to $1 per thousand, 3 inch hemlock plank $1, and timbers 50 cents. A price of $3 was established on No. hemlock lath f.o.b. Wausau.

The hardwood trade continues steady. White ash is quiet temporarily, while on the other hand oak and birch are quick sellers at firm prices. A considerable quantity of timber is being used at Buffalo for piling.

Shingle prices have improved. The Duluth price for red cedar shingles is $2.50. There is a heavy call for white pine shingles, XXXX being quoted at $3.60 at Buffalo, where the stock is very light. Eighteen-inch hemlock shingles are selling at Pittsburg at $3.10. Pine lath are not so firm.

GREAT BRITAIN.

The tone of the British market is decidedly firm, and while all classes of Canadian lumber are in good demand, exceptionally favorable reports are heard regarding spruce deals. At a recent auction sale 3 x 9 third quality brought £9 15s per standard, and 3 x 6 unassorted £7 10s. A large firm of Irish importers recently made inquiry for a cargo of New Brunswick spruce deals and were asked £8 f.o.b. for 11-inch, 18 to 20 feet average. With freight added, the price delivered at a British port would be at least £10 per standard, an unusually high figure. Owing to the light import this season, higher prices are predicted for the fall months, with possibly a still higher range of values next year. First quality Quebec waney pine is almost unobtainable, and importers having any stock are asking fancy prices. It is probable that the production of square and waney timber in Canada during the coming winter will show an increase over last season, although on this point nothing definite is yet known. Should the production be greatly increased, it would prevent the advance which will otherwise take place.

It is reported that Hon. John Charlton, M. P., recently purchased from Hale & Booth, of Pembroke, extensive timber limits in the Wahnipitae district, paying therefor a price in the neighborhood of $300,000.

STOCKS AND PRICES.

A raft of 3,000,000 feet of hemlock logs left Parry Sound last week for Detroit, consigned to the Detroit Lumber Company.

A raft of 2,000,000 feet of pine logs, cut from deeded lands, has arrived at Saginaw, Mich., for the Palmerton Wooden-ware Works.

The Saginaw Lumber & Salt Company last week sold to Detroit parties 1,000,000 feet of common lumber cut at the Sandwich mill.

The New Brunswick Government will offer for sale on September 3rd two miles of timber lands on Rider's Brook, a branch of the Canaan River.

The steamer Holmlea sailed last week from Montreal for Hull, with a cargo of deals. The steamer Petunia is loading a cargo of deals for London.

Bucknam Bros., of Severn Bridge, Ont., have purchased a timber limit at Rock Lake from the Canada Land Company and are about to build a saw mill there.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

Interest in local lumber circles is divided between the limits and the mills; perhaps the former obtain a shade the better of the situation. It is now a settled fact that the operations on the different limits during the coming autumn and winter will be more extensive than for several years past. It does not need a search-light to locate the reason for this. Stocks standing in the yards are sold close to the saws, and a study of economic conditions indicates a continued prosperity. Lumbermen have not been compelled to wander far from their offices in search of customers, indeed it has been but a question of making the supply meet the demand. A local dealer who recently returned from a trip through Ottawa Valley towns, remarked yesterday that he never before saw such active and extensive preparations for operations on the limits. A. & P. White, the Pembroke Lumber Company, and the Munro Estate, of Pembroke, Chas. McCool, M. P., Nipissing, McLachlin Bros., Arnprior, and Gillies Bros., Braeside, will all reinforce their gangs on the limits. Extra territory will in several cases be cut over. The Ottawa firms are following the aame lead and the probabilities in short point with satisfactory natural conditions to an increased log output.

Another feature is the increased attention being paid the production of square timber. On reliable authority it is estimated that fully 2,000,000 cubic feet of square timber will be taken out during the season just opened. This will be an increase of over 500,000 feet on last season's cut, the largest in years.

The following firms, amongst others, will engage in the square timber business: Robert Hurdman, Rideau Lumber Company, Chas. McCool, M.P., Hull Lumber Company, Shepard & Morse Lumber Company, Fraser & Company, J. R. Booth and Edward Moore, of Ottawa, and R. H. Klock, Mattawa. Several of these firms will enter the square timber line after an absence of several seasons from that business.

Considerable difficulty is being experienced in securing men capable of working on square timber. The decline in the demand in recent years has caused the bush and axe men to neglect the fine points of scoring, marking and hewing, and now that the services of experienced men are again in demand the number is reduced and wages have advanced accordingly.

While opinions conflict in some degree as to the state of the local lumber markets, it is agreed that prices have suffered no change with the exception mentioned in the last letter of hardwood. Ash and basswood have gained additional favor and prices have advanced a degree.

Although some of the dealers complain of vacation slackness, officials of both the Canadian Pacific and Canada Atlantic Railways report business good, the movement of lumber, lath and shingles from all mill points being large. The New York market is drawing heavily on the mills of the Ottawa district, and almost the entire output of lath is finding its way to points in Pennsylvania and Ohio. The prospects for the fall business are good.

Over $300,000 was involved in a recent deal whereby the W.C. Edwards Company purchased limits in the Temiscamingue country, previously owned by the Arthur Hill Company. The Edwards Company will conduct operations on the newly purchased limits this season. The limits are said to contain valuable timber, including large areas of pine, maple and spruce. The Edwards Company have an output for its hardwoods in its factory in Ottawa, where the finest lines of office furnishings are turned out.

As was predicted in a recent Ottawa letter in the CANADA LUMBERMAN, the Upper Ottawa Improvement Company has decided to extend its territory of operations from Des Joachims, above Pembroke, to the head of Lake Temiscamingue.

Heretofore this work has been done exclusively by the line of steamers owned and operated by Alexander Lumsden, ex. M.P.P., and run in connection with the Upper Ottawa Company's boats. If the latter concern cannot secure control of the Lumsden line, it will purchase and operate boats on a new line. It was at the request of the lumbermen that the company decided to extend its operations. Hereafter the work of handling the logs and supplies will be conducted with greater expediency.

Ald. Chas. D. Amour, of Hull, recently secured a large contract of supplying timber for use as "piling" in the Montreal harbor improvement work. He has disposed of over 6,000 telephone and telegraph poles this season. His latest sale was made to the Sydney, C.B., Electric Company, to whom he sold 1,500 poles.

OTTAWA, August 23rd, 1902.

DOORS AND MOULDINGS.

A large buyer of Canadian white pine doors and mouldings is open to contract with a mill for their entire output of No. 3 and 4 qualities of doors and all their mouldings during 1902. Write in first instance to "Empire," CANADA LUMBERMAN.

BRITISH COLUMBIA LETTER.

(Correspondence of the CANADA LUMBERMAN.)

During the past six months a number of American lumbermen have had their cruisers in the unoccupied timber lands of British Columbia, presumably for the purpose of securing limits to supply the mills which they contemplated building on this side of the line or to provide a supply for their mills in Washington should the Provincial Government revoke the act prohibiting the exportation of logs from British Columbia. Although these cruisers found considerable areas of timber lands accessible to the water, very few limits were taken up or purchased, as there was no likelihood of the act above spoken of being revoked, and the mills now in operation in British Columbia are more than sufficient to supply the Canadian market. If new mills were built their product would for the most part have to find a market in the United States, and the tariff, now almost prohibitory, might in the future be raised and the mills would then be thrown out of business. If British Columbia manufacturers had free entry into the United States markets it is safe to venture the assertion that the number of mills in operation here would be quadrupled within two years, and plenty of accessible cedar would be found to supply them for many years.

By "accessible cedar" is meant that now adjacent to salt water and which can be put in the water under the present system of logging and the prices prevailing for logs. Under present prices which mill men are able to pay for logs, the latter must be so near the water that donkey engines and horses are sufficient plant to put them in at a profit. As prices advance railroads will be added to the plant and large areas of timber inaccessible under present conditions will become accessible. A large portion, in fact the greater portion of the best timber areas now accessible to the water, is held by the large mill companies here, and although there is a large amount of timber lands not taken up, they are individually of small area and scattered.

The statement recently published that American lumbermen were unable to find any quantity of accessible cedar in British Columbia is largely incorrect. The real

cause of their not erecting mills here was a lack of market for the Canadian product. It is true that at present Canadian mills cannot supply the immediate demand for shingles in Ontario and Manitoba, but they were unprepared for such a large demand and consequently had little stock on hand when the rush came, and many of them had made provision for a supply of cedar timber sufficient to run ten hours per day only. The mills here will likely stock heavily during the winter, and it is not probable that there will be a scarcity next year. If the crops had been a failure in the North-west Territories and Manitoba, it is doubtful if the mills now in operation would have had sufficient orders to keep them running more than ten hours per day.

The fishing season has almost closed, and labor will be more plentiful and at reduced prices for Oriental labor. Prices of lumber are firm and likely to advance still further within the next few weeks. The demand for logs is good, and prices high for this province, with no likelihood of weakening, owing to the increased cost of putting them in the water. Foreign shipments are brisk at fair prices.

VANCOUVER, August 20th, 1902.

GILMOUR & COMPANY, LIMITED
TRENTON, CANADA

TIMBER STATEMENT.

Following is a comparative statement for three years of the timber, etc., measured and culled at the port of Quebec up to 26th August, 1902, as reported by the Supervisor of Cullers:

	Cu. ft. 1900	Cu. ft. 1901	Cu. ft. 1902
Waney white pine	1,366,183	953,431	1,519,699
White pine	565,666	394,847	297,570
Red pine	60,796	06,435	59,947
Oak	429,302	371,305	505,742
Elm	586,031	828,137	527,884
Ash	81,227	127,565	68,438
Basswood	241	464	....
Butternut	142	850	....
Tamarac	71	22	....
Birch and Maple	392,149	298,193	9,410

THE BOSTON MARKET.

The demand for spruce lumber at Boston shows considerable improvement, with more inquiry. Prices are well sustained to firmer: Ten and 12-inch dimensions, $20 to $21; 9-inch and under, $18.50 to $19; 10 and 12 inch, random lengths, 10 feet and up, $20 to $20.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $18 to $18.50; all other randoms, 9-inch and under, 10 feet and up, $16.50 to $18; 5-inch and up, merchantable boards, $17; matched boards, $18 to $20; out spruce boards, $13 to $14; bundle furring, $17.

Hemlock lumber is steady, with offerings small: Boards, 12, 14 and 16 feet stock, $15 to $15.50 for good eastern; random eastern, $14 to $14.50; Pennsylvania, No. 1, $16 to $17.50; No. 2, $15 to $15.50.

White pine continues very firm, with higher quotations the rule: Uppers, 1 to 2 in. $82.50 to $85; 2½ to 3 in. $87 to $88; 4-in. $90; selects, 1 in. $68; 1¼ to 1¾ in. $70; 2 in. $72; 2½ to 3 in. $80; 4 in. $82; fine common, 1-in. $62 to $63; 1¼ to 1½ in. $65; 2-in. $67.50; 2½ and 3 in. $72.50; 4-in. $82.50; barn boards, $23 to $33; coffin boards, $28 to $32.

Hardwood lumber is in steady request and unchanged: Quartered oak, $64 to $66; plain oak, $41 to $45; common and rejects, $20 to $25; whitewood, $42 to $43; sap and common, $30 to $35; brown ash, $41 to $44; white ash, $43 to $46; maple, $28 to $30; end-dried white maple, $38 to $42; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

Shingles are firm and unchanged: Extra cedar, $3.50 to $3.60; clear, $3 to $3.10; second clear, $2.50; extra No. 1, $1.90 to $2; British Columbia red cedar, 16-inch, five butts to 2 inches, $2.75 to $3.80; 18-inch, $4.25 to $4.50.

Clapboards are scarce and high: Clear, $38 to $40; second clear, $35 to $37; extra No. 1, $25 to $30.

Laths are firmer: One and five eighths inch, $3.10 to $3.15; 1½ inch $2.95 to $3.00.

The Nipissing Telephone Company desire to purchase a quantity of cedar poles.

THE NEWS

—McMillan Bros. are building a saw mill adjacent to Fort Francis, Ont.

—C. L. Vicary has purchased a new engine for his mill at Port Perry, Ont.

—J. W. Hughes has purchased the lumber business of D. E. Fraser at Methven, Man.

—James Yorke, of Chesterville, will start a sash and door factory at Thornloe, in New Ontario.

—G. H. Knowlimg, lumber dealer, Frobyshire, N.W.T., has sold out to Riddell & Company.

—J. H. Marshall is offering for sale his planing mill and sash and door factory at North Bay, Ont.

—The new saw mill of the Firstbrook Box Company at Penetanguishene, Ont., has been completed.

—F. H. Ringwood has purchased the retail lumber business of Ringwood & Wilson, Lenore, Manitoba.

—M. Brennan & Sons, of Hamilton, Ont., have not yet decided to rebuild their planing mill, destroyed by fire recently.

—Cushing Bros. have recently made extensive improvements to their sash and door factory at Edmonton, N.W.T.

—The new electric light plant in Moore's saw mill at Pleasant Point, near St. John, N.B., was put into operation last month.

—The Cleveland-Sarnia Saw Mills Company, of Sarnia, Ont., recently completed their mill No. 2 for sawing long timber.

—The Hazelmere Mills Company, Limited, has been incorporated, with head office at Blaine, Wash., and branch office at Hazelmere, B.C.

—The Read Lumber Company, which was recently organized in Ottawa, with a capital of $500,000, will operate in the state of California.

—Gibbs & Liscum, sash and door manufacturers, Winnipeg, Man., have dissolved partnership, and the business will be continued by C. Liscum.

—The dissolution is announced of Smith & McDonald, sawmillers, Langley Prairie, B.C. The business will be continued by William McDonald.

—Tne Shuswap Shingle and Lumber Company, of Sicamouse, B.C., has been incorporated, with a capital of $25,000, to take over the lumber business of J. C. Shields.

—While engaged in oiling some machinery in the Peter saw mill at Parry Sound, Ont., Colin McDonald, a lad of sixteen years, was caught by a shaft and drawn into the machinery, receiving such injuries as to cause death.

—W. Cruse, of the firm of Ritchie, Cruse & Company, sawmillers, Emo., Ont., recently had his left hand caught in the knives of a planer and badly mangled.

—The Savanne Lumber Company, of Savanne, Ont., have just installed a new engine in their planing mill, purchased from the Arbuthnot Machinery Company, of Winnipeg.

—The saw mill of the Georgian Bay Lumber Company at Waubaushene, Ont., was damaged by fire recently to the extent of $5,000. A fire engine from Midland extinguished the flames.

—F. McGibbon & Sons, of Sarnia, Ont., are making improvements to their mill. They have installed a new planer and matcher, purchased from the Goldie & McCulloch Company, of Galt.

—A. Haslam, of Nanaimo, B C., recently suffered the loss of one scow and the lumber carried by two scows while on the way from Nanaimo to Vancouver. The scows were in tow of his tug, the Alert.

—The Palmerston Woodenware Company, of Saginaw, Mich., are large users of pine and basswood. They will probably make purchases in Ontario next year, as they are now investigating this market.

—The Lotbiniere Lumber Company was organized recently, to operate a lumber business and the Lotbiniere and Megantic Railway. J. A. Begin, M.P., of Windsor Mills, is secretary-treasurer of the company.

—The Gilmour & Hughson Lumber Company deny the report that they have disposed of their water power at Chelsea. There nave been several proposals for the acquirement of the power, but so far no sale has resulted.

—M. Hyatt, of Revelstoke, B.C., has recently purchased a steam logger. He is about to take out 3,000,000 feet of logs on the Canoe river, which will be manufactured by the Revelstoke Lumber Company's mill at Big Eddy.

—The Harrison River Mills, Timber & Trading Company, of Harrison River, B.C., have applied to the Chief Commissioner of Lands and Works for permission to make improvements on Chehalis Creek to facilitate the floating of logs.

—A syndicate has been formed to erect a saw mill at Slocan, B.C. There is a timber limit in the vicinity containing about 20,000,000 feet. It is owned by local people, principal among whom is Mayor York, and it is proposed to put the timber in the syndicate as their share of the capital.

—Thomas McCallum, foreman of one of the lumber camps of Vigars & Company, Port Arthur, Ont., holds the record for the longest sojourn among the pines, having put in two years at the camps without coming into civilization. At present he is on a visit to his old home in New Brunswick.

—Incorporation has been granted to the Canadian Wood Specialty Company, Limited, with a capital of $500,000. The head office will be in Toronto and the factory at Bracebridge, Ont. The promoters include J. D. Shier and Angus McLeod, of Bracebridge, and George McCormick, of Orillia.

—The directors of the Upper Ottawa Improvement Company vave decided to extend the territory of their operations from Des Joachims up to the head of Lake Temiscaming. The towing of rafts in this additional territory has heretofore been done by a line of steamers owned by Alexander Lumsden, ex-M.P.

—It is practically decided that several schooners will be built in one of the ports of British Columbia, most likely Vancouver, for the carrying of lumber. Not only will these vessels require a considerable amount of lumber for their construction, but they will be a valuable addition to the lumber industry in facilitating shipments.

—British Columbia lumbermen have recently suffered much inconvenience and loss owing to workmen not putting in an appearance after having had money advanced to them. One of these loggers was recently arrested at the instance of W. L. Tait, of Vancouver, and ordered by the court to refund the money or serve a term in jail.

—J. A. Ansley, of Thessalon, Ont., has constructed a machine for giving lumber a quarter turn after leaving the trimmers for the sorting table. The apparatus was tried this spring in a mill at Spragge and said to have worked admirably. By it the work of handling the lumber is greatly reduced and the expense of labor is lessened about one-half.

—The old Dickson mill at Peterborough, Ont., was demolished last month, and on the site is to be erected large buildings for the American Cereal Company. This mill was for years a centre of activity, especially in the days when Peterborough was prominent in the lumber trade. It was regarded as one of the best mills in the country and held the record for a large cut.

—Within a few weeks the Victoria Lumber & Manufacturing Company, of Chemainus, B.C., will have completed the railroad between their logging camp and their saw mill. The company are making extensive improvements, including the erection of two new dry kilns, with a capacity of 50,000 feet of lumber per day, and a shingle mill. It is the intention of the company to enter the Manitoba and eastern trade.

—J. B. Giroux, of Lefevbre, Ont., was recently arrested in Ottawa charged with defacing, concealing and stealing saw logs For years saw logs have been stolen from the Hawkesbury Lumber Company, Gilmour & Comany and other lumber firms. Joseph Belanger, owner of a saw mill at Lefevbre, was also arrested in connection with the charge, but was released on his own recognizance to appear for trial. He is alleged to have shared the profits of the thefts and to have sawn the stolen logs in his mill.

To Purchasing Agents:

Corner 22nd and Centre Avenue,

GENTLEMEN: CHICAGO, October 12th, 1901.

Preparatory to increasing our manufacturing interests at Vicksburg, Miss., we have decided to close out and wind up a number of our scattered yards in Mississippi and Arkansas. The stock consists of several million feet of all kinds of Hardwood Lumber, Yellow Pine and Cypress, well seasoned and in good condition for immediate use. We propose to put a price on the above named material that will move it, and make a grade that will be an inducement to the purchaser.

Owing to the rapid wholesale manner in which we move and handle lumber we do not consider it practicable to issue a stock sheet or make standing quotations, for which reason we solicit your inquiries for any material that you are in the market to buy or will use in the future, and if you will take the time to furnish us the above information, we will make you some interesting quotations.

Respectfully yours,

GEO. T. HOUSTON & CO.

Lumber and Mining Supplies

Our Specialty

Our particular business is the supplying of the Lumber and Mining Trade with anything and everything they require.

Ask for our Price List on your requirements, and we will be pleased to quote you. We will merit your trade.

THE T. LONG & BRO. CO., Limited, Collingwood, Ontario

WOOD PULP DEPARTMENT

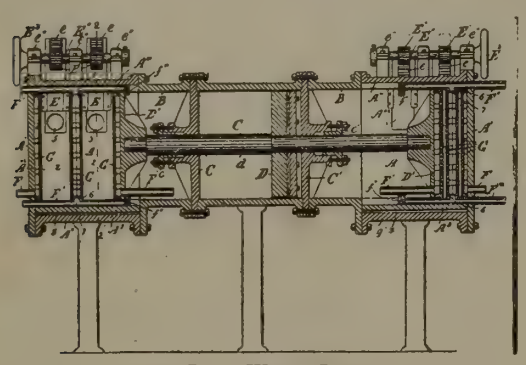
NEW WOOD PULP PRESS.

Mr. Joseph Stuart Hughes, of New Germany, Nova Scotia, has been granted a patent for a wood pulp press, as shown in the accompanying illustration. The claim is as follows :

The object of this invention is a machine having confined spaces into which the fluid pulp can be run intermittently and the water and air pressed out automatically, so as to leave a solid sheet of pulp in each space, a machine that can be handled with ease and facility and will do the work rapidly and with as little hand-labour as possible.

With this object in view the improved machine is made double-ended and double-acting, the pulp is forced under pressure, special facilities are provided for the escape of water and air, and special facilities for loosening the pressed sheets in the press after pressing prior to their removal.

The machine operates as follows : Assuming the



NEW PULP WOOD PRESS.

chamber at the left hand of figure 1 to be empty, the inner bottom A^3 lifted up tight, the door A^4 closed, the nozzle A^5 connected to the delivery pipes of a force pump supplying the fluid pulp, the drain pipes, F, F^1, F^{11}, connected with a suction-pipe, and the valves E open, as shown, the spaces 2 are being filled with the fluid pump under pressure. Immediately upon the entrance of the latter, and owing to the pressure on one side and the suction within the strainers on the other, water and air commence to be abstracted from it at once. When the spaces 2 are full of pulp, the valves E are closed by turning the wheel E^3. Pressure is allowed to act on the averted face of the piston D, and it moves, pushing the plunger D^1 in the chamber now under consideration toward the head. The pressure thus exerted upon the pulp within the spaces 2 causes the water and air therein to pass through the strainer sheets G^{11} and perforated plates G into the cavities of the strainer, thence through the drain pipes F, F^1 and F^{11}, until the piston D and the plunger D^1 have gone as far as the solid pulp remaining between the strainers will allow, and thus have arrived at the end of their stroke, and all water bas been abstracted from the pulp that is capable of being expelled by pressure. During the movement of the plunger, with its strainer, the central strainers, with its drainage pipes F^{11}, have slid along the chamber until the strainers, with the sheets of pulp between them, have been pushed against the head A^1 and have finally arrived in the position shown on the right hand of Figure 1. While this was taking place the chamber on the right hand gradually assumed the condition shown in the other chamber, the plunger D^1 making part of its return stroke and then engaging the lugs f^{11} of the drain pipes F^{11} and drawing them along, together with the central strainer. The door of this chamber having been closed, the valves E opened, and the spaces filled with pulp, the piston D and plunger D^1 are caused to commence the stroke toward the right, restoring the left-hand chamber again to the condition shown. In the meantime the door A^4 on the left was opened, the hinged bottom dropped, the strainers and sheets eased, and the pressed sheets removed. The same operation is then repeated. While pressing is going on in one chamber the other is opened, the hinged bottom dropped, the pressed sheets removed, closed again, the valves opened, and the chamber refilled.

THE OUIATCHOUAN PULP COMPANY.

The new pulp mill of the Ouiatchouan Pulp Company at Ouiatchouan, Lake St. John region, Quebec, was put into operation for the first time on August 17th. Upwards of three hundred persons from Quebec, Roberval, Chicoutimi and other points were present to witness the event. Mr. Etienne Paradias, of Quebec, is president of the company, and Mr. J. R. Lavery, secretary. The company is capitalized at $150,000. The initial output will be about 50 tons of wood pulp per day, although no doubt this quantity will be increased later.

The mill, which is situated at the foot of the famous Ouiatchouan Falls, consists of one main building about 200x100 feet, and others which contain the barkers, heating apparatus, etc. Among the machines are six grinders and eight wet machines, and all are of the highest grade and the most modern type. The power is derived from a dam on the Ouiatchouan river, situated some 600 to 700 feet from the falls. From a short distance above the top of the cataract to the bottom stretches a steel flume 475 feet long and seven feet in diameter. Its weight is 200,000 lbs., or about 100 tons, and the railroad has been engaged in hauling this and other materials for the mill for about a year. From the top of this flume to the dam runs a canal, with walls five feet in thickness, its diameter being 15x15 feet and its length from 500 to 600 feet. Inside it is a pipe, fed by its water, down which the pulp wood will be carried to the mill, for the company has 150 square miles of pulp wood limits in the vicinity of Lake Bouchette and Lac des Commissaires. This supply, it is calculated, should last for 100 years.

PULP MAKING IN JAPAN.

A correspondent of the Paper Trade Journal recently visited Nagasaki and other important seaport towns of Japan, and relates his impressions of the progress made in pulp manufacture as follows :

"As is well known to the trade, the Japanese have had access to the proper wood fibres for making pulp for many years, but for lack of proper machinery have failed to accomplish very much. Recently, however, both the Chinese and the Japanese manufacturers have adopted American and other patterns of pulp making apparatus, and have accomplished considerable. In Nagaski I found that there were several concerns representing the pulp making interests of the country. Not only are the poplar and other woods of the Empire used for this work, but there are processes of grinding cotton, linen, woolen, silk and other fibres of rags into a combination for boiling and reducing to pulp form. The logs are cut by the coolies and hauled to the mills. Spruce logs are brought in and the bark removed. I saw no effectual barking machines in use, although there were some of a home made pattern, fitted with revolving radial knives. These knives were not true or well sharpened in most cases, and the work progressed slowly and unsatisfactorily. The Japanese have ingeniously arranged stones for grinding the spruce or other woods. In some places American devices have been purchased for this work. The home made pattern is constructed on the same principle, but is smaller and less effective.

"Sulphite pulp is also manufactured. The timber is cut into suitably sized pieces, and the chips, after a careful sorting, are deposited in digesters, cylindrical in shape, and not at all like those in use in American mills.

"Then there is the cleaning operation, which is done much as in America, and by which foreign particles are removed. Chloride of lime is used in considerable quantities for bleaching. Screening is done on a novel plan. Compressed air or steam forcing devices are not used. In one place they had a sort of a spiral screw-press device, and the pulp was placed beneath the platen in a cylinder, the bottom of the cylinder being fitted with perforated portions through which the pulp was forced by screwing the platen down on the mass. The water in the pulp is evaporated as a rule, although in some places the workmen squeeze the moisture out by passing the pulp through the ordinary cylinders. The pressing into sheets is effected by means of steel rollers.

A large consignment of wood pulp was recently shipped from Canada to Appleton, Wis.

PULP NOTES.

The Canada Paper Company, of Windsor Mills, Que., have placed an order with the Pusey & Jones Company, of Wilmington, Del., for a 156-inch Fourdrinier paper machine.

The Price-Porritt Pulp & Paper Company has secured a Quebec charter, with a capital of $250,000. The principal place of business will be Rimouski, Que. Price Bros. and O. A. Porritt, of Quebec, are the promoters.

J. Barber, who is interested in the Nepigon Pulp & Paper Company, recently returned from Nepigon, and states that the site is being cleared for the proposed mills. Three thousand horse-power will be developed at first.

The North Shore Power, Railway & Navigation Company are making rapid progress with the construction of their works at Seven Islands, Que. The Marguerite Falls are being harnessed and a railway from Point Moir to the site of proposed pulp mill is under construction, also a wharf 1,500 feet wide. Cold and wet weather has delayed the work somewhat.

It has been rumored that the International Paper Company were about to build large pulp and paper mills at Three Rivers, Que., to utilize the large tracts of timber which they possess on the St. Maurice river. The report, however, is denied by President H. J. Chisholm.

It is understood that Minneapolis capitalists, including E. W. Backus, lumber operator, F. H. Nutter, civil engineer, and Hon. C. J. Rockwood, have made a proposition to the Ontario Government to establish large pulp and paper mills at Fort Frances, Ont. The erection of a saw-mill is also spoken of.

Mr. M. F. Mooney, manager of the St. John Sulphite Fibre Company, St. John, N.B., recently returned from a visit to England, where he met Captain Partington. The latter would not accept Mr. Mooney's resignation as manager of the Mispec mills, so the latter promised to retain the position at least for the present.

Lord Strathcona and Mount Royal, Canadian High Commissioner in London, recently received a deputation of representatives of firms engaged in the manufacture of paper and wood pulp making machinery, who asked the assistance of the Canadian government in removing the prejudice which exists in Canada in favor of American as against British machinery of this class. The deputation asked that Canada suspend for three years the present duty on British machinery. Lord Strathcona promised to employ his utmost efforts in favor of the British article.

Reference was made in last issue to the successful operations of the ground wood pulp mill of the Belgo-Canadian Pulp Company at Shawinigan Falls, Que. It is since learned that the Waterous Company, of Brantford, Ont., supplied this company with two Butterfield cutting-off saws, twelve 52-inch barkers, two splitters, pulp wood carrier for bringing the pulp wood into the mill, and storage conveyor something over one thousand feet long. For the pulp mill they supplied twenty-four 16-inch grinders, thirteen 72-inch wet machines, with rubber couch rolls, and twenty-six ten-plate screens, all made after the patterns of the celebrated machines of the Friction Pulley & Machine Company, of Sandy Hill, N.Y., whose machinery the Waterous Company build in Canada.

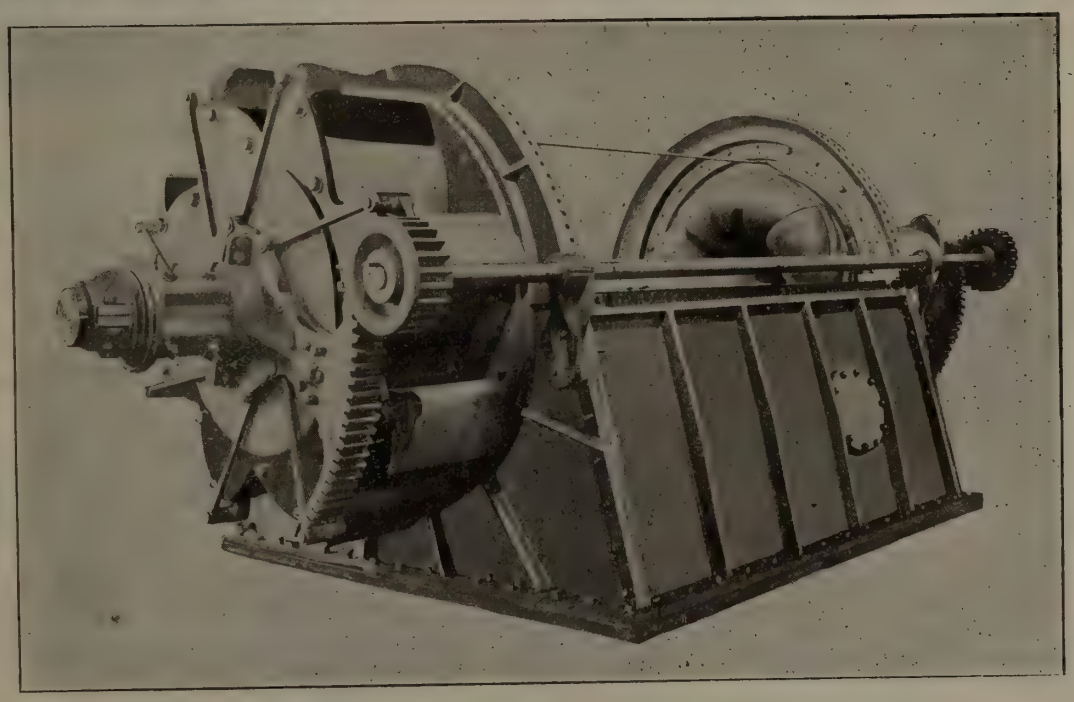
OPEN FLUME TURBINE PLANTS

For use under moderate heads where local conditions permit its adoption, there is probably no more satisfactory setting for horizontal wheels in pairs than the draft chest with central discharge, placed in an open flume.

The first cost is moderate.

The flow of water is unobstructed and ample, and as a result speed regulation is easy.



Pair of 35 Inch Wheels, Mounted on Draft Chest with Top Removed.

Direct connection to Pulp Grinders or other machinery may be arranged with facility.

Wheels are readily removed and replaced.

We have several styles of cases for use in open flumes, either steel plate or cast iron construction as may be required, or cast iron sides with steel plate top as shown in the engraving.

We are now engaged in building a 10,000 H.P. Wheel Plant, each pair of wheels being of the general type shown above, arranged for direct connection to Wood Pulp Grinders. Send us particulars for estimate, or write for catalogue and information.

LEGAL.

SOUTHAMPTON LUMBER CO. v. AUSTIN.—An action in the High Court at Toronto. Judgment in action to recover balance due on a contract for the supply of cedar railway ties and 5 to 6 inch face pole cedar ties, f. o. b. at Pine Tree Harbor, and also 15,000 unburnt posts and pavements. Held, that the defendant had not at any time inspected,accepted or received the ties, nor was there any selection or appropriation of them by him, nor were they at any time unconditionally appropriated to the contract either by plaintiffs with defendant's assent or by defendants with plaintiffs' assent. The contract is for the sale of unascertained or future goods by description, an executory contract, and the rule in such cases is that the property does not pass until goods in a state in which the buyer is bound to accept them are unconditionally appropriated to the contract either by the seller with the assent of the buyer or by the latter with the assent of the former; Chalmes 4th ed., p. 43, Blackburn 2nd ed., p. 128; Heilbutt v. Hickson, L. R. 7 C. P., at p. 449; Wilson v. Shaver, 3 O.L.R., at pp. 114-5. The property in the ties never passed. The plaintiffs were always in possession. As to the claim for the posts, however, the plaintiffs should recover. After the posts had been got out the defendant requested the plaintiffs to peel them and agreed to pay one cent per post. The plaintiffs peeled 10,000 and the defendant paid $200 on account, and on these facts there was a plain acceptance and waiver of inspection.

PERSONAL.

The death is announced of Mr. T. B. Folliott, of the firm of Folliott & McMillan, planing mill owners, Sandon, B.C.

Mr. E. Stewart, Dominion Superintendent of Forestry, has recently been on a trip through Manitoba and the North-West Territories.

Mr. O. G. Anderson, formerly head of the Anderson Furniture Company, of Woodstock, Ont., is about to leave Canada to become a director and general manager of the Angus Furniture Company, of London and Glasgow, one of the oldest established companies in England.

We are called upon to record the death,on July 24th, of Mr. Francis D. Mott, vice-president of Denny, Mott & Dickson, Limited, timber merchants, London, England. The late Mr. Mott was for about twenty-five years a partner in the firm of Denny, Mott & Dickson, which a short time ago was changed to a limited liability company.

TRADE NOTES.

The Brandon Machine Works Company, of Brandon, Man., has applied for authority to increase its capital from $40,000 to $125,000.

Alexander Dunbar & Sons, of Woodstock, N. B., have shipped about 50 Dunbar shingle machines this year, some of them going to the United States.

The plant of the Meaford Manufacturing Company, of Meaford, Ont., is being improved by the installation of a new two-room "Standard" moist air dry kiln. After proper investigation of the merits of the best known lumber drying systems, the Meaford Company decided to install the "Standard", owing to its simplicity of construction and ease of operation. The Standard Dry Kiln Company, of Indianapolis, Ind., appears to be steadily increasing the number of its kilns in this country.

Stroudsburg, Penna.

To Those Who Carry Insurance on Lumber

You are compelled to pay more for your insurance to-day than a year ago. This is particularly true in Canada where rates have been abnormally increased by Tarriff Association Companies. It is our business to insure nothing but lumber. We study the advantages offered by each risk submitted and accept only the best moral and physical hazards. Thus by carrying only selected risks we can offer lower rates. We are saving money for hundreds of lumber dealers. Why not let us take care of from $1,000 to $20,000 of your insurance?

For information apply direct to our home office,

LUMBER UNDERWRITERS, 66 Broadway, New York.

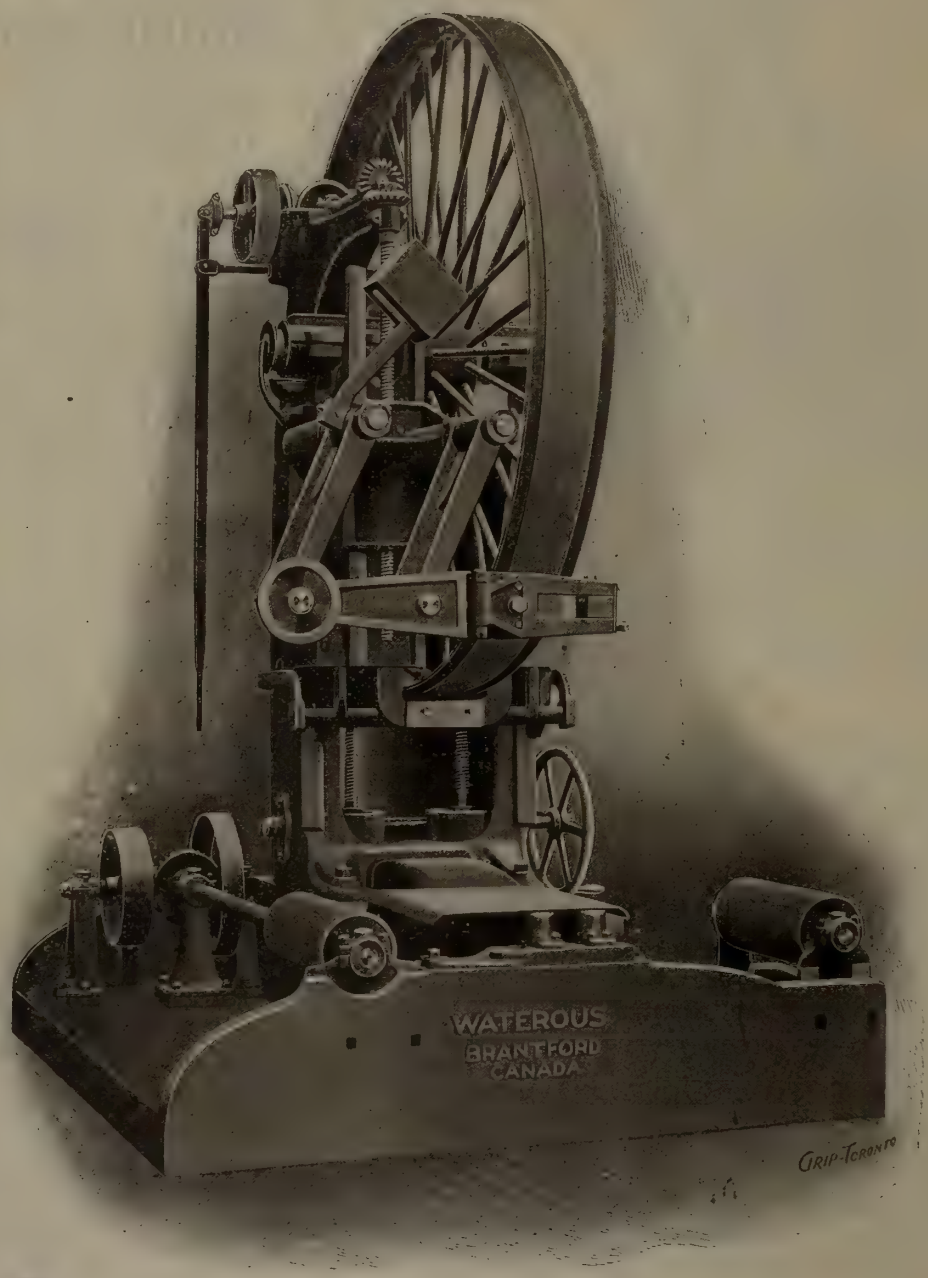
N. P. Macmullan & Co., Limited, 773 Craig Street, MONTREAL

YOU CANNOT AFFORD TO THROW MONEY AWAY.



Neither can you afford to let your competitor have an enormous advantage over you in a business way.

Each day that you neglect to put in an Allis Double Cutting Band Mill or a double cutting addition to your . llis Band Mill you are literally throwing money away. You are also letting your competitor get a serious business advantage over you.

WHY ?

1st. The Allis Double Cutting addition increases the output of your Allis mill from 30 to 40 per cent. without any increase in the cost of operation, thus increasing your profits fully one-third.

2nd. We are selling many Allis Double Bands. Your competitors are buying them and making one-third more profit from the same expense for labor as the owner of a single Allis Band Mill.

The answer is easy ; get an Allis Double Band It's cost is trival compared to its accomplishments. You can figure for yourself how long it will take an Allis to pay for itself.

Another pointer. Our Allis Steam Set will make an additional increase of 10% in the output of your mill. without increased expense for operation.

More about these money makers for the asking.

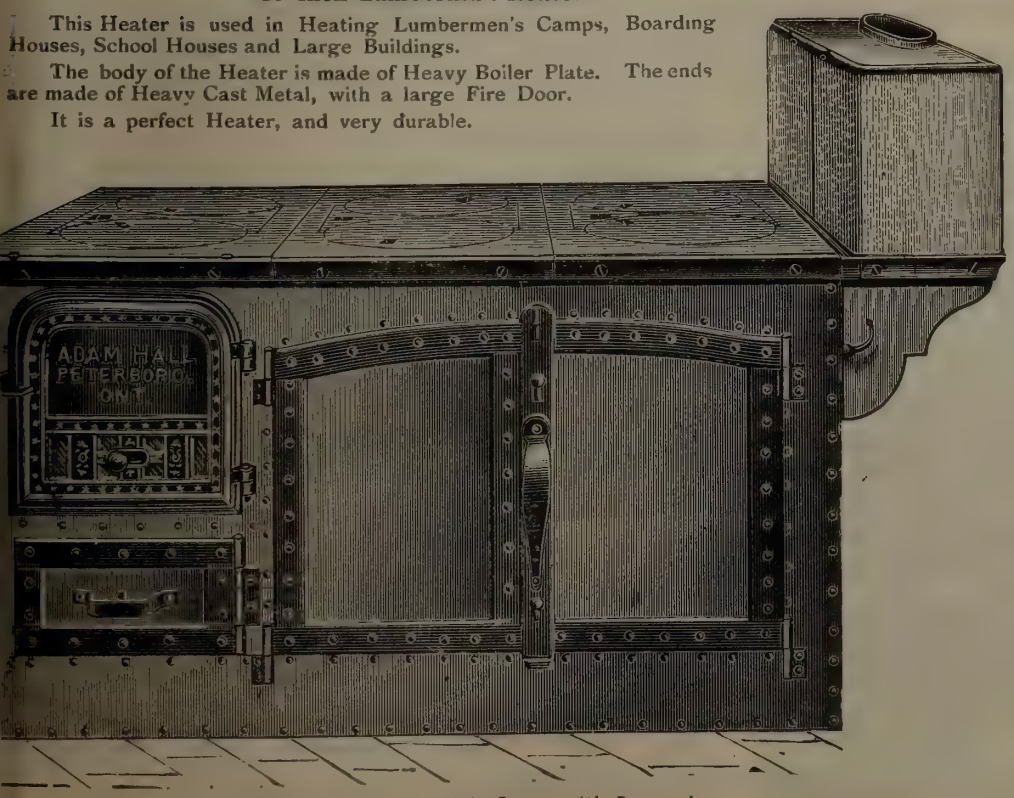
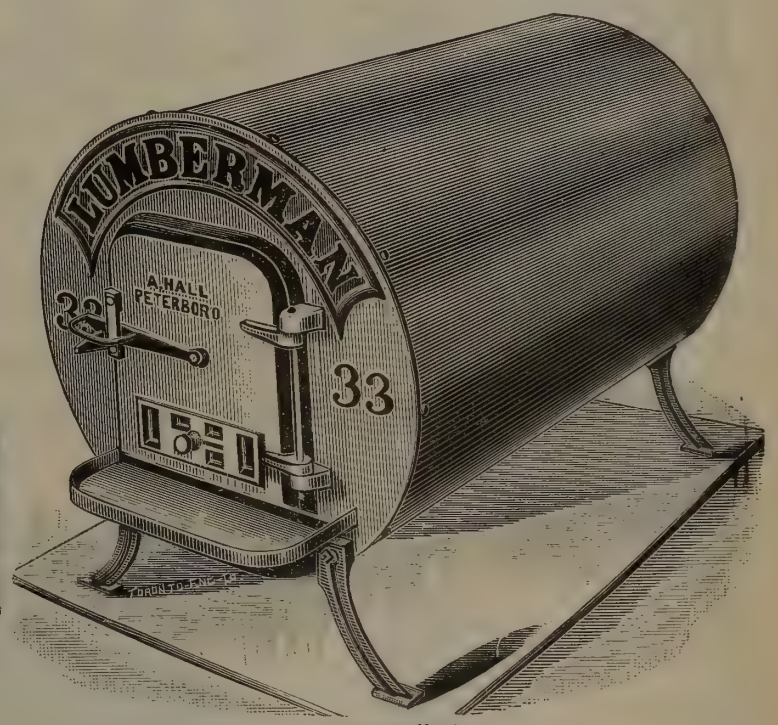
The body of the Heater is made of Heavy Boiler Plate. The ends are made of Heavy Cast Metal, with a large Fire Door.

It is a perfect Heater, and very durable.



Lumbermen's Six Pot Hole Range with Reservoir.



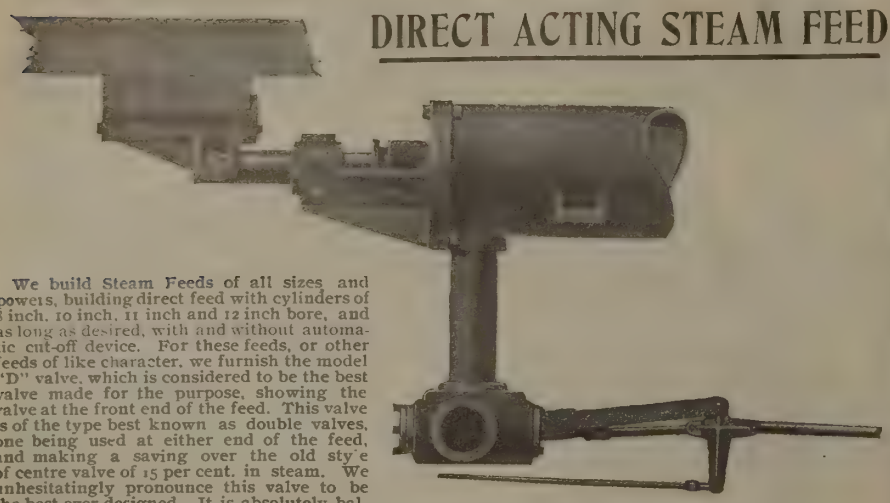
Lumberman Heater.

We have been manufacturing Steel Ranges and Heaters for Lumber Camps for the past Twenty-four Years, and have supplied the wants of nearly all the Lumbermen in Quebec, Ontario and Manitoba—they are unexcelled for Baking and Cooking, and are strong and durable.

This No. 10-25 Range with 25 Gallon Copper Reservoir is the one we sell the most of, owing to the convenience of having a supply of hot water at all times. Will cook for 50 to 60 men. Weighs 450 pounds.

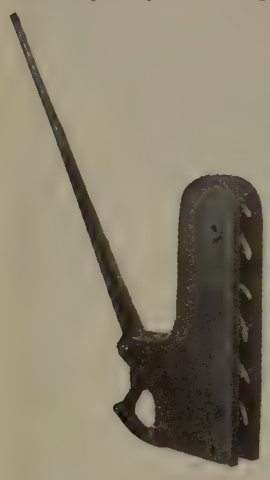
Write for Catalogue and Price List.

DIRECT ACTING STEAM FEED

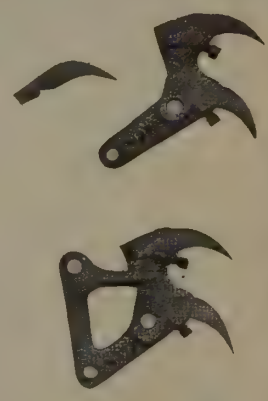


We build Steam Feeds of all sizes and powers, building direct feed with cylinders of 8 inch, 10 inch, 11 inch and 12 inch bore, and as long as desired, with and without automatic cut-off device. For these feeds, or other feeds of like character, we furnish the model "D" valve, which is considered to be the best valve made for the purpose, showing the valve at the front end of the feed. This valve is of the type best known as double valves, one being used at either end of the feed, and making a saving over the old style of centre valve of 15 per cent. in steam. We unhesitatingly pronounce this valve to be the best ever designed. It is absolutely balanced, does not stick or kick, has larger steam openings than any other valve made for corresponding sizes of pipe, is economical in the use of steam, and handles the largest and longest feeds, under any pressure, with pertect ease and accuracy. We have also designed a new style of stuffing box which is a great saving in packing, and has an outer support, and is fitted with an oil well, filled with felt or waste which keeps the piston thoroughly lubricated.

Improved Double-Tooth or Boss Dogs



The accompanying cuts fully illustrate our Improved Double-Tooth Dogs with inserted teeth, making the teeth themselves of the finest tool steel. This allows them to be drawn to a slender point that will penetrate without crowding the log or board away from the carriage The teeth in case of bending or breaking can be replaced in a few moments, and without having to take the whole dog case apart — an operation requiring an hour or more.



These Double-Tooth Dogs are controlled by a wrought iron lever that can be bent to suit the operator, and this lever is held by a spring, positively in or out, so that there is no danger of the Dogs pushing out toward the saw. This method of holding the dogs has the merit of being permanent, the ordinary light pawls and connections commonly furnished for this purpose generally lasting but for a few days Our latest improved carriages are fitted with these dogs.

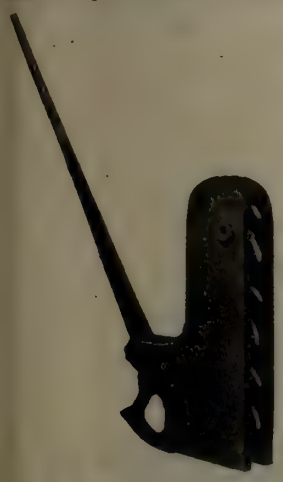
DIRECT ACTING STEAM FEED

We build Steam Feeds of all sizes and powers, building direct feed with cylinders of 8 inch, 10 inch, 11 inch and 12 inch bore, and as long as desired, with and without automatic cut-off device. For these feeds, or other feeds of like character, we furnish the model "D" valve, which is considered to be the best valve made for the purpose, showing the valve at the front end of the feed. This valve is of the type best known as double valves, one being used at either end of the feed, and making a saving over the old style of centre valve of 15 per cent. in steam. We unhesitatingly pronounce this valve to be the best ever designed. It is absolutely balanced, does not stick or kick, has larger steam openings than any other valve made for corresponding sizes of pipe, is economical in the use of steam, and handles the largest and longest feeds, under any pressure, with perfect ease and accuracy. We have also designed a new style of stuffing box which is a great saving in packing, and has an outer support, and is fitted with an oil well, filled with felt or waste which keeps the piston thoroughly lubricated.

Improved Double-Tooth or Boss Dogs



The accompanying cuts fully illustrate our Improved Double-Tooth Dogs with inserted teeth, making the teeth themselves of the finest tool steel. This allows them to be drawn to a slender point that will penetrate without crowding the log or board away from the carriage. The teeth in case of bending or breaking can be replaced in a few moments, and without having to take the whole dog case apart — an operation requiring an hour or more.

These Double-Tooth Dogs are controlled by a wrought iron lever that can be bent to suit the operator, and this lever is held by a spring, positively in or out, so that there is no danger of the Dogs pushing out toward the saw. This method of holding the dogs has the merit of being permanent, the ordinary light pawls and connections commonly furnished for this purpose generally lasting but for a few days. Our latest improved carriages are fitted with these dogs.

A SAW MILL ON THE NORTH SHORE.

One of the first important saw mills to be built on the north shore of Lake Huron is illustrated on this page. It was erected in the year 1883 by the Cook & Bros. Lumber Company and is located at Spragge, in the Algoma district. At the time of its erection it was considered second to none, while it has since been remodelled in keeping with the advance that has been made in saw mill appliances.

The annual product of the mill is about 23,000,000 feet of lumber and 5,000,000 lath, the annual capacity per day of ten hours being 140,000 feet. It is a steam power mill, having a battery of seven boilers. The equipment includes two band saws, a gang, two edgers, and two trimmers, as well as lath machines, and machinery for making pickets is now being installed, when it will be possible to utilize much of the waste product which is now disposed of by a burner.

The company have two yards, of a capacity of fifteen million feet of lumber. Each yard is equipped with high trams and cars and all facilities for handling lumber expeditiously. Most of the mill product is shipped by water, vessels being able to load very advantageously.

Around the mill are employed over one hundred men, not including boat loaders and shippers.

The Cook & Bros. Lumber Company own extensive timber limits on the Serpent, Spanish, Blind and Mississauga rivers, capable of supplying the raw material for the mill for at least fifteen years. The timber is almost exclusively red and white pine. Mr. Geo. W. Cook is president, and Mr. H. W. Welch secretary of the company. Mr. C. E. Smith is superintendent of the mill.

SAW MILL OF THE COOK & BROS. LUMBER COMPANY, SPRAGGE, ONT.

UTILIZING WASTE.

According to the advanced bulletin of the 12th United States Census on the utilization of waste and by-products, nearly all of what was considered waste products of lumber and timber can be turned to some good use, and some of the new products thus formed are of considerable value. Of this latter class may be mentioned sawdust, which was formerly considered an absolute waste material, and was allowed to float down stream or was thrown into a heap where it could be most conveniently disposed of. French cabinetmakers have found a way of preparing this material which gives it a value far above that of solid timber by a process that has been in vogue for at least twenty-five or thirty years, combining the use of the hydraulic press and the application of intense heat. By this process the particles of sawdust are formed into a solid mass capable of being molded into any shape and of receiving a brilliant polish, and possessing a durability and a beauty of appearance not found in ebony, rosewood, or mahogany. This product is known as "Bois durci." Artificial woodwork, therefore, seems to have a promising future. Alum, glue and sawdust, kneaded with boiling water into a dough, and pressed into molds when dried, is hard and capable of taking on a fine polish. Ornaments of great beauty can be made from it.

The production of acetic acid, wood naphtha and tar from sawdust is one of the latest enterprises in Norway. A factory has been started at Fredrikstad capable of distilling 10,000 tons of sawdust in a year. It also manufactures charcoal briquettes, which are exported to the Netherlands. The acids are chiefly placed on the German market, while the tar is mostly consumed at home. The factory is said to be the first of its kind erected in that country. According to an English patent of 1897, sawdust may be so prepared as to be non-inflammable, and then applied to jacketing of boilers and other purposes.

In the Journal of the Society of Chemical Industry for 1898 is described a series of experiments for obtaining alcohol from either coarse or fine sawdust, without affecting the yield. It was found that pine sawdust as compared with fir sawdust was superior as yielding a purer alcohol. It was also found that a high yield of sugar was obtained from birch sawdust, the yield of sugar being about 30.8 per cent. of the quantity of birch wood used. The quantity of alcohol obtained from 220 pounds of air-dried sawdust (20 per cent. water) was 7 to 8 quarts. The quality of the alcohol distilled from the fermented liquid was said to have been excellent, and the perliminary experiments indicated that the trifling impurities found in it could be readily removed.

A patent taken out in England in 1896 for utilizing certain waste products of wood describes a process of constructing or manufacturing a product resembling wood from a mixture of sawdust or wood refuse and certain quantities of gums, resins, or other suitable agglutinants, either in a dry state or dissolved, the compound being subjected to pressure at a temperature sufficiently high to soften or melt the gums or resins.

LUMBER INSPECTION BOOK.

Six two-cent Canadian stamps buys the Lumberman's Vest-Pocket Inspection Book, containing rules for the inspection of lumber in the leading markets of Canada and the United States. Every lumberman should have a copy. The C. H. Mortimer Publishing Company, of Toronto, Limited, Toronto, Canada.

MR. M. P. KINSELLA.

Mr. M. P. Kinsella, of Trenton, Ont., has been appointed travelling representative in Canada for the Skilling, Whitneys & Barnes Lumber Company, of Boston, Mass., and Ogdensburg, N.Y. Mr. Kinsella was born in Trenton, and as a boy entered the employ of the well known firm of Messrs. Gilmour & Company, Limited, of that town, remaining in their service for twenty-five years and until accepting his present position. He worked in many capacities connected with the lumber business, and gradually gained the confidence of his employers, and for the past ten years has been salesman and travelling representative for the products of their saw mill and sash and door factory.

During his term on the road Mr. Kinsella has become favorably known to the lumber trade of this country and is most popular. He is now thirty-eight years of age, just in the prime of life, of good physique and commanding appearance, and is known as a temperate and conscientious man. Always pleasant and possessed of considerable humor, he at once gains the respect of anyone he comes in contact with, which is shown by the feeling address and worthy presentation that was tendered him when severing his connection with Messrs. Gilmour & Company and their large staff of employers.

The Skillings, Whitneys & Barnes Lumber Company, with which Mr. Kinsella has connected himself, are among the largest buyers of white pine lumber in this country, with large stocks in the Ottawa Valley and Georgian Bay districts and at their Ogdensburg yards. With such a large connection, and a wide experience, we bespeak a bright future for Mr. Kinsella, and the CANADA LUMBERMAN wishes him every success.

The address presented to Mr. Kinsella by the members of the office staff of Gilmour & Company was as follows:

Esteemed Friend and Fellow Worker:

It is with a very great regret that we have learned of your intention to depart from our midst (wherein for so long you have enjoyed the utmost confidence and respect of all) to enfuse into other atmosphere the sunlight of the many good qualities of a genial, generous, whole-souled man. We appreciate the fact that, looking at the matter as you do, the course you are about to pursue is undoubtedly for the best, and for your personal welfare will be much more advantageous; but nevertheless we cannot help wishing that such a severance of good-fellowship, in labor and in recreation, had not taken place. In the whirl of mightier events we hope that you will not consign entirely to oblivion the memories of the lively little town, the circle of friends and co-workers, and the beautiful scenery, among and in which you have lived, and which you have enjoyed, for almost a lifetime.

As a slight token of the admiration with which you are regarded by us, and of the respect which we entertain for you, and as a trifling reminder of the many pleasant days we have spent together, and of the drummers' stories with which at times you were wont to regale us, we desire that you accept of this ring, and that in the wearing thereof you will occasionally bestow a fond remembrance upon the old firm that disciplined you for the battle of life and of business, and for the many fellow-employees who now look with such regret upon your departure from their midst.

Trenton, Canada, August 23rd, 1902.

The Columbia River Lumber Company, of Golden, B.C., are increasing the capacity of their saw mill and installing two boilers.

THE LUMBERING INDUSTRY OF THE UNITED STATES.

From the official statements of the Census Department covering the year 1900, some interesting data has been compiled regarding the lumbering industry of the United States. As the conditions existing in Canada and the United States are somewhat similar, the figures given are interesting.

The lumber industry was in 1900 the fourth among the great manufacturing industries of the United States. There were 33,035 establishments, with a total capacity of $611,611,524. The cost of materials used was $317,923,548, and the value of products $566,832,984.

Of the total product of the lumber industry, sawed lumber formed in value 81.2 per cent., or nearly five-sixths of all products. Shingles formed 3.9 per cent., cooperage materials 3.6 per cent., piles, telegraph poles, railway ties, charcoal, etc., 3.3 per cent., and all other products 8 per cent. Of the sawed lumber

MR. M. P. KINSELLA.

75.2 per cent. consisted of conifers and 24.8 per cent. of hardwoods. The cut of yellow pine was 27.8 per cent. of all lumber, white pine 21.5 per cent., hemlock 9.8 per cent., and spruce 4.2 per cent.

Wisconsin furnished 10 per cent. of the product of the country; Michigan, 9.6 per cent.; Minnesota, 7.10 per cent.; Pennsylvania, 7.3 per cent.; Washington, 5.3 per cent. These five states collectively furnished nearly two-fifths of all the lumber produced.

The average stumpage in the United States had a value of $2.18 per thousand. The figures differ widely in different parts of the country, owing to the different conditions of labor and the species of lumber. In the white pine region of the Great Lakes the average value of white pine stumpage was $3.30 per thousand feet, and the average value of saw logs $7.63, leaving $4.33 for logging operations. In the Southern pine states the average cost of stumpage was $1.20, while the average cost of saw-logs was $4.77, leaving $3.57 to represent logging operations. In Washington, where the timber consists mainly of fir, the stumpage is given as 80 cents per thousand and the value of saw logs $5.14, leaving $4.34 as the value of logging operations. This latter item is considerably larger in relation to the cost of stumpage and saw logs than in the Eastern States.

Eastern white pine had, on the whole, the highest stumpage value of any of the species, ranging between $3.50 and $4. Hemlock, which is becoming an important timber in the east, reached a stumpage value of from $2 to $3. The range for eastern spruce is given as $2 to $3, elm $3.30, ash $3.03, maple $2.66, basswood $1.50.

During the year there were produced 12,102,017,000 shingles, with a value of $18,869,705, or $1.56 per thousand. Shingles were made mainly from cedars, the various species furnishing not less than 52.6 per cent. of all the shingles made, which was more than three times as much as was made from any other wood. Next to cedar, white pine and cypress were most largely used for shingles. Hardwoods were little used, the quantity being less than 2 per cent. of the total production. Washington produced 35.8 per cent. of the total shingle product, followed by Michigan with 16 per cent.

THE CONTENTS OF LOGS.

Mr. Thomas Gibson, of Wroxeter, writes to the American Lumberman: "Do you publish anything showing a mathematical process for reducing the contents of saw logs to the extent of the defects that are visible before logs are sawn into lumber? These defects may be rot in the end, shakes, splinters, offsides, etc. Is a log scaler supposed to use his judgment as to the probable amount to be "culled," or has he to figure the amount mathematically?

The reply is as follows: Broadly speaking, a merchantable log is any log that will pay for transportation and manufacture and leave a profit to the mill man. There is no mathematical process or rule by which they can be measured. The scaler has nothing to do with the grade of logs, unless it be specially included in the agreement with him. He measures the log, allowing, as best he can, and as his own judgment would dictate, for defects which will lessen the quality or the product. That is to say, he states in his tally how much lumber the log will produce. As to the grade of lumber he does not concern himself, or as to the grade of the log. No two inspectors may agree on a given log and any selected log may turn out a product entirely different from that estimated by the scalers, but in a day's work the result will be practically correct, and two scalers, although they may not agree on any one log, would come out substantially the same in thei results.

A CONTEMPORARY'S OPINION.

Lack of space last month prevented us from extending our congratulations to our esteemed contemporary, the CANADA LUMBERMAN, Toronto, Ont., upon the excellent appearance of their July number, which was designed as a Western edition of their up-to-date paper. It contained 64 pages, the contents being of special interest to the lumber trade of Western Canada. In addition to descriptions and illustrations of many of the leading saw and shingle mills of the west, there appear nearly 100 portraits of members of the Western Retail Lumbermen's Association, the headquarters of which are at Winnipeg; also several articles bearing upon the conduct of a retail lumber yard.—National Cooper's Journal.

THE MANUFACTURE OF DOWELS.

The layman will scarcely think that dowels—the little round wooden pins used by the furniture and carriage trade and a few other industries—would require the output of several large factories; but such is the case. The demand for dowels runs into the millions. The modern finished dowel is a round hardwood pin, of various sizes of mathematical accuracy of diameter, with rounded or pointed ends, and is usually made with a series of parallel grooves to permit the escape of air and surplus glue in the joint made by its use.

For years dowels have been turned from square stock sawed out for the purpose. According to the American Lumberman, a new dowel-making institution recently put in operation resorts to a new process of making, which provides for the utilization of what would otherwise be waste material left in the woods after the logs are taken out or at best used for firewood.

Comparatively straight grained sections of bodies or branches of maple, birch and beech are sawed into

Sawing the Butts to Length.

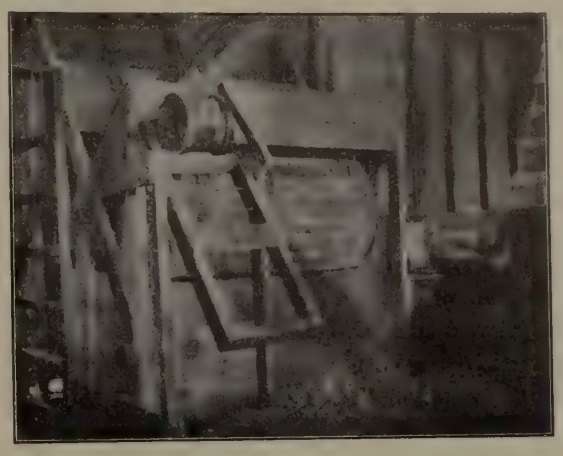
bolts about two feet in length in the woods, following the logging operations, and transported to the factory. The bolts are split to convenient sizes and cross-cut on an ordinary saw table to the length of dowels desired. A machine chopper then reduces the blocks to vertical strips, eliminating the defective and cross-grained wood. These strips are then fed to an automatic machine of recent invention, which chips off a section of sufficient size to form a dowel and drives the piece of wood through a hollow knife-edged die, at the astonishing rate of 6,000 pieces an hour. Thus the blank for the dowel is made.

These blanks are dumped from the barrels into which the machine drops them into trays, which are slid into a rack, carrying corresponding trays, and then are wheeled into the dry kiln, where they are thoroughly seasoned. The next process consists in grooving the

Grooving the Pins.

blanks, and this is accomplished by another ingenious little machine which works with wonder-speed and accuracy. The next and corresponding machine rounds the ends of the pins into perfect dowels. Lastly the dowels are dumped into a revolving tumbling box, where they are polished, and then are ready for shipment. Views are shown of some of the operations.

This new departure in dowel-making illustrates the fact that many economies in woods and saw mill waste can be accomplished if a little thought and experiment be brought to bear on the subject. In the case in point the addition of a modicum of low-priced labor to a mechanical outfit that cost but a few thousand dollars—probably not to exceed $3,500—has made a



Polishing the Dowels.

high-class commercial commodity out of material that would at best have produced only firewood.

THE HARDWOOD INDUSTRY.

The use of hardwood has increased enormously for building purposes in Canada during the past few years. In England the demand is constantly growing for Canadian hardwood products required to take the place of oak. The fact that there is a scarcity of hardwood in the United States and other countries is well known.

Some persons claim that in the near future the great bulk of our lumber will consist of hardwood, as the white pine is gradually disappearing. In the Muskoka district large quantities of hardwood have been left standing, owing to its being of too great specific gravity to float.

The Canadian Wood Manufacturing Company, Limited, has just been organized, with a capital of half a million dollars. Among those upon the Board are Messrs. R. S. Wood, Vice-President Imperial Loan Company, Angus McLeod, M.P., and Geo. McCormick, M.P., Dr. Beattie Nesbitt, M.P.P., President of the C. H. Hubbard Co., and J. D. Shier, Mayor of Bracebridge.

The company has been organized for the purpose of manufacturing hardwood flooring, blocks, veneers, broom handles, dowels and wooden novelties. The town of Bracebridge, which is situated in the heart of a large hardwood district, has voted a bonus of $20,000 without interest as an inducement to the company to establish its factory and mills at that place, and building operations are already well under way. Some of the stock is now being offered for sale by Messrs. J. H. Jewell & Co., 5 King street west, Toronto, who are the promoters of the company.

EMBARGO ON HEMLOCK.

Boston, Mass., Sept. 2, 1902.

Editor Canada Lumberman:

Dear Sir,—I notice in your September edition that under the heading "Embargo on Hemlock," you give the comparisons of shipments of hemlock bark.

I would say that the shipments of hemlock bark have decreased from the Province of Ontario very largely since the Ontario Government passed a law prohibiting the exportation of hemlock bark to the United States from Crown lands. As there are only very small quantities of land that are actually owned by farmers and lumbermen, very little can be exported.

The bark on Crown lands must all be sold to local tanners or left to decay. This embargo on hemlock bark was put on for the protection of sole leather tanners in that locality. If it should be removed there would be a market in New England for all the bark that might be produced.

Yours truly,

Frank A. Cutting.

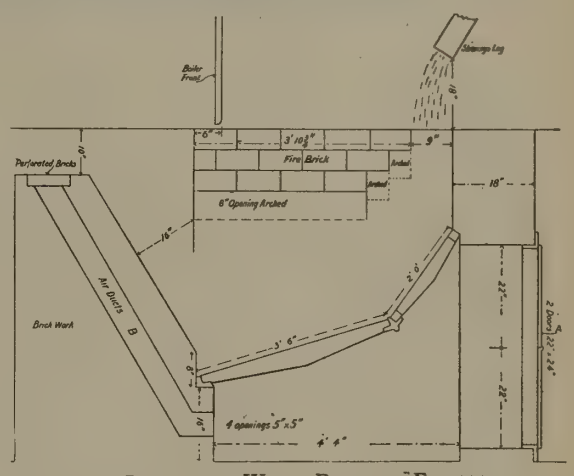
THE SMOKE NUISANCE.

Recent inquiries and replies regarding this subject that have appeared in these columns recall that there are several so-called "smoke consumers," which can no doubt be found by consulting a good engineering journal.

Two such systems have come under the observation of the writer, one of which was nothing more than a perforated pipe injecting live steam over the fire near the front of the firebox, and operated with a valve in the boiler room, being used only immediately after a fresh firing. The effect of the steam was to precipitate the soot and thus cause it to burn, instead of passing out of the chimney.

The other system consists of the peculiar manner of constructing the bridgewall and setting the grate-bars. It is particularly adapted to a wood-burning furnace. The enclosed sketch will explain the principle and the construction better than words can do. This system has some advantages not found in other styles of firing.

It will be noted that the floor of the boiler room is above the level of the grates. This permits of firing by dropping the fuel into the fire without the exertion of raising it, as is required in shoveling into an ordinary firebox. If the shavings exhaust is convenient, one or two legs may be dropped from the discharge pipe to about 18 inches to 2 feet above the floor of the boiler room, and the shavings may be dropped directly into the fire, giving an even heat as well as a saving of labor. The fire can not get up into the exhaust system, as there is no back suction, the only force being the attraction of gravity causing the shavings to drop, and it is never cut off, if the engine does shut



Smoke Consuming Wood Burning Furnace.

down. A closely-shutting valve for regulating the feed should be arranged up near the junction with the separator, so that when not required on the fire the shavings may be run into the vault.

The draft may be regulated by opening or closing the feed hole in the floor above, or by manipulating the draft doors under the floor, as shown. Note that the bridgewall is built with several flues, which admit air into the smoke chamber though the centre of this wall. The oxygen coming in direct contact with the dense, hot smoke, combines with the carbon in it, adding to the heat of the direct fire, at the same time purifying the smoke. Another advantage is the ease with which the grates may be gotten at, to be cleaned or repaired, or the ashes removed.—The Wood-worker.

A NEW LUMBERING CENTRE.

Midway between Shawville and Waltham, on the Pontiac line of the Canadian Pacific Railway, is located the new town of Davidson, established by the well known lumber firm of Davidson & Thackray, of Ottawa, and so named by the railway company. The new town, or village rather, has an ideal location at the junction of the Coulonge and Ottawa rivers and Coulonge lake.

Last season a dimension mill was erected, which has been in operation since May 1st and is shown on this page. It has the orthodox equipment, including trimmers, butters, steam feed, circular saw, double edgers, steam nigger and shingle machines. It is operated by steam power, and this season two dutch ovens were erected, permitting of the use of saw-dust as fuel, serving a two fold purpose, the disposal of the refuse and the reduction of the fuel bill. These ovens were erected at a cost of $1,000 apiece. Since the mill was started it has cut 3,500,000 feet of dimension timber and 2,500,000 feet of shingles. This summer a shingle mill was built and made ready for operations, and will be started shortly.

At the close of next season the company's two mills on the Quyon river, in Bristol township, near the Pontiac line of the Canadian Pacific Railway, will be closed down and all sawing concentrated at Davidson. For this purpose the erection of a double cutting band mill, with all other necessary machinery, is under contemplation. This mill will practically start in on the cutting where the Bristol township mills leave off.

A word as to the auxiliary work already completed at Davidson might not be amiss. The firm has erected the following buildings—substantial and commodious office, blacksmith shop, boarding houses, sleeping camp, detached five room cottages for the married men, railway station and stables. The station was erected by the railway company, and is an attractive looking building, as are the office, residences and other quarters, all finished in wood.

The Canadian Pacific Railway has laid nearly a mile of sidings through the yards, enabling the lumber company to load direct from the pile to the car. A haul of a mile had to be made at the Bristol township mills, entailing a considerable expense, which will be avoided at Davidson. Streets have been laid out and raised platforms erected. Last winter 650 cords of stone were placed in the piers in the river, and during the coming winter 700 cords will be secured. The object of the work being carried on in this direction is to increase the capacity of the log pond.

The company is conducting extensive operations on the limits and a large supply of logs is assured. Two camps have been established, each with 37 men and 16 teams. The company also has seven jobbers at work, each with a camp of about 15 men and five teams.

Altogether fully 200 men are employed at the mills and on the limits. When the new mill is completed next year, employment will be given to 60 more. Ald. James Davidson and ex.-Ald. Robert Davidson, of Ottawa, members of the firm, have ambitious plans for the new town of Davidson. It promises to become in a few years one of the most prosperous in the direction.

OFFICE ERECTED BY DAVIDSON & THACKRAY AT NEW TOWN OF DAVIDSON, QUE.

PARTIAL VIEW OF DIMENSION SAW MILL ERECTED BY DAVIDSON & THACKRAY AT NEW TOWN OF DAVIDSON, QUE.

HOOPS AND THEIR MANUFACTURE.

The great majority of hoops for slack barrels are made according to the sizes required by either sugar barrels or flour barrels. There are hoops made both longer and shorter than these, but these represent the bulk of the trade, and the others are generally made on individual specifications. The Slack Cooperage Stock Manufacturers' Association has outlined the following as specifications for the two classes of hoops most generally used :

Sugar barrel hoops shall be 6ft. 4in., 6ft. 6in. and 6ft. 9in. long, cut so as to be not less than 5/16 in. and 3/16 in. in thickness when finished and seasoned, and not less than 1⅜-in. wide when seasoned.

Flour barrel hoops shall be 5½ ft. and 6 ft. long, and shall measure, when seasoned, not less than 5/16-in. to 3/16-in. in thickness, and not less than 1⅜-in. wide.

There has been some effort to separate hoops into grades, for it is pretty generally recognized that there is a wide distinction in the quality of hoops, but no distinct classes have so far been pointed out, the only action by the association being to specify that No. 1 hoops shall be of good, sound timber, fully up to specifications, free from broken hoops in the coils and well finished.

TIMBER REQUIRED FOR HOOPS.

When you want to start a hoop factory, the first point is, obviously, to secure a supply of timber that will make hoops. It is not the purpose of this discourse to deal with that end of the subject to any length, but the prevailing scarcity of timber that will turn out hoops to advantage calls for at least a few words on the subject before taking up the matter of building a hoop factory.

Elm is the timber generally used for hoops; in fact, its use so greatly exceeds that of all other woods combined to-day that hardly anything else is thought of for making coiled hoops. But elm of a quality to make hoops is getting so scarce and high in price that to find a good location for a hoop plant—where there is a timber supply—has already become one of the serious problems of the trade. Not only must it be a good class of elm timber to begin with, but it is practically only the butt cuts that will work up to advantage.

Of course, any clear piece of good elm plank long enough for hoops is all right, and where one is operating a sawmill in elm there is an opportunity to get more or less of this plank, even from the top cuts, and, where there is not a sawmill or something of that nature to help the cause along, it is pretty generally necessary now to make staves or something else along with hoops in order to get a reasonable close clean-up of the stumpage.

The manufacturer of hoops is not entirely confined to elm, but it seems that the trade prefer elm, and do not take kindly to substitutes, even of oak. Still oak is being used to quite an extent, and there is really nothing to prevent it being used more, and being accepted right along with elm, except that in many instances the timber is too valuable for other purposes to be made into hoops to advantage. Others substitutes have been tried more or less, but while any wood that is reasonably tough and can be bent into a hoop should answer the purpose, there does not seem to be any that has come into use to any great extent. That is not saying they will not, however, and the near future may bring several kinds of wood into notice in this connection. But whatever the wood may be, the first step towards starting a hoop factory is to secure timber from which to make the hoops.

The first point to be decided when you make up your mind to build a hoop factory is the process of manufacture that will answer your purpose best — cut or sawed. There is some variety and choice of machines in carrying out the work in either cutting or sawing hoops, but the first question is : " Will you cut or saw your hoops ? " Nor is this question as easy

to answer as you might think. Cutting is the process most generally used, and, taking all things into consideration, it is probably the best, generally speaking, but what you want is not a general idea, but a specific idea of what is best in your individual case.

WHAT 1,000 FEET OF LUMBER WILL MAKE.

It is generally conceded that 1,000 feet of timber, board measure, will make, on an average, 4,000 hoops if cut, and about 3,000 if sawed. With such an estimate as this, one may wonder what excuse there can be for ever making hoops by the sawing process when it involves a waste of 25 per cent. of timber as compared to cutting hoops, but the system can and does exist. In the first place, it is cheaper to equip a factory for making sawed hoops, and then the hoops are better, and are supposed to bring a better price, though this is not always a fact. Probably the deciding factor that puts in most of the sawing systems comes from the fact that a system of this kind is particularly adaptable for operation in connection with a sawmill, where it is not the desire to make hoops on a large scale. One can equip a complete system for sawing hoops with a capacity of from 10,000 to 20,000 hoops a day, while if you buy a good hoop cutting machine it has a capacity of near 60,000 a day, and it would look like a waste of time and money to hire a skilled operator to operate such a machine if local conditions only called for an output of from 10,000 to 20,000. There are a number of other points here and there to be taken into consideration, together with local conditions, in deciding on what system to use, but the object here is to point out how to equip and operate a plant, rather than present arguments to and for the different systems, so, as the cutting system is the one most generally used, it is in order to outline briefly the equipment of a plant of this kind.

EQUIPPING A CUT-HOOP PLANT.

The average hoop plant on the cut system is built to manufacture something like an average of 40,000 hoops a day. Some of the machines have a higher capacity than this, and some plants are so equipped as to turn out more than that amount, but this is the figure that is usually taken as the basis for equipping a plant of this kind.

The first step in the manufacture of hoops by this system is to produce planks of the thickness to make the width of the hoops desired and the cross cut of the length desired. This work may be done as a part of the work in any sawmill, or a special short-log mill for this purpose can be provided. The plank is not necessarily edged down to the square edge, but cut with a view of getting as many good hoops as possible out of the log.

THE CUTTING MACHINE.

The next step is the boiling in vats for a few hours, depending much on the timber and the heat supplied from the vat. The first step proper in manufacturing is when you start to make these boiled planks into hoop strips with a cutting or slicing machine, which is usually so located as to cut from the edge of the plank hoops with alternate thick and thin edges automatically. The capacity of a good machine of this kind is usually given by manufacturers as 60,000 hoops in ten hours, but, for general purposes, it is only called on to make about 40,000 good hoops a day, for that represents, in fact, a fraction above the average output, as will be seen further along. It may be well to mention here, however, that the limit of capacity usually comes from other machines than the cutters.

PLACING THE PLANERS.

The next step is to get the hoops to the planers and finish them up smoothly to exact specified sizes. There is a variety of machines of this kind, which carry from one to three cutter heads, and of course their capacity is governed accordingly.

The usual practice is to have two planers with two or three heads, which should handle the output of one cutter. In setting these planers in the factory, they should be set up with two points in view to get the hoops to the planer from the cutter, and to get them from the planer to the pointer and lapper with the least possible amount of handling. Probably the best arrangement that can be made, ordinarily, is to set them with the feeding-in end toward the back of the cutter and just far enough away so that the men taking away from the cutter and the planer feeders will not interfere with each other in their work.

THE POINTER AND LAPPER.

From the planer the next step is to the pointer and lapper, and the same idea of getting there with the least possible amount of handling should be kept in mind. Usually the pointer and lapper is made to handle as many hoops as the cutter will make, so while they generally have two planers we come back to one machine again to do the lapping.

In placing this machine one must be guided somewhat by local conditions, and take into consideration that the material goes from the lapper to the coilers, with the steam box intervening, and as the coiler is the last step in the process, it is necessarily placed so as to discharge into the storage sheds or yard.

Where it can be done a good arrangement is to have the material go sidewise from the discharge end of the planers to the pointer and lapper, and from it direct into the steam box to prepare it for coiling. Local conditions may determine which side to work from, and may even call for the material being worked straight along instead of sidewise at this point.

A POINT OF IMPORTANCE—THE COILERS.

The wind up of the process is at the coiler, and, strange as it may seem, this machine and its operator frequently make up the most important part of the work. In the first place, it is a general practice to have two of these machines to a plant built for approximately 40,000 hoops a day, and as the machines are only rated at a capacity of 15,000 to 18,000 hoops, it is obvious that they may either have to be worked overtime or else they are likely to limit the capacity of the plant.

It is at this point that the final grading of the hoops is done; they are graded to a certain extent as they are put into the steam box, but the final culling out depends on the coiler. The careless man may not only break the hoops in coiling, but may be so careless in selecting or throwing out poor stock that the cooper using the hoops will have just cause for complaint. There is not much chance to examine the hoops thoroughly after they are once in the coil, and it involves trouble and expense to get one out when found and reconstruct the coil. It is, therefore, very important to give close attention to the selecting and coiling of hoops, and there should be a good man at this point of the factory, even if you have but indifferent help at all other points, if you expect to make a success of the hoop business.

It seems that it would be advisable to have more coiling machines; say, for example, three machines for a hoop plant of 40,000 capacity, so that there would be no unusual rush to furnish an excuse for not properly grading the stock. This may seem like adding expense to the process of manufacture, as it also calls for another man to operate the extra machine, but this good care is what counts in getting a price for hoops, and sometimes a little additional expense here will bring more than its equivalent in the better price you will be able to obtain for your product.

A chute is usually made from the coiler to the storing shed with an incline in it, so that the hoops will roll down this way with being touched by the operator.—Barrel and Box.

REGARDING A LOGGING CONTRACT.

In the case of Royle vs. Musser-Sauntry Land, Logging and Manufacturing Company, decided by the Supreme Court of Minnesota, it appeared that a logging contract provided that the contractor should have the option of adopting the official scale at Lake St. Croix as the final basis for settlement instead of the scale where the logs were banked—a place distant more than 100 miles up the St. Croix river and its tributaries. For the first three years' operations the contractor accepted the bank scale as the basis of settlement, and during those years the bank scale exceeded the official scale by 1,760,000 feet. During operations for each of the subsequent years the contractor adopted the official scale. The court held that the option provided for should be exercised each year with reference to the work annually accomplished; that from the terms of the contract, in view of the nature of the business, the parties contemplated not only that some of the logs cut and banked each year would fail to arrive in time for the annual official scaling, and would come in during subsequent drives, but also that some of them might be lost, stolen or detained and never reach their destination; that the annual official scale established prima facie the number of feet cut per annum and was the proper basis upon which to estimate compensation, and that the contract provided for annual settlement and interest upon unpaid balances, to be computed from the date fixed in each year for final settlement.

Buyers and sellers are daily brought together by means of advertisements in the "Wanted and For Sale Department" of the weekly edition of the Canada Lumberman. No lumberman should lose sight of the advantages it offers in this direction.

One Copy. Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is in dispensa ble for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE PROSPERITY OF CANADA.

The publication of figures showing the value of imports and exports for the fiscal year ending June 30th last has drawn attention with renewed emphasis to the wonderful prosperity now prevailing throughout the Dominion of Canada. The total value of the import and export trade of the country amounted to $414,517,358, exceeding the previous year by $36,827,673. The value of imports was $202,791,595, and of exports $211,639,286. The statistics show a remarkable growth of Canadian manufactures during the past six years, the iron aud steel production alone increasing from $10,000,000 in 1896 to over $28,000,000 last year. The cement industry expanded from $252,882 to $784,747 during the period mentioned.

The commercial and industrial development of the country is expanding at a rapid rate. Manufacturing industries of all kinds are taxed to their utmost capacity to meet the demand for goods, and notwithstanding large extensions during the past few years, orders are now on the books of manufacturers which will keep the mills and factories running for months to come.

The abundant harvest in Manitoba and the Territories assures a continuance of this prosperity throughout Western Canada for another year at least. Returns for their crops will enable the farmers of the west to erect needed buildings and to carry out the many improvements which are required in the development of new territory. The mining and timber resources of Canada are being developed in a manner as never before. The railways have this year found their supply of rolling stock more inadequate than ever to move the merchandise of the country, and are building new equipment as speedily as possible.

The question suggests itself, are the prosperous conditions of the present near an end, and we are reminded that periods of prosperity and depression have occurred in the past at regular cycles. But Canadians need little fear anything in the nature of serious depression, particularly for the reason that the development of Canada is yet in its infancy. With a territory large enough to accommodate ten times as many people, and with an abundance of natural resources, all predictions of a yet wonderful nation seem warranted. We may have a temporary lull in trade, but the future of Canada is likely to be gradual growth and expansion. With the greater development of the country ample scope will be provided for the labors of our young men, many of whom now migrate to the United States in search of a larger field.

Indicative of future development are the investments that are now being made by United States capitalists in Canadian timber limits. The International Paper Company own an immense area of timber land in Canada and are constantly adding to their resources. More recently C. P. Easton & Company, of Albany, have invaded Canadian territory by the purchase of timber limits in the Province of Quebec estimated to contain over 300,000,000 feet of pine and spruce. A similar step has been taken by Stetson, Cutler & Company, of Boston. Capitalists such as these are not concerned about tariff questions, but recognize that the country in which the raw material is located holds the whip hand.

COST OF LABOR AND SUPPLIES.

The extraordinary wave of prosperity referred to in the above article is responsible in part for an increased demand for human labor. From all parts of the Dominion an urgent call for laborers is heard. This condition has affected lumbermen seriously, for it has been impossible to secure all the men required for work in the woods this winter. When work is plentiful, as at present, the laborer who in other times has been compelled to be idle in the summer months while working in the woods in winter, gives up the charm of the woods and seeks steady employment in other branches of industry. It has been found necessary, as a result thereof, to employ many inexperienced men who, until they become accustomed to methods of lumbering, do not render very efficient service.

In British Columbia, where logging operations are carried on to some extent throughout the year, the scarcity of men for logging operations has handicapped the mills all summer, some of them being obliged to close down for lack of a supply of timber. The wages offered there to white men range from $2.50 to $3.50 a day, but even the maximum figure has failed to command the services of a sufficient number. The wages offered in Ontario and the eastern provinces are unusually high—for some classes of workmen higher than they have ever been in the past.

The supplies required by lumbermen for logging operations are relatively higher than last year. Canned goods, especially tomatoes and corn, and raisins are higher, whereas sugar, currants and apples are cheaper. There has been a considerable advance in beef and pork, the former being $2 and the latter $5 per barrel higher than last year. Taking lumbering supplies as a whole, the advance in prices is probably equal to ten per cent.

The scarcity of labor and cost of logging operations is certain to affect the log production of the coming winter. Of course, when the mills cease operations and the harvest in the North-West is gathered, the supply of labor will be more abundant, but it will not be possible to make up entirely for the decreased operations consequent upon the present stringency in the labor market. Although the lumber market is proverbially strong and likely to continue so for some time, we do not anticipate that the cut this winter will be unsually large.

DISPOSAL OF WASTE PRODUCT.

What is known as the waste product of saw and shingle mills has always been a source of expense to lumbermen. In steam mills it is possible to utilize a portion of the sawdust and other waste as fuel, but the balance must be disposed of in some other manner. With water power mills the refuse is not required for fuel and is usually consumed by large burners erected for the purpose at a considerable cost. To find some method of profitably utilizing the waste product is a question to which much consideration has been given, but which has not as yet been satisfactorily solved.

Some progress has been made in the direction of reducing the quantity of waste material. The saws used to-day are much thinner than those used ten years ago. Caution is exercised in sawing the logs, making the lumber no thicker than is actually required; and the sawyer who knows how to handle a log so as to get the most out of it is always in demand.

Occasionally is heard the complaint of the theorist as to the wasteful methods of lumbering. A little investigation would convince such persons that the waste around saw mills has been reduced to the minimum, and that so far as is commercially practicable all material is utilized. It should not be forgotten that material can only be worked up to the extent that the returns therefrom are equal to or greater than the expenditure for machinery and labor. Unless there is a profit as a result of the work the lumberman is not likely to devote his time to working up bi-products. That he disposes of his refuse at some expense by means of a burner is a condition over which he has no control, as the amount of sawdust and other waste material around a mill is so great as to render its disposal in some manner an absolute necessity.

Lumbermen are not entirely hopeless that some method will yet be found of profitably working up the waste of their mills. Gradually they seem to be getting nearer to a solution of the problem. A few years ago Messrs. Edwards, Booth and Egan, of Ottawa, started a manufactory for this purpose under the auspices of Mr. Emerson, a chemist, and while it was not altogether successful, enough was accomplished to show

plainly that it is possible to produce a great many valuable products from sawdust and waste material. At the present time the high cost of labor is an obstacle in utilizing such material. We know that some manufacturers have investigated the prospects for a factory to utilize short blocks cut off the lumber by the trimmers and pieces of slabs and edgings that are too small for lath, but when the expense incurred in picking out the material and curing it was considered, it was difficult to show a margin of profit in the present condition of the labor market. Other manufacturers have put in machinery to manufacture piece stock out of hardwood slabs, but as the highest price for clear piece stuff is about $10 per thousand feet at the mill, little encouragement is offered and the manufacturer feels inclined to burn the material.

The waste is proportionately greater in the manufacture of hardwoods than of the coniferous woods, but there seems to be a larger field for disposing of bi-products of hardwood waste. Many hardwood specialties find a ready market both at home and abroad. In Michigan hardwood slabs are converted into slack barrel staves and heading to advantage. The slabs are dropped over a slasher, which cuts them into lengths corresponding to the desired length of staves, which is from 30 to 35 inches. The short slabs are then bored, and by means of a conveyor are forwarded to the stave machine, which works automatically and makes staves any width from 1½ to 3 inches, depending upon the width of the bolt. The heading for these barrels is also a slab product; the slabs are sawed to the proper length, and an ordinary slab resaw makes the heading.

EDITORIAL NOTES.

In compiling statistics concerning the lumber industry the United Government has evidently been no more successful than has the Dominion Government. Many of the statistical tables issued from the Government bureau are of a misleading character. The United States census of 1900 undertakes to give figures representing the value of the timber stumpage of the country. The highest average given to white pine is $4 per thousand. This is somewhat below the actual value, but fancy a price of $5 per thousand being placed on walnut stumpage. Reliable statistics are doubtless valuable, but it seems almost impossible to make correct estimates by means of any system that has yet been adopted. The consumer of lumber who perchance glances at the figures representing the stumpage values of the different woods, as given in the census returns, will indeed conclude that he has contributed too much to the prosperity of lumbermen.

The news comes from Berlin that the German customs authorities will in future require certificates of origin in the case of American grain. This is regarded as a retaliatory slap at Canada for having granted preferential duty on British goods coming into this country. The Dominion should now demand a certificate of origin in the case of all imports from Great Britain. This would have the effect of shutting out large quantities of German goods which now find their way into Canada as British imports and get the benefit of the preference which was intended to apply only to British manufactures. The statement is made on what appears to be good authority, that many German manufactured goods are shipped into England, where the assembling of the parts is done, after which the goods are exported to Canada and receive the benefit of the preference. At present there is nothing to prevent such a practice either by Germany or other countries. Means should be adopted to prevent the preference being accorded to any but bona fide British goods.

The insurance companies have contended for some time that the premiums paid for fire insurance by the lumber and shingle mills of British Columbia were too low in comparison to the risks. Several prominent European and American companies, unable to secure unanimity in raising the rates, recently refused to renew their risks. The remaining companies have issued a new schedule, under which well-constructed and properly-protected mills will be accepted at the old rate and higher premiums charged for faulty construction. It is said that the increase will in some cases be equal to 50 per cent. The mill men are not opposed to the proposed method of grading the risks, but they claim that the average premium is excessively high. It is not improbable that some of the mills will either carry their own insurance or take out a policy with one of the lumber mutual insurance companies in the Eastern States. The National Wholesale Lumber Dealers' Association some time ago made an investigation regarding the ratio of losses to premiums paid on lumber risks, and they were shown to be only about 17 per cent. Lumbermen in the United States have also encountered higher rates of insurance. The question was discussed at a meeting of the Box and Box Shook Manufacturers' Association in Milwaukee last month, when it was pointed out that the rates had been advanced so that for a risk taken last year at $3.50 a rate of $5.10 was now demanded. Reference was made to the Lumber Underwriters, of New York, and the Lumbermen's Mutual, of Boston, which have paid large dividends to their stockholders, sentiment being in favor of taking insurance with these companies.

RULES FOR LUMBER CAMPS.

The regulations to govern employers of labor and employees in unorganized districts of Ontario, with a view to preventing another smallpox epidemic, have been issued by Dr. Bryce, Secretary of the Provincial Board of Health. The regulations follows :

Shantymen, miners and other employees of lumbering camps, mining camps, saw-mills, smelting works and other industries or any railway construction camp, are hereby notified and cautioned by the Provincial Board of Health, under the Act respecting the sanitary regulations in unorganized territories. It is required :

1. That all owners, managers, agents or foremen, or other persons in charge, employ only vaccinated persons ; that all employees are equally required to comply with the regulations.

2. That all employers of labor shall contract with a medical practitioner for their emloyees and works and are authorized to deduct from the pay due to any employee a sum not less than 50 cents and not exceeding $1.00 per month.

3. That a hospital for the care of the sick must be provided by every employer, and that the men are entitled not only to regular treatment therein, but also to have the camps and surroundings inspected regularly and maintained in good sanitary condition.

That failure on the part of any person to comply with any regulation of the Provincial Board of Health renders him liable to the penalties provided in the Act.

THE TRUE SITUATION.

Unless the signs fail the mill men of British Columbia may confidently look forward to no distant time when the local demand and the demand from the eastern portions of Canada will take from them all their output. One who looks over the great areas yet undeveloped in Canada cannot fail to be impressed with their promise for the future. With a population of less than six millions, but with a country capable of sustaining ten times as many, nothing but rapid growth can be anticipated. These vast unsettled areas will be peopled by a class of heavy timber consumers. It is in the northern latitudes that lumber is a necessity. In the warmer climates it is more of a luxury. The great timber belts of British Columbia and Eastern Canada will prove valuable preserves for their owners. The legislation that now prevents the logger in British Columbia from exporting his logs—though instigated by selfishness—will by time be proven to be wise and beneficent. The restrictive laws in the United States will doubtless be continued and will be offset in a great degree by kindred laws in Canada. The spirit of independence in Canada is growing and the desire for annexation dying out. A future day may develop a more liberal policy in the exchange of trade, but now trade seems to set toward selfishness in national law. In the growth of the cargo trade of this coast the British Columbia lumberman must always share. It is probable that an over-production will soon be felt and some time may be needed to re-adjust the demand to the supply, but that condition is always to be anticipated and is, perhaps, in a measure wholesome and curative. The British Columbia mill man is, as a rule, more conservative than his competitor south of the great international divide. He is not slow to invest, as many large plants attest. He is loth to adopt new methods until they are no longer new. The logging engine and the band mill he accepts after mature and lengthy consideration. But the leaven in the lump is at work, and the spirit of the new century is permeating the land from the Crow's Nest to Comox.—West Coast and Puget Sound Lumberman.

A buyer can always be found for your lumber product, second hand machinery, or logging equipment by offering it for sale through the Canada Lumberman. The Wanted and For Sale Department is for this purpose.

NEW METHOD OF TOWING LOGS.

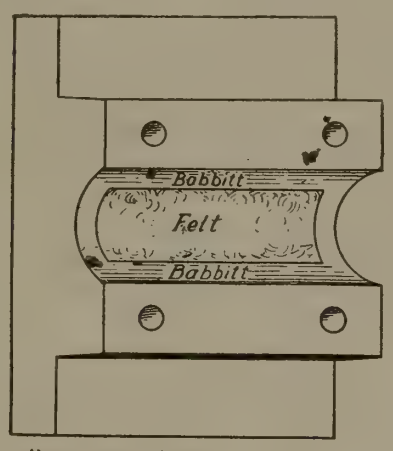
It is claimed that at last a new method of towing logs has been found which reduces to a minimum the chances of the loss of the logs during rough weather. The new idea received a test recently.

The Vancouver tug Albion towed a boom of 215,000 feet of logs from San Juan Harbor to Port Ludlow, Washington, through a heavy westerly sea without the loss of a single stick. The boom was made up according to the new method by which the logs are individually attached, by means of short chains, to the central cable which runs to the towing bits of the tug. During the trip the seas ran quite high, but not the slightest difficulty was experienced in taking the boom through.

In contrast to the success of the Albion's method, was the failure of the tug Rabboni to tow a boom made up in the old way with boom sticks and chains from Port Crescent to Port Ludlow on the same day that the Vancouver made the run. The Rabboni enconntered the same sea met by the Albion, and she lost every log in her boom.

BABBITTING BAND RESAW BOXES.

I have had considerable experience with band resaws and band rip saws, says "G.A.P" in The Wood-Worker. At present have three



BABBITTING BAND RESAW BOXES.

band resaws under my charge, but can't say I have the same trouble as some readers of this journal. I use 18-gage saws, 6 inches wide, 32 feet long. The wheels on my machines are 5 feet 6 inches diameter and make 490 revolutions per minute. I use nothing but engine oil.

To babbitt the boxes on these machines, I wrap the journals with writing paper and pour cap and lower half of box at same time, using wooden liners. On lower (or driving) wheel I babbitt only a strip an inch wide around edges and ends of box—see sketch. The cap I babbitt full. The wear is on the cap. In lower half I use thick felt, usually cut from the top of a felt boot. In the top box I babbitt the lower part full and use felt in the upper half. I scrape all boxes to a good fit.

To pack my boxes I use two pairs of cardboards for top and bottom on each side of box, using writing paper for rest of packing. I screw bolts down until there is no play of shaft and just so it can be turned by hand. I babbitted these machines sixteen months ago and have only taken out one liner on each side. My machines will run five minutes after the belt is thrown off the tight pulley.

Our stock is mostly cull cottonwood for boxes. The average daily run for the three machines is 49,000 feet, working ten hours. The machines run every day, as our mill never shuts down except for Sundays and legal holidays.

BRITISH AND COLONIAL INDUSTRIAL EXHIBITION.

Mr. J. G. Jardine, Canadian Trade Commissioner for South Africa, in a recent communication, refers to the British and Colonial Industrial Exhibition which will be held at Cape Town during the months of November, December, January and February, 1903-4, under the patronage of His Excellency Lord Milner, G.C.B., G.C.M.G., High Commissioner for South Africa. Mr. Jardine is of the opinion that the time fixed for the Exhibition is certainly an opportune one for Canadian manufacturers desirous of doing business in that country, giving them as it does ample time to enter exhibits. Mr. Jardine states that such a Canadian exhibit should embrace samples of the forest wealth of Canada and industries in which large quantities of wood are required, all descriptions of canned goods, dairy and food products, apples, agricultural implements, furniture, boots and shoes, leather, trunks and valises, cotton and woollen textures, models of railway and tramcars, locomotives and traction engines, carriages, stoves and heating apparatus, tin and enamelled ware, axes and mechanics' tools generally, and musical instruments, including cabinet organs.

The cost of such an exhibit, he says, need hardly be considered, as every article of the kind mentioned could be sold at a reasonable advance on cost of manufacture and transportation, etc., besides such an exhibit from Canada, side by side with industries from all parts of the Empire, cannot but lead to extensive and profitable business and the opening up of new and permanent trade outlets to Canadian industries generally.

THE TORONTO INDUSTRIAL EXHIBITION.

The success which this year attended the Toronto Industrial Exhibition shows that its usefulness is still generally recognized and that it will continue to grow in importance in proportion to the efforts that are put forth by the management to improve it. Inducements should be offered to secure a greater representation of manufactured products from all parts of the Dominion. This year there was really no exhibit of sawmilling machinery, an omission which must have been disappointing to lumbermen visitors.

The Northey Manufacturing Company, Toronto, had their usual interesting display of gas and gasoline engines and pumping machinery, including their triplex power pumps, for which they report a great demand.

A full line of shafting and power transmission machinery in operation was exhibited by the Dodge Manufacturing Company, of Toronto. The exhibit included wood split pulleys, friction clutch pulleys and couplings, Dodge system of rope driving, etc.

The exhibition of the Bradley, Levy & Weston Machinery Company, of 102 Front street west, Toronto, attracted the attention of lumbermen and persons interested in power and machinery. They exhibited the Hardill engine in two sizes, 50 and 25 h.p. This engine, for which they are agents, is worthy the notice of any one interested in power. There were shown a self-feed rip saw, manufactured by the Goldie & McCulloch Company, calculated to decrease labor and increase the manufacturer's output, two sizes moulding machines of entirely new design, with the latest devices for time and labor saving, and a complete line of wood-working tools. This firm are gradually extending their business and are in a position to supply machinery of all kinds, including engines, boilers, planers, matchers, etc.

The Goldie & McCulloch Company, of Galt, Ont., exhibited two engines in operation, and several wood-working machines.

A splended exhibit of canoes and rowboats was made by the Peterborough Canoe Company. One of the collection was a canoe weighing only fifteen pounds which they claimed to be capable of carrying two men.

R. Bell, of Seaforth, Ont., exhibited traction and stationary engines.

The only belting concern represented was D. K. McLaren, of Montreal and Toronto. The exhibit comprised English oak tanned belting, card clothing and cotton mill supplies, Lancashire, balata and cotton belting, and belt hooks and appliances in all sizes.

STAVES WANTED IN AUSTRALIA.

Mr. J. S. Larke, Canadian Commissioner at Sydney, Aus., in his last report to the Department of Trade and Commerce, says: "I have again had applications for oak staves for wine casks. Nothing so far has been done in direct shipments from Canada. The requirements have been, so far, too small to warrant full car lots being sent through, and purchases for Australia are, therefore, made in New York. There are considerable shipments each month from New York of pine, oak and basswood for Australia and New Zealand, which can be supplied direct by Canada upon the establishment of direct ships. A vessel recently brought a quarter of a million feet.

The tendency to a wider and slightly heavier saw for use on resawing machinery of the band saw type has been very rapid, and to many operators who have had charge of the saws with 3, 4, and even 5-inch blades, the change to a 7 or as much as an 8-inch blade for a resaw will explain much of the reason for the rapid feeds that have been reported as having been made with this class of machinery. A 20-gage blade taking a kerf of less than 1/16-inch with a width of 7 or 8 inches of well-tensioned steel behind it, is an entirely different proposition to that of the smaller saw with a slower running and spring-set blade. The band resaw of to-day is a stronger and better tool than was the band log saw of a very few years ago, both in the frame and in the width and strength of the blade. — The Wood-Worker.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 24 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELEN'S, LONDON, E. C.

Weekly Lumberman, published every Wednesday Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

LUMBERMAN'S

VEST-POCKET

INSPECTION BOOK

Containing Rules for the Inspection and Measuring of Pine and Hardwood Lumber in the leading markets of Canada and the United States. Embracing also many useful tables and calculations of everyday service to lumbermen.

Prepared by the Editor of the "Canada Lumberman."

Toronto, Canada
C H. MORTIMER, Publisher
1895

THE above is a fac simile of the title page of the latest and most complete Lumber and Inspection Book published.

We shall be pleased to send you a copy on receipt of six 2 cent Canadian postage stamps

THE CANADA LUMBERMAN,
Toronto, Canada.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in he current week's issue.

WANTED—MACHINERY SUITABLE FOR A good circular mill that would have a capacity of 30,000 feet per day. Apply at once to Box 20, CANADA LUMBERMAN.

McLAREN-ROSS LUMBER CO., Limited

In the Matter of the Winding up Act (Dominion) and of the Acts amending the same.

Pursuant to a winding up order of the Court dated 6th September, 1902, made in this matter, there will be sold by and with the approbation of William Louis Scott, Esquire, the Master of this Court at Ottawa, at his Chambers, in the Court House, at the City of Ottawa, at the hour of two o'clock p.m. on the 12TH DAY OF NOVEMBER, 1902, the following real and personal estate, the property of the said Company, all situate in the Province of British Columbia, Canada.

PARCEL NO. 1—Lot No. 55, comprising 23,600 acres more or less in the Seyward District, Vancouver Island, Title renewable leasehold.

PARCEL NO. 2—Lot No. 439 G 2, comprising 9,280 acres more or less, situate in the District of New Westminster.

Lot No. 50 C. comprising 6,720 acres more or less, in the Chilliwack District.

Lot No. 55, comprising 15,900 acres more or less in the Chilliwack District.

Lot No. 83, comprising 1,042 acres more or less in the Chilliwack District.

The above four lots are held under renewable annual licenses.

PARCEL NO. 3—A tract of land comprising about 400 acres more or less, held in fee simple, including a mill site and farm lands en bloc situated on the north bank of the Fraser River about three miles east of New Westminster, B.C. About 200 acres of this land is cleared, graded and drained and has been under cultivation a number of years. The mill located upon this site is a frame mill about 455 ft. by 72 ft. with T across tail end of main building, about 176 ft. by 60 ft. The whole structure from foundation up is built in a most substantial manner, well timbered and braced with knees, metal roof, contains three steam engines of three hundred horse power each, and is fitted throughout with special machinery for working up B.C. timber of all dimensions as well as for working out the refuse into laths, pickets, etc., etc., also planers and matchers, with a large assortment of tools, plant and equipment; also one large refuse burner, one large stone boiler house, metal roof, containing ten large tubular boilers, steam pumps with all necessary and proper attachments, good frame office, boarding house, cottages, horse stables, blacksmith shop and machine shop, with good efficient and complete plant of tools and machinery in each shop.

Each parcel will be offered for sale separately, without reserve. All persons other than the liquidator are to be at liberty to bid.

The property will be sold subject to all rents, taxes, dues and rates accruing due subsequent to the 31st December, 1902.

The purchaser shall, at the time of sale, pay a deposit of 10 per cent. of their purchase money and shall pay the balance within one month of the day of sale. The purchasers shall have the conveyances prepared at their own expense and tender the same for execution. All expenses of and incidental to the inventigation of titles, including the abstracts therof, shall be borne by the purchasers. The vendor will be bound to produce only such title deeds as are in his possession. In all other respects the terms and conditions of sale shall be the standing conditions of this Court.

Further particulars may be had on application to E. S. Leetham, Esq., the Liquidator, or to Messrs. Christie & Greene, his solicitors, No. 110 Wellington Street, Ottawa.

Dated 11th day of September, 1902.

(Signed) W L. SCOTT,
Master at Ottawa.

WANTED—WHITE STRAIGHT GRAINED 1¼ Maple, both plain and quarter sawn, also 1¼ Red Birch. Box "Z," CANADA LUMBERMAN

WANTED AT ONCE,—ONE CAR LOAD OF 1" Spruce firsts and seconds. Reply with full particulars to THE NEWCOMBE PIANO CO., LTD., Toronto.

WANTED — TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER CO., 52 Yonge Street Arcade, Toronto.

WANTED— WHITE OAK TIMBER, CAR Stuff and Plank. Large lot of Piling in any kind of wood. Hardwood Lumber, Pine and Hemlock sawn to order. G. ELIAS & BRO., Buffalo, N. Y.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

DRY PINE.

WE HAVE ABOUT 1,500,000 FEET DRY PINE in 1, 2 and 3 inch common and better, prefer selling in bulk. Will quote freight rate to Buffalo, Chicago or Toronto on application. Correspondence solicited. N.B.—Would like to correspond with consumers of hardwoods. ST. JOE ISLAND LUMBER CO., Sault Ste. Marie, Ont.

SPECIAL TO LUMBERMEN.

WITH A THOROUGHLY EQUIPPED PLANING Mill at Orillia, we solicit orders for resawing and planing of lumber, in any quantity; can match 26 inches wide; all work guaranteed first-class; prices on application. Address, NATIONAL BOX CO., Orillia, Ont.

Hardwood Staves For Sale

THE UNDERSIGNED IS IN A POSITION to manufacture a large quantity of hardwood staves, and would be pleased to enter into correspondence with firms desiring to purchase such stock either in Canada or abroad. Address L. M. MAJOR, Bedford, Nova Scotia, Canada.

3/16 INCH BASSWOOD AND ELM

WE HAVE FOR SALE ABOUT 200,000 FEET 3/16 inch Rotary Cut Basswood, 35 to 42 inches long and 6 to 16 inches wide, a large percentage of which is clear; also about 300,000 feet 3/16 Elm, mostly 60 inches long, suitable for crating. Would sell this stock in bulk or would cut it to dimensions or strips ready for use. THE RIDER & KITCHENER CO., Limited, Lindsay, Ont.

Important to Lumbermen

AUCTION SALE

THE FOLLOWING WILL BE SOLD BY public auction at the Anderson Furniture Co.'s mill, Trout Creek, on WEDNESDAY, OCTOBER 15TH, sale to commence at 1 o'clock.

1. A timber limit containing about 11 square miles, on which is a lot of good hemlock, spruce, maple and birch timber. The G. T. R. runs through the centre of the limit.

2. A first-class Waterous band saw mill, (capacity 30,000 to 40,000 per day), complete with edger, trimmers, etc.

3. Shingle mill with saws, jointers, packers, etc.

4. Camp and mill chattels, consisting of horses, sleighs, wagons, chains, harness, trucks, saws, axes, cooking utensils and other articles too numerous to mention. Terms for chattels, cash.

Terms on mill and limit will be made known on day of sale.

For further particulars apply to the
ANDERSON FURNITURE CO.,
Trout Creek, Ont.

WANTED — A QUANTITY OF WHITE BASSWOOD. Box 6, CANADA LUMBERMAN.

RAILS AND CARS FOR SALE

FIFTEEN MILES 30 LB. STEEL RAILS IN good order, logging cars and locomotives; immediate shipment. For particulars apply to JOHN J. GARTSHORE, 83 Front Street W., Toronto.

SAWMILL MACHINERY FOR SALE

Will fit up mill with band or circular saw, long timber or lumber mill, will cut from 5 to 60 ft. long, with large edger, slash table and lumber trimmer and jump-up saws, endless log chain and bull-wheel and drag-saw for sawing logs in water, also lath machines and trimmers and live rollers, turn tables, lumber cars and some track iron, with large powerful boiler and engine. Will erect mill for anyone wishing to buy or would go partner with person who has a large pine or hardwood limit and convenient place for shipping. For further particulars apply to XAVIER BAECHLER, Sarnia, Ont., Box 712.

Important Sale
—OF—
VALUABLE TIMBER LIMITS

UNDER INSTRUCTIONS FROM WM. HENDRIE, ESQ., of Hamilton, there will be offered for sale by Public Auction, at the Russell House, Ottawa, on WEDNESDAY, 17th DECEMBER, 1902, at 2 o'clock in the afternoon, the following valuable Timber Berths, under license from the Crown, subject to the regulations of the Crown Lands Department of the Province of Quebec, namely Upper Ottawa Limits, Nos. 591, 592, 593, 594, 597, 598, 599, 600, 601, 602, 603 and 604, containing in all about 272 square miles. The limits will be sold in one lot.

Terms and conditions to be made known on the day of sale.

For further particulars, apply to
MacCRAKEN, HENDERSON & McDOUGAL,
Central Chambers, Ottawa,
Vendor's Solicitors.

CURRENT TRADE CONDITIONS.

ONTARIO.

The close of September finds lumber prices steady after the several advances that have been put into effect during the season. With almost the entire season's production manufactured and ready for the market, it would not be surprising if prices should show a tendency to recede from their high point; but the only tendency in this direction is confined to one locality and to one class of trade. In Western Ontario some shading of prices on the lower grades of white pine in carload lots is reported, but it has not been of such an extent as to cause the trade much concern. There is really no reason to cut prices at the present time, as the demand is of average volume and a good trade seems assured throughout the fall and winter months. Of course, there will be quiet periods. In Toronto it has not yet been possible to advance prices on good lumber to a basis corresponding with

other markets. This is probably due to the fact that the manufacturers of sash, doors, blinds, and other woodwork have been working up their old stock and have not purchased much lumber at prevailing prices. They have, therefore, been in a position to sell their goods at a relatively low cost, but when they are compelled to replenish their stock of raw material it will be necessary to advance the prices of woodwork. Hardwood lumber has shown more strength of late than pine. Prices on all hardwood stock are strong, and in some kinds there will be a famine before next spring. Unless present indications are misleading higher prices will be the ultimate result.

QUEBEC AND NEW BRUNSWICK.

Spruce lumber was never stronger than it is to-day. Any stocks for sale are rapidly picked up, the demand from the United States being so large as to consume almost the entire available supply for that market. Clapboards are entirely out of the market. Prices are fabulously high and promise to remain so throughout the winter. Most of the mills are still in operation. Every effort will be put forth to continue as late in the fall as possible, and it is probable that very few logs will be carried over until next spring. Operations in the woods this winter will be on an average scale—some operators may increase their output, but others, feeling that prices may not hold next season, will not operate as extensively as usual. A weakening in values would, in view of the excessive cost of logging operations, be a matter of serious consideration. Thus the more conservative lumbermen are disposed to proceed cautiously.

UNITED STATES.

The lumber market has lost none of its strength. Although in some districts trade has fallen off somewhat, stocks are so small that prices have not been affected, nor are they likely to be in the near future. East of Buffalo and Pittsburg there is an active demand for all kinds of lumber. Buffalo and Tonawanda dealers have advanced the price of barn boards 50 cents per thousand, while sales of No. 1 inch cuts are being made above $40, which was the price through the summer months. The high prices have met with some opposition from consumers, but as there seems no prospect of a break in the market it is anticipated that there will be active buying during the next two months. Chicago reports a steadily increasing volume of trade, much of the demand coming from the country. It would appear that farmers, having their crops safely housed, are now giving attention to farm improvements. Hemlock has shown wonderful strength of late. In the east the higher lists have been maintained and there is likely to be a still further advance. No doubt this class of lumber is being purchased for some purposes for which white pine would be used excepting for the abnormally high price. Hardwoods compare favorably in point of strength with pine and hemlock. Wisconsin reports a slow demand for inch soft elm and a scarcity of two inch rock elm, while at Buffalo good grades of hardwood lumber are in short supply and commanding high prices. The supply of basswood is still so short as to curtail the volume of trade. Fewer shingles are being received in the east from the Pacific coast. This has brought about a hardening of white pine shingle prices. Lath is about as scarce as ever, and brings $4.25 at Buffalo for first-class white pine.

GREAT BRITAIN.

There is a decided firmness in lumber prices throughout Great Britain. Trade is moderately active, stocks are not excessive, and it does not seem that anything is likely to occur to disturb the market. Spruce seems to be about the firmest class of lumber and c. i. f. quotations are now considerably higher than they were a few weeks ago. It is understood that shippers are asking £9 15s. c. i. f. London for regulars, 12 to 13 feet, 3x9 second quality, and £9 5s. for third quality. Spruce battens are quoted at £7 17s. 6d. c. i. f. for seconds and £7 7s. 6d. for thirds. Even at these prices shippers are refusing to contract excepting for immediate delivery, the tendency being towards a further advance. Some of the large importers of spruce at Liverpool are practically sold out for this season. Pine is almost as strong as spruce. First quality deals are exceptionally scarce. The complaint is again made that the grading of pine deals is not satisfactory to British buyers, and that much of what has been placed on the market as first quality is no better than second class. Third and fourth quality pine deals have been graded more satisfactorily, but the demand for them is only fair.

STOCKS AND PRICES.

In the Chicago market 8-inch extra white cedar shingles sell at $2.80, and 10 inch at $2.85 to $2.90 by water. Lath are holding up well. Sales of No. 1 mixed have recently been made by water at $3 and of No. 2 by rail at $3.75.

Prices of tight barrel cooperage stock have lately advanced. In Chicago lard tierces range from $1.15 to $1.17½ ; oak pork barrels, $1 ; ash pork barrels, 87½ cents ; tierce staves, $23 to $24 ; pork staves, $19 to $20 ; tierce heading, 16 to 16½ cents ; pork heading, 12½ cents.

The New Brunswick Government will sell by public auction on October 8th timber berths No. 21, south of Enoch Baker Lake, 3 miles; No. 22, Parishes of St. Francis and Clair, 7½ miles; No. 23, River St. Francis, 7½ miles ; No. 24, Cains river, 2 miles; and No. 25, head of Little River, 2 miles.

The Dominion Government is asking for tenders up to October 15th for a license to cut timber on Berth No. 309 in the Province of British Columbia, comprising two blocks. Block No. 1 was formerly known as Timber Berth No. 62 and contains an area of 3,638 acres. Block No. 2 contains an area of 2,080 acres. Offers will be received up to same date for a timber license on Berth No. 307, containing 80 acres.

A number of logs belonging to Hale & Murchie upon which the Boom Company's tolls had not been paid were sold by auction recently at Fredericton, N.B. There were first offered the logs now in the boom at Lincoln, and they were sold as follows : 79,036 feet of merchantable and 1,288 feet of batten spruce to J. R. McConnell at $11.05 per thousand ; 2,340 feet of pine to Hilyard Bros., at $7.75 per thousand. The next sold were those logs now at St. John, in the hands of James Holly & Sons, subject to their tolls, about 5 cents a thousand. The spruce, 16,248 feet of merchantable and 7,336 feet of battens, was bought by Hilyard Bros., at $11.75 a thousand, and the same firm bought 2,300 feet of pine at $7.50.

Messrs. S. P. Musson, Son & Company, under date of September 13th, say of the Barbadoes market : "We have placed for the Government 215,000 ft. white pine boards, about one half each shipping and seconds, at $24.25 and $18 respectively. The stock of shippers is moderate, but owing to the export demand being entirely checked, and that locally at this time of the year very small, there is no life whatever in the market. We confirm our previous valuation of $19 to $20 for a small cargo of spruce. No shingles have arrived, but a couple of cargoes of Gaspe are on the way. Stocks of Cedar Laying will be augmented, no doubt, by the lot in Government hands, some 1,500,000, for which tenders are invited.

BRITISH TIMBER SALE.

Only a small quantity of Canadian lumber was offered at the auction sale of Foy, Morgan & Company, London, on September 17th. The result was as follows:

PINE—Ex. Huelva, from Quebec—12-16 ft. 3x12-20 in. first quality, £15 10s per std. Ex. Forest Holme, from Botwoodville— 10 ft. 3x11 in. first quality, £19 5s; 9-11 ft. 3x12-16 in. second quality, £10.

SPRUCE—Ex. Belgian, from Quebec—12 ft. 3x9 in. third quality, £9 10s; 12-13 ft. 3x9, £9 10s. Ex. Norden, from St. John, N. B.—17-30 ft. 4x6 in. unassorted, £7 10s. Ex. Cresyl, from Quebec—6-22 ft. 2x8-12 in. unassorted, £7 10s.

BIRCH TIMBER—Ex. Carlisle City, from Miramichi, N.B.—9-7 ft. 4 1/5 5-15 inch, 1s 1d per cubic ft; 6-15 ft. 4x11-15, 1s 1d; 5-18 ft. 4x9-10, 1s 2d; 3-18 ft. 4x4-8, 1s ½d, 6-20 ft. 3x7-13, 1s 1d; 3-18 ft. 2x8-14, 1s 2d; 3-17 ft. 2x7, 1s ½d; 3-17 ft. 2x4-6, 1s.

OAK TIMBER—6 logs, 13-20 inch, 22-28 ft. second quality, 62s per load of 50 cubic ft.

TIMBER LIMIT TRANSACTIONS.

Several important sales of timber lands along the line of Lake St. John and Quebec Railway, in Quebec, have lately taken place. Harold Kennedy, of Quebec, has purchased for $20,000 the property of Colin Campbell on the Jacques Cartier river.

George Gordon & Company, of Pembroke, Ont., have purchased from J. & T. Conlon, of Thorold, 108 miles of timber limits in Hawley, Appleby and Jennings townships. Much of the timber is along the Veuve river and convenient to the Cache Bay mill of George Gordon & Company.

St. Paul and Spokane capitalists have secured large timber limits on the Columbia river, in British Columbia, from the G. B. Wright Estate. This timber is held in fee simple and can be exported to the United States.

Theo. P. Burgess, president and general manager of the Burgess Sulphite Pulp Company, of Berlin Falls, N. H., has closed a deal with the Department of Lands, Forests and Fisheries, Quebec, for the purchase of six hundred square miles of timber limits on the Upper St. Maurice River. The Company intend bringing their pulpwood down the St. Maurice to the St. Lawrence, opposite Three Rivers, where they have secured two miles of deep-water beach, and will ship to their mills in Berlin Falls over the Grand Trunk Railway.

BIRCH SQUARES AND SEATS.

A large buyer of Birch chair seats and of Birch squares is open to contract with a mill for their output. Also open for Broom Handles and Dowels in large quantities. Write in first instance to "Finance," care of CANADA LUMBERMAN.

TO SUBSCRIBERS.

A postal note for one dollar, unaccompanied by any name, has been received at THE LUMBERMAN office. The envelope and order are both postmarked "Ottawa". If this should meet the eye of the sender, will he please forward his name and address, so that proper credit may be given.

A saw mill at Chester, N. S., owned by John Stamford, was destroyed by fire last week.

The Government saw mill on Mill street, Montreal, was almost totally destroyed by fire recently, the loss being $10,000.

John J. Gartshore, 83 Front Street West, Toronto, has purchased the logging railway formerly operated by Holland & Graves at Wahnapitae, Ont., and is prepared to dispose of the same in quantities to suit customers. The material is all in good condition.

Carl, sailed Sept. 26th, for Bristol, 6,219 pcs. spruce deals by W. &. J. Sharples.

CANADIAN LUMBER IN ENGLAND.

Reviewing the market for Canadian lumber, the Timber Trades Journal, o London, Eng., makes the following significant remarks:

First quality pine deals have risen considerably in price during the season, and parcels have been disposed of at £30 c.i.f. to London for regulars; and on the Clyde we hear that for a shipment of broads £38 was recently paid. Second quality deals are just now rather dull of sale, and this is in some quarters attributed to the depreciated classification. Thirds are fetching good prices, say, £12 and over, but importers are purchasing with extreme caution. Fourth quality deals hold a better position, and sales are reported at £10 5s. c.i.f. London for regulars. It is stated that there is a good demand for third and fourth quality oddments, but these goods are unobtainable, the avilable stocks on the other side having been absorbed by the United States market.

Good pine sidings are in request, and during the last six months have advanced in price from £3 to £4 per standard in this market, which is also owing to the active demand from the States. For 2 in., 10/11 in. average, 12/16ft., £24 to £25 is quoted. Shipping cull sidings, 2in., are reported to have been sold at £12, and 1 in. at £10 10s. The latter is, however, for some reason not a favorite one in the English market. The increasing demand for good sidings of the shipping culls, and the increasing quantity of these goods manufactured year by year, would appear to indicate that they will have to replace to some extent the 3 in. deals. A tendency of the Canadian trade is the decrease of the manufacture

FOR SALE.

of deals for the European markets in favour of the board sizes to fill the ever-expanding United States demand.

It may be safely said that Quebec oak is scarce and very dear, and it is expected that little will be lying at the St. Lawrence port for spring shipment. For ordinary specifications 3s. 2d. per cubic foot c.i.f. is now quoted. Rock elm has maintained its value, but so many bastard kinds of elm are now put forward in place of the favorite rock elm that the market has become somewhat demoralized.

HARDWOOD DEMAND AND SUPPLY.

That there is a pronounced scarcity of hardwoods throughout the country is no longer a theory, but an undisputed fact, which can be substantiated with little difficulty by anybody interested. Not only are the wholesalers running short on total supplies, but their assortments of almost every variety, according to the American Lumberman, are low and considerably broken. Manufacturers are in as bad shape regarding quantity of dry stock on hand as they have ever been. Many of them are shipping their lumber green as it comes from the saw, wholesalers being so anxious to get hold of it that they will stand the difference in freight. There is very little dry lumber of any kind available excepting in the hands of wholesalers, and their supplies are not sufficient to last over the winter; in fact, there are many whose supplies are already so greatly reduced that they are practically out of business and can see no hope of replenishment before next spring.

There is a genuine famine in firsts and seconds basswood, and not much available in any of the other grades. What users of this staple wood are going to do between now and next May is an insoluble problem.

Manufacturers of Michigan maple are securing about the best prices for their stock that have ever ruled. Quotations are pretty nearly uniform at $20 for inch firsts and seconds, $14 for common, and $8 for culls, and not much for sale at those figures.

TIMBER STATEMENT.

Following is a comparative statement for three years of the timber, etc., measured and culled at the port of Quebec up to 30th September, 1902, as reported by the Supervisor of Cullers:

	Cu. ft. 1900	Cu. ft. 1901	Cu. ft. 1902
Wanev white pine . .	1,440,083	1,253,666	1,815,920
White pine	564,444	558,595	388,600
Red pine	63,780	89,76	71,160
Oak	455,449	488,806	618,680
Elm	676,163	942,372	561,880
Ash	91,701	135,108	76,920
Basswood	241	464	. . . .
Butternut	142	944	. . . .
Tamarac	71	198	. . . .
Birch and Maple. . . .	459,333	307,039	164,300

THE BOSTON MARKET.

Spruce lumber in Boston is firm, with a very fair demand. The provincial mills do not want extensive orders ahead, for the reason that they have so few logs. Quotations are unchanged: Ten and 12-inch dimensions, $21; 9-inch and under, $19; 10 and 12 inch random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9-inch and under, 10 feet and up, $18 to $18.50; 5-inch and up, merchantable boards, $17; matched boards, $18 to $20; out spruce boards, $14; bundle furring, $17.

Hemlock lumber is very steady. The country boards have been pretty well picked up and prices are firmer: Boards, 12, 14 and 16 feet stock, $14.50 to $15.50 for good eastern; Pennsylvania, No. 1, $16 to $17.50; No. 2, $15 to $15.50.

Western pine is still very firm, with the supply short, and tendency upwards, Uppers, 1 to 2 in. $82.50 to $85; 2½ to 3 in. $87 to $38; 4-in. $90; selects, 1 in. $68; 1¼ to 1¾ in. $70; 2-in. $72; 2½ to 3 in. $80; 4 in. $82; fine common, 1-in. $62 to $63; 1¼ to 1½ in. $65; 2-in. $67.50; 2½ to 3 in. $72.50; 4-in. $82.50; barn boards, $23 to $33; coffin boards, $28 to $32.

Hardwood lumber is well sustained, with the market pretty firm: Quartered oak, $66 to $68; plain oak, $42 to $45; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $42 to $43; sap and common, $30 to $35; brown ash, $41 to $44; white ash, $43 to $46; maple, $28 to $30; end-dried white maple, $38 to $42; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

Shingles are well held on the best, but some of the makes could doubtless be shaded: Extra cedar, $3.60 to $3.65; clear, $3 to $3.10; second clear, $2.55; extra No. 1, $1.90 to $2; British Columbia red cedar, 16-inch, five butts to 2 inches, $2.75 to $3.80; 18-inch, $4.25 to $4.50.

Spruce clapboards are in very small supply, with the mills not making them. The market is nominally quoted at: Clear, $40 to $42; second clear, $37 to $39; extra No. 1, $22 to $32.

Laths are firmer, with the supply mainly going to New York and the Sound: One and five-eighths inch, $3.25 to $3.45; 1½ inch, $3 to $3.25.

WANTED

MESSRS JOSEPH OWEN & SONS, Ltd., of Liverpool, Eng., are open to treat for regular supplies of large quantities of HARDWOOD LUMBER, and will be glad to hear from holders who have to offer WHITE ASH, WHITE OAK, SCALY BARK and SECOND GROWTH HICKORY, POPLAR and WALNUT, in logs, planks and boards, also prime fresh BIRCH LOGS of large dimensions.

THE NEWS

—F.E. Griffin has established a lumber yard at Penhold, Alta.

—James Johnson, of Minto, Man., has sold out his lumber business.

—A. Slack & Co., planing mill proprietors, Ottawa, have gone out of business.

—It is the intention of Binkley Bros. to rebuild their saw mill at Neustadt, Ont.

—The Rathbun Company, of Deseronto, are preparing to manufacture box shooks.

—D. Larue, of Pointe aux Trembles, Que., is rebuilding his saw mill and butter factory.

—A. Tait, of Orillia, Ont., intends installing an electric motor in his mill for resawing purposes.

—The Shuswap Shingle and Lumber Company are building a shingle mill near Sicamous, B. C.

—Mr. Philips has commenced work on the building of a new planing mill at Toronto Junction, Ont.

—Goulet, Premont & Premont have registered a partnership as lumbermen at Chateau Richer, Que.

—The Brodhagen Lumber Company, of Brodhagen, Ont., has been incorporated, with a capital of $50,000.

—The new saw and shingle mill of D. & J. Haddon, of Cloverdale, B. C., commenced work last month.

—W. H. Hennings and C.P.D. Dundas have registered proprietors of the Victoria Cooperage, Victoria, B.C.

—It is reported that the South River Lumber Company are preparing to greatly increase the capacity of their saw mill at South River, Ont.

—Conroy Bros., of Aylmer, Que., are about to build a large saw mill at Deschenes. A bonus of $25,000 is being asked for from the town.

—It is the purpose of Trusler Bros., of Trout Creek, Ont., to build a new saw mill on Black Creek, in which they will cut hemlock and pine.

—The Kennedy & Davis Milling Company, of Lindsay, Ont., are building a large addition to their mill and installing a 125 h.p. boiler.

—The Ottawa Board of Works has decided that J.R. Booth must remove by November 1 the lumber piles which encroach on Spruce street.

—The Firstbrook Box Company have completed their new saw mill at Penetanguishene, Ont., which is equipped with a double-cutting band mill.

—C. Lloyd, Son & Company, of Wingham, Ont., have asked the council for a bonus of $6,000 to enable them to extend their plant for the manufacture of doors.

—The Lake of the Woods Milling Company are building a barrel factory at Keewatin, Ont., capable of turning out between 1,000 and 1,500 barrels per day.

—Fred H. Hale's mill at Plaster Rock, N.B., is turning out shingles at the rate of 150,000 a day, while the rotary is cutting 40,000 feet of spruce deals per day.

—The Turner Lumber Company, of Midland, Ont., are preparing to do a large business in the woods this winter. They are building a large warehouse at South River.

—The Muskoka Wood Manufacturing Company are actively at work on their new buildings at Bracebridge, Ont., and will shortly commence to install the machinery.

—John Gillies, lumber manufacturer, Braeside, Ont., has made a proposition to establish a new industry at Kingston, Ont., the nature of which has not been learned.

—The South River Lumber Company are improving and enlarging their mill. They are putting in a circular, band and gang saw, 400 h.p. in boilers and 300 h.p. in engines.

—Haley & Sons, of St. Stephen, N.B., have ordered a band re-saw and other machinery, so as to increase the output of box shooks, for which they find a growing demand.

—N. N. Wright & Company, a Saginaw concern operating in Ontario, with a mill at Cutler, have recently added something like 100,000,000 feet of stumpange to their holdings.

—Jacob Braun, of Ayton, Ont., has secured the contract of making the barrels required by the Wiarton Beet Sugar Company. About 40,000 barrels will be required annually.

—A subscriber asks for information as to the market for latchet blocks used by shoemakers. We would be glad to receive any information from persons familiar with this trade.

—A.H. Dale has purchased the saw mill of S. Stevens at Fort William, Ont. He will make extensive improvements and put in machinery for doing all kinds of sash and door work.

—The new factory of the Georgian Bay Box Shook Mills, of Midland, has been in operation for some time, turning out dressed lumber, box shooks, sash and door frames, mouldings, etc.

—The saw mill pioneer, William Powers, of Midway, B.C., has bought out Bernard Lequime's interest in the Midway Sash and Door Factory and will carry on the business on his own account.

—It is reported that the Hettinger saw mill at Prescott, Mich., which cuts 300,000 feet of pine daily, is to be removed to Georgian Bay district, Canadian side, as the timber in the present locality is nearly exhausted.

—Bay City, Mich., is to have a plant for the manufacture of wood alcohol by a new process, which will use up waste, such as sawdust, shavings and slabs, coming from mills where hardwood lumber is manufactured.

—The Ontario-Slocan Lumber Company, in which J.B. Tudhope, M.P.P., of Orillia, and George Chew, of Midland, are interested, expect to commence the building of their mill at an early date. It will likely be located at Slocan, B.C.

—Keenan Bros., of Owen, Sound, Ont., have secured from the C.P.R. an excellent dock frontage which they will use for receiving and shipping lumber by vessel. They are putting down a siding to accommodate rail shipments.

—It is reported that Theodore Ludgate has not yet given up the intention of building a saw mill at Vancouver, B.C. When in that city recently he inspected several sites, presumably for the purpose of building a mill thereon.

—C. F. Linkmark and C. B. Hume, of Revelstoke, are reported to have purchased a controlling interest in the Big Eddy saw mill on the Columbia river. Under the new management extensive improvements are contemplated.

—The Cedar Valley Improvement Company, of Fernie, B. C., expect to have their large mill completed this month. It will be the largest saw mill plant in the province east of Nelson, having a capacity of over 40,000 feet per day.

—Incorporation has been granted to the St. Gabriel Lumber Company, with a capital of $250,000. The promoters are H. M. Durant, V. E. Mitchell and E. F. Surveyor, of Montreal, and F. P. McManus and L. M. Garrison, of Jersey City.

—We have to acknowledge receipt of a sample bag of Manitoba No. 1 hard wheat from the publishers of the Winnipeg Free Press. This paper has always been a consistent advocate of the great resources of Manitoba and the Territories.

—It is reported that J. G. Woods and other capitalists purpose conducting extensive lumbering operations on the Capilano river in British Columbia. A flume eight miles in length will be constructed for the purpose of getting out the timber.

—The Huron Lumber Company, of Spanish River, Ont., intend installing a modern slash table system in their mill and erecting a burner. They are at present doing contract sawing only for the Spanish River Lumber Company and Pitts & Charlton.

—W. M. Drader, of Chatham, Ont., has been given a contract to supply barrels for the Dresden Sugar Company, at Dresden. The latter company are constructing a cooper shop and barrel plant, and next year will manufacture their own barrels.

—The Saskatchewan Lumber Company has received a Dominion charter. The capital stock is placed at $500,000. The head office is at Prince Albert, N.W.T., and the directors are W. Cowan, J. H. Sanderson and E. H. Moore, of Prince Albert, and Kenneth McDonald and Hector McDonald, of Ottawa.

—The Pigeon River Lumber Company, of Port Arthur, will add new machinery to double the capacity of their mill, making it about 25,000,000 feet, and will arrange to run the year arouud. The company has made contracts with the Duluth, Port Arthur and Western road to bring logs by rail, and the road will put on a daily logging train service from the Whitefish camps. A hot pond will be built and logs will be dumped into it for winter sawing. The company will also add to its equipment a wood-working factory and will go into the sash, door and blind business on a considerable scale.

CASUALTIES.

—A Japanese named Nishimua was seriously injured by being caught in the cog wheels in Heaps & Company's mill at Cedar Cove, B. C.

—A logger named Andrew Anderson was killed in a logging camp at Loughborough Inlet, B. C. He was caught in the chains and carried under the heavy rollers on the skidway, where he was crushed to death.

—George Bushey, an employee of the Saginaw Lumber & Salt Company, of Sandwich, Ont., was seriously injured recently. In some manner the steam cylinder was blown out, a portion of the flying debris hitting him on the head. At last report his recovery was doubtful.

TRADE NOTES.

The Jenckes Machine Company, of Sherbrooke, Que., find that their business has increased to such an extent that larger works are required. They will probably build.

Messrs. Geo. T. Houston & Company, of Chicago, announce the removal of their main office to the Tribune Building, Suite 824 to 830, Eighth Floor, where communications will be received in connection with company business, including their branches, Houston Bros., Cairo, Ill., Memphis, Tenn., Bigbee, Miss., Columbus, Miss., and Vicksburg, Miss.

J. L. Neilson & Company, of Winnipeg, Man., have recently supplied two complete barrel factories for the Ogilvie Flour Mills Company and a barrel factory and two compartment dry kilns for the Lake of the Woods Milling Company, Keewatin. The cooperage machinery was manufactured by the E. & B. Holmes Machinery Company, of Buffalo, and the dry kiln by the American Blower Company, of Detroit.

PERSONAL.

Mr. Charles E. Hamilton, of the Rat Portage Lumber Company, is gradually recovering from the accident which befell him about two months ago. A piece of steel about one-half inch long lodged in one of his eyes while engaged at work on a band saw. An operation was performed in the Winnipeg General Hospital, the steel being extracted, and it is hoped that the sight of the eye may be retained.

Mr. J. E. Murphy, late of Hepworth, is now permanently located at Meaford, where he is connected with the Meaford Manufacturing Company, which manufactures special lines of furniture, tables, etc. It is probable that Mr. Murphy will build a saw mill at Meaford, although he still operates his mill at Murphy, near Owen Sound.

The Lumbermen's Credit Association, of Chicago, in their July Edition of the Red Book, have made several additions and revisions which mark the book as the best yet published. It is the recognized authority on lumber credits.

If you have lumber for sale, the CANADA LUMBERMAN reaches buyers everywhere. You will be convinced of this by placing an announcement in the "Wanted and For Sale Department" of the Weekly Edition. It has been found by many to be a most effective method of finding a buyer.

WOOD PULP DEPARTMENT

EXPORT DUTY ON PULP WOOD.

A resolution was passed at the annual meeting of the Canadian Manufacturers' Association in Halifax last month in favor of an export duty of $4 per cord on pulp wood shipped from Canada. The resolution was adopted for the sole purpose of having our raw material manufactured in Canada. Mr. Eddy, of Hull, declared that Canada was rapidly being robbed of her forest wealth by the exportation of pulp wood to the United States.

It is difficult to secure accurate figures showing the quantity of pulp wood exported to the United States, but one of the best authorities gives it as his opinion that from 60 to 65 per cent. of the pulp used to manufacture paper in the United States is made from timber grown in Canada. Owing to the existing duty on pulp, this percentage is represented very largely by pulp wood, as the quantity of pulp shipped across the border is, in comparison, a mere bagatelle. In the last twelve years there have been exported from Canada between eight and ten million cords of pulp wood, which, when manufactured into pulp, would represent an outlay or an expenditure in cash of from twenty to twenty-five millions of dollars. It is not surprising, therefore, that there is a strong public sentiment in favor of applying to pulp wood a policy which would secure to Canadians the benefits of home manufacture of the raw material. Why should we allow pulp wood to go out of the country free of export duty and give the United States all the advantages accruing from its manufacture, in the place of having this money circulated in Canada?

A tax of $4 a cord would doubtless be prohibitive, as is intended. Pulp wood cannot now be exported from Ontario and British Columbia, but from the other provinces of the Dominion the business of exporting the wood goes on unhampered, except for a discrimination of twenty-five cents in the Province of Quebec, which is really of no effect in preventing exports. Should the Dominion Government fail in its duty to impose an export tax, it will be up to the Provincial Governments to pass a prohibitory law as was done by Ontario and British Columbia.

We are told that the Treasury Department proposes not to recede from its position in imposing an additional duty on pulp as the result of the discrimination by the Province of Quebec against the export of pulp wood to the United States. We were inclined to regard this action as a bluff, but this characteristic cannot fairly be attributed to the Treasury Department, and we must look upon the officials as sincere until evidence to the contrary is produced. It matters little, however, whether this additional duty is imposed or otherwise. If the relations between the two countries should become such that Canadian pulp and pulp wood could not be exported to the United States, one of the ideal conditions will have been reached, as by this means a wonderful stimulus would doubtless be given to the manufacture of paper, and thus the greatest possible benefit would come to Canadians from the manufacture of the raw material. But we do not expect that this condition will be experienced. If a prohibitory export duty should be placed on pulp wood, the paper makers of the United States would bring such pressure to bear upon their Government that no doubt the duty on wood pulp would be taken off entirely. Then capital would be freely invested in this country for the erection of pulp mills and there would be a demand for labor such as we have not yet seen.

With such an abundance of spruce timber admirably suited for the manufacture of pulp, our Government should disregard entirely all retaliatory measures which may be temporarily put into force by the United States, and should legislate solely with a view of building up manufacturing industries within our borders, which can never be accomplished so long as we allow our raw material to furnish the supply for pulp and paper manufacturers in other countries.

THE SEVEN ISLANDS PULP MILL.

The North Shore Power, Railway and Navigation Company, who are building a large pulp mill at Seven Islands, on the St. Lawrence River, have decided to increase the capacity of the mill from 150,000 tons to 250,000 tons, having satisfied themselves that there is a market for the larger output. Messrs. Ross & Holgate, consulting engineers, of Montreal, who were entrusted with the engineering work, have now been given entire charge of the construction work also, the company having found that sufficiently rapid progress was not being made. The engineers have, with much difficulty, secured several hundred workmen, principally Italians, who are living under canvass and have to be supplied not only with food but with every necessary of life, as there is no town or village within reach from which to obtain what is required. Supplies are brought down by boat from Quebec, but at the close of navigation operations must be suspended. It has been decided to locate the mill alongside the water power, which is situated seven miles from Seven Islands Bay, it having been found by calculation that it would be much cheaper to carry the product of the mill by railway to the shipping point than to locate the mill at the Bay and transmit electric power from the Falls with which to operate it. To do this would require a very large expenditure for copper, as a heavy current would be required.

One of the first undertakings, therefore, was the construction of a steam railroad seven miles in length, which pending the completion of the mill, will be used to carry in supplies and afterwards to convey the product of the mill to the shipping point. The company also own another water power, two or three miles farther distant from the water. These two water powers will have a capacity of about 80,000 h. p. It is proposed, at present, to develop 22,000 h. p. at the mill site. There are now under construction at the bay necessary wharves, and a sufficient number of houses will be built near the mill to accommodate 500 operatives and their families. These features of the undertaking are being pushed forward as rapidly as possible. The next to be commenced will be the construction of the dam, but this will probably not be started this year.

Seven Islands Bay is a natural harbor, being almost land-locked and about seven miles in diameter. It provides accommodation for vessels of 30 feet draught and is open all the year. A comparison last winter showed the temperature to be several degrees higher than at Peterboro, Ont.

This bay is 350 miles nearer Great Britain than is Quebec. It is therefore not improbable that it will, in the future, become an important ocean port.

The North Shore Power Company have purchased 1,000 miles of spruce limits in the neighborhood of the mill site. In the same locality are iron deposits giving by analysis 60 per cent. of pure iron. The whole of this northern section of the province of Quebec is believed to be rich in minerals, as well as in timber, and abounds with excellent water powers, so that a great development is looked for within the next decade.

In reporting on the wood pulp market in France, M. A. L. Grondal, of Paris, states that that the demand is slow and prices show a downward tendency.

PULP NOTES.

The Acadia Pulp & Paper Mills Company, of Halifax, N.S., have declared a semi-annual dividend of 3½ per cent., payable September 15th.

The Chicoutimi Pulp Company, of Chicoutimi, Que., are building a large addition to their mills, which will increase their capacity to 27 grinders, capable of turning out 60,000 tons of pulp per annum.

A report has been going the rounds of the press that J. C. Kelly, of Ottawa, has under way the organization of an immense paper combine, to include eleven of the largest paper mills in England, with over $25,000,000 capital. Rumor states that large pulp and paper mills will be erected on the Ottawa river.

Mr. D. Lorne McGibbon, manager of the Laurentide Pulp Company, of Grand Mere, Que., states that the exports of pulp from Canada will be smaller this year than for some time, owing to the fact that last year low water curtailed the production in Norway and Sweden, a condition which has not been experienced this year.

A new pulp company will probably locate at North Bay. Recently Messrs. Warren and Gray, of Toronto, and Labrocke, of Philadelphia, discussed the project with members of the town council. For certain privileges, including exemption from taxation, they promised to expend $250,000 within the next twelve months and pay out $200,000 yearly in wages.

A Swedish chemist is now in Canada superintending the erection of a plant to manufacture peat fuel. In working up the by-products he proposes to produce a fibre for paper making. From this fibre he says that he has made in England a paper that cost £2 10s. per ton and that sold at £6 a ton. He also says that using 80 per cent. of peat, with other paper making materials, he can produce news and writing papers.

The British market, says Paper and Pulp, continues depressed, and mechanical is now freely offered at 40s per ton c.i.f. U.K. ports (50 per cent. moist.) Papermakers would do well to contract at this price, as a rise in price during the winter and spring months is inevitable. Chemical pulps are also very low at present, and contracts have been closed for next year at prices very favorable to papermakers.

Mr. George Cahoon, jr., for many years a director of the Glen Falls Paper Company at Glen Falls, N. Y., and one of the division superintendents of the International Paper Company, has been appointed vice-president and managing-director of the Laurentide Pulp Company, of Grand Mere, Que. It is understood that Mr. Cahoon will have entire control of the manufacturing end of the business. He is recognized as one of the ablest paper manufacturers on the continent, and is stated to have acquired a substantial interest in the stock of the Laurentide Pulp Company.

The Ottawa & Hull Power Company have decided to build their proposed paper and pulp mills on the Quebec side of the Chaudiere. William Kennedy, of Montreal, is now working on plans for the development of the power, and plans of buildings and machinery are in course of preparation. The J. R. Booth mill be erected about a quarter of a mile from the site of the Hull & Ottawa Company's mill. Mr. Booth has given the contract for water wheels and accessories to the Jenckes Machine Company, of Sherbrooke, Que. It will total 10,000 horse-power.

At the annual meeting of the French Papermakers, Association held at Paris last month, one of the members complained of the French customs authorities, who persisted in levying the tax of 20 francs per ton on all wood pulp imported, irrespective of whether it were dry or most. In the case of moist pulps the duty is of course levied on the contained water as well as on the pulp, so that the actual duty on the latter is 40 francs per ton. It was suggested that, even if no distinction were made in this direction, mechanical pulps should be taxed at a much lower rate, say 10 francs per ton for dry and 5 francs for moist.

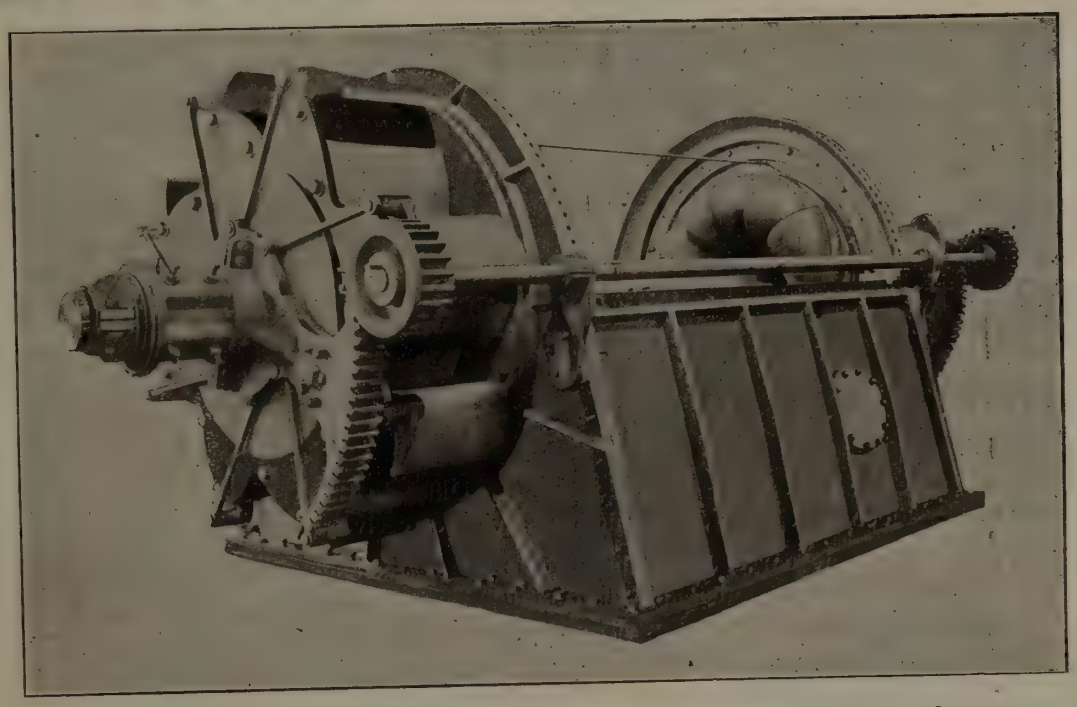
OPEN FLUME TURBINE PLANTS

For use under moderate heads where local conditions permit its adoption, there is probably no more satisfactory setting for horizontal wheels in pairs than the draft chest with central discharge, placed in an open flume.

The first cost is moderate.

The flow of water is unobstructed and ample, and as a result speed regulation is easy.



Direct connection to Pulp Grinders or other machinery may be arranged with facility.

Wheels are readily removed and replaced.

We have several styles of cases for use in open flumes, either steel plate or cast iron construction as may be required, or cast iron sides with steel plate top as shown in the engraving.

Pair of 35 Inch Wheels, Mounted on Draft Chest with Top Removed.

We are now engaged in building a 10,000 H.P. Wheel Plant, each pair of wheels being of the general type shown above, arranged for direct connection to Wood Pulp Grinders. Send us particulars for estimate, or write for catalogue and information.

THE DOUGLAS FIR.

What the white pine is to Eastern Canada the Douglas Fir is to the Province of British Columbia, where magnificent forests of this tree still tower in majestic grandeur, reaching a height of two hundred or even three hundred feet. In such a forest, as in the shadow of the mountains, man begins to realize the great forces of nature which are working around him, and in his breast there rises that feeling of awe and reverence which must have influenced the worshippers of an earlier day when they chose the forests as the temple of their gods. Look up, and still further up, and still the great tree towers till the eyes are strained in vain seeking to measure its height. Think of the power of unwearied effort by which little by little, from the diminutive seedling, such an immense column has been raised, and think of the pulsating life by force of which the water needful for its existence is carried through all that height of trunk and spread of branch; and man, be he Christian, or pagan or unbeliever, must recognize that he is here in the presence of one of the greatest manifestations of that mystery of power which he may designate life, but which he does not therefore any the more clearly understand.

This tree is known most generally in Canada as the Douglas Fir, though it is also designated as the Red Fir and the Oregon Pine. The botanical name is Pseudotsuga Douglasii, or Pseudotsuga taxifolia, though the uncertainty about its classification before this name was settled upon may be seen from the other scientific names which have been applied to it, namely, Pinus taxifolia, Pinus Douglasii, Abies mucronata, Abies Douglasii. The generic name is derived from pseudo, false, and tsuga, hemlock, and the first specific name from that of the man who first described it and introduced it into Europe, while the second is from taxus, yew, and folium, a leaf. The flat leaves are scattered over the twigs, but they have this special character which distinguishes this tree, that they are set with the edges up and down instead of with the flat side uppermost as usual. It reaches its best development in the coast district, though it is found all through the southern part of British Columbia up to a height of 6,000 feet, where it appears in a stunted form. It passes over the Rockies as far east as the vicinity of Calgary. Its northern range is irregular and still somewhat uncertain. The great size of the trees is shown by the fact that as much as 500,000 feet have been cut from one acre, while the average is from 30,000 feet to 50,000 feet, although only the trees between two and seven feet in diameter are usually cut. The bark is largely used for tanning, and the wood is suitable for a great variety of purposes, such as house building, ship building, bridges, wharves, piles, masts, furniture, fencing, etc. When excluded from the air it is very durable, and is therefore useful for piles, and the great length of the timbers which can be obtained makes it specially valuable for bride building and similar purposes.

In the districts of British Columbia, where the winter is like that of the East, the logging is somewhat similar, but in the part where lumbering in Douglas fir is most important snow is unknown and winter unheard of. The usual method of cutting is for the axeman to cut a deep notch on each side of the tree at a height which can be conveniently reached. In these notches pieces of board, long and wide enough for standing room, with an iron prong pointing upward, are inserted. The weight of the men on the boards drives the prong into the wood and makes everything firm. From this vantage place a cut is made by the axe in the side of the tree to which it is to fall and the remainder of the cutting is done with a crosscut saw. The object of leaving so high a stump is apparently to get above the swell of the root. It will be easily understood that the felling of a tree two hundred feet in height is a difficult operation, and if not carefully handled may result in great damage to the timber either from splitting or from the impact of the fall. If the tree is growing on a slope it is usually felled upward, and in other cases it is felled so as to have the force of the fall broken by trees of inferior value, and sometimes even an artificial bed of branches is prepared. If long timber is not required the log is cut in lengths from twenty-four to forty feet, the bark is cut off or "rossed" so that the pieces will slip easily, and they are drawn over a skidway prepared by laying across the road at distances of a few feet round logs of a diameter up to fourteen inches. The skidway is sometimes made more slippery by greasing the logs. The motive power may be oxen or horses in teams of a dozen or more, the oxen being now largely superseded by the quicker-stepping horses, or it may be by a stationary engine working a cable on a drum, or even a steam tramway may be run into the scene of operations. Logs of such great diameter are not easily sawn, and at first the work was done by two circular saws, one working from above and the other from below, a method which required a very nice adjustment of the saws. Since the introduction of the band saw it has taken the place of the older method. The proximity of the good timber to the coast gives great facilities for shipping.

With such magnificent forests it might easily be concluded that the lumber industry in British Columbia should be in a flourishing condition. The want of a market is, however, a great difficulty. The local population is small, the North-West Territories are not yet sufficiently populated to make a large demand, the market to the south is practically closed by a heavy duty on lumber, and the shipping facilities for Australia and the far East are not sufficient as yet to make the business very extensive in competition with the American West Coast timber. Within the last few years conditions have commenced to show signs of improvement, but the average price last year was only about $10 a thousand.

*Contributed by the Officers of the Canadian Forestry Association.

DOUBLE CUTTING BAND SAWS.

By N. E. Huff.

Commence with the band mill and line bottom wheel with track, no lead either way; then put top wheel in line with bottom, no crossline or overhang. The face of wheels shonld have a very slight and true crown from edge to edge. This done, commence with saws and see that they are straight, no long or short back. Commence in the extreme center of blade and open them just deep enough to fit nicely over the crown of wheels and have them hug the wheel the hardest, or the most strain, at the extreme edges of the face, with a gradual decrease in strain from each edge towards the center. This done, put saw on top of bench and level on inside of same that part of saw which is lying on leveling slab by going over it with straight edge reaching across full width of saw, and level it down so that the most light shows under straight edge in center of blade (where tension is deepest), with a gradual decrease towards the edges, until you come to the tires, which should not show any light under the straight edge. After which again go over this section with straight edge, first on one edge of saw, then on the other, by holding straight edge say ⅔ the way across the blade, looking for and hammering down any small

To the Lumber Trade:

Tribune Building, CHICAGO, August 26th, 1902.

We beg to announce the removal of our Chicago Main Office to the Tribune Building, Suite 824-825-826-827-828-829 and 830, Eighth Floor, where all communications will be received in connection with company business.

In the future we will devote our entire facilities to meet the demands of the wholesale car lot trade, and with our present branches, including mills and distributing yards, Houston Bros., Cairo, Ill., Memphis, Tenn., Bigbee, Miss., Columbus, Miss., and Vicksburg, Miss., give us mill capacities and stocks on hand which enable us to quote interesting prices on all kinds of Hardwood Lumber, Yellow Pine and Cypress, Export Stock, Car Material, Railroad Ties and Piling. Besides our own large resources we also handle the product of several large southern mills, making all shipments direct to our customers on a very satisfactory basis. We solicit correspondence in either buying or selling in a wholesale way of all kinds of lumber you produce or consume.

Yours respectfully,

GEO. T. HOUSTON & CO.

lumps which may appear on the particular edge and which you were unable to locate when holding the straight edge across the entire width of saw. When holding the straight edge ⅔ the way across the blade, the light should not show as deep under it as when holding it across entire width of blade, because when holding it across entire width of blade, both ends or straight edge are resting on the two tires or thickest part of saw, and when holding only two-thirds the way across the blade only one end of straight edge is resting on the tension or thin part of saw. In like manner go over the entire inside of saw, after which put it down on the bench "on the bottom" and go over the outside of saw in the same manner as with the inside, always bearing in mind how much light showed under the straight edge when you were leveling the inside and trying to equalize same when leveling the outside of saw, being especially careful to have no light show under straight edge on either side of saw from where the tension terminates at the edges. If you are not satisfied that you have the saw sufficiently level to insure its doing good work after going over each side, repeat the operation until you are satisfied.

The most important part of bench work is to have saws level. For this work I have a cast iron leveling slab about 3x12 inches by 6 feet. This slab has a perfectly straight and level face, both lengthwise and crosswise, and forms a part of my bench. I use a 14-inch straight edge to level by, which I am very particular to see is straight at all times.

When do I put the tension in a saw, or go over it to equalize the tension? Answer, after leveling my saw on the inside the entire length and while leveling the outside. I level a section on the outside and then try the tension gauge on that section. If any tight places appear, I roll them out, after which I again try my straight edge to that particular part, to see if in putting in the tension my roller has punched through or pulled up that particular part of saw rolled on. If pulled up, I again level and try tension; if punched through, I mark saw with chalk on the other side at that place, so I may know the cause of lump when I come to level on the other side again, which I would certainly have to do.

I have had men tell me it was not the fault of the roller that the saw was punched through or pulled up. To others of the same opinion I would advise them to try a saw on a roller which has a top roller with a more crowning face than the bottom, and see if the saw is not pushed through, or with the rollers vice versa, and also notice if the saw is not pulled up. I have my saw lying perfectly flat on the bench (the bench is in perfect line with the top face of bottom roller) when rolling in tension

In sharpening, a single cut sharpener equipped R and L hand is preferable to use of two separate sharpeners, for by using the same machine for sharpening each edge of saw, you are certain to obtain the same shape and hook in the teeth on each edge, consequently both edges, if properly gone over on the bench, ought to stand the same amount of feed. Moreover, in such case your swage will swage alike the teeth on both edges of saw. Always go over a newly swaged saw with a set gauge, making sure that the teeth are all perfectly straight.—From Baldwin, Tuthill & Bolton's Catalogue.

To Those Who Carry Insurance on Lumber

You are compelled to pay more for your insurance to-day than a year ago. This is particularly true in Canada where rates have been abnormally increased by Tarriff Association Companies. It is our business to insure nothing but lumber. We study the advantages offered by each risk submitted and accept only the best moral and physical hazards. Thus by carrying only selected risks we can offer lower rates. We are saving money for hundreds of lumber dealers. Why not let us take care of from $1,000 to $20,000 of your insurance?

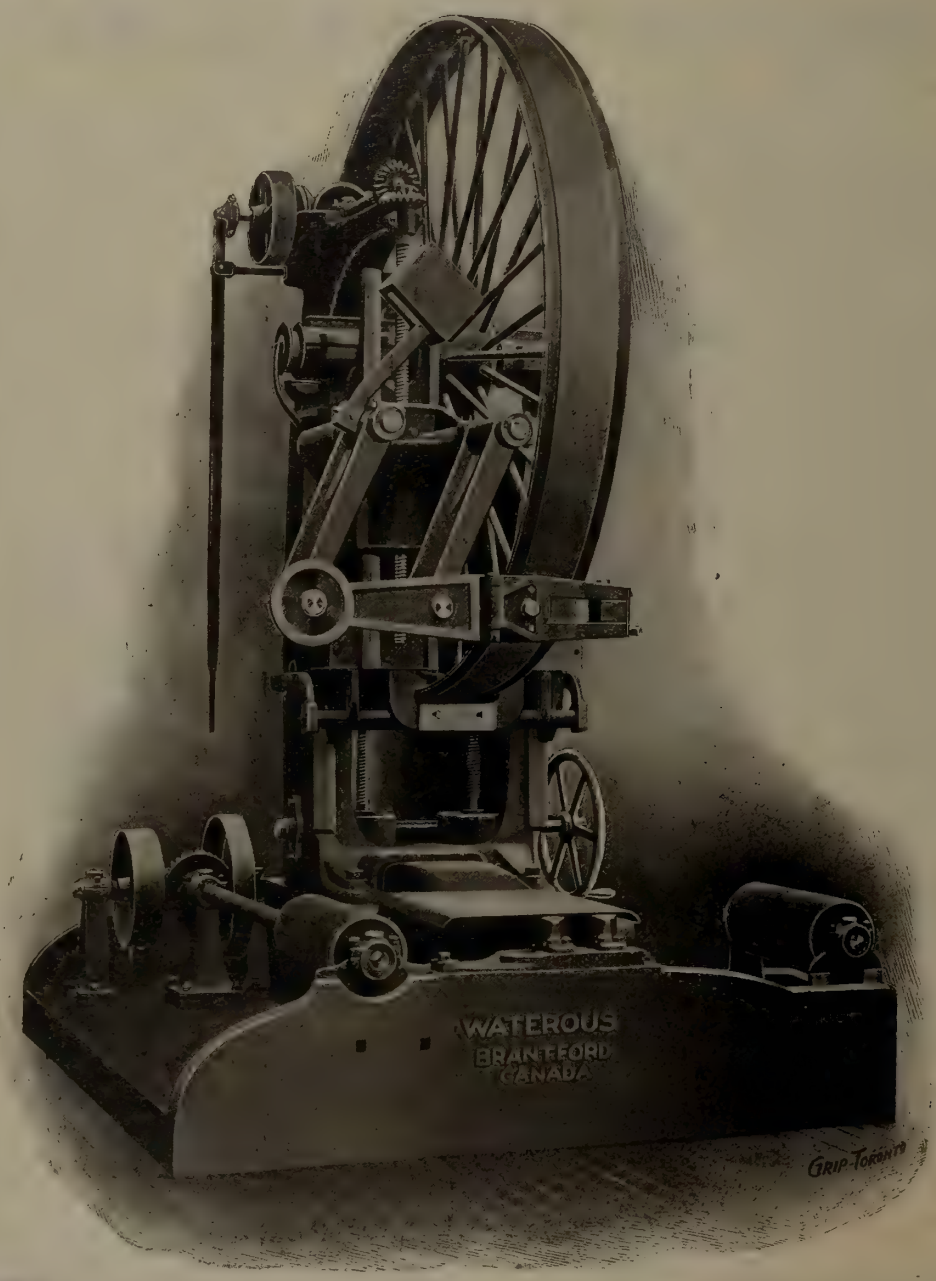
R. H. SMITH CO., Limited, St. Catharines, Ont.

OPEN YOUR VAULTS AND LET THE MONEY ROLL IN.



The Key to your Safe and a Steady Stream of Profits is the Allis Double Cutting Band Mill

That's because it will increase your output 30 to 40 per cent. without increasing your expenses of operation, thus furnishing a **net gain** in your **profits** of at least **one-third.**

The Allis Double Cutting Band Mill will actually put out from 30 to 40 per cent. **more** lumber than a single mill and will use **no more men** or require **no greater expense** of operation than a single mill.

For example—If your profits on your single band mill are $75 a day now, the Allis double cutting attachment will increase them to $100 a day. It requires no deep reasoning to see what a steady stream of profits the Allis Double Cutting Band Mill will turn your way. The double cutting attachment can be put on any Allis Single Band Mill without great expense and on new equipment it would be well for every mill proprietor to consider the actual net profits which will come from the use of the Allis Double Cutting Band.

We shall be pleased to take up the subject of the Allis Double Cutting Band with anyone wishing to increase their net profits either from its addition to an Allis Single Band or for new equipment.

Let us tell you too—about our Steam Set—how your profits can still be increased by 10 per cent. and save wear on men's lives.

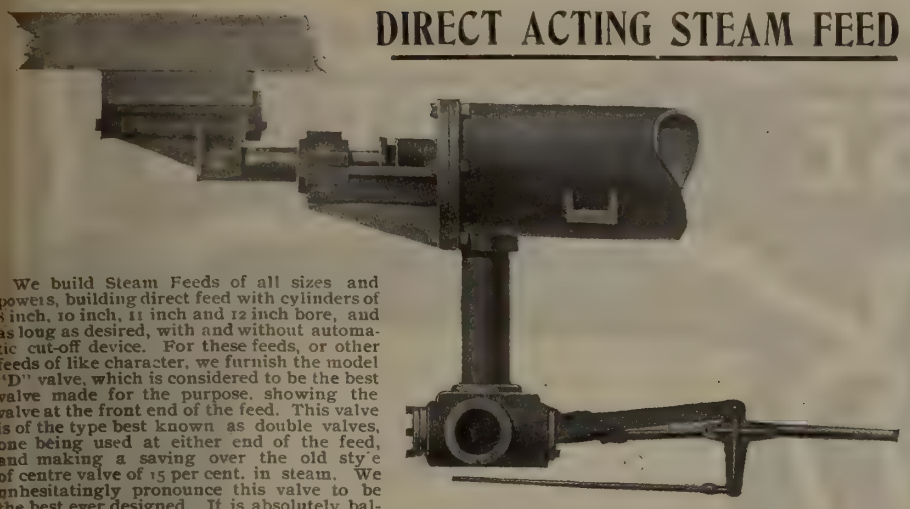
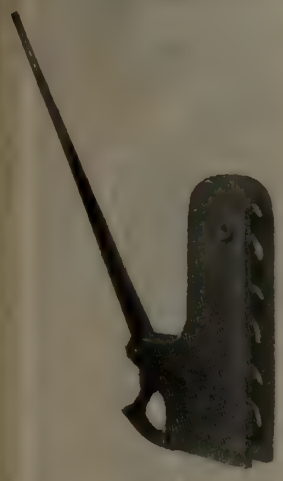
DIRECT ACTING STEAM FEED



We build Steam Feeds of all sizes and powers, building direct feed with cylinders of 8 inch, 10 inch, 11 inch and 12 inch bore, and as long as desired, with and without automatic cut-off device. For these feeds, or other feeds of like character, we furnish the model "D" valve, which is considered to be the best valve made for the purpose, showing the valve at the front end of the feed. This valve is of the type best known as double valves, one being used at either end of the feed, and making a saving over the old style of centre valve of 15 per cent. in steam. We unhesitatingly pronounce this valve to be the best ever designed. It is absolutely balanced, does not stick or kick, has larger steam openings than any other valve made for corresponding sizes of pipe, is economical in the use of steam, and handles the largest and longest feeds, under any pressure, with perfect ease and accuracy. We have also designed a new style of stuffing box which is a great saving in packing, and has an outer support, and is fitted with an oil well, filled with felt or waste which keeps the piston thoroughly lubricated.

Improved Double-Tooth or Boss Dogs



The accompanying cuts fully illustrate our Improved Double-Tooth Dogs with inserted teeth, making the teeth themselves of the finest tool steel. This allows them to be drawn to a slender point that will penetrate without crowding the log or board away from the carriage. The teeth in case of bending or breaking can be replaced in a few moments, and without having to take the whole dog case apart — an operation requiring an hour or more.

These Double-Tooth Dogs are controlled by a wrought iron lever that can be bent to suit the operator, and this lever is held by a spring, positively in or out, so that there is no danger of the Dogs pushing out toward the saw. This method of holding the dogs has the merit of being permanent, the ordinary light pawls and connections commonly furnished for this purpose generally lasting but for a few days. Our latest improved carriages are fitted with these dogs.

THE DODGE MFG. CO.,
Toronto, Ont.
Gentlemen,—We beg to say that the Split Friction Clutch Pulley which you furnished this Company is working to our entire satisfaction, and it is with pleasure that we recommend it to any person requiring pulleys of this description.
Yours truly,
[Signed] The WILSON CARBIDE WORKS CO. OF ST. CATHARINES, LIMITED.
THE DODGE MFG. CO., LIMITED.
Toronto.
Gentlemen.—In reply to yours of the 26th ult., we would say the Dodge Friction Pulleys are by far the best we have ever used. The large Friction on five-inch shaft has been in constant use this summer.
Yours truly,
[Signed] JNO. FISHER & SON.
(Dundas Paper Mills.)

In figuring the cost of a clutch the cost of putting up and of repairment to the working parts must be taken into consideration.

In many clutches this expense amounts to more than the original cost.

In the Dodge Split friction clutch this expense is very nominal.

The Dodge can not only be erected at a less expense than any solid clutch but its subsequent cost for repairs has been found to be one-quarter the cost of a solid clutch.

It is the ideal friction clutch.

It is perfect in balance, easy to erect and adjust, and its friction is positive.

No better clutch has ever been made.

We are willing to demonstrate this to any purchaser and to show many indorsements of it other than the two shown above.

Let us send you the booklet descriptive of this perfect clutch, as well as the booklet "How good people speak of it."

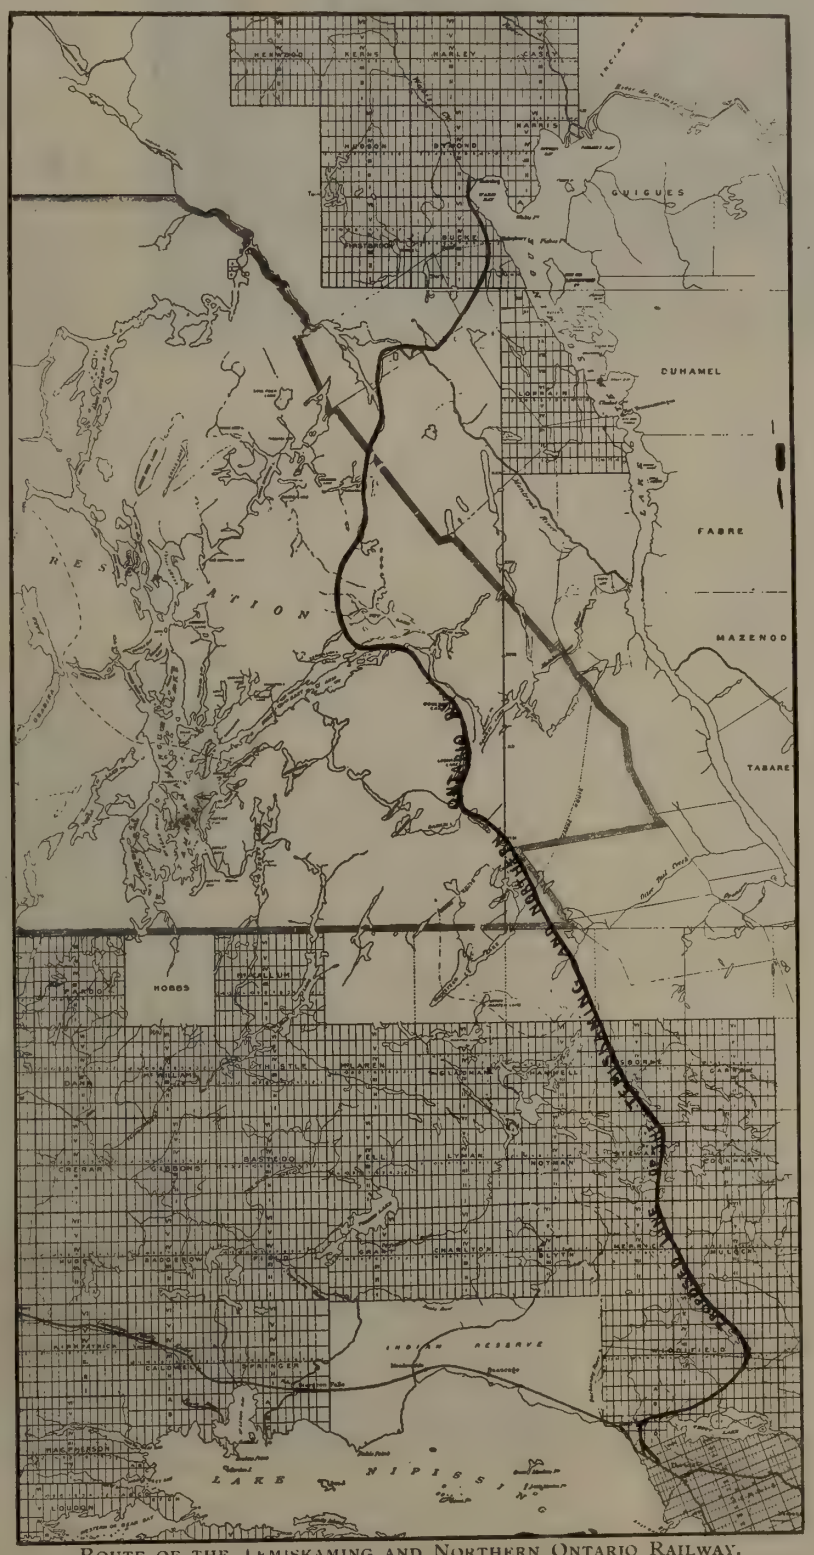
TORONTO, CANADA, NOVEMBER, 1902

TERMS, $1.00 PER YEAR
SINGLE COPIES, 10 CENTS

THE TEMISKAMING AND NORTHERN ONTARIO RAILWAY.

Within the past month the Commission appointed by the Ontario Government has awarded the contract for the construction of the Temiskaming and Northern Ontario Railway, an undertaking of great interest to lumbermen and to the public generally. The successful tenderer is Mr. A. R. Macdonell, of Glengarry, who has been engaged in railway construction for a number of years. The portion of the road now placed under contract will extend from North Bay to New Liskeard, a point on Lake Temiskaming distant about 110 miles. The contract is for clearing the right of way, bridging, grading, ballasting and track-laying. It does not include the building of a telegraph line nor the erection of stations. The Commission will furnish the steel rails, which will be 80 pounds to the yard, the fastenings for the same and the steel superstructure for the bridge over the Montreal river. The timber along the right of way is to be manufactured by the contractor into ties, culvert timber, fence posts and telegraph poles, but as there will not be sufficient timber along the right of way for this purpose, a separate contract will be entered into for probably 200,000 ties, which will be sufficient for the first 60 miles of road which are to be completed by the end of next year.

For almost the entire distance the road will pass through an essentially white pine forest, practically none of which has been placed under license. In addition to white pine, however, there is a considerable quantity of spruce, balsam and hardwoods, the latter chiefly birch and maple. About 40 miles from its southern terminus the road will enter the Temagami forest reserve, passing directly through the reserve and reaching what is known as the Temiskaming Land Settlement. Recently there has been a very rapid settlement of this region, until the surveyed land is now largely taken up. The timber in the Temiskaming settlement is varied in character, although spruce predominates. It provides the chief source of revenue for settlers while clearing their lands. It is estimated that the settlers in this district last year disposed of spruce, tamarac and cedar to the value of $80,000. The E. B. Eddy Company, of Hull, is reported to have purchased 14,000 cords of pulp wood at an average value of $2.25 per cord, the other timber going principally to J. R. Booth. This was apart entirely from the operations of lumbermen in the vicinity. It may be explained that two or three townships in the Temiskaming district are under timber license to Ottawa Valley lumbermen, who have operated thereon for some years past.



ROUTE OF THE TEMISKAMING AND NORTHERN ONTARIO RAILWAY.

Eventually, of course, the road will be extended beyond the height of land, where the great spruce territory is reached. A preliminary report by T. B. Speight's surveying party states that in the country between Lake Temiskaming and the Abitibi river spruce and poplar were found in abundance. A few miles north of the Black river, north of the height of land, a clay belt was met with, the timber on which was chiefly spruce and poplar, averaging 12 to 14 inches in diameter, but many of the poplars were 20 inches. Balsam, balm of gilead, and white birch were also found in some quantity.

The Commission is understood to be considering the relative advantages of operating the railway by electricity and by steam. It is claimed that, in view of the danger of forest fires resulting from locomotives, the government should adopt electricity. Persons who are familiar with the territory through which the road will pass doubt the practicability of the employment of electricity and state that the location of the road is not the most advantageous for operotion in this manner, as it would be necessary to transmit the power a considerable distance. There is no doubt but that every precaution should and will be taken to protect the forests from fire. South of the Land Settlement timber limits extending back five miles from the shore of Lake Temiskaming have been operated for many years, and some of these limits recently changed hands at large figures.

To what extent forest fires are caused by steam locomotives is a debatable question. It is contended in some quarters that steam locomotives carefully screened and kept in proper condition afford little danger of fire. The Canada Atlantic Railway, for isntance, runs two hundred miles through a heavily wooded country, and we are informed that during the last six or seven years no fires of any consequence have been attributed to the railway.

A protection which will doubtless be taken with the new line is the clearing of land on each side of the railway for a distance of about 200 feet. The employment of fire rangers should also be resorted to, and as for some distance the road will pass through the Temagami reserve, which is well patrolled by a staff of fire rangers, we have an assurance that the matter of protection from fire will receive that consideration which it deserves.

The Wiarton Lumber Company are rebuilding their mill at Barrow Bay, Ont., which was recently destroyed by fire.

LOGGING METHODS IN BRITISH COLUMBIA

The methods employed in logging operations in British Columbia differ in many respects from those in vogue in Eastern Canada. While horses are employed almost exclusively in the east for hauling the logs in the woods, in British Columbia steam engines perform this duty to a large extent. By request, we give some particulars regarding the logging engines used for this purpose.

10 x 12 DOUBLE DRUM LOGGING ENGINE AS USED IN BRITISH COLUMBIA.

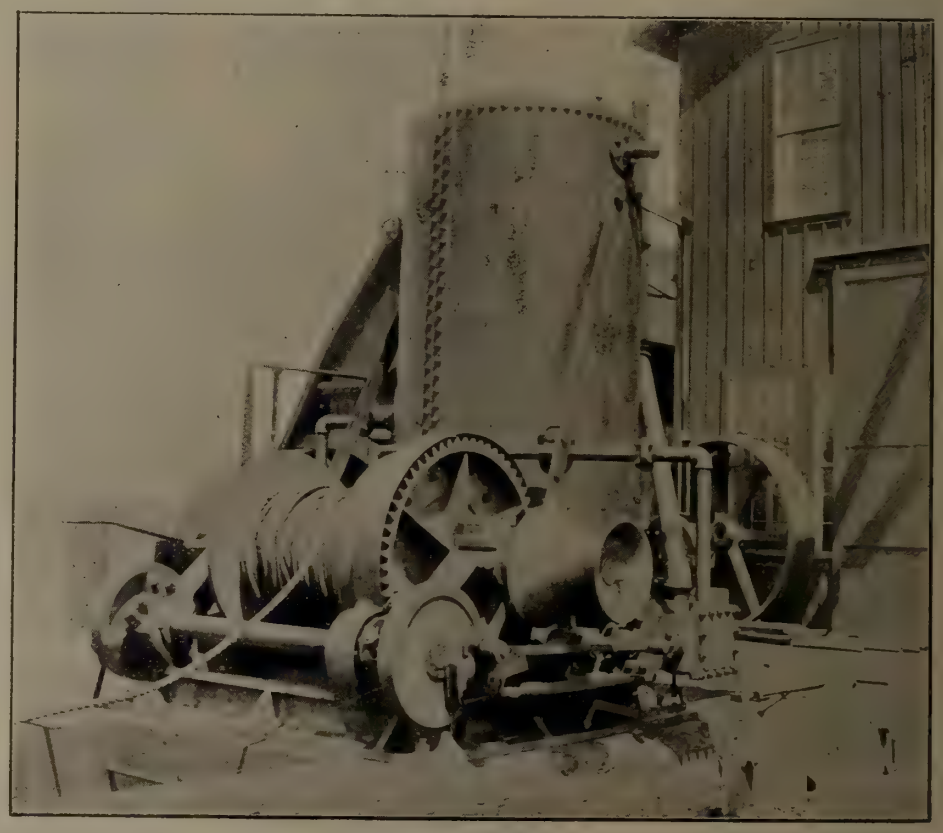
The logging engines which are generally used in British Columbia are operated by steam, and are fastened on to a big sleigh moved about in the woods wherever required under their own steam.

There are two kinds of logging engines. One is called the yarding engine, which is generally put on the main skid road and hauls the trees and logs as they are cut from the bush out onto the main road. The engine hauls the logs out of the woods without making any road for them. For yarding it is customary to use a single drum engine having about 7x10 cylinders, the cylinder usually making six revolutions for one of the drum. In yarding it is not considered advantageous to haul more than 600 feet; it is found to be more profitable to keep the roads up close to the main road.

The engine is bolted on to a sleigh, made of two runners about 18 inches x 24 inches, usually 30 feet long. It is moved through the woods by running out the rope and fastening it to a tree and thus hauling itself up. The 7x 10 engine is worth about $1,500; 7/8 wire rope is worth about 15 cents per foot, and the blocks are worth about $20 each.

The other engine is called a road engine and is used for hauling the logs on the main skid road down to the water. It is usually much larger than the yarding engine, with two drums instead of one. The second drum is for the haul back. There is a block made fast at the back end of the haul, one-half inch rope being run through it, and when the load is at the landing the top drum is put in motion and the main line is taken back to the woods. The line used is usually of one inch. An engine of this kind will haul a distance of one mile very satisfactory, but it is doubtful whether it is profitable to haul a longer distance. This engine is capable of hauling 10,000 feet of logs at a time. The price of the road engine varies according to the weight and size from $2,200 to $3,000.

The timber in British Columbia being so heavy and large, difficulty was found at first in getting the engine stong enough, and consequently the operators who first started to use them had considerable trouble on account of breakages. The manufacturers have since studied the difficulties which were experienced by the loggers, and the machines are now giving splendid satisfaction, and taking the place of horses almost altogether.



9 x 10 SINGLE DRUM LOGGING ENGINE AS USED IN BRITISH COLUMBIA.

Logging engines are manufactured by several Canadian firms, including the William Hamilton Manufacturing Company, of Peterboro, Ont., and the Albion Iron Works Company, of Vancouver, B.C. In sending use the photographs from which the accompanying illustrations were made the Albion Iron Works Company say :

"We are manufacturing here at the present time a 10" x 12" double cylinder log hauler with main haul drum and haul back drum; this machine is specially built for roading purposes and contains one mile of 1-inch cable. We are also manufacturing two yarding engines — one double drum 9" x 10" cylinders, the other single drum 9 x 10" cylinders; these machines are capable of handling from half to three-quarters of a mile of 7/8 inch cable. The single drum machine is worth $1,650; the double drum 9" x 10" $2,300, and the double drum 10" x 12" roading engine $3,000."

THE VICTORIA LUMBER AND MANUFACTURING COMPANY'S METHODS.

Modern methods of logging are employed by the Victoria Lumber and Manufacturing Company, of Chemainus, B.C., the following particulars of which will doubtless be of interest.

Having purchased from Henry Croft and his associates the small mill and mill site then at Chemainus, soon after the Esquima't & Nanaimo railway land grant was made, the Chemainus Lumber & Manufacturing Company entered into negotiations with the E. & N. Ry. Co. for the purchase of all the timber lands contained in their grant. Numerous parties of expert cruisers were at once put in the field, and the E. & N. railway lands from the Koksilah river on the south to the 50th parallel on the north, were thoroughly cruised, and all the lands suitable for logging and containing timber were selected, and purchased by the company. These lands were not taken up in sections or blocks, but the lines were run just around the timber, taking in no land but what was suitable for logging. The result of such thorough cruising, and the manner in which the lands were selected, is that this company now own one hundred and sixteen thousand acres of the best tim-

ber lands on the Island. This timber lies along the Koksilah and Cowichan rivers, Chemainus river, Nanaimo river, Cameron lake, Comox lake, Campbell river, and other streams and waterways.

A large body of the timber lies adjacent to Chemainus, and into this tract the company have built a standard gauge, well ballasted road, extending from the head of Horse Shoe bay, in a northwesterly direction. This road is about nine miles long, and is now abreast of Ladysmith, and will be extended as the timber becomes cut off. The company do their own logging, and have a large and up-to-date plant in the woods, their power consisting of 12 large donkey engines, two geared locomotives, and one direct connected locomotive on their main line.

In the camps of the V. L. & M. Co. can be seen the latest methods of logging with steam power. Their method is as follows: A cruiser goes out through the woods, noting the lay of the land, the quality of the timber, and how it will have to come out. The cruiser is followed by an engineer, who runs the lines through the timber, taking elevations, etc.; when a suitable route is found the main line is surveyed, graded, and track laid. This main line is built for a distance of two or three miles up into the timber, and from it spurs are built from either side, reaching from the main line to the boundary of the company's land on either side. Where the grades on these spurs permit, the logs are handled on cars down to the main line, in which case landings are built at intervals along the spurs. The tops of these landings are just level with the bunks on the logging trucks. As soon as the spurs are graded, and while the rails are being laid and the landings built, the fallers come in, falling the timber that is to come in over that spur. These are followed by the buckers, who cut the fallen trees up into logs of suitable lengths, then the swampers clear out and get everything ready for hauling. When the landing is completed one of the large donkey engines is brought and placed on one end of the landing securely anchored to convenient trees or stumps; the end of the steel wire rope is taken by a line horse, hauled into the woods, one end of the rope is attached to the log, the signal is given and the log is hauled onto the landing, where it is taken in charge by the loaders, who, using the donkey engine, load it onto the cars. This operation is repeated over and over, until perhaps a radius of 500 or 600 feet is cleared of logs around the landing.

In some cases the lay of the land will not permit of the engines on the landing reaching out far enough to pick up all the timber laying adjacent to the landing, in which case skid roads are built out into the timber, reaching from the landing for perhaps 2,000 to 5,000 feet. At the end of this skid road an engine is stationed, which hauls the logs onto the skid road; the end of the rope attached to the engine on the landing is hauled out to the end of the skid road by means of a haul back line, the rope is atttached to the logs hauled in by the yarding donkey, which are made up into a turn of 10 or 15 logs, coupled together by dogs, a signal is given, and the engine on the landing hauls the logs in on to the landing, where they are loaded onto the cars.

In event of the grade on the spur being too steep for the operation of cars, another system, called "trailing," is used. The ties in the middle of the track are covered with two inch plank, side pieces of 6x6 are placed just inside of each rail, donkey engines are placed at intervals along the road; they haul the logs out of the woods to alongside the road, a geared locomotive starting at the far end of the road takes charge of the logs, which are rolled into the centre of the track, dogged together, and hauled along on the plank between the rails; as the engine passes each donkey the logs they have ready are rolled into the track and attached to the turn; these are finally dragged down to a landing on the main road, where they are loaded onto cars.

The company are using a 25 ton "Climax" geared locomtive, trailing over about two miles of road, which runs up and along the side of Mount Brenton.

For collecting the loaded cars from the different landings, spotting the empties, and making up trains, they use a 40 ton "Shay" engine; when this engine has the train made up it is taken in charge by a 60 ton consolidated, eight driver, locomotive, and hauled down to the unloading wharf at the head of Horse Shoe bay, where by means of a crane and a donkey engine the logs are quickly unloaded into the salt water, and are later taken over to the mill. The company employ from 80 to 120 men in the woods, and run their camps all the year around.

The loading of lumber is also done by modern appliances. After the lumber comes from the mill, that which is intended for the different vessels then loading is placed opposite their berths on the dock. The loading of the vessels is done by The Victoria & Vancouver Stevedoring and Contracting Co., Ltd. Most of the loading is done by steam power. A donkey engine on a scow being fastened alongside the vessel, a wire fall is run from the donkey down into the ship's hold, through one of the hatches, whence it is taken out through the ports onto the deck. A chute is laid from the edge of the dock to the ports. The lumber is built into small piles, called loads, on the dock, the wire fall is attached, and it is hauled into the hold of the vessel by means of the donkey engine. The lumber is then stowed solidly into the vessel by expert lumbermen, who have probably spent the best part of their lives working at the stowing of vessels with lumber cargoes. From 30 to 50 men are constantly employed loading vessels at Chemainus.

DRYING BEECH LUMBER.

A subscriber desires to learn of a satisfactory method of drying beech lumber with the least amount of checking. We would be glad to hear from persons who have had any experience in the drying of this class of lumber and to receive suggestions as to the best method. It has been suggested that the crossers upon which the lumber is piled be placed right at the end of the board, but we are not certain that this would prevent checking.

RULES FOR MEASURING LOGS.

We have been asked to give some information as to the customary methods of measuring saw-logs. There are in this country and the United States two recognized rules, known as Scribner's and Doyle's. Scribner's rule is not used very largely, the one in common use being Doyle's, which has been adopted as the standard rule by the Ontario government. The calculation of Doyle's rule is as follows: From the mean diameter of the log inside the bark subtract 4; square one-fourth of the remainder and multiply the product by the length of the log in feet. The result will be the number of feet board measure.

Scribner's rule is made up according to diagrams. On small logs it gives a greater quantity and on large logs a smaller quantity than Doyle's rule. On logs averaging 100 feet per log it is calculated to allow 15 feet per log more than Doyle's rule.

Taking a 16-foot log, it will be found that Scribner's rule gives more than Doyle's on logs up to 28 inches in diameter, and that Doyle's rule gives the greater quantity on logs of larger size. In the case of very large logs the difference between the two rules is considerable, being 208 feet on a log 16 feet long and 4 feet in diameter.

In addition to Scribner's and Doyle's, there are several other rules used to some extent, one being a combination of the above two rules.

The following table shows the contents of a 16 ft. log, as given by Doyle's, Scribner's and the Combined log scales used in different sections of the United States and Canada, showing wherein they differ:

Diameter in Inches.	Doyle Scale.	Scribner Scale.	Combined Doyle and Scribner Scale.

THE
Canada Lumberman
MONTHLY AND WEEKLY EDITIONS
PUBLISHED BY
The C. H. Mortimer Publishing Company
of Toronto, Limited,
CONFEDERATION LIFE BUILDING, TORONTO.
BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance . $ 1.00
One Copy. Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the umber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is in dispensa ble for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE EXPORT OF PULP WOOD.

THE proposition of the Canadian Manufacturers' Association that the Dominion Government should impose an export duty on pulp wood, to which we referred in last issue, is not regarded with favor by Mr. Edwin F. Bishop, who on another page takes up the cudgels against such legislation. It may be that Mr. Bishop is an out-and-out free-trader, but we are inclined to the opinion that his opposition to the export duty on pulp wood has been engendered in part at least by his company's possession of a considerable tract of spruce timber land held in fee simple and thus exempt from the Ontario government regulation prohibiting the export of pulp wood. Recent contracts placed with his company to supply pulp wood for American mills may also have strengthened his views on the subject. Mr. Bishop makes out a fairly good case, but he can scarcely hope to succeed in changing the existing public sentiment in favor of having our raw material manufactured at home.

Mr. Bishop quotes us as saying, as the opinion of an authority, that 60 to 65 per cent. of the pulp manufactured in the United States is made from timber grown in Canada, whereas our statement was that 60 to 65 per cent. of the pulp used to manufacture paper in the United States was from Canadian-grown timber. Thus both Canadian pulp wood and pulp shipped to the United States would be included in the calculation. But if the quantity should be less than estimated above, it is nevertheless much too large to admit of the proper development of the pulp and paper industry of this country. It is certain that a vast quantity of pulp wood is shipped to the United States from patented lands of which no record is kept, while it is known that the export from Crown lands in Ontario was increasing rapidly up to the time that prohibitory legislation was enacted. It may be, as claimed, that not a single pulp mill in the United States nepends entirely upon Canada for its supply of wood, yet mills located at Port Huron, Niagara Falls, Ticonderoga, Glen Falls, Watertown, and other points obtain a very large percentage of their supply from this country.

The prediction of Mr. Bishop that the United States people will utilize other material for the production of pulp is not a new idea, as experiments looking to that end have been conducted for some years past, with the result that no substitute has yet been found which will take the place of spruce in the manufacture of mechanical pulp, nor have the investigations given any promise in that direction.

Mr. Bishop seems to fear that the imposition of a duty on pulp wood might widen the breach between Canada and the United States and result disastrously to Canada. Last year the United States exported to Great Britain, Germany, South America and other countries, paper to the value of $4,998,333. No doubt much of this paper was manufactured from Canadian pulp wood. Are we to continue to build up the export of the United States by furnishing the raw material for their industries? Looking beyond the pulp and paper trade, it will be found that for the fiscal year ending June 30, 1901, Canada purchased from the United States goods to the value of $119,306,000, while her exports to the United States for the same period were only $70,306,000. The balance of trade, however, according to Hon. John Charlton, who is by no means a protectionist, was more heavily in favor of the United States than would be indicated by the figures, for cutting out the commodities that simply pass through Canada and taking into account only those imported from the United States for cousumption, and on the other hand omitting coin, bullion, gold dust, etc., and considering only the exports of other Canadian products to the United States, the balance in favor of the latter country in the year mentioned was over $70,000,000.

Many people appear to forget that there are markets for Canadian products outside of the United States. Great Britain is a large consumer of pulp and paper and each year our exports to that country are increasing. The visit to this country of Mr. Harmsworth with a view to locating extensive pulp and paper mills is an indication of the possible expansion of trade in that direction. It is also significant that the Chicoutimi Pulp Company have entered into a contract with Edward Lloyd, Limited, of London, England, to supply about thirty thousand tons of dry pulp per annum for the next six years.

Mr. Bishop enters a plea for the settler. It is true that the sale of pulp wood is now a very desirable means of revenue while the land is being cleared. The assumption that there would be no market for pulp wood if an export duty were imposed is surely based on a misconception. The prohibition of the export of pulp wood would doubtless result in the erection of new mills in Canada which would bring competition in the buying of the wood. Look at the results which followed the prohibition of the export of saw logs. There was, if anything, an appreciation in the value of timber; mills that had been idle for years were rebuilt and put into commission; others were removed from Michigan to Ontario; the population of the lumbering settlements was greatly increased, and the country was in many ways immensely benefitted. A like condition would no doubt follow an embargo on pulp wood, although it could scarcely be expected that the transformation would be so rapid and complete.

The natural facilities of Canada are so favorable to the manufacture of pulp and paper that no opportunity should be lost to secure for the country all the benefit resulting from the development of such an industry. From St. John, N. B., to the Lake of the Woods, and even in British Columbia, there are numerous water powers splendidly adapted for pulp mills, while the quantity of spruce timber is admitted to be much greater than is possessed by any other country in the world. Then should we not take full advantage of our national heritage by prohibiting the export of pulp timber? Legislation placing an absolute embargo on its export, such as now applies to the Crown lands of Ontario and British Columbia, is to our mind the ideal condition.

Essentially this is not a tariff question, but it becomes so from the fact that the export of wood from private lands cannot be prevented except by the imposition of a prohibitory tax by the Dominion Government. Such a duty would surely eventually prove to be in the interests of the country. Mr. Bishop's statement that Canada is a "notoriously unsafe country" in which to invest capital owing to revolutionary tariff changes is not well founded. How does he account for the recent purchase of extensive areas of timber lands in this country by the International Paper Company, Burgess Sulphite Pulp Company, Stetson, Cutler & Company and other United States corporations?

OUR SHIPPING FACILITIES.

THE announcement that the Canadian Government had concluded arrangements for a direct steamship service between Canada and South Africa was received with great satisfaction by the business men of this country. The eighteenth of October marked thesailing, from Montreal, of the first vessel under this agreement. The "Melville" is announced as the second steamer and will leave Montreal on November 18th, her capacity being 4,391 tons. During the winter months there will be monthly sailings from St. John and Halifax. The export trade of Canada has doubtless suffered in the past from lack of direct steamship communication, and now that this has been provided with South Africa we may expect to greatly increase our exports to that country.

The reports of the Commissioners sent to investigate the trade openings in South Africa emphasize the enormous opportunities for trade in many different lines, not the least important of which is lumber and wood goods. If Canada is to obtain her proper share of the trade it will be necessary to adopt modern methods that will compare with those of older countries. It has been suggested that three or four firms might join hands in sending a representative to exploit the field.

As affecting our export trade, the improvement of the navigation of the St. Lawrence river is an important step. The Minister of Marine and Fisheries has announced that it is proposed to make such improvements as will place Canada in a position to compete successfully with other countries and result in a reduction of the existing high rates of insurance charged on vessels from St. Lawrence ports. A proposition has been made by a Montreal company to light the channel of the St. Lawrence between Montreal and Quebec by electricity. That this would be of inestimable value is indicated by references to the subject which have been made from time to time by the Marine' Underwriters Association, the Montreal Board of Trade, and other influential bodies.

RETENTION OF BRITISH TRADE.

THE lumber trade is prosperous. This prosperity is not of the spasmodic kind, but is the result of a gradual improvement in the commercial conditions of almost the entire world. During late years the lumbermen of Canada have taken advantage of these conditions to extend their trade in Great Britain. It is to be regretted, therefore, that within the past year or two a disposition has been shown by some to sacrifice their connection which they had established in Great Britain in favor of markets nearer home. Many complaints have been made by British importers that it has been impossible to obtain in Canada the stock which they desired for the reason that the mills which they formerly dealt with were catering almost entirely to the United States market. Thus one effect of the abnormal prosperity has been to cause manufacturers to neglect the British trade, established in some cases at considerable cost. It is only natural that a merchant should desire to dispose of his goods in the market which, all things considered, gives him the best returns, but he should also look beyond the present and endeavour to retain that connection which he has established and which he is likely to again desire when less prosperous times shall return. The British buyer is generally of a conservative disposition, and if once his trade is secured there is not likely to be much difficulty in retaining it. It is not courteous or businesslike, therefore, for the Canadian manufacturer or shipper to desert him when he finds that there may be a temporary advantage by doing so. We are glad to learn that some manufacturers recognize this fact and are nursing their British trade steadily and persistently, knowing how intrinsically valuable it will be when it is more difficult to sell lumber than at present.

EDITORIAL NOTES.

Lumbermen have again this year been "hung up" by the scarcity of railroad cars to move their stock, and we may expect a further handicap by the transfer of cars to the coal trade following the settlement of the labor troubles. The man who has much lumber to ship is likely to be more worried thereby than he was by the coal famine.

AN important step has been taken by the United States Bureau of Forestry in the establishment of a dendro-chemical laboratory in connection with the Bureau of Chemistry. This laboratory will devote its attention to the study of the chemistry of forest products. The first work to be undertaken is a study of the chemical composition of the wood and bark of the chestnut oak, white oak, red oak, black oak, and western hemlock. In connection with the methods of kiln drying lumber which are now extensively practised, the laboratory has been requested to investigate the effect of dry and moist heat on the physical properties of various woods. The information secured in this investigation will be of practical value to the lumber trade. Plans have also been formulated to test the various woods of the country with a view to learning their adaptability or otherwise for the manufacture of pulp, as well as for paving blocks. In the latter instance the application and effect of wood preservatives will be reported upon.

A BELFAST correspondent of the Timber News tells of a combine of shipbuilders and other timber consumers to purchase their supplies direct from the producing country. He says: "One important fact is certain, and that is that one of our local shipbuilding firms has just sent out their timber buyer to Canada to purchase, it is said, direct on the spot, waney and square white pine and other goods, and if this new move succeeds it will put a big hole in the shipments of the Quebec and Montreal shippers to Ireland and relieve the local importers of the finest and probably the most profitable part of the Belfast trade. It is a deep and very radical move, and nothing to prevent its success can be done, either here or in Canada, so far as we can judge. They have the money, they pay cash on delivery, and have always done so, and they will in consequence be very acceptable buyers to the Canadian manufacturers. This is only the thin end of the wedge, and is sure to have before next spring shipments other imitators."

DESIGN FOR A VERANDAH COLUMN.

A reader writes us as follows: "I am in want of a design for a verandah column, cornice, gutter and rail, also a tower cornice with gutter enclosed. The building is of the balloon type, boarded and sided on the outside, and is to be built in Colonial style. Any information with designs or diagrams will be appreciated."

ANS.—We publish herewith a design for a verandah column, cornice and rail. Fig. 1, which as near as we can understand our correspondent's wants, will prove quite suitable. The section for a tower cornice and gutter, shown at Fig. 2, will perhaps answer his requirements in that direction. These designs are suited to each other and both are in Colonial style.

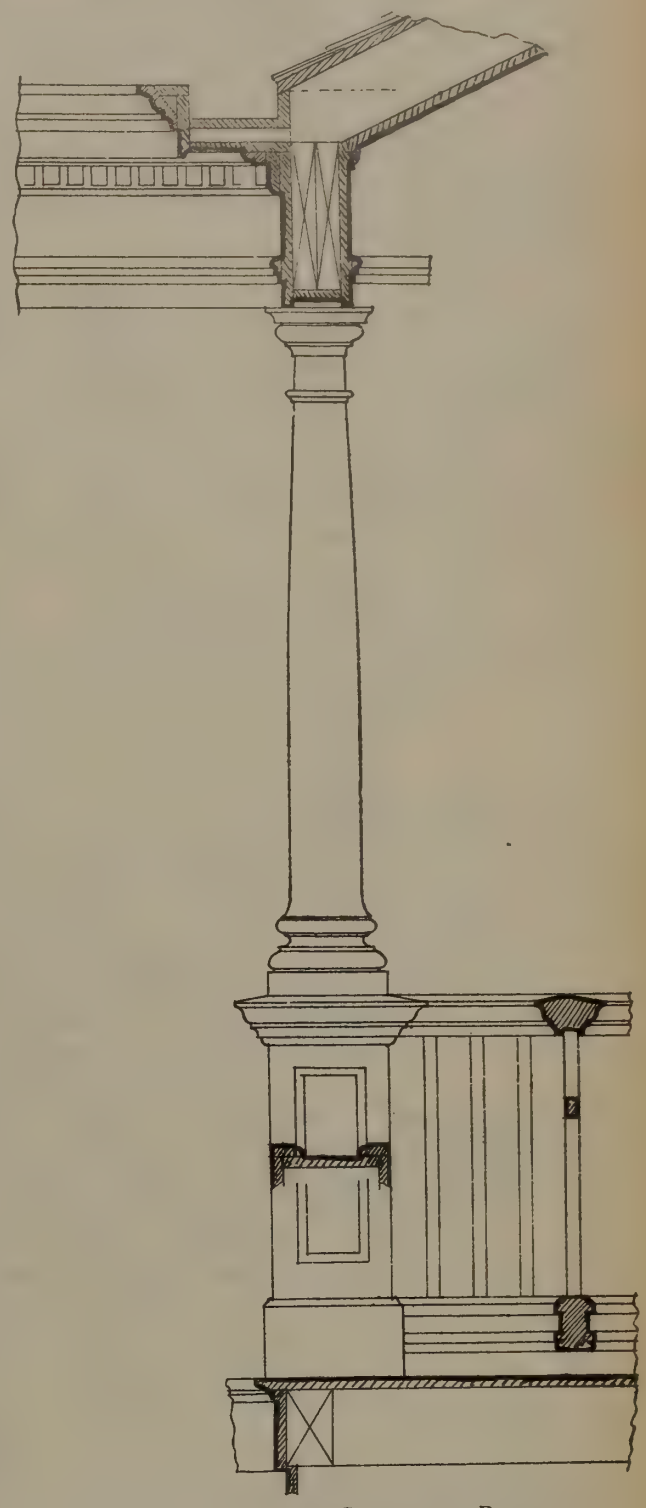

FIG. 1.—VERANDAH COLUMN AND RAIL.

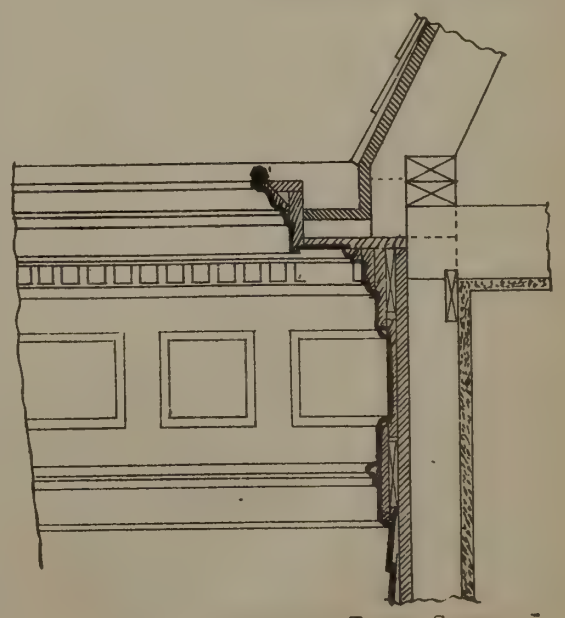

FIG. 2.—SECTION OF TOWER CORNICE.

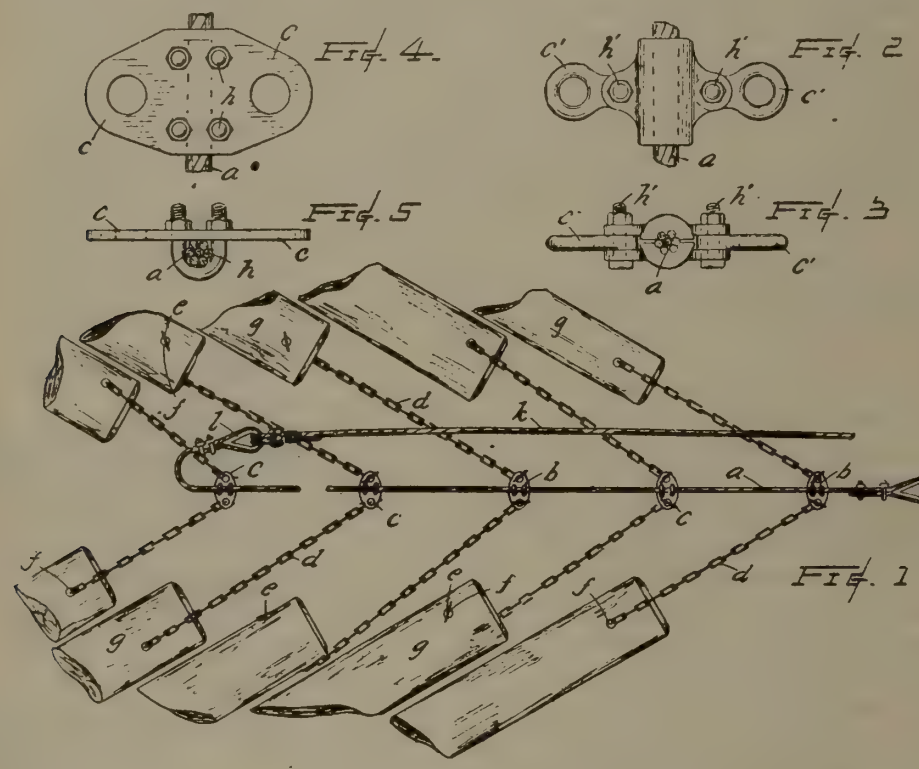
NEW METHOD OF RAFTING LOGS.

The Griffiths Log Rafting Company, Limited, of Victoria, B.C., have invented a new method of rafting saw logs which will appeal to the consideration of lumbermen. A patent on the device, which is herewith illustrated, has been granted in the United States, and application has been made for a patent in Canada. The experiments that have been made with the new method have been very successful, and we are advised that the company have made arrangements with an assurance company to insure logs against loss up to three-quarters of their values which we believe is a new departure in the trade and should make the financial end of a logger's business more easy of finance.

The following description of the method will be of interest:

It is common to construct rectangular log rafts where the several logs thereof are confined within enclosing barriers formed of "boom-sticks" tied end to end. These rafts are towed by a hawser bent to the bent of a bridle line, having its ends secured to the boom sticks near the forward corners of the raft. Under the conditions prevailing in rough waters, this manner of constructing and towing rafts is objectionable, inasmuch as they are easily broken up, at considerable loss to the owner, besides the liability of the scattered logs doing great mischief to vessels.



GRIFFITH'S METHOD OF RAFTING LOGS.

The Griffiths method provides a flexible construction of raft adapted to the roughest bodies of water, and which is so assembled and connected together and with the towing hawser as to reduce the chances of loss to a minimum.

In the accompanying drawings, where like letters of reference indicate corresponding parts in the three views, Fig. 1 is a plan view of a system and apparatus embodying the invention. Fig. 2 is an enlarged plan view of one form of gripping device or clip. Fig. 3 is an end view of the same. Fig. 4 and 5 are, respectively, plan and end views of a modified form of clip.

In these drawings the letter (a) represents a main or draw line, preferably a wire cable, and may be of any suitable length, or number of lengths connected together, according to the quantity of logs rafted.

Attached at intervals along the main line are a number of clips (b) (see Fig. 4 and 5), having two oppositely disposed laterally projecting wings (c), to which are secured lines (d), perferably chains, provided with toggles (e) upon their outer ends, which are passed through holes (f) of the logs (g), and securely engaged therewith, as shown. A hawser (h) is secured to the leading end of line (a), and a supplement line (k) connects the tail end (l) of the main line with the towing vessel, which ordinarily would lie slack or loosely upon the raft; but in the event of any breakage, either of the hawser or of the main draw line, it would be used for towing. Where an unusually long tow is made up, buoyant bodies may advantageously be positioned at intervals along the main line, to prevent the submergence thereof. The main line (a) may, if desired, be made up of a number of logs connected end to end by chains; but cables give the best results in rough waters.

The clip shown in Fig. 4 and 5 is the one generally used, and comprises a single piece of sheet metal secured to the cable by U-bolts (h) as shown. For longer hauls in rough waters, however, it is preferred to use a clip (see Fig. 2 and 3) having a divided sleeve socket provided with internal corrugations corresponding with the lay of the cable strands, so as to equalize the strains thereon. In this last described form the clip wings (c) may advantageously be made separate from the clip body and connected thereto by passing the clamping screws (h) through holes or eyes thereof.

The features of this invention are:

1. The means of rafting logs to be towed, comprising a central longitudinal draw line, lines arranged in pairs along the draw line and adapted to have their outer ends severally secured to logs, and devices for securing the lines to the draw line, for the purpose described.

2. The single line and its connection with a vessel, in combination with means to connect logs or the like to the line upon both sides thereof, the log connections being disposed in pairs for the purpose set forth.

3. The combination with a central line, clip device adapted to be rigidly secured to the line, two separate chains each detachably secured at one end of the clip device and having a toggle at its opposite end.

4. In combination, a central draw line, connection between each end and a vessel, clips clamped to the central line, two chains each secured at one end to each of the clips, and a toggle upon the outer end of each of the chains.

5. The combination in a log raft with a central line (a) and chains (d) of clips (b) adapted to be rigidly secured to the line and provided with laterally projecting wings (c).

Mr. Hugh Logan gives the following particulars of a recent test of the device:

"I was on board the tug Albion which towed a boom of logs from Port San Juan to Port Townsend, the boom being rafted in the manner known as the Griffiths log raft. We left Port San Juan at 11:30 a. m. on Tuesday, September 2, 1902. There was quite an ocean swell running in San Juan harbor, and on leaving the harbor and rounding the point and entering the Straits of Fuca, a heavy swell from the Pacific Ocean, coupled with an easterly wind and an ebb tide, made a very ugly cross sea. We made good headway in crossing the Straits to the United States shore until abreast of Pillar Point, when we struck a strong tide rip and a strong southwest wind, together with the ebbing tide. We made no headway on account of the ebb tide, and that morning when we went to the end of the boom to take the towing light off I accompanied the deckhand and walked to the centre of the boom to see how the logs were acting, it being the prevailing opinion amongst towboat captains who have been in the habit of towing logs that the logs would revolve and snap the chain; but I found that when I went to the centre of the boom and watched the action of the logs in this heavy tide-rip, none of the logs revolved, and as a further proof of this I may state the method in which the tail-end light before mentioned was adjusted, namely, a pike pole some four or five feet in length was driven into the last log of the boom and the lantern hung thereon; on taking the lantern off in the morning it was still alight, thus proving to my satisfaction that the logs do not revolve, as, if they did, the last one, being freer than the others, would be the one to revolve. Moreover, if the logs had revolved I would not have been able to get to the centre of the boom, having no caulks in my boots and having no experience in walking on moving logs.

"Pillar Point was reached at 3 a. m., and on account of the state of the weather and the tide, at 9 o'clock the same morning we had lost about two miles.

"At the next flood we arrived about three miles above Freshwater Bay. It was blowing quite hard from the westward, with a heavy sea. We stopped there on account of the ebb tide. I went again that evening in company with the deckhand to adjust the towing-light at the tail end of the boom intact, with the same experience as on the previous occasion.

"We arrived at Port Angelos at 5 a.m. on Thursday, 4th September, and lay there until two hours before the turn of the tide, leaving again at 8 a. m. During our stay at Port Angeles the tug Augusta came in from Port Townsend, from the captain of which vessel our master enquired the state of the weather off Dungeness. The captain of the Augusta advised us not be leave, on account of the heavy seas, which, he stated, "were going clean over him." However, knowing that our vessel and the logs could stand it, we started. Off Dungeness we encountered very heavy seas, and anchored at 5 p.m. on the east side of the spit, to wait for the next tide.

"We left there for Port Townsend at 11 p.m., taking a straight course from Dungeness Lighthouse to Point Wilson (instead of taking a lea course, as is usual), and arriving at Port Townsend at 11 a. m. on the 5th September, without having lost a single log. On our way from Dungeness to Townsend we had a strong southeast wind and a heavy sea.

"I am informed that the Rabboni, towing a boom of logs made up in the ordinary manner, from Clallam, and experiencing at or near that point the weather we came through successfully, lost her tow entirely. This matter will be on record; I merely mention it, but cannot vouch for its truth, as I was not aboard the Rabboni.

"The time occupied in towing the boom from Port San Juan to Port Townsend was three days, and we did not delay one moment on account of the state of the weather, the only thing delaying us being the state of the tides. It is my opinion absolutely that the method adopted in this case for rafting the logs is a very great improvement, when rough weather is to be encountered, over the one generally in use; and it is, further, my opinion that by using the Griffiths log raft method of towing it is safe and practicable to tow logs in the Straits of Fuca or similar rough waters at any time or season when the steamboat would herself care to go out. I have no doubt at all that the logs so boomed will hold together, the only point being that weather may be encountered so heavy that the tug herself would have to cut loose from her tow and seek shelter. I would not be afraid to undertake the towing of a similar raft all around Vancouver Island or to San Francisco, provided a powerful tugboat took the tow in charge.

"Referring to the time taken in making this tow, I wish to state that on account of the fastenings to the pointing slipping in the first couple of tiers of logs, it made the logs jam at the forward end, thus forming a blunt or square-nosed boom. I am given to understand that in

future precautions will be taken to prevent this, and this will be the means of the tow being made in quicker time. To prove this, the tug Resolute, which took the logs from Irondale to Port Gamble, made fast to the point which when we were towing was the tail end, and she made the tow in the usual time."

During the last week of September a second raft was towed between the San Juan and Port Townsend, and again without the loss of a single log.

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

The E. B. Eddy Company has rebuilt its supply depot at Ralph post office which was destroyed by fire. The firm has also stocked its depot at Stubb's Bay on the Dumoine limits. About 45,000 cords of pulp wood will be taken out by the Eddy Company this season. A number of small jobbers are at work and four camps have been established on the Coulonge river.

Mr. J. R. Booth will take out over 10,000 cords of pulp wood on the Dumoine river. This will probably serve as a supply for the new paper and pulp mills he is erecting at the Chaudiere.

The question of establishing a Lumbermen's Exchange in Ottawa is again to the front, but in a problematic form only. The idea is to gather the different firms under one roof so as to facilitate the transaction of business. The Woods building on Queen Street, which is modern and centrally located, is spoken of as a suitable site for the Exchange.

Mr. Woods' business—the manufacture of lumbermen's supplies—has outgrown the present commodious building erected a few years ago, one of the most imposing business establishments in the Capital. He has had plans prepared for a new building, which will be situated on Slater street between Elgin street and the Canal, one block south of the City Hall Square. It will be a six or seven storey building, after the style of the Grand Trunk offices in Montreal, and on completion will represent an expenditure of fully $80,000. The dimensions will be 90x130 feet. Stone is to be the material used, and the building is to be fireproof and modern in every feature. The plans call for a structure that will be a credit to the commerce of the city.

Work was started last week on the much-talked-of saw mill near Ottawa. It was the original intention to have it built on the site of the old Conroy mill at Deschenes, Que., and operated by a syndicate, firms mentioned in this connection being Fraser & Company, Robert Hurdman and Shepard & Morse. A satisfactory arrangement for railway rates could not be made, however, and a second scheme was advanced, namely, to establish the mill on the Ontario side of the Ottawa river on the site of the old Skead mill. This dropped through also and for a similar reason. The mill as actually built will stand on the Quebec side about a mile above Deschenes Rapids, and about seven miles from Ottawa. It will be built not by a syndicate but by one firm, Fraser & Company having the project in hand. All the timber has been taken out and this material will be forwarded to the mill site at once. Present expectations look to the completion of the work by the early summer at the latest.

The equipment of the new Fraser mill will be modern in the strict sense of the term, and the machinery will represent the latest ideas of American and Canadian experts. Steam is to be the motive power, and provision will be made for the disposal of the sawdust and refuse as fuel.

As regards the handling of logs in the river, the site is even a better one than that of the old Conroy mill at Deschenes village, a mile distant. A buoy-like formation will give the Fraser logs ample protection from the rapid current and rapids which proved a source of trouble at the Conroy mill.

Railway connection will be provided by the Pontiac steam line recently completed from Aylmer to Hull and placed under the Canadian Pacific's control. The estimated cost of the mill and site and equipment is $200,000. Next year's logs are now ready.

Mr. E. Stewart, Dominion Superintendent of Forestry, who has just returned from an official trip to British Columbia and the North-West Territories and Manitoba, granted your correspondent the privilege of an interview. The Pacific Province, Mr. Stewart believes, has a great future in lumbering. Its possibilities for pulp and paper making, however, are limited, as the spruce is of such large dimensions that it is manufactured into board lumber.

The demand from the eastern plains, with the influx of settlers, has been an active one during the year and promises to increase with the settlement of the prairies. Mr. Stewart has recommended the Government to set aside as a forest reserve three townships near Kamloops, B. C. They are situated in a dry belt, and the action is being taken with a view to conserving the moisture. Forest fires in the Kootenay district did considerable damage, but the Government tract along the Canadian Pacific Railway, which was protected by rangers, escaped. Mr. Stewart travelled on foot and by canoe through portions of the Mackenzie Basin and Peace River countries. He found poplar, white and black spruce, larch and hemlock. One of the great needs of these districts for the development of the timber resources is the railway. All the rivers run towards Hudson's Bay, and hence none are available for the transportation of logs south. Tree planting on the plains of the Territories and Manitobia was pronounced by the Superintendent a success. Nurseries which were established some time ago at Indian Head and Brandon will next spring supply the farmers with over 1,000,000 saplings for purposes of transplanting. A similar nursery is to be established at Virden.

OTTAWA, Oct. 23rd, 1902.

THE SAGINAW VALLEY LUMBER TRADE.

(From Our Travelling Representative.)

Bay City, Mich., Oct. 20, 1902.—Gradually the Saginaw Valley lumber industry has shifted until now the interests of Bay City and Saginaw are practically identical, as far as timber is concerned, with Canada. The cutting down of the Michigan forests drove their lumbermen to the Canadian shores of Lake Huron and the Georgian Bay. Lumber mills are fast disappearing in the Valley.

In a second-hand shop window in Water street in Bay City I saw an engraving representing the Saginaw river as it appeared in 1890—just twelve years ago. The river teamed with tugs, towing great rafts of logs, steamers with barges and vessels of all description. The banks of the river for miles were the none continuous piling ground for lumber ; the hum of the saw mill was heard from the mouth of the Saginaw river way up past Saginaw city, a distance of twenty miles. Now, the piling grounds are nearly deserted, the prohibition of logs from Canada having closed many of the mills. True, the lumber comes in large quantities, but it is principally milled in Canada. The men who formerly held timber limits in Michigan and Wisconsin now hold an interest in Ontario limits or are connected with companies who are extensive buyers of Canadian lumber.

The Saginaw Valley, although it has lost its old-time lumber prestige, has seized upon her great natural resources of salt, coal, sugar, chicory, alkali, etc. Most of the former lumber mills manufactured salt, and many of those mills now running utilize their waste steam to produce the article in paying quantities. It is to the manufactories in the valley that is due in a measure the salvation of the Saginaw river, the largest river in the state. Such wide awake and progressive firms as Wickes Bros., Morley Bros., Saginaw Lumber & Salt Co., W. B. Mershon Co., Mershon, Schutte, Parker & Co., of Saginaw city, M. Garland Co., E. B. Foss & Co., the Industrial Works, and others in Bay City were not satisfied with local trade. They are typical American business men and are pushing out into the world's markets. They are now making a successful bid for a portion of the $150,000,000 worth of Americao goods imported into Canada each year, despite the duty.

The Wickes Bros. and Morley Bros. can outfit and equip lumbermen in supplies, tools, etc. The W. B. Mershon Company's band se-saws are noted the world over. They are now placing some large orders for Australia, South Africa and Great Britain.

In the great lumber yards of the Edward Hines Company at Chicago there are several travelling cranes and derricks for unloading lumber. These were made at the Industrial Works, Bay City. The Hines concern is noted for improved methods and their handling of lumber and timber is a marvel. Much of this is due to the McGarry patent piler, which is also used extensively by the largest concerns in the Saginaw Valley.

Many of the old Valley lumber companies are now going into the beet-root sugar industry. Several large wooden-ware and box shook factories in Saginaw and Bay City will yet reach out to the Canadian and foreign markets.

The Saginaw Valley is the garden of Michigan. Whilst raising profitable crops of sugar beets above there may be plenty of coal and salt below any man's farm. Over 11,000,000 pounds of granulated sugar was manufactured by one company last year, whilst the coal mines are running full blast and new ones opening out every month. I personally inspected several of these mines and saw how what lumber mills as were running could manufacture salt with their waste steam. With these, the ship-yards, the chemical works, and the men of push who are not satisfied with local trade, the Saginaw Valley still teems with enterprise and industries to take the place of the vanished lumber business.

EXPORT OF PILING.

We have been asked to state the restrictions placed on the export of piling from the province of Ontario. It is learned that the Government has recently given a ruling that in character piling is not different from saw logs, and that accordingly its exportation from the province is prevented by the legislation enacted about three years ago.

PERSONAL.

Mr. F.M. Anderson, lumberman, of St. Martins, N.B., is a candidate for a seat in the Provincial Legislature.

The death is reported of Mr. Robert McLeod, for a number of years in the lumber business at Black River, N. B.

The death occurred recently of Mr. P. S. Hoe, of the firm of R. Hoe & Company, saw manufacturers, New York city.

It is rumored that Mr. W. C. Edwards, M. P. for Russell, will be appointed to the Senate in succession to Senator Clemow.

The CANADA LUMBERMAN had a pleasant call from Col. T. Tollerfield, representing Messrs. Mansell, Morgan & Feel, of Gloster, Miss. The Colonel wi l spend some time in Canada with the purpose of purchasing stock required to fill large contracts.

Mr. Wm. J. Macaulay, one of the principal shareholders in the Victoria Lumbering and Manufacturing Company, of Chemainus, B.C., died recently at his residence in Victoria. Deceased has been prominent in the Pacific coast lumber trade for years, and was formerly in the same line in Orillia, Ontario.

Mr. George H. Perley, lumber merchant, of Ottawa, has been chosen to represent the Conservatives of Argenteuil county in the approaching by-election. Mr. Perley has for a number of years past conducted large lumbering operations in the Ottawa valley, and now has mills at Calumet, Que.

A wedding which interested lumber circles took place in Toronto on October 8th, when Mr. Joseph Ormsby Oliver, son of Mr. Joseph Oliver, president of the Oliver Lumber Company, and Alderman for Ward No. 2, took as his bride Miss Hannah Jones, daughter of Mr. John Jones, street commissioner of Toronto. Rev. Dr. Milligan, pastor of St. Andrews' Presbyterian church, officiated. The honeymoon was spent in the Eastern States.

The CANADA LUMBERMAN was favored with a call recently from Mr. R.H. Campbell, of Ottawa, assistant secretary and treasurer of the Canadian Forestry Association. Mr. Campbell is one of the younger generation who recognizes the necessity of perpetuating as far as possible our forest wealth. In his official capacity he has done most effective work for the Association, which he reports to be increasing in membership. Steps will be taken immediatly towards perfecting arrangements for the next annual convention, which should and doubtless will be the most successful yet held.

THE GORDON HOLLOW BLAST GRATE.

This grate, an illustration of which is here given, is used very extensively by saw mills, hoop mills, stave mills and heading factories in the United States. The manufacturers claim that it makes the hottest fire of any device in existence. It burns wet, green or frozen sawdust or other refuse readily, producing as good results with such fuel as a draft grate gives with dry wood. It develops every ounce of power a boiler is capable of generating, regardless of the weather. It is exceedingly durable, outlasting from three to five draft grates.

This grate is far from being an experiment. It has been on the market since 1889, and there are two thousand sets in daily use.

In the States the manufacturer sells with the following written understanding : "If thirty days' trial does not demonstrate the grate to be a profitable investment, you may return it at our expense."

This not only absolutely protects the purchaser, but strikingly illustrates the manufacturer's unlimited faith in the grate.

Our representative failed to learn whether they sell on the same liberal basis in Canada, but this information, and any other that may be desired, can be promptly obtained by addressing the sole manufacturers, the Gordon Hollow Blast Grate Co., Greenville, Michigan. This company also manufacture the celebrated "Tower" 2 and 3 saw edgers, "Tower Extra" 3-saw edgers, and "Tower" one-man 2-saw trimmers. In fact, they claim to be the largest manufacturers of blast grates, edgers and trimmers in the world.

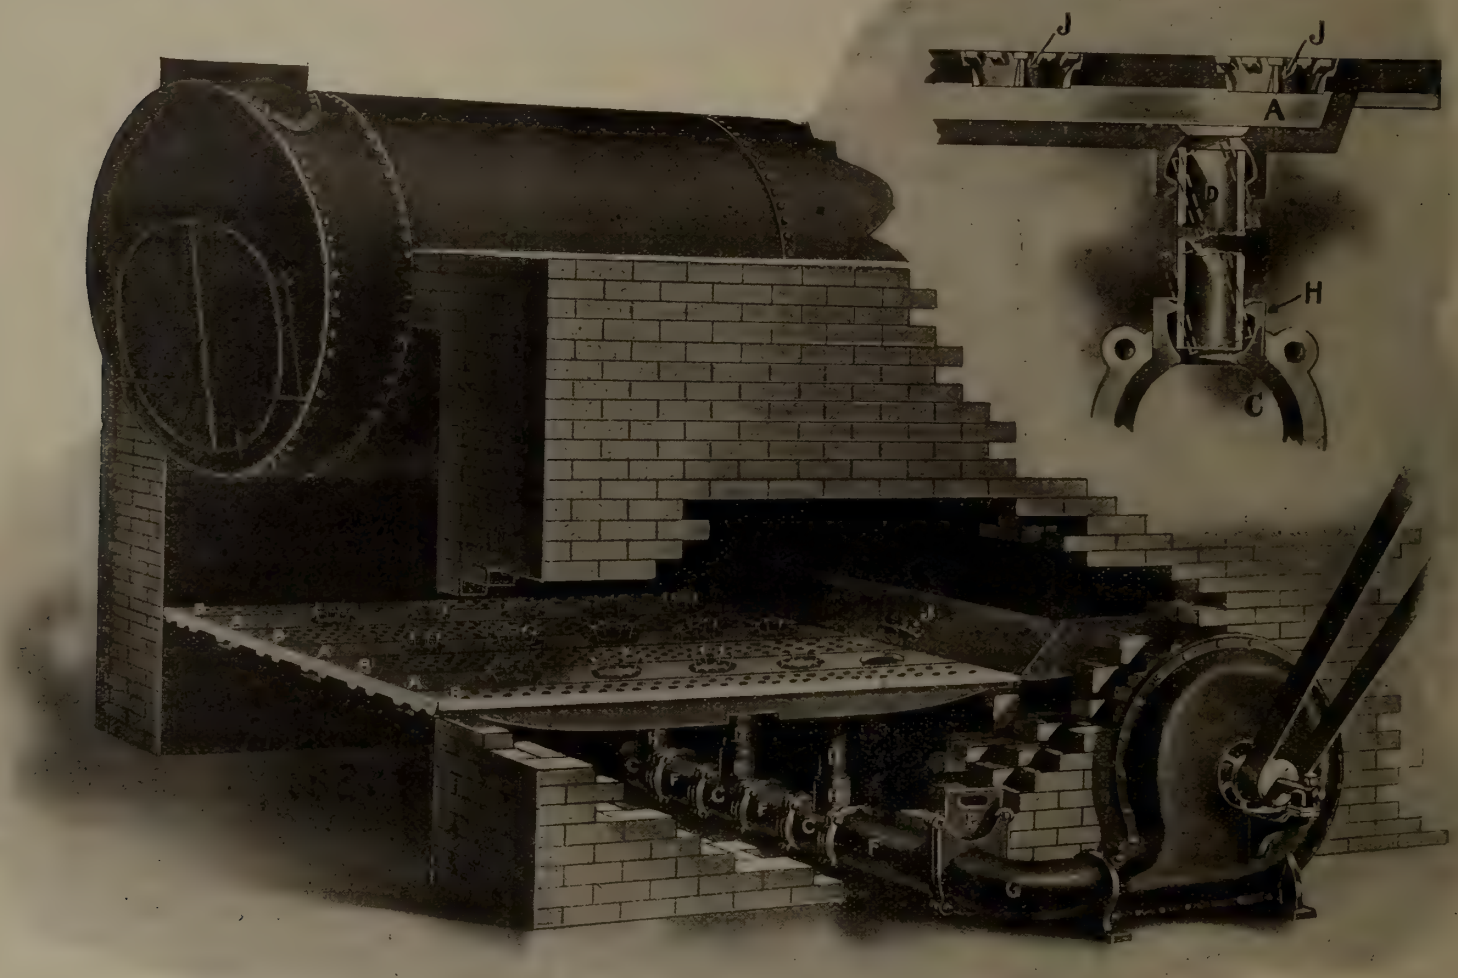
We suggest that such of our readers as are interested write for their Catalogue D.

The firm of Douglas & Ross has recently been formed at Vancouver, B.C., to combine real estate, insurance, mining and timber. Mr. C. S. Douglas is well known in real estate circles, while Mr. H. G. Ross is a prominent business man and identified with the lumber trade.

MUSKEGON'S GREAT INDUSTRY.

A visit to the immense machine shops of the Rodgers Iron Manufacturing Company in Muskegon, Mich., shows a regular hive of industry. In their special lines they are making the best of modern machinery for saw mills. They are now going into the Canadian field for business, fully realizing that Canada will absorb a great many of the United States mills. This company make a small lath mill to cut 40,000 laths per day and a small "bolter" to go with it. A larger one cuts "pickets" and "bolts." The No. 1 large lath mill will cut all the lath made in the biggest mill extant. This has an attachment for cutting pickets and is a really admirable machine.

The company make a lath binder and trimmer to go with these machines—made on new approved and scientific principles. A rotary fire - wood cutting machine is also one of the best on the market. It will cut fire-wood out of edgings or slabs up to 6 inches thick and 18 inches wide.



THE GORDON HOLLOW BLAST GRATE.

One of the special features in this plant is the "Jumbo edger" with rift saw attachment, a machine first put on the market by this company. It is used principally for cutting "cants" into lumber. The use of this machine will, it is claimed, increase the capacity of any mill 20,000 feet per day. It is likewise an edger for edging lumber to any width—made in all sizes to suit any description of mill. The material used in these machines is of the very best, and the workmen are all expert in their special lines.

Their "cant" or "tie" machine will make "cants" from 4 to 12 inches thick, and railroad ties of all standard sizes. It takes but two men to run it, and has a capacity of 2,000 logs per day, cutting them perfectly straight. In operating this machine the different thicknesses can be gauged without stopping the machine—the logs going through all day in a steady stream. It is designed to cut small or short logs and is specially useful to box manufacturers for cutting up small rough logs in which there is much available lumber not generally utilized. The Rodgers Iron Manufacturing Company also manufacture all kinds of saw mill machinery and will be glad to hear from all interested in progressive up-to-date machinery.

The announcement of J. T. Wing & Company, of Detroit, Mich., appears on the front cover page of this issue. This company make a specialty of the manufacture of high-grade graphite metal. They claim that owing to the presence of graphite, which acts as a self-lubricant, much less oil is required than where other metals are used. They solicit a trial order from lumbermen.

Extensive factory additions have been commenced by Alex. Dunbar & Sons, of Woodstock, N. B. It is proposed to build new machine shop, blacksmith shop and foundry, and to convert the old machine shop into a wood-working factory. The new machine shop will be equipped with a 75 horse power engine of their own manufacture. The firm have orders on hand for 44 shingle machines. It is understood to be their intention to make some new lines of saw mill machinery, including stock gang saws, and a new shingle machine especially adapted to the large timber of British Columbia.

One of Saginaw's great industries are the works of W. B. Mershon & Company situated on the east side of the city. They make a specialty of band saws and band-sawing tools and machinery. They are making extended improvements and additions to their extensive works. Special machines for the manufacture of screws and bolts, all electrically driven, are in operation in their machine shop. One hundred men are kept busy in this shop at the band re-saws and pony band log mill. The different shops are veritable hives of industry. Three railroad companies have tracks through the works and the docking facilities are ample. Mr. E. C. Mershon is the business head of the machinery establishment, and by his keen business foresight and aptitude has built up a splendid reputation.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 24 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VII — TORONTO, CANADA, NOVEMBER 5, 1902 — No. 40

CANADA LUMBERMAN

PUBLISHED BY

The G. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELEN'S, LONDON, E. C.

Weekly Lumberman, published every Wednesday Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in he current week's issue.

FOR SALE

QUANTITIES OF BIRCH, ASH, PINE, RED Oak and Hemlock. Hemlock cut to order. Address JAS. I. HARRIS, Day Mills, Ont.

WANTED

GOOD ALL ROUND MAN WITH FAMILY of boys to work in mill. Steady job. Can supply house at reasonable rent. JAS. I. HARRIS, Day Mills, Ont.

WANTED

A STOCK OF PINE LOGS, LONG AND short from two to three million feet. Will take them at any point on Georgian Bay where they can be rafted. Apply to MAITLAND, RIXON & Co., Owen Sound, Ont.

MUSKOKA SAW-MILL
FOR SALE CHEAP.

STEAM AND WATER POWER CIRCULAR Saw-Mill, capacity 25 to 30M per ten hrs., 5 Saw Double Edger, Trimmers, Slab Saw, Re-Saw, Nigger and Log Loader, Log Jack, Slush Chains, Filing Machine, Lumber Trucks, Rip Saw, Bracket Band Saw, Iron and Wood Lathes, Shaper, Mortiser, etc., all complete and in running order; yard capacity 2½ million feet, "High Tramways," together with about 100 acres of land, mostly wooded; a two-story Shingle Mill, with Boss Shingle Machinery, Blacksmith Shop, Barn, Office, six Dwellings, Yacht House Boat House, Storehouse and good Steamboat Dock. Planer and Matcher in connection and Lumber Shed 16x90 ft. for storing dressed lumber in. Splendid location for local and wholesale trade. Abundance of timber for years, and good booming ground. We could supply purchaser with a stock of logs for next season if so desired. Good man can make lots of money.

We also have for sale 1200 acres of timber lands, well timbered with hemlock and hardwood, and some very desirable lake shore property on Rosseau Lake, also a 50 ft Steam Tug.

For further particulars apply to

P. MUTCHENBACKER & SONS,
Rosseau Falls, Ont.

WANTED—PARTNER WITH $25,000 TO $30,000 to buy half interest in Pine Limits and Saw Mill in Northern Ontario. Address, Box 27, CANADA LUMBERMAN.

WANTED.—To buy a second-hand portable engine and boiler; must be in good running order and not less than 40 h.p. Write to P. ROY, Salmon Lake P.O., Quebec.

Wanted—Pine Timber Limits

SITUATED IN ONTARIO, OR WILL JOIN party in purchasing of limits. Address "AMERICAN," care CANADA LUMBERMAN.

WANTED—ANY PART OF FOUR MILLION feet of Hemlock or Pine Logs for Spring delivery. For information leading to purchase of any part of above, we are prepared to pay liberal commission. KEENAN BROS., Owen Sound, Ont.

WHITE PINE FOR SALE

ONE AND A HALF MILLION FEET OF one, two and three inch White Pine Lumber, Mill Run, from good large Logs. PINE LUMBER COMPANY, Cartier, Ont., Canada.

SPECIAL TO LUMBERMEN.

WITH A THOROUGHLY EQUIPPED PLANING Mill at Orillia, we solicit orders for resawing and planing of lumber, in any quantity; can match 26 inches wide; all work guaranteed first-class; prices on application. Address, NATIONAL BOX CO., Orillia, Ont.

Important Sale
—OF—
VALUABLE TIMBER LIMITS

UNDER INSTRUCTIONS FROM WM. HENDRIE, ESQ., of Hamilton, there will be offered for sale by Public Auction, at the Russell House, Ottawa, on WEDNESDAY, 17th DECEMBER, 1902, at 2 o'clock in the afternoon, the following valuable Timber Berths, under license from the Crown, subject to the regulations of the Crown Lands Department of the Province of Quebec, namely. Upper Ottawa Limits, Nos. 591, 592, 593, 594, 597, 598, 599, 600, 601, 602, 603 and 604, containing in all about 272 square miles. The limits will be sold in one lot.

Terms and conditions to be made known on the day of sale.

For further particulars, apply to

MacCRAKEN, HENDERSON & McDOUGAL,
Central Chambers, Ottawa,
Vendor's Solicitors.

TIMBER LANDS FOR SALE

SEALED TENDERS WILL BE RECEIVED by the undersigned up to 1st December, 1902, at 6 o'clock p.m., for the purchase of the following timber lands, viz:—Lots Nos. 19, 2nd Con.; 18, 20, 24, 25 and 26, 3rd Con.; 10, 13, 24, 25 and 28, 4th Con.; 29, 5th Con.; 23, 24 and 26, 6th Con.; 24 and 25, 7th Con., and 23, 8th Con.; all East of the Bury Road, Township of Lindsay, County of Bruce, Ont. Total acreage about 1700. The lands are timbered with different kinds of Hardwood, Hemlock and large quantities of Cedar. The quantity has been estimated for all kinds at 3,500,000 feet. Easy access to Georgian Bay for shipment. Lands all patented except one Lot, which is paid in full.

Terms—10% Cash on advice of acceptance, balance within 30 days thereafter.

Highest or any tender not necessarily accepted.

For further particulars apply to the undersigned.

C. E. WATSON,
Manager, Union Bank of Canada.

Wiarton, Ont., 15th Oct., 1902.

TUG WANTED, ENGINE ABOUT 20 x 20 or 22 x 22 square compound, to be in fair tate of repair, not too old. Apply GODERICH LUMBER CO., Goderich, Ont.

FOR SALE

Timber Limits in British Columbia.

23,000 ACRES PINE AND CEDAR SITuated on Columbia river. Address G. L. LENNOX, Toronto, Ont.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

FOR SALE—CIRCULAR SAW, SHINGLE, planing and chip mill in Haliburton county. Any amount of Hardwood timber and Hemlock to be had. Also farm of 200 acres in connection with mill. First-class chance for man with small capital. For all particulars apply to GEO. W. STEVENS, Boskung P.O., Ont.

RAILS AND CARS FOR SALE

FIFTEEN MILES 30 LB. STEEL RAILS IN good order, logging cars and locomotives; immediate shipment. For particulars apply to JOHN J. GARTSHORE, 83 Front Street W., Toronto.

DRY PINE.

WE HAVE ABOUT 1,500,000 FEET DRY PINE in 1, 2 and 3 inch common and better, prefer selling in bulk. Will quote freight rate to Buffalo, Chicago or Toronto on application. Correspondence solicited. N.B.—Would like to correspond with consumers of hardwoods. ST. JOE ISLAND LUMBER CO., Sault Ste. Marie, Ont.

IMPORTANT SALE

A FARM, 9 x 40 ARPENTS, WITH AGRIcultural implements complete; flour mill, modern door and sash factory, saw mill complete, shingle mill, planers; all these mills are operated by water power, and are situated on the river bank; booms; 16 miles of timber limits, of which 10 miles are well wooded with cedar and spruce; dams; camp with sleighs; horses, vehicles, saws, chains, cooking utensils, also private residence. For particulars apply to JOSEPH ROY, Riviere Blanche, Matane Co., Que.

FOR SALE.

Large Tract of Timber
In Central Ontario

THE PROPERTY OF

The Canadian Land and Immigration Company of Haliburton, (Limited.)

This company has a large tract of well timbered land about 125 miles north-east of Toronto. There are large quantities of Cedar, Hemlock, Spruce, Balsam, Basswood, Cherrybirch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads, one of which is about to be extended through the centre of the property. The Company are prepared to sell this timber in blocks ranging from 5,000 to 10,000 acres, or more if desired.

There are several good mill sites on the property. This would be a good opportunity for parties who are at present cut out and looking for a new location.

Maps and plans and further particulars can be had by applying to

W. H. LOCKHART GORDON,
Managing Director,
157 Bay Street, Toronto.

STANDING TIMBER FOR SALE, 700 ACRES about one mile from G. T. Railway, within a reasonable distance of Toronto. Apply THOS. MYLES SONS, Hamilton, Ont.

CURRENT TRADE CONDITIONS.

ONTARIO.

The volume of trade reported by dealers and manufacturers is quite up to the average at this season of the year. Local orders have not been so numerous of late, but this is no more than could be expected, as the building season is drawing to a close. Enquiries continue to be received in large number for stock for shipment to the Eastern States and Michigan. From present indications it seems safe to predict that more American buyers will be in the market next year than was the case during the past season. We are advised that Michigan dealers who previously handled no Canadian lumber are now visiting Georgian Bay points with a view to securing a portion of their supply from this source. No buying of consequence for next spring has as yet been reported, but some important deals are expected to be closed at an early date. It is estimated that of next season's production in Western Ontario 150,000,000 feet will be shipped to Michigan points. So far operations in the woods have been satisfactory, apart from the difficulty of securing labor. There will be taken out this winter a larger quantity of hemlock than usual, but a market for this will doubtless be found without difficulty, as both lumber and timber of that variety are becoming more in favor each year.

QUEBEC AND NEW BRUNSWICK.

The only change in the spruce situation is a further stiffening of prices. New Brunswick spruce deals are selling from $13 to $14 a thousand delivered alongside the ship. This is between one and two dollars higher than last fall. Spruce clapboards continue exceptionally high on account of the scarcity of stock. When a buyer wants them he usually pays the price asked without argument. Laths are almost as high proportionately as clapboards. For some brands of "Extra" cedar shingles it is possible to obtain $3.60 for Boston delivery, but the prevailing price is about $3.55.

The scarcity of labor is curtailing operations in the woods. Another restricting influence is the price of stumpage, which has reached $4 on the St. John river. It is probable, however, that the log input this winter will be about as large as that of last season.

MANITOBA AND BRITISH COLUMBIA.

The mills supplying the Manitoba and North-West markets are still far behind

with orders. The buying, however, has slackened, and it would appear that dealers now have their stocks pretty well replenished for the winter trade. Operations in the woods will be very active in anticipation of a heavy demand for lumber next season. Prices of British Columbia lumber are likely to be advanced in the near future. A meeting of the association controlling the output for export in British Columbia and Washington was held recently in Seattle, at which it is understood a scale of prices above that now ruling was decided upon. The prices of logs continue to advance. No. 2 are now quoted at $5.50, merchantable at $8, and flooring logs at $10.

UNITED STATES.

The general conditions in respect to the lumber trade are satisfactory. If there is any disappointment it is in the fact that the expected impetus to the demand as a result of the settlement of the coal strike has not materialized. Business, however, is quite active. A report comes from Tonawanda that at no time this season has business been as brisk as that now prevailing. The demand upon wholesale dealers of pine has been of such volume that it is feared that the supply will not last through the winter. A rough estimate of the stock at Buffalo places it at 125,000,000 feet, which will be increased before the close of navigation. The manufacturing cities are consuming lumber in large quantities and the country demand is improving, although principally for barn and corn crib material. Inroads have been made upon the supply of No. 2 and No. 3 common strips and a scarcity may develop later on. No. 4 boards are showing more life and prices have firmed up materially. In the Chicago market short dry piece stuff is quoted at $16 delivered, and long at $18 to $18.50. Common inch ranges from $18.50 to $19.50. Hardwoods are being bought up liberally by manufacturers, who apparently fear that there will not be sufficient stock to carry them through until the new cut can be secured. Basswood is exceptionally strong, the demand far exceeding the supply, and soft elm is experiencing a better call than for some time. There is a run on 2-inch elm. The brisk demand for spruce continues and a premium is often paid for prompt shipment. The higher prices for hemlock are being maintained. Dealers state that they are unable to supply the demand and keep their stock within reasonable proportions. The base price at Buffalo is $15. Michigan hemlock is selling for the most part about $1 under Pennsylvania. A drop of five cents in the price of red cedar shingles is the only feature of note. The trade is steady, with few white pine shingles on the market.

GREAT BRITAIN.

The lumber trade of Great Britain is somewhat unsettled. The volume of business is moderate, but prices have not yielded. The chief uncertainty pertains to next year's business. There is a very general recognition of the fact that if the market next season should become depressed, importers contracting at the present asking prices would stand to lose heavily. For this reason reports from this side are watched with great interest. The course of trade for the first half of next year seems reasonably clear, but beyond that time few seem disposed to venture an opinion. The immediate condition of the market is very favorable. It is confidently expected that prices of spruce will further harden. At London 3 x 9 third quality spruce is practically unobtainable in the docks, although $10 per standard is offered for 12 to 13 foot lengths. The best quality of pine deals continue scarce and bring high prices, and values for the lower grade have recently shown some improvement.

STOCKS AND PRICES.

In the Chicago market No. 1 mixed lath brings about $3 by boat.

The steamer Sydenham has jnst sailed from Montreal for Newcastle with a cargo of deals.

Pittsburg prices are as follows: No. 1 white pine lath, $4 to $4.50; No. 2, $3.25 to $3.75; hemlock lath, $3.50; 16-inch hemlock shingles, $2.65; 18-inch, $3.05.

Thomas Wallace, of North Bay, Ont., has been given a contract to supply 175,000 ties for the construction of the Temiscaming and Northern Ontario Railway.

Rafting was completed October 30th at the Mitchell boom, Maugerville, N. B. About 75,000,000 superficial feet were rafted there, or a little over half of the up-river cut.

The Canada Wood Specialty Company, of Orillia, Ont., have received a contract to supply curtain poles, rings and other fixtures to the extent of $25,000 a year for the next five years.

It is understood that the Wolvin syndicate is making arrangements to enter into lumbering operations during the coming winter on the timber limits in the Lake Metapedia district recently acquired from King Bros., of Quebec.

Prices of slack cooperage stock at Buffalo rule as follows: First-class elm flour barrel staves, $7.75 to $8; mill run fruit barrel staves, $6 to $6.25; second class, $4.50 to $4.75; first class basswood heading, 5½ to 5¾ cents; mill run, 4¼ to 4½ cents; second class, 3½ to 3¾ cents; coiled elm hoops, $11 to $11.50 for 6 foot, $10.75 to $11 for 5½ foot.

Lumbering operations along the line of the New Brunswick Southern Railway will be quite active this winter. Haley Bros., of St. Stephen, are getting out timber for box-making purposes. J. A. Gregory will manufacture 1,500,000 feet at Lepreaux, and will also take out a large quantity of spool wood. T. A. Sullivan is also taking out spool wood. W. A. Quinton will take out over a million feet for his mill at Spruce Lake and J. E. Moore expects to secure 2,000,000 feet for his rotary mill near Lepreaux.

THE EXPORT LUMBER COMPANY IN DIFFICULTIES.

Within the past week it was announced that the affairs of the Export Lumber Company, of New York, had been placed in the hands of a receiver. The news was received with some surprise, as well as regret, in Canadian lumber circles, as the company has been a considerable factor in the shipment of Canadian lumber for some time past. The Supreme Court has appointed three temporary receivers, in the persons of W. A. Taft, vice-president of the company; E. J. Hathorne, expert accountant; and B. L. Fairchild. This was done on the application of a majority of the company's directors asking for a voluntary dissolution of the company. In this application they state that the assets of the company, although in excess of the liabilities, are in such complicated shape that they are not available for immediate use to meet liabilities. The liabilities of the company are stated to be $2,358,536 and the nominal assets $3,598,920. One item of the assets is $2,015,026, representing advances to other companies; another item $977,765, representing lumber, which it is understood had mostly been pledged as security for portions of the indebtedness. The company was associated with the Atlantic Coast Lumber Company, which has also become embarrassed.

The Export Lumber Company was incorporated in May, 1879, with an authorized capital of $150,000. In 1881 branches were established at North Tonawanda, N. Y., and Montreal. In 1882 the capital was increased to $500,000, in 1885 reduced to $250,000, and in February, 1886, again raised to $500,000. A branch was established at Ottawa. In 1894 the company became selling agent for several West Virginia concerns and was heavily interested in timber and lumber in Northern New York. The branch at North Tonawanda was discontinued a few years ago. The company did an extensive export business, particularly to South America and the West Indies.

The New York Lumber Trade Journal gives the following list of creditors: Bank of Montreal, $453,959, secured by lumber at Ottawa; Baring, Magoun & Co., $64,874, secured by lumber; Guaranty Trust Company, $22,151, secured by lumber; German Bank of London, $39,194, secured by lumber; James B. Ford, $91,821, secured by lumber; Meyer Rubber Company, $112,568, secured by stock of the Atlantic Coast Lumber Company and $75,000 on a note; First National Bank, $70,889, secured by stocks and bonds; Bank of America, $50,000; Chemical National Bank, $114,611; Importers and Traders' Bank, $65,000; National Park Bank, $64,867; Western National Bank, $60,000; Merchants' National Bank, $80,000; Seventh National Bank, $47,428; Corn Exchange Bank, $5,000; Merchants' and and Traders' Bank of Brooklyn, $10,000; Third National Bank of Philadelphia, $10,000; Industrial Trust Company of Providence, $25,110; State Bank of Tonawanda, $24,960; Manistique Bank of Manistique, Mich., $24,127; Albany Bank, $15,000; People's National Bank of Charleston, S. C., $27,886; Bank of Charleston, $11,391; First National Bank of Charleston, $26,786; Loan and Exchange Bank of Columbus, S. C., $26,143; Eastern Townships Bank of Sherbrooke, Que., $35,421; Massachusetts National Bank of Boston, $23,210; W. O. Gay & Co., Boston, $51,814; George O. Currier & Son, Boston, $19,343; Courtlandt, Babcock & Co., New York, $103,303; Meyer Rubber Company, $35,500; Atlantic Coast Lumber Company, $40,100; Georgian Bay Lumber Company, $13,682; Beaver Creek Lumber Company, $11,336; Marrett Lumber Company, Portland, $34,000; J. R. Booth, Ottawa, $23,524.

It is believed that the company will be safely piloted through the present difficulties. It is thought that for some time past the company has been making money, and that the trouble is that there was too little actual cash put into a plan originally contemplating a very heavy investment, but which actually required more money than was anticipated. It is probable that reorganization will be effected and the business continued without interruption.

DOORS AND MOULDINGS

A large buyer of Canadian white pine doors and mouldings is open to contract with a mill for their entire output of No. 3 and 4 qualities of doors and all their mouldings during 1902. Write in first instance to "Empire," CANADA LUMBERMAN.

HARDWOOD STOCK DEMAND.

One of the heaviest hardwood operators in the country, a man who is exceptionally well posted in regard to conditions in different sections, says that he believes it to be a well established fact that the stocks of hardwood lumber in the hands of manufacturers in the United States are at least 500,000,000 feet short of the amount so held a year ago.

In his view this means, says the American Lumberman, that next year the hardwood producers will be confronted with a dual demand. There will be the requirement for consumption and for re-stocking. That is to say, stocks in the hands of handlers have been brought to so low a point that business cannot much longer be successfully conducted with the supplies available and it will be necessary to put into yard, whether the yards be at the mill or at the distributing centres, larger and more complete stocks than now or for some time to come can be carried.

The season is at hand when the mill product is at its minimum. The northern mills cut very little hardwood in the winter and for various reasons the southern mills cut less than at other seasons. Consequently there can be no material replenishment of stocks, while the winter is an active consumptive season. The effect of this combination of light production, depleted stocks and heavy demand must be to maintain prices at their present level, and very likely to advance them in a good many lines, for practically a year to come, unless of course there should be some unlooked for and disastrous break in the general business condition of the country.

A year ago there was a good supply of hardwood lumber at the mills and buyers had no difficulty in finding what they wanted in any desired quantities; but now the supply does not exist. Hundreds of buyers have been taken off the road because they could not find enough lumber to warrant paying them salaries and expenses. What little they got had to pay so high a charge that it brought the price above a profitable figure.

The mills have probably never before been so closely cleaned out as at the present time. Some dealers have stocks of fair size and of good assortment, but in the main the markets are also rather lightly stocked. Whatever the exact figures may be the conclusion cannot be evaded that the hardwood market is in an impregnable position and that it will take many months of active mill operation under the most favorable circumstances to bring stocks to such a point that there can be any material lowering of values.

TIMBER LIMIT TRANSFERS.

A deal involving $328,000 and effecting a transfer of 80,000,000 feet of standing pine has just been oonsummated in Duluth. The limits are known as the Culligan tract and have been purchased by W. H. Cook, of Duluth.

The timber limits and mill properties in the province of Quebec, formerly owned by Gaynor Bros., are reported to have been purchased by John McClellan, of Syracuse, N. Y. The limits comprise 181 square miles and are located on the Pentecost river. It is reported to be the intention to operate the limits for saw logs and pulp wood.

THE BOSTON MARKET.

There is a firm market at Boston for spruce lumber, but the demand is not active. More of the mills are stopping work, with the result of still further restricting production. Nine-inch spruce is firmer: Ten and 12-inch dimensions, $21 and $22; 9-inch and under, $19 to $20; 10 and 12 inch random lengths, 10 feet and up, $20.50; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50; all other randoms, 9-inch and under, 10 feet and up, $18 to $18.50; 5-inch and up, merchantable boards, $17; matched boards, $18 to $20; out spruce boards, $14; bundle furring, $17.

There is a quiet demand for hemlock at firm prices: Boards, 12, 14 and 16 feet stock, $14.50 to $15.50 for good eastern; Pennsylvania, No. 1, $16 to $17.50; No. 2, $15 to $15.50.

Full prices are being paid for western pine, with a fair request: Uppers, 1 to 2 in. $82 to $85; 2½ to 3 in. $87 to $38; 4-in. $90; selects, 1 in. $68; 1¼ to 1¾ in. $70; 2-in. $72; 2½ to 3 in. $80; 4 in. $82; fine common, 1-in. $62 to $63; 1¼ to 1½ in. $65; 2-in. $67.50; 2½ to 3 in. $72.50; 4-in. $82.50; barn boards, $23 to $33; coffin boards, $28 to $32.

There is a firm market for hardwood lumber, with a fair request: Quartered oak, $63 to $75; plain oak, $42 to $47; common and rejects, $20 to $25; red oak, plain, $43; whitewood, $43 to $45; sap and common, $30 to $35; brown ash, $41 to $44; white ash, $43 to $46; maple, $28 to $30; end-dried white maple, $38 to $42; birch, $27 to $30; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

THE NEWS

—S. Stevens has sold his saw mill at Fort William, Ont., to A. H. Dale.

—J. E. Doak has installed a shingle machine in his mill at Doaktown, N. B.

—At West Selkirk, Man., William Robinson is just completing a new saw mill.

—J.W. Shannon & Company, saw-millers, Prince Albert, N.W.T., are reported to have sold out.

—The saw mill of Cruise Bros.& Ritchie at Emo,Ont., has been sold to G. E. Campbell & Company.

—The lumber business Arneil & Company, Port Stanley, Ont., has been transferred to William Robinson.

—Prescott Holman and Charles Johnson, of Truro, N. S., have purchased a wood-working factory at Shubenacadie.

—John Fenderson & Company, lumber and shingle manufacturers, Sayabec, Que., have applied for a charter of incorporation.

—An examination of candidates to be licensed as saw-log cullers was held by the Ontario Government at Rat Portage on October 10th.

—The firm of Smith & McDonald, of the Otter saw mill, Langely, B. C., has been dissolved, and the business will be continued by William McDonald.

—The Muskoka Wood Manufacturing Company have almost completed the erection of their buildings on the old Whaley mill site at Huntsville, Ont.

—The Dundas Company, of New Westminster, B.C., has been formed to take over the lumber business of L.T. Dundas. The capital of the company is $25,000.

—The Victoria Harbor Lumber Company have moved into their new office building at Victoria Harbor, Ont. The building is a handsome and substantial structure.

—J. S. Emerson, of Vancouver, B. C., who is interested in logging operations on the coast, has invented a log-pushing locomotive which he intends to test on his limits.

—James McGregor, of Cheboygan, Mich., is constructing a large refuse burner for the Huron Lumber Company's mill at Spanish River, Ont. It is 100 feet high and 30 feet in diameter.

—Senator G. G. King is building an addition to his saw mill at Chipman, N. B., and in future will manufacture doors, sashes etc. The new building is 85 x 35 feet and three storeys high.

—Incorporation has been granted to the Pacific Coast Lumber Company, Limited, of Vancouver, B.C., with a capital of $500,000. The manager is Mr. J. G. Scott, late of New Westminster.

—J. R. Eaton, of Orillia, Ont.,has just installed in his planing mill an improved matcher weighing between five and six tons, which will greatly increase his facilities for turning out flooring and other matched lumber.

—Louis de Rossier, who recently returned to Vancouver from the Yukon, reports the discovery of an extensive belt of fine cedar timber near the coast, and 150 miles further north of the supposed northern limit of cedar.

—The Kilgour Shives Lumber Company,Limited,have had plans prepared for a modern saw mill to be built at Campbellton, N.B. It is learned that the contracts for machinery and other equipment have not yet been placed.

—The amalgamation is reported of McNab & Ryan, Leisch & Company and Park & Mitchell, lumber manufacturers in the Kootenay district of British Columbia. The combination will be known as the East Kootenay Lumber Company.

—Alex. Fraser & Sons of Ottawa, have purchased from Ritchie Bros., of Aylmer, Que., one hundred acres of land at the head of Lake Deschenes, the purpose being to erect thereon a modern saw mill. The work of construction will likely be carried out this winter, so as to commence sawing operations next spring.

—J. J. Willson has bought out the interest of John Eaton in the Kean saw mill at Fesserton, Ont. The new proprietors are enlarging the mill and installing a new engine. It is the intention to manufacture lumber, hoops and staves for export.

—It is understood that Donald Fraser & Sons intend to remove their saw mill now located at Cabano, Que., to Fredericton, N.B., where it is intended to erect a large modern mill. This mill will be operated in addition to the Aberdeen mills.

—The Lake Rosseau Lumber Company has been incorporated, with head office in Toronto and a capital stock of $40,000. The directors are G. W. Boake, G.E. Rowan, and Edith Lackie, Toronto; W.F. Boake, Downsview; and A. Boyd, Bracebridge.

—The John Harrison & Sons Company, of Owen Sound, Ont., have purchased the saw mill of C. H. Witthun at Wiarton. They will remove it to Owen Sound, where it will be used to cut ties for the C.P.R., for which they have a five year contract.

—A. Cushing & Company, of St. John, N. B., have this fall shipped about 100 carloads of mill refuse, slabs and edgings, in 4-foot lengths, to towns in Massachusetts to be used as fuel. A market for this refuse was doubtless created by the coal strike.

—An automatic shingle jointer for either dimension or random shingles has been invented by J.D. Caldwell, of Vancouver, B.C. Three of these machines have been installed in the new mill of the Hastings Shingle Manufacturing Company and are said to be proving very successful.

—The North-East Wood-Working Company has been formed to acquire the wood-working business formerly carried on by A.C. Mabee at St. John, N.B. The capital of the company is $20,000, the applicants for incorporation being R. G. Haley, Kennith Haley, J.F. Gregory, W.H. Murray and H.W. Cross.

—C. P. Easton & Company have registered their business at Quebec. The firm is composed of I. B., William E., and Frederick Easton, of Albany, N. Y., and it is the intention to carry on the manufacture of lumber, pulp and pulp wood in the province of Quebec. Timber limits for that purpose were recently purchased.

—Theodore Ludgate has again visited Vancouver. It is reported there that he has plans well advanced for the building of a large saw mill, probably on Dead Man's Island. Recently he put through a deal for the purchase of timber limits up the coast, and of course the timber from these limits must be manufactured within the province.

—The old Moore & McDowall saw mill at Prince Albert, N.W.T., has been purchased by American capitalists, who intend to conduct extensive lumbering orperations in the vicinity. A company of Rosthern capitalists are reported to have purchased the Shannon saw mills at Prince Albert and to contemplate making extensive improvements thereto.

—G. G. Gladman, whose saw-mill at Westport, near Parry Sound, was recently destroyed by fire, has decided to rebuild on a larger scale. He has purchased the machinery in the "Little Mill" of the William Peter Estate at Parry Sound, which will be removed to Carling. Mr. Gladman will equip his mill with band and gang saws and all modern improvements.

—The Goderich Lumber Company contemplate enlarging their plant at Goderich, Ont., to double its present capacity. In connection with the proposed enlargement a scheme for the sheltering of logs outside the harbor is also under consideration. The plan is to place a stretch of piling at right angle with the south pier and to shelter the logs behind this, bringing them into the harbor in small quantities as needed.

—A progressive saw-mill machinery concern is the M. Garland Company, of Bay City, Mich. Their steel cable conveyors are noted all over the continent. Amongst the machinery made at their immense works are band mills, re-saw and circular mills, saw-mill carriages, steam niggers, edgers, trimmers and slab slashers, Kline steam log loaders, center decks, cant flippers, rotary steam feed valves, seeam feed cut-off saws, heading staves and box board machines, stave jointers, equalizers, self-feed rip saws, lath mills and bolters, combined and separate fuel feeders, haul-up machinery, live rolls, shafting,pulleys,etc. Whilst they have plenty of imitators of their patents, they claim perfection and orginality, and make immediate delivery.

—The new saw mill of the International Lumber Company at Sault Ste. Marie, Ont., was opened on October 6th, with a force of 100 men. It is one of the many industries controlled by the Clergue syndicate. The mill is fitted up with all the latest improvements and runs with steam. The logs will be conveyed by slides to a clipper, where they will be cut up and then taken to the dry room, where they can then be dropped directly into cars which will be run beneath. The lumber will then be taken to where it is required. To overcome the difficulty of frost in the winter the water in the channel that has been dredged from the bay to the mill will be kept warm by a system of steam pipes, enabling the mill to run as well in winter as in summer.

—Mr. R. A. Estey, of Fredericton, N. B., is making some improvements to his mill. An incandescent electric light plant will be installed to light the mill, and a feed pump to supply the boilers. The water for this purpose will in future be obtained direct from the river instead of, as before, from the city waterworks. Mr. Estey has in previous years mostly cut spruce deals for the British market, but having allowed his supply of logs to run down during the period of lower prices in Great Britain, he was not in a position to resume operations when the market revived. This is one reason why this year finds him running full time on hemlock deals and hemlock boards for the United States market. The boards are dressed on one side, 12, 14, 16, 18 and 20 feet in length, and in width from 6 inches up. The timber is obtained from the farmers up the river.

LUMBERING IN NEWFOUNDLAND.

Mr. D. C. Craig, a veteran lumberman of Toronto, has recently returned from a trip to Newfoundland, in the interests of a company who had obtained an option on 250 square miles of timber land in that colony. This land is expected to yield 100,000,000 feet, half being white pine. The option is understood to be $60,000, which may be considered a very reasonable figure. Mr. Craig states that there are quantities of white pine, spruce, and fir timber on the Island. The fir corresponds to the Ontario balsam. Until recently no crown dues were exacted by the Government, but a ground tax of $2 per square mile was imposed. Under a new act, however, purchasers are obliged to pay in addition to the ground rent crown dues of 50 cents per mile. This new act also provides that purchasers must establish within a year of the date of purchase a saw mill and begin manufacture. There are quite a number of mills in operation, a few of them, as for example that of the Murray Company, Limited, being of large capacity. These mills cut mostly deals and scantling for the British, United States and West India markets. A large timber area is owned by Mr. R. G. Reid, the well known contractor, from whom permits to cut may be obtained on payment of 75 cents per thousand feet manufactured. The shipping facilities are good. Most of the mills are located near to the water and load directly on the vessel. In some cases where it is impossible for ships to reach the mill, lighters have to be employed. Some of the mills ship by rail over the Reid system. Wages are very much lower than in the Dominion, averaging only from $12 to $15 per month, while supplies can be secured at reasonable figures from Prince Edward Island and other points. Mr. Craig is of the opinion that there are profitable openings to be found for lumbermen in Newfoundland.

WOOD PULP DEPARTMENT

THE EXPORTATION OF PULP WOOD.

PORT ARTHUR, ONT., Oct. 10th, 1902.

Editor CANADA LUMBERMAN:

DEAR SIR,—I note in your monthly edition an article on the proposed export duty on pulpwood, which it has been suggested by some visionary and impracticable people should be $4 a cord. Unfortunately, absolutely exact data of the quantity exported cannot be obtained, but the statement in your article that 60 to 65 per cent. of pulp manufactured in the United States is made from timber grown in Canada is so absolutely untrue that I am confident that any casual investigation made by you would have shown that not 10 per cent. of the pulp made in the United States is evolved from Canadian spruce. For instance, the only mills in the United States that are to-day obtaining their raw material from Canada are the few scattered along the international boundary from Port Huron to some points down the St. Lawrence, and of all the wood crossing that line 99 per cent. goes from the province of Quebec. By the recent absolute embargo on the exportation of spruce for pulp wood purposes from the province of Ontario, its sale was practically stopped, the only exception being a few scattered farmers, settlers, and one or two small companies like ourselves, who own their lands in fee simple, and have no Canadian market, and therefore are obliged to sell to the United States mills. If you would stop to consider the numerous productions of pulp and paper in the United States from a great many materials aside from spruce, you would quickly appreciate the fact that Canadian wood is a very small factor. The bulk of the American mills are so far from the international boundary that the mere question of freight-rates debars them from the purchase of Canadian wood.

Another fact, which seems to prevail in Canada, is the utter ignorance of the reserves the American mills have to draw on. So true is this that I would like to be advised of the existence of a single mill in America which has been built with a view of relying upon Canadian wood. There is such a general misapprehension of forest conditions in the United States, of the large number of acres still uncut, of the modern scientific and seemingly successful re-forestration in some states, that the usual Canadian attitude is one of utter intolerence towards the idea that any other country possesses any substantial amount of spruce except the Dominion of Canada. On the contrary, Minnesota possesses vast tracts of virgin spruce and Wisconsin has so much left that our company cannot ship to Green Bay and compete with local prices. Maine and New York and Michigan are still supplied with spruce and at least four other states have much of it.

Another element which cannot be overlooked is the fact that Americans are the most fertile devisers of substitutes of any people alive, and that the moment spruce becomes too costly they will utilize other raw materials and in a short time manufacture an equally perfect product. Just at present there seems to be a mania for export duty on pulpwood, as if this was the only tariff issue between the two countries. Your suggestion that Canada "should disregard entirely all retalitory measures which may be temporarily put into force by the United States" is the old idea that some day or other the tail will be able to wag the dog. Up to date this has not been possible and it is not likely it ever will be.

Under the Dingley bill the imposing of an export duty, however great or small, on pulpwood, would involve the imposing of a corresponding duty on manufactured pulp, and 50 per cent. of the Canadian product now goes to the United States alone.

The building up of industries in Canada is a most admirable policy, and one in which we are greatly interested, but we wish to protest against any such absurd ideas as

1st. The imposition of any export duty on anything whatever. It is a game two can play at. It also belongs to the dark ages.

2nd. The selection of pulpwood as a mark by which to fatten the pocket-books of a beggarly dozen of manufacturers.

The United States has had enough experience in the way of enriching a few manufacturers at the expense of the many to serve as a solemn warning. As a general thing the public does not want libraries, but bread and meat if they can get them.

Another matter of no small importance is the fact that Canada has for years held out inducements to settlers to take up Crown lands and assured them that they could sell enough pulp wood to support themselves until the land was cleared. If this export duty is imposed either these deluded individuals must accept a miserable pittance for their wood or use it as fire-wood. It should be borne in mind that with the exception of a few widely separated localities there is no market in Canada for this raw material. The farmer or the pulp wood company (and of the latter there are very few) are entirely justified in their desire to sell in the highest market. The idea that this prohibition would force American mills out of existence or compel them to move to Canada is childish. Every recent incorporation of a pulp and paper mill in Canada, in which American capital was largely involved, has been done with a view to exporting to European countries or, if at all, only incidently to the United States. These concerns have been few in number and located at points on or adjacent to tide-water. The private land owners in the immediate vicinity of these cocerns are not able to sell to them a single cord, because a large concern owning their own concessions can cut their own pulpwood cheaper.

In the money markets of the world Canada is a notoriously unsafe country in which to invest capital, as, if it does not make revolutionary tariff changes very often, it constantly threatens them, and an illogical press agitates for them. The policy of "Canada for the Canadians" is all very well, but when it practically means "Canada for only a few Canadians" the issue will be how far the few can befool the many. By fair treatment of capital so it will be able to figure on the continuance of existing conditions for a resonable number of years in advance, it is only a matter of time when her natural resources will be fully developed, and developed so thoroughly and legitimately that any artifical propagation would have been a most serious mistake. For instance, how would Canada enjoy an export duty imposed by the United States of $4 a ton on anthracite coal? In view of present conditions it ought to appreciate what this would mean, and, while I do no believe in any spirit of retaliation, it is usually the bigger dog that can retaliate the hardest. Canadian manufacturers, as well as those in the United States, are to-day enjoying such prosperity that a careful student of affairs is almost inclined to tremble. The New World is rapidly, to use a slang expression, "putting the Old World out of business," and of this progress Canada is getting its proper share. The surplus of American capital is rapidly being transferred to this side, not only in the way of the rush into the North-West wheat lands, but in the way of enormous factories and the heaviest kinds of investments. There never was a time when there should be wise men at the head of Canadian affairs, thoroughly determined to let well enough alone.

Very truly yours,

EDWIN F. BISHOP,
Manager Lake Superior Timber Company.

VISIT FROM A BRITISH CAPITALIST.

Much benefit may accrue to Canada as a result of the recent visit to this country of Mr. William Harmsworth, of London, England. Mr. Harmsworth, is a brother and partner of Mr. Alfred C. Harmsworth, of the London Daily Mail. The special object of his visit was to investigate the timber resources of Canada with a view to the establishment here of pulp and paper mills which would ensure a permanent supply of paper for the various publications in which Harmsworth Bros. are interested. The supply has in the past been obtained largely from Norway and Sweden.

Mr. Harmsworth visited the provinces of Ontario, Quebec and New Brunswick, and it is understood that he was favorably impressed with the extent and quality of spruce available for pulp purposes, as well as with the number of suitable water powers. From his remarks the impression was obtained that they will locate in Canada, although it is improbable that a decision will be reached for some time. Two or three locations are being considered.

The extent of the proposed operations of this company are little less than wonderful. It is the intention to control the manufacture of paper from the raw material to the finished product. Timber limits will be purchased, pulp and paper mills erected, and vessels constructed or purchased for carrying the pulp and paper across the Atlantic. It is learned that 1,000 tons of paper per week will be required. This will mean an immense expenditure in mills and equipment and labor to produce such a large quantity of paper.

One of the difficulties in securing a location is that it

is necessary that shipments should be made the year round. It is understood to be the intention of Harmsworth Bros. to operate their timber limits with a view to reproduction, and they may even go so far as to resort to replanting.

PULP NOTES.

It has been rumored that Cushing & Company, of St. John, N. B., contemplate building a new pulp mill at Fairville.

Joseph Kilgour, of Kilgour Bros., Toronto, was in Ottawa recently looking for a site upon which to build a paper mill.

John Fenderson & Company, Sayabec, Que., now applying for incorporation, ask for permission to carry on a pulp and lumber business.

The Chicoutimi Pulp Company are making extensive additions to their pulp mill at Chicoutimi, Que., by which the capacity will be more than doubled.

A report is current that a Mr. Norden is making arrangements for the establishment of a large colony of Finlanders at Portage a l'Ours, on the banks of the Ashwapmoushouan river, 38 miles north of Roberval, Que. Large pulp mills at this point are spoken of.

The Chicoutimi Pulp Company, of Chicoutimi, Que., expect to have their new pulp mill completed next spring. It will have a capacity of 100 tons of dry mechanical spruce pulp per day, all of which will be exported to England under a contract with Edward Lloyd, Limited, of London, until 1908.

Irving R. Todd and H. F. Dowst, of Calais, Me., have been incorporated as the Eastern Pulp Mill Company, the purpose being to build a mill at Baring, N. B., for preparing wood so as to be suitable for pulp mills. The proposed mill will be 95x25 feet exclusive of boiler room, and will give employment to about 25 men.

An American syndicate has taken active steps towards the establishment of pulp and paper mills at Bella Coola, B. C. The site of the mills will be within four miles of the village. Philip Jacobson, of Bella Coola, states that the settlers have agreed to grant the company all the timber on their lands upon condition that the industry be established at the point mentioned, and that the Government has offered the company the privilege of leasing 125 square miles of timber limits on which there is a large quantity of spruce and cottonwood.

An English party, consisting of M. Graham Lloyd, of the Sydney Mail and Sydney Morning Herald, A. B. Craig, a prominent woollen merchant of London, H. L. Trueman, a wealthy banker and broker, L. P. Andrews, a noted English pulp expert, and C. W. Sawbridge, a solicitor, are making an inspection of the property of the Sturgeon Falls Pulp & Paper Company at Sturgeon Falls, Ont., in which they are interested. Their visit is in connection with the proposed expenditure of about $2,000,000 in increasing the pulp and paper plant of the company. The timber limits of the company are being explored, and should they reach the expections of these gentlemen there is little doubt but that the proposed expenditure will be undertaken.

The Refined Wood Company has been incorporated under the laws of the State of New Jersey, with a capital of $1,000,000. The company will manufacture wood pulp lumber under the patents of F. E. Keyes, who has just returned from Germany, where his refined wood lumber is being manufactured. Under the patents it is intended to so incorporate and unite the fibres of wood pulp and similar fibres that they can be formed into boards of any desired thickness and of a size limited only by convenience in handling. Refined wood, it is claimed by the inventor, may be of the density of the softest pine or of the hardest mahogany and take as fine a finish; it may be bent or curved in any direction and will not change in shape.

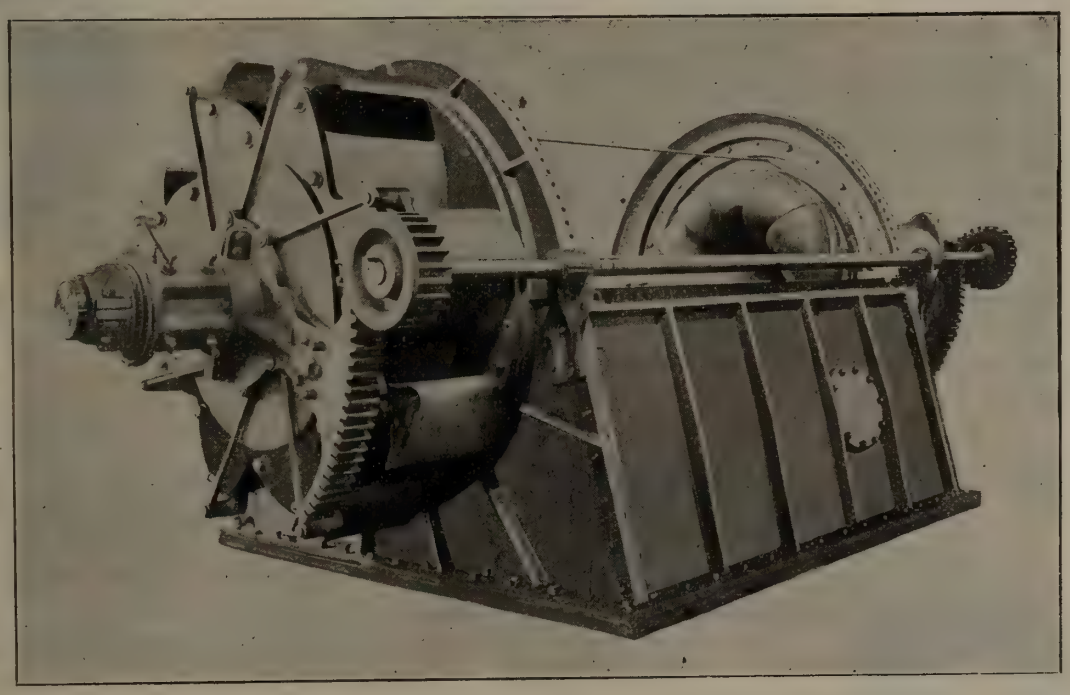
OPEN FLUME TURBINE PLANTS

For use under moderate heads where local conditions permit its adoption, there is probably no more satisfactory setting for horizontal wheels in pairs than the draft chest with central discharge, placed in an open flume.

The first cost is moderate.

The flow of water is unobstructed and ample, and as a result speed regulation is easy.



Direct connection to Pulp Grinders or other machinery may be arranged with facility.

Wheels are readily removed and replaced.

We have several styles of cases for use in open flumes, either steel plate or cast iron construction as may be required, or cast iron sides with steel plate top as shown in the engraving.

Pair of 35 Inch Wheels, Mounted on Draft Chest with Top Removed.

We are now engaged in building a 10,000 H.P. Wheel Plant, each pair of wheels being of the general type shown above, arranged for direct connection to Wood Pulp Grinders. Send us particulars for estimate, or write for catalogue and information.

SAW MILL MACHINERY.

When travelling through Michigan our representative called upon the firm of Wickes Bros., of Saginaw, well known as manufacturers of saw-mill machinery. Wickes Bros. started operations in Saginaw in the year 1860,at which time the Saginaw Valley and tributary country was covered with dense forest of the finest cork pine, and lumbering was practically the only industry. They commenced building a line of heavy saw mill engines and other saw mill machinery, which found favor with the saw mill operators, not only of Saginaw and its immediate vicinity but throughout the entire State. Among the first machines they turned out were several of the old-fashioned gang saws with wooden framing, light parts and slow motion such as were generally in use at that date and which would produce but a very small percentage of the amount of lumber cut by one of the gangs of to-day. Realizing the disadvantages of the machine as then constructed, they designed, patented and built the first iron frame gang saw-mill ever used in America, applying to the sash an oscillation movement which presented the saws to the cant in such manner as to result in an easy cut, and freed them entirely on the up-stroke. The result, our representative was told, was an enormous increase in the quality and quantity of the output, and from that day to this Wickes gangs have held their position among the best machines of the kind made. Their builders cheerfully acknowledge that the suggestions they receive from their customers are among their most valuable aids in improving their machines and adapting them to the ever-changing and more exacting requirements of the trade. With a vast number of customers and with a highly skilled engineering staff and perfect shop equip ment at their command, it is easy to understand how is that the Wickes gang maintains its pre-eminent position.

WORKS OF WICKES BROS., SAGINAW, MICH.

Wickes gangs are made only at the shops of Wickes Bros., Saginaw, Michigan. They have no representatives, either resident or travelling, nor is any concern in Canada authorized to build or vend Wickes gangs. The trade of the company is widely distributed, covering nearly every State in the Union, nearly every Province of Canada; Newfoundland and the countries beyond the seas. Among recent shipments was one of a gang sawmill for the United States Navy Ship Yard at Manilla, Phillipine Islands, and one of a gang sawmill for Havre, France.

It is not to be inferred that the Wickes gang is the only product of these shops; they build also a complete line of saw mill machinery, including heavy duty slide valve engines, log haul-up rigs, log kickers and loaders, log turners or niggers, carriages, band mills, circular mills, live rolls, edgers, trimmers, slashers, lath machinery, etc. Their boiler shops are among the finest in the country and turn out a product that is second to none. Among other users may be noted the new Beet Sugar Factory at Dresden, Ontario, where there are some 1,500 horse power of Wickes' vertical water tube boilers.

Some years ago, when co-incident with the exhaustion of the cork pine preserve, Michigan mills began to close through lack of timber, Wickes Bros. started a business, which has since grown to very considerable proportions, by purchasing abandoned saw mill outfits. As a rule they were bought cheap and sold at a correspondingly low figure, and many of them are set up in Canada and earning money day after day for their owners. The firm now operate very extensively in this line, purchasing and selling all kinds of abandoned plants and maintaining large sales warehouses at Saginaw, Mich., Pittsburg, Pa., and Jersey City, N. J. They issue monthly a list of second hand machinery on hand in their various warehouses and will mail this list to any one on application.

They are located near to the great lumber producing section of Canada, have had a long acquaintance with Canadian trade, and understand its needs thoroughly. They are, therefore, well equipped to care for Canadian orders.

TRADE NOTES.

The Winnipeg Machinery & Supply Company are installing a saw mill plant at Bowsman, Man., for Caverly & Sons.

A circular from the Tanite Company, Stroudsburg, Pa., calls attention to the many excellent qnalities of the emery wheels offered by this company.

A little booklet called "At Home" gives small halftone glimpses of the plant of the American Blower Company, of Detroit, Mich., who make a specialty of dry kilns.

The Meaford Manufacturing Company, of Meaford, Ont., have installed a two-room "Standard" moist air dry kiln, built by the Standard Dry Kiln Company, Indianapolis, Ind.

The M. Garland Company, Bay City, Mich., have just shipped another of their improved band mill carriages for the Meadow Mountain Lumber Co., Newport, Tenn.

The Eau Claire Supply Company, Eau Claire, Wis., have sent us a copy of their catalogue B referring to their lumbermen's sleds.

The Baden Machinery Manufacturing Company, Limited, of Baden, Ont., has been incorporated, to manufacture engines and boilers. Charles Hood and Oliver Master are interested. The capital is $40,000.

"Electric Locomotives for Surface Haulage" is the title of a catalogue issued jointly by the Westinghouse Electric and Manufacturing Company, of Pittsburg, and the Baldwin Locomotive Works, of Philadelphia.

James W. Woods, manufacturer of lumbermen's supplies, Ottawa, is having plans prepared for a new building, his present premises being too small for his extensive business. The new building will be commenced this fall and must be completed by August 1st, 1903.

Messrs. Joshua Oldham & Sons, the well known manufacturers of gang, circular and band saws, New York City, are sending out to the lumber trade a novelty in the form of a pocket lumber scale. It is conveniently arranged and enclosed in an aluminum case. On the front of the case is the announcement of the firm and on the back a view of their extensive works.

A large business is gradually being built up by the Owen Sound Iron Works Company, of Owen Sound, Ont. This company have just decided upon the erection of new works of an extensive character. The main building, to be known as the machine shop, will be 300 feet long and about 50 feet wide. There will also be a pattern shop and metal storage building each 40 feet long, and a boiler shop 100x40 feet. The company make a specialty of saw-milling machinery.

Mowry & Sons, of Gravenhurst, Ont., have recently issued an illustrated catalogue of their manufactures, which include saw and shingle mill machinery and supplies, steam engines, boilers, etc. Some of their specialties are automatic saw sharpeners, log jacks, log decks, log loaders, steam niggers, steam feeds, steam edger transfers, steam jump saws, slab slashers, "Boss" shingle machines, knife jointers and splitters. Persons about to build new mills or to remodel existing plants should write for a copy of their catalogue.

The Fairbanks Company, Craig street, Montreal, have concluded arrangements with the Dodge Manufacturing Company of Toronto for their general agency for Montreal and vicinity. An entirely new stock of Dodge standard pulleys has been put in, as well as various stocks of Dodge transmission goods, including ball and socket hangers, flange and grim death couplings, safety collars, improved self-oiling bearings, all types, etc. All of these standard lines will be carried in stock at the Fairbanks Company's warerooms, for immediate shipment at factory prices.

NEW BRUNSWICK FOUNDRY AND MACHINE SHOPS

FREDERICTON. N. B.

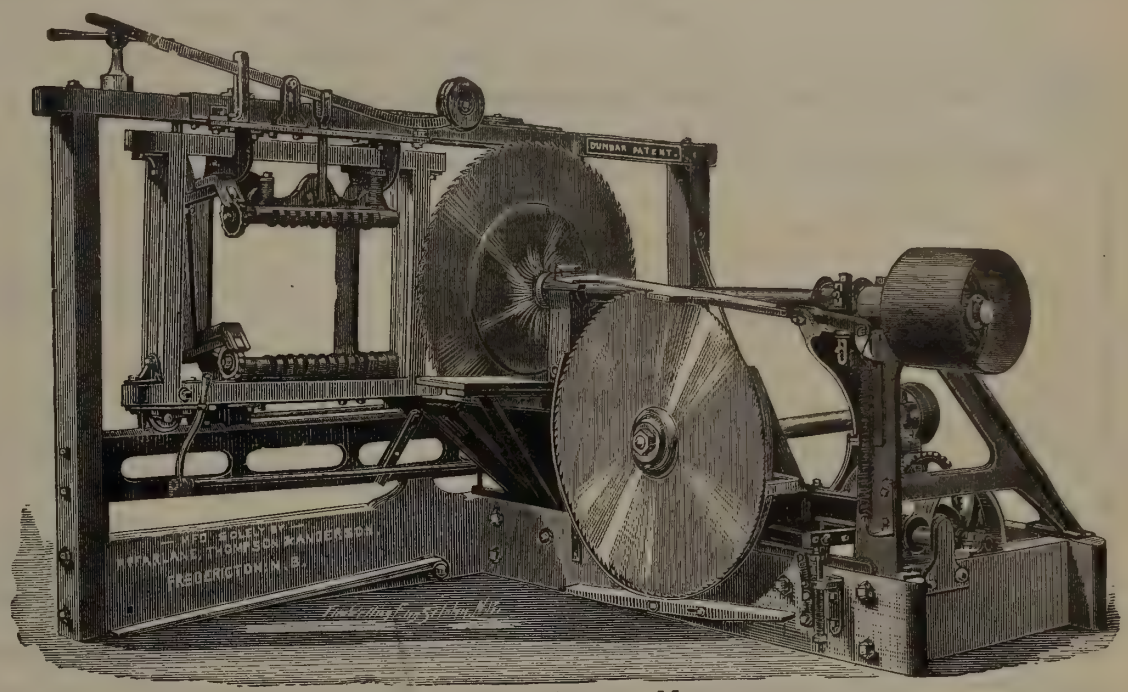
McFarlane, Thompson & Anderson

Manufacturers of the only original

PATENTED DUNBAR SHINGLE MACHINE

And Sole Proprietors of the said patent

Universally admitted as being the best machine on the market from the Atlantic to the Pacific.

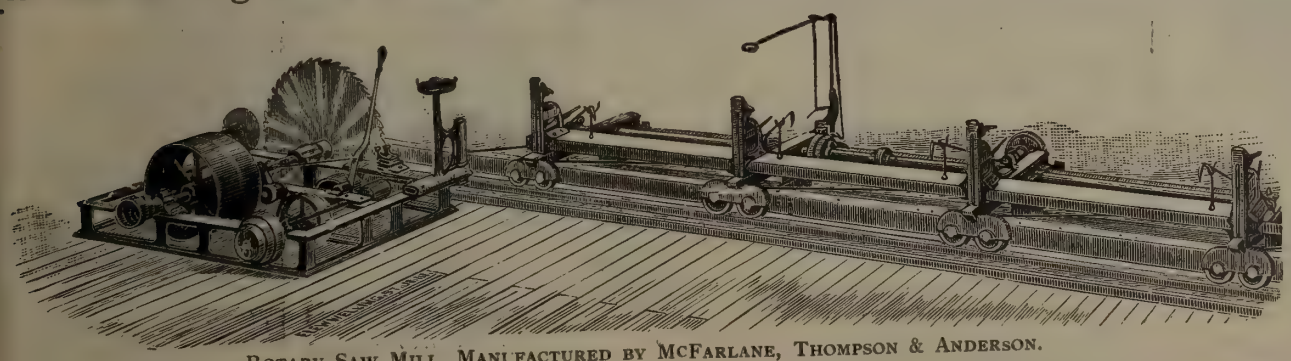


PATENT DUNBAR SHINGLE MACHINE.

The following well known firms are a few of the many who are using the celebrated Dunbar Shingle Machine:—Metis Lumber Co., Quebec, 15 machines; John A. Morrison, Fredericton, N. B., 16 machines; Gibson R'y. & Manufacturing Co., Marysville, N. B., 10 machines; Hastings Shingle Manufacturing Co., Vancouver, B. C., 16 machines.

The McFarlane, Thompson & Anderson Dunbar Shingle Machine is a record breaker in the west—(New Whatcom Blade, Washington State). The following may be of interest to mill operatives and other; it is, we believe, the best six day record ever made on this class of machine—a Dunbar upright; the bolts were taken as they came from the woods, without selection, and were a good average quality. This remarkable run was accomplished recently at the George A. Cooper mill, Chuckanut siding: Total cut for six days, 2 shifts of 10 hours each per day, 394,000 eighteen inch shingles. In the day shift, Harry A. Edison, sawyer, cut 218,000, an average cut of 36½ thousand, and the night shift, Levi Loop, sawyer, cut 176,000, an average of 29⅓ thousand of eighteen inch shingles per day.

"When all the rest fail, or are down for repairs, or are cutting shims, the McFarlane, Thompson and Anderson DURBAR SHINGLE MACHINE is still cutting the standard shingle of the world." From the Atlantic to the Pacific they all say it.



ROTARY SAW MILL, MANUFACTURED BY MCFARLANE, THOMPSON & ANDERSON.

Latest Bulletin from the seat of war, October 17th, 1901—From the Metis Lumber Co., Price, Que., in reference to the 15 Shingle Machines sold them last season:

"Replying to your enquiry as to the running of the Shingle machines you sold us, would say that they have given entire satisfaction, and have run very successfully so far. We have sawn 30 million shingles in 70 days to date, and count on sawing 10 million more this season."

THE METIS LUMBER COMPANY.

We manufacture a complete line of IMPROVED ROTARY SAW MILLS, BUCKEYE AUTOMATIC CUT-OFF ENGINES and all kinds of MILL MACHINERY.

Our prices are right.

Kindly allow us to quote before purchasing.

For further particulars address

McFarlane, Thompson & Anderson,

Fredericton, N. B.

CHICAGO'S LUMBER KING.

Edward Hines has been called the "Young Napoleon" in the Chicago lumber industry. He started as a tally boy at $4 a week, and the other day one of his deals involved $400,000. The Edward Hines Lumber Company is one of the largest in volume of business transacted in the whole world. The extensive yards, offices and mills are located south of Blue Island avenue on Lincoln street, one of the show sights of Chicago.

This concern own and maintain a mile and a half of dock frontage, with double track capacity for 220 cars. They have 15 large lake steamers operating among their extensive timber locations. In Wisconsin and Michigan they own exclusively 500 million feet of standing pine, and at their Chicago plant alone they have a storage capacity of 75 million feet. Their two planing mills take care of 700,000 feet of lumber in ten hours. The S. K. Martin Lumber Company and the I. Stephenson Lumber Company have been absorbed by the Edward Hines Company, making four of the largest Chicago companies which have been consolidated with the latter company.

A visit to the yards of the company shows a "beehive" of industry representing over two millions of money invested. The latest improved machinery, including the McGarry patent safety lumber piler, is used entirely in these yards.

A SAFETY LUMBER HOIST.

One of the most interesting sights in Chicago is the rapid manner in which immense quantities of lumber are piled. This s done by an invention of Mr. John A. McGarry, the yard manager of the Edward Hines Company. It is not only a rapid and safe piler, but a lowering machine. It combines absolute safety to any required height, durability, economy, utility and simplicity. Mr. McGarry has also a patent adjustable swivel pulley for the bottom of the pile, a patent self-acting tongs. The whole outfit is cheap and will save its cost over hand labor in one or two weeks. The largest concerns in the United States use this piler.

INQUIRY FOR WILLOW TREES.

F. Westbury & Son, 183 Great Dover Street, London, are seeking a certain class of willow tree. They would be glad if some Canadian lumberman would send them a sample bundle of leaves taken from the species available, with some details as to height and girth and approximate cost per tree c. i. f. London. They state that as soon as they see the leaves they will know whether business is practicable.

Boyd, Caldwell & Company, Limited, has been incorporated, with a capital of $200,00, to carry on the lumber and woollen business of Boyd, Caldwell & Company at Appleton and Lanark, Ont.

ANNOUNCEMENT

We have established a Land Department in connection with our main Chicago offices, with resident agents at our branch places, Houston Bros., Cairo, Ill., Mephis, Tenn., Vicksburg, Miss., Columbus, Miss., and Bigbee, Miss.

We are offering for sale six different tracts each in solid bodies of virgin White Oak timber standing thick, with a sprinkling of Red Oak, Cypress, Ash, Hickory and Gum, thrifty growth, the way nature produced it without depredation, advantageously located for milling or manufacturing purposes, having both railroad and water transportation facilities. Prices very reasonable. Write us for particulars.

We sell rich Delta and Tombigbee River Valley land, alluvial soil, from which the timber has been removed, desirable for agricultural investment, colonizing purposes or stock farms. We employ settlers in connection with our logging and milling operations. Write us for maps and description.

We manufacture Hardwood Lumber, Yellow Pine and Cypress and will quote you on basis of stumpage value, cost of manufacturing and handling bill, straight or mixed car lots; direct shipments from either of our sawmills bearing the lowest freight rate to point of delivery. Write us for prices.

LUMBERING TOOLS.

A great industry in Saginaw, Mich., is that of Morley Bros., occupying two blocks of that city with their own railway and docking facilities. Our representative was shown over the works of this concern, where are manufactured the celebrated "Blue Line" lumbering tools, also mill supplies of every description, including special harness for lumbermen's use. A patent equalizing trace is a feature of the latter. In their foundry are four immense steam hammers at work. Lumber cant dogs, cant hooks, pikes, etc., are hand-forged—much superior to the weaker drop-forging. Three hundred horse-power of pressure is used to place the steel pike in the "peavey," the handles being of maple and hickory. Our representative was shown a car-load of seven-foot handles for shipment to Montgomery, Alabama, for southern pine operations. The company also manufacture skidding tongs, cold chutes or repair links, chain grab hooks and chain round hooks, swamp and loading hooks, in which a special quality of steel is used.

The Woodstock Lumber & Manufacturing Company, Limited, of Woodstock, N. B., is applying for incorporation.

To Those Who Carry Insurance on Lumber

You are compelled to pay more for your insurance to-day than a year ago. This is particularly true in Canada where rates have been abnormally increased by Tarriff Association Companies. It is our business to insure nothing but lumber. We study the advantages offered by each risk submitted and accept only the best moral and physical hazards. Thus by carrying only selected risks we can offer lower rates. We are saving money for hundreds of lumber dealers. Why not let us take care of from $1,000 to $20,000 of your insurance?

For information apply direct to our home office,

Combination Gang Edger

The above cut represents what we call a 60-inch machine, i. e., the entire length of the feed rollers is 60 inches. The arbor is arranged with a gang of eleven saws for manufacturing 1-inch lumber from cants 4, 6 and 8 inches through. The balance of machine is arranged with three moveable saws, one stationary or fast.

With this machine the cut of a mill can be increased at least 25 per cent. without any additional expense for labor, as a grefit deal of the sawing which is now done on the band or cicular can be done on this machine. It has rift flooring attachments, andis without question the best machine on the market. It has been in use in the larger mills for many years.

Read and Reflect

RHINELANDER, WIS.

Rodgers Iron Manufacturing Co., Muskegon, Mich.

Gentlemen :—Replying to yours we will say that the combined flooring mill and edger is doing good work and that we have no fault to find with it, as it is a very satisfactory running machine. Respectfully,

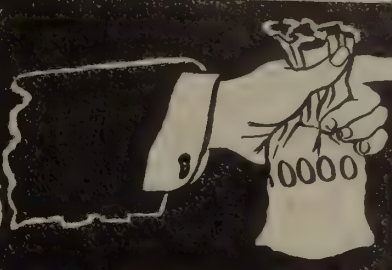
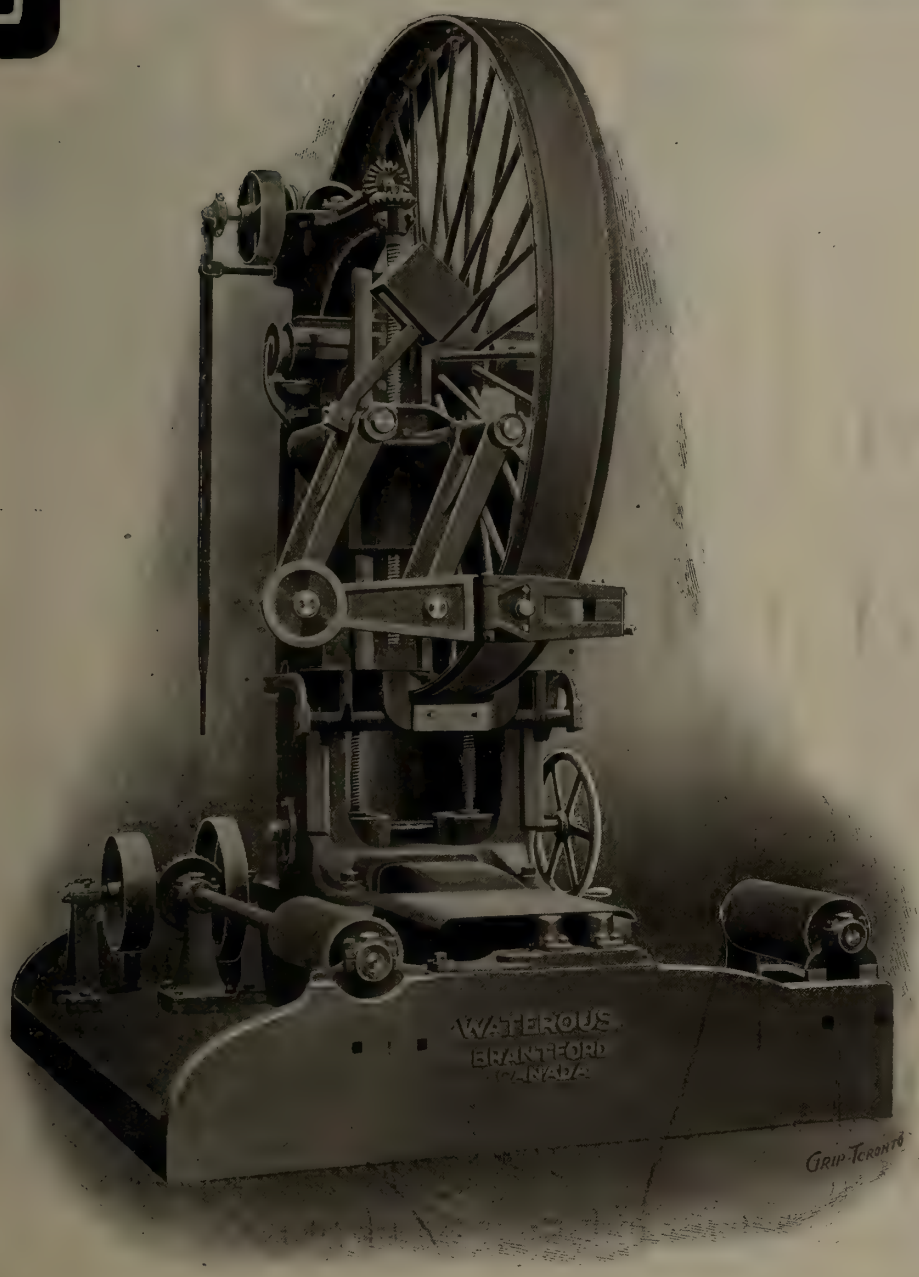
THATS YOUR INCREASE IN NET PROFITS WITH THE ALLIS DOUBLE CUTTING BAND MILL



33 TO 40 %



The bank balance is nearly every business man's criterion.

We can increase it for you.

Perhaps you have a single band mill in operation.

The "Allis" cutting attachment, cutting both ways, will increase your production 33 to 40 per cent. without increased charge for operation.

Consequently your net profits are increased this amount.

Likewise your bank balance.

It will pay its cost in a few month's sawing.

On new equipment the Allis double cutting band mill should be the only mill to consider.

It's a money maker and a bank balance increaser, for it increases net profits.

You can figure for yourself, with its increased production, how long it will take to pay for itself, merely on its **increased** production.

Let us estimate with you on new equipment.

It's dollars in the bank for you if you will.

Our "Steam Set" too is a net profit producer.

It increases your output an additional 10 per cent. and so adds 10 per cent. more to your net earnings.

It always sets accurately and never **gets tired.**

Let us tell you more about it.

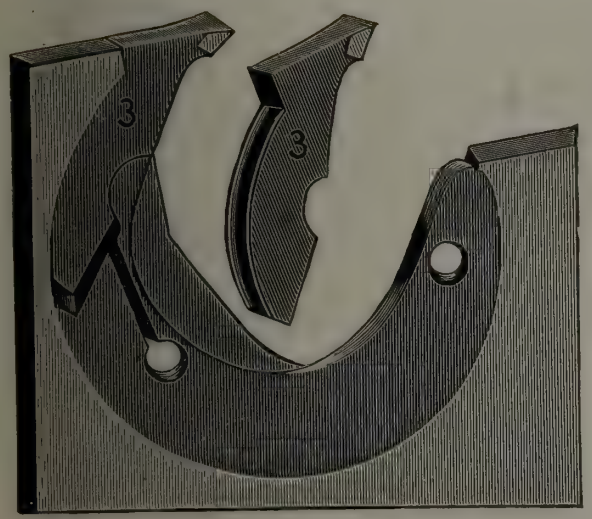
R. H. SMITH CO., LIMITED

St. Catharines, Ont.

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada.

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.



INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

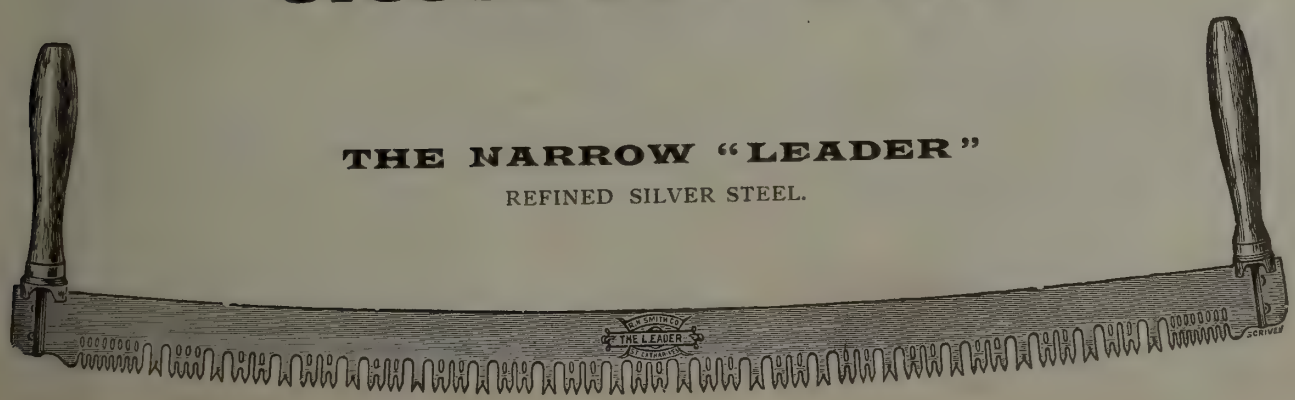
Shanks made in usual gauges and to fit your saws

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS



THE NARROW "LEADER"

REFINED SILVER STEEL.

The Simond's temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

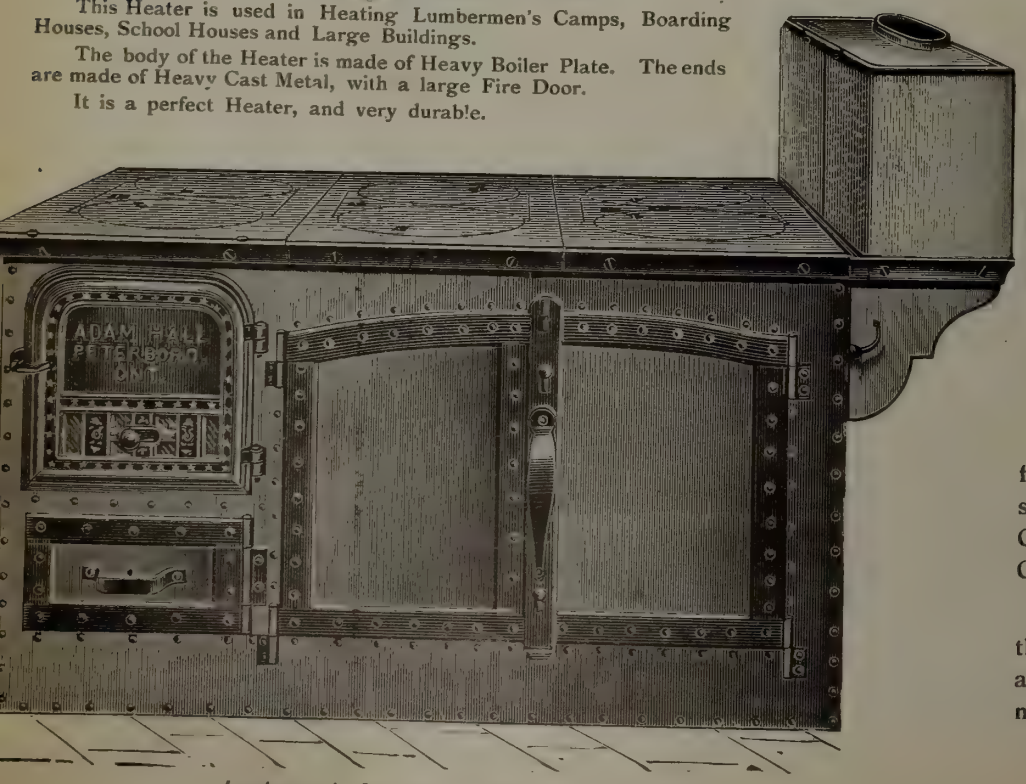
THE LUMBERMAN HEATER.

36 Inch Lumberman Heater.
42 Inch Lumberman Heater.
48 Inch Lumberman Heater.

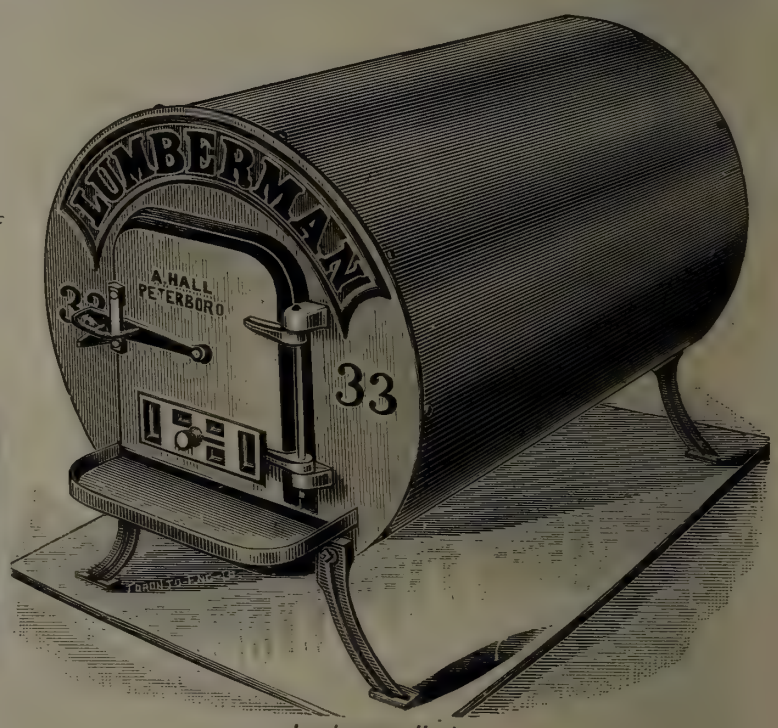
This Heater is used in Heating Lumbermen's Camps, Boarding Houses, School Houses and Large Buildings.

The body of the Heater is made of Heavy Boiler Plate. The ends are made of Heavy Cast Metal, with a large Fire Door.

It is a perfect Heater, and very durable.



Lumbermen's Six Pot Hole Range with Reservoir.



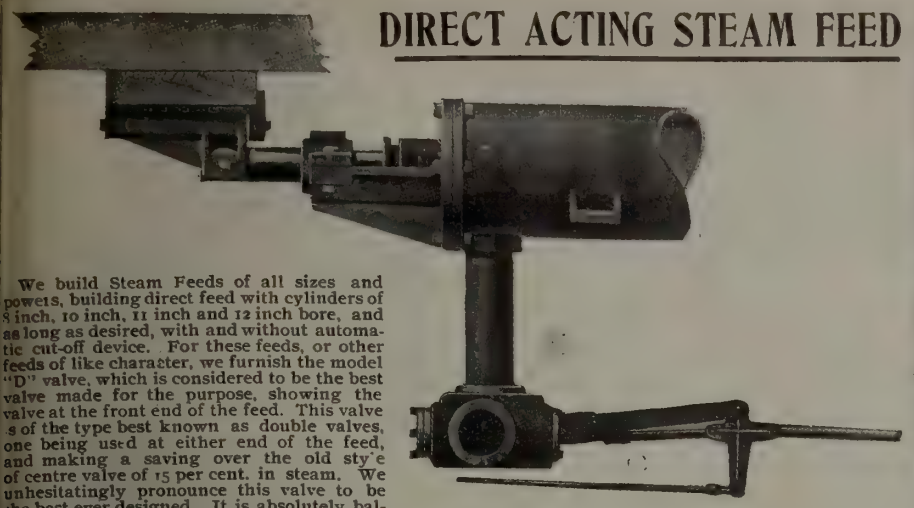
Lumberman Heater.

We have been manufacturing Steel Ranges and Heaters for Lumber Camps for the past Twenty-four Years, and have supplied the wants of nearly all the Lumbermen in Quebec, Ontario and Manitoba—they are unexcelled for Baking and Cooking, and are strong and durable.

This No. 10-25 Range with 25 Gallon Copper Reservoir is the one we sell the most of, owing to the convenience of having a supply of hot water at all times. Will cook for 50 to 60 men. Weighs 450 pounds.

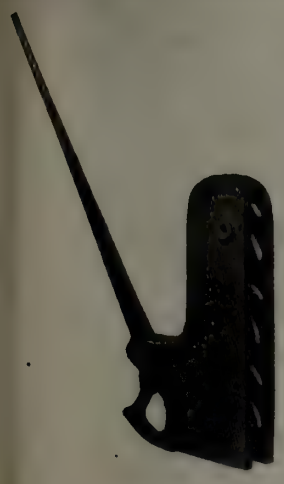
Write for Catalogue and Price List.

DIRECT ACTING STEAM FEED



We build Steam Feeds of all sizes and powers, building direct feed with cylinders of 8 inch, 10 inch, 11 inch and 12 inch bore, and as long as desired, with and without automatic cut-off device. For these feeds, or other feeds of like character, we furnish the model "D" valve, which is considered to be the best valve made for the purpose, showing the valve at the front end of the feed. This valve is of the type best known as double valves, one being used at either end of the feed, and making a saving over the old style of centre valve of 15 per cent. in steam. We unhesitatingly pronounce this valve to be the best ever designed. It is absolutely balanced, does not stick or kick, has larger steam openings than any other valve made for corresponding sizes of pipe, is economical in the use of steam, and handles the largest and longest feeds, under any pressure, with perfect ease and accuracy. We have also designed a new style of stuffing box which is a great saving in packing, and has an outer support, and is fitted with an oil well, filled with felt or waste which keeps the piston thoroughly lubricated.

Improved Double-Tooth or Boss Dogs



The accompanying cuts fully illustrate our Improved Double-Tooth Dogs with inserted teeth, making the teeth themselves of the finest tool steel. This allows them to be drawn to a slender point that will penetrate without crowding the log or board away from the carriage The teeth in case of bending or breaking can be replaced in a few moments, and without having to take the whole dog case apart — an operation requiring an hour or more.

These Double-Tooth Dogs are controlled by a wrought iron lever that can be bent to suit the operator, and this lever is held by a spring, positively in or out, so that there is no danger of the Dogs pushing out toward the saw. This method of holding the dogs has the merit of being permanent, the ordinary light pawls and connections commonly furnished for this purpose generally lasting but for a few days Our latest improved carriages are fitted with these dogs.

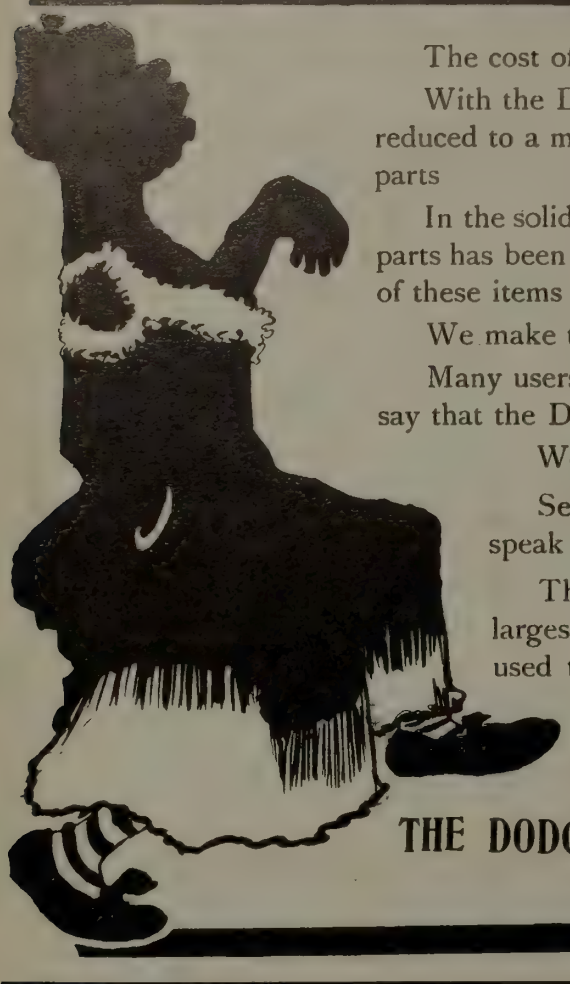
CUTS QUITE A FIGURE



The cost of erecting a friction clutch "cuts quite a figure."

With the Dodge Split Friction Clutch the cost of erection is reduced to a minimum as well as the cost of repair to the wearing parts

In the solid clutch the cost of erection and repair to the wearing parts has been shown time and time again to be four times the cost of these items in the Dodge Split Friction Clutch.

We make these split friction clutches for pulleys and couplings.

Many users who have other makes installed along side the Dodge say that the Dodge is superior to any other make.

We don't ask you to take our word for this.

Send for our booklet, "How good people speak of it."

The booklet gives the opinion of many of the largest concerns in Canada, some of whom have used the Dodge Split Friction Clutch for years without one cent of expense for repairs.

FORESTRY REPORT.

The report of the third annual meeting of the Canadian Forestry Association has been distributed within the past month. It contains 130 pages, in addition to a number of interesting and appropriate illustrations, and is carefully compiled. A paper dealing with "The Forest Fires of 1901" furnishes information as to the loss occasioned from this cause in the different provinces, with the plans adopted for preventing them and some detailed suggestions as to the lines upon which such protection should be provided. This paper brings out clearly the great advantage and the comparatively small cost of an efficient system of fire rangers.

The illustration on this page is reproduced from the report.

BURNT FOREST IN TEMISKAMING DISTRICT.

LUMBERING ON THE NEWFOUNDLAND RAILWAY.

A correspondent at St. John's, Nfld., sends the following interesting information to the Railway and Shipping World :

An immense impetus has been given to the traffic of this road in the past year by the establishment on a very large scale of a saw mill plant by John Miller, a Scotchman, who has for the past 25 years been operating in the spruce and pine forests of Sweden. Two years ago Mr. Miller found that his timber limits were about exhausted in Sweden and that he would have to look about for a new field for operation. Happening to meet in Scotland R. G. Reid, a family connection and then the proprietor of the Newfoundland Railway, Mr. Reid advised him there was ample field for large operations in the almost unknown and unexplored timber areas of Newfoundland. Mr. Miller immediately deputed one of his most experienced timber cruisers to go out to the colony and examine the areas in question. A few months later a most favorable report was received and Mr. Miller decided at once to move his plant and outfit from Sweden to Newfoundland. Inside of a year from that date he had three large saw mills erected, some 25 miles of branch railways and sidings built, and the largest lumber wharf in the colony constructed at Lewisport, on Notre Dame Bay, on the east coast. His shipments this year it is expected will reach 25,000,000 feet ; already some 700 men are employed in the woods cutting logs and operating the mills. It is expected that after this year the average cut will not be less than 40,000,000 feet. As all this lumber is hauled from 50 to 75 miles on the Newfoundland Railway it can be seen that a great impetus must be given to its somewhat limited traffic. The lumber is principally spruce, but a considerable quantity of excellent white pine and tamarac is also turned off the limits. The striking feature of this great plant, says one who has recently seen it, is "that practically nothing is wasted except a surplus of bark and small clippings in excess of that required for the boilers." Most of the machinery is of the most modern type and of Canadian make. The largest mill is built on the Red Indian lake, on a branch line 21 miles off the trunk-line of the Newfoundland Railway and almost in the centre of the colony. A village of dwellings, school house, church, and large stables for horses employed in the lumber woods (and all beautifully whitewashed) are grouped about this great mill that runs day and night. Over 300 people are employed here. Mr. Miller brought over about 70 Swedes with him, but most of them have gone home or to the west, and the employees now are, with few exceptions, natives of the colony. They are said to make excellent operators in all lines, after a few months' training under the experienced managers who have long been in Mr. Miller's employ in Sweden. The largest portion of the cut is deals. Material not large enough for deals is cut into pickets, box shooks, laths, and a variety of other small dimension stuff. Mr. Miller claims that barring fires he has limits that will yield a yearly cut of 40,000,000 feet for 50 years. The Red Indian lake on which the mill is situated is over 40 miles long and about an average of three-quarters of a mile wide. Outside Mr. Miller's people there is not a habitation or a settler within many miles. He already has one steamer plying on this lake and another one about ready to launch.

BONUSES FOR TIMBER LIMITS

List of the Public Sales Held by the Ontario Government Within the Past Fifteen Years.

Inquiries received from time to time regarding timber limits that have been placed under license by the Ontario Government prompted the compilation of the accompanying list. It includes, we believe, all the limits in Ontario that have been sold by public auction within the past fifteen years. In addition, a few berths of minor importance have been disposed of by private tender, these consisting chiefly of timber damaged by fire.

The list of sales, as arranged below, may be found useful for reference. The figures are interesting at least as showing the gradual appreciation in the value of pine timber lands. The berths enumerated represent a return to the government for bonuses alone of $6,195,021.74. Some of these berths have been lumbered; others still remain in their original state. In any event, there has been a large additional revenue to the Government from stumpage dues and ground rent.

Total	$733,312.50

TIMBER FOR A RAILWAY.

The Grand Trunk Railway Company use annually between 10,000,000 and 15,000,000 feet of lumber and timber, which is required for bridges, culverts, stations, platforms, cars and coaches, etc. The material consists of white pine, red pine, Southern yellow pine, British Columbia fir, spruce, oak, ash, mahogany and whitewood.

Surveys have been completed for a logging flume which is to be constructed in the Capilano River valley by H.H. Spicer, J.C. Keith and other capitalists of Vancouver, B. C. The length of the flume will be eight miles. There are some deep gulches across the route of the flume, which will require heavy timbering.

THE
Canada Lumberman

MONTHLY AND WEEKLY EDITIONS

PUBLISHED BY

The C. H. Mortimer Publishing Company of Toronto, Limited,

CONFEDERATION LIFE BUILDING, TORONTO.

BRANCH OFFICES:
IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELENS, LONDON, E. C.

The LUMBERMAN Weekly Edition is published every Wednesday, and the Monthly Edition on the 1st day of every month.

TERMS OF SUBSCRIPTION:

One Copy, Weekly and Monthly, One Year, in advance . $ 1.00
One Copy. Weekly and Monthly, Six Months, in advance.. .50
Foreign Subscription, $2.00 a Year.

ADVERTISING RATES ON APPLICATION.

THE CANADA LUMBERMAN is published in the interests of the lumber trade and allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information in which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment We need not point out that for many the CANADA LUMBERMAN, with its special class of readers, is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements, which will be inserted in a conspicuous position at the uniform price of 15 cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for four successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

TERMS OF SALE.

The apathy of Canadian lumbermen in effecting even minor reforms has been emphasized by the continuance of terms of credit which for some time have been considered inimical to the best interests of the trade. The terms allowed in Canada for the settlement of lumber invoices are 2 per cent. discount within fifteen days and the face value of the invoice within three months. The latter period, in the opinion of many members of the trade, should be reduced to two months, to correspond with the custom prevailing in the Eastern States. The shortening of credit would seem to be a very desirable step and one which would be likely to result beneficially to both buyer and seller. It would lessen the risk involved by the seller and would no doubt in some cases protect the buyer from getting beyond his depth. Not alone in lumber, but in all branches of commerce, should this limit be adopted.

That a change has not been made is due to lethargy on the part of those interested rather than to any fear of difficulty in applying the changed regulation. Naturally one dealer refrains from taking the step on his own account lest he should be regarded as too severe and should thereby lose some of his custom, but if concerted action were taken it would probably be found that there would be no opposition to the movement.

The question of credit has been very carefully considered by the Natioaal Wholesale Lumber Dealers' Association of the United States, and the result of its deliberations stands as a precedent for Canadian lumbermen. At a meeting of the Association on March 2, 1899, a resolution was adopted allowing 1½ per cent. off for cash within fifteen days of date of invoice, or bankable paper at 60 days. These terms remained in force until September 17th of this year, when a change was made allowing 1 per cent. on cash within thirty days from date of invoice, as well as the 1½ per cent. for cash within fifteen days. These terms are almost universally adopted throughout the Eastern States. The western terms are 2 per cent. within ten days from date of invoice or 1 cent. in thirty days.

It might be found advisable for the Canadian trade to allow 1 per cent. for cash within thirty days; in any case, a revision of the terms of credit, by which the period of settlement would be shortened to two months, is desirable.

BRITISH MACHINERY.

On this side of the Atlantic the memorial presented to Lord Strathcona by the British manufacturers of paper and pulp machinery is regarded as a singular document. It is quite natural that the representative of Canada in Great Britain should be asked to wield his influence to remove any prejudice that may exist against British machinery, and that he should also extend an invitation to Canadian papermakers to visit the works of British manufacturers, but when a request is made that British machinery be allowed to enter Canada for a time free of duty, a discrimination in favor of one branch of industry is contemplated which the Government cannot be expect to recognize. It is extremely unlikely that the Dominion Government will consider the proposition favorably, as it would be establishing a dangerous and troublesome precedent.

The views of Canadian manufacturers, published elsewhere in this number, show that British-made machinery is used to a very small extent in the paper and pulp mills of this country. The statement of the British manufacturers that a predjudice exists in Canada against British machinery does not seem to be correct. The reasons why British machines have not found a larger demand in this country may be said to be their inadaptability to requirements, the great distance between the two countries, and the failure of British manufacturers to adopt more modern methods to bring their products to the attention of prospective purchasers.

As to the first cause, there seems no reason why British machinery could not be made suitable in every respect to the mills of this country. As now manufactured it is heavier and more durable than the machines made in Canada and the United States, but is thought to be lacking in efficiency and appearance. The inconveniences resulting from the distance from base of supplies cannot easily be overcome. When parts of machines require to be renewed it is a serious drawback if these have to be brought across the Atlantic. The establishment of a branch in Canada would be of assistance in this direction.

There is good ground for the contention that the Britishers are themselves responsible in large measure for the small share of the Canadian trade that they have secured. The statement of the manager of a large paper company that in three years he has been approached but once by a representative of any British machinery concern is in itself an evidence of lethargy and lack of business energy. If the Britishers are to compete successfully against the United States and Canada they must be equally persistent in seeking the trade, and by personal solicitation and judicious advertising methods constantly keep their goods before the eyes of buyers. Instead of extending an invitation to our paper and pulp mill men to visit Great Britain and examine their machines and their facilities for producing the same, they should make arrangements to establish show-rooms in a convenient location in Canada where there goods could be inspected and full particulars obtained.

While many of the paper mills of Canada are equipped with foreign machinery, it is encouraging to observe that in many of the new pulp mills now under construction, the major part of the equipment is of Canadian manufacture. The mills of the Riordan Pulp Company at Hawkesbury, Ont., and the Ouiatchouan Pulp Company at Ouiatchouan Falls, Que., are equipped almost entirely with Canadian-made machines.

CARE IN SHIPMENT AND MANUFACTURE.

Commenting on the proposal to revive the Hardwood Exporters' Association of the United States, and incidentally upon the wagon oak trade, the Timber Trades Journal makes some pertinent remarks as to the methods which should be adopted by shippers to the British market. It is pointed out that much damage is done to oak planks and other hardwood lumber by transporation to the seaboard on open cars. When the stock arrives at its destination it is frequently unfit, owing to injury in transit, for the purpose for which it was intended.

Shippers are urged to exercise great care in the manufacture of their stock and to endeavor to supply the sizes demanded by the British trade. Instances are cited of the receipt of oak scantlings measuring one-half inch under square or one inch too short. Other shipments have been defective in the other direction, being perhaps half an inch larger than the specification called for. In such instances, in addition to the dissatisfaction caused the recipient and the possibility of the rejection of the stock, an additional freight charge must be paid on the waste material.

Defects in manufacture, according to our contemporary, have been frequently met with These are usually scrutinized very closely and the shipper compelled to stand the loss.

No doubt these statements are founded on facts. It may be said, however, that in late years there has been a great advance in manufacturing methods and the lumber turned out by the Canadian mills to-day will compare favorably with that manufactured in any other country of the world. In all countries there are careless manufacturers, and the trade at large must bear the stigma.

The question of manufacturing methods brings up some important considerations. It is possible that the tendency to increase the output of a mill may be carried too far and that

quality may be sacrificed. In these days of double-cutting bands and double-cutting circulars, it is necessary that the quality of the product should be carefully watched. It is an easy matter to increase the production at the expense of quality.

We do not wish to be considered as antagonistic to the class of mills we have mentioned, but rather to give prominence to that system which produces the best results.

A certain manufacturer in Ontario has used a double-cutting band for the past season. He is prepared to stand by it both as to economy and efficiency, and in a new mill about to be built proposes that a double-cutting band shall form part of its equipment. On the other hand, we know of shrewd manufacturers who claim that the double-cutting band mill is certain to increase the quantity of unevenly-manufactured and cull lumber, for the reason that it is not possible for the sawyer to obtain a proper view of the log in order to direct to the best advantage the return cut.

EDITORIAL NOTES.

The Grand Trunk Railway carries hardwood lumber from the Georgian Bay district to Montreal at a rate equal to 60 cents a ton per mile. The Intercolonial Railway rate is 75 cents per ton per mile for almost an equal distance. The lumbermen of the east think this constitutes a grievance, and are seeking to have it remedied.

THE sailing schooner is fast disappearing from the great lakes of Canada. Several of these vessels are wrecked every year, and none are being built to take their place. Owners of such vessels say that the carrying charges are too low to admit of doing a profitable business, and they are gradually getting out of it. The shortage of vessels is hindering the operations of lumbermen. A manufacturer told the writer a day or two ago that he had been trying all summer to get some lumber brought down the lakes, but so far had not succeeded, and was afraid that he might fail to secure it at all this year, as some of the steam vessels are about to lay up.

The granting by municipal corporations of bonuses for the establishment of saw mills and other industries should not meet with public encouragement. In certain instances peculiar conditions may warrant the giving of some inducement to secure an industry, but as a rule the concerns that are seeking such assistance are not worthy of it. It is possible to point to many examples bearing out this statement. Municipal bodies appear to overlook entirely the injustice that is done to existing industries, probably established when the risk involved was much greater and times less prosperous than at present. We have in mind a certain corporation in Ontario which within the past month granted a bonus for a saw mill. This corporation owes its very existence to an existing mill, established without any such assistance, and against which the "bonused" mill will complete. If such advantages count for anything, it should not be difficult for the new industry, backed by the corporation, to outstrip the old one.

From the Atlantic to the Pacific is heard the familiar fall wail of a car famine. All branches of commerce are suffering, but perhaps none so severely as the lumber trade. The situation, taking the Dominion as a whole, is the worst that has ever been experienced, with a consequent heavy loss and little prospect of better things in the near future. The large grain crop in the North-west has this year more heavily taxed the rolling stock of the railways. The annual recurrence of a car famine is due simply to the inability of the railways to move the vast quantity of freight that is congested into the fall months, and the difficulty is not easy of solution. It cannot be expected that the railways will provide and keep standing idle for perhaps eight months in the year sufficient rolling stock to accommodate prompt movement of all the fall trade, nor does it seem reasonable that shippers should suffer to the extent they have. It would seem incumbent upon the railways to increase the supply of rolling stock, and upon shippers and consignees to load and unload cars as speedily as possible.

NEW METHOD OF SAWING LUMBER.

Mr. Martin L. Killam, of Liscomb Mills, N. S., has invented a new method of sawing logs which will appeal to the consideration of lumbermen. A patent on the device has been granted in Canada and the United States. The experiments that have been made with the new system have proven successful, and Mr. Killam and all who have seen the tests are unanimous in the opinion that the new method will saw more lumber in a given time and at less expense than any other method yet introduced. The following description of the method has been furnished us and will be of interest.

It is a common method of sawing logs to use a circular saw with carriages of various makes, and by the use of this method to saw some fifty or sixty thousand feet of lumber in ten hours, but Mr. Killam's method improves on the old one by using two saws and cutting two deals or boards at the same time. The two saws are placed one directly in advance of the other; one saw (the head one) is adjustable and by the use of a lever at the sawyer's side can be instantly and while in full motion moved nearer to or further from the carriage, so that any thickness of lumber up to and including six inches can be sawn two at a time. At the first forward movement of the carriage a slab and a deal or board are taken from the log. At all other forward movements of the carriage two deals or boards are sawn until the last cut, when three deals or boards or a slab and two deals or boards are sawn.

The features of this invention are:

1. The use of two saws in combination so that in slabing a log, a deal or board can also be sawn, doing away with any forward movement of the carriage for no result in producing lumber.

2. The use of two saws in combination, making it possible to cut, at every forward movement of the carriage except the first and last to every log, two deals or boards.

3. The use of two saws in combination making possible to saw three deals or boards or a slab and two deals or boards at the last cut on log.

4. The use of two saws in combination both of which may be brought into exact line; the rear saw being larger than the head saw, will admit when both saws are in line and employed in the same cut to carry full feed in very deep cut and make it possible to cut large logs faster than by any other method.

The following particulars of a test of the new method made at a mill at Liscomb Mills may be of interest: Three deal logs averaging 75 superficial feet, sawing time 19 seconds; four deal logs averaging 121 feet, sawing time 24 seconds; five deal logs averaging 156 feet, sawing time 34 seconds. Something over five hundred logs were sawn during the test, the regular mill sawyer, Joseph McDonald, of Mosen River, N. S., doing the sawing and finding no trouble in handling the extra saw. The lumber sawn during the test was well and accurately sawn. The saws were equipped with Killam's patent guide to top of saw. The saws were of guage 9, the larger one sixty inches in diameter. They were hammered and fitted by Mr. Killam, who is an expert on circular saws. Mr. Killam is the best known millright in the eastern provinces and built the Liscomb Mills, Ship Harbor, and Stewiacke mills for Mr. Alfred Dickie, all of which have proven themselves very fast cutting mills.

We understand that the Killam double circular mills are now being manufactured by the Oxford Foundry and Machine Company, of Oxford, N.S.

RAFT OF OAK UNDER WATER.

Somewhere beneath the mysterious surface of the Scugog river, a few miles from Lindsay, Ont., a large quantity of oak timber, worth tens of thousands of dollars, has lain for about fifty years. The facts connected with the sinking of the timber are now known only to the oldest inhabitant. Away back about 1850 Mr. Alex. Dennistoun operated largely on the waters of the Scugog, Cameron and Balsam lakes, and in those days square timber was the chief product of the forests in this locality. The timber was floated down in vast rafts made up of hundreds of cribs, the whole being run through Peterboro to Lake Ontario, and towed to Quebec.

Mr. Dennistoun had a foreman in one of the camps named Joe Demoe. Demoe, instead of cribbing his oak with a few sticks of pine to keep it afloat, built his raft entirely of oak. This timber was floated down in one huge block to a point near the mouth of the Lindsay river, where it was tied up for the winter. In the spring the rafts had disappeared beneath the surface of the Scugog, having become water logged during the winter. In those days oak was plentiful, and it was decided that it would not pay to raise it. In a few years the circumstance was forgotten.

The timber is as sound to-day as it was when cut, having been preserved by the water. Mr. John Thompson, of the Dickson Company, Peterboro, says that the timber, judging by what he has heard about it, is worth $100,000 or more. Some time or other it will be recovered, and will make some one immensely rich.

VIEWS AND INTERVIEWS

I understand that one or two Canadian box manufacturers have recently exploited the Mexican market with some success, and that others are giving it some attention, one of them being now on the ground. One would naturally think that the manufacturers of the Southern States would be able to control this market, but it seems that they have not done so. One of the reasons may be that the Southern pine is a poor box lumber and tends to warp. In Canada spruce lumber is finding favor with box manufacturers and many of the shooks shipped to Mexico have been of this material. It is considered even better than white pine for boxes, and can be relied upon not to taint the contents.

* * *

There is no more observant lumberman in Canada than Mr. J. H. Lavallee, of Orillia. When I last met him he had only recently returned from British Columbia, where he has timber interests. Almost his first remark was in reference to the magnitude of the timber supply of our western province. "No Ontario man has any conception of the possibilities of the lumber trade of British Columbia," was the way he introduced the subject. "Within ten years," he added, "there will not be a stick of British Columbia lumber available for shipment further east than Winnipeg." To a query as to the direction of the greatest expansion in demand, he replied: "I believe there will be a like expansion in both local and export trade. Look at the immense agricultural country in the North-West. As it becomes more thickly populated so will the lumber demand increase. In the export trade there promises to be vastly increased shipments in the near future to Japan, China, South Africa, and Australia. I also anticipate a greater trade with the Eastern States, as when the Nicaragua canal is completed, which will probably be within ten years, the distance between Vancouver and Philadelphia will be much shorter than by the present route, and the cost of shipping will be reduced perhaps one-half. Reverting to the forests of British Columbia, Mr. Lavellee cited an instance of one block of 50,000 acres of timber land which he had in mind and which contained three billion feet of timber, or an average of 60,000 feet to the acre. This limit would supply the raw material for a mill cutting 30,000,000 feet a year for a period of one hundred years. The average of 60,000 feet to the acre is very good for a large tract of timber, although it is often exceeded in small lots. For instance, a logger in the employ of the Victoria Lumber & Manufacturing Company, of Chemainus, is said to have cut 560,000 feet on one acre, and Mr. Lavallee tells me that this statement is confirmed by Mr. Palmer, the manager of the company. If in Ontario a yield of 560,000 feet is obtained from a square mile the owner considers that he has little ground for complaint. Truly, the possibilities of British Columbia are great and the province will be a land of forests for many generations to come.

* * *

Referring to the New Brunswick log scale, an eastern manutacturer remarks that "it is the meanest, closest thing we have in the trade down here, and we can never get out of the logs what we buy them for." This remark prompted me to make a comparison of the rule with the Doyle rule, with the following result: Taking a 24 foot log, 12 inches in diameter, the Doyle rule gives 95 feet and the New Brunswick rule 144 feet; 18 inches diameter, Doyle 294 feet, New Brunswick 344 feet; 24 inches, Doyle 600 feet, New Brunswick 648 feet. On the whole the New Brunswick rule gives perhaps 25 per cent. more than the Doyle rule, and even a larger percentage on small logs. It was compiled especially for "deal logs," whereas the Doyle rule is intended for scaling logs to be sawed into boards and allows for more saw kerf; hence the difference. It is not surprising that this manufacturer does not regard the rule with favor, as no doubt it is frequently found impossible to get from a log as much lumber as it calls for. Of course, it is not necessary to crowd a small log to get out of it what is demanded by the Doyle rule, but the difference between the two seems too great. The time is ripe for a revision of the N.B. rule. We cannot disguise the fact that the average log taken out to-day is not as large as it once was. What say other manufacturers in the east?

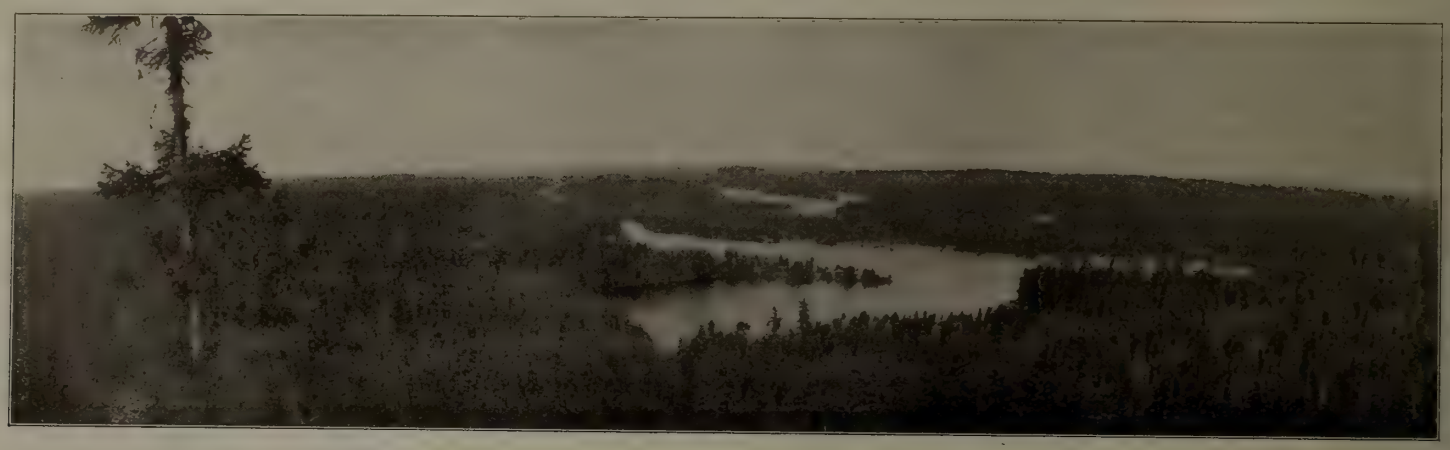
The advertisement has an advantage over most agents in that it does work for the future and in the future. If the advertiser does his part well the men it brings to him may be held indefinitely. The advertisement will not do it all, but it will do much more than half of the work.—Printers' Ink.

FORESTRY MATTERS.

Mr. A. Knechtel, of Albany, N.Y., is a forester with the New York State Forest, Fish and Game Commission. Recently he visited the Muskoka district of Ontario to secure 200 bushels of pine cones, with which he intends to carry out a scheme of reforestation in the Adirondacks. A similarity in climatic conditions with New York State prompted him to try Muskoka. The cones are to be planted first in nurseries. After four years' growth therein, when the trees have attained a height of nine inches, they will be planted in the open five feet apart. In the course of a few years a thinning process will be resorted to, and the saplings removed will be offered for sale as Christmas evergreens. According to Mr. Knechtel over 60,000 acres on the mountains have been fire swept and cleared of timber.

An exhibition of a decidedly novel and interesting character will shortly be given in Toronto under the auspices of an association now in process of formation, the Canadian Forest, Fish and Game Association. The object of this association is to foster an interest in the preservation and cultivation of the forest, the fisheries, and the game animals and birds. Associated with the movement in Toronto are such well known gentlemen as B.E.Walker, Senator Cox, Lieut.-Col. H.M. Pellatt, E. R. Wood, Dr. Oronhyateka, H.P. Dwight, A.E. Ames, Aemilius Jarvis, J. Maughan, E. A. Scadding, Stewart Houston and Chas. Cockshutt. It is proposed during December to hold an exhibition in the Armouries of Canadian trees, fish and game, something after the extensive sportsmen's exhibitions which have proved so successful in the United States. The armouries will be transformed into forest scenes, with lakes, water falls and trout pools, while many of the principal trees will be transplanted and shown in full growth. Mr. R. E. Follett, manager of the International Forest, Fish and Game Association, was recently in Toronto organizing the Canadian association.

Perhaps no profession ever rose into popularity in this country so rapidly as that of forestry. There are already four regular schools of forestry here, in New York, Minnesota, North Carolina and Ohio, besides several summer schools to which only those students are admitted who possess a good preliminary training; yet the demand for trained foresters already far exceeds the supply, and is fast increasing. It is said that, in the United States alone, more than two million acres of private woodland are under the charge of trained foresters, in addition to the tracts belonging to the State and General Governments; and twenty skilled foresters have been called for to go to the Philippine Islands. What will be the result of the movement remains to be seen, but it is hardly possible that a system which has, in a hundred years, added immensely to the wealth of Germany should not be of even greater benefit to the United States. It is curious that one-third of the students in the Yale Summer School of Forestry are women; and, although a great many women attend summer courses rather as amateurs than with any definite object, it is very possible that the profession may, in this country, be found to suit the sex which excels in accurate and scientific observation.—American Architect.



SCENE IN THE TEMAGAMI RESERVE. (THIS IS AN ALMOST PURE PINE FOREST.)

THE CARE OF STOCK.

By H. T. Gates.

By stock, I mean finished product, ready for the market; material that is to be kept on hand for immediate sale. I take it for granted that most wood-working shops carry more or less stock. In order that it may be delivered to the purchaser in first-class condition, some thought must be given to its storage and preservation. It must be kept clean, accessible and conveniently arranged. Economy of space must also be taken into account.

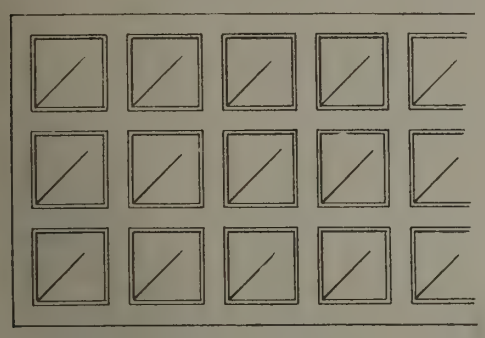


FIG 1.—SECTION OF RACK FOR MOLDINGS—END VIEW.

Let us first consider what stock is usually kept on hand. Besides rough and dressed lumber there are moldings, balusters, spindles, corner and base blocks, doors, sash, blinds, mantels, as well as parts of manufactured work before it is made up, such as blind slats, door panels, turned beadings, press moldings, carvings, brackets and scroll work; also hardware, including nails, screens, sash dowels, sandpaper, glue, sash pulleys, etc.

The hardware stock room should be convenient of access for the workmen, and near the office also. It should be in charge of a trusted employe, whose duty it is to report what stock needs replenishing, and to accompany any one who requires supplies, keep the stock in order and the room properly cleaned. He may have other duties that will not be seriously interfered with by this responsibility. It is usual to have this stock kept locked up. Nobody thinks of having money lying around loose, without a safeguard upon it, and, though we may not have thought of it just this way, it is a fact, nevertheless, that such stock represents just so much money, and it is like putting temptation in the employees' way to leave it promiscuously around the shop. Instances have been known of lunch pails or boxes having gone home with something besides "grub" in them; and he who puts temptation of this kind in another's way is not altogether free from blame. Therefore, I favor keeping hardware carefully stored in a room arranged for the purpose, with shelves for the boxed goods, bins for nails and other loose articles. In some factories it is the custom to sell nails, building-paper, weights, sash cord, etc.; in such instances they may be kept in the same room, all being in charge of the shipping department.

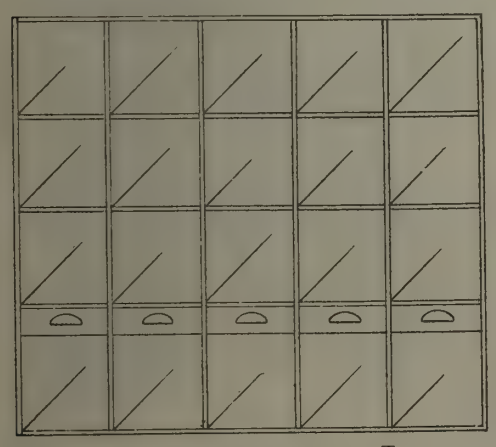

FIG. 2—RACK FOR BALUSTERS AND TURNINGS, FRONT VIEW.

The storage of moldings is of prime importance, and care should be exercised to keep the various patterns separate, the moldings straight and free from dust, dirt and breakage. Sometimes they are kept in tight boxes with ends closed. In this way the stock is sure to remain fresh and bright. Contractors delight in getting fresh stock, just as well as house-wives like fresh provisions. The compartments of the molding rack should be lined with some thin, cheap material which will serve the purposes referred to (see Fig. 1), and the ends of the racks facing front should be numbered plainly to correspond with the molding patterns, so that they can be found instantly when wanted. It is a good plan to have a board in the office, with a piece of each pattern of molding hung on it, for reference, and each pattern numbered to agree with the rack and molding book. For the various panel moldings, etc., similar racks hung from the ceiling, and high enough to be out of the way of the bench men, are convenient. Blind slats, being short lengths, must be kept in enclosed bins, with access at one end.

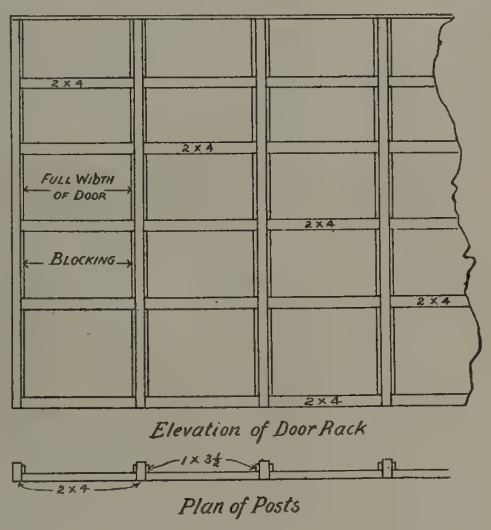

FIG. 3.

A rack on the wall, with shelves and partitions, making 12 or 15 compartments, is serviceable for storing balusters, keeping the various kinds and sizes separate. Drawers near the bottom, with partitions, will take care of small rosettes, knobs, etc.—see Fig. 2.

The storeroom for sash, doors and blinds should be kept as dust-tight as possible. Sash, doors and blinds in large quantities are usually piled flat on the floor. For small lots, racks with uprights and slats across will keep the different sizes separate. The tops of all the door piles should be covered. There are several styles of door racks in use, the width between uprights being such as to admit the widest door kept, and the height of each compartment regulated by the number of doors to be stored—see Fig. 3. The manager can arrange the sizes to suit the case and convenience.

Where the stock room is narrow, the racks should be accessible from the side instead of the end—see Fig. 4. Another method, where the ceiling is low, is to stand the doors up in stacks, with dividing posts to carry the weight and separate the various sizes. This also applies where several sizes are kept in a limited space—see Fig. 5.

Spindles, balls, post tops, etc., are kept in bins or covered crates or barrels easy of access. Corner and base blocks are piled against the wall, as tightly together as possible, sometimes in covered boxes.

The object of the warehouse is to keep any product of the wood-worker dry, clean and intact from the time of its completion to its delivery to the consumer. It should be convenient to the finishing room, shipping department and elevator. It should be tightly built to keep out whether and dust, and should be kept clean by occasional sweeping.

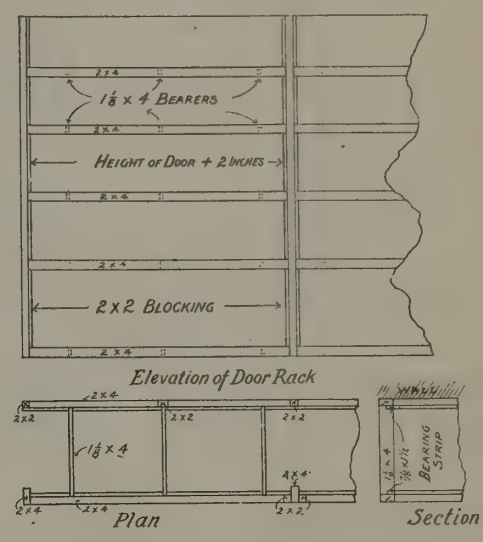

FIG. 4.

The fault with most of us is, we do not live up to our ideals and understanding in these matters, letting things go by default. As a consequence we have occasional bargain days, to get rid of depreciated stock. This could be obviated in a large degree by taking proper care of stock on hand. All this tells in the annual round-up for or against "good housekeeping."—The Wood-Worker.

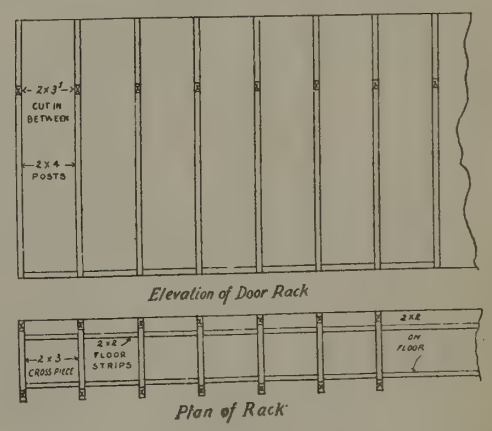

FIG. 5.

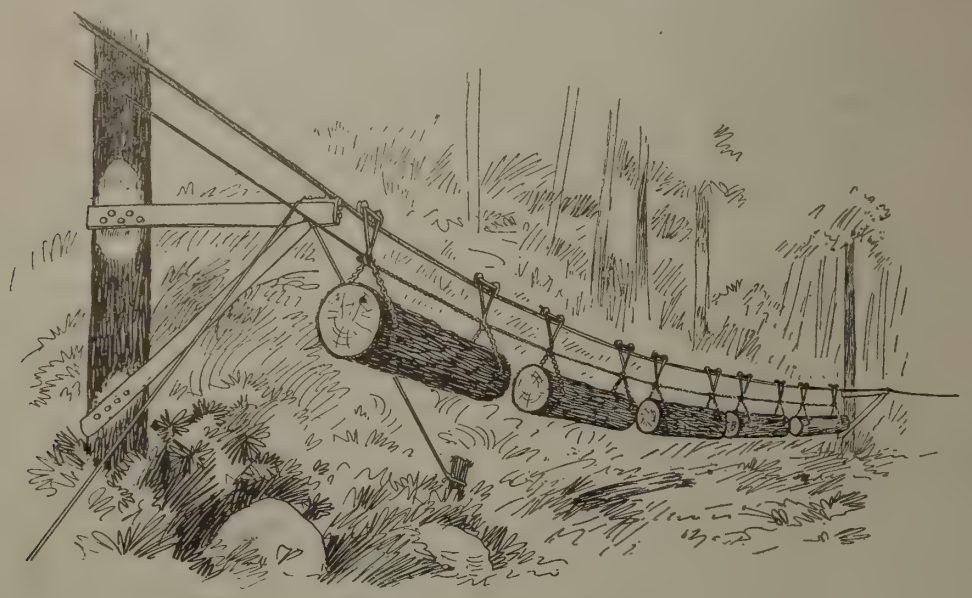
Mr. H. P. Hubbard has been appointed sales agent for Canada for Messrs. E.C. Atkins & Co., saw manufacturers, of Indianapolis. Mr. Hubbard has just returned from an initial trip though the Georgian Bay District and Northern Ontario, where he formed the acquaintance of the leading mill owners and operators and secured a number of orders for his firm. He has opened an office in the Exchange Building, 44 Scott Street Toronto.

A NOVEL LOGGING OPERATION.

Capt. J. B. Thomas, manager of the lumber and veneer operations of William E. Uptergrove & Bro., New York, at their Eastern Tennessee plants at and near Johnson City, Tenn., has an exceedingly rough logging proposition in the White Rock mountain district.



AERIAL LOG TRAMWAY IN THE EAST TENNESSEE MOUNTAINS.

As is well known, in the ordinary rough country where the coves are too steep to permit of the use of logging railroads, slides are built by means of which the logs are slid down to the line of the railroad. Some of the coves on White Rock mountain are so cut up with cross coves as to make the expense of building slides prohibitory. Captain Thomas has therefore invented, constructed, and has in daily use a trolley line log conveyor, which is illustrated in the accompanying sketch. The three-quarter inch wire cable in this instance is 3,700 feet in length, and runs in practically a straight line down the cove. It is stretched and firmly anchored at each end to trees. By means of a series of carriers, the sheave pulleys of which ride the cable, the logs in trains of five are let down the line, being steadied by means of the brake attached to a hoisting drum. The logs are poplar and of large size, running from 500 to 1,200 feet each. A 5 horse power gasoline engine at the upper end of the cable line brings the carriers back to the several skidways where the logs are being loaded.

The illustration of the operation is almost self-explanatory. Grab hooks are driven into the sides of both ends of the logs, and the logs are then hooked on to the carriers. The carriers are chained together for the entire length of the train of logs. The invention is working admirably and economically, and it takes less than 30 minutes to deliver a load from the top of the inclined railway to the bottom and to return the carriers to the starting point. The loads are loaded from skidways, a pair of balanced skids lifting the logs into place for attachment to the carriers, and are then dropped from underneath the log when it is started forward. The line is practically a straight one from a perpendicular point of view, but on a horizontal plane is adapted to the inequality of the cove. Trees 150 to 250 feet apart are employed to which to attach the supporting arms. These brackets vary in length to insure a practically straight line. The cable is not fastened into the casting at the end of these brackets, but simply lies in a groove, save in occasional cases where it is necessary to employ a piece of strap iron riveted to the iron casting in which the bracket terminates to hold the line down in place. The appliance is working admirably and with economy, and reflects credit on the ingenuity of Captain Thomas in his woods work.—American Lumberman.

LUMBERING OPERATIONS IN LABRADOR.

J. A. Gillis, of Stewiacke, has recently been in Labrador as manager of the Grand River Pulp & Lumber Company, of which Alfred Dickie, of Lower Stewiacke, is president. He fitted up temporary quarters for his men twenty-five miles up the Hamilton inlet and arranged for the cutting of 10,000 logs this winter. Concerning the operations of the company Mr. Gillis writes the CANADA LUMBERMAN as follows :

"The company have acquired from the Government of Newfoundland 200 square miles of forest on the Grand River at Labrador. This territory skirts the Grand River from its mouth up two hundred miles, thereby holding the key to operations on the whole river. The river is about 125 miles from the sea, but a 2500 ton steamship can come to loading berth where mill will be erected, and, of course, logs will be driven to mill. The river varies from half to three-quarters of a mile wide and is navigable for a draft of nine feet to Muskrat Falls, which is twenty miles from mouth of river. A portable mill is at present in course of operation on this river at Traver's Pine. The expedition started from Halifax last of August with forty men, fourteen horses and twenty thousand dollars worth of supplies, and we expect to get for next season's shipment four million sup. feet of spruce deals.

"The pulp wood on this property is inexhaustible and would keep the largest mill going for a century, and none of it more than one and one-half miles from the river bank. We cut down trees there, near to the bank of the river, seventy feet long and measuring twelve and fourteen inches at the top and as straight as an arrow. It is the intention of this company to erect next season a large saw mill opposite Northwest River at mouth of Goose Bay."

PRICE OF CUBAN WOOD.

Replying to the inquiry of a subscriber, the present prices f. o. b. New York for Cuban mahogany and cedar logs range from 75 cents to $1.40 per cubic foot, according to quality and size. Fancy figured mahogany logs have been sold as high as $5.00 per cubic foot. The value depends largely upon the size and quality of each log, and it is impossible to fix an average price. As a rule each parcel is sold upon its merits.

IMPROVED DUPLEX MILL DOGS.

Canton, Ohio, is famed as the home of the martyred President McKinley. It is also noted as the headquarters of the Canton Saw Company. In their large and busy works they manufacture saws, saw-mill "dogs" and supplies. Class' improved duplex mill dogs manufactured by this company have no springs, no rachets, no pawls, nothing to get out of order, but have a positive grip, so that no log can become loose or turn while being sawed. Thousands of these "dogs" are in use in the best circular and band saw-mills in the U.S., and the company are now shipping them to England, Canada and Australia.

These "dogs" can be fastened on any head block knee, and will hold small blocks on single head block if necessary to do so. Upper or lower dogs can be used together or independent of each other. This company also manufacture a single dog without any duplex attachment. Their advertisement in this issue should attract all those interested.

One of the features of the works of the company is the fact that the whole machinery and plant is run, lighted and heated by natural gas received by a pipe line from

CLASS' RIGHT-HAND DUPLEX DOG.

Sisterville, West Vingina, a distance of about 180 miles from Canton.

As an instance of the dispatch in this plant, an inserted tooth saw 56 inches diameter was ordered to be sent to the Japanese Goverament Envoy at Chicago. The order was received by telegraph Thursday, built complete, and delivered in Chicago on the following Saturday morning.

J. Thompson, W. R. Turnbull, D. J. Purdee, C. E. L. Jarvis, J. B. McLean, G. W. Crawford and G. F. Turnbull, all of St. John, are seeking incorporation as the Thompson Manufacturing Company, Limited, to erect and operate foundry and machine shops in the county of Kings. The proposed capital stock is $40,000.

CANADA LUMBERMAN

WEEKLY EDITION

The Lumberman Monthly Edition, 24 pages } $1.00 PER YEAR { The Lumberman Weekly Edition, every Wednesday

THIS PAPER REACHES REGULARLY THE PRINCIPAL LUMBER MANUFACTURERS AND DEALERS THROUGHOUT CANADA, AND WHOLESALE BUYERS IN GREAT BRITAIN, THE UNITED STATES, AND OTHER FOREIGN MARKETS.

VOL. VIII. TORONTO, CANADA, NOVEMBER 26, 1902 No. 43

CANADA LUMBERMAN

PUBLISHED BY

The C. H. Mortimer Publishing Co'y of Toronto, Limited

Confederation Life Building - TORONTO.

Branch Offices:

IMPERIAL BUILDING, MONTREAL.
22 GREAT ST. HELEN'S, LONDON, E. C.

Weekly Lumberman, published every Wednesday Contains reliable and up-to-date market conditions and tendencies in the principal manufacturing districts and leading domestic and foreign wholesale markets. A weekly medium of information and communication between Canadian timber and lumber manufacturers and exporters and the purchasers of timber products at home and abroad.

Lumberman, Monthly A 24-page journal, discussing fully and impartially subjects pertinent to the lumber and wood-working industries. Contains interviews with prominent members of the trade, and character sketches and portraits of leading lumbermen. Its special articles on technical and mechanical subjects areespecially valuable to saw mill and planing mill men and manufacturers of lumber products.

WANTED AND FOR SALE

Advertisements will be inserted in this department at the rate of 15 cents per line each insertion. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed. This notice shows the width of the line and is set in Nonpareil type; 12 lines make one inch. Advertisements must be received not later than 4 o'clock p. m. on Tuesday to insure insertion in he current week's issue.

WHITE PINE FOR SALE

ONE AND A HALF MILLION FEET OF one, two and three inch White Pine Lumber, Mill Run, from good large Logs. PINE LUMBER COMPANY, Cartier, Ont., Canada.

DRY PINE.

WE HAVE ABOUT 1,500,000 FEET DRY PINE in 1, 2 and 3 inch common and better, prefer selling in bulk. Will quote freight rate to Buffalo, Chicago or Toronto on application. Correspondence solicited. N.B.—Would like to correspond with consumers of hardwoods. ST. JOE ISLAND LUMBER CO., Sault Ste. Marie, Ont.

WANTED

SMALL CARGO CEDAR POSTS ½-4½ TO 6 inches, balance 6 inches and up, No. 1 strictly. The same to be delivered at Olcott, Niagara Co., N.Y., this month if possible. Also wanted 150,000 feet white basswoods, 1 and 1¼ inch delivered next spring. NEWFANE BASKET MANUFACTURING COMPANY, Newfane, N. Y.

Important Sale

—OF—

VALUABLE TIMBER LIMITS

UNDER INSTRUCTIONS FROM WM. HENDRIE, ESQ., of Hamilton, there will be offered for sale by Public Auction, at the Russell House, Ottawa, on WEDNESDAY, 17th DECEMBER, 1902, at 2 o'clock in the afternoon, the following valuable Timber Berths, under license from the Crown, subject to the regulations of the Crown Lands Department of the Province of Quebec, namely. Upper Ottawa Limits, Nos. 591, 592, 593, 594, 597, 598, 599, 600, 601, 602, 603 and 604, containing in all about 272 square miles. The limits will be sold in one lot.

Terms and conditions to be made known on the day of sale.

For further particulars, apply to

MacCRAKEN, HENDERSON & McDOUGAL,
Central Chambers, Ottawa,
Vendor's Solicitors.

WANTED.

CEDAR POSTS. GIVE PRICE, QUANTITY, freight, &c. J. R. PARK, Amherstburg, Ont.

WANTED—ONE INCH SPRUCE SUITABLE for manufacturing boxes. Can use 20,000 feet daily. Also pine deal ends. AUGER & SON, Quebec.

WE HAVE ABOUT ONE MILLION FEET choice hemlock which can be cut in any size or length. Can make rail shipment to North Toronto. SIMEON LEMON, Kettleby, Ont.

STANDING TIMBER FOR SALE, 700 ACRES about one mile from G. T. Railway, within a reasonable distance of Toronto. Apply THOS. MYLES SONS, Hamilton, Ont.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

WANTED

SMALL BASSWOOD LOGS 8 TO 15 INCHES in diameter, 11 feet long. Can take unlimited quantities. Will give price per piece f. o. b. Write first instance, Box 101, CANADA LUMBERMAN.

WANTED

A STOCK OF PINE LOGS, LONG AND short from two to three million feet. Will take them at any point on Georgian Bay where they can be rafted. Apply to MAITLAND, RIXON & Co., Owen Sound, Ont.

HEMLOCK LOGS FOR SALE

ADVERTISER WILL CONTRACT TO TAKE out on the Georgian Bay this winter from one to ten million feet of hemlock logs. Apply Box No. 77, LUMBERMAN.

RAILS AND CARS FOR SALE

FIFTEEN MILES 30 LB. STEEL RAILS IN good order, logging cars and locomotives; immediate shipment. For particulars apply to JOHN J. GARTSHORE, 83 Front Street W., Toronto.

FOR SALE

TIMBER LIMIT, 8½ SQUARE MILES, LICENSE No. 204, season 1902-03, in the Township of Calvin, District of Nipissing, Province of Ontario, and Water Power Saw Mill on said limit, situated on the Amable Du Fond River and on the main line of the Canadian Pacific Railway, 1¾ miles east of Eau Claire. Apply to JOHN MACKAY, Renfrew, Ont.

WANTED

750 Boom Chains, ⅝ and ¾, 10 to 12 feet long.

N. N. WRIGHT & CO.,
CUTLER. ONT.

IMPORTANT SALE

A FARM, 9 x 40 ARPENTS, WITH AGRIcultural implements complete; flour mill, modern door and sash factory, saw mill complete, shingle mill, planers; all these mills are operated by water power, and are situated on the river bank; booms; 16 miles of timber limits, of which 10 miles are well wooded with cedar and spruce; dams; camp with sleighs; horses, vehicles, saws, chains, cooking utensils, also private residence. For particulars apply to JOSEPH ROY, Riviere Blanche, Matane Co., Que.

WANTED

500,000 FEET DRY 1½ INCH LOG RUN SOFT Elm, mill culls out, delivered at Erie, Pennsylvania. Address C. G. & H. H. McLAUGHLIN, Columbus, Ohio.

WANTED

PORTABLE SAW MILL TO CUT BY THE thousand, or will buy or rent. R. J. DOUGALL, Hallville, Ont.

CURRENT TRADE CONDITIONS.

ONTARIO.

Owing to the car shortage, lumber salesmen have been taken off the road, as manufacturers and dealers consider it unwise to increase their obligations until they are able to discern when the stock now ready for shipment will be moved. The car famine has in large measure paralyzed the fall trade and caused great inconvenience to consumers in need of stock. Many retail dealers bought sparingly earlier in the year in the hope that prices might weaken. They are consequently in need of the stock that has been ordered. Under such conditions it is difficult to estimate the current lumber demand. The open weather has permitted out-door operations to be carried on without interruption and consumption of lumber locally is exceptionally large. Every factory for which lumber furnishes the raw material is operating to its maximum capacity, with orders booked far in advance.

The stocks held by manufacturers are lighter than for many years. The upper grades have practically passed out of first hands, and before the mills commence operations next spring the quantity of lower grades will be reduced to a very low point. Dimension of all kinds is in good demand, also lath and shingles, which are getting stronger almost every week.

Operations in the woods have thus far been expensive. The ground is soft and the swamps full of water and not frozen hard enough for teaming purposes. These conditions have greatly deterred successful work and increased the cost of logs, which in turn will be reflected in lumber prices.

MANITOBA AND BRITISH COLUMBIA.

The British Columbia Lumber and Shingle Manufacturers' Association have put into effect a new price list covering all points on the Canadian Pacific Railway and branches between Moose Jaw and Winnipeg. By this list many grades of fir and cedar lumber are advanced, the important increases being as follows: No. 1 clear red cedar finish, 1x8 to 12 inch, $5; 1x14 to 18 inch, $10; 1x20 to 24 inch, $16; clear squares, 3x6 inch, $5; 7 to 10 inch, $10; No. 1 clear siding, 1x6 inch, $4.50; ½x6 inch, $2; No. 1 clear ceiling, 1x6 inch, $4.50; fir finish, $1 advance on all sizes; ship-lap, $1; fir flooring, $2 on 1x4 or 6 inch edge grain and $1 on other kinds. On other items advances ranging from 50 cents to $1 have been made. It is believed that no difficulty will be met with in maintaining these prices, as the demand is unusually active. A shortage of logs as the result of unfavorable weather for operations in the woods is causing much anxiety, and some of the mills may be compelled to close down.

UNITED STATES.

The lumber demand throughout the United States is quieter, although no signs of weakness are displayed anywhere. Very little buying of next season's production has taken place, dealers evidently preferring to postpone the placing of contracts until after the turn of the year. Such sales as have been made indicate that there will be no break in the price of white pine. The steady appreciation in value of this class of timber is shown by the recent purchase of a large tract of standing timber in Minnesota at a stumpage value of $10.60 per thousand feet. Some items of pine lumber have advanced within the past week. The scarcity of 10 and 12-inch boards has tempted holders to advance their quotations, and in some cases the higher prices have been paid by buyers. A meeting of wholesale dealers is shortly to be held in Cleveland, when it is thought that No. 2 shelving, No. 1 shop, A selects and uppers will be advanced. Buffalo reports a pronounced scarcity of 12-inch white pine box lumber, but the supply of other grades is fairly good and larger than at Tonawanda. Chicago prices are unchanged, $16 being the ruling quotation for cargo lots of short pine piece stuff, $18.75 to $19 for long timbers, and $19.50 to $30 for small timbers of good lengths. Hardwoods are showing pronounced strength. Prices have stiffened somewhat and advances are in prospect in the near future. Several dealers at Buffalo are asking $1 more for maple and claim to be unable to supply the demand for thick stock. Elm and basswood are also scarce. The tone of the hemlock market is stronger than for several weeks and the supply greatly broken. It is predicted that the base price at Tonawanda will reach $20 before next season.

GREAT BRITAIN.

A correspondent who usually takes a conservative view of trade prospects predicts that all things considered British

importers are now justified in looking upon the bright side of affairs. He believes that prevailing conditions indicate that present prices will be maintained for at least the first six months of next year, and advises buyers to contract at the prices now asked. The outlook for next year is hopeful, although, of course, circumstances may transpire in the meantime to change the present strong trend of the market. The import of sawn and planed timber by Great Britain for the first ten months of this year was nearly one million loads in excess of the import of last year. From Canada the import of hewn timber was 73,336 loads, as against 82,516 loads last year, a decrease of 9,180 loads. Of sawn lumber the import was 1,451,163 loads, as compared with 1,239,004, an increase of 112,159 loads. The effect of this increase in the quantity of Canadian sawn lumber is offset by the probability that next year a smaller quantity of Canadian lumber will be marketed in Great Britain. Spruce is firm and the weakness temporarily created at Liverpool by the abundaut stock of narrow sizes is passing away. No transactions for first-open-water delivery have as yet been reported, although one or two small contracts are believed to have been closed.

STOCKS AND PRICES.

The receipts of lumber by vessel at Tonawanda this season are estimated at 410,000,000 feet.

Albert Smith & Sons, of Amherst, N.S., have purchased from Charles Bent the timber on a lot at Fort Lawrence for $1,700.

Mutchenbacker Bros., of Rosseau Falls, Ont., expect to turn over between 6,000,000 and 7,000,000 feet of logs this winter, mostly hemlock.

At Manistee, Mich., pine piece stuff is selling at $16; inch white pine at $18 to $20.50; hemlock, $10 for short, and $12 to $18 for longer stock.

In Chicago lath are held at $3 and $3.50 for No. 1 mixed and No. 1 white pine respectively. In New York the prevailing price for No. 1 is $3.50.

The Arthur Hill Company, which has operated on the Georgian Bay the last eight years, cutting something like 250,000,000 feet of timber, is winding up its lumbering operations near Midland, having had about 15,000,000 feet manufactured this season.

At the Crown Land Office, Fredericton, N. B., the following timber berths will be offered for sale on December 3rd: Two square miles on North river, west of Intercolonial Railway, Hazen Crossman, applicant; 5½ square miles on Little Meransey Brook, branch of north-west Oromocto River, John Sheehan, applicant.

Under date of November 11th, Messrs. S. P. Musson, Son & Company say of the Barbadoes market: "There have been no arrivals of either white pine or spruce in the fortnight, but we learn that two cargoes of the former have been contracted for a $25.50 and $25.75 for shipping and $21 and $21.75 for seconds. In spruce the small lot mentioned in our last was sold at $19.22. As the season is approaching dealers show more willingness to operate, and first receipts should bring fair rates. We understand that a small cargo has been sold on C & F terms equal to about $22.50 landed, which we consider a very full price. Shingles have been sold at $4.89 to $5.01 or long, as to quality; $4.01, $5.22, $6.22 and $7.22 for 4.5, 6 and 7 inch respectively and $1.82 for cedar laying."

THE OTTAWA VALLEY.

(Correspondence of the CANADA LUMBERMAN.)

A new lumber railway connecting with the Parry Sound branch of the Canada Atlantic Railway was completed last week. It is 15 miles in length and runs from Whitney Station on the Canada Atlantic Railway to Lake Opeongo, connecting the St. Anthony Lumber Company's mill at the station and its limits bordering on the lake. The construction of this road entails a saving of about 50 miles in the transportation of logs and naturally makes a big reduction in the time consumed. With the completion of the road, work on which was started 15 months ago, the company will be enabled to operate its mill all the year round. Two log trains a day will be run, assuring a steady supply. The road cost $200,000 and involved considerable rock cutting and trestle building. Several of the trestles are 400 feet in length. There are few of these logging railways in Eastern Canada, although they are common in the States and Western Canada. Mr. J. R. Booth has one running from his limits in the Madawaska district. It connects with the Canada Atlantic at Madawaska. By this road Mr. Booth has established a record of 24 hours from the "stump to the saw," whereas by the water route the movement of logs usually consumes six months and in dry seasons often a year or more. The St. Anthony Company, it is expected, will do equally as well. The new road runs through Algonquin Park, Ontario's natural reserve.

Unprecedented activity in the lumbering operations in the Kippewa district are reported. Mr. H. B. Shepard, President of the Shepard and Morse Lumber Company, and Mr. Peter Whelen, Canadian manager, who have just returned from the company's limits in that district, bear the news. This is the first year in five that this firm has carried on operations in that field. It has four large camps at work making logs and another engaged getting out square and waney timber. Other firms working in the district, several after an absence of years, are the Hull Lumber Company, Robert Hurdman, the Rideau Lumber Company and Edward Moore, of Ottawa, and McLachlin Bros., of Arnprior. Some are getting out logs and others square and waney timber. Fully 2,000 men are engaged, a great increase over last year's numbers. The weather so far has told against the work. A month ago snow fell and ice formed and it was concluded that winter had "set". Rain has fallen almost continuously ever since, however, and the streams are at the high level natural to spring. The low lands are soggy and afford but poor footing for men and horses. Early frosts are hoped for, as they guarantee good "bottom". The output of logs and square timber will be large.

The mills in the Ottawa district have either closed or are preparing to close for the season. An odd shipment of lumber is being made by barge and a few carloads are being shipped by the Canada Atlantic and Canadian Pacific Railways.

The high insurance charges placed on the St. Lawrence route has driven the export lumber trade in a measure from Montreal and Quebec to Portland and Boston. As a consequence lumber which was formerly shipped from Ottawa to the Canadian sea ports by barge is now forwarded by rail to the American ports.

The return of the western harvesters to Ottawa has afforded some relief to the labor market. Many of these men are being engaged for work on the limits and as they have had experience in past seasons they are welcome. Wages have advanced; the latest monthly schedule, board included, running from $26 for road makers to $32 for log makers.

OTTAWA, Nov. 22nd, 1902.

NEW BRUNSWICK CEDAR SHINGLES.

At the present time the demand for N.B. cedar shingles is rather light. Stocks in manufacturers' hands are also light. The retail yards throughout New England are just fairly stocked. There are but few shingles going into consumption at the present time, and the demand will, as a result of this, be rather slow until the yards commence to buy in anticipation of their spring requirements.

Prices seem to be firm, and as there is no excess of stock in the two higher grades anywhere in manufacturers' hands, there is every likelihood that the shingle producers will get present prices for all they have, if their courage holds good, for the shipments of the next six or eight weeks ought to clean out the entire stock left over from this season's operations. It is quite likely that the winter-cut shingles (which are not as good as the summer-manufactured article) may be sold during January and February at something less than present going quotations. Every indication, however, would point toward an early spring market that will take all the shingles that can be found, at prices certainly as high, and probably somewhat higher than the present market figures. There is a small surplus of Second Clears and Extra Ones, and on these grades we are inclined to believe there may be some shading in prices.

Present quotations F. O. B. cars Boston rate of freight are: Extras, $3.50; Clears, $3.00; Second Clears, $2.40; Clear Whites, $2.30; Extra Ones, $1.75. These figures are easily obtained when anyone is found who wishes the shingles. Any cut in these prices on the part of manufacturers would only tend to alarm the retail trade, and less shingles would be sold than if the above quotations are rigidly adhered to.

Indications are that the production of winter-sawn shingles will not be any larger, if as large, than the output of last winter. Such being the case, it is an absolute certainty that all shingles now on hand, as well as those made during the winter, can be marketed at present prices, provided, as above stated, that manufacturers do not get anxious and endeavor to force the market, which at the present time would seem to be the height of folly.

BIRCH SQUARES AND SEATS.

A large buyer of Birch chair seats and of Birch squares is open to contract with a mill for their output. Also open for Broom Handles and Dowels in large quantities. Write in first instance to "Finance," care of CANADA LUMBERMAN.

GILMOUR & COMPANY, LIMITED
TRENTON, CANADA

THE BOSTON MARKET.

There is no cnange to note in spruce lumber at Boston, the situation being fully as firm as previously noted, with the market rather quiet : Ten and 12-inch dimensions, $21 and $22 ; 9-inch and under, $19 to $20 ; 10 and 12-inch random lengths, 10 feet and up, $20.50 ; 2x3, 2x4, 2x5, 2x6, 2x7, and 3x4, 10 feet and up, $17 to $17.50 ; all other randoms, 9-inch and under, 10 feet and up, $18 to $18.50 ; 5-inch and up, merchantable boards, $17 ; matched boards, $18 to $20 ; out spruce boards, $14 ; bundle furring, $17.

Hemlock lumber is a little easier, with lower prices predicted. In fact, some dealers are already shading outside quotations : Boards, 12, 14 and 16 feet stock, $14.50 to $15.50 for good eastern ; Pennsylvania, No. 1, $17.50 to $19 ; No. 2, $15 to $16.

Western pine lumber is very firm, with a steady demand : Uppers, 1 to 2 in. $82 to $85 ; 2½ to 3 in. $87 to $38 ; 4-in. $90 ; selects, 1 in. $68; 1¼ to 1¾ in. $70 ; 2-in. $72 ; 2½ to 3 in. $80 ; 4 in. $82 ; fine common, 1-in. $62 to $63 ; 1¼ to 1½ in. $65 ; 2-in. $67.50 ; 2½ to 3 in. $72.50 ; 4-in. $82.50 ; barn boards, $23 to $33 ; coffin boards, $28 to $32.

Hardwood lumber is generally quiet, except for floorings, which are in active demand : Quartered oak, $63 to $75 ; plain oak, $42 to $47 ; common and rejects, $20 to $25 ; red oak, plain, $43 ; whitewood, $45 to $47; sap and common, $30 to $35 ; brown ash, $41 to $44 ; white ash, $43 to $46 ; maple, $28 to $30 ; end-dried white maple, $38 to $42; birch, $27 to $30 ; birch, 75 per cent. red, $45 to $50; elm, $29 to $31.

There is no change to note in shingles, the demand being steady at firm prices : Extra cedar,$3.50 to $3.55 ; clear,$3 ; second clear,$2.50; extra No.1,$1.75 to $1.80; British Columbia red cedar, 16-inch, five butts to 2 inches, $3.50 to $3.60; 18-inch, five butts to 2 inches, $4.25 ; five butts to 2½ inches, $4.50.

Spruce clapboards are steady at quotations : Extra, $42 ; clear, $40 ; second clear, $37 ; extra No. 1, $30 to $32.

Laths are firm and unchanged : One and five-eighths inch, $3.40 to $3.45 ; 1½ inch, $3.25 to $3.30.

The Hazelmere Mill Company, Limited, Hazelmere, B. C., are selling out.

Freight rates on lumber from British Co'umbia rule as follows : To Sydney, 30s to 31s 3d ; Melbourne or Adelaide, 37s 6d ; Port Pirie, 36s 3d ; Fremantle, 47s 6d ; Shanghai, 35s ; Kiao-Chau, 35s to 40s ; Taku, 40s ; Vladivostock, 37s 6d to 40s ; West Coast S. A., 37s 6d to 40s ; South Africa, 57s 6d to 60s ; U. K. or Continent, 62s 6d.

AMERICAN VS. BRITISH MACHINERY.

The request made recently to Lord Strathcona by a deputation of British manufacturers of paper and pulp machinery, that they be allowed to send their machinery into Canada for a time free of duty, has aroused a lively interest in the question whether machinery of British manufacture can compete successfully with the product of the American continent. For the purpose of obtaining their views on the subject, the following questions were submitted to a number of Canadian paper and pulp manufacturers:

(1) In the erection of your pulp or paper mills, or subsequent alterations or additions, were the merits of both British and United States machinery considered, and with what result?

(2) In what respects, if any, is United States machinery superior to that of British manufacture?

(3) What is the difference in cost?

(4) Have you any British-made machinery in your mill?

(5) What do you consider the chief drawback in introducing British machinery into Canada?

(6) How does Canadian paper and pulp mill machinery compare with machinery of foreign manufacture?

The replies received to the above questions are given below:

THE E. B. EDDY COMPANY, Hull: (1) In re-equipping our works here after the great fire of 1900, we in every instance used a Canadian-made machine when we could get one that would satisfactorily do the work required of it.

(2) Outside of Canadian-made machines we have very little British-made machinery, chiefly because our paper makers and other workmen are not as a class familiar with English paper machines and because we could not get our orders for paper-making machinery filled as quickly or as advantageously in the years 1900 and 1901 in Great Britain as we could in the United States.

(3) As we have never used much machinery made in Great Britain, we cannot compare the cost of such machines or their work or output with machinery made in Canada or with machinery made in the United States.

(4) If there is any drawback in introducing British machinery into Canada, it would in our opinion arise chiefly from lack of inclination on the part of the British manufacturers to make the machines to the specification and within the time required.

These conditions, while regretable, are we think in the main true and might as well be stated so as to be well and generally understood.

BELGO-CANADIAN PULP COMPANY, Shawenegan Falls, Que.: Our pulp mill is equipped with United States and Canadian machines, therefore it is impossible for us to make a comparison between the "British Machinery and United States Machinery." However, we must say that the American machines which we are using have given us entire satisfaction. These machines were obtained from the Waterous Engine Works, Brantford, Ont.; Black & Clawson, Hamilton, Ohio; Jeffrey Manufacturing Co., Columbus, Ohio, etc. With the machines installed our mill was to produce a maximum of 100 short tons per day, while we have attained a record of more than 120 gross tons per day. This proves that the machines have an elasticity, allowing us to produce 33 1-3 per cent. more than was figured on.

RIORDON PAPER MILLS, LIMITED, Hawkesbury, Ont.: (1) We considered the merits of British and the United States machinery when erecting our mill at Hawkesbury. The United Kingdom is not a wood country, and does not manufacture one tithe of the pulp it consumes, therefore the manufacturers of pulp mill machinery are not in a position to know the requirements of pulp manufacturing in Canada.

(2) We consider the United States machinery superior to that of British manufacture, because they understand what is wanted better, and the design and workmanship we regard as superior to that of English-made machinery.

(3) We think the difference in cost is in favor of the United States.

(4) We have no British-made machinery in this mill except one cutting machine for cutting the pulp into sheets.

(5) We consider one of the drawbacks to introtroducing British machinery into Canada for pulp making is their ignorance of the pulp business to start with; the long distance of the factories from the paper mills, and the long time it takes to get anything made and delivered in Canada; they seem to have no idea of the value of time; then as most of the machinery in Canada is of United States construction, intending purchasers like to get something which they have seen in operation and know to be satisfactory.

(6) In regard to Canadian paper and pulp mill machinery. There is very little paper mill machinery made in Canada; we do not know of any complete paper machine having been made in this country; it requires a very large plant, and the demand hitherto would not have kept a factory running continuously on that line of machinery. At present we consider there is a splendid opening for an up-to-date paper machine plant in this country. We hear of one United States firm desiring to secure the services of a large plant to make paper machines from their designs and with their patterns. As to Canadian pulp mill machinery, we purchased most of the machinery for this plant in Canada, made under our own directions. As an example, three of the six of our digesters, which are large ones, two of them the largest sulphite drying machines in Canada, were made for us by Bertram & Sons, of Dundas. Nearly all the other parts of our plant were constructed by ourselves.

STURGEON FALLS PULP COMPANY, Sturgeon Falls, Ont: We believe that the best paper-making machines are made in the United States, therefore our orders for paper machines were placed there. The writer does not feel that machines made on the other side of the water compare at all favorably for fast running newspaper. Never having had personal experience with British machines, we cannot, of course, give an exact comparison as to their working qualities. American machines have, however, the market to-day, both in this country and in many foreign markets. Per ton of product, they would, in writer's judgment, cost less than the English machines. We have no British machines in our mills. The chief drawback in bringing British machinery into Canada for paper mills would be, first, the difficulties of being in touch with the manufacturing of the machines from time to time; second, the great difficulty in having broken or injured parts replaced or promptly repaired.

In regard to your last question, no fourdriniers are made in Canada. The pulp and paper machines made in Canada are of excellent quality and compare favorably with those made in the United States. As much of this manufacture is comparatively recent, the castings and furnishings are not so carefully and accurately made as in similiar machines made in the States, where they have been made for years. I think, however, that the Canadian made machines will be well made in a very short time. It would seem that the great development of paper mill and pulp mill properties now going on in Canada would make it desirable and profitable for some Canadian manufacturer to undertake to construct fourdrinier machines here. The machinery for making these, however, is very expensive and a thoroughly equipped plant would cost a great deal of money.

We have ordered all the pulp mill machinery in Canada, as we came to the conclusion that we could buy it to as good advantage here as in the States.

SISSIBOO PULP AND PAPER CO., Weymouth Falls, N.S.: We have no British-made machinery in either of our mills, all of it being either of Canadian or United States make. Our experience is that Canadian machinery is liable not to be as well finished as that made in the United States, but is generally stronger and more heavily built than that imported. Some of the machinery made in the latter country has more improvements than our own, which gives them the advantage when selling to us. We see no reason why Canadians should not manufacture machinery fully as good, not only in the working parts, but also in the appearance, as can be obtained anywhere, as by so doing they would have an advantage in the sale of it over the American manufacturers, on account of the duty. We have had no experience regarding British machinery, but judging from what we have seen, it appears to be more heavily built than that of the United States.

THE LAURENTIDE PULP COMPANY, Grand Mere, P.Q.: (1) The machinery required for our paper mills was wanted so quickly that it was all bought in the United States on account of quicker delivery, and in some lines slightly better prices.

(2) Not having any British machinery in our mills, we are not in a position to state which country turns out the best article.

(3) As we have not had a quotation on British machinery for over four years, we are not in a position to answer this question as to cost.

(4) The chief trouble seems to be that the British makers are represented on this side by men who are not versed in pulp and paper mill machinery. They, therefore, are not in a position to do justice to their principals. In the space of three years, we have been approached but once on the subject of British machinery.

(5) No.

(6) Canadian machinery compares very favorable with that of foreign manufacture. It would be well, however, to note in this instance that most of the Canadian machinery is made on a royalty basis from American patterns.

OUIATCHOUAN PULP COMPANY, Ouiatchouan Falls, Que.: All our machinery, except the water wheels, is of Canadian manufacture. The wheels were made in the United States. We have had no experience with British machinery.

PERSONAL.

Ald. Joseph Oliver, president of the Oliver Lumber Company, Toronto, has announced his intention of retiring from the Council. During his public career as the representative for Ward 2, Ald. Oliver has given a good account of himself. His friends have urged him to become a candidate for the Mayoralty, but his business has expanded to such an extent as to demand his entire attention.

A cablegram received at Quebec on November 15th announced the death of Mr. Thomas Beckett, which took place while he was on a voyage to South Africa. The deceased gentleman was for many years a partner of the firm of Dobell, Beckett & Company, timber merchants, Quebec, but retired some years ago, and has since been living in London, Eng. He married a daughter of the late Sir David Macpherson, and a wife, three sons and one daughter survive him.

IMMENSE FOREST RESERVES.

About six million acres of timber land in Northern California were withdrawn from the public land area for the creation of forest reserves under orders issued last month, at Washington, D. C., by Commissioner Hermann, of the General Land Office. The order was issued by direction of the Secretary of the Interior. The reserve on the Klamath river will embrace 3,780 square miles; Mount Sparta reserve 3,024 square miles; Lassan Park reserve 1,692 square miles, and Diamond Mountain 872 square miles. Many of the lumbering companies who had been expecting much of these limits to be placed on the market have been disappointed, and are turning their attention to Canada, notably British Columbia.

The Bureau of Forestry a fortnight ago received the silver medal awarded the Ontario exhibit of forest products at the Pan-American Exposition last year. It bears the handsome relief design which the Exhibition has sent forth and is a beautiful work of art.

Our special representative now travelling in Michigan states that the general consensus of expert opinion in Bay City, Saginaw and Muskegon is that the Michigan lumber industry, which has been rapidly declining of recent years, will be at an end practically in five years.

THE NEWS

—R. S. Walsh, of Quyon, Que., is erecting a new saw mill on the Ottawa river.

—W. Cowan proposes to establish a large saw mill at Trout Lake City, B. C.

—A. Brunelle & Company have registered in the saw mill business at Rosaie, Que.

—G. O. Buchanan, of Kaslo, B. C., is removing his mill from Duncan City to Creston.

—The Vancouver Bevel Siding Lumber Company will erect a plant at Vancouver, B. C.

—Walter Mitchell has purchased the planing mill of William Robinson at Port Stanely, Ont.

—Robinson & Company are removing their saw mill from Fisher Bay, Man., to Humbug Bay.

—William Moses, of Carp, Ont., has manufactured over 14,000 boxes during the present year.

—William McNairnie has admitted J. C. Shaw as a partner in his planing mill business at Wallaceburg, Ont.

—An Ontario charter has been granted to Wood-Workers, Limited, with headquarters at Wiarton, Ont.

—Comile Monjeau, lumber and general store, St. Bruno, Que., is selling out and removing to Montreal.

—Johnston & Bows have started their new mill near Ashley, Ont. It has a capacity of 10,000 feet per day.

—Charles Glenn met his death recently by falling on a shingle saw in Allan Bros'. mill at Mississippi Station, Ont.

—The Sutherland-Innes Company, of Chatham, Ont., will likely build a stave and heading factory at St. Thomas.

—The Moyie Lumber Company, of Moyie, B.C., will probably enlarge their mill to double its present capacity.

—Capt. McDonough, of St. Martins, N. B., has sold his portable steam saw mill to Robert Moore, of Loch Lomond.

—It is understood that the Mississaga Lumber Company are considering the building of a saw mill at Blind River, Ont.

It is understood that Walter and Robert Little, of Beachburg, Ont., intend building a saw mill in the Temiskaming district.

—The Weidman Company, of Southwold Station, Ont., are considering the establishment of a stave and hoop factory at St. Thomas.

—F. H. Todd & Sons are overhauling their saw mill at St. Andrews, N. B. They expect next year to make a very large cut of lumber and shingles.

—Frank Hourigan & Company, of Smith Falls, Ont., will operate the Shaver saw mill at Eganville and are in the market to purchase a small timber limit.

—The Keewatin Lumber & Manufacturing Company have decided to build a tie mill on Keewatin Bay. The company supply large quantities of ties for the C. P. R.

—The Victoria Lumber & Manufacturing Company, of Chemanius, B. C., are building a new logging railway from Ladysmith back into the woods north-west of that town.

It is reported that J. M. Poitras, late manager for the North Pacific Lumber Company at Barnet, B. C., and who recently returned from Dawson, will engage in the saw-milling business in the vicinity of Vancouver.

—Mr. Fitzpatrick, of Nairn Centre, Ont., reports that fifty-five reading rooms have now been established in lumber camps, and teachers placed in charge of some of them.

—It is the intention of the North-End Wood-Working Company, recently organized at St. John, N. B., to greatly extend the plant taken over from the A. A. Maybee Company.

—The Parry Sound Lumber Company have applied to Foley township council for exemption from taxation on a sash and door factory proposed to be erected on Jenkin's Point.

—The Yale Lumber Company are building a saw mill at Cascade, B.C., with a daily capacity of 25,000 feet, and a shingle mill at West Robson with a daily capacity of 75,000 shingles.

—It is reported that the Holland & Graves Lumber Company intend building another saw mill at Byng Inlet, Ont., to be completed in time for sawing operations next spring.

—The Spicer Shingle Mill Company, of Vancouver, B. C., have invited tenders for the construction of a flume eight miles in length for carrying shingle bolts down the Capilano valley.

—The Wausaw Box Company, of Wausaw, Wis., purpose establishing a box factory in Ontario if a suitable location can be found. Sault Ste. Marie, Ont., is under consideration.

—A shingle mill on False Creek, B.C., owned by the Imperial Lumber Company, has been sold to Albert Cotton, of Calgary, who owns extensive timber limits in the Crow's Nest vicinity.

—S. O. Church & Bro., of New York, have secured a site and are about to erect a large stave and hoop factory at Sand Point, Ont. They are advertising for a supply of hardwood logs.

—D. R. Fraser & Company, of Edmonton, N. W. T., are erecting a saw mill on their limits sixty miles up the Saskatchewan river from Edmonton, to which point the logs will be rafted for manufacture.

—The Wolvin Lumber Company, who recently purchased the Matane timber limits of King Bros. in the province of Quebec, will likely erect a mill near the border of Quebec and New Brunswick.

—Thompson & Avery, of Sharbot Lake, and Peter Gray, of Caldwell's Mills, have joined forces in the lumber business at the latter place, under the name of the Clyde Forks Milling & Lumber Company.

—The Yale-Columbia Lumber Company have under construction a new saw mill at Robson, B.C., to replace the one destroyed by fire there some time ago. Joseph Genelle is managing director of the company.

—The Porto Rico Lumber Company, Ymir, B. C., has constructed two dams across the Salmon river. By this means the water is periodically raised about five feet, enabling the logs to be floated down to the mill.

—An American syndicate is reported to be negotiating for the purchase of the saw mill and timber lands of E. D. Davison & Sons, of Bridgewater, N. S. The limits are located on the LaHave and Medway rivers.

—It is announced that T. H. DeCew & Sons, stave manufacturers, of Fenelon Falls, Ont., have decided to move to eastern Ontario next year, as the stock of suitable timber around Fenelon Falls has become exhausted.

—George L. Burtis, of Munising, Ont , has completed arrangements to build a saw mill at Thessalon, the concil of that town having granted him exemption from taxation for five years. The work of construction will commence at once.

—The Manitoba Hardware & Lumber Company, Limited, of Brandon, Manitoba, is applying for incorporation, with capital of $150,000. The applicants are John Hanbury, Peter Payne, Joseph Agnew, A. B. Fleming and W. A. Bridgett.

—W. W. Harper has erected a new wood-working factory at Charlottetown, P.E.I., containing band saw, moulder, sand-paperer, power mortising machine and a cutting-off and ripping saw table. The building is 26 x 48 feet and has a concrete floor and iron doors.

—J. W. Scott, of Dumfries, N. B., has purchased an improved rotary saw mill, with engine and boiler complete, from the Robb Engineering Company, of Amherest, N.S. The mill will be set up on the large tract of timber land, eight miles below Woodstock, which Mr. Scott recently purchased.

—The annual supper of the employees of the Pembroke Lumber Company was held on October 24th in what is known as "The Ark," the large boarding house of the company. Mr. John Bromley, one of the directors of the company, occupied the chair and a very pleasant evening of social enjoyment was spent.

—The Canada Wood Specialty Company, of Orillia, Ont., are installing a short saw mill rig, which will enable them to produce the bulk of the lumber used in broom handles and curtain poles from the log. The company will manufacture a large quantity of veneer next year.

—The new factory of Thomas Bros., at St. Thomas, Ont., is not yet completed, although over $35,000 has been expended on buildings and machinery. The product of the factory will be brooms, brushes and woodenware. It is the intention to build a dry kiln and a saw mill to be operated in connection with the woodenware factory.

—Incorporation has been granted to the Great Northern Lumber Company, Limited, with a capital of $50,000. The incorporators are J. B. Scott, John E. Martin, and W. R. Staveley, of Montreal; Solomon Cole, of Port Fortune; and H. T. Evans, of Lachine. It is proposed to take over the saw-mill property of J.B. Scott at Conception, Que., at a valuation of $24,700.

—The Newfoundland properties of the Highland Lumber Company, Parrsboro Lumber Company and a number of smaller concerns have been purchased by a Canadian-American syndicate for $150,000. The deal was effected through H. J. Crowe, of Halifax. It is understood to be the intention of the syndicate to operate the properties on an enlarged scale.

—Nelson Carter has established a shingle mill at Port Haney, on the main line of the C. P. R. about twenty miles from New Westminster, B. C. Only one machine, with a daily capacity of 50,000 shingles, has been put in, but should the venture prove a success more machines will be added. There are large tracts of cedar timber near Port Haney.

—Two men named Cofflin and Farrell were engaged at Rat Portage to work for D. L. Mather in one of his tie camps at Vermillion Bay. Their fares were advanced them but on arriving at the Bay they refused to go to work. They were consequently placed under arrest for breach of contract and were sentenced by the magistrate of Rat Portage to eight days' imprisonment for the offence.

—The lumber industry of South-East Kootenay, in British Columbia, has assumed large proportions. In almost every town in the district one or two saw mills are in operation. Mills are located at Moyie, Cranbrook, Mariesville, Wausaw, Fernie, Elko and Jaffray, and one having a capacity of 50,000 feet per day is being built at South Wardner. Preparations are being made for the erection of several mills on the Kootenay river near the international boundary.

—James York, of Chesterville, Ont., is now erecting a large sash and door factory and planing mill to replace the one destroyed by fire last spring. He is building on modern plans with a floor space of over 9,000 square feet. The machinery equipment will be up-to-date in every respect and will be operated by a 100 h. p. Wheelock engine. Mr. York expects to have his new mill running by February 1st next.

—T. Ludgate and Angus McLeod, the latter of Bracebridge, Ont., have secured large timber limits on Arrow Lake, B. C., aggregating 200,000,000 feet of timber. They have decided to build a mill at Arrow Head with a capacity of 25,000,000 feet a year, to be of the band saw pattern. Logging operations will be conducted this winter, although the mill is not likely to be commenced until next spring.

—Ross & Taylor, of Exeter, Ont., have just completed their new planing mill. The building is of brick, main building 55 x 60 feet, two stories, with fireproof roof. The building throughout is heated with steam, and is one of the finest and best equipped mills in Western Ontario. The firm has been in business since 1877 and have been fairly successful. They have now added to their already large business the wholesale manufacture of sash and doors and with this end in view have purchased lumber extensively.

—The Rat Portage Lumber Company have commenced the erection of a large saw mill at St. Boniface, a suburb of Winnipeg. The preliminary work will be done this fall and the mill erected early next spring. The site secured is a desirable one, consisting of 23 acres of land running back from the Red River. It is understood that no definite plans for the mill have yet been prepared and that none of the contracts for machinery have been let, but it is officially given out that the mill be equipped by a double cutting band saw and probably by a band resaw. The boilers will be supplied by the Bertram Engine Works Company, of Toronto.

THE LATE ANGUS McLEOD.

Mr. Angus McLeod, M. P. for North Ontario, died in St. Paul's Hospital, Vancouver, B. C., on November 18. Mr. McLeod was a resident of Bracebridge, Ont., but about two months ago went to British Columbia for the purpose of looking after his lumbering interests in that province. In conjunction with Mr. T. Ludgate, he was about to build a large saw mill at Arrowhead, where extensive limits had been secured. Shortly after his arrival at Vancouver he was stricken with typhoid fever and from the first it was feared that he would not survive. The news of his death was received with deep and widespread regret by a vast circle of friends and acquaintances, and the loss to the town of Bracebridge and the district which he represents in Parliament is almost irreparable.

Deceased was forty-five years of age, having been born in Campbellville, Halton county, on February 5, 1857. He began work in the lumber camps when quite young and afterwards was appointed manager of the Victoria Harbor Lumber Company, a position which he held for about twelve years. In 1891 he resigned and entered into partnership with Mr. George McCormick, M. P., of Orillia, since which time the two gentlemen have been engaged in the lumbering and contracting business. One of their present contracts is the construction of the Eastern Railway of Nova Scotia. Messrs. McCormick and McLeod first met when lumbering on the banks of the East river, near Huntsville, in 1872, and their friendship since has been close and unbroken.

Mr. McLeod was first elected to the House of Commons as Conservative member for North Ontario in the general election of 1900, with a majority of 518 over his opponent.

The remains of the deceased were brought to Bracebridge for interment.

TRADE NOTES.

The Kneeland & Bigelow Co.,of Bay City, Mich., are installing one of Garland's patent chain conveyors in their plant near Lewiston, Mich.

The Lake of the Woods Milling Co., of Winnipeg, are installing one of the America Blower Company's "Moist Air" dry kilns for drying staves at Keewatin, Ont.

Rhodes, Curry & Company, of Amherst, N. S., have in their employ 830 workmen, and the monthly pay roll amounts to $12,800. In the last two months they have built 480 cars.

The McFarlane-Neill Manufacturing Company, of St. Mary's, N. B., report a large business in peavies, boot calks, horse hames, etc. They are shipping to all parts of the Dominion.

On November 6th the M. Garland Company, of Bay City, Mich., shipped a carload of machinery, including a sixteen-saw slab slasher, to the Johannesburg Mnfg Company, Johannesburg, Mich., this being the third carload of machinery they have shipped them for their new mill. The same firm have three of their band mills in operation.

Incorporation has been granted to the Restigouche Foundry & Supply Company, of Campbellton, N. B., with a capital stock of $100,000. The incorporators are Kilgour Shives, W. J. Duncan, W. A. Mott, Richard O'Leary, W. S. Montgomery and Thomas Malcolm. The company will take over the foundry business of Duncan & McLellan at Campbellton.

The America Blower Company's factory at Detroit, Mich., is working "over-time" in all departments, owing to the very large amount of business on hand. Among recent dry kiln sales they mention the following: Wabash (Ind.) Cabinet Co.; Peter Klerner, New Albany, Ind.; Mt. Pleasant (Mich.) Body Co.; Walker Sons, Walkerville, Ont.; Anderson Veneer Door Co., Jamestown, N.Y.; Northern Michigan Turning Works, Mackinaw City, Mich.; Pontiac Body Co., Pontiac, Mich.; Ann Arbor (Mich.) Organ Co.; Lake of the Woods Milling Co., Winnipeg, Man.

The attention of our readers is called to the advertisement first appearing in this number of the Sawyer & Massey Company, Limited, of Hamilton, Ont. This company manufacture a high grade of portable saw mills and engines, and also keep in stock rebuilt machines in good order. Readers of the LUMBERMAN will do well to correspond with this company when requiring anything in these lines.

WOOD PULP DEPARTMENT

THE OUIATCHOUAN PULP COMPANY.

One of the most recent enterprises to be carried to completion in the Lake St. John District of Quebec is that of the Ouiatchouan Pulp Company. This company was incorporated by the Provincial Government on April 20th, 1901, with a capital of $150,000, of which $140,000 is paid up. The directors are Ettienne Paradis, Quebec, president; J.J. Lavery, K.C., Quebec, secretary-treasurer; Wilbrod Jalbert and A.D. Dupuis, Quebec; A. C. de la Chevrotiere, M. D., Lotbiniere; Damase Jalbert, St. Jerome; Onesime Cote, St. Alphonse; and Jos. Brassard, Roberval.

The company own 150,000 miles of spruce limits around Lakes Ouiatchouan, Bouchette and des Commissaires, at a distance of about 15 to 20 miles from Ouiatchouan Falls, where a pulp mill has been built. The logs can be conveniently driven down the Ouiatchouan river. The company also own a large saw mill along the line of the Quebec and Lake St. John Railway.

The pulp mill consists of a main building, 200x100 feet, and buildings containing barkers, heating apparatus, etc. The height of the falls is 250 feet, giving the company an actual head of 240 feet. The steel flume carrying the water is 480 feet long and 6 1-2 feet in diameter. The capacity of the mill is six grinders, with eight wet machines, producing 30 tons of pulp per day. The steam mill to the left propels the barkers. The pulp wood passes down by the small sluice which is seen running off the mountain edge towards the left, is then taken back to the barker by a chain and then carried in the same manner to the grinders, which are in the lower part of the building to the right. The steam mill is heated with the bark taken from the pulp mill.

The water wheels comprise two special 61-inch Victor high pressure turbines furnished by the Stilwell-Bierce and Smith-Vaile Company, of Dayton, Ohio, each turbine operating three grinders; one special 28-inch Victor high pressure turbine operating the machinery, i.e., wet machines, pumps, centrifugal screens, pumps, etc.; and one special 14-inch Victor high pressure turbine operating the dynamo.

The wet machines, grinding machines, pumps, shafting, connections and water pipe were supplied by Carrier, Laine & Company, of Levis, Que., and the centrifugal screens by Baker & Shevlin, of Syracuse, N.Y.

The mill was designed by Jos. Perron, of Jonquiere, Chicoutimi county, and W. Jalbert, 113 St. James street, Quebec.

The company are provided with convenient shipping facilities, a railway siding running to the pulp shed now in course of erection. The mill is located 184 miles distant from Quebec city.

QUEBEC PULP WOOD ASSOCIATION.

The Province of Quebec Pulp Wood Association held a meeting in Quebec city on October 23rd to discuss the question of an export duty on pulp wood. There was an informal discussion and it was decided to meet again at Sherbrooke on November 6th. At the Sherbrooke meeting Mr. H. M. Price, of Quebec, presided, and there were present: Messrs. E. W. Tobin, M.P., Brompton Falls; T. A. Cousins and G. C. Poulin, St. Johns; G. P. Nadeau, Stanfold; B. C. Howard, N. N. Walley, F. N. McRea, Sherbrooke; John Champeau, D'Israeli; O. Brouillard, Carmel; O. C. Morrisette, Lake Megantic; E. Legaux, Tring Junction.

After much discussion of the pulp wood question in which the probable effects of an export duty were considered, the following resolution, moved by B. C. Howard and seconded by O. Brouillard, was unanimously adopted, viz.:

"That a delegation composed of all the directors of the association wait upon the Commissioner of Crown Lands, the Hon. S. N. Parent, in Quebec, Friday, 7th November, at 4.30 p. m., with a view of having the stumpage dues on pulp wood replaced at $1.90 per cord on all pulp wood cut on crown lands in future, with a rebate of $1.50 upon pulp wood manufactured into pulp in Canada, and to take up any other questions relating to the regulations in regard to sale and manufacture of pulp wood in the province."

The delegation appointed comprised Messrs. Price, Tobin, McCrea, St. Pierre, Poulin, Nadeau, Howard and Smith.

Regarding an export duty no resolution was agreed upon. The views of the members, it is understood, differ somewhat regarding the question, though many of them are strongly in favour of such a duty. Some fear that it would give the pulpwood business a setback, while others say that in a few years there will be mills enough in the province to exhaust the supply and there will be no need of an export duty on raw material. They consider that a rebate of stumpage dues as mentioned in the resolution above will have a tendency to hasten that time.

PULP MILL OF THE OUIATCHOUAN PULP COMPANY, OUIATCHOUAN FALLS, QUE.

AN AMERICAN VIEW.

Mr. C. W. Rantoul, jr., manager of the Sturgeon Falls Pulp Company, who has recently removed from the United States to Canada, thus expresses himself: "It seems to me self-evident that if Canada prevented pulpwood leaving her Provinces for the United States, that country would be obliged either to purchase pulp from Canada or remove its import duties on Canadian

paper. Considering the rapid depreciation of the American spruce supply, Canada will doubtless, in the near future, supply a largely increased amount of paper and pulp for the American markets. Any action of the Government in keeping her wood in her own boundaries will tend to hasten the arrival of this period."

MAY BUY CANADIAN PULP.

Paul Dupuy, business manager of Le Petit Parisien, and son of Jean Dupuy, French Minister of Agriculture under the Waldeck-Rousseau Ministry, recently arrived in the United States. M. Dupuy has come to study American methods of conducting newspapers, and especially to learn if he cannot procure paper in a more economical manner. "I want to look into the newspaper business in the United States," he said. After spending a month in New York I am going to Canada to look into the paper question. It costs us more in France for paper than it does here. We pay 30 francs for 100 kilos. Nevertheless we use 43,000 kilos. a day, and Le Petit Parisien's paper bill for a year is about $1,400,000. I am going to see if we cannot import pulp from Canada. France imposes a small tariff on pulp."

PULP NOTES.

It is reported that rapid progress is being made with the new pulp mill at St. George, N. B.

The Brompton Pulp & Paper Company, of Brompton Falls, Que., expect to have their mill completed early in the new year. They recently purchased from Adolphe Conway 3,000 acres of timber limits in Weedon, Dudswell and Lingwick townships.

The annual meeting of the Laurentide Pulp Company, Grand Mere, Que., was held in Montreal last week. The annual report was presented and unanimously adopted. At a meeting of the new directors Sir William Van Horne was re-elected president of the company, and George Cahoon, jr., vice-president.

The Bella Coola Pulp & Paper Company has been incorporated at Tacoma, Wash., the promoters being C. W. Thompson, Marks Smaby, R. M. Thompson, C. H. Thompson and Theodore Shenkenburg. The company has secured large timber areas bordering on the Bella Coola river in British Columbia and propose to erect a pulp mill, the primary object of which is said to be to supply a paper mill soon to be erected at Tacoma.

The North River Pulp & Lumber Company, of Baddeck, Cape Breton, will probably select a site for their proposed pulp mill immediately. F. G. D. Barnjim, resident manager of the company, is in favor of locating at North River Centre. The company's timber possessions cover almost all the ungranted lands in the county of Victoria and a large portion of Northern Inverness. They have already expended about $100,000 in erecting saw mills and on barking machinery, and the contemplated pulp mill will cost at least half a million more.

The British Canadian Pulp Company, Limited, has been incorporated, with a capital of $500,000 and head office at Toronto. The incorporators are His Honor Judge McDougall, F. A. Ritchie, T. P. Coffee, C. S. Smoke and J. J. Warren, all of Toronto. Mr. Warren, presumably acting for the company, has requested a bonus of $15,000 from the town of North Bay, Ont., as in inducement to establish their mill at that place. The agreement provides that there shall be an expenditure of $250,000 in buildings and plant. The question will be voted on by the ratepayers on January 6th.

THE ONTARIO-SLOCAN LUMBER COMPANY

A company bearing the above name has been organized for the purpose of building a saw mill at Slocan City, B. C., the promoters being Ontario men. The officers are: J. B. Tudhope, Orillia, president; Thos. Chew, Midland, vice-president; J. H. Lavallee, Orillia, secretary-treasurer; George Chew, Midland, general manager. The property-owners of Slocan City, by a large majority, have agreed to give the company a site and exemption from taxation for ten years. It is the intention to build a mill to cost $100,000, to consist of saw, shingle and lath mills, dry kiln and all appurtenances necessary in a modern plant. The company will cater to the demands of Manitoba and the North West and the eastern provinces. Limits containing over 300,000,000 feet of splendid timber, located on the waters of Slocan lake, have been secured. It is the intention to proceed immediately with the erection of the mill, Thomas Chew having gone west for that purpose.

DUNCAN'S PATENT RESAW FOR SLABS.

Wm. Duncan, of Montreal, has put on the market what seems to be one of the best resaws yet built. A number of his machines have been running in different parts of Canada for over two years, giving the best of satisfaction. One resaw is doing the re-sawing of four mills for the Hawkesbury Lumber Company, of Hawkesbury, and giving splendid results.

The machine is very strong and heavy, being built entirely of iron and weighing over thirty-two hundred pounds, with a strong, heavy spindle. The feed rolls are large, being twelve inches in diameter and geared differently from all other resaws. The driving gears do not require to slip on their keys with the full strain of the work on them, all the gears being keyed tight to the shaft. They are geared in such a way as to allow the feed roll to open and close easily to the various thicknesses of the slab while passing through the saw. Large knots on the slab do not interfere with the resaw doing good work owing to the fact that the feed roll moves so easily.

Owing to the construction of the machine there is not as much pressure required on the press roll to drive the slab through as is generally required on machines of this kind; consequently a narrow slab with a thick edge will not be forced so hard against the face roll as to turn it and make a board with a thin edge, but there is just enough pressure used on the press roll to pass the slab through quickly and turn out well-manufactured lumber, any thickness, from 5-8 of an inch up to 3 inches thick. The various thicknesses required can be instantly and accurately changed at any time to take from the slab whatever thickness of board it will give, also any one thickness can be adjusted without interfering with any of the other sizes. It is claimed that this machine in a small mill with a circular saw can be made to increase the output of the mill over 50 per cent. by sawing the small logs up the middle by the large saw and carriage and then putting them through the resaw a couple of times if necessary. Only one man is required to operate the machine, producing from 20 to 30 thousand feet per 10 hours.

A card to W. Duncan, 452 Guy street, Montreal, will bring further particulars.

C. P. Easton & Company are said to have decided to build a mill at once on their timber limits recently purchased in the Province of Quebec. It is probable that they will retain their yard at Albany.

Shippers of lumber to the Transvaal are now able to export lumber to that country without having to pay a duty. The duty of 7½ per cent. has been temporarily removed pending the establishment of a Customs union. This will result in a stimulation of the demand for lumber from that country.

To Those Who Carry Insurance on Lumber

You are compelled to pay more for your insurance to-day than a year ago. This is particularly true in Canada where rates have been abnormally increased by Tarriff Association Companies. It is our business to insure nothing but lumber. We study the advantages offered by each risk submitted and accept only the best moral and physical hazards. Thus by carrying only selected risks we can offer lower rates. We are saving money for hundreds of lumber dealers. Why not let us take care of from $1,000 to $20,000 of your insurance?

THE ROBB ENGINEERING COMPANY.

The Robb Engineering Company, of Amherst, Nova Scotia, are about to make extensive enlargements and improvements to their works. This step has been made necessary by the rapid growth of the business, the volume of which has nearly doubled within the last two years. It is proposed to erect next year a new machine shop 100 x 250 feet in size, and to rearrange the other departments to the best advantage, placing the buildings so as to permit of their further extensions when necessary. The machine shop, boiler shop and foundry will be equipped with travelling cranes. A new electric plant will be installed to operate these cranes and many of the machines in the boiler and machine shops, as well as to light the works.

A walk through the works reveals the fact that the management is actuated by progressive principles. Every device calculated to reduce the cost of manufacture and render more perfect the product, is eagerly sought for and adopted. In some instances where a suitable device could not be found to perform a certain kind of work, the inventive genius of the firm has proved equal to the emergency. One of the latest of these inventions is the Robb-Armstrong Sweet governor, patents for which have been applied for in Canada, the United States and Europe. This new governing device is said to embody the advantages of the Sweet and Rice inertia governor and is so designed as to avoid friction.

The company have a most excellent system of preserving for ready reference in the details of manufacture and tests of each engine turned out, so that any future troubles in operation can be promptly and certainly remedied.

Electric, hydraulic and pneumatic power are employed in the works, the first for lighting and power, the second for operating the heavy drills, and the third for operating the lighter drills, these latter being attached to flexible hose filled with compressed air, and thus made available for use at any place inside the shops or even outside.

The company have now nearly ready for shipment four engines for the Trinidad and one for the Demerara electric railways. They are each of 450 h. p. capacity. Last year they were honored by receiving an order from the Technical School of Manchester, England, for an engine which should exemplify the best features of American design and construction.

CHICAGO, ILL.

Do It Right Now !

Write us and we will tell you all about our

Combination Gang Edger

The above cut represents what we call a 60-inch machine, i. e., the entire length of the feed rollers is 60 inches. The arbor is arranged with a gang of eleven saws for manufacturing 1-inch lumber from cants 4, 6 and 8 inches through. The balance of machine is arranged with three moveable saws, one stationary or fast.

With this machine the cut of a mill can be increased at least 25 per cent. without any additional expense for labor, as a great deal of the sawing which is now done on the hand or circular can be done on this machine. It has rift flooring attachments, and is without question the best machine on the market. It has been in use in the larger mills for many years.

Read and Reflect

RHINELANDER, WIS.

Rodgers Iron Manufacturing Co., Muskegon, Mich.

Gentlemen :—Replying to yours we will say that the combined flooring mill and edger is doing good work and that we have no fault to find with it, as it is a very satisfactory running machine. Respectfully,

BROWN BROS. LUMBER CO.

DO YOU LACK STEAM? WE CAN HELP YOU.

The Gordon Hollow Blast Grate

Makes the hottest fire of any device in existence.

Burns wet, green or frozen sawdust or other refuse readily.

Develops every ounce of power a boiler is capable of generating regardless of the weather.

Outlasts several draft grates.

Edgers and Trimmers for Small and Medium Sized Mills

The "Tower" and "Tower" Extra 2 and 3 Saw Edgers

800 IN DAILY USE.

Among the reasons for the great popularity of these celebrated edgers are the following :

1. They take up little room.
2. They require little power.
3. The mechanism for shifting the saws is up-to-date, convenient and positive.
4. The feed rolls are adjustable in four directions, which means absolute accuracy. This feature is original with us.
5. The saws may be removed easily and quickly, without disturbing the arbor.
6. There is no edger made approaching them in cheapness.

Cheapest Trimmer on Earth

The "Tower" One-Man 2-Saw Trimmer.

With this trimmer one man can easily trim the output of a mill cutting up to 30,000 feet in ten hours. The operator shifts the saws as he walks toward the board to be trimmed. This saves time. There are two feeds, easily and quickly started, stopped or changed without stopping the saws.

LARGEST LUMBER YARDS IN THE WORLD

Headquarters for Everything in the Lumber Line

We carry a complete stock of LONG, HEAVY TIMBER up to and including 16 x 16—60 feet long ; LONG, HEAVY JOISTS, up to and including 3 x 4—36 ; CAN SHIP IMMEDIATELY. We also carry a complete stock of THE HIGHER GRADES OF LUMBER, especially from 1 inch up to 6 inches in thickness, UPPERS, SELECTS, SHOP STOCK, ETC. REMEMBER there is NO DUTY ON ROUGH LUMBER GOING TO CANADA and that we are making many shipments to Canada and the New England States. We solicit enquiries from that territory especially and will give same prompt and careful attention.

Improved Gang Lath Machine

This machine is entirely self contained—does not require a counter-shaft and pulley to drive the feed from.

It has a solid iron frame. The feed rolls are milled from solid steel bar and case hardened. In fact the machine is constructed of the best material throughout. Carries four 12 inch saws and will do fully as much work as any other machine made for the same purpose.

I manufacture other lath machines much heavier than this cut shows, and lath bolters of various capacities.

I also have a full line of saw mill and shingle mill machinery, and can quote low figures, especially to cash customers.

The double cutting Allis Band mill increases your output from 33 to 40 per cent. In some cases the increase is more than 40 per cent.

The Allis double cutting band cuts clean and cuts lumber of a uniform thickness. You don't have to take our word for these statements. Read the following letters. They are as strong an endorsement of the Allis double cutting band as you would want to see.

PARRY SOUND, November 4, 1902.

The Waterous Engine Works Co., Limited, Brantford, Ont.

GENTLEMEN:—As the season is drawing to a close I am in a position to state that after the manufacturing of about 18 million feet on one of your double cutting bands with steam set works, we are very much pleased with the outcome and find the product of saw culls will not exceed 5,000 feet, which is an exceptionally good record. All buyers remark that our stock is cut very uniform in thickness, which is also very gratifying to us as no doubt it will be to you. Very truly yours

(Signed) CHAS. R. SHAW,
Manager Edwin S. Hartwell Lumber Company, Chicago, U.S.A.

PARRY SOUND, November 6, 1902.

Waterous Engine Works, Brantford.

DEAR SIRS :—Replying to yours of the 27th ult. in regard to the merits of the double cutting band mill and steam set works over single cutting and hand set works, I beg to say that very much better results have been obtained with double band mill and steam set works, the average daily cut this season being some 91,000 feet per 11 hours, to 54,000 last year. The saw culls will not exceed 7,000 feet out of 18,000,000 feet of lumber. Yours truly,

(Signed) J. J. GRANT, Supt. Conger Lumber Co. Saw Mill.

Letters such as the above should convince the most sceptical as to the superiority of the Allis Double Cutting Band Saw and Steam Set Works.

With their use your production is increased tremendously at no increase of labor charge.

Let us tell you more about it
